8596. When you say gone out of cultivation, it does not mean that it has gone out of cultivation altogether?—It is no longer ploughed.

8597. Do you mean it has gone out of corn cultivation?—Yes.

8598. (*Mr. Chaplin.*) Is it practically worthless; say 1s. an acre?—I walked over a great deal of land that I would not have taken for nothing.

Land unable to pay rent.

8599. (*Mr. Giffen.*) That is my point, whether it was capable of paying rent of that kind, how much was there of it?—A great deal of it was worth nothing as grazing unless you fed animals upon it with purchased food. One farm that I was over was somewhere about 700 acres, but there was 200 acres of that marsh land, and the cattle fed on the marsh land during the day, and they used the upper soil as a kind of exercising ground. The farmer told me that he could not keep stock on this tumble-down pasture.

8600. But you are not prepared to give us any idea of the per-centage of land in Essex that is in a position not to pay any rent?—I do not think that I am in a position to do that. I can get information that would do it.

8601. I think you told us that in certain parts there is a considerable quantity of land in that position?—Yes.

8602. (*Mr. Chaplin.*) Have you any idea of the total acreage at all that has come under your own notice, that is, in this condition?—I would not like to hazard a statement. I was very anxious indeed to have those maps completed, and then I would have been in a position to say something useful, but in my present condition, with the maps not completed I cannot do so.

Mr. R. H. Pringle. 22 Feb. 1894

8603. Do I understand that by completing those maps you could give accurate information as to the extent of the land in that condition?—I could clearly, as far as the maps would do it.

8604. You could obtain reliable information as to the land in Essex that has fallen into this deplorable state?—I could.

8605. Would it be a long operation?—I think not. (*See maps appended to Mr. Pringle's Report on Essex.*)

Land out of cultivation.

8606. (*Chairman.*) There seems to be three classes of land that has gone out of cultivation, namely, some land laid down to grass, and other land which has tumbled down into grass, and other land which is cultivated in rye grass and grass of that kind. Is not that so?—Yes.

8607. All of those you include under the head "going out of cultivation"?—Yes.

8608. (*Mr. Chaplin.*) In my question I referred to the land that you described as practically worthless, tumbled down itself, or which had rye grass sown with it, which is practically the same thing?—Practically the same thing.

8609. The land which has been laid down to grass I presume you would not describe as worthless?—Certainly not; that land is coloured green on those maps, and there is almost none of it.

8610. But there is a vast area of land which you describe as worthless, which has fallen in Essex?—There is an enormous area.

8611. Could you obtain accurate information as to the extent of the class of land if those maps were completed and you had time at your disposal?—Yes; I could and would undertake to do it.

Cost of wheat growing.

8612. (*Mr. Clay.*) Regarding the information from those two friends about the production of wheat, you as a practical farmer do not believe that you could cultivate wheat at 18*s.*?—Produce from the land?

8613. Yes?—It is hard to believe, I admit.

8614. Because wheat from Dakota at the present day is at 35 cents, that is 1*s.* 5*d.* per bushel, and a quarter would come to about 12*s.* Now the average yield in Dakota is about 12 or 13 bushels, that would be 18*s.* to 19*s.* per acre. Is it possible that any man in America could cultivate land and get 18*s.* per acre off it?—I do not know what the cost of cultivation of land in America is, but it would be an enormous stretch of imagination to conceive that wheat can be grown at that price. But still they continue to send it.

8615. That is a necessity. Wheat at that price is not like wheat here. You have the straw here,—a certain amount of revenue from straw. There they have none, so that upon the bare 18*s.*, if your two friends are correct, do you believe it can be done?—I left them with the impression that it could not, but I did not say anything.

Laying down land to grass.

8616. Regarding laying down to grass, is it not possible that grass land, laid down to grass, under favourable circumstances, and fed afterwards by sheep and cattle, might not be made more profitable than it is now?—I think so if you could do it, if you could get it to grow.

8617. Will the land still grow, that is laid down to grass?—I believe the mixed soils would, but I would hesitate before saying the same of the three-horse land.

8618. Still, would not the three-horse land laid down be fit, with proper food and manure laid on, for keeping dairy cattle or sheep?—Not sheep; sheep would not do there at all.

8619. Well, dairy cattle then?—Yes, provided that you could get the land to take grass and the grass to grow. There is no reason why it should not carry cattle.

8620. That is the only reason why the Scotch farmers on the dairy principle in giving up arable land and replacing it by grass have been more successful than the other farmers?—I did not intend to say in this Report, that the Scotch farmer on the three-horse land was doing any better than any body else. I was particularly guarded not to say so. I do not think that the Scotch farmer on the very stiff land is doing very much good.

8621. Is he following out that principle of laying down to grass?—Yes, and consequently he is spending less.

8622. Is he making any more rent than on the other system?—Scotchmen are not so willing to tell you things as Englishmen.

8623. But you might see for yourself?—I can see the top soil, but not below.

8624. You said that that land would not pay to cultivate?—That is my clear opinion.

8625. Would it in any way pay to release a certain portion at half-a-crown an acre upon laying it down to grass?—Yes, if you do not make much you do not lose much. You do away with the working expenses.

8626. (*Mr. Gilmour.*) Did you find out what seed they had given in the attempts to lay it down?—I did.

8627. If it is in this Report I need not trouble you?—Yes, it is there.

Possibility of growing grasses in Essex.

8628. In much finer climates than some of the clay lands in Scotland, such as you have in Essex, you would think that the grasses there in moderate seasons would have a much better chance?—The climate in Essex is rather against the grass system. I got information from the Meteorological Society about that. The rainfall in Essex, the average of the last 16 years, has been about 21½ inches; the rainfall in my part of Roxburghshire, Teviotside, varies from 26 to 36 inches. The rainfall of Fifeshire I think is about the same. It is heavier in Kinross, the nearer to the east the dryer you get. But the climate in Essex is rather against the grass, it is too dry in spring and summer.

The Agricultural Holdings Act. Compensation.

8629. In regard to this question in paragraph 152, "Compensation under the Agricultural Holdings Act "for stuff produced on their own holding." Did any of them give you any practical way of carrying that out, so that interests might be properly protected?—No, they did not go deep into the Agricultural Holdings Act at all, they just simply referred to it in general terms.

8630. Did they get their barn books in such a state that you could check between what was sent to market and what was consumed on the farm?—I saw no granary books in Essex similar to what we keep in Scotland, and I should think there would be considerable difficulty in carrying out what you are aiming at.

Depression in Essex.

8631. (*Mr. Little.*) I think the effect of your Report is that there is a deplorable condition of affairs in Essex very widely spread?—Yes; all over the unions that I went to.

8632. And you attribute that principally to a decrease in the price of corn?—Yes, chiefly to that.

8633. (*Chairman.*) And especially to the decrease in the price of wheat?—Yes.

8634. (*Mr. Little.*) You say especially wheat, has it affected all classes of farmers?—It would be very difficult to say that it had affected the farmer who is still making 12½ per cent on his capital.

8635. Does that apply to all classes of farmers?—It has affected all classes, more or less.

Large and small farms compared.

8636. Do you think that there is any clear distinction between the large farmer and the small farmer in this respect; any wide difference I mean?—I do, from what I saw. I did not see many small holdings, but the few that I did see were in a deplorable condition.

8637. Worse than the larger holdings?—Yes, I went over one large farm the accounts of which are here. I saw a small holding of 40 acres alongside it, and I went over that small holding too, and it was in a terrible state; the contrast was terrible.

8638. Then even the small farmer who does the principal part of the labour all by himself or his family does he suffer as much as the large farmer?—No; once you get over a certain area it may be 60 or 70 acres where it was a workable size and where a pair of horses would find full employment, probably the man whose family worked on the farm was doing as well as anybody; not perhaps as well as the large men with capital, but when you come on to small places of 30 or 40 acres they seem to be suffering intensely.

Scotch farmers in Essex.

8639. The comparative success of the Scotch farmers you attribute to following a new system of farming?—Yes.

8640. Dairying, the substitution of oats for wheat, the reduction in the cost of labour, and the carrying on of the grass for three or four years?—That is exactly what occurred to me.

8641. Has that example been followed at all by the Essex farmers?—Yes, more or less it has.

8642. Then I think you remarked on the industry of the Scotchman's family. Up to what size farms would a Scotchman's family work at actual manual labour?—I was over a farm 720 or 730 acres in which the wife and the family were working hard when I was there.

8643. What description of work were they doing?—Dairying; and I saw one of the sons throwing mangolds into a cart.

8644. Would there be any great difference in that respect between the English and the Scotch farmer?—Yes, I think there is a difference.

8645. The families are more industrious?—Yes, I think there is a difference.

The Agricultural Holdings Act. Compensation.

8646. With regard to the Agricultural Holdings Act you have printed an elaborate scale for compensation which I understand is adopted generally by valuers?—Yes, that is taken from a pamphlet.

8647. Is there any complaint as to the inadequacy of that scale of compensation? Did you receive any complaints?—Not directly aimed at this.

8648. Not on that point?—No.

8649. I observe in paragraph 151 complaints were made of the vagueness of the award. Is an award valid under the Agricultural Holdings Act which does not state the amount that was awarded for a particular thing?—I take it that certainly the award must state the amount, but it does not state the way in which it is arrived at.

Tithe.

8650. Then, with regard to the tithe question, you have entered rather largely into that question. There seems to be a complaint that the Tithe Act of 1891 has entirely failed to give relief?—There has been a disappointment.

8651. You do not complain that the Commissioners who have had to settle the value of the land have misinterpreted the Act?—No; I think they have interpreted the Act perfectly correctly.

8652. The Act as it was drawn gives no sufficient relief to the owners of land where tithe equals rent or approaches rent?—It does not give the relief that they think they are entitled to.

Corn returns.

8653. I will not go into the question of the comparative burden of tithe, because that is a very large question. There have been considerable complaints, I understand, as to the corn returns—have you examined into that question?—There are five returning markets for Essex, Chelmsford, Colchester, Romford, Saffron Walden, and Braintree, and I really could not say any more upon the subject.

8654. You referred to complaints that were made that the returns misrepresent the price?—That is all.

Land tax.

8655. With regard to the land tax; you have given the land taxes charged in 1798 and the land tax which is charged now, and you then proceed to estimate how much per acre the present amount of land tax is?—Yes.

8656. But it surely is very much more than that per acre, because the land tax has been redeemed in some cases, and a certain quantity of land has been exonerated?—Deducting the land which has been exonerated and redeemed from the original amount, the land tax per acre still remaining is as shown in these figures.

8657. But only a portion of the land 56 per cent. is taxed, presumably, 56 per cent. of the area?—I doubt not.

8658. Therefore it is very much more per acre than appears by this account?—Yes, there is a lot of land in Essex which pays no land tax now.

8659. But does the land which is out of cultivation pay land tax?—Yes, I believe so.

8660. And it can be got?—Yes.

8661. How can it be got?—I do not know.

8662. The parish has to make up the deficiency of the land out of cultivation has it not? Each parish has to pay a certain quota. If it cannot be recovered from one could it be recovered from others?—I do not know.

Depression in Essex.

8663. (*Mr. Chaplin.*) From your Report you say this great depression in Essex began in 1875?—Yes, the evidence is to that effect.

Mr. R. H. Pringle.
22 Feb. 1894.

8664. But before that period you say that things had been quite prosperous?—I think so. I was led to believe so.

8665. In 1880 and 1884 the number of farms that was given up was enormous, and this, I understand, was the case, although between 1880 and 1886 there had been reductions of from 25 to 80 per cent. in the rent?—Yes.

Fall in price of land.

8666. I wanted to ask you a question about the sales of land during the same time. You say they were frequent, and disastrous to sellers. Does that mean that the price to sellers had practically gone to nothing?—It had immensely fallen.

8667. You mentioned an island in paragraph 45. It was a very remarkable instance. You speak of 600 acres (half saltings) being purchased about 1875 for 8,000*l.*?—I remember it.

8668. In 1885 it was sold for 420*l.*; could you give more information about it?—The name of the island was Peewit; 600 acres, 300 being saltings.

8669. What do you call saltings?—As the honourable Commissioner says, it is watered occasionally by salt water. "It is all grass land. Originally, 20 years "ago, it cost 8,000*l.*, expenses included, it was "purchased eight years ago for 420*l.*, boats, &c. in- "cluded. He has laid out 200*l.* in a new sea-wall"—that is the evidence in my book.

8670. Was there anything peculiar about it?—It was very stiff clay. The gentleman that bought the island gave me that information, and I was also told that along with the island for that 420*l.* he got all the boats connected with it.

8671. Was it actually an island?—Yes.

8672. However, it fell from 8,000*l.* in 1875 to 420*l.* in 1885?—Yes, it was extraordinary.

8673. In 1887 you say, "There has been one glimmer of light"—that was a first-rate season?—A good season.

8674. And what was the result in spite of that season?—The result was, that they could pay their rent, they paid their rent, they held their own, but there was nothing over.

8675. They made nothing?—They made nothing.

Land out of cultivation.

8676. No profit. You saw a good deal of land that was once so celebrated for the excellence of its crops, now making nothing?—Yes, a great deal of land that I knew.

8677. You mentioned two parishes, Canewdon and Northpits, what do you say of those?—I stayed at Canewdon in 1875 for a fortnight. At that time, those farms were all in cultivation, and they were in beautful crops. It was just before harvest, when I was there. I walked over them a few weeks ago, and they are all tumbled down to grass.

8678. Absolutely or practically worthless?—Practically worthless.

Heavy soils

8679. As regards the future, how is the farming to be carried on on this strong land which you have been speaking of, in districts such as in Canewdon and Northpits?—With the present price of corn, it cannot be carried on on the Essex system of farming. If it could be laid down to grass, it would be worth something.

8680. It would be impossible, under the present circumstances, to pay the labour bill?—I do not think it would not pay the labour bill. All the evidence went to convince me that it could not pay a labour bill.

Scotch farmers in Essex.

8681. With reference to what you told the President about the Scotch farmers, how many did you say were losing less, I think you said three were doing fairly well?—I said I could put my finger upon three who were doing fairly well, and I think I could.

8682. The whole number being 120 or 130?—I did not see them all.

8683. How many did you see?—I think I saw about 25.

8684. Out of that number, three you would say were doing fairly well?—Yes.

8685. Then with regard to the others, the most you would say is that they were losing less than their neighbours?—There was one Scotch farmer doing very well he said, but I was not there. I thought, from what I heard from other quarters, he was not.

8686. Where they have been successful, so far as you have been describing them as doing fairly well, that is because they have cut down their expenses to so great an extent, is it not?—Yes.

Mr. R. H. Pringle.
22 Feb. 1894.

8687. Is not it the case that where the Scotch farmers have succeeded it has been very injurious to the rural population in point of employment?—Undoubtedly so.

8688. In paragraph 135 you make a statement, "Where formerly three labourers earned a livelihood, "not more than one will now be found"; that is with reference to the Scotch system.—Yes, that is the Scotch system; the substitution of pasture for arable.

8689. "So long as Scotchmen continue to hire Essex "land, the substitution of pastural for arable farming "may be expected, and along with it a decrease in "employment to the rural population"; is that so?—Yes.

8690. That is the general result of the importation of Scotch farmers into Essex?—Yes; I think there are a few Scotch farmers who are, perhaps leaving their land lying for two years in grass, but as a rule they leave it in three and four years, and cut down their expenses as much as possible.

8691. It is the case, is it not, that a great many farms have been taken almost without rent of late?—A great many farms.

8692. And given up again?—And given up again.

8693. In paragraph 87 you maintain that there has been no change for the better at all. That is since the period when Mr. Druce visited Essex 10 years ago.—As far as I can gather, there has been no change for the better.

Cost of restoring land to cultivation.

8694. I gather from your Report that when once the Essex land has been allowed to lay itself down to grass in the manner you have described, that it takes a very considerable outlay, under any circumstances, to restore it to cultivation again?—I am sure of it. I saw an example on Haseleigh Farm of a field out of cultivation for three years, and it was broken up, and it had been grabbed and harrowed just before I was there, and the amount of twitch on the surface was something extraordinary. I went into the field and rooted it up with my foot, and there was as much below as above.

8695. You give an estimate of what it costs at page 15, 10*l.* 4*s.* 6*d.*; where did you obtain the estimate?—Would you wish the name?

8696. Yes.—From Mr. Edward Strutt. It was taken from his books; Lord Rayleigh's agent, and he farms 8,000 acres at present.

8697. It was from a practical man?—Yes, and I submitted it to various bodies of practical farmers of Essex before I made use of the information.

8698. What would be the view of practical men of any such attempt to restore the strong land of Essex at the present time and at present prices?—They simply said that it was not worth considering the question, that it would be the act of a madman and could not be done at any profit.

8699. I should not be wrong in saying that any prospect with present prices of seeing golden grain waving again in that part of Essex would be a perfectly Utopian idea?—I am afraid after this season that there will be of golden grain about one-half the quantity, and the acreage under corn will be getting less and less.

Heavy soil.

8700. In paragraphs 93, 94, and 95, I understand the general drift of your Report on this point to be that you are of opinion that on these particular classes of land it is almost impossible to make it grow good grass permanently?—Altogether from what I saw and from what I heard, my opinion is that it would be very difficult to get it to grow there well, but with better management an improvement might be effected.

8701. Take paragraph 133, I suppose this expresses your view generally on the three-horse lands, by three-horse lands you mean the strongest lands?—The strongest lands.

8702. "The difficulty of growing grass and roots has "prevented the spread of dairy farming and the "alteration of system which has accompanied the in- "troduction of cows on many mixed farms cannot, "therefore, be related of this peculiar variety of soil. "Nature has apparently decided that three-horse "lands shall be suitable for one style of farming, and "that one unfortunately the least suited to the present "prices of agricultural produce." You mean by that wheat growing?—That is what I mean.

Mr. R. H. Pringle. 22 Feb. 1894.

8703. And practically your view is this, that for this class of land wheat growing is the only mode of cultivating it?—That is unfortunately the best sytem of cultivating.

8704. Because it will not grow really anything else?—I would not like to say that it would not grow anything else, or that it would not grow grass, but I think all the evidence that I saw and heard induced me to believe that it would not. There might be some system discovered, some grass discovered that would enable it to grow grass.

8705. But as far as you know at present it is a very hopeless prospect?—It is that.

Land out of cultivation.

8706. Do you anticipate a further increase of land going out of cultivation in Essex than what you have seen already?—Yes, I do.

8707. To a large extent?—Yes; I would not like to anticipate what the effect of last year will be.

8708. If the present prices continue you anticipate that there must be a very great increase in the area of land that is already out of cultivation?—There must.

8709 And what will be the effect under those circumstances upon the labourers?—If there is no land under cultivation the labourers will not be required.

8710. I observe that you say that "Everything points "to a winter and a spring of exceptional hardship "and privation for the labourers in the parts of Essex "through which I passed." You can see no means of cultivating the land by which this hardship could be averted to any degree?—Not if the cultivation of land is to be conducted with a profit—not if profit is to take any part in the play.

Reduction of labour.

8711. Were you told by anybody that they would have to discharge their labourers?—Yes.

8712. By the farmers whom you visited, or the lands you walked over, or where did you get it?—Many farmers mentioned it indirectly, and one gentleman mentioned it directly, and I think I give a quotation. That was a landlord farming his own land, and he made the statement to me which I put in the Report.

8713. Where is that?—Paragraph 105, page 53.

8714. "I have now told my bailiff that my labourers must go." Is that the point?—Yes.

Scotch farmers in Essex.

8715. I observe in paragraph 117 you criticise very severely the character of the farming by Scotch farmers. You say, "On several farms held by Scotchmen the "fallow lands were very foul, and the old pastures "decidedly impoverished. Hay-cutting and selling, one "of the surest ways of destroying grass pastures has "been prosecuted to an unjustifiable extent. . . . "I observed a great deal of this agricultural greed "going on, but I am of opinion that Scotchmen are "the chief culprits." Did you find the English farmers guilty of the same malpractices?—Not to such a large extent as amongst the Scotchmen. I am very decided upon that.

8716. The fact is that those Scotch farmers were taking all that they could possibly get out of the land?—That is what they were doing, and using nitrate of soda, I think improperly.

8717. And that accounts for their losing less than their neighbours?—It may be.

8718. What class of farms do you consider has suffered most?—Very strong soils, three-horse soils which are adapted to the growing of wheat and beans, and where bare fallows are necessary.

8719. I ought to have said, what class of farm in point of size has suffered most?—I thought the very small ones under 40 acres were suffering more than any other class. I saw very few of them.

8720. What is the case with regard to medium sized farms of 200 or 250 acres?—I think I have a paragraph about that.

8721. I see in paragraph 116 you say, "So far as I "could see the larger farmers have suffered no more "than those in occupations which might be described "as of medium size, and both have suffered less than "the holder of small areas"?—Yes.

Low prices.

8722. Now, with regard to the remedies for this state of things, what are the opinions that you gathered in Essex from the men who suffered themselves?—They thought that the low price of wheat and the low price of beef and mutton were the chief causes of the depression.

8723. And that anything that would raise the prices would improve their position, I suppose?—I think what you have just now said is an exact quotation of what they say.

Mr. R. H. Pringle. 22 Feb. 1894.

8724. Did they look to anything else?—They were very severe upon the burthens upon the land.

8725. With what they considered adequate reductions in those burthens, do they think it would be possible to continue to cultivate this land?—It was so stated at all the meetings. They believe that the land is carrying undue taxation, and they thought if the land was fairly taxed it could still compete with the foreigner.

Burdens on land.

8726. Is it your opinion from what you saw that any reduction of the burthens on the land that is conceivably possible would enable them to cultivate this worst class of land?—Would you urge that question upon me?

8727. Yes?—I think that in the stiffest soils it has got beyond the question of taxation altogether.

8728. What is your idea of any possible improvement. I observe that in paragraph 198 you say, "Concurring "as I do, with these opinions, it is by no means easy "to see or recommend any speedy course of action. "The main hope lies, I think, in the *possibility* of laying "more of the land down to grass and farming it on "some rotation where the extent under the plough is "kept at the lowest economical area." Does that apply to this worst class of land, because that would appear to me to be inconsistent with what you have said about grass in other parts of the Report?—I think, taking Essex all over, that an increase of grass, the introduction of the border six or seven years rotation, would be advantageous to all parts of Essex.

Land laid down to grass.

8729. The introduction of what?—Of a temporary pasture rotation, would be advantageous to all parts of Essex. But I put in the word "possibility" because I am not altogether so sure that the very stiff land could be got to lie in grass.

8730. A vast number of notices to quit have been given during last year, I understand?—A great many.

8731. If those are carried out there will be thousands of acres, I suppose, in addition uncultivated?—There will.

8732. And you cannot suggest to the Commission, I gather, any change of system in farming or any alterations in legislation which are at all likely to restore the position?—I think that I did make a slight suggestion as to the system of farming, in so far as I thought that if the temporary pasture rotation were introduced it would be advantageous.

Change in system of farming.

8733. If it was possible on the bad land, about which you have some doubts?—I have some doubts there. I commented perhaps more strongly than I should have done that the Board of Agriculture might take a part in demonstrating and testing the question as to whether suitable grasses could be found.

8734. I have only one more question to ask. You wind up with a very emphatic statement after all your inspection in the county, and in paragraph 201 you say, "nor is it at all likely that fresh capital will flow into a "county where land is taxed and rated out of all pro- "portion to its real value, and without fresh capital "Essex, so far as its agriculture is concerned, is lost.' Is that your deliberate opinion?—No, sir; I would not like to say that that is my opinion; that is really a summary of the evidence given to me in very strong and positive language. I should not have said such a thing were it not a summary of the evidence given on the point.

Prospects in Essex.

8735. (*Chairman.*) I understand that it was not your own opinion?—I rather reserved my own opinion.

8736. You have not given it as your own opinion?—I would not like you to take it so.

8737. (*Mr. Chaplin.*) You gave it as the outcome of the evidence before you?—Yes.

8738. *Chairman.*) You do not say it is your own opinion, but it is a summary?—Precisely so.

8739. (*Mr. Lambert.*) As to the portion in Essex that you have reported on, is that the worst portion of the county?—Yes, to the east of the Great Eastern Railway is undoubtedly the worst.

8740. So you have reported on the worst portion of the county?—And perhaps the best too.

8741. But the conditions are not so disastrous in the best portions as in the worst?—Nothing like it.

Mr. R. H. Pringle. 22 Feb. 1894.

8742. In paragraph 92 I see a farm has been out of cultivation for 15 years; that would be during the time of high prices, would it not?—1879 was a wet season.

Land out of cultivation.

8743. Yes, but the prices were not then so depressed as now?—They were not so bad.

8744. Have you reckoned such land as has been out of cultivation 15 years in the category of the land given us?—This particular farm is marked "out of cultivation" in these maps.

8745. Are there a great many other farms of the same description that have been out of cultivation 15 years or something like that—I mean to say that have not been thrown out of cultivation owing to the late bad seasons?—There was a great acreage of land that went out of cultivation in consequence of the season of 1879.

8746. And a large portion of this land has not gone out of cultivation owing to the recent seasons and prices?—It has gone out owing to the depression of agriculture which has existed since 1879.

8747. But not owing to the depression which has existed recently?—Any amount of it has gone out of cultivation within recent years.

8748. Could you give any proportion?—I could not because it is very difficult. From practical experience I could tell you of land that has tumbled down within the last three years, but I would not like to say that I could discriminate any further.

Unoccupied farms.

8749. You say that in 1893 there were fewer unoccupied farms than in 1886?—Unoccupied.

8750. But I presume an unoccupied farm would mean a cultivated one?—No, I was over plenty of uncultivated land that was occupied at perhaps 10*l.* for 600 acres. That land was occupied, but it was not cultivated.

Tithe.

8751. In paragraph 44 you say the rent is 1*l.* per annum, the tenant paying tithe, 140*l.* a year. I thought under the recent Tithe Act, if the tithe was two-thirds of the annual value, it should be reduced?—Yes.

8752. How is it that they have to pay 140*l.* for tithe and 1*l.* a year rent?—If he appealed under section 8 of the Act he would get a remission.

8753. How could that be if the annual value is only 1*l.*?—The annual value is the actual rent plus the tithe. The present value of the tithe on this farm is 140*l.*, the rent is 1*l.*, and the total annual value under Schedule B. is 141*l.*; two-thirds of 141*l.* is 94*l.*, consequently there could be a remission of 47*l.* under section 8 of the Tithe Act on this farm.

8754. (*Mr. Elton.*) But the tenant pays the tithe as well as the 1*l.* rent?—Yes, the tenant pays the tithes.

8755. To the landlord?—Yes, I should presume so.

8756. He pays his landlord the amount of the tithe plus 1*l.* for himself?—I would not like to say that is so in this individual case. There are a great many instances in which the tenant still pays to the tithe-owner; but under the Act he should pay to the landlord.

8757. (*Mr. Lambert.*) In paragraph 115 you say:—"Some farmers have made a little headway." On what kind of land would that be?—I see you refer to a Lancashire man?—I was over half of that Lancashire man's farm; there was a bit of it very strong, near Chelmsford particularly strong, and that was in three years grass. The pasture was not very good, but still it paid the rent. There was another piece on fair mixed soil under the plough.

8758. Do you think that these conditions could be applied to other portions of the county?—A great deal more than at present.

Small farmers and large farmers compared.

8759. You concluded that the small farmers were suffering more than the large, that was the summary of your Report?—It was so far as I saw them and heard of them.

8760. Would the rent and conditions of the tenancies be the same in small holdings as in the large?—I think there was not anything in the rent.

Competition for farms.

8761. In paragraph 116 you say there was a rush for small farms some years ago?—Yes, that is the evidence; I was told that.

8762. Owing to that rush was there a fictitious value given to those farms?—Probably there was, it took place before I went.

Dairying.

8763. You say that there should be an increase in dairying, or you think so; that is your opinion in some parts of it?—I think I qualified that afterwards in the last paragraph; I thought that an increase of output of milk would be disastrous.

Mr. R. H. Pringle. 22 Feb. 1894.

8764. You do not think that there is any opening for the increase of dairying?—Dairying could be increased, of course it could, but I am not sure that it would be very good for those who were engaged in it, unless it took the form of butter and cheese manufacture.

Buildings.

8765. And you also state that upon a great many farms the buildings are not what they should be?—They are inferior.

8766. And in the days of fairly high rents the buildings were not kept up in the condition that they should have been?—Not to my eye.

8767. And the Essex farmers have little knowledge of grass?—That is exactly what my Report says.

8768. That would intimate that the Essex farmers do not understand the rotation which is practised by the Scotch farmers?—I do not think that they are grass farmers.

Fruit growing.

8769. Do you think that there are any openings for fruit growing in Essex?—I saw some fruit trees in the three-horse land, but they appeared to me to be dying off. I inquired into the matter, and I was informed that the tendency of fruit trees in these stiff lands was to rather die off at the roots, consequently I formed the opinion that on the stiff lands fruit-growing, so far as orchards were concerned, could hardly be extended profitably. Upon the mixed soils I have no doubt that berry bushes might be grown very largely.

Poultry farming.

8770. Would there be an opening for poultry farming?—I think there is a good opening, and poultry farming has been immensely increased of late years.

8771. So that if that kind of farming were carried on that would be an inducement to the small holders to remain upon the land?—Yes; I think it might be made a great deal of.

Dairying.

8772. Do I understand this point: that dairy produce could be produced in Essex, but that you are afraid there would be no market for it?—That is just exactly my point. There is no doubt the dairy farming might be extended, but I do not see that the sale of milk could be profitably extended. This was very prominently put before me.

8773. (*Mr. Channing.*) If it were made universal the supply would exceed the demand, would it not?—That is it.

The Agricultural Holdings Act. Counter-claims.

8774. (*Mr. Lambert.*) In paragraph 156 you say that some counter-claims under the Agricultural Holdings Act are sometimes oppressive. Were any instances brought before you of that?—Yes; there was one instance brought before me of a case where a tenant had spent a very considerable sum of money—a large sum of money—and where he had infringed the lease somehow or another. He made a claim under the Agricultural Holdings Act, and his claim was entirely annihilated by the counter-claim on the part of the landlord.

8775. Do you consider it an unjust counter-claim, or was the case not stated to you?—I had no means of forming an opinion. It apparently took place some years ago. I recollect the case myself, I was interested in these matters, and I knew that he had laid out a good deal of money on the land, but I never saw his lease, and I do not know what clause he broke, or anything about it.

Security for tenants' improvements.

8776. Is there a desire for better security to the sitting tenant?—There appears to be from the evidence brought before me at meetings and in private.

Arbitration courts.

8777. I notice that at Braintree it was carried *nem. con.* that it was desirable that arbitration courts should be established by the Legislature as soon as possible?—That was one of the resolutions.

8778. And what would those Arbitration Courts mean?—I do not know.

8779. What would they be established for?—Will you kindly refer me to the paragraph?

8780. Paragraph 158, page 70?—To settle disputes between the landlord and tenant, generally speaking.

8781. Would that include the fixing of rent?—I think so, undoubtedly; that was covered by the resolution.

8782. Do you think it would be desirable, judging from what you have seen?—I have not an opinion upon the point.

Mr. R. H. Pringle. 22 Feb. 1894.

8783. But you thought there was a desire amongst those farmers that there should be a court established for the fixing of rents?—I did; more than that, I say so, because at every meeting, except one, it formed the subject of a resolution.

8784. How many meetings did you hold?—Four.

8785. And at three out of the four the farmers were in favour of a court for the fixing of rents?—They were.

8786. Was it the opinion of the farmers that it would be desirable to give the sitting tenant the prior right of having the sporting rights?—It was very distinctly expressed that it would, but I must say this, that there were only two estates where there was any complaint at all about flying game, and those were in cases—I think I say it in the Report—in which there were shooting tenants, and it was from the tenants of those estates that this matter was mentioned.

8787. (*Chairman.*) You found that where a disagreement arose they were shooting tenants?—Yes.

Ground Game Act.

8788. (*Mr. Lambert.*) And upon the subject of ground game did you find the farmers in favour of facilities for killing the ground game?—I had no reason for supposing that the ground game was a grievance at all.

8789. They had full facilities for killing them?—Yes, under the Ground Game Act.

8790. But the farmer's right to kill them has been extended?—It was extended by the Act as far as necessary, but there has been no oppression as far as the evidence went.

8791. (*Mr. Channing.*) The maps that you have shown us which are of great value have been marked as regards unoccupied fields locally I understand?—Just locally, from parishes taken here and there.

8792. But not by local persons?—Oh, yes. The Maldon map was marked by Mr. Fitch, the Chairman of the Board of Guardians, and Mr. Freeman, the Clerk of the Union. The Billericay map was done by Mr. Coverdale, Lord Petre's agent, assisted by two or three other gentlemen. The Chelmsford map was done by Mr. Coverdale also, and Mr. Lawrence Marriage and Mr. Offin, and the Rochford map by Mr. Offin and Mr. Lawrence Marriage.

8793. Would there be any difficulty in getting the maps completed?—I think not. It might be necessary to find a little £ *s. d.*

8794. Then it would not involve a visit by yourself to the county again?—I would like to go myself.

Land out of cultivation.

8795. I asked you that question with a view of asking you another to clear up a point about which Mr. Lambert put a question; what precisely are we to understand by those uncultivated fields; they are fields which in many cases are occupied?—By stock, as summer grazing. These uncultivated lands were formerly under rotation and are now under no rotation at all but under grass, good, bad, or indifferent.

8796. Would they be returned in the "cultivated area" to the Board of Agriculture in the Agricultural Return?—I think they would be returned as either temporary pasture or probably permanent pasture after lying a certain time.

8797. Then with regard to the six or seven years rotation in these temporary grasses that you are recommending, I want to ask you whether the feeling among landlords and agents is to allow them any agreement, or whether tenants have the slightest difficulty in obtaining the land under those terms?—There is not a single landlord or agent that I spoke to but would have been delighted to give tenants all and full facilities that would be anything to their advantage in this connexion.

8798. You referred to one Lancashire tenant?—Yes; I was talking to Mr. Lambert about him just now.

Rent.

8799. Are you aware of the rent paid on that farm for a long number of years previous?—I think it is given.

8800. I have in my hand the report of a Lancashire Tenant Farmers' Committee, who inspected this farm, and the rent is given previous to Mr. Lofthouse being there. The old rent was at 450*l.* a year for two terms of 14 years, in addition to a tithe paid by the tenant, 98*l.*, equal to a total of 548*l.*, and those terms were paid up to 1885. Is that consistent with the facts within your knowledge?—I got them from Mr. Hilliard, the agent on the estate, and I talked to Mr. Lofthouse, and I got from him the particulars of the rent, and it fits in exactly with what you say.

Mr. R. H. Pringle. 22 Feb. 1894.

8801. The rent paid by Mr. Lofthouse is 150*l.*?—That is the figure.

8802. Do you think he will get on with the farm at that rent? Have you formed a favourable opinion of his bargain?—I was over it, and I thought the man would do if he did not grow wheat.

8803. He was working it with his family?—He had a large family at work.

8804. And with the temporary grass system, the Scotch system?—Yes.

8805. Were there any other Lancashire farmers there?—I saw no other Lancashire farmers.

8806. Can you tell me anything about the remissions of rent made to the former tenant, to Mr. Dewar? Is it within your knowledge whether he actually paid this total of 548*l.* down to 1885, or whether the rent was nominally that sum, and he had large remissions from it?—I have no information upon the point. I have got Mr. Lofthouse's evidence before me. I see the acreage of the farm is 364 acres.

8807. Did you see the old tenant when you were there?—I saw Mr. Lofthouse. I did not see the old tenant.

8808. You are not aware of his statements?—No, I did not see the old tenant.

Reductions and abatements of rent.

8809. Did you form any impression (I do not know whether it is stated in your Report), as to the remissions of rent or abatements of rent, or whether if they had been made earlier in the period of depression they would have helped the old tenants to get over their difficulty?—Do you mean generally speaking?

8810. Yes; whether you have formed any opinion that the abatements came rather late in the day?—The abatements dated back to 1879. They began then, and there were large abatements and reductions and remissions given regularly all through. No doubt if they had had bigger abatements and bigger reductions it would have helped; but I would not say that the landlord had stood in the light of his tenants.

8811. Have you any cases of leaseholds as late as 1885?—Some.

8812. In these farms, perhaps, the abatements were not made so freely?—I could not say that I have heard any complaints of that.

Equipment of farms.

8813. You have given very strong evidence in your Report as to the want of equipment of the farms?—Yes, I did put it very strongly in my Report.

8814. And that a sufficient return of capital was not made in the good times?—Yes.

Security for tenants' improvements.

8815. Mr. Lambert put a question to you about security to the sitting tenant, and I suppose what I am to understand from your Report is this, that there was a very strong wish expressed by many of the tenant farmers to have security for their improvements, and to have their farms at a fair rent?—That is exactly it.

8816. —That is the thing that would allow them the enjoyment and the full results of their labour?—The enjoyment. They apparently held that the enjoyment of one's own improvements was of greater value than any compensation that could be got by Act of Parliament.

Cross-cropping.

8817. There was one passage in your Report which refers to cross-cropping, as being winked at by the agents. Did you have evidence on that point?—I had no specimen brought forward, but it was frequently referred to.

8818. And that they allowed things to go on, and when the tenants made a complaint it would be brought up?—It was there to be brought up.

Freedom of cultivation.

8819. Was there a strong expression of opinion as to freedom of cultivation so long as a man is responsible for the ultimate result?—There was no expression of opinion because, I believe, that they have got it. The Essex farmer can cultivate as he likes; there is no exception, excepting with respect to the last two years of a tenancy.

8820. Am I right in understanding from that passage that there is a feeling that although they cultivate as they like, if they wanted to put money into their farms, any substantial outlay into their farms, they would not be safe were the cross-cropping a breach of

Mr. R. H. Pringle. 22 Feb. 1894.

covenant?—Probably he would run a risk, and there might be something heard about the cross-cropping in the event of a claim. That is the evidence given to me.

8821. Would freedom of cultivation and valuation of the ultimate results to both sides, efficient covenants and fair rents, tend, in your opinion, to make the farmers put more capital into the land?—I think it would undoubtedly do away with what they consider a grievance, as stated to me. It would prevent the bringing in or raking up of cross-cropping.

8822. I cannot put my hand upon that in your Report, but my impression is that you say that the sense of insecurity does diminish the motive to put money into the farms in Essex?—It is in the 158th paragraph.

The Agricultural Holdings Act. Valuation.

8823. That seems general in that sense. I will not ask you anything further on that point. You referred to the practice of valuers, not to state items in their award in respect of which they award compensation?—The different figures are given.

8824. You are of course aware that that is inconsistent with section 19 of the Agricultural Holdings Act, which requires them to do so?—I respectfully beg to differ from you. I do not think that the section of the Act binds. Take the instance of a muck heap. They do not give the measurement in their awards, and they do not say how much per cubic yard, and the Act does not bind them to do so.

8825. "The sum awarded in respect of each improvement, act, matter, and thing," that is sub-section (*c*) of that section?—The farmer wants fuller particulars.

8826. They are not allowed to give general compensation, but to give compensation according to the items generally?—Yes, the farmers appear to want to know how much per ton for their hay, and how much hay is being sold and everything, just the same as the account you get from the grocer.

8827. What I want to know is whether valuers do not take the matter into their own hands as regards procedure under the Act?—The evidence is undoubtedly to the effect that the valuers take the matter pretty much into their own hands.

8828. They form their own time scale, lump the exhaustion, and they apply that without very much consideration of whether the work or improvements have been carried out well or ill?—Yes.

8829. That is one defect in the practice of valuers?—Essex farmers think so.

Subdivision of farms.

8830. You say that some of the moderate sized farmers have got on—those who work with their families have got on tolerably well, and those who do the work with their hands have got on fairly well, and managed to make a rent after a fashion. At the same time, in another part of your Report, you say there is a great reluctance to break up large farms to make smaller holdings. But if this greater security and continuing at a fair rent was to hold good, would not the farmers be more willing to press the landlord for those moderate sized farms, and would there not be more willingness to carry them out?—I think it would have that tendency.

Buildings and drainage.

8831. You attribute in your concluding remarks a considerable share of the distress in Essex to improper farm buildings and want of drainage?—Yes, the buildings are very bad, and I think the farmers are severely handicapped, and there is a great deal that requires draining and cannot be properly cultivated until it is drained.

State loans for improvements.

8832. Can you say whether loans could be usefully made at low terms to Essex landowners with a view to improving the building and equipment and drainage and so on?—I think I recommended in the Report that it should be so. Perhaps I do it in the name of the Essex farmers, but it was very generally spoken of, and I think that it is desirable.

8833. Do you think that it is practicable?—I do.

Scotch farmers in Essex.

8834. (*Mr. Everett.*) The Scotch farming in Essex may be roughly summarised as the minimum of employment of labour, and the minimum production, may it not?—Yes, I think that is a very fair description.

8835. These Scotch farmers come from one district in Scotland?—Chiefly from the west country and south-west country.

8836. Did you get any idea why it is that only one district of Scotland has sent emigrants into Essex and the Eastern counties?—As far as I could gather it was the rents. I know that part of Scotland pretty well, though not as well as the east, but the rents are high there, and there is great competition for land, and the leases seem to be rather strong in their clauses. It is poor soil in the west part of Scotland as a rule. I think putting all these together you get the reasons for bringing them south.

Mr. R. H. Pringle. 22 Feb. 1894.

Characteristics of Essex land.

8837. (*Mr. Elton.*) I understood you to say that Essex is divided into three grades of soil. I know Essex a little. Were you in the worst or in the first, second, or third grade? There is high land; were you there?—No, I was in mixed soil. You can hardly make subdivisions of soil in the three-horse land.

8838. But there is a part, and that the highest part, about which you do not give evidence?—I was not there.

8839. Do you think that the land that you were in had exhausted all its growing properties?—No, I would not say that. I should rather expect it is difficult to exhaust it and to keep it clean, but a great deal of the land was very foul.

8840. You thought that it was not making good pasture land?—I think it would not; it was hardly grass land.

8841. Do you recollect the wheat and beans ground which is now used for pasture in the Vale of Aylesbury?—I have never been in the Vale. I have been very near it, but I have never been in it.

8842. I wanted to get your opinion about that again definitely. You say the strong clay soil is not good for fruit?—I know very little about fruit, and I saw so very little in strong soil that my opinion would not be worth much.

8843. There may be a possible exception as to lias soils—clays?—There may be.

8844. There is, because the best apples and pears are grown on that?—I do not doubt the point.

8845. Did you find any fancy seeds, like canary seeds and so on, grown extensively?—Yes, up near Braintree.

8846. Is that a good fruit place?—I think so.

8847. Is there a tendency for it to increase again; you know there was a great deal at one time?—In turnip seed growing and mangold seed growing there is rather an increase; but I think that fancy seeds are rather on the decline.

Tithe.

8848. When the farmers used to talk about tithe, did you not find that where they paid the tithe they took it as not part of the annual value, but as a separate thing; they considered that if they paid 50*l.* tithe, and 1*l.* rent, they called the annual value 1*l.* and not the 50*l.*?—I cannot call to recollection any tenant talking about annual value; they just told me the rent and the tithe too.

8849. At any rate they have not got to pay the tithe by the Act?—They talked about so much rent and so much tithe, my note book is full of that.

8850. They kept the tithe separate as being paid by the landlord?—They do not jumble it up with the rent.

8851. They do not take it as part of the annual value?—They do not.

8852. Their complaints mentioned in your Report may be read with that explanation?—I think so.

Area of Essex reported upon.

8853. (*Lord Vernon.*) About what is the acreage of the land over which the Report you made is spread?—I should think somewhere over 200,000 acres.

8854. That is about a quarter of the whole of Essex?—I think perhaps it would be more than a quarter.

8855. Is it the worst part of Essex?—Undoubtedly the Eastern Division to which my Report refers is the worst part of Essex.

8856. May we practically understand that the land that you class as land out of cultivation is really very inferior land?—It is not inferior land for a certain system of farming; it is very superior land for wheat and beans, but it is inferior at present prices.

8857. Do you think that a certain portion of it would not have been brought into cultivation unless it had been unduly stimulated by high protective duties?—I should need to go back a long time for that.

8858. Not such a very great while?—It is natural to suppose that wheat growing land many years ago was rather successfully cultivated there.

Mr. R. H. Pringle.

22 Feb. 1894.

Land tax.

8859. (*Chairman.*) This land has suffered from going out of the cultivation of wheat?—That is so.

8860. (*Lord Vernon.*) One question about the Land Tax. I see that on page 77 of your Report you have got Essex down in 1798 as being assessed for Land Tax at 88,647*l.* as against a county like Westmoreland at 3,000*l.* That is an enormous difference. Now the amount redeemed and exonerated since 1798, although put down at 50,000*l.*, is, under the present quota, put down at 38,000*l.* That is so enormously different from any other county that I shall be glad to have your explanation?—That is the Return of the Land Tax, which the Secretary got for me.

8861. (*Chairman.*) For some reason or other Essex is very heavily burdened with Land Tax?—Apparently so.

8862. (*Lord Vernon.*) How would it be fixed?—100 years ago Essex land was undoubtedly worth a very considerable rent, perhaps double as much rent as many counties which are now worth a great deal more than Essex.

Successful farmers.

8863. (*Chairman.*) I should like you to turn to the balance sheet of that farm in Appendix C., at page 91. You there give a balance sheet of a farm of 950 acres. Whereabouts was that farm?—Half way between Ongar and Chelmsford.

8864. What quality of soil is it?—Mixed soil; a good deal of stiffish soil; but not three-horse soil.

8865. Is it goodish clay?—Yes.

8866. May it be taken as a fair average of Essex land, other than the very worst?—It is a fair average of the quality of the land; but extremely well farmed.

8867. You went over that farm?—I rode over it.

8868. Is it farmed by a tenant farmer, or by the owner?—It is farmed by a tenant farmer; I will give you the name, but I would not like it taken down.

8869. You say that this is well farmed?—Admirably farmed.

8870. If you give the net results of the farm for 14 years there has been a profit of 400*l.*, which represents 3 per cent. upon the capital. Now, if you will take the last six years you will find that the profits have averaged 740*l.* a year?—Yes.

8871. And that since the earlier years, which include some bad years following 1879, the rent has been reduced from 1,184*l.* a year to 741*l.* a year?—Yes.

8872. Therefore the last six years have had the benefit of the reduction of rent from 1,180*l.* a year to 740*l.*, and with that reduction the profits have been 740*l.* a year, or about 6 per cent. upon the capital. That is the result, I think?—Yes.

8873. Apparently two-thirds of the farm is arable, and one-third pasture?—Yes.

8874. And the wages appear to amount to about 2*l.* per acre?—That is about it.

8875. The rates amount to 3*s.* per acre, the tithe to 3*s.* 6*d.*, and the Land Tax to 2*s.*, making the total charges of that kind 8*s.* 6*d.* per acre?—Yes.

8876. Judging from that do you think it is possible that other land of the same kind may be farmed to the same advantage, because 6 per cent. upon the capital during the last six years does not seem to be a bad return?—Quite so. This gentleman, as I explained in paragraph 109, is an expert. He has a very large capital, as you will see from the books, and he is rather a model man altogether.

8877. But you told me at the beginning of your evidence that you did not know of any case where anyone had done well, other than the Scotch farmers; but this would seem to be a case where the man has done fairly well by applying considerable skill to it, as you see, and being an expert?—In answering your question I was not taking the last six years out, but referring to the accounts as a whole.

8878. What I have to point out is that the earlier years of the 14 years were burdened with heavy rent; the rent was reduced in 1886 from 1,180*l.* to 740*l.*, and since then he has had the advantage of that reduction, and if you take the average of the last six years you will find an average profit of 740*l.* a year?—But in these accounts I have charged no interest upon capital, and nothing for management.

8879. That works out 6 per cent. on his capital?—I am sorry that I said anything of the figure, since his rent has been reduced, he is a better man to that extent.

Mr. R. H. Pringle.

22 Feb. 1894.

8880. You are speaking of a farm which is still an arable farm?—There has been some slight increase of pasture land on this farm.

8881. But still, in the main, it is an arable farm?—Yes.

8882. But it seems to have been worked on the principle of making his profit partly out of milk, and partly out of live stock, and partly out of the sale of hay?—By adopting a mixed process of farming; by the sale of corn, barley, milk, and partly by the sale of hay, he has succeeded in making a fair profit during the last six years, with the reduction of rent. I do not think that the farmer in question would exactly like to have his profit called a fair profit.

8883. It is 6 per cent.?—Yes.

8884. And besides that he has lived in his house, and paid no rent for his house?—He pays rent for his house with the farm.

8885. He has lived rent free?—Yes.

8886. And he has made 6 per cent. upon his capital?—He has got nothing for his time though.

8887. Do you say that 6 per cent. is not such a return as a man ought to expect?—No, I think that a farmer is entitled to more.

8888. If entitled to more there is still a margin of rent from which to draw?—Yes.

8889. Supposing he now pays 740*l.* rent, and supposing, instead of being entitled to 6 per cent. upon his capital, he ought to expect 8 or 10 per cent., is there not still a margin of rent from which to draw?—Yes, if there were another reduction he would be so much the better off.

8890. If he continues at 740*l.* a year one may presume that he is satisfied; at all events he is content to go on paying that rent?—I do not think that he would like to see anybody else in that farm.

8891. Then, on the whole, he is fairly content with the conditions?—I cannot go that length.

8892. He is content to go on paying that rent?—Yes. This gentleman was good enough to give me the whole of his books, which were carefully kept, and I made them up in the office, and he came down and went over them with me.

8893. But am I not substantially correct when I say that these accounts show that his rent has been reduced from 1,180*l.*, or thereabouts, to 740*l.*?—Yes.

8894. And that he is still paying at the rate of 16*s.* per acre, or 740*l.* a year?—Yes.

8895. And therefore if he is not satisfied with his position, and if no other people are likely to take the farm at the same rent, he would probably get a reduction?—There is room for it.

8896. And if he is not making enough interest for his capital, a reduction of rent would make up the difference?—Pardon me; there are two or three farms together. One of these farms was taken in 1865; the rent was 660*l.*, and on the tithe there was a reduction of 125*l.*, on that one farm of 500 acres.

8897. You need not go into details, but substantially I am right, am I not, there is a considerable reduction, but even with the reduction he is paying 16*s.* per acre, and if his interest is not sufficient to enable him to live as a farmer, there is a margin for him to draw upon?—I think so.

8898. Do you think that others in the neighbourhood might not do as well?—I am very far from saying that a reduction of rent would not benefit Essex generally.

8899. But looking at the whole position, might not others do as well as that farmer is doing?—No, he is not an ordinary man at all.

8900. Why is not he an ordinary man?—If you look at those tables on page 56 which are abstracted from these accounts, you will see that the total of sales per acre on this farm were in 1891 and 1892 14*l.* 18*s.* 5*d.* and stock purchased per acre 5*l.* 16*s.* 6*d.*, and the feeding stuffs and manures per acre 3*l.* 5*s.* 8*d.*, these are enormous figures.

8901. That rather tends to show that by the application of a large amount of capital he is enabled to weather the storm?—But do not forget his head piece; he is a splendid fellow.

Mr. R. H. Pringle.
22 Feb. 1894.

8902. He supplied talent to the concern, and the result is that it is not a bad one, even in bad times?—If you could get a lot of men like this gentlemen with money and brains and activity and energy and steadiness, they would hold out better than others.

8903. It is not a case of holding out, but he has done fairly well, and if he is not satisfied with his position he has something to draw upon; that is the case of the arable farm. Now the next case is that of the Scotch farmer. He has taken a farm of 636 acres and farmed it on a different principle, namely, he has allowed it to go into grass and is employing as little labour as he can. Here is a case of 636 acres; 71 acres now is arable; 318 is old pasture, and 247 is temporary pasture; is that what you would call land gone out of cultivation?—No.

8904. It is not what you would call gone out of cultivation?—No, that would be broken up again.

8905. This gentleman appears to have reduced his wages paid per acre from 2*l.* an acre paid by the last farmer to something under 1*l.*, considerably less than the others?—His wages in 1892 and 1893 were 13*s.* 3*d.* per week, threshing included.

8906. And the result of his operations has been that on the four years average he has made a profit of 12½ per cent. on his capital. He has done fairly well?—He has done fairly well.

8907. He has lived in the farmhouse free, and probably he and his family have lived there too. He has done fairly well?—Yes.

8908. (*Viscount Cobham.*) Has he employed his family?—He has two children, but they are very small ones.

8909. (*Chairman.*) Is there any reason why others should not do as well as he has done?—The same reason as the farm referred to in Appendix C 1. He is head and shoulders above others, he is an extremely clever man.

8910. Then it is still possible for a clever man to make money out of it?—I think some men will float while others sink, and you have got two specimens.

8911. It would seem that the average produce per acre is not very low, it is varying from 6*l.* to 6*l.* 13*s.* an acre?—This is a dairy farm.

Arbitration courts.

8912. Now you have stated in answer to one of the questions put to you that the farmers were desirous of arbitration on rent. You say at paragraph 158, "Before "consenting to the adoption of these resolutions several "farmers submitted that Arbitration Courts for the "fixing of fair rents should be optional, and not com-"pulsory?"—Yes.

8913. Did you understand what they meant by that?—I did. It arose in this way. The farmers were discussing the Irish Land Act. There was a resolution brought forward absolutely naming the advantages that were being extended to the Irish tenant farmers; I took no part in the discussion except to clear away a point. A large number of the farmers seemed to think that the Irish Land Act was compulsory, that you were bound to go into Court without attempting to come to any agreement with the landlord, and the matter was referred to me. I produced the Irish Land Act, and read them the clause which deals with the point. Then when they saw that the Irish Land Act was not compulsory, those who previously objected altered their opinions.

8914. Did they know that the landlord might go into Court as well as the tenant?—They did.

8915. Would they be content with the landlord here going into Court?—I made it very plain.

8916. To fix the rent for seven years?—The term of years did not arise; they did not mention it, 15 years is the judicial term in the Irish Land Act. They affirmed the principle, and I think on several occasions they did say that there ought to be re-valuation at seven years, they thought that 15 years was too long.

8917. Did they discuss the question as to what would have happened if they had had judicial rents some years ago, and the falling rents of the last few years?—I do not think that that was taken into consideration; it was the principle that they were desirous of putting before me.

Mr. R. H. Pringle.
22 Feb. 1894.

Fixity of tenure.

8918. Did they understand by that fixity of tenure as well as arbitration on rents?—I think they were rather stronger upon the fixity of tenure than upon the fixing of rents.

8919. That they should be given by the Legislature an absolute interest in their holdings and be irremovable?—Yes, as being superior to the Agricultural Holdings Act they contrasted the two.

8920. They considered that a man who took his farm a year or two ago should be entitled to remain there for ever?—I think with a fair rent they did; that is to say that he should not be put out of it.

8921. That is the same thing?—Yes, it is very much the same thing.

8922. He cannot be put out, and if he is entitled to a judicial rent he is entitled to a fixity of tenure for ever?—Yes.

8923. (*Mr. Chaplin.*) Who were these gentlemen of whom you have been recently speaking, those tenant farmers?—There was one meeting where the matter was brought forward and there were 280 farmers there.

8924. In what neighbourhood?—That was at Braintree.

8925. Were they representative farmers?—I should think so.

Landlords and tenant.

8926. Is not there one part of your Report in which you state that the farmers whom you met said that the landlords had behaved very fairly in respect of rents, and there was a most friendly feeling between them?—Decidedly.

Successful farmers.

8927. (*Mr. Little.*) Are not those two gentlemen you have spoken of exceptional men?—Very exceptional men.

8928. In abilities and in command of capital?—In both of those respects undoubtedly.

8929. Would you not think that exceptional men would be entitled to something more than average profits?—Certainly so.

8930. And the prizes of the profession generally go to the exceptionally clever?—There is no good in being exceptionally clever if you do not get something for it.

8931. The profits of 6 per cent. and 12½ per cent. for those exceptionally clever men farming under the greatest advantages, do not seem to you a fair commercial profit?—I think that the 12½ per cent. is a fair profit.

8932. What does it amount to in a year at 12½ per cent.?—I think it is about 1*l.* an acre profit.

8933. About 600*l.* a year?—Yes.

8934. Considering that there are many thousand pounds invested, is 600*l.* a year any great prize for the best man?—No, it is not; and in the other case, I think that it is a very poor profit.

8935. The farmer, referred to in Appendix C. 1., is not only an extremely good judge of stock, but he has the capital to keep a very large quantity?—Enormous quantities. I never had to deal with such large figures on the same area. I saw a large number of cattle on these farms, this man goes into market and picks up three parts fat beasts, and brings them home, and keeps them for a month or so, and finishes them off. It is not every man who could find the capital for that.

8936. It is not every man who has the capital and the skill to do it?—No.

8937. (*Viscount Cobham.*) It is only 435*l.*, not 600*l.*?—Yes.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Seventeenth Day.

At 23, Great George Street, Westminster, S.W., Friday, 23rd February, 1894.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW LEFEVRE, M.P., in the CHAIR.

Viscount COBHAM.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN-THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
WALTER HUME LONG, Esq., M.P.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq., } *Assistant*
FREEMAN THOMAS, Esq., } *Secretaries.*

Mr. R. H. Pringle.

Mr. R. HUNTER PRINGLE re-called and further examined.

Mr. R. H. Pringle.
23 Feb. 1894.

23 Feb. 1894.

Condition of farmers in Isle of Axholme.

8938. (*Viscount Cobham.*) I wish to ask you a few questions upon your Isle of Axholme Report. It is very melancholy reading. You say that on the whole, financially speaking, the position in Axholme is as bad as in Essex?—I think it would be impossible to compare the two, because the land in the Isle of Axholme is useful workable land.

8939. But I mean with regard to the financial position of the actual cultivators of the soil at the present moment?—The one is just as bad as the other, but from different causes.

8940. On page 19 of your report you give us the effect of the depression on various classes. You state that the heavily burdened freeholder has suffered the most, and his position is very bad indeed, and in many cases hopeless. You make a distinction, then, between the freeholder and the renter of land?—Yes.

Mortgaged freeholds and tenancies compared.

8941. You consider that the position of the freeholder is worse than that of the renter?—Yes, I do.

8942. Owing, I presume, to the inelastic nature of the engagements that he has entered into?—Just so. The fact is, that the freeholder who has mortgaged does not get the same remissions from the persons to whom he has to pay interest that the tenant farmer does.

8943. Not merely that, but as I gather from other parts of your evidence he has actually to pay more in interest than what would be considered a fair rent?—I should think, probably, in a great many cases that I looked into, he has to pay double as much as would be a fair rent.

Arrears on mortgages.

8944. As to the arrears, they are not written off?—I think not, I think they accumulate.

8945. Is it your opinion that any farmer in any part of the country who is labouring under a heavy burden of arrears is practically in a hopeless position?—At any time it is a very severe weight upon a person, but particularly in times such as these.

8946. The lenders of money in many cases in the Isle of Axholme are hardly in a position to write off arrears, I suppose?—I could not say that. I did meet with one gentleman who was very largely interested in the matter as a solicitor. He had a great deal of money out both of his own and of his clients, and I could see no disposition on his part to write off anything, and he rather discountenanced the idea when any little hints of that kind were made.

8947. If it were possible it would be a great advantage if the arrears were written off?—It would be of immense advantage.

Condition of large tenant farmers.

8948. Then the second class that has suffered next heavily is the large tenant class. You say, "The "tenant who took land without adequate capital, has "neglected it, cannot stock it, is heavily behind with "his rent, and in debt to various tradesmen." That I suppose is generally applicable?—Yes. I saw over two farms which exactly answered that description. They were hopeless.

Condition of occupiers owning part and renting part of their farms.

8949. The third class that has suffered in your opinion are the "farmers of 30 to 70 acres who own "part and rent part, and who have their freeholds "either clear, or nearly clear of debt." I presume those are comparatively very few in number?—Not many.

8950. Should you say that if they took steps to get rid of their land at the earliest possible moment they would probably put themselves in a better financial position?—I do not quite understand the question.

8951. You say some are partly tenants and partly freeholders?—Partly freeholders and partly rent holders.

8952. Would they be better off if they ceased to be freeholders?—Yes, provided that the acreage was not reduced below a workable size, that is, supposing that a man retained at least 40 acres.

8953. You consider that 40 acres is about the minimum that can be cultivated with a profit?—On the fine land of Axholme, 40 acres would be a suitable holding. Anything less would, in my opinion, be too small.

Condition of small holders.

8954. We have been told frequently that small holdings are the most profitably cultivated by those who are half farmers or half labourers, or who have other strings to their bow. Do you find that to be the case in Axholme?—Yes.

8955. Are there a good many of that class?—Yes, and I think an increasing number.

8956. Are there many small tradesmen, as well as jobbing labourers and others?—There are not so many small dealers in that country.

8957. Dealers in farm produce?—Not stock; there is not much stock kept there, it is potatoes and corn chiefly. I found a comparative absence of small dealers among small holders. I have had some experience in small holdings, and one generally finds a good many jobbers, but not so many in Axholme as I have found in other places.

8958. They have to work immensely hard, I presume?—I think very hard at certain seasons; but taking the life of one of these small holders in Axholme all the year round I do not think that it is as hard as the agricultural labourer's.

8959. But speaking of those who are agricultural labourers at the same time, they are half labourers and they have a hard life?—Yes; I am sure of it.

Mr. R. H. Pringle. 23 Feb. 1894.

8960. Then you say, "The large and good farmers "with useful land at a fair rent, sufficient capital, "and of extensive, intelligent, and enterprising mind, "and good business habits," they are "holding their own"?—They are doing better than any of the other classes.

8961. I presume that that applies, unfortunately, to very few?—Very few. In the northern part of the Isle of Axholme you get rather out of the small freeholders, and into larger ones. It is magnificent land, it is warp land,—the whole of the land is artificially made by the flooding of the Trent.

8962. Is the land generally going into somewhat larger holdings?—No, I do not think so; I think that it is remaining about the same.

8963. When a small piece of land is given up, it is bought up by another small freeholder?—There is a great deal of cutting up, but this is a cutting up and handing over to other smaller men; but it is putting the land together again.

8964. The large landowners are not buying up the small holders, are they?—No.

8965. There is no tendency to aggregation?—There is no tendency in that way.

Quality of soil.

8966. Do you lay stress upon the quality of the land as affecting the position of the cultivators, and do you say that those who cultivate the best land are, on the whole, the best off, notwithstanding their heavier burdens?—The best land that I saw in the hands of small holders was rather near the Trent. That is the better warp; the nearer the river the better the warp. Of course they pay more for their land. One hundred and twenty pounds per acre was frequently paid for that class of land in former times, and the interest at 5 per cent. on that purchase money forms a very heavy rent. The further you get away from the Trent the warp is lighter, and the rent is less; but I could not exactly say what it is. I would not like to say that away from the Trent they were doing any worse than near the Trent. Those who rent the best soil are, I should say, doing better than those on second rate soil, because the best soil produces more, and at no greater cost of production on labour and manure.

8967. You do not see any marked difference in the holders of different classes of land?—No.

8968. All the land in the Isle, I understand, is fairly good?—Yes; as a rule the land is very good until you get towards the west side of the isle, and then you get into the sandy soil near Hatfield Chase.

8969. You have only been able to give us the accounts of one farm, I believe?—Only one.

8970. I suppose that accounts have been hardly ever kept?—They are hardly ever kept, and I think I mention in my report that those figures were not what I considered reliable. The books were given to me in the rough, and I made them all up to the best of my ability; and it was rather a troublesome business.

Accounts of a representative farm.

8971. Is this a good representative farm that you have selected in Appendix B, page 25? It is 73 acres. I think it was very good soil; it is close to Butterwick.

8972. Is that a rented farm?—Yes.

8973. And that shows a loss in every single year except 1882-3, when it shows a profit of 12*l.* 16*s.* 11*d.*?—I happen to know that that man is 500*l.* in arrears with his rent. They keep back those things; sometimes one has a little difficulty with them.

8974. And the state of things is a great deal worse than is shown in the accounts?—Yes.

8975. (*Mr. Little.*) The rent shown is the rent paid and not the rent due?—It is the rent actually paid, and it varies a good deal in the accounts. I suppose he paid what he could. I remember the property that that is on.

8976. (*Viscount Cobham.*) Was he a farmer pure and simple?—A farmer pure and simple. He had either one or two sons; two, I think, who worked on the place.

8977. At no wages?—No wages. I recollect the evidence was that one of them got 3*d.* a week pocket money.

8978. And this farm of 73 acres is a farm that is as well calculated to pay its way as a farm of any other size, speaking of small holdings?—I consider 73 acres a very nice size, because that is just what would keep a pair of horses, or a pair and a half, going, and that is a very good test of a small holding; just enough to keep a pair of horses busy.

Mr. R. H. Pringle. 23 Feb. 1894.

Prospects of small holders.

8979. Should you say generally, after your experience in the Isle of Axholme, that small holders are not likely to do well in the future; applying your experience to the rest of England, or such parts of England as you know, would you be against the system?—I think, so long as the small holdings have those mortgages over them, that they cannot do well. It is a weight round their necks that they can hardly get rid of.

Small holdings and mortgages.

8980. But is it not your experience that small holders do generally accumulate mortgages on their shoulders?—I do not know how it is in England. I know the small holders of Ireland, and the crofters of Scotland; I know a good deal about them. There certainly does seem to be a tendency, no matter what nationality you take, that small holders get into debt, and they do not seem to feel it the same as large men.

8981. So that the small yeoman farmer of to-day is a person who gets into difficulties?—They generally want bolstering up somehow or other.

8982. (*Mr. Whitehead.*) That would not apply to small occupiers, only to small owners; you intended that?—No, I went further than that.

8983. You think that small occupiers are not doing well generally?—I do not think that they are doing well.

8984. I mean just renting?—I understand. Might I show you one reason why I think they are in the Isle of Axholme; that is an important point, and I have prepared a map to show it.

Expenses of working small holdings.

8985. (*Viscount Cobham.*) Is it a map of the whole district?—It is showing how the small holdings are made up; it is all painted in different colours; it is to show the great expense that it must be working those small holdings. They are put together in fields, one field here and another a mile and a half off.

8986. (*Mr. Whitehead.*) While the map is being got ready I might ask you as to Class No. 3; do most of the farmers that you refer to there work themselves: "Farmers of 30 to 70 acres who own part and rent "part and who have their freeholds"?—Yes, I will give you an example of that.

8987. Do they work themselves, and their families too?—On page 19, paragraph 54, I give an example. This farmer works and his son works, and they employ a regular labourer and one boy at harvest and three women for seven months.

8988. Then as to Class No. 4: "The small holder "half a farmer and half a labourer." Of course, they do the whole of the work themselves and their families?—Yes, entirely.

8989. Does the head of the family work as an agricultural labourer at all? I see you say here that when possessed of a horse and cart they earn from 15*l.* to 20*l.* a year for hiring and jobbing?—The man from whom I got that evidence works his holding and when he can get a job he takes it, and he attaches more importance to the job that he gets than to the working of his own land.

8990. Does the class work as agricultural labourers?—When labour can be got; but in that district, of course, they are almost all small freeholds, and labour is very scarce. It is only at odd times that they can get anything to do.

Potato and celery growing.

8991. Does this Class No. 4, which has been fairly successful, adopt any special kind of culture?—Potatoes; a lot of potatoes, and a good many of this Class No. 4 have gone into celery.

8992. Would the soil of the island be suitable to the growing of celery?—It grows magnificent celery. I never saw such celery.

8993. What market does it go to?—All the celery is sold to the manufacturing towns in Yorkshire—Leeds, Huddersfield, Halifax, and Bradford, and all those markets.

8994. Have they any special culture besides celery and potatoes?—Cauliflowers, but the small holders do not grow them, but some of the men who are large holders do. I saw a 40-acre field of cauliflowers; and flax is going out.

Mr. R. H. Pringle.

3 Feb. 1894.

Fruit cultivation.

8995. (*Viscount Cobham.*) Is there any fruit cultivation?—Yes, a good deal of orchards—apples.

8996. (*Sir Nigel Kingscote.*) And plums?—No, I did not see any plums; there were a great lot of apples.

8997. (*Viscount Cobham.*) Were they well cultivated and well managed orchards?—I think so: the trees seemed to me to be very nicely shaped and very nicely pruned, and it is really a branch of industry.

8998. (*Mr. Whitehead.*) Would you say whether these special cultures are increasing in acreage?—Undoubtedly the cultivation of celery is very largely on the increase. I think I have shown that. I got the Agricultural Returns and have put them at page 16, paragraph 35, in my report. In 1882 the acreage under special crops, such as beet-root, cauliflowers, celery, Brussels-sprouts, poppies, &c., was 55½, and in 1892 558¼ acres, or an increase of 502¾ acres in 10 years.

8999. (*Viscount Cobham.*) Is not that largely due to one or two large farmers who have lately come in there?—There were two large farmers, and of course a very large proportion would be due to their presence; perhaps of that 502 acres 200 acres might be due to those men. There is, however, a great increase among small farms and on small holdings.

9000. (*Mr. Giffen.*) With regard to this loss upon the farm of 73 acres which you have shown in the Appendix, can you give us from what source the loss was made good; had the tenant got capital to lose?—I was rather puzzled myself with that account. I could not see how the person was going on with that loss; but it was stated that 300*l.* of capital had been put into it by the good lady of the establishment, who had got it some how or other. They kept going on till it was all lost. I know that the landlord has been forced to serve a notice to quit for non-payment of rent and for hopeless accumulations, so that I think you will see that the position was rather bad altogether.

Cultivation of small holdings.

9001. (*Mr. Clay.*) Referring to the small holdings, were they in grass?—Almost all under cultivation. I should say that 90 per cent. was cultivated land.

9002. Would it not be better if it were used for grazing and using it as a dairy farm?—Yes, perhaps so; but 20 acres in grass would not give a man employment.

9003. Would it not give his family employment in the shape of making butter or cheese or anything of that kind, and the man might take the out-door work?—20 acres in the Isle of Axholme might keep, summer, winter, wet and dry, seven cows.

9004. Would that not be sufficient for a wife and family?—I think not. A man in Essex is expected to milk 15 cows.

9005. Were these rented holdings or property holdings?—I think 80 per cent. were freeholds, small properties, but some of those men had a little rented land along with it.

9006. Is not the reason of some of these rented holdings not being successful that they have been too highly rented?—The rented holdings, as I found them, were only paying half the rent that the freeholders were paying in the shape of mortgage charges; there has been a great reduction in rents lately, but those who are freeholders were under mortgage, and there has been little or no change in their obligations.

Rent per acre.

9007. What is the price per acre of those lands?—I speak of the very highest quality of warp land, which is making, say, an average of from 27*s.* 6*d.* to 35*s.* for exceptional lots an acre at present, then you get down and down until you get to the very stiffest clay there, which, strange to say, occurs in some districts, and the rent is not more than 10*s.* an acre.

9008. Do the rents of those small holdings compare favourably with the rents of other farms alongside of them?—I am disposed to think that the small holdings are paying larger rents per acre.

9009. You say 35*s.* to 40*s.* per acre would be a fair rent, and that 35*s.* would be the maximum rent actually paid?—So it is; that is what was given to me. The scale of fair rents was given to me by a solicitor and agent, so that probably the opinions of the farmers might be a little different. I think from about 30*s.* would be a fair average rent for the best class of warp land.

Rent of small holdings.

9010. In your experience of small holdings in Ireland or Scotland is it not the fact that these small holdings pay about double the rent?—Not double, but a larger rent.

Mr. R. H. Pringle.

23 Feb. 1894.

9011. What percentage more would you put it at?—I would like to deal, so far as I can, with facts that came under my own notice.

9012. Can you say generally?—I know a good deal about the small holdings in Ireland, and I should say that with regard to the small holdings in Ireland, as I found them, the rents were from 10 to, perhaps, 15 per cent. over what a 250 acre farm would be; it depends a great deal upon the district and the locality.

9013. And in Scotland, what do you say?—In the south of Scotland, which you and I know pretty well, we have no small holdings.

9014. There are some of 10 or 20 acres?—I have never had anything to do in my immediate district with them. I do not think there are any. In Teviotdale, where I live, the smallest farm that I can think of is 71 acres. I know that was rented at 2*l.* 10*s.* an acre, I speak of 12 years ago.

9015. Was that not out of proportion to the 200-acre farms?—It was; and the last tenant had to leave it on that account.

History of the small holdings.

9016. (*Mr. Gilmour.*) Has this Isle of Axholme been for a long time back broken up in this way?—Yes; the history is very peculiar. It was formerly nothing but a swamp, and many years ago, a very long time ago, a Dutchman, Vermuden, came over, and he spied out the land, and he was evidently a clever man, and he made some proposal to the Sovereign at the time that he would drain the land provided that he would get something for it. An arrangement was made by which the Isle of Axholme was divided into three parts, he getting one, and the king another, and the third was lotted out among commoners; they had some peculiar name, and it was cut up. Then the Inclosure Acts came, and this creation of small holdings stopped.

9017. Did you find out how before the year 1871, say in the sixties, the people had been doing; before the bad times came?—They were undoubtedly doing well.

9018. Entirely off the produce of those holdings?—Entirely off the produce of the holdings.

Small holders and labourers compared.

9019. Have the ideas of those people altered very much?—Very much. A great many of those small holders told me that they were not anything like as well off as labourers, and they did not know what was going to take place.

9020. But I mean, when the holdings were doing well, did they live in those years gone by, in a more sparing and economical way than they do now?—I could not say, because I was not there; but I inferred something from the size of the houses. I saw a house that was built 25 or 30 years ago on a farm for a farmer of 30 acres; it had a kitchen and a sitting-room, and three bedrooms, and a front room, and a bacon store, and a coal-house; that was built about 30 years ago, and I thought that it was perhaps a bit too big.

9021. And that was upon a 30-acre holding?—I will correct myself. I see from my notes that it was 24 acres.

9022. But the general gist of the evidence is that unless they can find other occupation it is almost impossible really to live comfortably and rear a family upon that amount of land?—That is the drift of the evidence so long as those charges remain, so long as they have to pay such a big rent.

9023. (*Mr. Little.*) These freeholders in the Isle of Axholme seem to be the victims of the land hunger?—I think they are.

9024. They have been so greedy to possess land that they bought it at more than its value, and they are hampered by the incumbrances?—That is the result of the evidence.

9025. The island is not one which is attractive to large proprietors and capitalists for the purpose of residence?—No; it is a very unattractive place.

Small freeholders and tenants compared.

9026. These people are very much worse off than they would be as tenants?—Very much.

9027. You have given some particulars as to the number of holdings of each size in the three parishes. I just draw your attention to that, for the purpose of getting it on the notes. These holdings are not separate occupations, they are separate plots, and perhaps

Mr. R. H. Pringle.

23 Feb. 1894.

ownerships, but not necessarily entire occupations; one person may hold several?—Yes, undoubtedly.

Size of holdings.

9028. But they are divided. The parishes seem to be divided into an enormous number of holdings, which are capable of being held separately, and not as large farms?—Yes.

9029. There seem to be about 23 per cent. of the holdings in those three parishes of the whole number which are holdings of under one acre?—Yes.

9030. (*Viscount Cobham.*) Are they unfenced as a rule?—They are unfenced in some localities, but fenced in others.

9031. (*Mr. Little.*) But something more than 50 per cent. are over one acre and under 10 acres?—I am sure you are right.

9032. And only 3 per cent. are over 200 acres?—Yes.

9033. Those are held by occupiers only?—Yes.

9034. Many are let by persons who are small owners?—Yes, a great many of the small properties near town have been bought lately by shopkeepers, and they sub-let them in little pieces, and each of these is returned in the rate-book as a separate holding. I took all those figures from the rate-books myself.

9035. As to these holdings of from one acre to 10 acres, do you know whether they are generally occupied by labourers, or are they combined into occupations of sufficient size to employ the holder; there are 50 per cent. of the whole number, I believe, over one acre and under 10 acres?—I think most of them are held by men who make this little farming their chief business, and perhaps their sole business.

9036. And are those of less than one acre also held chiefly by farmers or by labourers?—They are held by labourers living in towns. The towns in the Isle of Axholme are somewhat peculiar, they are very long and very straggling. Epworth town is over two miles long.

9037. They were on the high lands before the fens were drained, like the villages in the fen country?—They call them fields on the high land.

9038. Has the possession of small holdings encouraged among the people thrift—are they more thrifty than in other parts?—I could not make the comparison, because I never saw them before.

9039. But would you form an impression that they are frugal and industrious people—specially so?—Yes, I think they are. I think they would be more industrious if they had a little more encouragement.

9040. They are not economical of labour?—No.

Cost of labour.

9041. The cost of labour is excessive, is it not?—The cost of labour per acre surpasses anything I have ever had to do with.

9042. If the amount of the labour given by the man and his family is taken into account, the amount expended on labour is very large indeed?—It comes to about 3*l.* per acre on some holdings that I looked into.

9043. And is the produce proportionately large?—On the farms that I am thinking of the crops were very good indeed, but nothing out of the common—no better than that of a larger farm with 50 per cent. less expenditure on labour.

9044. (*Viscount Cobham.*) Are those cultivated with the spade?—No, with the plough; they have a sort of barter and change amongst themselves.

9045. (*Mr. Little.*) The scattered nature of the land adds considerably to the cost of cultivation?—Very greatly.

Re-allotment of scattered holdings.

9046. Do you think there ought to be some scheme for economising the expenditure of the holdings?—Yes.

9047. Is there any reason why those sections should not be enclosed and re-allotted as has been done all over the country?—There is no reason why it should not be done, but the difficulty would be in getting the small owners to consent. One would say, "You are putting "a good bit of land on to my neighbour, and you are "giving me a piece not so good."

9048. That difficulty has been overcome in many thousands of parishes in England where enclosures have been made of common fields?—If it could be overcome in the Isle of Axholme it would be a great advantage.

Mr. R. H. Pringle.

23 Feb. 1894.

9049. When you said that the people would be more industrious if they had more encouragement, what sort of encouragement had you in view?—I was looking at the very heavy rent they are paying in the shape of mortgage charges.

9050. How could they be encouraged by a remission of these?—I have no idea.

9051. (*Viscount Cobham.*) Better prices, of course, would encourage them?—Yes, if the prices were what they were 30 years ago they would not feel their burdens.

Condition of free-holders and farmers.

9052. (*Mr. Chaplin.*) Your report appears to be a very deplorable account of the condition of many free-holders and farmers of the Isle of Axholme; is it too much to say that in many cases it is verging upon bankruptcy?—It would not be too much to say that.

9053. That is the impression you formed of it?—Undoubtedly.

Low prices.

9054. With regard to the cause of all this trouble, I understand that there is not much complaint to be made of the seasons, is that so. I observe you say in paragraph 29: "Within the past 13 years there have "been good and bad seasons. The warp land in the "north, east, and south, requires a dry summer, and "there have been three or four very suitable seasons "since Mr. Druce visited the district. For the light "lands in the west a damp year is most suitable, and they "also have been at times favoured. Farmers agree "that, on the whole, the seasons have not been very much "against them, and 1893 has proved an exceptionally "fruitful year"?—That is exactly what was told to me, and what I believe to be the case. There were no complaints about the seasons; 1893 was a splendid season.

9055. Then the main cause of all this terrible trouble in the Isle of Axholme, which has ended almost in general bankruptcy, arises from the fall in prices of agricultural produce, I presume?—Yes, low prices of produce, and those big charges that I have been talking of.

9056. Which classes have suffered most?—I think I have classified them on page 19.

Reductions of rent.

9057. There have been great reductions in rent?—On the rented holdings there have been large reductions.

9058. Is there any complaint on that ground?—No complaint was made to me in the matter of rent.

Lincolnshire tenant-right.

9059. In regard to the question of tenant-right; does the Lincolnshire tenant-right prevail there?—Yes.

9060. Is that held to be satisfactory?—Yes; no complaints have been made to me on those points. The Lincolnshire custom seems to be extremely liberal in the matter of tillages and compensation.

9061. But in spite of all those advantages they have been overcome by the present depression in prices?—Yes.

Remedies for depression.

9062. Did they make any suggestions as to the remedies?—They did.

9063. What did they look to chiefly?—Protection, and the mortgage question—sweeping away all the mortgages altogether.

9064. Is the system of agriculture pursued in the Isle of Axholme to be taken as typical or representative in any way of agriculture in the rest of the county, or does it differ materially?—I do not know Lincoln county sufficiently well to answer that question; but it is not representative of the system of farming near Brocklesby, because there the holdings are large.

9065. But you are not well acquainted with the rest of the county?—Not sufficiently well to answer the question properly.

Mortgaged freeholds and tenancies compared.

9066. (*Mr. Dalton.*) Would not it be to the advantage of some of those freeholders heavily in debt if the mortgagees were to foreclose and the present owners were to take the farm at a rent?—But the mortgagee will not do that. That is the strange point. I went very particularly into this. If the mortgagee forecloses he would not get within 75 per cent. of the charge upon the land, so that it appears to be the better policy not to foreclose, and to take what he can get pending better times.

9067. But they would be in a better position if they went to the bankruptcy court and started afresh?—They would have nothing to start with.

9068. No capital?—None.

9069. Do you know the rent of this farm that you mention in Appendix B.? I see one year the rent paid is 10*l.* and another it is 150*l.* Do you know the rent?—I think I mention it.

9070. Take this one of 73 acres. The rent paid varies so enormously, I was wondering what the rent agreed to be paid was?—The rent undertaken to be paid?

9071. Yes?—I do not seem to have mentioned it.

9072. Could it be ascertained?—I think it could.

9073. Because the loss seems to depend very much upon whether the tenant paid his rent or not. Then, in one year his house-keeping expenses and sundries are 49*l.*, and in another year 163*l.* How do you account for that?—I wrote to the man about that, and he explained that some years ago he had a labouring man that he fed, and he had a son that worked, and that was the explanation of the variation of the household expenses. Of course when he kept lodgers or boarded his labourers, the household expenses were heavier.

9074. (*Viscount Cobham.*) And the wages were so much the less?—And the wages so much the less.

9075. (*Mr. Dalton.*) Wages do not seem to be reduced in this year in which the housekeeping was high. They were higher in 1889 and 1890 than in the two years before when the housekeeping was low?—In 1889 and 1890 the housekeeping is 163*l.*, and the wages 79*l.* In the next year the housekeeping is less, but the wages are 20*l.* more.

9076. But going back to 1885, the wages are practically the same as in 1890, but the housekeeping expenses are less than half those of 1890. I suppose there is a different system?—I really could not tell. As I tried to explain to the Chairman, these accounts greatly bothered me, I could not see through them. I tried my best to get them put into ship shape, and even so they are not satisfactory.

9077. Are the rates high or low in this part of the country?—It is a strange thing, I could get very imperfect information about that. The small holders do not appear to keep their receipts. I endeavoured all that I could possibly do to get the rates, but they did not keep the receipts; they brought up a whole lot of things, but generally they were accounts from manure merchants and things of that kind: they do not keep them, so that I cannot answer that question. I could have found out if I had had time, but I felt I had little time.

9078. (*Viscount Cobham.*) A great deal of the land would be tithe free?—A great deal of it is tithe free.

9079. (*Mr. Dalton.*) If the rent of this farm is 100*l* per annum, the rates per acre do not appear to be heavy; in this account they come to about 10*l.* on an average, that is 2*s.* in the £?—This is the entry in my book:—Taxes on 30 acres and house, freehold, assessment 31*l.*; poor rate, 2*s.*, equal to 3*l.* 2*s.*; highway rate, 1*s.* 8*d.*, equal to 2*l.* 11*s.* 9*d.*; evidently there is no school board, but it is a voluntary rate, subscription for education, 2*s.*; land tax, 2*s.* 6*d.*; tithe on one field only, 10*d.* and then he brings in income tax.

9080. These rates are very high?—Those are the rates on this particular farm.

9081. Do you think that the rent of a small holding is generally higher per acre than that of a large one?—I do.

9082. Is that owing to the value of the house bearing a larger proportion of the rent in a small holding than it does in a large one? If you exclude the value of the house would they have let it at a higher figure?—It is the fact that there are more competitors for small holdings.

9083. It has nothing to do with the house?—The house is an element that might be made something of, but putting aside the house small holdings make more rent.

9084. (*Mr. Channing.*) Did you find sub-divisions produce a bad result?—Sub-division has been going on for very many years, and I could not exactly take upon myself to say that sub-division was producing worse results now than it did, except that the times are worse now. I do not therefore think that sub-division in itself is producing worse results. I think that the figures prove that the average size of a farm has not much altered.

9085. I see you say that on the death of a man having one of these small holdings, part of it is generally sold?—Yes.

9086. Does that not tend to diminish the usefulness of the piece that remains in the hands of one of the sons?—It is sold outright. Take a holding, say, of 20 acres; the man dies and leaves it subject to certain charges, and his family cut it up into five different lots, the effect is that each part goes to make up another small farm and makes it bigger by so much; all the sub-divisions just make other places a little bit bigger.

9087. It does not result in the diminution of the holdings?—I think not.

9088. Now, the real point is that the capital and profits that can be made are eaten up by those charges and mortgages, and the immense prices they have paid for the land?—That is a very prominent point.

9089. That is really the case; they are growing expensive crops, which pay very well, celery for instance?—Celery is a very expensive crop, it takes a man with a large capital to plant it. Celery growing.

9090. Are many of them growing it?—There are a good many celery plots. It takes 20*l.* an acre to plant it, and that means capital, to begin with.

9091. They could make a good profit but for the expense?—Yes, bar frost; it is a profitable crop to grow.

9092. I understand there are complaints about the railway facilities for getting to market?—Yes.

9093. Your attention has been drawn to Mr. Bear's book on small holdings?—I have read it.

9094. With reference to the matter, he says that he was very much struck with the greater prosperity of the people than in the times when Mr. Druce examined the Isle of Axholme, that was in 1882?—Yes. Small holdings in 1882 and 1894 compared.

9095. Does that, or does that not, correspond with your observation?—It does not correspond with my experience. I read Mr. Bear's book on my way up.

9096. Mr. Bear says, on page 17 of his book, "But "when I reached Epworth I was agreeably dis- "appointed, for unlike Mr. Druce, I was struck with "the well-to-do appearance of the people and of their "houses and holdings, and the more inquiries I made, "the more satisfied I became as to a great improve- "ment in the circumstances of the small holders of "land having taken place since Mr. Druce was among "them. The houses reminded me of those I had seen "in Jersey, rather than of the cottages of farm "labourers, and I was much struck with the well "fed and happy appearance of the people"?—I agree with what Mr. Bear says about the cottages; I think I say in my report that the small holders' cottages are good, but I also say that the cottages are too good for the circumstances of the men in the present condition of affairs.

9097. Do you mean to say that they cost too much to keep in repair and that sort of thing?—Yes.

9098. The rent of the land, I see, you put at from 3*l.* for the best down to 12*s.* 6*d.* in the case of some land?—Where is that? Rent.

9099. In your own report somewhere, I think?—Well, 3*l.* is a biggish price.

9100. Perhaps I have taken that from Mr. Bear's book. Then I will ask you what you found the rents of the lands let there to be?—By far the larger proportion of the land that I had to do with was freehold land, and the mortgagee's charge, if you call that a rent, ran up very high.

9101. You are not aware of land letting at 3*l.*?—None over 2*l.*; and I am not sure that I heard of any land as high as 2*l.*

9102. Then the value of the land would be enormously lower than the price paid for the best land a few years ago?—Yes, land that was bought for 120*l.* an acre, say, 15 years ago, would not make 60*l.* an acre now. That is an outside figure; perhaps, if I said 50*l.* it would be nearer. Value of land.

9103. (*Viscount Cobham.*) That hardly corresponds with mortgagees not getting within 75 per cent. of their mortgage?—Mortgages are only on a certain percentage of the land. I was thinking of mortgages of 80*l.* out of the 100*l.* on the land.

Mr. R. H. Pringle. 23 Feb. 1894.

9104. Then, if the mortgagees sold the land, they would get 40*l.*?—In the case of a person who had advanced money to the full amount that was paid for the land, he would be a very severe loser were it to be sold now. In a great many places the purchaser has paid up, say, 10 per cent., or it may be 20 per cent., and borrowed the rest.

9105. But the mortgagee would hardly lose to the extent of 75 per cent. of his advance, which I think you said before—that was a mistake?—That was a mistake; what I meant was, that the land would bring at the outside 75 per cent. of its original value.

9106. (*Mr. Channing.*) In paragraph 21 you say that the money was advanced in much larger proportion than it would usually be advanced in the Isle of Axholme?—Yes, I hardly thought that anyone would ever lend so much as has been done in the Isle for land purchase.

Mortgages.

9107. The mortgages run up to the greater proportion of the freehold value?—I did hear of instances where the whole of the money was borrowed in many cases; more than 90*l.* of every 100*l.* was borrowed. I met a solicitor, who had a good deal to do with the sale of land, and he said to me, "I believe in the majority "of the cases, so long as the purchaser could pay 10 "per cent., he could get plenty of money on the land." I think I said that in my report.

9108. Only one more question; you said in the most of those industries men would be still more industrious if they had a little more encouragement. If they got the land at anything like its present value, the agricultural work they carry out would be very profitable to them, would it not, or would it give them a fair, reasonable profit if they held the land at its present value?—It would be a very great help, but they would want capital; they have not the capital to farm it now.

9109. Their capital is used up?—Yes, it is gone. If those excessive charges could be cleared off, and they had land at a fair rent, no doubt they are industrious men, and they would fight a good fight.

Small holdings.

9110. (*Captain Owen Thomas.*) When those small holdings become vacant, are they readily taken up?—I believe they are snapped up, and sub-divided, and cut into little pieces, by one man here and another there.

9111. What would you consider a fair average rent that a man could pay?—It would not be quite judicious for me to express an opinion on a fair rent for land that I did not know. I am not sure that a man knows the fair rent of land out of his own district.

9112. You say that there are complaints about the rates. Are they based upon the present rental, or present value of the holding?—I do not know what the system of the assessment committees is in the Isle of Axholme; each assessment committee, perhaps, has its own customs, and I did not get any evidence on that point.

Effect of appreciation of gold on mortgages.

9113. (*Mr. Everett.*) You report to us that the mortgaged people on this island are in dreadful trouble. A mortgaged person is a person who has contracted to pay a certain quantity of gold every year, has he not?—I do not think that there is any obligation to pay it in gold.

9114. But all English money is gold, is it not?—I think Bank of England 5*l.* notes would do as well.

9115. But that is an order to pay gold, is it not?—He has to undertake to pay it some way or other.

9116. I was going to ask if there has taken place a great rise in the value of gold, would not the natural effect of that be, that all those people who pay a fixed quantity of it every year would be in trouble?—Undoubtedly, if they undertook to pay it in gold, clearly so.

Mr. R. H. Pringle. 23 Feb. 1894.

9117. That is what everyone who owes money does in England, because gold is our only standard. Do you happen to know, that, by a series of legislative Acts in different countries during the last 20 years, enormously increased demands have been created for gold?—Yes, I am aware of the fact.

9118. Which has had the natural effect of raising the value of gold?—There is no doubt that gold has appreciated.

9119. And it really put those mortgaged individuals in the same position as they would be if they had contracted to deliver a certain number of bushels of produce, and the size of the bushel had been increased to hold half as much again as it did before, and they were compelled still to pay those larger bushels instead of the old bushels. That is a fair representation of the position in which these mortgaged individuals are placed?—I cannot exactly go into the thing.

9120. (*Viscount Cobham.*) You are not prepared to go into that question?—No, it is a little bit beyond me.

9121. (*Mr. Dalton.*) On page 20 there is an item of "borrowed money," 305*l.* How does that come amongst the payments?—I do not know.

9122. It does not appear in the details given at the end; ought it to be reckoned; if it is borrowed money is it not counting over some items twice?—No, I think this 305*l.* shows the total disappearance of capital, and a sum of 305*l.* was paid into the concern by the farmer's wife. I explain it in that way.

9123. But this is in addition to the losses, or it is part of the loss, and so you have put it in?—Well, it evidently does not mean that, then.

9124. (*Mr. Chaplin.*) I only want to ask one question: In your visits to Essex, and to the Isle of Axholme, were you, in your visit as Sub-Commissioner, acceptable to the people?—I was never more heartily received in all my life than in those two districts.

9125. They were glad of the opportunity of laying before you the position of agriculture in those districts?—Very much so.

9126. Does that lead you to think that, in other districts, the people are anxious to have the visits of Sub-Commissioners?—I have a great many letters, asking me to go down there, to which I reply that I have no instructions to do so.

9127. Were they from various districts?—I had letters from other parts of Lincoln.

9128. Where did you say from?—They were all from Lincolnshire.

9129. What districts were you asked to visit? Could you place that information before the Commission?—I have the information in my books. One letter was from the Lincoln Society—the Lincoln County Society, I think.

9130. Do you mean the Agricultural Society?—Yes. I have also received another letter from another agricultural society further south; I forget the name, but I have the letter here.

9131. Does the same thing apply to Essex?—No; they knew that I was going to make a pretty wide inquiry there. I had some requests from the Roothings to go up there, but, of course, it was out of my territory.

The witness withdrew.

Mr. A. W. Fox.

Mr. ARTHUR WILSON FOX, called and examined.

Mr. A. W. Fox.

9132-4. (*Viscount Cobham.*) You are one of the assistant Commissioners appointed to report upon the Glendale District of Northumberland, are you not?—I am.

Fall of rent in Glendale District.

9135. I gather that the fall of rent generally has been about 25 per cent. more or less throughout Northumberland or throughout the Glendale District?—Throughout North Northumberland, I think that is agreed to be about a fair average to take.

9136. You have come to that conclusion from the evidence as to rentals, furnished to you from the large estates?—Yes, and from the evidence of the farmers. I think they most of them agree that the average was from 20 to 25 per cent.

9137. The great bulk of the country is taken up by very large properties?—Very large properties. The Duke of Northumberland has 25 per cent. of the land there.

9138. And you think there has been a reduction from 20 to 25 per cent?—I think that is a fair statement.

Mr. A. W. Fox.
23 Feb. 1894.

9139. If that is so, that represents very much the average fall through a large part of the country generally?—I can speak for North Northumberland, which is chiefly confined to four unions, the Glendale Union, the Alnwick Union, the Berwick-on-Tweed Union, and the Belford Union. Of course that covers a large area.

9140. Has that fall, in your opinion, about represented the fall in the country generally, not in Northumberland alone?—That is so in Northumberland.

9141. I mean comparing it with the rest of England?—Of course I read my colleagues' reports, but I should say that, comparing it with Lancashire, where I was, the permanent reductions in Northumberland have certainly been greater than in Lancashire, but then the depression has not existed there so long.

9142. Lancashire is rather favoured in that respect?—The depression has not existed so long in Lancashire as in Northumberland.

9143. Roughly speaking the fall in rents throughout England is certainly not less than 25 per cent., and North Northumberland seems to have pretty fully participated in the general fall?—That is so.

Depression in Northumberland compared with other counties.

9144. There is a rather prevalent opinion that Northumberland and the northern counties generally have not suffered quite so much as the midland and southern counties?—That is so; but I have heard it stated by several witnesses in Northumberland that the fact of some of these large landowners making what was then a substantial reduction, at an early period, has enabled them down to the present time to fairly weather the depression.

9145. Speaking of the position of farmers generally, you would not say that it is at all comparable to the position of farmers in many counties, such as Essex, Hampshire, or Wiltshire?—Certainly not.

Sale of stock by live weight.

9146. As to the markets in North Northumberland, is the sale of meat by live weight at all coming into vogue?—I do not think so, because they sell it at auction marts.

9147. It is a practice in Scotland to a certain extent?—I do not know anything about Scotland. I do not think it is; I asked the question in the district where I was, and I do not think that animals are sold by live weight.

9148. Has the question excited any interest?—Some gentlemen recommend that they should be sold by live weight.

9149. Have the farmers taken up the matter?—Some of them recommended it, but others think that their judgment is as good as the scale.

Quality of labour.

9150. As to the quality of labour in North Northumberland, you put it very high, I suppose?—I should say it is the best in England.

9151. Both that of men and of women?—I should say that the women of Northumberland are as good as any of the south countrymen.

9152. Although there is some deterioration referred to in your report?—Yes; comparing the present with the past, there is some deterioration, and a doctor there of great experience told me, and the late Mr. George Culley held the same view, that the change of diet which was commenced by payment in cash, instead of in kind, has deteriorated their bodily strength; and that is the general opinion in the district among the people themselves. It is the fact they are not the race they were.

9153. But notwithstanding that, the quality of the labour is good?—It is as good as anywhere in England.

Cost of labour per acre.

9154. Should you consider that, taking the wages they receive, the labour is as cheap per acre as in other parts?—Some of the farmers up there, men farming in a very large way, consider that the labour question is the most serious they have got to deal with, owing to the increasing scarcity of the men and the increase of wages, because in the last three years, of course, just when the times got worse, wages went up 2*s.* a week, and since 1871 the women's wages have gone up 3*s.* a week. I state here that, assuming the men were now paid in kind, as they were in 1870 and 1871, assuming present prices, they would be now paid 7*s.* 3*d.* per week less than they are actualiy, that is to say, if they had shared in the farmers' losses, they would be receiving 7*s.* 3*d.* a week less.

9155. Are you acquainted with the parts of England where the wages are low?—I reported on the Eastern Counties for the Labour Commission.

Mr. A. W. Fox.
23 Feb. 1894.

9156. Do you agree with what we have heard from Essex, that notwithstanding the inferior quality of the labour in Essex, it really pays the Essex farmer better to employ an Essex labourer at Essex wages, than it pays the Northumberland farmer to employ a Northumberland labourer at Northumberland wages?—I would say it would not.

Labourers in Essex and Northumberland compared.

9157. You prefer the good men at the higher wages?—Yes. I know a few farmers in that county who have been paying their men a high rate of wages; and they say that it always pays them, and that they get the best quality of labour by paying in that way.

9158. Are leases generally taken by the farmers? You gave us instances of 13 leaseholders—have the leases been recently taken?—I do not think that I stated the number of leaseholders. I have given some instances of leases.

Leases.

9159. I have the number here of holdings and leases on Lord Waterford's estate?—Lord Waterford has got a peculiar system, which is very beneficial to the tenants, because he allows them to break their leases on two years' notice, while he could not give them a two years' notice, but would have to let them go on to the end of the lease. If they wanted to go they could do so by giving that notice.

9160. In consequence of the favourable character of that lease is it generally availed of on the Waterford property?—There are certainly more leases there.

9161. On page 76 of your report you say, "Out of 17 "agricultural tenants on the Ford Estate, 11 hold "under leases or agreements for a term of years." Are we to understand that they renew the leases when they fall in?—Yes.

9162. Do you mean that it is popular?—Yes, that it is popular because they can give a two years' notice instead of one. They can break the lease themselves, but the landlord cannot break it.

9163. But when they ask for a reduction of rent they have to give the notice; that is the practice, is it not?—Yes, that is what the agent tells me.

9164. On another page you state that the value of land has gone down considerably owing to the feeling of insecurity. What insecurity did you mean?—I meant that the buyers are afraid that the land would still further depreciate in value.

9165. It is a question of price and not owing to anything political?—Yes.

Agricultural Holdings Act.

9166. You do not find that feeling existing out there?—I should think that the majority of the farmers there are discontented with the Agricultural Holdings Act. But as far as insecurity of tenure is concerned, as far as there is any anxiety about being turned out of their holdings unjustly, I do not think there is anything of the sort.

Decline in selling value of land.

9167. Has the selling value of land fallen very considerably?—Yes; but then, of course, the permanent rents have depreciated 25 per cent.

9168. They are afraid of a still further fall?—Yes, and if prices continue to fall, I venture to think that it is not improbable that the rent will still further be reduced there.

Leases and yearly agreement compared.

9169. (*Mr. Channing.*) I wanted to ask you one or two questions. You say on page 75 of your Report, that much of the high state of cultivation is attributed to the long leases, and that some of the agents attribute bad results to the introduction of yearly tenancies. I wanted to ask you on that what the terms of those long leases were. Did you form the impression that under the system of long leases the land had been moderately rented?—As far as I could ascertain there has not been any friction about rent in that country.

9170. The leases there are gradually terminating?—Yes. Before the depression I do not think there was any feeling that the rents under the leases were too high.

9171. And therefore the tenants had really the advantage of the use of the land and the enjoyment of their own improvements at a low rent, presumably a rent which did not cover any part of their improvements?—I think so.

Mr. A. W. Fox. 23 Feb. 1894.

9172. You quote from Mr. Bolam, at the bottom of page 75, as to the bad results of the introduction of yearly tenancies?—He says, "Since 1879, when the "agricultural depression began to be felt, tenants "have been unwilling to run the risk of taking leases "with prices falling."

9173. In what direction were they diminishing their application of capital in consequence of the tenancies coming in?—Opinion is rather divided about that; I met a very large number of men, who said that they farmed just as high under a yearly tenancy as under a lease; but there were others who said that that was not the case. In that particular district the landlords are very large ones, and they are men with very large capital, and I think, on the whole, there is a feeling of security under such landlords as those.

9174. Where there is a feeling of security the tenants still farm well, I suppose?—Yes; and there is evidence in the Report that the agent of the Duke of Northumberland and the agent of the Marquis of Waterford consider that the land has not deteriorated in the last few years.

9175. I am asking about the result of yearly tenancies. May I take it that the evidence brought before you did not tend to confirm Mr. Bolam's statement?—Opinion was considerably divided on that point. Some farmers themselves told me that they certainly farmed as high under a yearly tenancy, but I heard a lot of others who said that they did not.

9176. Did you infer that the diminution of the outlay of the farmer was in the form of labour, or in manure, or in what special way?—I do not think it was in manure, because I think that that class of men would not cut down manure in any way, unless they were really very hard pressed. I think the diminution in the outlay was in improvements on the farm, and, in some cases, on labour.

9177. Then, I rather gather that you did not notice that there was any general tendency to starve the farms in any way?—Certainly not.

Expenditure on permanent improvements.

9178. You refer to the large percentage of expenditure on permanent improvements and repairs, and buildings, by the landlords; I suppose that was general in the district?—I should say, comparing the position of North Northumberland with other counties that the buildings there are very good. But there are some bad ones. On the whole the men who own that land have got capital, and the buildings are good.

Tenants capital.

9179. Have the tenant farmers generally a fair amount of capital?—Well, they are no doubt men who have had a good deal of capital. How much they have lost during the last three or four years, or since 1880, it is rather difficult to say. Of course rents have been reduced, but the evidence of all the agents is, that the present rent is punctually paid, and that there is no difficulty in letting farms.

Demand for farms.

9180. Is there a demand for farms at a not decreased rent in this district?—There is plenty of demand at the present for farms at present rents of all sizes.

Effect of Agricultural Holdings Act on agreements.

9181. And is it your experience that the effect of the Agricultural Holdings Act in Northumberland has, as in a great many other northern counties, been rather in the direction of indirectly causing better agreements than of actual direct use?—Several witnesses of position have told me that they think it has had the effect of getting better terms for the tenant; that it has made landlords realise that compensation should be given as far as possible, but the Agricultural Holdings Act has not often been put into operation there.

9182. Have you formed any opinion as to the way in which the valuations were carried out in the district. I see you have a passage here as to the recommendation of the Newcastle Farmers' Club attached to the bottom of page 90 of your report?—Yes.

Fixed scale of compensation for improvements.

9183. As I understand it the Newcastle Farmers' Club have repeatedly stated that 10 or 12 years ago the mere time scale of exhaustion did not compensate the best farmer in a proper way?—Yes.

9184. I should be very glad to hear any further comments?—They drew up a fixed scale, which they hoped would be acted upon throughout the country, and which they thought would be a fair one. It was acted upon to a certain extent within the last six or seven years, but I think that people generally came to the conclusion that a fixed scale was an impossibility; that you cannot lay down a scale for all soils, as soils have different effects upon manures. The gentleman who took an active part in drawing up that scale, Mr. Scott, told me that, after all, he had come to the conclusion that a fixed scale would not work. I think that is the general opinion of the district, although Lord Tankerville and his agent, Mr. Bolam, and one or two other witnesses told me that they would rather have the fixed scale than have the matter go to arbitration, because they thought it would avoid cost.

Mr. A. W. Fox. 23 Feb. 1894.

9185. What is the opinion of men who take that view as to the best way of having agricultural compensation; would they strike out all the schedules of the Agricultural Holdings Act, and that sort of thing, and simply leave it to experts to say how much a farm had been improved or deteriorated?—You mean the men opposed to a fixed scale.

9186. Yes?—Well, the other suggestion was, to have a county board, or some authority of that sort, who would give more uniform decisions than are given at present.

County boards of valuers.

9187. Would they have a semi-official list of valuers, or something of that sort—a board of valuers?—Yes; I think Mr. Sanderson put forward a scheme which a good many men support. It is on page 92 of my report. He said, "Let the county council and the "justices in quarter sessions each name six gentle- "men to constitute a county board of agriculture. "If either a landlord or tenant so require, let a "farm when first let be inspected by two members "of the board (landlord and tenant each selecting "one)."

9188. Does that procedure tend to the settlement of compensation by periodical inspections, and then a decision by an expert at the termination of the tenancy, whether the farm had been improved or deteriorated?—Yes.

9189. Without any time scale for specific improvements?—Yes, that is what he said.

9190. Was that supported by a good many practical men?—A good many men thought that would be a good plan. Mr. Scott advocated very much the same sort of idea as that which he gave to the late Mr. Coleman, who reported to the Duke of Richmond's Commission. I did not set it out at length because it was set out in that report to the Duke of Richmond's Commission. (See Appendix A., XXV.)

Railway rates.

9191. With regard to the railway rates, there is a good deal of complaint about railway rates and the access by railway to the various markets?—Yes. I have set out some of the rates, and up to the time of this report they had not been reduced. You will find that on pages 101 and 102 of my report.

9192. Is it not the fact, that in the past year, in those districts of North Northumberland, you had comparatively large hay crops?—Some of them, in some districts. Of course in Lancashire they have a much larger demand, because they sell hay to the big towns.

9193. Is it not a fact that those Northumberland farmers, in some districts of Northumberland at any rate, were enabled to compete with the foreign hay which was rushed upon the London market owing to the high railway rates?—I heard that in Lancashire, but I did not hear it in Northumberland. They complained in Northumberland about dealing being an impossibility owing to the high railway rates.

Labelling of foreign meat.

9194-6. (*Mr. Long.*) I wish to ask you one or two questions with regard to the recommendations which have been made, and which you comment upon in paragraphs 31 to 40 in your report, with reference to paragraph 32, as to the labelling of dead meat; did you have any definite proposal or suggestion made by anybody to you as to how that should be carried out?—No, that was the difficulty. The only practical suggestion I had was to make the butcher take out a licence.

9197. What for?—To put it over his shop, and put it on his cart.

9198. Do you mean a licence for the sale of foreign meat?—Yes. It was also suggested that on account of the difficulty of getting a conviction, as there always is under the Merchandise Marks Act, a very heavy penalty should be inflicted, so that it would be hardly worth anyone's while to commit a fraud.

Mr. A. W. Fox. 23 Feb. 1894.

9199. Do they believe that there is a very large competition in this foreign meat as against home-grown meat?—That is the general impression.

9200. What effect do they think it has?—They think that it undersells English meat.

9201. Do they think the foreign meat is sold as English meat at English prices?—Yes, certainly.

9202. Therefore the price is kept up, but in reality meat which is presumed to be English meat, and is sold as such, is really grown abroad?—If I may refer to the Lancashire Report, I say that Mr. Kay went into a shop in the Strand last winter and found that all the meat that the butcher had labelled as English meat was foreign meat. I think that he gave that evidence before the House of Lords Committee.

Assessment to local rates.

9203. I saw that in your other report. Now one question about the rates; you say that everybody agreed that the rates and taxes are very unduly assessed, the land is very unduly rated?—Yes.

9204. What do they suggest would be a better system, do they think that the proportion of value of land and houses on the one hand, and manufactories and personal property on the other, are out of their due proportion?—They say they are out of their due proportion, but I heard no practical suggestions.

9205. Do you know at all the practice of assessment committees in North Northumberland, or did it come before you at all?—No. I put it in my Lancashire Report, I forget what they took off.

9206. Did you ascertain whether there was a uniform practice which governed all the assessment committees, or was there a great variation?—I cannot say that, I have given that in Lancashire in the union I was in.

9207. It was only a sort of general suggestion. Did you discover whether the rates had been raised really or had remained the same?—I am in communication about the rates now. I have had some difficulty; it is difficult to get at these figures sometimes, because it is done voluntarily and takes a great deal of trouble, but I shall be able to get it from the Unions before this Report is issued. I do not think that the rates have been raised in the unions I was in there.

9208. Is that owing to the fact of there being more economical administration, or to the fact that the rates have received relief?—The rates have received relief.

9209. That has been felt in that neighbourhood then?—Yes.

Letting of farms.

9210. (*Mr. Chaplin.*) I understand that there is no difficulty in letting farms in Northumberland?—None.

9211. Even at the same rate?—At present rent, no.

9212. I think there were some cases where they were let at advanced rents, were there not?—I did not say that.

Evidence of depression.

9213. How is the depression shown then?—Well, the depression is shown in the general reduction of rents since 1880, and I think that landlords have been asked to do more, that tenants are not in the position to do so much themselves as they did; and there is evidence certainly in some districts that the land has deteriorated. I think Mr. Bolam, Lord Tankerville's agent, says it has deteriorated 30 per cent., and there is also evidence from manure merchants to say that some farmers are buying less manure, and that they cannot get their accounts paid as they used to do.

9214. I suppose this shows that, as far as the tenants are concerned, they are making less profits than they did before?—Certainly, less profits.

9215. At the same time I observe that there is not only no difficulty in letting farms, but there is a keen competition for them?—Yes.

Reductions of rent.

9216. And notwithstanding that those reductions of rent have been made of something like 20 per cent.?—Yes.

9217. Is that about the average?—From 20 to 25 per cent.

9218. And in addition to this, there has been an unusual amount of outlay on buildings and improvements of that kind?—That is certainly the case; of course there are exceptions, there are one or two properties where there is no money.

Mr. A. W. Fox. 23 Feb. 1894.

9219. Referring to paragraph 10 of your report, I want you to explain this: "The farmers at the meeting at Hedgeley said that the same rent is bid for a farm when a man leaves even though it is well known he has not made it pay." What makes them do that?—I think that they are not good business men. They may think they are rather cleverer than the last man who had the farm.

9220. They think that they could make it succeed by better management where their predecessors have failed?—I think that must be it.

Fall in prices.

9221. I want to ask you one or two questions with regard to the statements made to you as to the cause of agricultural depression. There was a general agreement that it was due to fall in prices, was there not?—Yes.

Appreciation of gold.

9222. But I observe in paragraph 26 several witnesses express a strong opinion that it was greatly due to appreciation of gold, and that this subject was much overlooked by those who discussed the cause and remedies of agricultural depression, and there were two gentlemen whom you quoted, Mr. H. S. Scott and Mr. Forster, of Budle?—Yes.

9223. Did you have any conversation with those gentlemen?—Only with Mr. Scott. Mr. Forster wrote to me. I know him.

9224. Were they men who had carefully studied this question?—Mr. Scott certainly has, and Mr. Forster wrote and said that it had been a study of his for years.

9225. And they both expressed to you the strong views which are contained in the extracts in your report here?—Mr. Forster's opinion is that the appreciation of gold is at the bottom of agricultural depression; that that is the only cause for it.

9226. Well, then a third gentleman, Mr. Hughes, of Middleton, also referring to the cause of agricultural depression, puts this cause as first again?—Yes. He is a gentleman who thinks very deeply.

9227. Might we not suppose that the gentlemen are more or less experts upon this question?—Yes. I should say that all three of them are men who would not speak about any subject unless they had studied it.

9228. Are they practical farmers besides?—Mr. Scott is a gentleman who farms very largely; he has 10,000 acres, but I understand that he has got an interest in collieries as well. Mr. Forster, of Budle, is one of the very best men there; he is a practical farmer. Mr. Hughes is a landowner.

9229. Assuming that the Commission wanted to obtain evidence upon this point, would these gentlemen be desirable as witnesses, in your opinion?—Yes, I should certainly say that they would be all excellent witnesses, all three of them.

9230. Now with regard to the Agricultural Holdings Act, have you stated in your report all the recommendations that were made to you for any alterations in this Act?—Yes. I have stated the different opinions which I collected in Northumberland.

9231. And am I right in supposing that the main suggestions are in paragraph 29, page 90?—Yes, at (*a*), (*b*), and (*c*).

Fixed scale of compensation for improvements.

9232. With regard to the fixed scale of compensation, what was it contemplated that that scale of compensation should include, what improvements would be included in that?—All improvements except those which now require the consent of the landlord.

9233. All the improvements except those which are contained in the first part of the schedule of the Act?—Yes, that is cake, manure, and so on.

9234. And draining; would that be included?—Draining is included, but that is generally done by special contract up there. The landlords supply the tiles, and the tenants do the labour.

9235. That is a very common practice?—That is the custom. Of course there is no claim for labour under the Agricultural Holdings Act.

9236. But I should like to know a little more of this, because in the second schedule of course draining is an improvement under the Agricultural Holdings Act, and then in the third part, in reference to manures, the consumption of cake, and that kind of thing, the boning of land, the chalking of land, clay burning,

Mr. A. W. Fox. 23 Feb. 1894.

liming of land, marling of land, and things of that kind, are those included in this fixed scale?—Yes, and liming was supposed to be one of the greatest difficulties in fixing a scale.

9237. Why?—Because lime runs five years on some kind of land, and 20 years on other kinds of land. I know there is a gentleman who got a very large award about 18 months ago; I think he got 20 years for lime.

9238. A committee was appointed to examine this proposal, I understand, but they ultimately agreed that it could not be done?—I understand that it has not been generally adopted.

9239. Can you tell me whether they were acquainted with the custom and practice that has been in vogue for many years in the county of Lincoln, where all these things are done?—I cannot tell you that.

9240. You do not know whether they had that before them?—I do not know that. Mr. Scott was one of the prime movers in drawing up that scheme.

9241. Still, the Committee reported to the Newcastle Farmers' Club: "It appears to your Committee that, "fixing a scale, naming a hard and fast value for "every improvement named in the Act, whether well "or ill executed, whether in good or bad repair, and "reducing the price by a certain percentage for each "year used, would in effect and incidence be unjust, "resulting in the good farmer getting too little, and "the bad farmer getting too much." Did you ever ascertain from them why it was necessary that there should be a hard and fast value for every improvement, whether well or ill executed? Surely, in the case of drainage it is perfectly possible to ascertain whether it is well or badly done?—They adopted three fixed scales of compensation for all improvements set out in the schedule, to be given according to the skill and care which had been exercised in the outlay. By this means they thought compensation would be given according to merit.

9242. Did they contemplate that this could be done without the interference or appointment of a valuer at all?—No, but I think they hoped that some expense in the procedure might be avoided.

9243. Again, I observe that another difficulty on their part was, that the consumption of purchased foods would leave the same manurial value in the case of a holding full of weeds, and very badly cultivated, and that the compensation for that would be as great as in the case where it was well done. But was it beyond their contemplation, where a holding was made into this bad condition, that there might be payments and counterclaims? Was that in their minds?—Yes, the the landlord's counterclaim would have to be considered.

9244. You did not ask them about these things?—No, I spent a day with Mr. Scott discussing a great number of questions.

Official arbitrators or valuers.

9245. Then I come to the next point, sub-section (*b.*), where they suggest, "The appointment of an arbitrator "for the county or district, so that greater uniformity "in decisions might exist." Is it not the case that in that county, as in many others, there are a number of professional valuers who practically value on a uniform basis?—Yes, that is so, but these gentlemen are not always called in.

9246. Do you mean to say that the changes of tenancies are made without calling in a valuer at all?—Yes, a valuer, but different men have different views as to compensation.

9247. Is there any County Association of Valuers in Northumberland?—I do not know.

9248. You are aware, I suppose, that that is a common practice in many counties?—Yes.

9249. And where that exists they proceed under general conditions?—Yes.

9250. Then they recommended, "The appointment "of arbitrators for the county or district to examine "the condition of farms when tenants enter, and "again when they leave"; did they suggest to you any scheme by which this was to be done—where, for instance, were the records to be kept?—That was put forward as a great difficulty, that however good a record was left of a farm, as soon as a valuer died there would be, no doubt, a difficulty in really arriving at the state of the facts.

9251. Several suggestions were made as to how the Act could be amended, and one of the suggestions was this appointment of arbitrators to keep the records, for the purpose of having records?—Yes.

Mr. A. W. Fox. 23 Feb. 1894.

9252. But they did not go on to lay down the machinery by which it could be carried out?—No, I heard really no suggestions except those of Mr. Sanderson and Mr. Scott, which have been alluded to.

9253. Then those were the only suggestions really that you elicited while you were there as to the alteration of the Agricultural Holdings Act?—I may say that a great number of men were of opinion that things must remain as they are, that everything is bound to be fought out, and that meant having witnesses and incurring expense.

Remedies for depression:

9254. (*Mr. Little.*) You received from farmers and others a great many communications suggesting remedies for depression which you have given in Appendix B. in a tabulated form?—Yes.

(*a.*) Malt tax.

9255. A very large number of those recommendations are with reference to the re-imposition of the malt tax?—Yes, that is a subject on which they were strong.

9256. Out of 26, 14 recommend the re-imposition of the malt tax, or a tax upon malt instead of beer? There is a very strong feeling upon that subject.

(*b.*) Relief from rates.

9257. And another thing was local rates, that some relief from rating was proposed?—Yes.

(*c.*) Protection.

9258. And the next was with reference to the import duties, seven were in favour of moderate duties?—Yes.

(*d.*) Reduction of rents.

9259. And five, I find, were of opinion that the reduction of rent was one of the remedies, that is five out of 26, and there are a great many other recommendations, but none of those were recommended by a great number, those were the principal suggestions?—Yes.

9260. Only one refers to the law of distraint?—Yes; in the evidence that I had there, but there were others who did refer to it in the district.

9261. You have spoken of the condition of the agricultural labourer, and you have expressed a very high opinion of the labourers of Glendale and Northumberland generally?—Yes.

Cost of labour per acre.

9262. Have you not found that notwithstanding the high rate of pay, the cost of labour per acre is less than in other parts of the country?—Well, I should say it was.

9263. Is it not partly attributable to the labour of women?—Yes.

9264. Women are something like one-fourth of the whole number of labourers?—Yes.

9265. And they are paid less than men?—Yes, they are.

9266. They are paid more than women in other parts of the country, but less than men?—Yes.

9267. And you say that they do as much work as south countrymen?—I worked a day or two with them once, and that is my opinion.

9268. I understand you to say that there is great complaint about the increased cost of labour?—Yes.

9269. You have furnished us with some accounts of a farm of about 500 acres?—Yes.

9270. I have been through these accounts and I find, if I have not misunderstood them, that labour has decreased in cost in the 10 years, or rather the total amount paid for labour has decreased, 20 per cent.?—But this gentleman has turned some land to grass, and he has got rid of some labour.

9271. By altering his system of farming he has reduced the amount of labour that he has to pay for?—Yes.

9272. It does not follow that the cost of labour was any less?—No; it has risen.

9273. Then the reduction of rent on that farm is only 7 per cent.?—Yes, that is near a town, I may say.

Demand for farms.

9274. (*Mr. Gilmour.*) Did you find that there was an increased demand for farms during the last season or the previous one, at all?—I do not think there was an increased demand, certainly not; there is a greater demand for the small farms than the large, because those large farms require such a great amount of capital.

9275. Did the idea strike you that the demand for farms was because those men thought that things had

Mr. A. W. Fox. 23 Feb. 1894.

reached about as low as they possibly could?—Well, Mr. Rea expressed his opinion that it was due to a certain amount of speculation and a certain amount of hope. I should think they hoped that things would turn.

Official valuers.

9276. In reference to that question about arbitration as proposed, was the idea in the minds of these gentlemen that one man should be appointed to do the work that is virtually now done by three men?—I did not hear that proposal; the proposal was rather put forward, as Mr. Sanderson put it, that the justices in quarter sessions, and the county council, should nominate a few men and form a county board, and then the landlords and the tenants from that body could each choose an arbitrator when it came to a contest.

9277. But looking to the fact that the great complaint against this Act is the expense of carrying it out, did they give any expression to the effect that that was one way of lessening the expense, if the two parties had to take an arbitrator who was fixed upon by anyone who was chosen to name him in any county or district?—Do you mean whether that would lessen the expense?

9278. Yes?—All these proposals were put forward with a view to reducing the present expenses. I think that is one of the chief complaints that they have got to make against the Act there.

Payments in cash and kind compared.

9279. In regard to the payment now in cash instead of kind, how do these families get a supply of milk?—They do not get it.

9280. Do you hear complaints about that?—The doctors said it was having a very bad effect upon the health of the people, that they got anæmic.

9281. Did you hear complaints about the women themselves?—Most certainly.

9282. That it was a great loss?—The children drink strong tea without any milk instead of milk and porridge. They will not take porridge without the milk.

9283. Are the farm labourers satisfied with the change that they made?—They are satisfied in this way, that they feel that they get cash down, and they have not had to share in the losses consequent upon the depression—upon the produce. They were, of course, in a much better position in that way, but they do not spend their money on milk.

9284. You stated that the shepherds and grieves are taking farms now; do those men have to borrow money from banks to stock them?—I do not think they do; I think they save it, and they are rather increasing in number, and the landlords say they make very excellent farmers.

Reduction of rents.

9285. (*Mr. Clay.*) Talking about the general fall in rents in Northumberland, you put it at 25 per cent.?—That is what it was put at at two meetings I held, and by the agents whose names I have mentioned.

9286. I see on the Roddam Estate there is a reduction of 33 per cent.; there may have been a further fall than 33 per cent.?—Yes.

9287. And over and above he had built cottages and farm houses, and made large improvements to the extent of 10,000*l.*; that is a fall upon the price of land, over and above the reduction of rent?—Yes.

9288. Then you had Mr. Grey; he says that over and above the reductions in the farmer's rent, he has given the tenants lime, manures, and feeding stuffs?—That is what he stated.

9289. In what proportion would that be, the percentage over the 25 per cent.?—He could not tell me that; he was agent to several properties, and it would take some time to take that out.

9290. But it would be considerable, would it not?—I think he says that it is considerable. Hundreds of pounds have been expended by the landlords in giving their tenants lime, and manures, and feeding stuffs.

Fall in value of land.

9291. Further, with reference to the sale of property, on page 83 of your Report, you say "(2) A property "valued 20 years ago by Mr. Grey at 26,000*l.*, was "put up to auction a few years since, but 15,000*l.* "could not be got for it, and the mortgagees had to "take possession. (3) A property bought 20 years ago "for 17,000*l.* has recently been offered by auction for "9,000*l.*, with no bidders. The rent of this farm in "1874 was 740*l.*, and at present it is 380*l.*" If property falls in that way, of course it is based upon the rental?—Yes.

9292. So that appears relatively a fall of 50 per cent.?—Of course, I do not know the circumstances of these properties. Mr. Sanderson gave me those figures.

Mr. A. W. Fox. 23 Feb. 1894.

9293. But that is a very serious thing for the landlord, if he wants to pay off mortgages or family matters?—Those are three instances of very heavy falls in the value of land, but I cannot give you any more instances I do not think there have been any sales in this district recently. Those are the only instances I could get.

9294. But if the sale of property shows a reduction of 50 per cent., a tenant cannot be content with a reduction of only 25 per cent., can he?—Of course I do not know whether these properties had any special circumstances attached to them; whether they were forced sales or not.

Official valuers or referees.

9295. With regard to the Agricultural Holdings Act, are you inclined to have official referees appointed to go and do the work?—Well, no doubt if the referees gave satisfaction to both parties, that would appear, from the evidence I got in North Northumberland, to be a somewhat widely spread desire.

9296. Would not it be a great benefit, in the way of saving expense, if those referees accustomed to deal with the work were appointed?—The question would be whether you would do away with all witnesses, and leave the thing entirely to the referees. As long as witnesses are called you are bound to have expense.

9297. I mean that there should be one referee appointed, and to let him do the whole of the work?—And leave the whole question to him.

9298. Yes?—Then it is suggested by some that it would be very difficult to find one referee who would be acceptable to both parties.

9299. But you might have those referees, as Mr. Chaplin says, chosen from the Society of Valuers?—Yes; I understand you to mean one referee. The feeling among the witnesses that I met was, that there should be a selection—that there should be a body of men from whom landlords and tenants should choose, and not to appoint one man that both sides were bound to take, whether they liked him or not.

9300. I did not mean two arbitrators and an umpire, but one referee officially appointed, as in the case of Agricultural Drainage?—A fixed appointment, you mean.

9301. Yes, a recognised practical agriculturist?—Yes.

9302. In regard to the scales of compensation, you have heard of that case of 20 years given for lime?—Yes.

9303. And the special referee there was an agent for a very good landlord, Mr. George Grey?—Yes.

9304. He sat and awarded, and there was no expense?—Yes.

9305. Now such a man as he is would make a good referee in Northumberland?—There is no doubt about that, and there are usually one or two men in every county who command the confidence of everybody; but these men are rather rare, perhaps.

9306. Is it your opinion that if they should be appointed, the landlords and tenants would agree?—No doubt, if you could get a referee acceptable to both sides.

Effect of cash wages on diet of labourers.

9307. (*Mr. Giffen.*) Does the change of diet which has occurred amongst the labourers, through their being paid in cash instead of kind, consist simply of a non-consumption of milk, and the substitution of tea for it, in the case of children?—There is also this, that they do not take porridge as they used to. They also eat white bread instead of wholemeal bread, and the doctors say that the wholemeal bread is very bone producing, and they have given that up entirely now.

9308. And that these are the causes of the deterioration of the quality of the labourers?—Yes.

9309. Do they consume more meat than they did before?—I do not think that they consume much butcher's meat there. I am sure that they do not. They eat potatoes, and bread and butter, and bacon.

9310. So that the change of diet is the giving up of milk and porridge?—Yes, and wholemeal bread.

9311. Is that general?—They have rather a modern diet compared with the past. It costs rather more, but no doubt it is not so strengthening for them, or so good for them.

Mr. A. W. Fox.

23 Feb. 1894.

Accounts of a particular farm.

9312. (*Chairman.*) You give the account of one farm for the last 10 years?—Yes.

9313. Is that to be taken as a fair average?—Well, I should not set it forth as a good specimen. It belongs to a man who does other business, and a man who lives near a town; it is not a good specimen of a farm account in Glendale.

9314. How far is it from town?—It is close to Alnmouth, which is increasing in size.

9315. How far off?—Quite close to the town, and of course not far from Alnwick.

9316. If you look at this account for the last 10 years, it appears that for the last five years the tenant has done very much better than in the first five years?—He attributes that to laying down more grass.

9317. The first five years he made an annual profit on an average of only 17*l.*, but in the last five years he made a profit of 289*l.* for the year, and that does not appear to be owing to the reduction of rent, because the rent has been reduced by only 29*l.*; the wages have been reduced somewhat—120*l.*—and apparently the better result has been arrived at by laying down more grass, and growing less corn?—That is what he attributes it to.

9318. That is what has resulted from the operation?—Yes.

9319. And apparently that has been effected without any considerable reduction of rent?—But I should not put that forward as a fair specimen of a Glendale farm account.

9320. Could you get any fair specimen for an average, because it would be very desirable that we should have it?—Of course, gentlemen are not very willing to show their accounts.

9321. At all events this is good for comparison with itself. It shows the course of business on that farm, that whereas for five years the tenant farmer, made very little profit, in the last five I find he has made a good deal, because 289*l.* profit would be 10 per cent. on the capital embarked, and besides that he has the consumption of the produce on the farm, and his family are living in the house rent free?—Yes.

9322. That would not be at all a bad account?—No.

9323. And if it was not a fair profit for the farmer there would be still a very large margin of rent to go for. He still pays 411*l.* rent, which might be reduced if the farmer did not get a fair profit?—Yes.

9324. Apparently the rates have remained very stationary?—Yes.

Mr. A. W. Fox.

23 Feb. 1894.

Local rates stationary.

9325. Whereas they were 32*l.* and 44*l.* the first two years, practically in the last 10 years they have been 38*l.*?—Yes.

9326. Therefore the rates are a considerable item?—Yes.

9327. That is where the rates, you would expect, would be high?—Yes.

9328. Have you given any illustrations of the course of rates on other farms, or not?—No, I do not think I have.

9329. You have not investigated how far the rates have been a serious burden?—I have written to the clerks of those guardians for the amounts of rates in 1882 and 1892, which will be added to this Report when they come. As far as I have been able to get the information, I have given some particulars at page 98; but the information is not very easy to get.

9330. One of the principal complaints of the farmers in the district has been the burden of rates?—The rates have not gone up.

9331. If the rates have not gone up that does not account for the depression?—They have not gone up.

9332. Has the assessment on land been reduced in proportion to the lowering of the rent?—Yes, because these are all permanent reductions in North Northumberland.

9333. And have the rates in the pound remained the same?—I have set out some of the rates in the pound here, and it is rather difficult to tell you from the present information whether, on the whole, they have. I think they have gone down.

9334. Then if the rates have been reduced in proportion there must have been a still greater reduction of rent?—Yes.

9335. *Mr. Lambert.*) Did you say that the rents have been reduced from 20 to 25 per cent.?—Yes, generally, throughout the district.

Competition for farms.

9336. And there is a keen competition for farms?—There is a keen competition for the small farms, and the reason for that is, the higher wages of shepherds and stewards.

9337. Does this keen competition raise the rent beyond the sum that the tenant can pay?—No, I do not think so. I think that the land in this district is in the hands of men of considerable capital, and their object is to get a good man.

The witness withdrew.

Mr. William Smith, M.P., called and examined.

Mr. W. Smith, M.P.

9338. (*Chairman.*) You are Member for the North Lonsdale Division of Lancashire?—Yes.

9339. You are also a corn miller and merchant in that district?—Yes.

9340. An importer of flour?—Yes.

9341. And the owner of several farms in the Garstang district?—Joint owner with two of my brothers in the Garstang district.

9342. Of more than one farm—of several farms?—Yes, eight farms.

9343. With tenants?—They are all let to tenants. The total acreage is 840 acres; the largest one is 284 acres, there is one of 160 acres, one of 120 acres, three of 80, and two small ones of 20 and 16 acres. The two smaller ones are parcels of land with buildings, and are let in conjunction with the other farms.

9344. You are also President of the Federation of Tenant Farmers' Associations?—That is so.

9345. Have you given attention for some years past to the subject of agricultural depression?—Principally during the last two years.

Depression in Garstang district.

9346. What is the state of depression in your district?—It has become acute only during the last two or three years. Being largely a dairy and grazing district the low prices of grain did not affect us as they did some other counties.

Low prices.

9347. Are there special causes in the last two years for the depression having arisen there?—Yes; the drop in the prices of beef and mutton, and of dairy products, has become more apparent during the last two or three years.

Mr. W. Smith, M.P.

Bad seasons.

9348. They have also suffered from the seasons?—The seasons have been unfavourable, inasmuch as we have had dry springs, and the wet has come in the autumn, whereas being chiefly grass-land the most favourable seasons are those in which we have abundant moisture in April and May, and the sunshine in the latter part of the year.

9349. Would you say that a large part of the difficulties of the farmers has arisen from the seasons?—No, I think the low price is perhaps the first cause. That has been aggravated by the unfavourable grass seasons.

9350. (*Mr. Chaplin.*) Do you refer to last year or the last two years?—The last three years I might say. Last year the spring was dry but warm. In the two preceding seasons the spring was both dry and cold, which was very detrimental to both meadows and pastures.

9351. (*Chairman.*) When did the drop in prices begin?—I do not think it was noticed very greatly in our district more than three years back, it was not felt acutely.

9352. What do you consider that fall in prices due to?—I take it that it is principally owing to the developments in steam communication, which practically means bringing all these various competing countries within a shorter distance of our own shores.

9353. Would that affect the dairy produce?—Yes.

Mr. W. Smith, M.P.
28 Feb. 1894.

9354. The sale of milk?—Not milk, except what comes in the shape of condensed milk.

9355. Does that district depend largely on the sale of milk?—Only the sale of milk about the towns; it depends upon the sale of butter and of cheese. A large quantity of cheese is made in the Lancaster and Garstang and Preston districts.

Tenure.

9356. Do you attribute the depression to any other causes?—Yes, I attribute it also to the tenure of land, the conditions under which the land is held. In the first place, rents are too high with the altered state of things. Up to a few years ago the farmers of this country had more or less a monopoly of our markets, that is to say, the distance of their competitors in point of time of conveyance, and the cost of conveyance of goods, gave them a very great advantage over their foreign competitors.

9357. (*Mr. Chaplin.*) Up to when?—Speaking of my own particular district, up to three years ago.

9358. (*Chairman.*) Up to when did you say?—Three years ago; it has been felt most since then, and in consequence of the opening up of these foreign markets the land has ceased to have that exceptional value which it had previously.

Federation of Tenant Farmers' Association.

9359. Before I go further, what does the Federation of Tenant Farmers consist of?—It consists of a number of societies in the counties principally of Cheshire, Lancashire, and Cumberland.

9360. Federated societies?—Yes.

9361. How many of them?—I could not tell you the exact number, but I think somewhere approaching 30, with a varying membership, some of them small, containing 50 or 60 members, and some of them containing 500 or 600 members.

9362. Could you give me an idea of the total number of members?—I expected to have had that information but I have not got it here. I will send you that information.

9363. (*Mr. Lambert.*) Could you give it me approximately?—Probably an aggregate of 5,000 or 6,000 members.

9364. (*Mr. Chaplin.*) Belonging to what?—To the Federation.

9365. Is that the society of which you are president?—Yes, I may say that the extension of the society would be very rapid if we had had any funds. It has been purely voluntary. The secretary is not paid, and we have had no extensive funds for organization.

9366. (*Chairman.*) Do these affiliated societies send representatives to the central one?—They do in proportion to their numbers. I think they send one delegate for every 50 members.

9367. How many members does the central society consist of?—The general meetings are attended by one delegate for every 50 members, so a society with 200 members would send up four delegates. There is an executive elected annually at that meeting, and the executive really conduct it.

9368. How often do they meet?—The executive meet at no fixed dates, but they are summoned when there is any special business. The general body, by the rules, meets at least once a year.

9369. And oftener if necessary?—Oftener if the executive call them together.

9370. Have they discussed these questions of tenure?—Yes, that has been practically the subject of discussion, and a Bill was drafted after mature consideration by the executive.

9371. Before we go to that, when did this movement begin?—I think it commenced in 1892.

9372. Then it is of quite recent date?—Yes, quite so.

9373. It developed into the preparation of a measure?—Yes; that was so.

High rents.

9374. What are the complaints made to the society?—Well, the complaints made are, first, that rents are too high under the changed circumstances, and that to await the natural adjustment of things would mean in Lancashire and Cheshire, as it has done, I believe, in other counties, the practical ruin of the farmers; for, before the adjustment was complete the farmers' capital would become exhausted, and probably at the same time the land on the farm would have been very largely exhausted also.

9375. Do I gather from you that up till three years ago there was no strong ground for complaining of the rents?—Practically not. I think I might even say that up to two years ago there was no outcry in the district I am speaking of.

Mr. W. Smith, M.P.
23 Feb. 1894.

9376. The rents were maintained, I suppose?—The rents were maintained.

9377. Without any great complaint being made of them?—There had not been the fall in prices I have spoken of.

Reductions of rent.

9378. Since the fall in prices you speak of, has there been a reduction in rent?—Speaking now of the district that I live in, and which I am more intimately acquainted with, I might say that there has been no general reduction of rent. The reductions that have been made have rather taken the form of temporary remissions of rent. I should think in most cases they amount to about 10 per cent. only—in some cases to 15.

9379. Then the last two or three years there have been temporary abatements in rent?—Temporary abatements.

9380. Which have not yet been converted into permanent reductions?—I could not say that in no cases have they, but it is the exception rather than the rule.

9381. It is the exception?—Yes.

9382. The general practice is to make temporary abatements?—Yes.

9383. And those have not yet been converted into permanent reductions?—No. They were so, I believe, in a number of instances on the last rent day, when that which had previously been a 10 or 15 per cent. temporary remission was made more or less permanent.

Particulars of farms.

9384. What have your brothers and yourself done on your estate?—We have in some cases made remissions near to 33 per cent. Take the largest farm—the 284 acre farm—the rental of which is now 550*l.*, of which we are bound by agreement to spend 50*l.* in manure for the grass land, that farm was let at 800*l.* some eight or nine years ago.

9385. What is the acreage?—284 acres. The rent was 800*l.*

9386. I suppose it is an exceptionally good farm?—It runs by the river side, and is very rich alluvial soil.

9387. Is it near to a railway?—It is not very near a large town; it is two miles from Garstang.

9388. Is it very favourably situated?—It is a very favourable farm, and one which has exceptionally fine buildings. My father, after he bought the farm, farmed it a number of years himself, and made very extensive improvements upon it.

9389. You have reduced the rent there by 33 per cent.—I will not say reduced it, but you have made abatements?—Not abatements, it is reduced permanently. It was re-let two years ago at 600*l.* a year, and we made a further voluntary abatement to the tenant as from this Candlemas—the past Candlemas—of 50*l.*; that makes it now 550*l.*, or 500*l.* net, as we are bound to spend 50*l.* a year in such manures as bones or lime.

9390. (*Viscount Cobham.*) Is that a very common arrangement in Lancashire?—I do not think it is.

9391. (*Mr. Long.*) When you say it was re-let, do you mean to a fresh tenant or to the same tenant?—It was let under lease before, and the tenant died. His family was grown up, and they all wanted to divide the proceeds of the man's estate. He was fairly well-to-do, being worth 3,000*l.* or 4,000*l.* We relieved them from the balance of the term. There was still, I think, nearly two years to run, and as soon as we found a suitable tenant we relieved them of the balance of the lease and re-let. This tenant, to whom it was re-let for 600*l.*, said something about the times being very bad, and we reduced the rent a further 50*l.* to him this spring.

9392. (*Chairman.*) In the case of the smaller farms, what have you done?—In the case of one of the 80-acre farms, that was once let at 300*l.*; it is now let for 200*l.* That was let two years ago for 220*l.*, and the rent was further reduced 20*l.* this Candlemas.

9393. Are they let by the year?—They are all, with one exception, let on yearly tenancies.

9394. Do you find the tenants not willing to take leases?—I may say, in the case of the large farm, the

Mr. W. Smith, M.P.
23 Feb. 1894.

tenant took that two years ago on a lease for a term of his own choosing—I think it was 10 years he took it for—then, after the lease was drawn and he was in possession, he demurred to signing the lease. We did not press him to sign, and I said, "If you like you can "be tenant from year to year instead."

9395. You have been willing to give leases, but you find tenants are not willing to take them?—The reluctance to take leases has been within the last two or three years.

9396. That almost necessarily follows from the fall in prices, with the uncertainty as to the future, I presume?—Yes.

Insecurity of tenure.

9397. Then complaints, you say, have been made, first, of too high rents, and, secondly, of insecurity of tenure?—That is so. There are one or two instances in Lancashire and Cheshire, one in Lancashire and one in Cheshire, that have been rather notorious during the past few months—cases where men have been dispossessed of their farms; in the one case owing to agitation in favour of an improved tenure of land, and, in the other case, owing to political opinions and the active part taken by a farmer in politics, I expect both those gentlemen will be called before you.

9398–9406. And as a ground of complaint by the association?—That is so.

Capricious evictions.

9407. You put it in that way?—Yes, as instances showing that men who are admittedly on all hands good farmers may be dispossessed of their farms for other and insufficient reasons. It is not on the ground in either case of any improper treatment of their land; they have both been very high-class farmers.

9408. Are those the only two cases that have come within your knowledge?—Those are the most prominent cases.

9409–9416. (*Chairman.*) These are two prominent cases which have occurred within your knowledge, and, I presume, you put it that what has happened in those cases may happen in others?—That is so.

9417. (*Mr. Long.*) Let us carry it a little further; do you put it that what has happened in their case has happened in others, but that you have selected these two as instances?—I have no doubt myself, though I am not able to give you names and dates now, that in many cases something of the same kind has happened.

Compensation for improvements.

9418. (*Chairman.*) Besides the high rents and the insecurity of tenure, have there been complaints also of insufficient compensation for improvements on leaving farms under the law as it now is?—Yes. It is generally felt that the Act of 1883 gives no adequate compensation. I may say that that Act has ceased to be acted upon of recent years, owing to the disappointing results in the earlier years it has been in force.

Changes of tenancy.

9419. Have there been many cases of changes of tenancy where the claims have been made, and where the results have been unsatisfactory?—I have not heard of any cases under this Act now for several years back. There were a number of cases in the earlier years, and the results were so disappointing in the expense and the nature of the award, that I think tenants generally have preferred to arrange privately with their landlords as best they could.

9420. Of course there have been a great many changes of tenancy?—That is so.

9421. In those cases, I understand you, they have endeavoured to come to agreements with their landlords, or rather with the incoming tenants, without resorting to proceedings under the Act, is that it?—The arrangements would be, as a rule, with the landlord, not with the incoming tenant.

9422. With the landlords?—Yes.

9423. And they have come to arrangements?—They have just made the best bargain they could, and got anything or nothing according as they could privately, but they have not gone the length of taking proceedings.

9424. Has that been on account of the insufficiency of the provisions of the Act for securing compensation or on the ground that counter-claims have been admitted under the Act which have more than eaten up the amount of compensation due?—On both grounds I think. The counter-claims have generally been as large or larger than the original claim, and then there is the expensive slow process.

9425. Have the proceedings in themselves been expensive?—I think there have been very frequent adjournments, and considerable expense incurred by frequent sittings of arbitrators and attendance of witnesses.

Mr. W. Smith, M.P.
23 Feb. 1894.

9426. Do they also complain that the modus of the Act does not, in itself, provide sufficient compensation?—That is so.

Compensation for improvements.

9427. (*Viscount Cobham.*) Do they fall back then upon some local custom?—There is very little local custom between the out-going and incoming tenant. There is practically nothing covered in the district of which I have personal knowledge beyond the value of the unconsumed hay and straw on the premises, and the crop of wheat which the out-going tenant may have sown. They are practically all that the local custom covers. The rule is that the incoming tenant takes the hay and straw at a valuation from which one-third is allowed as manurial value; and as regards the crop of wheat which may be in the ground, the out-going tenant takes one-half of it, and the incoming tenant the other half.

9428. (*Mr. Chaplin.*) I should like to know what time of the year these farms are entered upon?—Candlemas always in our district as regards the land, but the buildings at May Day—the dates are the 2nd February and the 12th May. There are certain local customs, as, for instance, that the tenant when he enters into possession of the land at Candlemas is allowed stallage for so many horses, and sleeping accommodation for one or two men according to the size of the farm, so that they may come and be proceeding with their spring work.

9429. (*Chairman.*) These three questions, the highness of the rent, the insecurity of tenure, and the insufficiency of compensation for improvements under the Agricultural Holdings Act, have all, I presume, been discussed by your Federation?—That is so.

Land Tenure Bill.

9430. What conclusions have the Federation arrived at upon them?—The conclusions they have arrived at are embodied in the Bill which I introduced into the House last session. I may say that I had myself determined to introduce such a Bill, but before the time came for the Bill being printed, and the expected time of second reading we had one or two conferences on the subject with a specially selected sub-committee of the executive, and the draft Bill was gone through very carefully, and they suggested certain amendments, and these were embodied in the Bill. (*See* Appendix A. XXVI.)

Land Courts.

9431. What do they propose?—They propose, in the first place, the establishment of Land Courts to fix rents.

9432. Have you got a copy of the Bill?—I have some small pamphlets which give in a short form the main features of the Bill. I do not know whether they would be of any use, but I will hand in copies. (*Handing in the same.*)

9433. May I take it that generally the Bill is framed on the model of the Irish Land Act?—The basis of it is the Bill that was introduced for Wales by Mr. Ellis.

9434. It proceeds upon the general principle of that Act?—Yes, broadly upon the same ground.

Fixity of tenure.

9435. Does it propose to give fixity of tenure to the existing tenants?—It does, subject only to the condition that the man shall farm his land in a satisfactory manner and pay the judicial rent.

9436. Then any existing tenant would be entitled to remain in his holding for ever?—So long as he complied with those cardinal features.

9437. And subject to the rent being fixed by a tribunal?—Yes, once in five years on the application of either party. I may say there are certain exceptions. There are certain grounds upon which the landlord may re-acquire the land, such as for public purposes, the building of chapels, the provision of allotments, or small holdings, &c.

9438. The landlord may resume possession, may he not?—He may resume the occupation by himself or by any member of his family.

9439. Is the landlord equally with the tenant entitled to claim a judicial rent?—Yes, that is so.

Permanent improvements.

9440. You say that this was framed largely upon the analogy of the Irish Land Act, is there anything in your district in the condition of the tenants similar to

Mr. W. Smith, M.P. 23 Feb. 1894.

that which existed in Ireland; had the tenants effected permanent improvements themselves largely?—No, not as regards buildings. I think, as a general rule, the buildings have been erected by the landlords.

9441. The English system may be said to prevail in your district?—Yes.

9442. The landlords effecting all the permanent improvements?—The bulk of them.

9443. You are aware, I presume, that the fact of the Irish tenants having effected all the permanent improvements themselves formed one of the main grounds of the defence of that Act?—I know that was an exceptional state of things, which gave greater force to the movement for it.

9444. There is nothing analogous to that in your district?—No, but I advocate this upon the ground of common benefit to all the parties interested. I think it would benefit the land-owner as well as the tenant.

9445. Once every five years the tenant would be entitled to go into court and have his rent fixed?—Yes, that is according to the proposals of the Bill.

9446. Then on the termination of that five years he may be again entitled to go into court?—Yes, or the landlord.

9447. And so on, for ever?—That is so.

9448. Would it also follow that the tenant would be entitled to sell his interest?—Yes, to sell it during life, or to bequeath it at death. The way in which I provide for the valuation of his improvements is by the price they would command in the market. You will find that on page 4 of the pamphlet, at the bottom. There the landlord has the right of objection. Notice has to be served upon him, stating the name, address, and occupation of the incoming tenant, and the price agreed upon to be paid between the two, and he may, by giving notice, object to those terms upon the ground of their want of *bona fides*, or of the unsuitable character of the man who is proposed to be admitted to the farm, say, for instance, if he had had no experience of farming, or if he had no adequate capital with which to farm the land; and the court has power under such circumstances to vary the amount or to refuse to accept the man as a suitable tenant.

9449. Then in clause 7 I see there is provision made that the court may fix reasonable conditions of tenacy?—Yes, that is so.

9450. That seems to be a novelty, as compared with the Irish Land Act. On the application of either party apparently the court may vary the ordinary conditions of tenure and put in special conditions?—Yes, that is so; if the landlord refuses to give consent to permanent improvements provided for in the first clause of the Agricultural Holdings Act, such as buildings, the tenant may apply to the court, and if the court are satisfied that such additional buildings are beneficial to the holding they may sanction, without the landlord's consent, the erection of such buildings.

9451. Apart from this clause apparently, the tenant has not been entitled to make any permanent improvements in the shape of buildings?—Not without the lessee has got the landowners' consent, or he gets the consent of the court. I put it in because I felt that a man might have some hobby, he might be a breeder of horses, and he might want to erect a lot of loose boxes, and that sort of thing, which would be of no value to an average tenant following him. It would be a foolish and vexatious expenditure.

9452. Inasmuch as the tenant is to have fixity of tenure and to be entitled to sell his holding, and to hold it himself as long as he likes, and to sell it whenever he likes, one does not quite see why there should be any restrictions in the buildings he is to erect?—It might be dispensed with, perhaps, but it is really an attempt to make the Bill fairer, so that the man should show the reasonableness of his wish.

9453. The landlord would no longer have any interest in saying whether there should be more or less buildings upon it, so long as he is not called upon to erect them himself?—The landlord has the option in any case in which there is going to be a change of tenacy to re-acquire the whole of the interest in the farm. He may elect, if he wishes, to pay over the sum which has been agreed upon between the tenants, and resume full possession of the holding, and then of course choose his own tenant, as at present.

9454. Still that is only upon payment of whatever may be agreed to be paid between the out-going and in-coming tenants?—That is so. I quite see the point you make and I do not suppose for a moment that the Bill is a perfect one. It seems that that is almost an unnecessary safeguard.

Compensation for improvements.

9455. I want to see exactly what it means, and to arrive at the reasons for it. Then it also contains provisions as to the compensation for improvements?—On the other point I may say that there is nothing in the Bill which prevents the landlord still making these improvements himself, upon the tenant agreeing to pay him interest upon the amount expended, and that being notified to the court becomes binding as part of the judicial contract.

9456. All that must be subject to the approval of the court, apparently?—Yes.

9457. Therefore, if the tenant is unable himself to make a permanent improvement, or erect a building, he must apply to the landlord, and if the landlord is willing to spend money for the purpose, then the consent of the court must be obtained; is that so?—Yes.

9458. That is to say, the rent can only increase with the consent of the court, and for that purpose it would have been necessary to apply to the court?—Yes.

9459. Then there was a further provision as to compensation for improvements; that, I presume, is to take effect in the event of the tenant being willing to terminate his tenancy?—Yes.

9460. Supposing he wishes at any time to give up, I presume at the end of the five years he can do so?—Yes.

Transfer of holdings.

9461. A tenant would not be entitled, I presume, to give up his holding short of the five years?—He would have to provide a tenant acceptable to the land-owner.

9462. I mean he could not transfer it without the landlord's consent when the rent has been fixed for five years?—He would have to find an acceptable tenant or otherwise retain it himself.

Lease-holders.

9463. There is a further provision, apparently, that the lease-holders are to be put into the same position as the other tenants?—At the termination of the existing leases.

9464. I do not think we need go into the question of common grazings, and so forth; that seems to be a special subject?—Up in the northern part of the district, Cumberland and Westmoreland, similarly to Wales in the pastures, there are certain rights as to sheep pasturage on the farms.

Constitution and procedure of land court.

9465. What do you propose in the way of a land court?—I propose the existing county courts as being at once numerous and easily accessible; then the tenants are more or less familiar with them, and with their procedure, and their decisions would be given comparatively quickly and at much less cost than any special court which might be created.

9466. The county court of the district would be the land court for that purpose?—The county court judge.

9467. Whatever size the farm might be?—Yes. The county court judge is really the one, and the power of the decision would rest in his hands, but he would be advised by two practical men, who would sit as assessors, just as is the case, I believe, now in the Admiralty Division of the High Court.

9468. Then what exceptions do you make to the provisions of the Act?—I make exceptions where the land is required for public purposes, such as for schools and chapels, or for allotments, or for the use of the land by the owner, or by his family. The degrees of relationship to which that is available are specified, I think, in the Act.

9469. Then I see a provision that "any holding which "is not agricultural or pastoral in its character, or "partly agricultural and partly pastoral," should be excepted?—Yes.

9470. Then lands in the hands of the owner and in allotments?—That is following exactly the provisions of the Welsh Bill, of which I spoke.

9471. Apparently there is no provision like that in the Irish Land Act, with reference to purely pastoral farms?—No.

9472. It goes further than the Irish Land Act in that respect?—I am not myself very familiar with the Land

Mr. W. Smith, M.P.
23 Feb. 1894.

Act, which was passed some years ago, before I took a prominent interest in these matters.

9473. Of course it follows also that there is no provision such as there is in that Act, that farms managed on the English system are also exempted?—No.

9474. In fact it goes very far beyond the Irish Land Act?—And the judicial period is much shorter It is five years against 15; and there is no appeal.

Remedy for the depression.

9475. Will you explain shortly to the Commission how you think this will operate as a remedy for the depression?—I feel in the first place that the want of security and the very inadequate compensation now enjoyed by farmers is having a very prohibitive effect both on their energy and skill in management. I believe it is admittedly the fact that farming, as a rule, has deteriorated during recent years. Very few improvements have been made by tenants now, because it is found from experience that a man who has farmed his land well has a much less chance of getting a reduction of rent when there is a drop in prices than the man who has farmed his land badly, because the farm which has been badly farmed would be very difficult to let, and could only be re-let at a very much less rental. The farm which has been farmed well has probably been very much improved, and improvement in the land would in many cases counterbalance the depreciation in its natural value from the drop in prices.

Land Tenure Bill.

9476. The Bill, if passed into law, it seems to me, would operate very differently, according to whether rents are falling or rising?—In any case the man would be certain of his farm at what was a fair rent under the then circumstances.

9477. But if the prices were falling, as they have fallen during the last three years, then tenants who have had their rent fixed before the fall would, at all events, be bound to pay the judicial rents during the five years?—I take it that, in fixing rents, the court would somewhat view the drift of affairs, and if it was very evident that prices were at the moment rapidly receding, they would take that into account somewhat.

9478. But there is no provision that, in the event of the prices falling during the five years, anything should be done for the tenant farmer?—That is so. My own predilection was in favour of a shorter period even than the five years, but I altered that from three to five in deference to the wishes of the tenants themselves as represented by the Federation.

Leases and agreements

9479. I understood from you that even your own tenants were very unwilling to take leases?—I ought to have explained, perhaps, in connexion with my own land—I did not know that you were going to ask me questions about that—that the circumstances are somewhat peculiar. My late father had a passion for acquiring and improving land; and every one of these farms which we own now was taken into his own hands after purchasing, and he made every possible improvement upon it in the way of buildings and fencing that it was possible for a man to make upon his farms, so that many of the conditions which pertain to other holdings have no force in this case.

9480. Quite so; but one would think that a tenant coming into one of those farms which are in such good order would all the more like to have a lease?—They have got frightened by the rapid fall in prices. A man may make a good bargain to-day, and it becomes a bad one in a few years' time. I must say, for my own part, that I have not been very anxious to give leases either, because my experience has been somewhat this: Take this one farm which is 284 acres—the largest one—that was let originally at 800*l.*; after the man had been on the farm for two years only, as things were going a little worse, the rent was voluntarily reduced to 700*l.*

9481. What they are evidently afraid of is that, if they took a lease for seven years, prices might fall in the interval, and they might find themselves landed in loss?—I suppose that would be their feeling; the farmer has been hit heavily of late.

9482. I do not see why tenant farmers should be more willing to take a judicial lease than a lease from a landlord like yourself?—I think with a judicial lease he would feel the security that he does not feel now in any case, certainly not in many cases. As regards throwing himself with energy into the improvement of the soil, he would have an absolute certainty that no advantage would be taken of him in that respect.

9483. Supposing the alternative is presented to one of your own tenants either to take a lease from yourself or to take a judicial lease under this Bill, or to remain as a tenant from year to year, do you think that he would be more willing to take a judicial lease under the Bill than a lease from yourself?—I think so. That was the opinion I gathered from the farmers in the district, that they would prefer to be under such a system as the Bill suggests; that is, under a court.

Mr. W. Smith, M.P.
23 Feb. 1894.

9484.—You do not think the same reasons which prevented him from taking a lease from yourself would induce him to be unwilling to bind himself for five years?—As a matter of detail as to the exact number of years, as I say, my own feeling was for a shorter period, but, of course, you do not want to have the farmer's hands constantly full of litigation, and the farmer always running to the court. Of course the thing would work both ways, and if we had a turn in the tide he would benefit.

Execution of permanent improvements.

9485. Do you contemplate that the tenants would themselves effect the permanent improvements, or that the landlords would still continue to effect them?—I think as regards buildings, in the main, they would probably prefer and expect the landlord still to make them, they paying a percentage upon the outlay.

9486. Do you think the landlords would be willing themselves in future to expend money?—I do not see why they should not, because there is special provision that, over and above the judicial rent, they shall be paid interest upon such outlay.

9487. It would be always subject to this, that, at the end of five years, the rents would be re-adjusted?—Yes, but the rent, with the addition of the buildings, surely would, under any circumstances, be more than it would have been without the buildings if they had involved a serious expenditure.

9488. Then do you contemplate that the landlords would continue to effect permanent improvements?—Yes; but I would only apply the term "permanent improvements" to buildings, I should not expect them to do such work as draining and boning the land.

9489. That, you think, the tenant should do?—I think the tenants would be quite willing to do that.

Railway rates.

9490. Have you any other suggestions or remedies that you contemplate, or that you have to propose?—There is no doubt at all that to some extent the railway charges are felt to be very burdensome; they are practically prohibitive of the removal of the produce of one district to another. I may say that in my own experience, as a miller, many years ago we used to get large quantities of wheat from Lincolnshire, at a rate varying from 15*s.* 10*d.* up to perhaps 19*s.* 2*d.* per ton. At that time the freight by sea from foreign countries was very much higher than it is now. The ocean freights have gone down. Take recent experience, say from California: Californian freights have gone down from as high as 80*s.* to as low as 17*s.* 6*d.* or 20*s.* per ton, but the railway rates from Lincolnshire remain practically the same. The result is, that it is perfectly impossible to use those wheats which we should very much like to use frequently, as an admixture with foreign wheats, to give flavour to the flour.

9491. Do you complain especially of the raising of the rates during the last two years, or are you complaining of what I may call the permanent rates?—I should say that I complain as regards that more important matter of the retaining of the rates at their former level, in view of the reduced cost of transit from foreign and competing countries. There have been considerable increases locally.

9492. You do not think that there has been a reduction of railway rates corresponding at all to those which have been effected in freights?—There has been none at all that I am aware of. In fact it has come to this point, that during the last 12 months I have been able to convey grain from San Francisco to Barrow, where my mills are situate, at the same or less cost per ton than grain can be conveyed from Lincolnshire by railway. We have had vessels with freight as low as 17*s.* 6*d.* per ton.

9493. (*Mr. Everett.*) From where do you say?—From San Francisco, a four-and-a-half month's voyage by sailing ship, at as low a freight as 17*s.* 6*d.* to 20*s.* per ton, and the rate by rail from Lincolnshire or Norfolk (those are the great wheat growing counties, we do not grow much in our own neighbourhood) is just as great, and remains unchanged entirely from what it was 20 years ago.

Mr. W. ...ith, M.P. Feb. 1894. perimen... farms.

9494. (*Chairman.*) Do you recommend experimental farms?—Yes, strongly. I think agriculturists in this country have been handicapped very much indeed by the want of facilities which have been enjoyed by most of these large competing countries. I believe that throughout Canada and the United States, and also throughout France, Germany, and Switzerland, for many years back, the Imperial or the municipal Government has provided experimental farms, with schools attached. Something is being done in that direction now. The Lancashire County Council have decided to take a small farm, and the Cheshire County Council has already taken, I believe, a small farm.

9495. Do you think it should be confined to small farms?—It would depend upon the local circumstances. I would prefer a medium size farm. We call a large farm in our district a farm of 300 acres, and the great bulk of the farms are half of that.

9496. What would you call a small farm, 60 to 100 acres?—No; 80 to perhaps 140 or 150 acres.

9497. Are those farms that men can farm themselves, with their own hands and their families?—Yes, there are a great many farms so farmed; the man and his wife and family, with perhaps one, or it may be two, hired men work the farms.

9498. The man working himself?—Yes. There is quite a different system in the north from what you find in other parts of the country; we have hired men, who are mostly single men, and who live in the house with the family, and they are hired by the half year.

9499. (*Viscount Cobham.*) Do you think that it would be advantageous for the county councils to apply the whole of the money granted to them which is applicable for the purposes of agriculture to the establishment of experimental farms?—Yes.

9500. Rather than to the giving of lectures?—Yes. My own experience is that the money spent in lectures round about the country is very largely wasted, because, as a rule, the lectures are too scientific and too technical in character, and the professors are speaking over the heads of the people; they go away retaining practically nothing.

9501. Are the lectures well attended in Lancashire?—Yes, fairly; some subjects better than others. Latterly they have been giving lectures on bee-keeping and horticulture, and the smaller branches of farming. I think they have abandoned the lectures to farmers pure and simple.

9502. But you think that agriculture may be taught more advantageously?—Two years ago I urged very strongly upon the Lancashire County Council to take up this at once. My idea was this: say the sons of the farmers leave the village school where most of them go, at perhaps, 14 years of age, I think the best thing for them to do is then to go to their own homes and work practically on the farms for two or three years, and then, when they have begun to take an intelligent interest in farming matters, they should be got, if possible, to go to these experimental farms or schools; it should not in any sense be an agricultural college for the sake of qualifying land agents and that class of men, but it should be a school where they might see the practice and science of every-day farming combined. The farmers, there is no doubt at all, are very largely wedded to old-fashioned notions, and I think they suffer very much by it, because they do not adapt themselves so readily as they might do to new ideas.

Ground game.

9503. Have you any provision about game in your Bill?—None at all.

9504. Have you anything to say to us with regard to the existing practice as to game?—In my own immediate neighbourhood it is not a crying grievance. If you go a little further south, perhaps in the Lytham district, it might be otherwise.

9505. (*Chairman.*) Have you any provision in your Bill which might be said to bear upon that?—I take it that as the Bill as drawn now gives permission to the owner only to enter upon the farm for certain purposes, and the pursuit of game not being one of those, the game would really be the property of the tenant.

Position of landowners under Land Tenure Bill.

9506. (*Viscount Cobham.*) What enjoyment would a landowner get out of his property in the future under your Bill?—He would have the pleasure of receiving the rents.

9507. Except the receipt of his rent?—If the land was, as I believe it would be, well farmed, he would have the pleasure of seeing a thriving tenantry and a prosperous country side, which, I presume, is something.

9508. He would become merely a rent charger?—Yes.

9509. What inducement do you think the landlord would have to spend money on permanent improvements under such conditions?—That he would get his interest on his money as on any other investment.

9510. Could he, as a matter of fact, get anything like the same interest for an expenditure upon a landed estate as he could get from consols?—I do not see why he should not for permanent buildings.

9511. What provision have you in your bill with regard to the fixing of the interest?—What do you mean by that?

9512. If the landowner spends money upon permanent improvements, the interest upon that money has to be fixed?—That would be by agreement between the landowner and the tenant, and they having so agreed the agreement would receive the approval of the court, and it would be recorded in the official records of the court.

9513. That would hold good only until the next revision of rent, of course?—The next revision of rent would, of course, take into account the better state of the farm when supplied with such buildings. Take an instance which has been very largely commented upon in Lancashire just lately. I think Mr. Wilson Fox had evidence of it when he was down in Lancashire. I allude to the very unsuitable, and, in many cases, insanitary buildings on dairy farms in which butter is made for the large towns, and in which cheese is made—they are utterly unsuitable; in fact, in some cases, the only place they have to keep cheese is under the bed in which the farmer and his wife sleep. Surely, in such a case, if good substantial buildings were erected on a farm having a suitable dairy and suitable cheese-rooms, that farm would be worth more rent to any one who might enter upon it than a farm with such accommodation as I have described.

9514. Do you think, in your district, at all events, the landowners would be equally willing to put their hands into their pockets in the future?—I am not speaking from a knowledge of their sentiments derived from discussing it with them largely; but I should say that, as reasonable men, they would have every inducement still to continue doing so.

Appointment of valuers.

9515. As to the appointment of assessors, do you put that into the hands of the county council?—It is the county council by the Bill, but the district councils were not then in existence, neither are they now, yet it is an open question whether the district council would not be the better body.

9516. Would you arrange that one of the assessors should be a representative of the landowners?—Yes.

9517. Is that in the Bill?—Yes, the registrar of the county court has the selection of these men from the list provided by the county council, but he is bound to see that one of them represents the landed interest, and is an estate or land agent, and that the other is a *bonâ fide* tenant farmer.

Insecurity of tenure.

9518. What is your explanation of this feeling of insecurity amongst tenants being very much greater in Lancashire and Cheshire than we have heard of in other parts of the country?—I believe the movement first commenced in this way; some men left Lancashire and went down into Essex, and they found that there where price had been affected through the price of wheat much sooner than price had been affected in our district timely remissions of rent had been refused to tenants, and that the result had been that the tenants had gone on hoping against hope that there would be a reaction in prices until the whole of their capital had gradually been absorbed, and simultaneously the land had been much impoverished. We felt that that was not a right state of things, and we wished if possible to prevent a repetition of such things in our own part of the country.

9519. Do you think that the farmer's capital is more insecure in Lancashire than in other parts of the country?—No, it is equally insecure everywhere, but the result is more painful in some other parts because the process has been in operation longer; they do not wish to go through the same painful experience that

Mr. W. Smith, M.P.
23 Feb. 1894.

farmers in the wheat growing counties have gone through.

9520. We hear very little of this from witnesses representing those parts of the country?—It was a matter of notoriety at the time. I know that a member of the committee was sent down from the Preston district into the Essex district and the matter was a great deal discussed, and opinions expressed upon it at public meetings in the Preston district particularly.

9521. I assumed that the agitation in Lancashire was due to local causes, but I understand you to say that that was not so?—I did not want to weary you at too great length; but this is really what took place. It was after the failure, as we believed, of the conference in St. James's Hall in December 1892. I believe the idea of that conference came from Lancashire, and we expected the attention of the conference to have been mainly directed to the question of land tenure. We found it was not, and that it was directed to what we thought the impossible remedies, the unattainable remedies at all events I will say, of either protection or bi-metallism, and we thought it was time that we made some movement towards raising an agitation in what we believed to be the right direction.

Relations of landlords and tenants under Land Tenure Bill.

9522. (*Chairman.*) There is just one question that I omitted to ask you. Apparently, under Clause 31, any contract for the hire of land which is inconsistent with this Bill will in future be void. I rather gather from that that the operation of it would be this, that the owner of land if he lets at all must let subject to this Bill?—Yes.

9523. In other words if he admits a tenant at all the tenant must be a co-owner and not a tenant?—That is just so.

9524. It would forbid the creation of any tenancy in the future, a tenancy that is, such as we all mean?—Other than a judicial tenancy, yes.

9525. It must be a judicial tenancy with fixity of tenure?—Yes.

9526. And with the security of this Bill?—We do not want the Act to be permissive, we want it to be compulsory.

9527. Therefore, in future, there could be no such relation as that of landlord and tenant?—You might call the landlord what you like; you might call him rent receiver or rent charge owner.

9528. Such as we understand to be the relation of landlord and tenant would cease to exist; it would not be created in the future?—I suppose the relative position of landlord and tenant is without any such Bill as this very rapidly undergoing a change.

9529. If a landlord wished to let a portion of the demesne land, he could not let it for a year because the tenant who came in for a year would at once become entitled under this Bill to fixity of tenure for ever?—I am not quite sure, but I think there is a provision where the tenancy is for less than a year; but perhaps that is only about sub-letting.

9530. If he lets it for a year, the tenant comes in and at once becomes entitled to remain there for ever?—That probably is so.

9531. (*Viscount Cobham.*) Your Bill is compulsory upon all parties?—Yes.

9532. Notwithstanding any agreement to the contrary?—Any private agreement would have to be submitted to the court and recorded in their books.

9533. Your Bill is a long way beyond the Irish Act?—In that respect, yes, but I think the Irish Act has not proved perfect in its working.

Definition of fair rent.

9534. (*Mr. Giffen.*) What is a fair rent in the sense in which you use the term?—I take it to be a rent by which a farmer could live, and could pay fair wages to his labourers, and bring up his family in decent comfort at the then existing prices of whatever produce that land was calculated best to raise.

9535. How do you define a farmer living in decent comfort, and what is meant by "decent comfort," and terms of that kind?—I suppose common sense would have to come into that; the men who would fix such value and who would advise the judge in such a matter would be practical men.

9536. But these are all changeable terms in their meaning, and people have different ideas of what decent comfort is?—There are no such terms set forth in the Bill, I may say.

9537. You used the phrase "fair rent," and I am merely asking in what sense you use the words?—I trust to the fairness and the sound judgment of the men who would be called upon to say what was a fair rent; they would have no interest in the matter themselves.

Mr. W. Smith, M.P.
23 Feb. 1894.

Fixing of rent.

9538. By what principle would the county court judges, I think there are about 60 of them, be guided in fixing what is called a fair rent in the Bill; what would they have to go by?—I suppose the assessors, who would visit the holding, and who would know entirely all its conditions, would be very largely guided by the price of the various products in the market, and, therefore, they would know what rent the farmer might reasonably be expected to pay; they would be practical men.

9539. They would have some vague ideas, I suppose, as to how men of that class would like to live, or something of that kind; but it would all be very vague, it would not be exactly a principle?—One of the assessors would be a land agent who had been in the habit of letting farms, and the other would be a tenant who had been in the habit of living on farms.

9540. I suppose land agents are guided now very much by the fact of their knowledge as to what similar farms could let for under competition, but under the system you propose they would no longer have such a guide?—What would they be guided by?—Their own practical experience, I take it.

9541. Yes, but they must have some principles in fixing the rent. Now they have a practical experience in fixing competition rents; what would they have to guide them under the new system which you propose to establish?—I may say that farms are far from being let at present all by competition. Very frequently farms are not put up to competition at all. Take the instance I quoted of the largest of the few farms which my own family hold; there was no competition in that case. We wanted a tenant, a man we thought a substantial and likely man came to inquire about the farm, he went and looked over it with one or two of his own friends, and he placed upon it what he thought a fair value, and he came to negociate with myself about it. I had my own idea of what its value was, and we came to terms.

9542. But the element of competition exists all about you, and if that man who came to you could have got a farm on better terms elsewhere he might have gone there?—He was already in a farm which he was not compelled to leave.

9543. Still he had that opportunity of going to other farms under the system of competition which we have now?—I suppose there would still be this guide, that the judicial term would not end at the same time in every farm, and that these rents would be being fixed continually, and that one would be a guide to another.

Farmers' scale of living.

9544. You referred to the fact of the farmer being able to live upon his farm in decent comfort; is not one of the difficulties of the case that not only have farmers different ideas of what decent comfort is, but that the scale of living of a whole class changes from period to period?—It does change, of course, as every other class does; but I may say that the farmers in the district that I am most acquainted with are not open to any charge of extravagance in living. I believe the gravest charge that can be brought against them is the waste of time which some of them make by attending auction marts and that sort of thing too frequently. There has been no extravagance of living, and every member of the family is accustomed to work.

9545. But still the principle by which the county court judges would be guided, some of them not being very well acquainted with farming, would be somewhat vague?—I take it that in addition to the opinions of the two men especially appointed who would have a sense of responsibility strongly upon them, both parties would be able to call evidence into court as to the value of the farm.

9546. It seems to me that the point upon which you would have to call evidence would be the definition of the decent comfort in which the farmer was to live?—If a man had farmed a farm, say for five years, one of those judicial periods, and during that time he had not been able to make it pay, and if he could produce his accounts to show what the loss or otherwise was, that in itself would be very tangible evidence of what the farm was worth.

Mr. W. Smith, M.P. 23 Feb. 1894.

9547. If there were no accounts, and many farmers, I understand, have no accounts?—Then the matter would be one of more difficulty, but I believe the tendency is for farmers to keep accounts. I myself for several years have urged upon farmers that they should adopt a simple method of book-keeping, because very largely farmers have to go to their landlords asking for remission of rent, and the landlord has had to take their word for it as to whether they have made money or not.

Fair wages labourers.

9548. Would it not be a great convenience in carrying out these arrangements if the labourers were bound to work for fair wages?—With us they do get what I suppose are considered fair wages, what some counties would consider good wages.

9549. And is a county court judge to be called upon to fix fair wages?—No, I think the subject is sufficiently difficult without introducing a still more complicated one into it.

9550. Still that would be a convenience in enabling the fixation of fair rents?—I think the fact exists that there is no complaint upon the part of the farm labourers in my own neighbourhood, and that they are satisfied with the wages they are getting, so that those might be taken as fair wages.

9551. But still circumstances might change, and change very materially in the course of a very few years, and the question of what is a fair wage for the labourers would come before the county court judge indirectly?—In a manufacturing district like Lancashire or Cheshire, of course, the supply of labour would ebb and flow more or less according to the prosperity of the manufactures.

9552. That is to say, the wages of the labourers would be determined by competition?—Yes, if you put it so, and we should at once see whether the wages were fair and attractive or not, because the supply of labour would decrease, and the farmers would have to offer a higher rate per day to attract them from the ironworks, say.

9553. You do not contend for fair prices for the produce of the farm?—I do not contemplate any artificial regulation of prices.

9554. You only propose to regulate artificially the rent of the farm; in the midst of changing elements all around it, you propose to regulate artificially this one thing?—I did not want to enter upon a long discussion on the foundation of this subject; but I take it that land stands in a totally different position to what many of these products do. The land of the country is limited in extent, and I think there is an obligation upon us to make the most of it, and to remove any barriers which prevent the full use of it.

Effect of security of tenure.

9555. Are you satisfied that the farmers' class would be any better off under the system that you propose, than they are now under the system of competition in many parts of the country where the farmers can choose and fix their own rents?—I am perfectly satisfied that their position would be very much improved.

9556. Why?—In the first place, they would have the feeling that injustice could not be done them, for they would be secure in their holdings, and they would feel that so long as they farmed their holdings to the benefit of the community, if you like to put it so, so long as they were farming that land well, they would not be vexaticusly disturbed, and they would be practically in the position of owners.

9557. But what security, practically, could they have better than the fact that if they are dispossessed of one farm they would get another on as good terms?—But if a man has been a very high-class farmer, it is not such a simple thing to leave one farm and go to another; if he has been a very good farmer he leaves behind him a very large amount of capital which he cannot recoup himself for.

9558. If it be the case in many parts of the country that many of the farms are to let on advantageous terms, how would the farmer be better off under this system that you propose?—I think I should say that he would have a much greater incentive to high class cultivation if he had an absolute security of tenure.

9559. Why, what is the incentive if he can get a farm on good terms elsewhere?—What do you call good terms? If a man takes a farm now from year to year you can quite understand that he is not in a position to embark his capital freely in it.

9560. Still we have been informed that in some parts of the country farms can be got easily, that is to say, there are more farms unoccupied than there are farmers to take them up; in those parts of the country how would a farmer be better off under the Bill which you propose?—I fancy that that is really a proof of the contrary state of things. The fact of these farms not finding takers is a proof that the conditions on which they can be taken are not satisfactory.

9561. If, on the other hand, there are some parts of the country, where there are more farmers than there are farms to let, would not the effect of what you propose be, to give a special advantage to the particular farmers who happen to be in possession, making them so much better off than the rest of the community, and converting them, in effect, into part owners?—If anyone is to have a preference, the man who is on the farm at the present moment is that man. Two men cannot occupy the same farm at the same time; the thing must have a beginning, and there is no doubt that the man on the farm would get the preference.

9562. Then you would give a special advantage to the people in possession, beyond the privileges which the rest of the community possess?—I suppose that is so.

9563. Why should you take a part of the property from the present owners, and give it to one class?—I do not admit that we are taking anything from any owner. What are we taking from him?

9564. Then you are going to give them the property at a rent which does not take anything from the owner?—I do not see what we are taking from the owner. We simply provide security for the man who does this necessary work, and it is necessary for the whole community that the land should be cultivated and cultivated to the very best advantage, and we want to offer every inducement to the tenant so to cultivate.

Fair rent.

9565. That is to say, you give him an opportunity of carrying on the process of cultivation at a rent less than the owner of the property could obtain in the open market?—I do not know whether it would be a rent less or a rent more, but at a fair rent.

9566. It must either be the one or the other, or the sum that the owner would get?—At a fair rent, which was fixed by some impartial person.

9567. Yes, but the difficulty is that at present a fair rent is a competition rent, that is to say, what the land would let for in the open market; and you have not given me, as far as I can judge, a definition of a fair rent in your sense?—I think the definition is clear enough, it is what a man could live by. You will find now, all over the country, that a man who is farming land is not living; he is gradually losing bit by bit the whole of his capital.

9568. You cannot carry it further than that; you cannot give me a more precise definition?—I think it is a perfectly satisfactory answer.

Procedure under Land Tenure Bill.

9569. Can you give me an idea as to the number of judges that would be necessary if this business was thrown upon County Courts?—No. I think the fact that such a power exists would prevent any very large number of cases going into the court. I think the settlement of one case would act very much as a guide to private arrangements in the other cases. I do not anticipate that 1 per cent. of the cases would go into court.

9570. Has that been the case in Ireland?—I cannot tell you.

9571. Is it not the case there that you have an immense number of judicial decisions, and a great amount of legal process at great expense; that whatever the advantages or disadvantages of the law in Ireland may be, yet still it has had this effect, that you have had a great amount of legal process?—I am not very fully conversant with what has gone on in Ireland under this Act, but I do not anticipate that you would have that amount of litigation in England; of course, in Ireland, to begin with, there was perhaps greater injustice in the existing condition of things; the rents being paid there were rents which I think all parties admit now ought never to have been charged, and therefore it is perhaps natural that more litigation should take place there.

9572. And that is not true generally of the rents that you have to deal with in Lancashire?—In nothing like

Mr. W. Smith, M.P.
23 Feb. 1894.

the same degree, because the parties there were paying rents upon buildings and all sorts of things which they hemselves had erected.

Wages of Lancashire labourers

9573. (*Mr. Clay.*) What is the general wage for the agricultural labourer in Lancashire?—The single men, who live in the house with the farmer and his family, and who eat at the same table with him, and live altogether in a similar manner, are getting wages from 20*l.* a year for youths, up to 30*l.* for skilled men. The married men who settle in the villages are employed week by week, and they are getting from 3*s.* 6*d.* a day, or 21*s.* a week; but they get more, 24*s.* a week in harvest-time and hay-time.

9574. Having carried your ideas so far as to fix a rent which would give the tenant a living wage, as you call it, have you any objection to fix the labourer's wage now, and to give him a good living wage?—I do not say the Court does directly fix the living wage to the farmer, but it does indirectly in fixing the rent.

9575. Is fixing the rent not a great factor in giving a man a good living wage, or a profit?—I think the Bill as it is drawn equally fixes the wage of the labourer now, as it does the remuneration of the farmer, because the Court would know what the current rate of wages in the district may be, and would say, after a man has paid his labourers, and after a man has lived on this farm, he can afford to pay so much in the shape of rent; therefore indirectly it fixes both, but directly neither.

9576. If it fixes the rent at a low rate, the farmer is better able to give the labourer a better wage?—Yes. There is no trouble on the score of wages at all in the counties which I am conversant with. There is no grievance in respect of wages now.

Security of tenure.

9577. The tenant farmer gets some compensation when he goes out of it?—Yes, except that the man might be the subject of vexatious dismissal, and so he does not farm the land with that energy or that free expenditure of capital that he would if he had fixity of tenure.

9578. You want the tenant to be permanent upon his land?—So long as he complies with the two cardinal conditions of paying the rent which has been adjudged to be a fair one under the circumstances, and so long as he farms the land properly. I give the landlord power to get quit of the tenant if he can show that the man is causing persistent waste by dilapidation of the land or buildings, &c.

Increased fertility by security of tenure.

9579. If the tenant were fixed upon the land do you think he would improve the land better than a shifting tenant?—I am quite certain that he would. I am quite certain of this, that there is not one acre in a hundred in this country that is farmed nearly up to the degree that it might be farmed, and that the produce of this country might be increased.

9580. Do you think your process would ensure better farming?—I do, otherwise I should not have attempted to draft any Bill on the subject.

9581. And higher fertility?—Yes.

Position of landlord and tenant.

9582. (*Mr. Little.*) I fail to understand upon what grounds you would transfer the property of the landlord to the present tenants?—I do not admit that there is any transfer of the property of the landlord to anyone. There is no such transfer.

9583. The landlord becomes a mere rent charger?—He retains all that he has ever had any right to, but he ceases to have the power to accrete to himself what he has in the past done in the shape of tenants' improvements.

9584. He has had the power to let as he pleased, for as long a time as he pleased, and for as short a time as he pleased?—Yes, and he has also had the power, unfortunately, to take to himself the improvements which have been made by the tenants.

9585. Are there many instances where he has taken to himself property that does not belong to him?—I did not purpose to dwell on the details of any of these matters; the other witnesses from the different counties, from our Federation, who will follow me, will go fully into those details.

Result of security of tenure.

9586. Who would be benefited by your bill beyond the sitting tenant?—The community, very largely.

9587. In what way?—By the increased productive power of the soil under the new condition of things.

9588. What proof have you that it would be increased?—That if a man feels absolutely secure he will get a return for what he invests, his investments in the land will be very much greater than they are now, when that is a very doubtful matter indeed.

Mr. W. Smith, M.P.
23 Feb. 1894.

9589. Is that not rather a gratuitous assumption; is it the case that where land is farmed by the owner it universally produces more than where it is farmed by tenants?—It depends under what circumstances the owner is farming it. There are a number of owners farming their land now because they have not found tenants, and they are probably farming it in a makeshift sort of way.

9590. I am not speaking of those. There are a considerable number of farmers still in the country who occupy their own land; is there any proof whatever that they grow more than tenant farmers?—I think, from my own observation locally, that these are the farms that are much the best cultivated.

9591. Is it the case in Ireland?—I am not acquainted with that country in detail; it is many years since I was over there.

Determination of fair rents.

9592. I think you have not laid down any principle upon which these fair rents could be fixed, except that the tenant should be able to pay his labourers and bring up a family in comfort. The bringing up of a family in comfort would depend upon the size of the family, would it not?—Yes, but I suppose if the family was too large to be profitably employed in the holding, they would drift away to other employments.

9593. In fixing the rent you would not go into the question of what family a man had?—No, I would not limit him to the size of the family he ought to have.

9594. Would you take this into consideration: that there is a great demand for farms in the neighbourhood at the time?—If there was, I suppose the valuers who fixed the rent would take all the circumstances into consideration.

9595. At the present time, I believe, there is a demand for farms, even in Lancashire?—There is a fair demand. They are all let so far as I know.

9596. Some are let at increased rents even at the present time?—I should be surprised to learn that.

9597. You cannot admit that; but suppose that the circumstances alter, and that there is a great demand for farms, would you, in fixing a fair rent, take into consideration the fact that half a dozen tenants would like to take this farm at the rent at which the tenant has it?—I suppose that where there is a great demand for farms, that would be some sort of evidence that farming in that neighbourhood was profitable.

9598. Then supposing the rent to be fixed at a sum which the farmer's neighbours think a low rent, would you allow the farmer then to sell the goodwill?—His goodwill would simply consist in the value of his own improvements.

Fair rents and competitive rents.

9599. His goodwill would consist in the difference between the fair rent-charge and the competition rent?—I do not see that.

9600. If the rent is fixed at 100*l.* a year, and someone else is willing to give 50*l.* a year more, you would transfer from the landlord to the tenant the power of taking that 50*l.* a year?—The power is given to the court to intervene in any case where it is thought that the amount between the outgoing tenant and the incoming tenant is in excess of a fair amount.

9601. The tenant has got something to sell?—Yes.

9602. Which is the difference between the fair rent and the competition rent?—No. I take it that all that the tenant has to sell is the increased value resulting from his own improvements on the farm.

9603. But is it not the fact that if a fair rent is fixed at 100*l.*, and there are half a dozen people who will give 150*l.* for it, the tenant has got something to sell in the fact that he has a goodwill, a valuable consideration to part with?—That is assuming that the men who had the rent to fix have not performed their work well.

9604. Suppose circumstances have changed in the period of five years for which the rent is fixed, the fair rent remains for five years, and in the first two years prices improve, and the land is worth so much more, the tenant then sells to somebody else on a rising market?—Under those circumstances he might for a short period sell what you would call his tenant right.

Mr. W. Smith, M.P. Feb. 1894.

9605. How would the incoming tenant under those circumstances be benefited?—It would be a speculation on the part of the incoming tenant.

9606. He would be in exactly the same position as another tenant whose rent has been raised by a landlord?—Except that the increase of rent, if he had paid such to the incoming tenant, would come up for revision, he would have paid a small sum more for one, two, or three years it might be.

9607. He has paid a capital sum down for what he considers a valuable consideration; then when it comes before the land court again would there not be a disposition on the part of the land court to say, this man has invested so much in this land, and he is part owner of it, having bought the tenant-right of the previous tenant?—I do not read it in that light, and that is not the view that I should expect the court to take. *Mr. W. Smith, M.P.* 23 Feb. 1894

The witness withdrew.

(For Mr. Smith's further evidence, *see* Question 9838.)

Adjourned to Thursday next at 12 o'clock.

Eighteenth Day.

Thursday, 1st March 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lion, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. T. Carrington Smith re-called and further examined.

(For previous evidence *see* Question 8020.)

Mr. T. C. Smith. 1 Mar. 1894.

Position of landlord and tenants.

Rent.

9608. (*Mr. Dalton.*) I think you said that you consider the depression of agriculture had been more severely felt by the tenants than by the landlords in your district?—Yes.

9609. Do you consider that the present rents fairly represent the value of the land?—I think not, but those rents, by the temporary relief that is given by temporary remissions, do, I think, fairly represent the value of the land.

9610. How do you account for the fact that when the farms in your district are vacant there are so many applicants for them at the present rents, if the rent is not a fair rent?—I think my answer is limited to farms of a certain size, 200 acres.

9611. But you would agree that the rents in those cases are fair?—Unless temporary remissions are made up to we will say 10 per cent., I think they are in excess of the value of the land, but where that temporary remission is made, I think that the rents are fair.

Arrears of rent.

9612. But the rents are in no way in arrear?—On one estate that I was speaking of (I could give the figures) they are not in arrear at all, but there are many other cases where they are. I am prepared here with evidence to show how the rents have fallen in arrear, and how the cases have come before the Official Receivers in bankruptcy. I have here the reports of two Official Receivers bearing specially upon small holdings. In connexion with the question Mr. Chaplin put to me, I wished to fortify my opinion as to the working of the law of distress, and I took the step of writing to two Official Receivers in the Midland Counties and they have been good enough to place at my service, and the service of this Commission, the evidence that has come before them in the bankruptcy courts. I have also here the Law Reports for 1887, in which there is a case in point, which now gives the authority with respect to the law of distress. And, by the way, may I be allowed—the information has come to me since—to correct my opinion when I stated that the law of distress did not operate beyond 18 months back. I must correct that, because I am prepared here with the information that has been placed in my hands to show that it is quite common that two years' rent should be recovered. May I give the case which is now the legal authority. It meets the case of the small holder, if I may call Mr. Chaplin's attention to it. The case is at page 642 of the Law Reports, 1887. It is Bull in *re* Bew. That was a tenancy at 80*l.* a year; it was originally 75*l.*; the rent was raised to 80*l.*, and there was a provision in the agreement that one year's rent afore-hand should be recovered. In a short time the tenant became bankrupt. The landlord had put in his distress, and he had claimed 139*l.* 4*s.* 5*d.* That is to say, he had claimed under his agreement. The Official Receiver opposed the claim in the county court, and the county court judge decided in favour of the Official Receiver; that is to say, he only allowed by his judgment one year's rent, 80*l.*, to the landlord. The landlord took this case up to the Queen's Bench Division, and from the time of 1887 the decision given here, as reported, is the law. The case was heard and Mr. Justice Matthew, and Mr. Justice Cave gave their decision. They reversed the decision of the county court and gave the whole of the amount claimed by the landlord under the distress, which was 139*l.* 4*s.* 5*d.*

The law of distress.

9613. (*Viscount Cobham.*) That was two years' rent, was it not?—It was not quite two years, but it might have been. May I go on with some evidence from the Official Receivers?

9614. Do you mean as to that same point?—Precisely the same point.

9615. That seems to be pretty conclusive as to that point?—Yes.

9616. (*Mr. Dalton.*) It has not been appealed against?—It has not been appealed against.

9617. (*Mr. Channing.*) May I ask whether your intention in quoting from the Official Receivers is not to

Mr. T. C. Smith. 1 Mar. 1894.

show the practical operation of the Law of Distress rather than the law itself with regard to it?—It is both really, because here I am prepared with a case where two years' rent has been recovered.

9618. (*Viscount Cobham.*) Just mention the result of the case?—"On the 3rd instant the landlord distrained "for 429*l.* 12*s.* 4*d.*, being the two years' rent of the "farm to the 29th September next, and also for "17*l.* 11*s.* 7*d.* due for tithes, due 1st of January last. "The amount realised from the sale was 467*l.* 16*s.* 8*d.*, "which was insufficient to pay the rent, tithe, and "costs of distress." The second report which I have here brings out the fact that the tenants have always been in arrear. I must ask, please, that no names be given here.

9619. Are these cases that fell within your own knowledge?—No, but they come to me directly from the Official Receiver, and they are official reports.

9620. Are you speaking of Staffordshire?—I am speaking really of a larger district than Staffordshire, because of the two Official Receivers who have placed this information at my disposal one lives at Shrewsbury and the other at Derby, but they take the whole district, including the whole county of Staffordshire.

9621. You need not give the names, of course?—Mr. so-and-so "filed his petition in consequence of a "distress for rent having been levied upon his effects. "He has occupied land under his present landlord for "17 or 18 years, having increased his holding from "time to time until he has now 190 acres (of which "about 150 acres are grass land), at a gross rental of "374*l.* On the 28th August last there was owing for "rent and arrears up to the previous Lady Day (the "Lady Day rent is by custom payable in June), a sum "of 352*l.*, and a distress was on the 28th August levied "for such rent and arrears, the bankrupt having then "completed his harvest. On the same day as the "distress the landlord, under a clause in the tenancy "agreement, gave notice requiring immediate payment "of the rent coming due at 29th September following "(but by custom payable at Christmas), and on the "30th August he caused a distress for that rent (187*l.*) "to be made, making a total of 539*l.* so distrained "for, representing practically one and a half year's "rent." I may say that in one case there was no dividend whatever, and in the other there was a very small one. May I now take the other Official Receiver's report? I will now take two cases that represent the small holdings: Date of petition, December 1892, so-and-so:—"At starting had 200*l.*" This is the Official Receiver's report; it is in manuscript here, but I have verified it. "Had prior to that assisted his father, a "farmer. Signed an agreement under which rent due "in advance. In November 1892, landlord distrained "for 160*l.*=80*l.*, half-year March to September 1892, "and 80*l.*, half-year September 1892, to March 1893, "due in advance. This he recovered. Creditors for "459*l.* 5*s.* 7*d.* received dividend of 2*s.* 9¾*d.* Had "two farms, one farm was 40 acres and the second "about 80 acres."

9622. (*Mr. Dalton.*) Was that rent due in advance?—Rent due in advance by agreement and recovered by distress. The other case was "entered March 1889"—these are quite recent cases—"date of petition September 1892. The debtor was previously a game-keeper," in point of fact the farm was let by his previous employer. "Wife had about 280*l.* Took farm at rent "of 45*l.* per annum, payable in advance. Resorted to "money lenders, and August 1892 gave a bill of sale "for 40*l.* At time of bankruptcy landlord had distrained, and bill of sale holder had seized. Landlord "received his rent. Bill of sale holder compromised. "Unsecured creditors 345*l.* 0*s.* 10*d.* Dividend 1*d.* in "the £." There are a lot more cases, but I think I need not trouble you with them. The same Official Receiver who had furnished me with that evidence asks me if you will allow him to express an opinion with respect to giving bills of sale, and being an experienced lawyer, he suggests that there should be some check similar to that already existing under the law of settlement, under which the bill of sale man would have his wings a little clipped. He suggests that, supposing the law of distress should be done away with entirely, it would be advisable in the public interest, and in the interest of the landlords, that a bill of sale should be inoperative like a settlement is, unless it can be proved that at the time of taking the bill of sale the person who gave it was able to pay all his debts without the aid of the property comprised in the bill of sale.

9623. (*Viscount Cobham.*) That is applicable to the law of bills of sale generally?—Yes. *Mr. T. Smith* 1 Mar. 18

9624. Not specially to farmers?—Not specially to farmers.

9625. That is rather a large question?—It is.

9626. (*Mr. Dalton.*) It is only in cases of settlements?—There is the existing law in cases of settlement, and he asks for an analogous law in cases of bills of sale. I must say that my own opinion is decidedly in favour of that expression of opinion.

9627. Have the rates in the £ gone up or down in your district?—They have temporarily gone down because of the help we have received from the Imperial funds, but I can see that the time is coming when the help from the Imperial funds will not be so great as now, and I think it is probable that the rates will go up. Rates.

9628. (*Viscount Cobham.*) Under the County Council?—And others, we shall have a lot of councils now.

9629. Has the charge for roads increased?—The charge for roads is likely to increase greatly, because the public are determined to have better roads. In my own county our expenditure on the main roads—and of course those are the only roads under us—is 70,000*l.* a year. I am speaking now as a member of the Highway and Main Roads Committee.

9630. (*Mr. Dalton.*) Can you say how far they have gone down or up?—Speaking of my own parish?

9631. Yes?—My own parish has been so fortunate as to escape any new rates; speaking of my own parish the rates are rather less than they were 20 years ago.

9632. Have you any figures? Can you give me how much difference in the pound?—Yes, I can, approximately about 1*s.* 1*d.* I am speaking now of the poor rates; I am not speaking now of the highway rate, or of the voluntary church rate, or of anything of that kind.

9633. Taking the whole of your compulsory rates together what do they amount to in the pound in your parish?—In my own parish, what are properly called the poor rates, for these last two years, would not average more than 1*s.* 1*d.* in the pound.

9634. What were they before the passing of the Local Government Act?—They were under 1*s.* 3*d.* before the passing of the Local Government Act.

9635. Has your county rate gone up?—No.

9636. Has it gone down?—It has gone down.

9637. How much?—I am afraid I cannot answer that question.

9638. Has your highway rate gone up?—We have no main roads in our parish. It is a small parish, and it is divided into two townships. The rates have not gone up.

9639. Have they gone down?—They are about the same.

9640. About how much is the highway rate?—About 3*d.* in the pound.

9641. And the county rate; about how much in the pound is that?—I am afraid I cannot tell you; but the county rate would be included in the poor rate.

9642. Then they only come to 1*s.* 4*d.*; that is, 1*s.* 1*d.* the poor rate and 3*d.* for the highway rate?—Yes; but perhaps I ought to add that although church rates, of course, are not legal, we pay a voluntary church rate, and we also subscribe.

9643. But the compulsory rates are 1*s.* 4*d.* in the pound?—That would cover the whole.

9644. (*Mr. Lambert.*) You have been in occupation of your farm 38 years, I believe?—Yes.

9645. Could you give us any idea whether the rent was increased from the beginning of your tenancy up to, say, 1875; or something like that?—When I took my farm in 1856, I took it at a rent in advance of the previous tenant, who by the way, had come to grief. My rent has not been increased except temporarily, when the landlord had borrowed money for improvement on the farm, and that money I agreed, by a clause added to my agreement, to pay off at the rate of 7 per cent. Rent.

9646-7. (*Viscount Cobham.*) When was that?—That would be 30 years ago, I should say; in any case the time of the repayments of the loan expired some time ago. I continued to pay principal and interest on

Mr. T. C. Smith. 1 Mar. 1894.

the drainage until its repayment was finished; then, of course, the extra charge upon me ceased. Then I must explain that the rent has been slightly lowered, inasmuch as part of my land was chargeable with tithe, and when the alteration in the law with respect to the payment of tithe was made, the landlord consented not to ask me to pay the tithe; so that the reduction in rent was equal to about 1*s.* an acre on the whole of my holding, and now my rent is 1*s.* an acre less than it was when I began in 1856, although more than it was previous to 1856.

9648. (*Mr. Lambert.*) At how much increase on the rent prior to 1856, did you take the farm?—How much was my rent in advance of the previous tenants?

9649. Yes?—About 2*s.* 6*d.* an acre.

9650. What would that be per cent.?—The rental is now 32*s.* 6*d.*

Permanent improvements.

9651. You paid 7 per cent. for the improvement that your landlord made, which paid off both principal and interest?—That is so, with respect to the drainage.

9652. Has that improvement added to the value of the estate?—Yes; in buildings, certainly.

9653. Have you paid the whole of the cost—principal and interest?—Yes; at the rate of 7 per cent., covering both, but I paid no interest on the buildings, the provision of which was included in the agreement of tenancy.

9654. So that practically, you have paid for all this improvement?—Yes, that is so, as regards drainage.

9655. And it now becomes the property of the landlord?—It is now the property of the landlord.

9656. Therefore, you yourself have paid for the permanent improvement of your landlord's property?—Yes; if you like to put it so, it is so.

9657. Do you expect to get any compensation for that at the end of your tenancy?—No, I should never think of asking for it.

Reduction of rent.

9658. You say the rents have been reduced about 10 or 12 per cent. in your district?—Yes. May I state what I have done since my last examination. I expressed an opinion then that the rents in my county had been reduced 10 per cent. I thought I could perceive that the opinion of the Commission was, that mine was an optimistic statement; so I wrote to the Board of Inland Revenue here, asking whether they would allow the surveyor of taxes, in my own county, to place his opinion at my service for this purpose, and the Board of Inland Revenue gave instructions to the Surveyor of Taxes to place the information within his office at the service of this Commission. May I give it?

9659. (*Viscount Cobham.*) Certainly?—He could not give me all the figures I asked for, but he says: "From "a statistical return prepared for head office, I find the "following comparisons of assessments on lands. I "cannot go beyond 1889–90, as the returns have been "destroyed." So that this is only a comparative statement between the two returns for 1889–90 and 1892–93. This surveyor has jurisdiction over two districts in Shropshire and five districts in Staffordshire, and he gives Schedule A for 1889–90 at 551,455*l.*

9660. I think your statement was that the fall in rents since the depression began had been 10 per cent. or thereabouts?—It is so.

9661. This hardly bears upon that, does it?—It only bears upon part of the time.

9662. The last three years only?—That is so.

9663. I hardly think that that would be sufficient to confirm your statement or otherwise?—For what it is worth I think it confirms it. Of course, as you are aware, the assessments run for three years. The return would be made last year. It would bring in last year fully. As I have said, Schedule A for 1889–90 was 551,455*l.*; for 1892–93 it was 541,620*l.*, which represents a fall of 1¾ per cent. Then I asked him for his expression of opinion as to whether these assessments fairly represent the rentals. He says: "You may take the assessments "as fairly representing the annual rents payable, as, "although the smaller tenants do not usually make "returns, the information is obtained from the owners," so that the whole of the agricultural land is dealt with in this return.

9664–7. Of course that would omit any temporary reduction in consequence of the bad season of last year?—I feel bound to call the attention of the Commission to that, and so I should like to read what he says about that: "These figures do not fully represent the actual "reductions in rent, as of late years the landlords have "from year to year given large temporary rent remis- "sions from the rents payable." I am glad to have the opportunity of adding that. (*See* Appendix A., XXVII.)

Mr. T. C. Smith. 1 Mar. 1894.

9668. Could you give us the figures for the earliest year you have mentioned—1888?—I cannot go back further than this return.

9668*a*. What years does that compare?—It compares 1893 with 1890, you may say.

9669. (*Mr. Lambert.*) The rents, in your opinion, have been reduced in the last 15 years, about 10 or 12 per cent., I understand?—Certainly, not more, taking the whole of the county.

9670. What is the principal produce that you sell in your district?—Dairy produce. Dairy farming.

9671. Has that decreased in value?—Very much.

9672. What is the proportion?—I have made cheese for 35 years consecutively on the same holding. I took out my figures for the first 28 years; and found that I made 7¼*d.* a pound on the whole of the cheese during that 28 years: the seven following years up to last year, or eight, I think it is; it would be a little under 6*d.* per pound. So there you get the proportion of fall in the article of cheese. But I have changed my practice, and have now taken to milk selling. I am unable to say how that will go on, but I am inclined to think it will make more money considerably than making cheese.

9673. Do you sell beef and mutton?—Yes.

Fall in prices.

9674. Has that depreciated in value?—Considerably; especially the sort of beef that a dairy farmer makes; that is to say, cow beef.

9675. I do not want you to go into too specific particulars, but taking it as a general statement, how much per cent. would be the average reduction of the produce that you have to sell?—I must eliminate corn altogether, because I have ceased to sell corn. Covering meat and dairy products, and spare store stock, I think the fall—I must compare with a certain date—from a high point in the seventies——

9676. Yes; from the maximum?—It is at least 25 per cent.; but under the items of beef and mutton, compared with the beginning of my tenancy in 1856, I think there is no fall at all, except in cow beef.

9677. Did you, in the seventies, derive any benefit from selling corn, did you make any profit on selling corn?—For a short time I did.

Reduction in rent and value of produce.

9678. Then the rents have decreased about 10 or 12 per cent., and the value of agricultural produce has depreciated 25 per cent.?—Yes.

9679. Can you give us any reason why the rents have not fallen in proportion to the value of agricultural produce?—The means of production have been cheapened, so that it is hardly fair, from my point of view, to compare the fall in rents with the fall in produce, inasmuch as by the help of imported foods I can produce both dairy products and meat more cheaply than I could before those foreign products were as cheap as they are now.

9680. Does that make the whole of the difference—50 per cent. difference between the value of agricultural produce and rents?—50 per cent.?

9681. I must make that clear; the rents have depreciated about 12 per cent., taking the maximum, and the agricultural produce has depreciated 25 per cent.; therefore agricultural produce has depreciated exactly double as much as rents have?—I understand now; but, if you please, I must add the proviso that the means of production have been cheapened.

9682. I quite agree, but is it to that degree?—Yes, I think so.

9683. You said that a decreased rent invariably followed a fresh tenancy; for what reason is that?—I think I did not say so. In my précis I have stated a case where a farm of 150 acres is now becoming vacant because the tenant asked for a reduction of 30*l.* a year, inasmuch as it is too dear, the rental being 2*l.* an acre, and the tenant not being able to get that reduction will leave this next Lady-Day. But there are several applicants for the farm at the old rent.

9684. Are we to understand that at the present moment, if a farm is to be let, there would be naturally,

Mr. T. C. Smith.
1 Mar. 1894.

if the farm were put up to competition, no decrease in the rent?—There would be no decrease in small farms

9685. (*Viscount Cobham.*) I see, this is what you stated:—"(*Q.*) In the case of medium-sized farms, "particularly pasture, what has happened?—(*A.*) "There has been no fall at all"?—Thank you; it is in my previous examination. I think I have stated that there is a fall of 20 per cent. in large farms, have I not?

9686. (*Mr. Dalton.*) Did you not state to-day that you thought the rent was greater than the value of the land?—Except where temporary remissions have been made. It comes to this then: I have pledged myself that a temporary remission of 10 per cent. about meets the necessary fall, but that where the temporary remission is not made the rental is 10 per cent. in excess of the value. That is what my opinion comes to.

9687. (*Mr. Lambert.*) Has that 10 per cent. been remitted on the majority of the farms?—I am afraid not.

Arrears of rent.

9688. To what do you ascribe the arrears of rent that are due from the tenant to the landlord?—To several causes; primarily, to the fact that the existence of the law of distress invites the competition of men to take farms who have not sufficient capital to manage farms; secondly, to the unhappy practice of some landlords of allowing arrears of rent to accumulate. The latter, I have a very strong opinion myself, is a great mistake. It is absolute unkindness and not kindness on the landlord's part to allow rent to come in arrear.

9689. What would be the meaning of rent coming in arrear; would it not be that too much rent was offered to be paid in the first instance?—Sometimes.

9690. Would that not be it in the majority of cases?—In a great number of cases, probably in the majority.

Compensation for improvements.

9691. I understand you are in favour of giving to the tenant compensation for any improvement that adds to the letable value of his holding?—I am.

9692. Do you think it would be probable that any tenant would make an expensive improvement on worthless land?—There is no worthless land in cultivation in England in my judgment.

Uncultivated land.

9693. I think you heard some evidence the last time you were here to the effect that there were several farms out of cultivation, or next door to it?—I have no knowledge of such cases, and I am more than an agnostic, I am an unbeliever of such cases.

9694. You do not think it would be likely or probable that any tenant would make an improvement without very carefully estimating as to what its probable effect would be upon the holding?—Certainly he would not.

Railway rates.

9695. Have you any instance of the railway rates for milk being increased?—Yes, I have my own.

9696. Could you give it us very shortly?—At the beginning of last year the railway rates were very largely increased. We held in my own neighbourhood antagonist meetings, and one of the best meetings I ever attended was one held in my own neighbourhood. As a result of the agitation some of the railways went back to what was called the old rate, but as a matter of fact although the railways claim they have gone back to the old rate for the carriage of milk, they have increased that rate by 6¼ per cent., inasmuch as now they charge per Imperial gallon and not per barn gallon; that is to say, they carry now 16 gallons for the same rate that they previously carried 17. In my own case—I am a new beginner—I consider that my year's charge will amount to 120*l.* paid for carriage to the railway, and that I shall have to pay 6¼ per cent. advance from the old rate in consequence of this change from the barn gallon to the Imperial gallon.

Land laid down to grass.

9697. You say the fall in rents would have been much greater had not a large amount of arable land been laid down to permanent pasture; does the law at the present moment afford an incentive to farmers to lay down land to permanent pasture?—No, it is a complete speculation; in my own case it was a speculation which has been a profitable one, inasmuch as I have made my landlord make terms with me.

9698. Have you formed any opinion as to how improvements should be assessed at the end of a tenancy?—I am quite content to take the definition of an improvement in the Agricultural Holdings Act, 1883; t is: "the value to the incoming tenant."

Official valuers.

9699. You have missed the point of my question: Have you formed any opinion as to how, by what means, those improvements should be valued?—By arbitration; I have expressed my opinion.

Mr. T. C. Smith.
1 Mar. 1894.

9700. Are you in favour of official valuers or such appointments?—I must confess that I am in favour of an official umpire in case of the original arbitrators not agreeing.

Reduction and remission of rent.

9701. (*Mr. Channing.*) In putting the permanent reductions of rent at 10 per cent. or 12 per cent., you said that the figures you gave from the Official Receivers, or from whatever authority they came, did not take account of temporary remissions?—That is so. They were from the Surveyor of Taxes.

9702. Can you give us any idea as to the scale of temporary remissions; were they generally the 10 per cent. or the 15 per cent. that you referred to just now, or have they been more or less?—On my own estate there have been no remissions for many years, but in the new tenancies there has been a reduction, and in some of the old ones, but not in all.

9703. Your attention must have been drawn to a good many complaints of the insecurity which the tenants feel under this system of temporary remissions?—That is so.

9704. They would prefer to have the rents adjusted permanently?—There is no doubt a man would prefer to have a permanent reduction instead of simply a temporary one.

9705. Your experience in Staffordshire rather confirms the view that the old tenants who remain in their holdings do not get as large reductions of rent as have to be made in the case of new tenants?—That is so.

9706. How far do you think Parliament and the State have a right to interfere with rents; would you carry the interference with rent further than merely the protection of the tenant's improvements?—No; I would hold that the tenant and the landlord should be free to make their own bargains, but that in order that they may be able to make their bargains on equal terms I would abolish the law of distress in the first instance, so that the landlord and the tenant should be on an equal platform in making the original bargain as to rent, and I would make the compensation for unexhausted improvements indefeasable, so that at the conclusion of the bargain the tenant should be entitled to receive all the added value he had given by his acts to the property, just as the landlord is entitled to recover for the dilapidations made by the tenant.

The law of distress.

Compensation for improvements.

9707. I understand you would give him the right of obtaining that compensation whether he quitted or not at the determination of a tenancy?—Certainly.

9708. How would you secure the tenant in that case, supposing that his landlord wished—I do not know that it would often occur—to raise the rent immediately after?—Before the rent could be raised the tenant would be in a position to recover from the landlord the added value which the act of the tenant had given to the property; consequently it would follow that the tenant, having that power of protection, the rents would not be raised unless the value of the land, irrespective of the tenant's action, had gone up.

9709. How do you suppose it will work out, that is really what I want to come to; you would allow the tenant to get his compensation without the necessity of quitting his farm if the tenancy was determined and new terms were being arranged, would you contemplate his having cash down for his improvement at that time, and then give the owner the right to charge what rent he liked having paid for the improvements?—If the rent was interfered with by the landlord, the tenant wishing to continue as tenant?

9710. Yes?—I would: that is to say, the landlord would have to pay the capital value of the improvement recognised by its adding to the letting value before the landlord could raise the rent on the tenant, that is to say, the landlord could not raise the rent on the tenant's improvements.

9711. (*Mr. Chaplin.*) Is that to include what is commonly known as the tenant right?—I would not apprehend that it would; with respect to the unconsumed hay and straw and anything of that kind do you mean?

9712. Yes?—No, that would be a question between the landlord and the tenant; it might be that the landlord would do something else.

9713. You are referring to more or less permanent improvements?—Yes.

Mr. T. C. Smith. 1 Mar. 1894.

9714. (*Mr. Channing.*) In order to solve this problem you suggested one method, namely, that the landlord should pay cash down for these improvements, and then be able to charge the commercial rent, and you think that is a fair arrangement; but are you aware that Sir James Caird, in order to meet that difficulty, also suggested the method of distributing the compensation over a number of years in the form of a reduction of rent? What is your opinion of that suggestion?—Where did Sir James Caird make that suggestion?

9715. That was one of his suggestions made in 1883 when the Agricultural Holdings Bill was before Parliament?—Do I understand this—that Sir James Caird suggested that the rental of a farm should be reduced to the tenant because he had made certain improvements?

9716. That when he remained in his holding the compensation for his past improvements instead of being paid cash down, as you suggest, should be paid in the form of a reduction of rent?—I was not aware that he had made that suggestion.

9717. Then you have probably not formed an opinion upon the point?—I have not.

Fixity of tenure.

9718. You think the sitting tenant would obtain full protection, I understand, without fixity of tenure?—Yes.

9719. Because in your scheme he would have cash down for his improvements at the time the rent was being fixed, and he would not need any further protection?—I certainly should object to fixity of tenure.

The law of distress.

9720. Now about your objection to the law of distress; as I understand your evidence it is not merely that you object to the competition of men who really cannot farm well and therefore artificially raise the price of farms, but you object to it on general principles—you think it leads to bad farming?—Certainly.

9721. Do you think it would be better for a man with a small capital to take a small farm which is proportionate to his capital, and work it well, than for him to take a large farm, and work it on the extra credit that he gets from the landlord owing to the law of distress?—Certainly.

9722. It leads to bad farming; that is your real objection to it, is it not?—That is one of my objections.

The Agricultural Holdings Act.

9723. Now about the procedure under the Agricultural Holdings Act; as I understand you think that the schedules and definitions in detail rather complicate matters, and make it more difficult to work the Act well?—I consider the schedules absolutely useless and harmful.

Official valuers.

9724. That it would be far better to give a free hand to a good valuer to say how much value had been added to the farm by the improvements executed by a tenant?—Yes.

9725. (*Viscount Cobham.*) Do you mean that that should be the sole consideration guiding the valuer?—Yes.

9726. (*Mr. Channing.*) Then you would approve of valuers being selected and that competent men should be specially selected for a duty of that kind; as I understand your idea is that they should be chosen by the County Council, is it not?—I think myself that the appointment of official umpires by the County Council would work well. I think I would leave the landlord and tenant as now to appoint their arbitrators in the first instance and then call in an official referee to decide. He would then become an official umpire, whereas now the arbitrators appoint their own umpire.

9727. (*Mr. Chaplin.*) That can be done now, can it not; under the existing law there is an appeal to the Board of Agriculture?—There is an appeal, but I would make it obligatory, I think myself that the County Council would be a desirable body to fix within the area of its authority upon certain persons to act as official umpires to decide in case of dispute.

9728. (*Viscount Cobham.*) Do you prefer the County Council to the Board of Agriculture who nominate at present under the Act?—Yes, for this reason: that you must have local men to deal with the local practice; farming varies so differently.

9729. (*Mr. Little.*) You have said an appeal, but it is on the application of either party that the official referee is now appointed?—Yes, I must correct myself.

9730. (*Mr. Channing.*) Are you aware that Sir Thomas Acland in a Bill which he introduced some years ago suggested that the whole of this compensation should be determined by the county court judge unless the parties otherwise agreed, by a single judicial tribunal; have you formed any opinion about that?—I take it there that the county court would be simply the court of justice, but that the county court judge could not form an opinion; he could not be the valuer; he must only be the judge to enforce the law.

Mr. T. C. Smith. 1 Mar. 1894.

9731. You do not think a county court judge with two assessors would be a good tribunal to decide these matters then, as perhaps you are aware was suggested originally by the Farmers' Alliance some years ago, and which is the main proposal of a Bill now before Parliament called the Land Tenure Bill?—I look upon the interference of a judicial authority as simply an interference to enforce the law, not to arrive at the facts. I would leave the determination of the facts to the arbitrators appointed by the landlord and tenant, or in case of their not agreeing to an official referee. I really have not made up my mind very definitely whether that official referee would be better appointed by the Board of Agriculture or by the County Council.

Custom in Scotland as to referee.

9732. Are you aware that an Act was passed for Scotland fixing the procedure by a single referee? Do you not think that if a single agricultural referee taken, as I suggest in the proposal which I have laid before Parliament, from an official list, were appointed to determine these questions unless the parties otherwise agree, that would be a cheaper way of dealing with it than the method at present adopted? If you had a single referee taken from such a list of official valuers as you suggest appointed by the County Council, and if necessary, approved by the Board of Agriculture, would you like to trust valuations to his decision?—For myself I should.

Compensation for improvements.

9733. Now just go back for one moment to one point that I omitted about the sitting tenant. You are aware that a man's improvements can be confiscated by a failure to reduce the rents sufficiently as well as by an increase of rent, are you not?—Quite aware.

9734. Your proposal, therefore, that the landlord should pay the compensation at the time in settling the new rent, would cover both cases?—Yes.

The Agricultural Holdings Act.

9735. And it is meant to do so. Now I should like to ask you a question as to the defects of the Agricultural Holdings Act in connection with your objection to all this complication of items. Your attention, I dare say, has been drawn to a case brought before the courts, and just decided, which has taken three years to decide; after having gone through various courts in which, if your suggestion of a single procedure to determine the added value had been adopted, justice might have been obtained promptly, whereas now the result has been unsatisfactory to the tenant, owing to the technicalities of the Act, is not that so?—If you are alluding to the case of *Farquharson* v. *Morgan* I am here prepared with the facts. I have been to the *Times* office this morning to get the *Times* report, inasmuch as it appeared to me that that was the best authority to take. The case was reported in the *Times* of the 5th of last month.

"Farquharson v. Morgan."

9736. The principal point of that case is this, is it not: that it was agreed between the tenant and the landlord in the lease that items, which are not technically included in the schedules and provisions of the Agricultural Holdings Act, should be compensated for under the procedure of the Agricultural Holdings Act, yet the tenant failed in obtaining compensation for those improvements, although protected by the lease?—He not only failed, but he has been exposed to litigation for three years, and now has got an adverse decision given in the Court of Appeal by Lord Halsbury, Lord Justice Davey, and Lord Justice Lopes. The tenant having succeeded in convincing the County Court judge that the award was a correct one, the landlord appealed against the enforcement of the award, and took the tenant to a Divisional Court, and two judges (or Lords Justices) there upheld the decision of the County Court judge. Then the landlord appealed to the Court of Appeal, and Lord Halsbury and the two Lords Justices named, took time to consider their judgments, and all three gave written judgments. They held with great regret, that inasmuch as certain compensation, not included in this Act or touched on in the schedules, was included in the award, although that compensation was separately specified, the decision must go against the tenant and in favour of the landlord.

9737. (*Viscount Cobham.*) That inclusion made the whole award bad?—It made the award practically outside the Act and bad.

Mr. T. C. Smith. 1 Mar. 1894.

9738. (*Mr. Channing.*) I think you understand that decision of the judges was that the County Court judge could not make an order to enforce the award under the 24th section of the Agricultural Holdings Act, because the award included items which the Agricultural Holdings Act did not provide for?—Not in these schedules, although there is an agreement that the landlord should pay; probably the landlord will pay in another way.

9739. I am not entering into the conduct of the landlord at all. The point of this case is that the defining of the different details for which compensation can be paid under the Agricultural Holdings Act—the close defining and limitation of these details leads to an injustice of this kind—that a County Court judge is unable to enforce an award which includes these items, and therefore the compensation is defeated in its actual enforcement, is not that so?—That is so. Certainly it is not the province of Parliament to lay down how land shall be farmed. Parliament has endeavoured to do what is entirely *ultra vires* in fixing the schedules of this Act.

Reduction of rent.

9740. (*Captain Owen Thomas.*) Might I ask you whether the farmers in your district are satisfied with the reductions of rent that have been made?—No, they are not satisfied. To speak of my own neighbourhood I think that farmers being honest men generally, think that a reduction of something like 10 per cent. would meet the circumstances of the times.

9741. Have they applied for a further reduction?—In my own case I have not.

9742. You have not?—No.

9743. Have many of the tenants, do you know?—Yes, I have given a case here—I call it an unfortunate case—where a tenant and occupier of a farm of 150 acres of which the rent is 300*l.* applied for a reduction of 30*l.*, the landlord refused the reduction and the tenant will go next Lady Day.

9744. Do you think it possible for these tenants to make their rents out of their holdings, considering the present exceptionally low prices of everything?—You see that is a general question. I do not think farmers who have a large proportion of arable land could make their rents with a reduction of 10 per cent. My opinion is pledged to the whole of the county which includes a very large proportion of grass land, and I honestly think myself that if the rentals in Staffordshire were reduced 10 per cent. on land permanently the reduction would meet the circumstances of the case. In some cases the reduction would be 20 per cent., in some cases none at all.

9745. (*Viscount Cobham.*) It would be an average of 10 per cent.?—An average.

9746. (*Mr. Long.*) Is that upon a rental already reduced or upon rents which have in the main not been reduced materially?—Of course, in cases where rents were advanced during the seventies it would not meet the case, but where rents were not interfered with we will say from the level previous to the rise in the seventies the 10 per cent. reduction would I think meet the circumstances of the case.

9747. Has there not been a heavy reduction in Staffordshire since 1879?—No.

9748. Then it would be practically on rents which have not been interfered with?—Practically so.

9749. Your remark would not apply to cases where there have been reductions of 15 per cent. or 30 per cent. between 1879 and now?—I know of none in Staffordshire up to 30 per cent.

9750. You would not mean it to apply generally to those cases?—I do not think there are such cases in Staffordshire.

9751. (*Captain Owen Thomas.*) Were the rents in your district high, low, or moderate 20 years ago, when prices were 30 per cent. higher?—I think I may claim for the landlords in Staffordshire that they did not greatly advance their rents during the good times of the seventies.

9752. What was the interest, do you think, farmers got on their farming capital 20 years ago?—My own balance sheets do not show that I ever got more than 10 per cent.

9753. Twenty years ago?—No.

9754. And to-day?—I have been before the Income Tax Commissioners two or three times, or rather I ought to say, I have been before the surveyor and he has said, "Your statement is so correct that you need not go before the Commissioners," and the Commissioners have allowed it and returned my Income Tax. That shows that I proved to them that I made no profit.

Mr. T. C. Smith. 1 Mar. 1894.

9755. Does the land in your district in any way suffer for want of capital?—That is the case with some farms certainly, but I do not think greatly except in cases where the tenant has entered upon his occupation with an insufficiency of capital in the first instance.

Tenants' capital.

9756. Do you find as a rule that tenants are better treated on large estates than they are on small estates?—That is a very difficult question to answer, On many large estates the tenants are well treated there is not a doubt, and I think as a tenant that I would prefer to hold under a large owner than under a small one. But men vary so differently. I know plenty of small owners who are good landlords, and I know some large estates where the agents really manage their property so that the tenants are badly treated. I know one case where the agent openly boasts that he has never reduced the rent on any farm on the estate, and will not do it.

Tenants on large and small estates.

9757. Do you think the law of entail to be of advantage or disadvantage to tenants of an entailed estate?—It is not a disadvantage to the tenant; it is to the landlord.

Law of entail.

9758. It is not a disadvantage to the tenant?—I do not think it is to the tenant; perhaps I must modify my answer there, excepting in the case of heavy mortgages under which the landlord is not able to do the landlord's work; otherwise the tenancy under the law of entail is a more dependable tenancy for the tenant than it is where estates change hands.

9759. (*Mr. Everett.*) Has not the selling value of land in Staffordshire deteriorated more than 10 per cent. as compared with 15 years ago, or 20 years ago? I am under the impression that I have heard of cases where it has depreciated a good deal more than 50 per cent.?—In Staffordshire?

Selling value of land in Staffordshire.

9760. Yes?—I know of no such cases. I think I have stated that on the larger arable farms 20 per cent. would be the reduction in annual value.

9761. (*Viscount Cobham.*) The question was as to the selling value, but I presume you think it follows?—I think it follows that there would be 20 per cent. reduction in the selling value.

9762. (*Mr. Everett.*) In regard to the law of compensation, I understand you to desire that the improving tenant shall be entitled to the value of the improvements he has made, but that the law should avoid going into detail of specification and leave that to the actual valuers who view the estate?—Yes.

Compensation for improvements.

9763. Do you not think it would be a good thing if the tenure of every farm were entered upon with a written description of the condition of every field to be kept for comparison when the tenant goes out?—It would be useful information, but it would be only useful information, inasmuch as you could not depend upon having the same valuers when you go out as those who made the tabulated statement to begin with. If you could keep them in perpetual life and in the same description of efficiency then it would be useful.

9764. Still, as regards cleanness, for instance, that is a matter of fact, not a matter of opinion, to be clean from twitch and those things?—No doubt it is.

Cross-cropping.

9765. Then as regards landlords' claims on the tenant for cross cropping and matters of that kind; do you think there would be any injustice to a landlord in barring his claim under heads of that kind, to the limit of one year; that is, would it be unjust to him not to allow him to go back further than a year in making claims for cross cropping, which, of course, has been done in the open light of day within the knowledge of his agent, if he has an agent?—I do not think the custom of our county would grant damage for cross cropping; the agreement might.

Restrictions on cultivation.

9766. Would you see any objection to forbidding an agreement which could pile up penalties for a long series of years for cross cropping while the tenant in the payment of his rent from time to time has not been rebuked for it or brought to book for it?—I hold that any restrictions by agreement on cultivation are

bad, except, of course, the breaking up of the old turf land, which, I believe, in common law is a dilapidation; that is to say, I think no one is so good a judge of how land is to be cultivated as the man in occupation of the land.

Cross-cropping.

9767. Then, I think, probably you would not think it an unwise provision of the law that a landlord should not be allowed to go back and impose penalties for cross cropping after a year had expired: that he should not have more than a year back?—I am not aware of the arrangements in my neighbourhood covering that point.

9768. I went out of a farm as an executor this year where cross cropping had been done?—In my county?

9769. No, in my county. Verbal permission had been given to the tenant to cross crop in a certain way by the late owner, and he had been pursuing that with the knowledge of the agent; but that owner was dead, the estate had passed into another hand, and when we came to the valuation they said in law they could make a claim against us of something like 2,000*l.* I think.

9770. Under agreement?—Yes, under one of the clauses of the agreement. They did not press the strict letter of it, but they did use the power they had to exact some payment from us.

9770*a*. Would there be anything wrong in the law limiting that, going back to a year only?—I consider those agreements very foolish.

Reductions in rent.

9771. (*Viscount Cobham.*) I was rather surprised to hear of your confidence that the rents had not been reduced in Staffordshire to an average of, I understand, more than 10 per cent.?—I am of that opinion. (*See* Appendix A., XXVII.)

9772. Have you made careful inquiries throughout the whole of the county on that point?—I have written to three or four typical landowners whose names I am not free to mention, but who are known to me, and to whom my name would be known, asking them for an expression of opinion.

9773–4. Do you think that the extremes vary between 20 per cent. reduction in some cases and nothing at all in others, but that on the whole 10 per cent. is all the reduction that has been made on the average?—I think so.

9775. Are you well acquainted with South Staffordshire?—No, I am not. I am pretty well acquainted with some of the men who live there, both owners and tenants.

9776. I live very near to South Staffordshire, and I think certainly I could give you cases of estates, both large and small, where the reduction has been larger than that, and I wanted to know whether you have made any particular inquiry into that district?—Permanent reductions?

9777. Yes, permanent?—Would they be, may I ask the question, more than 20 per cent.?

9778. In some cases certainly, but I only wish to lay stress upon the point in order to assure myself that you have made careful inquiries to the best of your ability?—I have to the extent you see of applying to the Board of Inland Revenue.

System of farming.

9779. The North Staffordshire farming is more like Cheshire farming, is it not?—Agriculture in Staffordshire varies very greatly. Is is an extensive county; the land is of different qualities, and the proportion of arable to tillage varies very greatly. You are alluding to the south, no doubt.

9780. I was saying in the north the system of farming is more like that pursued in Cheshire?—Yes, and in Derbyshire.

9781. Where rents have fallen comparatively little?—And in Derbyshire. I had an expression of opinion from a man in Derbyshire that in his judgment the fall of rents in Derbyshire is not more than 10 per cent.

The law of distress.

9782. You say that you believe that if the law of distress was abolished it would clear away a large number of farmers who are now farming with inadequate capital?—Do you mean that it would dispossess them of their farms?

9783. It would have the tendency of largely reducing the number, at all events, in the future?—It would reduce the number of applicants with insufficient capital; but I think it would absolutely follow that a reduction in rent would be the effect of doing away with the law of distress, I put it in my own mind at 10 per cent.

9784. Do you think that a large amount of the land of England is cultivated with inadequate capital at the present moment?—Yes.

9785. Do you think that the abolition of the law of distress would bring in men with capital to take the place of those who would go out?—I have a strong opinion that it would.

9786. In Staffordshire you say that you have got men with capital to take the land under the existing law of distess?—Yes, we have.

9787. Then it has not prevented men of capital coming in in Staffordshire?—No. In these cases I have given you, especially in small holdings, you have men brought in to bid for farms who give more than the men of capital will give, and in the end it is the ruin of the men who have bid too much, and the consequent deterioration of the land, as shown in this statement coming from the Official Receiver's office.

9788. Will you explain why it is that the abolition of the law of distress will have such an important effect in bringing in men of capital?—It would reduce the competition for the farms inasmuch as it would take out of the competition the men who could not satisfy the owner of the land that they had sufficient capital.

9789. But you think there would be sufficient capital to provide for the cultivation of the land?—Clearly.

9790. Would that not mean the importation of a vast amount of capital in the place of the insufficient capital by which the land is now farmed?—I do not think so. I think there are men in England both capable and with capital ready to take land at its full value.

9791. If the rents were reduced?—Yes, and I only ask for 10 per cent.

9792. By the diminution of competition?—The rents would be reduced by the diminution of competition, and I think they would be reduced 10 per cent.

9793. (*Mr. Clay.*) You think that the law of distress creates a false competition?—I do.

9794. So that in that competition the tenant is very apt through the cash credit to take more land than he can manage?—Yes.

9795. Therefore the landlord suffers?—Everyone suffers. Might I add the expression of opinion from the Official Receiver:—"The operation of the law of "distress in my experience inflicts a very great hard-"ship upon the creditors of the farmer other than the "landlord."

9796. Then there is another very important element in this law of distress; the landlord only risks his rent, which is the interest on his capital, but the trader who really supplies *bonâ fide* articles—the carrying on of the farm by selling limes, cakes, and manures—risks his capital?—He does.

9797. Do you consider that fair?—No.

9798. If the trader has to risk that capital through the law of distress, does he not charge more for the article he sells, knowing that the landlord has a preferential claim?—I went to an implement manufacturer the other day and asked him why he kept his list prices so high. He said, I will take 25 per cent. off for you, and you need not pay me either. Why do you keep them so high? Because we have to deal with men who buy implements from us and cannot pay cash for them, and we know our risk if we give credit, and so we keep our list prices so high in order to average it.

9799. I think in your evidence to-day you have given us an example of a small tenant being sold up and the landlord through his distress getting nearly the whole of the proceeds. If I recollect aright the creditor risking his capital only got 1*d.* in the £?—I have mentioned three cases here where the landlord got practically the whole. In the one case the dividend to the public was 1*d.*, in the other it was 2*s.* 9¾*d.*, and in the other it is not yet settled.

9800. So in your mind both landlord and tenant, and the country at large would be a great deal the better off if this law of distress was totally abolished?—The land would be better farmed, the rent would be lower, the public would have greater produce, and the landlord would really receive his rents more regularly, though of rather less amount.

9801. And through the abolition of that law he would have a sounder competition, and there would be men with more capital entering into the business?—He would have better men farming his land.

Mr. T. C. Smith.
1 Mar. 1894.

9802. Just a question regarding the Agricultural Holdings Act. You know the procedure of the Act has been expensive?—This Act is quite hopeless.

The Agricultural Holdings Act.
Official valuers.

9803. But you have no objections to having expert men, official referees, appointed in each locality to perform the duty of giving decisions between landlord and tenant?—I would say this: If, as it is news to me, you have in Scotland official arbitrators who singly do the valuations, and if your experience is satisfactory, I see no objection why that system should not be extended to England.

Custom in Scotland as to referee.

9804. I may say to you that in Scotland we have not exactly the official man appointed yet, but when the arbitrators differ—and they very often differ—we apply to the sheriff, and the sheriff, being a public official in each county of Scotland, knows the most expert men in agricultural business, and he appoints that referee or umpire, as you call him. Would that satisfy you in England?—That really was my suggestion; but I thought that the landlord and tenant did not appoint the arbitrators to start with; but, as I understand you now, they do, and the official referee is appointed by the sheriff.

9805. If the arbiters cannot agree upon an oversman, we call him—he is called a referee here—we apply to the court, that is to the sheriff, and he appoints a man of standing reputation as the sole arbiter; the landlord and the tenant may bring their arbiters if they like, but only as witnesses; if we have that process what use have we for arbiters if we have a special referee like an ordinary judge sitting upon the Bench giving his decisions upon these points?—You are asking me whether, in my judgment, I would approve of an official arbitrator being appointed to consider the case *ab initio*?

9806. And the whole case?—From the beginning?

9807. Yes?—Without the interposition of arbitrators?

9808. There will be no occasion for arbitrators?—Quite so.

9809. Would they not come in the place of witnesses giving evidence respectively for the tenant and for the landlord?—I can see one great advantage in that scheme, because I must honestly confess I have seen a great deal of mischief arise from the fact of a landlord or a tenant making an extreme claim, and the other side immediately making an extreme claim in the other way, and so the consequence has been that the action of the umpire has been made very much more difficult, inasmuch as he has to strike a balance between two people who, both of them, are in fault *ab initio*.

9810. Another point in our Act: the tenant has to give four months' notice before the end of his tenancy to make his claim. How long has the landlord to make his claim before the end of the tenancy?—He has two months, and I think a fortnight in England to consider it over before he makes his counterclaim, I think he has.

9811. The tenant in England has to give two months' notice before leaving the tenancy, and the landlord has a fortnight after the tenancy has expired. Would it not be justice for both parties to make the claim on the same day and at the same time?—I have illustrated that to my mind by a game of cribbage. I hold that the game of cribbage in respect of this valuation is just as if the one party saw the cards of his opponent before they were played, and the other party was in ignorance of the cards to be played. It follows that the person who sees his opponent's cards before playing his own is sure of winning the game.

9812. Whereas in equal justice to all parties would it not be well to have the two parties, landlord and tenant, making a claim on the same day?—It is flagrantly unjust now.

9813. It is your opinion that the claims should be made on the same day?—Certainly.

Competition for farms.

9814. (*Viscount Cobham.*) You say that the absence of competition would bring in men with capital, but are you aware that over a great part of England there is no competition for farms at the present moment?—I may say that I am only speaking of my own neighbourhood.

9815. And that the men of capital have not come in?—I am afraid that the condition of arable farming in England is almost hopeless—I must say so, but then I am speaking of a district where arable farming is not the important part of the business. I consider it is hopeless for the arable farmer.

Mr. T. C. Smith.
1 Mar. 1894.

The law of distress.

9816. You base your theories on the law of distress merely from what you know in your own district?—Yes.

Reduction of rent.

9817. (*Mr. Gilmour.*) You referred to an agent of a large estate who boasted that he never reduced the rental; does that agent manage to get tenants for the farms?—He may have about a couple of farms in hand.

9818. You do not, perhaps, know the particulars of it, but speaking of a large estate as I understood you to do, he must either get tenants for those farms at the current rates, or take a good many of the farms into his hands?—You must bear in mind that on this large estate which I have in my mind rents were not advanced during the seventies, and that we are not dealing by way of comparison with the high times in the seventies, but that we are dealing with the time antecedent.

9819. That is what I was going to ask you. Are the farms on this estate kept at an exceptionally low rent as rents at present are?—I am still of opinion that there the rents are about 10 per cent. too dear.

9820. Too dear?—Yes, that is my opinion.

9821. But you cannot say whether he really finds tenants for the bulk of the farms at those rents?—We never can tell in the case of new tenancies, and I can only tell by conversation with the old tenants.

9822. But you believe that this man in boasting in this way is speaking the truth, and that he has not given reductions?—I would not pledge myself to the truth of his phraseology.

Compensation for improvements.

9823. (*Mr. Little.*) There is only one point that I would ask a question upon, and I do not think it has been touched upon. Can you not conceive circumstances under which what might be an improvement to a holding would not be an improvement, but which might be an incumbrance to an estate?—No, I do not think I can. Would you explain?

9824. I will put a case which is not purely hypothetical. A man has an off lying portion of a farm, arable land, on which he wishes to have buildings; those buildings will save him a long cartage of the produce and taking back manure; and buildings on that detached portion of the holding would improve its value, that you would argue?—It might be so.

9825–6. It is probable that it would; it might be held to improve the value of the holding?—If it was shedding for the shelter of stock?

9827. For the shelter of stock and for making manure?—I should say it would not be an improvement if it was a threshing barn.

9828. Put the case that a claim might be made for an improvement to the holding and probably sustained; most reasonable men would say that it was an improvement to the holding, but it might be no improvement to the estate?—How so?

9829. Suppose that the landlord has determined to divide this off-lying portion of land between two adjoining farms which have abundant buildings?—And make another farm?

9830. No. Suppose that he has determined to throw a portion of it to one farm and a portion of it to another, and buildings are already provided, he would have to pay for the increased value to this particular holding, but his estate would not be benefited?—I must answer a hypothetical case as well as I can by saying that probably the fact that these buildings were put up would prevent the landlord from deciding that the farm should be divided.

9831. I said it was not a purely hypothetical case?—I misunderstood you; I beg your pardon.

9832. That is an instance of a possible injury to a landlord by his having to compensate for what is an improvement to a holding but is not an improvement to an estate?—I should think such a case as that is very exceptional.

9833. You would include the building of cottages, I suppose, as adding to the value of a holding?—Yes.

Mr. T. C. Smith. 1 Mar. 1894.

9834. But one can easily conceive circumstances under which a cottage on a particular holding might be no improvement to an estate but rather a nuisance?—Do you suggest that a tenant would build a cottage on the chance of recovering for it at the end of his tenancy?

9835. I suggest it as a possible thing.—It is possible.

9836. I am putting that as a case where the landlord might be called upon to compensate for what added to the letting value of the holding, but which might be an incumbrance and a nuisance to the estate?—I can scarcely see how it can add to the value of the holding and yet depreciate from the value of the estate.

Mr. T. C. Smith. 1 Mar. 1894.

9837. You see my point?—It might be a nuisance to the adjoining farm.

The witness withdrew.

Mr. W. Smith, M.P.

Mr. William Smith, M.P., recalled and further examined.

Mr. W. Smith, M.P.

(For previous evidence, *see* Question 9338.)

Farmers' Association in Lancashire.

9838. (*Mr. Chaplin.*) You told us of an association of tenant farmers in Lancashire, and that the movement which resulted in the creation of that association began in 1892, can you tell us whether that was shortly after the great agricultural conference which was held in St. James' Hall in that year?—Yes, it was very shortly afterwards I think.

9839. What was the name of the association then?—There were several independent associations existing, but there was no federation of those associations; the Chester Farmers' Club, for instance, which was one of the prime movers, existed prior to that date.

9840. Will you, please, answer my question, what was the association that was formed immediately after the conference—what was the name of it then when it was first formed?—The Federation of Tenant Farmers' Associations, the same as it is now.

9841. Who was the first president of it?—Myself.

9842. Was one of the speakers at that conference a Mr. Rimmer, a member of it?—Probably so, I could not be quite certain, but I think it is very probable. He is chairman of the Preston Farmers Club, or Farmers' Association, now styled the Lancashire Tenant Farmers' Association.

9843. Your association that you speak of, the original association, was never termed the Lancashire Tenant Farmers' Association?—No.

9844. There is another association, I understand, now in Lancashire called the Lancashire Federation of Farmers' Associations, of which Mr. Kay and Mr. Barlow are two leading members?—Yes, that is so.

9845. If I am rightly imformed they were all included in the original association you speak of?—Not the one with which I have had connection. There was an association existing in Preston prior to the formation of this federation, and this association of which you now speak, Mr. Kay's Association, was in relationship—I do not know the exact relationship—with the Preston Association.

9846. When did you form your association?—I think it was very early in 1893. I know it was not formed in December 1892, when the Conference was held in St. James' Hall.

9847. Very early in 1893?—Yes, in 1893.

9848. Did these gentlemen that I speak of, Mr. Barlow, Mr. Kay, and the members of their association at any time belong to that?—No.

9849. Never?—Never.

9850. It is not the case that there was separation at one time between the Tenant Farmers' Association and the Association now presided over by Mr. Kay?—The association was a local one at Preston; they gave themselves an ambitious name, though the association remained practically the same.

9851. What was the ambitious name?—They called themselves the Lancashire Tenant Farmers' Association, instead of calling themselves the Preston and District Tenant Farmers' Association.

9852. You never belonged to that association?—No.

9853. Who did belong to it?—I think the Preston Farmers' Club was really the kernel of it, and a few branches in East Lancashire.

9854. Was Mr. Rimmer the Chairman of it?—Mr. Rimmer, I think, was the prime mover of it.

9855. Was he the chairman of it?—I almost think he was, but I would not be quite sure. Mr. Gillespie was the secretary of the same association of which Mr. Rimmer was chairman, and Mr. Gillespie afterwards became the secretary of Mr. Kay's association, and remained so till a few months ago. This is not a Lancashire association which I represent, it is a federation of tenant farmers' associations, without any curtailment of area.

9856. I am trying to get from you what was the case a little earlier, before you formed this new federation, as I understand there was an association before you formed yours?—Quite so, the Preston District Association, and Mr. Kay's was a split from the Preston Farmers' Club.

9857. So there was a split between the two different associations at that time?—Yes, a split on policy, I believe; the programme of one section went much farther than the other one was prepared to follow.

9858. Then you formed, I understand, a new association?—I did not form it. The Chester Farmers' Club were the prime movers and the Preston Farmers' Association. I attended their first meeting at Chester where it took shape, and at a later meeting—I think it was at Warrington, but I am not quite certain—they invited me to be their president, which I accepted.

9859. Were you a member of that association which you speak of as the Preston Association?—I do not think so. I gave them a subscription to promote their objects, but I was never a member I believe. I might be an honorary member. I do not know what they did themselves, but I was never an active member of it.

9860. Surely you can tell us whether you were a member of that association or not?—I do not think I was, but in view of the subscription I gave them they might place me on their honorary list, I do not know. I never was at any of their meetings, nor took any part in them.

9861. You gave them a subscription?—Yes, and there was a quarrel between the two about the time the split took place as to which association should have it, and how to divide it. I think I gave them 50*l.*

9862. Can you say why those associations separated?—I believe it was a question of policy as far as I know.

9863. On a question of policy?—Yes, the Preston district, Mr. Rimmer, and Mr. Hardisty, and Mr. Gornell, I think the secretary was, were in favour of the three "F's" and the others were in favour of a much milder form of reform.

9864. Then practically the split between these two associations occurred on the question of the three "F's"?—Yes, I think so.

9865. What was the number of members of the Preston association at that time?—I could not tell you.

9866. I observe that in his report, Mr. Wilson-Fox puts it at 300. Your are not able to give us any information about that?—I should think that is probable, but I believe they have formed some new branches since then.

9867. He calls it the Lancashire Tenant Farmers' Association, "consisting of 300 members," for anything you know that is correct?—I should say it was probable at that time.

9868. Do you know anything as to the number of the members of the Lancashire Federation, of which Mr. Kay is president?—I do not.

9869. I observe that Mr. Wilson-Fox puts that at 700 members, but you know nothing about it?—I should not be prepared to contradict it, or to confirm it; either one or the other. I know Mr. Kay very well personally, but I know nothing about the association.

9870. After the split between these two bodies I understand that you formed the new association?—Personally, I formed nothing; I was simply one of a

Mr. W. Smith, M.P.
1 Mar. 1894.

number who took part in the movement. The prime movers were the Chester Farmers' Club and the Preston Association, then called the Preston Farmers' Club.

9871. That resulted in the formation of a new association?—Yes.

9872. Of which you are at present the president?—Yes, I was elected the president.

9873. That is entirely separate from the other association presided over by Mr. Kay?—Yes, that is so.

9874. Those two associations differed altogether upon the question of policy I understand?—I may say that I met Mr. Kay and Mr. Gillespie a few months ago with a view to re-union, or union you may call it. They promised to send me the drafts of a Bill which they were preparing and I promised to send them drafts of my Bill, which I did, but they have never sent me yet the drafts of their Bill, so no further step has been taken.

9875. You are not able to give us any information I suppose as to the expansion of Mr. Kay's association?—No, I could not.

9876. Now, with regard to your own you have met the Sub-Commissioner I think, on either one occasion or or more in Lancashire?—Our association, our federation has never met him, but some of the local branches have met him; the Preston Farmers' Club met him, and he attended a meeting of the Lancaster District Association.

9877. The Preston Farmers' Association being the original one?—It was the first of all, I believe, to be in the field.

9878. Were you present at either of those meetings?—I was present at the one in Lancaster, in fact, I was present at three meetings that Mr. Wilson-Fox held in Lancaster.

9879. The meeting you were present at was which, the Preston or the Lancaster meeting?—The Lancaster meetings, I was never at any other.

9880. Was that numerously attended by farmers?—Yes.

9881. How many were present do you suppose?—There were three meetings held; the first one was called by the Agricultural Society, and consisted of farmers and landowners, as many of the one as of the other, probably the second was one of our Lancaster District Farmers' Associations pure and simple, and then some landowners, or the agents of landowners raised the question at that second meeting whether as the Tenant Farmers' Association had been given a meeting to itself it was not fair that the landowners should also have a meeting of their own. Mr. Wilson-Fox good naturedly consented, and a third meeting was held, which was supposed to be a purely landowners' meeting.

9882. Do I understand that there was one which was purely a tenant farmer's meeting?—Yes, the Agricultural Societies called it.

9883. Where was that at?—At the Town Hall.

9884. Where?—Lancaster.

9885. How many tenant farmers attended it?—I do not know that I could give that to you; it would be a rough estimate. There was a large company present, and it was a mixed company. I daresay besides landowners and tenant farmers, there were a number of trades people in the town, and that sort of thing.

9886. As far as the tenant farmers were concerned, can you give us any idea of the numbers that attended it?—I could make a guess, but it would not be much more than a guess; there might be 80 or 100.

The Federation of Tenant Farmers' Association.

9887. When the existing association, I think you call it the Federation of the Lancashire Farmers' Association, was formed what did it include?—There were a number of societies in Cheshire; the Chester Farmers' Club, and the Wirrall Farmers' Club; some in Flintshire also at that time, and Denbighshire.

9888. There was the Chester Farmers' Club?—The Chester Farmers' Club was one of the principal bodies.

9889. What else, if you please?—There was the Preston Farmers' Club, the Lancaster and District Farmers' Club, the North Lonsdale (that is, the North Lancashire Farmers' Club), and I think one at Burnley. There are a good many altogether, but I do not remember their names.

9890. Was there one at Warrington?—I think there was one at Warrington too.

9891. Was there one at Wigan?—Yes, there was one at Wigan also.

Mr. W. Smith, M.P.
1 Mar. 1894.

9892. One at Bolton?—I do not think the Bolton one is federated to either one or the other groups; I think it is independent.

9893. Is that so?—Yes, I believe so. There is the Bolton Dairy Farmers' Association, I know; I have been invited to go over to them, but I have never been, and I think they are not attached to any body at the moment.

9894. What is there beyond those?—I could not give you them from memory, but I told you the other day there are about thirty altogether; there are some in Cumberland.

9895. Can not you tell us what the different bodies are, belonging to this Association?—No; but I should be very glad to get you from the Secretary, an exact list, if it is important, and if you wish it.

9896. I want to know, because I am anxious to ascertain from where it is that you make up the number of 5,000 or 6,000 members that you talk of?—There are a number of associations in Cumberland.

9897. The great bulk of the members of the association are out of Lancashire?—Lancashire and Cheshire—I think there are more in Cheshire, perhaps than in Lancashire even.

9898. What are the number of members in the Chester Farmers' Club?—I could not tell you from memory; I have not those details.

9899. Can you tell us how many belong to the Wigan Association?—I do not think I can tell you the number of any individual association. I had no idea that I should be asked such a question. Should I get you the list from the Secretary?

9900. I should rather like to ask you this question now, the Lancaster Association is the foundation of it, I understand?—No, you are quite wrong. The Preston, I say, was the first mover, and the Chester Farmers' Club was the next in importance in the movement.

9901. Can you give us any idea of how many members belong to the Preston branch?—I could not.

9902. Are there 100?—Yes; you stated a few moments ago 300, and I said I thought that would probably be correct.

9903. In the Preston Branch?—Yes, you stated so. They style themselves the Lancashire Tenant Farmers' Association, which is very confusing. They made a very great mistake when they assumed that name.

9904. With regard to the Lancaster Branch, are there 100 members belonging to that?—Yes, more.

9905. What do you put it at?—I should say between 200 and 300.

9906. Bolton, you say, is not included?—I do not think it is; I could not be positive, but I do not think they are allied to any group; I think they stand independent.

9907. Burnley; can you tell us how many members it has?—I do not know the numbers.

9908. Have you any idea at all?—I have none whatever; not of Burnley.

9909. Can you say whether there are 100 members belonging to that?—I have never been to a meeting of that at all.

9910. Have you any idea that there are 100 members belonging to that?—From conversation with the president and the moving spirits I should say more. They speak of it as an important association.

9911. Would it be twice that?—It is all guess-work on my part; I have never been to any of their meetings.

9912. I am asking these questions because I am genuinely anxious to know how far your association can be held to represent the feelings of the farmers in Lancaster. I find from the Census of 1891 there are 13,255 farmers in Lancashire, and I should very much like to know what proportion of those farmers belong to your association, it must be something very small from what you have told us?—I should say that I should think that in Cheshire, and Flintshire, and Denbighshire, bordering there, they are probably more than the total of the Lancashire members.

9913. Quite so. In Lancashire, apparently from the answers I have elicited from you, there can barely be a

Mr. W. Smith, M.P.
Mar. 1894.

thousand?—I have not enumerated all the associations I think; they do not well come to memory; there are other associations than those you have got a list of.

9914. In fact, all the information that you can give to us about the number of members in Lancashire belonging to your association, is very vague?—Yes, that is so. Had I thought I should be asked those detailed questions, I would have had the exact particulars for you. I shall be very glad to supply them to you.* But I do not see what bearing it has on the point.

9915. The Chester Farmers' Club was one of the first to join your federation, I understand?—Yes.

9916. Is your association a political association?—No.

9917. In no sense?—Not in any degree at all.

9918. I understand that Mr. G. Cooke of Tattonhall, and Mr. Thomas Parker, are two very active members of your association?—Yes, they are members of the Chester Farmers' Club and members of our association also.

9919. They are gentlemen, I understand, whom we are likely to have before us here?—Yes, one of them is in the other room now and the other was here last Friday and he is coming again.

9920. Do these gentlemen belong to the same political party as yourself?—Mr. Cooke does.

9921. Is it then a fact that these two gentlemen with yourself attended recently the Horncastle election?—Yes; there were two others, Mr. Amos of Kent and Mr. Worthington of Wigan.

9922. Am I rightly informed that your attending that election, as representing your association, was subsequently made the subject of very grave complaint by some of the members of the Chester Farmers' Club?—There was one gentleman moved some resolution to that effect, but I believe he was not even seconded, and it was withdrawn.

9923. The resolution that was moved, I think, was to this effect, was it not:—"That this club withdraw from "The Federation of Tenant Farmers' Clubs?"—It was something to that effect but it was all done under a mis-apprehension—the man was entirely wrong.

9924. What were the reasons alleged in support of that motion?—I suppose they had thought we had gone to Horncastle in the interests of some political candidate, which was certainly not the case.

9925. (*Chairman.*) Did you go to Horncastle with the gentlemen you mention as a deputation from the association?—No, we went as members of the association, but not by direct mandate from the association. We were all members of the executive.

9926. But you went for the special purpose of advocating the views of your association?—Yes.

9927. And of persuading the electors to adopt those views?—Yes.

9928. But, as I understand you, without any intention to urge them to vote for one candidate or the other?—That is so. I spoke at two meetings there. I was questioned at both meetings as to what views the candidates took on this question. I declined to reply, because I said, "We have only up to this time seen one candidate," and I said "I prefer to give no answer "until we have seen both and can give answers as to "both."

9929. (*Mr. Chaplin.*) Is it not the case that at a meeting of the Chester Farmers' Club it was reported "that "three members of the Federation, Mr. W. Smith, "M.P., Mr. Thomas Parker, and Mr. George Cook, "Tattonhall, went to the Horncastle election as "representing the federation of so called Tenant "Farmers' Clubs. Those gentlemen had no official "authority to act in that way so far as he was aware. "They ought to keep politics out of the club and they "ought not to use the federation as a lever for their "own party ends." Upon that statement this resolution was moved:—"That this club withdraws from "the federation." Then the whole question was discussed and it ended in this way, that the motion was withdrawn for a period of 12 months. Now is that correct or is it not?—Yes, that is so. This pamplet of which you have all had copies and which was circulated in the Horncastle division says in the last paragraph in the largest type of all. "If English farmers "will consider their own interests as well as the inter- "ests of agriculture generally they will support Mr. "Smith's Bill and vote only for the candidates who "will support it."

Mr. W. Smith, M.P.
1 Mar. 1894.

9930. Does the Chester Farmers' Club then still belong to the federation?—Yes.

9931. For the next 12 months?—Yes.

9932. Referring again to the split which originally occurred, do you think it is possible that, like these members of the Chester Farmers' Club, the seceding members may have thought that the attention of your association was directed to political objects rather than to the advantage of agriculture generally?—I cannot say. I understood always that it was on the question of policy—as to the extent of reform that they should seek.

Depression in Lancashire.

9933. Now you told us in the course of your examination, that the depression in your district only became acute during the last two years?—Three years.

9934. Three years?—I think it is three years.

Low prices.

9935. And the first cause you attribute it to was the drop in prices?—Yes.

9936. In beef, mutton, and in dairy produce?—Yes.

Dairy farming.

9937. Dairy produce is the prominent element, I supose, in the agriculture of your district?—Cheese and butter both.

9938. Is there a large production of milk for sale?—Not very large, except around such towns as Preston, Blackpool, Lancaster, &c.; around all the towns there would be a good deal of milk, what we call, kitted into the town.

9939. What proportion of the dairy industry do you suppose it represents?—There is very little arable land, at least but a small proportion of arable land, but grazing and dairying are practically——.

9940. I did not make myself quite clear; I ought to have asked you what proportion of the dairy industry does the produce of milk represent, apart from cheese and butter?—If I speak of Lancashire generally it becomes different. I think down in South Lancashire there is a good deal of milk sent into Manchester and Liverpool. I was speaking rather of my own immediate district, north of Preston, where I live, and there it is a very small per-centage.

9941. In the neighbourhood of Liverpool?—Yes, and also in Cheshire.

9942. There the sale of milk is very large?—I see by travelling on the railway large numbers of milk cans going by rail.

9943. I think you also said that increased facilities for communication were the very prominent cause of this recent depression?—Yes, in the greater ease with which foreign products can be brought, and the very reduced charges for their conveyance.

9944. That would not apply, at all events, in the case of milk?—No.

9945. Are the localities in Lancashire well supplied with milk, or is there a further opening for dairy-farming in that district?—No, I think they are well supplied; I have not heard any complaints.

Low prices.

9946. As regards the chief cause then of the depression, the drop in prices, have you any remedy to suggest?—No, they will have to follow their natural course.

Tenure.

9947. It was also due, you said, to the present system of tenure?—Yes, I believe that if the farmers had had a better system of tenure they would have been able to to farm successfully, even with the prevailing low prices.

The Agricultural Holdings Act.

9948. The Agricultural Holdings Act, 1887, I understand you to say, to a large extent, has been a failure, but are you aware that many witnesses have stated to us that it has, at all events, done something to improve tenure in this country?—I could not subscribe to that.

Claims and counter-claims.

9949. Not at all?—I think the benefit from it is very slight indeed. I will give you a case in point if you like, which has occurred within the last few days. I will not go into detail of it because the gentleman will probably come before you. A claim is made for 290*l.* The landlord immediately counterclaims for 1,490*l.* of which 280*l.* are rent and tithe which is not disputed, An arbitration is held, and not one penny piece of the landlord's claim is allowed except the rent and the tithe, whereas I think 190*l.* out of the 290*l.* of the tenant's

* The witness subsequently furnished the following particulars of the number of the members of the Federation of Tenant Farmers' Clubs:—Wigan and District Club, 120; Warrington, 300; Birkenhead, 240; Abram and District, 80; Wrexham, 60; Lancaster, 140; Sandback, 60; North Lonsdale, 200; Preston (styled Lancanshire Tenants), 450; Burnley and District, 160; Bolton and District Dairy Farmers, 200; Stockport Farmers, 100; Chester Farmers' Club, 500; Cumberland group (six societies), 600; South Kent Farmers, 100; Total, 3,310.

Mr. W. Smith, M.P.
1 Mar. 1894.

claim is allowed. That tenant's claim would have been very much greater had it not been for a lease very prejudicial which he was in a manner compelled to sign, and which shut out the great bulk of the improvements which he had made prior to the date of the lease. The experience generally has been that the benefit to be derived from the Act was so small that it was not worth contesting.

9950. (*Chairman.*) I cannot quite see then, where the hardshipis, because he got all that he claimed apparently?—The hardship is this: experience has shown in the past that the moment a tenant makes a claim which may be perfectly justified, he is met by a counterclaim much larger in extent.

9951. Here the landlord made a counterclaim for 1,490*l.*, and it was rejected?—It is a sort of sword hung over the heads of the tenants.

9952. (*Mr. Chaplin.*) In this case that you quote to me, as showing that the Act was an absolute failure the tenant got his full claim I understand?—No he did not. He got 190*l.* out of the 290*l.* that he claimed.

9953. He would have got nothing I suppose before the passing of the Act?—I do not know. It would depend on the terms of his lease, I suppose. One of the largest estate agents in the district before Mr. Wilson-Fox at Preston (Mr. Fair) who is agent for the Lytham estates, and for the Earl of Bective in the neighbourhood, stated at that inquiry, that the Agricultural Holdings Act was a dead letter.

9954. I think I understand you at all events to admit this, that although it may not have done any very great good, the position of the tenant is certainly not worse, and perhaps is slightly better, than it was before the passing of the Act?—Yes, it cannot be worse.

Tenure.

9955. In fact the system of tenure now, is less bad than it was 20 years ago?—I should say it was a slight improvement, but exceedingly slight; it is not such as to encourage farmers to throw themselves with energy into the cultivation of the land, or to increase the products.

9956. Is it not the fact that 20 years ago, agriculture was in the most flourishing condition possible, and that it had reached the very summit of prosperity?—The farmers were getting better prices for their products then, and I suppose even in spite of an unjust system of tenure, they could make a profit.

9957. Then if a worse system of tenure was accompanied by the greatest possible prosperity, it is rather difficult I think, is it not, to reconcile the statement, that a bad system of tenure is the cause of the present depression?—If you had had an equal comparison, if you had had the same system of tenure under the same conditions, or rather varying systems of tenure under the same conditions as to price &c., you might have made a comparison, but you cannot under the circumstances I think.

Complaints.

9958. The main complaint I understand of your association is this: first of all, insecurity of tenure; secondly, that there is insufficient compensation for improvements; and thirdly, that the rents are too high?—We put the rents first.

9959. You put the rents first?—Yes; and the security of tenure second.

Evicted tenants.

9960. Will you let me ask you a question with regard to the security of tenure? At Question 9519 in the evidence you were good enough to give the other day you say that the tenants' capital is equally insecure everywhere. You are asked, "Do you think that the "farmers' capital is more insecure in Lancashire than "in other parts of the country," and you say, "No, it "is equally insecure everywhere." Then you are asked the question, "We hear very little of this from witnesses representing those parts of the country," and you say, "It was a matter of notoriety at the "time." You supported this statement by giving us two instances of gentlemen who had been evicted, I understood you to say, for reasons quite apart from the conduct and management of their farms?—Yes.

9961. You said, I think, that one was evicted for political reasons, and that the other was evicted for what cause was it?—For taking part in the formation of this federation, and in the movement generally.

9962. Further you told us in answer to a question of one of the Commissioners, "I have no doubt myself, "though I am not able to give you names and dates "now, that in many cases something of the same kind "has happened?"—Yes, I can give you a short instance now which is on religious grounds—a very prominent case—one political, one for agitating the farmers' own questions, and the third for not being ready to go to the parish church but going to the Wesleyan Chapel instead.

Mr. W. Smith, M.P.
1 Mar. 1894.

Compensation for improvements.

9963. Reverting to the question of the insecurity of tenure, even supposing that a tenant is dispossessed of his farm for any reason, are you not aware of many districts in the country where either by custom or agreement he receives the fullest compensation for all his improvements?—I am not aware of any district where he receives full compensation.

Lincolnshire custom.

9964. Are you acquainted with the Lincolnshire custom?—No, only very casually. I believe the Lincolnshire people are better off than in most counties.

9965. You are not acquainted with the custom?—Except what I heard during the Horncastle election.

9966. You are not prepared to say he would not receive full compensation under that custom?—I am not prepared to pronounce a decision on the Lincolnshire custom.

Custom of other counties.

9967. Are you acquainted with the customs in other parts of the country?—There are no customs in Lancashire or Westmorland or Cumberland or Cheshire which give a man full compensation.

9968. With regard to a great many other counties there may be that custom although you are not acquainted with it?—Take Mr. Clare Sewell Reade's statement at the Agricultural Conference in 1892. He stated distinctly that in the county of Norfolk there was a decided premium offered to a man to leave his farm in a dirty state.

9969. That was in the county of Norfolk?—Yes; I think if that had not been the fact that statement would have been traversed long ago.

9970. I did not say the county of Norfolk; I asked were there not many other districts with which you are not acquainted where you are not prepared to say that they do not receive full compensation?—I am not aware of any district where full compensation is given.

9971. That is not my question. Are you prepared to say that there are districts where that compensation is given?—I can only speak of what I know—I do not know of any where that compensation is given.

9972. You are not acquainted with the customs in the great majority of counties and districts where it is given?—I think we should have heard during this agitation if there had been any very special customs.

9973. Why—your agitation does not extend very far I understand?—I mean the general agitation. I have been in the counties of Sussex and Kent and Northamptonshire and other counties speaking on this question, and I have invited all the criticisms of our policy that I could get, but I have never heard anything of that kind, excepting in Lincolnshire.

9974. Have you never heard of the custom of the county of Nottingham?—No.

9975. Nor of parts of Yorkshire?—Not of any special custom.

9976. Nor of Cambridge?—Not of any special custom.

9977. Huntingdonshire?—Not of any special custom giving the tenant ample compensation.

9978. In fact you are not accquainted with these customs?—I am not acquainted with all the local customs.

Reductions of rent.

9979. The next complaint was high rents. Do I understand you to say that they are general in Lancashire?—Yes, I said that the permanent reductions in rent were very few; they were the exception.

9980. Whose fault is it? Why do the tenants give these high rents?—A man has been brought up to farming, and he cannot very well turn himself to any other occupation. Perhaps he expects that times will improve which may enable him to pay them.

9981. Surely there are vast districts in England at the present time where any number of farms can be obtained, where a great number are altogether unlet, and where the landlords are busily engaged seeking for tenants?—And a great number of Lancashire men have gone down into Essex and such counties during the last two or three years.

Mr. W. Smith, M.P.
1 Mar. 1894.

9982. Has that done nothing to reduce the rents?—It does not seem to have had any appreciable effect.

High rents.

9983. Is it not the case that many tenant farmers in Lancashire have maintained that it is the tenants who have now to blame themselves for the high rents, because they bid against each other?—There is something in that. I think they are partly to blame.

9984. Are you aware of the case that has been stated to us by our Sub-Commissioner, which occurred upon Lord Sefton's estate?—May I ask upon which estate of Lord Sefton; one is in the immediate proximity of Lancaster, and the other is near Liverpool.

Competition for farms.

9985. That I am afraid I cannot give you. The paragraph I refer to is this: "Colonel Wyatt, agent to "the Earl of Sefton, gives the following remarkable "evidence to show what keen competition there is to "get on that estate. 'I had seven candidates for a "'good farm last year. Two men offered to give the "'out-going tenant 500*l.* if he could get the farm for "'them.'" Surely that does not look as if the rents were so very high on that estate?—That may be an estate where the rents were not advanced during the better times, consequently it would not be in the same need of reduction now.

9986. At Hambleton there was a meeting, we are informed by the same Sub-Commissioner, and what he says of that meeting is this: the partners there said, "It is the tenants' fault that rents are high, and "not the landlords', because tenants will bid up against "the other"?—There may be something in that; there are men who bid a rent for a farm which they know or feel it is not worth. Then when they have got nicely on the farm, they perhaps expect to get a reduction made to them.

9987. Then I observe again that the gentleman who you told us was the Chairman of the Lancashire Association—I think Mr. Rimmer?—No, the Preston Association.

9988. He makes this statement at the Lancashire Tenant Farmers' Association; that he and the association agreed that "the farmers were themselves to "blame for raising the market price of the rent to "what they considered a fictitious value"?—They are to blame somewhat; there is no doubt that has part to do with it.

Reductions of rent.

9989. As a matter of fact some permanent reductions have been made already?—Not very many in the district I am acquainted with. I have made some inquiries since I was here last week. On the two largest estates in the district perhaps—the late Duke of Devonshire's, now Mr. Victor Cavendish's and the Duke of Buccleuch's—no permanent reduction has been made in either case, but a temporary remission of 10 per cent. has been given on several rent days.

9990. Considering that the depression has only become acute during the last two years perhaps permanent reductions might be considered to be premature?—It has been very acute where it has become acute.

9991. Do you think a landlord should be called upon to make permanent reductions in the case of depression which has only existed for two years?—Three years I said, with no signs of any immediate improvement. I think he would be a wise man if he did. I told you that in our case we made reductions of 33 per cent. on several farms.

9992. You gave us some very interesting information as to your own farms. I observe that a farm of 284 acres let for 800*l.* rental?—Yes.

9993. And that is now reduced to 600*l.*, with a further temporary abatement?—To 550*l.*, of which 50*l.* has to be spent. I did not give the whole of the cases, I just replied to the questions put to me. The average rental of my own land is something less than 30*s.* an acre.

Rent of certain farms.

9994. Something less?—Yes. I gave you the best farms; the highest rented farms in the instances I quoted.

9995. You gave us two farms?—Yes.

9996. Both of those appear to me to be let at a very desirable, not to say very heavy rent, even in these times?—They are worth it. These are farms my father had in his own hands for a great number of years, and spent enormous sums of money on.

9997. Is that kind of rent typical of the rent of the district?—There is land in the district even in these times of extreme depression that could be let for 3*l.* an acre. I have land on my hands now that I could let for over 3*l.* an acre if I chose to let it.

Mr. W. Smith, M.P.
1 Mar. 1894.

9998. (*Chairman.*) Even with the present depression?—Yes.

9999. (*Mr. Chaplin.*) Have you ever had any difficulty on the subject of rent with any of your own tenants?—Difficulty about rent?

10,000. Yes?—No; I do not think we have.

10,001. Any troubles; any complaint about rents?—No. The only thing approaching anything of the kind was that one man who took a farm at a rental of 256*l.* did not want to give quite as much at the time, but took it, with an assurance from me personally that if, after a couple of years' experience, it was not worth quite so much we would reduce the rent. He did not wait even the expiration of one year: he wanted it reduced immediately and I did not accede to his request. He admitted to me in the course of conversation that he was saving money at the same time, but he thought he ought to save more—he wanted a reduction of 16*l.* from 256*l.* to 240*l.*, or from 236*l.* to 220*l.*—I could not be quite certain which—and he left the farm in consequence. When re-let it was let for 16*l.* less, and I at once returned him the 16*l.* a year for the two years he had occupied the farm.

10,002. Is that the case that was referred to in public at one of the meetings of the Sub-Commissioner in Lancashire?—I dare say it is. These are old election stories that were brought up in 1892 against me, and I had no difficulty in settling them.

"Land Tenure (England) Bill."

10,003. Your experience upon these matters has moved you to introduce a Bill dealing with the whole question?—My interest in agriculture and the welfare of the farmers—I would rather put it that way.

Land courts.

10,004. Your Bill practically extends what is known as the Irish Land Legislation to England?—It is on somewhat similar lines, I think.

10,005. Are you acquainted with the machinery of the Irish Land Bill?—Slightly.

10,006. Are you aware that under that Bill there has been at times a tremendous block in the courts which have to fix the fair rents, and the cases have been unable to be taken for months and months, and have had to wait for great periods for decisions?—I believe that is so.

10,007. If the Bill was largely used in England should we not be liable to the same difficulty here?—No, you would have a multiplicity of courts far in excess of what you have in Ireland, and the conditions are not the same.

10,008. The courts you propose for the decision of these questions is the county court?—Yes.

10,009. Is not the county court pretty well occupied with its own work already?—In some districts.

10,010. Have you not occasionally heard of cases where business is sometimes delayed already in the county courts?—The judges now take groups of courts. It might require some additional judges to be appointed.

10,011. Is it conceivable that without an enormous addition to the machinery it would be possible for the county court to decide all the cases between landlords and tenants in England if the Bill be passed, and tenants usually went into court?—I think, as I said the other day, that typical cases would be adopted which would form precedents and guides in others.

10,012. What reason have you to suppose that a landlord would agree to a great lowering of his rent without trying what redress he could get at the courts?—I take it that if he had an ordinary degree of common sense he would see what the court was doing, and he would be a foolish man to throw away money.

10,013. Why did it not have that effect in Ireland?—The conditions are different there.

10,014. In what respect?—You have to ascertain there what the improvements are that the tenant has made.

10,015. Where?—On the farms, they have erected buildings, etcetera.

10,016. You are speaking now of Ireland?—Yes.

10,017. Surely the fact that the landlord makes all the permanent improvements in England would add to the difficulties and the complications?—He does not

Mr. W. Smith, M.P.
1 Mar. 1894.

make all the permanent improvements in England, he does as regards the buildings.

10,018. As a matter of fact the landlord makes the great majority of the permanent improvements?—What I think the court is needed for is that the farmers should know that there was in case of need an impartial authority to which they might appeal to redress their wrongs.

10,019. However, you think that the machinery you have provided is quite adequate and sufficient for the work?—Yes.

10,020. You see no difficulty of a block or of its interfering with other business of the county court?—I say some additional judges might need to be appointed, because I know they take groups of five or six courts in my own district.

10,021. (*Chairman.*) Do you think county court judges are competent to decide these difficult questions?—With the assistance of the practical men they would have as assessors.

10,022. (*Mr. Chaplin.*) Then you are not in the least induced to reconsider your proposals by the knowledge of the enormous blocks of business that there have been already in the land courts in Ireland?—No.

Relation between landlords and tenants.

10,023. Are you aware that dual ownership in Ireland has been found in many respects to be so exceedingly objectionable that both parties in the State have now for some years in the past been trying to get rid of it by introducing Land Purchase Bills to make the tenants owners of the land?—Of course in Ireland there had been a great deal of friction between the two parties long before this Act was passed, and then there is the extreme state of tension. I should not object at all to land purchase being extended to England, but before you could have land purchase you must have some tribunal or means of arriving at a fair judicial rent to be the basis of the purchase.

10,024. As to the relations between landlords and tenants in Ireland are they such as you would wish to see reproduced in this country in your opinion?—Do you mean the present or the past relations?

10,025. Both?—I think it would be a very great misfortune if the relations which existed in Ireland prior to the Irish land legislation, existed in this country.

10,026. Are the relations between landlords and tenants in Ireland generally friendly, or are they of an antagonistic character?—I do not know what they are now, I have not been in Ireland for some years; I can only judge from the past.

10,027. In the past do you think they were antagonistic?—Yes.

10,028. For anything you know to the contrary they are much the same at present?—I should say they are less antagonistic now.

10,029. What do you hold them to be in England?—They are not strongly antagonistic.

10,030. You do not agree with a great number of witnesses who have given evidence before us to the effect that they are extremely friendly, as a rule?—In many cases they are very friendly, in others there is a sense of injustice which rankles.

10,031. Have you no fears that if Irish legislation was extended all over England similar relations might arise between the landlords and the tenants in this country?—No, the relationship in Ireland is not the result of that legislation; it was what existed prior, and I think it has been ameliorated by that legislation.

Mr. W. Smith, M.P.
1 Mar. 1894.

10,032. Then you are of opinion that the relations between landlords and tenants in Ireland have improved since the year 1870, when Irish land legislation was first introduced?—Yes, I should say so. I know there is a fear in England of the same state of things occurring if no legislation does take place.

10,033. On what do you base that opinion—on what information?—I was told credibly the other day that on one very large estate in Leicestershire with a large number of tenants, an estate on which no reduction has been made, if a reduction was not made at the coming rent day there would be a plan of campaign organised, and absolutely no rent paid.

10,034. I think you did not understand my question. I was asking you on what information you based your opinion that the relations between landlords and tenants in Ireland to-day are more friendly, and are better than they were prior to 1870?—Simply from what I read in the newspapers.

10,035. You get your information from the newspapers?—Yes.

10,036. What—that the relations between landlords and tenants prior to 1870 were worse in Ireland than they have been for the last 10 or 15 years?—Yes.

10,037. I do not know what newspaper you get it from. Are you a practical farmer yourself?—Yes.

10,038. Have you much practical acquaintance with farming in England generally?—I have not farmed very much myself, but when my father was living he had five or six farms on hand at once frequently, and I assisted him—I kept the accounts of the farms.

10,039. Have you given much attention to the conditions of agriculture in other counties?—Not very much in other counties.

10,040. Nor to the customs or agreements under which they are carried on?—I have not a very intimate acquaintance with them.

10,041. You have no very intimate acquaintance with Ireland, or Irish agriculture either?—I have spent some time there but not just in recent years.

10,042. I understand your position to be this, that without having given, as you told us, any careful study or attention to the general condition of agriculture in England—to the agreements and customs under which it is carried on, or to the general conditions of agriculture in Ireland, you do not hesitate to come before the Commission and propose a sweeping revolution in the tenure of land which is to extend all over the country?—I am in this position, that I know there is very great dissatisfaction with the present state of affairs in this country; I know that when a very sweeping reform of land tenure was advocated in St. James' Hall it was carried unanimously; I know that in all the counties where I have spoken on the subject the proposals we make have been received very favourably; and in the absence of some better proposal I think the proposal I make is a desirable one. I can point to no better plan.

The witness withdrew.

Adjourned till to-morrow at 12 o'clock.

Nineteenth Day.

Friday, 2nd March 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq. *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. William Smith, M.P., recalled and further examined.

Mr. W. Smith, M.P. 2 Mar. 1894.

Security of tenure.

10,043. (*Mr. Long.*) I propose to ask you one or two questions, first of all with regard to your evidence, and then to come, if you will allow me, to your Bill. I understand that the basis of your reasons for desiring to amend the condition of things agriculturally is the want of security on the part of the occupier, and the general depression?—Yes; and coupled with that what I believe to be a fact that the land is not developed nearly to its full extent, in consequence of the present system of tenure of land.

10,044. Yes, but that is the result, not the cause, is it not, of the want of security and general depression?—It might be taken as that.

10,045. I understood you to say in answer to one question, Question 9475, that "the want of security "and the very inadequate compensation now enjoyed "by farmers is having a very prohibitive effect both "on their energy and skill in management?"—Yes.

10,046. Do I understand you to mean by that, that in your opinion farmers have not been farming well?—Not so well in recent years, they have not been making the improvements that they formerly made.

10,047. Then would it be correct to say that you consider one of the causes of agricultural depression is bad farming?—Yes. I think, in fact I feel certain, that had the farmers been in a more secure position which would have justified them in a greater expenditure upon the land, the depression at all events would not have been nearly so acute.

10,048. Greater expenditure on the part of the farmers is hardly synonymous with bad farming; a man may not be prepared, or may not be able to embark upon heavy additional expenditure whether he has got security of tenure or not, without being guilty of bad farming?—I take it that it is necessary certainly under the existing conditions of low prices that very high-class farming should be followed, that the only man who has a chance of making any money at those low prices is a man who farms in a really high-class manner.

10,049. Then it comes to this—if you are not prepared to go as far as saying bad farming—that at all events want of security of tenure has led to farmers not making the most of their opportunities?—Yes, I would say that.

Farming by occupying owners.

10,050. Are you aware of the fact that there are in all parts of the country a large number of holdings which are the property of their occupiers?—There are some of course.

10,051. Has your examination into agriculture led you to believe that where they are untrammelled by any doubt as to tenure, or any difficulty as to rent, their cultivation has been so much better and their expenditure so much more liberal, that they have prospered where others have failed?—Yes, in my own county I believe one of our witnesses, Mr. Worthington, of Wigan, will give you very specific evidence upon that point.

10,052. That is one individual case?—It is one typical case.

10,053. Is that the result of the examination of the country generally?—I am speaking of my knowledge of Lancashire. I know a good many farmers who own their own land and farm it, and they certainly are the best farmers I know of.

10,054. And they have prospered?—Yes.

10,055. And are prospering now?—Yes.

10,056. Is their prosperity directly to be attributed to the larger expenditure of capital?—Yes, and the more liberal use of manures, and improvements of that kind.

10,057. Then in the case where a man has capital your alterations would enable him to prosper where otherwise he would fail?—Yes, I believe so.

10,058. Take the case of a man without capital, or with a very limited amount of capital; have you considered what would be the immediate consequence of your system?—I do not know that I see any necessary consequence in such a case.

10,059. Would he not probably be able easier to get the capital?—If you notice I specially give the landlord the power to object to any proposed tenant if he has not sufficient means to make proper use of his holding.

Security of tenure and facilities for borrowing.

10,060. Yes, that is a valuable pious opinion, but it is rather difficult to carry out. What I wanted to get from you is this: In the case, of which there are a good many, of a man not having the capital necessary for these improvements to which you have referred, do you propose that by giving him security of tenure you would also give him opportunity to borrow the money upon the security of his holding?—I believe it would be much easier for him to borrow money to carry on his farming operations if he had absolute security.

10,061. One of your objects is to enable occupiers with greater ease to farm on borrowed capital?—No, that was not one of the objects.

10,062. One result?—I think that alteration would make it easier.

10,063. Do you think it a desirable result?—I do not see any objection to it.

10,064. You see no objection to a man farming on borrowed capital?—No, I do not say that. You may take too sweeping a conclusion from my answer. I think at present there is a fault on the part of farmers

Mr. W. Smith, M.P. 2 Mar. 1894.

in many cases that they take too large farms for the capital which they have. I believe in many cases they would do better if they were confined to a smaller acreage, because if a man is short of capital he is tied in buying and selling both; he is not able to watch the markets and avail himself of the best turn of the market.

10,065. That is perfectly true no doubt, but that is hardly dealing with the particular point that I am trying to bring you to now. The whole of your evidence on this particular point rests upon your opinion that it is desirable that tenants should develop their farms by improvements?—Certainly.

10,066. But when a man takes a farm under one condition of agriculture, such, for instance, as existed between 1870 and 1880, how is he to calculate his resources so as to be able to go in for additional improvements in a subsequent period when the conditions of agriculture have entirely altered?—I do not quite see how I am to answer that, it is rather an involved question.

10,067. Perhaps without any reference to the question being involved, if you cannot answer it you will say so; it is a very simple question, there is nothing involved about it at all?—Perhaps you will kindly repeat it; perhaps I shall grasp it better then.

10,068. On a tenant entering a farm between the years 1870 and 1880 when agriculture was very different to what it is now, how could he estimate what he might be required to do in the direction of additional improvements in a subsequent period when the whole condition of agriculture was altered?—I should think a man would be a very exceptional man who could have anticipated 20 years ago that such a state of things was going to occur as has occurred since. The probability is that most of those men at that time had abundant capital to make those improvements, but owing to subsequent events they have lost it.

10,069. Then I understand you to suggest that under your improved system of tenure he would be in the possession of greater facilities for borrowing money in order to make those improvements which are rendered necessary by the altered conditions of agriculture?—I did not suggest it, you suggested it, and I do not dissent from it.

10,070. It does not matter so long as you do not dissent from it who suggests it. Then may I take it that one of your objects in giving a man greater security of tenure is to enable him with greater ease to borrow money?—It is one of the minor objects of the proposal; it is not one of the primary objects of the proposal. It is incidental, I think, to the changed state of affairs that he would be able to borrow money much easier; his banker, for instance, would allow him an overdraft much more readily than he would with his insecure tenure.

10,071. Take, for instance, what you have just said, that a banker would allow him an overdraft more easily, do you know, or not, whether it is the fact that bankers have been in the habit of allowing farmers very freely to overdraw during the best times?—I do not think very largely in our own neighbourhood. They may have done so in some other places.

10,072. They do not want it in your neighbourhood?—No, they are more in the habit of borrowing from their friends. A great many farmers borrow 100*l.* or 200*l.* on a promissory note from their relatives or friends of the family. What we find, when a farmer fails and the estate comes to be inquired into, is that he owed such sums. Sometimes I am afraid they borrow them at the start when they go on to the farm, and do not go on with their own money altogether.

10,073. They borrow it from their relatives, and not from the banks?—I think they borrow a great deal more from their relatives practically than they do from the bank.

10,074. At a high rate of interest?—No, I think there is a sort of religious opinion that 5 per cent. is the correct rate of interest among that class of people.

10,075. Then would you suggest that under your altered system they would be able to get it from the banks at a low rate of interest?—If the value of money continues as it is at present they would be able to get it at less than 5 per cent.—probably 4.

10,076. Giving a bill of sale on their stock?—I do not think so. A wise banker does not lend money on a bill of sale, because that has to be registered, and at once calls attention to it.

Mr. W. Smith, M.P. 2 Mar. 1894.

10,077. Then what security would the banker have?—He would have no security other than the rest of the creditors. Bankers do not always lend on security.

Assignment of tenancy as security for loans.

10,078. (*Chairman.*) I suppose that the tenancy would be an assignable interest, and that that interest under your system could be deposited with the banker?—There would probably be no one fixed rule in those cases. Some bankers would lend without any security, others might not be willing to lend without something definite.

10,079. (*Mr. Long.*) I think the majority of bankers require security, do they not?—I do not think they do for small amounts, or if they do get security the common practice in those cases is to ask some friend to be bond for them. That, I think, is done in some 9 cases out of 10 with these small advances.

10,080. You do not think they would do as the Chairman suggests, that a tenant borrowing money from the bank would assign his tenancy?—He might do so, but I should not think that would be a general proceeding.

10,081. Supposing he did, is there any means in your Bill by which the landlord would know that an assignment has taken place?—No, there is not.

10,082. So that a tenant might assign his tenant right to somebody from whom he borrowed money without the knowledge of his landlord?—Yes, he would not assign anything belonging to the landlord, and I do not see why he should give the landlord notice.

Land Tenure Bill.

10,083. I think under your Bill it is provided that where there is a change of tenancy the tenant should be bound to provide a successor?—Yes, or he must remain on the holding for the judicial term.

Transfer of tenancy.

10,084. But if he has assigned his tenant-right to somebody else, how can he dispose of it?—If he has assigned it, it makes the position more difficult.

10,085. I take it he would have sold his rights to the banker who lent him the money, would he not?—I think that is very possible.

10,086. (*Mr. Channing.*) Does not the 13th section of your Bill provide that the landlord may within one month object to any person to whom the transfer may be made?—Yes.

10,087. I understood it to be so?—Quite so, but that is not the point.

10,088. (*Mr. Long.*) I am not asking you what the objects of the Bill are; I am trying to get from you what the effects of the Bill are; the objects may be excellent?—I think you worded it before that it was one of the objects of the Bill. I think if the shorthand writer would read back your previous question it would show that. There are many things that would follow as a consequence from the direct proposals.

10,089. Can we get at them then?—You are getting at some of them.

10,090. I want to know from you what would be the practical effect of the suggestions that you make in order to improve agriculture, whether one of them has not been correctly described by the Chairman?—That would be incident to the proposal, and I think would be in some cases very beneficial.

Land Tenure Bill and Irish Land Act compared.

10,091. You base your suggestions with regard to your proposal for agriculture upon the Irish Land Act?—Upon the proposals made in respect to Wales where the conditions are more nearly parallel to our own. I did not refer to any of the Irish Bills; I took as the basis of this Bill, Mr. Ellis' proposal.

10,092. But that is not in operation?—No, it was a Bill introduced into the House, and I got a copy of that, and that was the initiation.

10,093. The nearest approach to your suggestion which would be found in operation is in Ireland?—That is so; in Ireland.

10,094. I suppose you have studied the operation of the Land Act in Ireland, and its effect?—I have to some extent.

10,095. Have you studied it at all extensively on the spot?—No.

10,096. In different parts of Ireland?—I cannot say that I have within the last few years. I do not call the cases at all parallel.

10,097. You therefore do not suggest that you have made this proposal because of the result of the study of the operation of the Irish Act?—No, I feel that something needs doing, and this is the best thing that I can think of as a proposal; I am quite open to conviction as to any improvements either in principle or in detail.

Increased fertility by security of tenure.

10,098. To come now to the object, and not to the effect, your object is to improve the productive power of the country?—That is the main object. I think that ought to be the first consideration of every statesman.

10,099. You believe, as you say, I think, in answer to Question 9579, "I am quite certain of this, that "there is not one acre in a hundred in this country that "is farmed nearly up to the degree that it might be "farmed"?—I believe so.

10,100. You have, I suppose, studied agriculture in all parts of the country extensively?—Well, I have travelled about a good bit, and one hears a great deal from others who are acquainted with other counties.

10,101. Do you think that that remark applies to the high farming, for instance, of the great corn farms of the West of England?—I believe it applies generally; that very much more might be done.

10,102. Do you think it applies to Lord Leicester's estate?—I do not know his estate. I have the opinion of such men as the late Lord Derby and Sir James Caird, who have over and over again stated that the production of this country might be enormously increased.

10,103. (*Mr. Little.*) Without regard to expenditure?—I do not say without regard to expenditure.

10,104. Without regard to cost of production?—I think that would practically apply to profitable production, I mean to say, not presupposing any expenditure that would not be justified by the results. I do not mean to say that there is more land, and all this sort of thing, which might be cultivated, but which would not pay the cost of cultivation; I am excluding that from my view; I mean land that is now cultivated.

10,105. The statements that you quoted were not unqualified statements that the land could profitably produce twice as much as they now produce, were they?—Well, I presume that would be understood.

10,106. They were not so, I think?—There was very little use in making such a statement if that was not a part of it.

10,107. The qualification is or may be, that produce might be increased, and yet profits might be diminished?—I take it that this was part of a general argument that the country would be the gainer by better cultivation, and that such better cultivation was capable to a very large extent. The nation would gain nothing by cultivating lands for the sake of getting a little produce if there was a loss entailed thereby. I do not think men of the weight of either of those gentlemen I have named would advocate such a suicial policy.

Reductions of rent.

10,108. (*Mr. Long.*) You told us, with regard to rents in your neighbourhood, as I understand you to say, that the average reduction had been about 10 or 15 per cent.?—No; I would scarcely go so far as that; I think there are very many cases in which no reduction has been made at all.

10,109. Where reductions have been made?—Where reductions have been made they are 10 or 15 per cent. temporary remissions of rent. I do not think there is one case in ten where there has been a permanent reduction.

10,110. In your own case you told us that you had made a permanent reduction voluntarily of 33 per cent.?—I did not say in all the farms—in some cases.

10,111. No, but you quoted one particular farm?—Two.

10,111*a*. When using the word "voluntarily" did you mean that you could have got a better rent without difficulty at the time?—I meant that we did not seek to obtain higher rents than pratically we did obtain, and in one case the remission has been made to the sitting tenant—not in the case of a new letting.

10,112. Do you mean that you could have got a higher rent than that represented by your 550*l.* a year?—I do not know what we could have done if we had tried. We did not, in the existing state of things, think that the land was worth so much—it was quite self evident.

10,113. Were you offered a higher rent by anybody else?—No, I could not say that we were.

10,114. In other words you took the rent that was offered to you?—Yes; put it that way if you like.

10,115. But is that not what you did? I do not want to put it in any particular way; I am not trying to make any reference to your individual case; I only want to ascertain what you mean by a voluntary reduction?—I mean where a tenant is in possession of a farm, and has not given any notice, nor threatened to leave; if we reduce his rent, that is a voluntary reduction of rent.

10,116. Is that not what takes place in a vast number of instances? I only want to ascertain what the meaning of "voluntary reduction" is?—One reduction might be made under the threat of the tenant leaving; another might be made freely.

10,117. You merely mean, as the majority of landlords in the country have done, the rent has been reduced in consequence of the times, and not with the object of preventing the tenant leaving the farm?—Yes, you can put it that way if you like.

Land Tenure Bill.

10,118. Your Bill, of which we have got a copy here, has been generally approved by the Committee of the Federation of Farmers' Associations, of which you are president, I believe?—Yes; I had drawn the Bill before conferring with them—before the Federation had developed; but after having been elected president I thought it was only courteous to submit the Bill to them. I did not tie myself absolutely to engraft everything upon it which they might suggest, but I found that their suggestions were nothing but reasonable suggestions, and in some cases were suggestions really in the interests of the landlord rather than of the tenant, which would make the Bill fair, not one sided; and so I readily accepted them.

10,119. Have you been assisted in the consideration of the details of the Bill by anybody representing owners or labourers?—I may say that of some of these associations' members are owners.

10,120. Then would you put the Bill forward as one in the interests both of owner and of occupier?—I believe it is in the interests of all parties concerned. I myself, the framer of the Bill, am an owner on a small scale as I explained at first. I might say that I do not quote those cases of our own, showing remission of rent, to extol my own conduct.

Reductions of rent.

10,121. No; I understand?—I simply do it to show that where we have felt such reduction of rent necessary or advisable, in other lands adjoining no reductions have been made at all. I could quote you a case where the estate is in Chancery, and where they have been appealed to by the tenants who presented a petition first to the Lord Chancellor and after, by instruction and advice, to the judge in whose court the particular suit lay. Unfortunately no reduction has been made on that estate, which adjoins several of our own properties, and there is no power to obtain such a reduction because the tenants have no *locus standi* in the court.

10,122. Have they threatened to quit their farms?—Some of them have quitted them.

10,123. Have quitted?—Yes.

10,124. Have their places been filled?—I do not know whether they have or not; I think they are leaving just now—this spring. I do not anticipate that the farms will not be relet.

10,125. At the same rent?—Certainly not; some of them are leases, and I think some of them have been allowed to go without the lease having expired. They are leases of 8 or 10 years ago. There have been two dates during that series of years when I believe there have been two small remissions of rent of 5 or 10 per cent., or an allowance of compensation, or something of that sort, but there has been nothing done this last year or two. The tenants find their capital slipping away, and they have sought to be released.

Interest on permanent improvements.

10,126. You told us that at the end of five years, at the end of your statutory term, if the landlord had spent any money on improvements it might be possible to secure a revision of the rent in order to get a return of interest out of the tenant to the landlord in respect of the money so spent?—I think it is in this way; any

Mr. W. Smith, M.P.
2 Mar. 1894.

money that has been spent by the landlord in permanent improvements, by agreement with the tenant, entitles the landlord to an extra charge even during the judicial period.

10,127. By agreement with the tenant?—Yes; if he erects any building for him.

10,128. In other words you would make the tenant the absolute judge as to what permanent improvements should be made upon the landlord's land?—No; I do not think it is in that way; I am not aware that it is usual now for landlords to erect new buildings, or things of that sort, except by request of the tenant. In some cases the landlord declines to accede to the tenant's request, and the tenant has to remain without those buildings. In this case if the landlord declined to erect them (for which he would be entitled to a reasonable rate of interest) then the tenant has power to go to the court, and the court may give him power to erect them at his own expense, and he would have a permanent interest in those buildings.

10,129. Surely it is the case that during the last, say, 25 years, enormous sums have been spent by landlords on the improvement of their properties?—That is so.

10,130. On their own initiative?—I do not say on their own initiative, unless farms come in hand, and the landlord then realises that new buildings are necessary. I think in 99 cases out of 100 they are built on request from the tenant that he wants a new barn, or new sheds, or something. He may or may not get what he asks for.

10,131. Are you not familiar with the practice of agents reporting regularly to the owners of property as to what they think it desirable to do, and making suggestions for improvements without notices to quit from the occupiers?—I do not think they do anything of that kind unless the matter has been initiated by the tenant. If they are going to relet a farm they might think this farm would be more marketable if we do so and so on it. In that case they might initiate it.

10,132. Are you not aware of the fact that there are a large number of large properties in the country upon which these changes have been of the fewest possible number?—Do you mean changes in occupation?

10,133. Changes in occupation, changes in tenants?—Yes; but I still say I should be exceedingly surprised to learn that the initiative in these cases, or any considerable per-centage of them, had come from the landlord or the agent.

10,134. Have you made inquiries into the systems which landowners and their agents pursue?—What do you mean by "made inquiries"? I have not travelled up and down the country and gone interviewing a great number of land agents, but I have been connected with agriculture, and my business brings me also in contact with agriculturists, and it is a matter of common conversation on things incidental to land tenure. I live in a country district, I do not live in a big manufacturing town.

10,135. You know nothing of the practice of agents so recommending the landlords, and of the landlords carrying out such improvements?—I never heard of any such, and I very much doubt their existence.

10,136. You are rather inclined to doubt the fact that enormous sums have been spent by landlords in improving their property?—No, excuse me, do not misinterpret what I say. Freely I admit the large sums, but the initiative does not come from the landlord or the agent.

Disposal of tenant right under Land Tenure Bill.

10,137. Now I should like to know what you think would be the benefit to the future tenant under your Bill; the present tenant of course will get security of tenure?—So would the future tenant, exactly the same—all succeeding tenancies would.

10,138. Yes, but the present tenant having got his tenant-right will probably not give up his farm without disposing of his tenant-right; it will be saleable, will it not?—He will only be able to realise the capitalised value of the improvements he himself has made.

10,139. But will not he be able to deal with the incoming tenant?—He has to deal with the incoming tenant. The way I assess the increased letting value of the farm is what the incoming tenant estimates the improvements to have been worth.

10,140. Will he not be able to dispose of his tenant-right, so to speak?—I do not think so. He might in the case we mentioned the other day—in the case of a considerable advance in prices—for a portion of his judicial term get a little advantage in that way. But that is not my object. My object is simply to allow the tenant to be absolutely secure of realising the improvement which he himself has made.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,141. On the view that the provisions of your Bill left it open for a tenant to sell his tenant-right in addition to the capitalised value of his improvements, would you so alter it as to make that impossible?—You could do it by shortening the judicial period, in which case it would be less likely to occur. He would be liable during the five years to get a greater sum for the improvements he had made if the market value of the farm had risen; on the other hand, if there had been a decline of values, he would get the value of his improvements less the difference in price from natural causes. It cuts both ways.

Fair rents.

10,142. One question more only: In order to fix this fair rent you propose that the rent should be what is left after the tenant-farmer has paid his expenses, and a reasonable cost of living?—Yes; I take it that one definition of rent might be given as the difference between the cost of producing the article and the value of the article when it is produced.

10,143. Plus the tenant's living expenses?—In my part of the country, where the tenant and his family all work, and assist in the production, they are surely worthy of their hire, just the same as an ordinary farm labourer.

10,144. That would only apply to the smaller farms?—It applies to all the farms in our district. I do not know of any single case where the wife and sons and daughters of the farmer do not take an active part in all the operations on the farm.

10,145. Your Bill is not limited to your district—your Bill would apply to the whole country?—That is so.

10,146. You have not studied either the conditions on the larger tenancies in other parts of England as closely?—I do not know what you mean by "studied" them. I have not given up myself entirely for any number of weeks or months to travel up and down the country to investigate these things on the spot. I am a business man, and I have done the best I could with the opportunities I had.

10,147. You have not had an opportunity of making yourself familiar with the conditions of agriculture in those parts of England where the farms are to a greater extent large farms?—Except where I have attended meetings and heard these matters discussed by men from all parts of the country.

10,148. What I meant was, have you had any opportunities of studying on the spot the system of letting farms and of cultivating them by the occupiers in the districts where the farms are large rather than small?—I am pretty well conversant with Cumberland, Westmoreland, Lancashire, and Cheshire, and the West Riding of Yorkshire. In Westmoreland and Cumberland some of the farms are very large, but the size of the farm does not determine its value, because much of the land is hill pasturage and that sort of thing. Do you mean by a large farm merely the acreage? Still the principle would hold good, I think, for all farms.

10,149. I understood you in reference to my question as to what a reasonable cost of living to the occupier would be to answer me by referring to the fact that the majority of the occupiers were engaged in working on the farm?—Yes.

10,150. And were, in other words, practically wage-earners?—Yes.

10,151. I ask you whether that would apply to agricultural holdings generally over the country?—I do not think it would. My knowledge is sufficient to say that in some counties farmers have been accustomed to live more in the style of gentlemen.

10,152. Necessarily on a big farm, say a farm of 1,500 acres, a man must keep up an expenditure which is rather larger than in the case of a farm of 50 acres?—I should not expect a farmer on a large farm to take a part in menial work. I think his time and his energy and ability are very much better devoted to the superintendence and direction of the operations of the farm. A man who keeps a small shop stands behind the counter; a man who has a large wholesale establishment spends his time in the counting-house, but none the less contributes to the prosperity of the affair.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,153. How do you propose, in the case of the larger farms, that the county court judge could fix the reasonable cost of living?—The county court judge decides finally, but he is advised in this matter by practical men and men who belong to the particular districts in which the court is situate. I do not propose to take men from Lancashire to assess the value of farms in Lincolnshire or other counties. They are men residing on the spot with a practical knowledge of the whole subject.

10,154. They would need to have a practical knowledge of housekeeping as well as of agriculture?—I suppose pretty much every man has a knowledge of housekeeping.

10,155. That is how you propose to get at the value?—That is the best proposal I have found myself able to make.

10,156. Do you propose that the valuer should take into consideration the wages paid by the occupier to his men?—Certainly.

Labourers' wages in relation to rent.

10,157. And has he to decide whether the wages are fair wages or not?—No, the general run of the markets would decide that, but in estimating the rent the valuers would have to estimate what the man has to pay—what the current wages of the district are.

10,158. Do you mean what he actually pays?—Yes, what he is paying.

10,159. Or what he ought to pay in the shape of labour in respect of a certain farm?—No.

10,160. What he actually pays?—They would estimate what number of hands would be required, and they know the current rate of wages for those hands.

10,161. Would you leave it to them to decide how much labour ought to be employed on the farm?—No, they would not be able to dictate to the tenant, and to say you must keep 5 or 6, or 20 men. They would have to estimate what they thought was necessary.

10,162. Quite irrespective of how many he might employ?—If he employed more hands in making improvements, which I take it under this Bill he would—that is a point on which I have never had an opportunity of touching before—I think it would cause very much greater employment of labour; new works of all kinds would be put in hand.

Circulation of Land Tenure Bill.

10,163. Has your Bill been circulated amongst Chambers of Agriculture all over the country?—It has to some extent.

10,164. Down south, or west, or east?—It has been a good deal commented on in the newspapers—such papers as the "Mark Lane Express," and other agricultural papers—and it has led to inquiries for copies of the Bill. I have had a great many myself, and I know many Members of Parliament who have had over a dozen copies and circulated them in their district. Almost every day I get requests for copies.

10,165. You are not aware that any discussions have taken place in the different Chambers of Agriculture, and whether resolutions have been passed with regard to it?—No; there was a discussion at the Cheshire Chamber of Agriculture the other day on very similar lines. I did not deal with the Bill by name, but with the principles in the Bill.

Tenancies under the Land Tenure Bill.

10,166. (*Mr. Dalton.*) You define a contract of tenancy in your Bill as meaning "a letting of, or agreement for the letting of, land, from year to year, or for a term not exceeding five years"?—Yes.

10,167. What is the object of that definition?—I may say that that is copied bodily from the other Bill.

10,168. Its effect will be to limit the Bill, or at least a great many provisions of the Bill to short agreements?—I intend the Bill to cover all; that there should be no other lettings than the lettings under the Bill, with a few exceptions. I believe I was misunderstood the other day as to the exceptions. Demesne lands and home farms are exempted under the Bill; but as regards all other tenancies, I wanted them to come under the Bill.

10,169. Do you propose to prohibit the letting for a longer period than that?—The letting, although ostensibly for five years, is for ever, and it is only the rent which may be changed upon the application of either party.

Leases under Land Tenure Bill.

10,170. Did you intend it to apply to past contracts of longer terms?—No; leases are brought under it only on the expiration of the lease.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,171. You have one clause by which either party to a contract of tenancy, present or future, may apply to get a judicial rent?—Yes.

10,172. Is it not intended by that, that a man who took his lease several years ago, and who has got a long lease may apply?—No. Clause 15 says, "At the expiration of leases of holdings existing at the date of the passing of this Act, and which were originally granted or held for lives or a life," they may come in then. A person who is on a farm now as tenant from year to year may at once apply to the court and have a judicial rent fixed.

10,173. Then the object is that you should not relieve a tenant who is now holding a long lease?—To void just contracts would be a more sweeping proposal even than the Bill makes. There may have been very valuable considerations in the contract.

10,174. (*Chairman.*) You do not propose to break a present lease then?—I do not propose to break any existing lease, because at the expiration of the lease the leaseholders would become tenants from year to year, and would have the powers of the Act open to them.

10,175. Do you think that it would not be just to break a present lease?—One has to look to the possibility of carrying a measure into law, and I think it is perhaps quite sufficiently drastic as it is to find acceptance. In the case of Ireland, I believe leaseholders were excepted. I am quite willing personally that there should be due consideration given to the terms of the lease, the conditions under which the lease was granted.

10,176. (*Viscount Cobham.*) It is a small question now, is it not practically?—I think year by year the number of leases is becoming fewer.

10,177. There are very few now in Lancashire, are there?—There are some of course that really were taken out 10, 12, or 14 years years ago.

10,178. (*Mr. Dalton.*) When a farm falls vacant after the passing of the Bill, and there are several competitors for it bidding various prices, some high and some low, either party on the day after they have completed may go for a judicial rent?—Completed what?

10,179. Completed the contract for the hiring of the farm, some having offered a high rent, and some a low rent?—That would not occur. There is no competition except as to tenant's improvements.

Letting of farms under the Land Tenure Bill.

10,180. I was assuming that you have got a farm which you are going to let some time after the Bill is passed, when an existing lease falls in. At present I suppose some offer a high rent, and some offer a low rent?—That is so now.

10,181. What would they do when the Bill passes?—Under the Bill, the man who is in possession of the farm is the man who would remain in possession of the farm if he wishes.

10,182. I mean in one of these cases where you have to put a farm up to let. It is not to apply to existing leases, I understand?—Not to existing leases.

10,183. There will be many cases where the tenant will go, the farm will be vacant, and will be put up to be let?—I take it that if there is a farm absolutely vacated, the landlord would let it just as he would do under other circumstances.

10,184. Just so, that is my case. Then you get some offering a high rent, and some offering a low rent for it?—Yes, I suppose that would be so.

10,185. But then it is a bargain which may be set aside the very next day under the Bill, I suppose, because then either of them may go for a judicial rent?—No, I do not think so. The landlord would choose his own tenant, and the tenant would not be free to avail himself of this until the end of the five years.

10,186–200. That is not so as the Bill stands, is it?—I think you will find—I could not just name the exact clause—that there is nothing to prevent the landowner and tenant agreeing upon any point and notifying it to the court when it becomes a judicial agreement. I think you will find that somewhere in the Bill.

Agreements under Land Tenure Bill

10,201. (*Mr. Dalton.*) You say in clause 7, "either party to a contract of tenancy, present or future, may apply to the Land Court to fix" the judicial rent?—Yes.

Mr. W. Smith. M.P. 2 Mar. 1894.

10,202. So that in any case of any future tenancy, the moment you have got an agreement made, either party may apply to the Land Court to alter it?—Yes.

10,203. Is that what is intended?—Yes, I think my first view is right that there is no five years' period within which the man would be fast with the rent, and that he may apply at any period after he is admitted a tenant, but that he must not apply more than once in five years. I think, reading clause 7 with clause 10, my first construction of the Act is the proper one, namely, that at any time after being admitted as tenant either party may apply to the court to vary the rent; but having made the application, and the rent having been fixed for another five years, he may not make another application until the five years have expired.

10,204. (*Mr. Channing.*) That is to say future contracts are entered into subject to the right to have a statutory fixing of rent at any time within the usual term of an agricultural notice?—Yes, that is if there is any change in the market value of the land.

10,205. (*Chairman.*) Is that a correction of your statement just now that you respect contracts for five years?—I think after refreshing my memory by clause 7 and taking that in conjunction with clause 10, a private compact entered into would not be binding for any fixed number of years until it had been made a judicial contract by application to the court on the side of one or the other.

10,206. And the court then would have the right of revising it?—Yes.

10,207. On the application of either party?—Yes, and having once revised it it would remain for five years.

10,208–9. (*Mr. Dalton.*) Then the court might revise it the very day after it had been entered into?—That would practically be so.

Land Courts,

10,210. (*Chairman.*) The only thing conceded to the landlord is that he has the right of the selection of one out of many applicants for the farm; he takes which of the applicants he likes but he cannot define the rent?—No.

Revision of rents.

10,211. The quantum of rent is always subject to being revised the next day by the court?—I do not think that would be the practice because if the rent was fairly assessed at the time of letting a tenant would not go into court for the sake of going into court.

10,212. (*Mr. Dalton.*) Assume that you have one tenant who is willing to pay a low rent and another tenant who is willing to pay a high rent; if the landlord accepts the tenant who gives a low rent he may take him into court the next day and get a judicial rent fixed which is a higher rent than the tenant is willing to pay. On the other hand he may accept the man who offers a high rent and that man may take him in and get a judicial rent which is lower?—Yes, I think that would work with advantage because we had it brought prominently forward yesterday that there is undue competition between tenants and that they offer rents sometimes now which they cannot really afford to pay.

10,213. In some cases the landlord might make the tenant pay a higher rent under this Bill than he was willing to pay after he had accepted him as tenant?—The rent would be always proved to have been a just rent because it would be fixed by impartial persons.

10,214. It might be a just rent but it might be a rent that a tenant was not at all willing to pay, and he might only be desirous of taking the farm at a low rent?—He would do it with his eyes open.

10,215. Is it not hard on both parties?—He would do it with his eyes open; he would know what the Act was, and what its workings would be.

10,216. It is a very great interference with the freedom of contract of both parties?—The whole Bill, of course, contemplates very great interference with that in the national, the general, interest.

10,217. Would not the Bill be very injurious to tenants in districts where the value of the land is falling; you would get a judicial rent fixed for five years?—Yes.

10,218. And even if the rent were falling the tenant would have to pay that rent for five years, whereas if he kept on the holding from year to year he would get the benefit of the fall in value—Yes; but the man who is in possession need not go to the court to have a judicial rent fixed unless he wishes.

Mr. W. Smith. M.P. 2 Mar. 1894.

10,219. Either party may go to the court?—Yes, either party may go to the court; the landlord would not be very likely to go to the court to reduce the rent.

10,220. No, but to get a fixed rent for five years?—In regard to the question of the term of years, as I said the other day, my own preference was in favour of a shorter term. You cannot enter upon a contract without some little bit of speculation, some little bit of risk in it whatever commodity it is you are dealing in.

10,221. When you are entering upon a contract the two parties are willing to come to those terms, but under the Bill those terms might be upset against either party almost immediately afterwards?—Yes.

10,222. Do you know of any similar legislation in other countries where you can upset contracts in that way?—Do you mean in connexion with land.

10,223. In connexion with any subject matter, land or anything else, where after you have entered into a contract one day either party may go the next day and have it varied?—I take it that this is an exceptional state of things which has arisen; and if everything is to have a precedent there is perhaps one for this in some section of the Irish Land Act.

10,224. (*Chairman.*) I do not think there is any precedent for that in the Irish Land Act?—I do not see where it would work practical injustice at all.

10,225. (*Mr. Dalton.*) One man may be willing to pay a low rent, and another a higher one from special circumstances?—The landlord I take it would choose the most substantial man, and the man he thought would be the best tenant in every way.

10,226. Yes; but then the best tenant may be the one who offers the low rent, and yet he is saddled with a higher rent?—Of course he has this before him, that he knows the court is there to be invoked by either party; the probability is that a landlord would choose the best tenant apart from the rent.

10,227. Would not the knowledge that a contract might be set aside the next day make both parties very unwilling to enter into contracts?—They will have to enter into contracts, or the farms will have to remain empty.

10,228. Just so, may not that very likely be the result of it?—It practically means this: the landlord says, I am willing to take such a man for my tenant, and the court shall fix the rent, which is a fair one, that he should pay. It practically amounts to that.

10,229. You have got security of tenure here for the tenant, but he may go away at any time, I understand?—No.

Security of tenure and change of tenancy.

10,230. May he not from year to year?—He may by finding a successor.

10,231. He is not bound to find a successor, is he?—I take it that he is doing the judicial term.

10,232. (*Chairman.*) Or he is bound to remain for five years?—Yes.

10,233. (*Mr. Dalton.*) He can stay on at the end of five years if he likes?—Yes.

10,234. But he is not bound to find the landlord a tenant for another five years?—No.

10,235. So that although there is security to the tenant there is no security to the landlord that he would let his land at all?—It might not be to a man's interest to remain on, the man gets old, perhaps, and unable to follow the occupation of farming, or the man dies, and perhaps no member of his family is suitable to continue it. I am afraid that to compel the man to remain on the farm would do a great injustice to the owner.

10,236. You give the landlord practically a rentcharge?—Yes.

10,237. Which is determined at the end of the tenancy?—Yes.

10,238. You do not secure him any rentcharge in perpetuity, but you give the tenant a right in perpetuity if it serves his purpose to keep on?—I do not think I should be consulting the interests of the owner of the land if I did not deal with it in that way.

10,239. That is the effect of the Bill?—That is the effect of the Bill. My intention is that the tenant may be able to leave at the end of his tenancy if from any

Mr. W. Smith, M.P.
2 Mar. 1894.

cause he is desirous of leaving, and there is no obligation on him to find a successor. But if he has made improvements, as I take it he would in the majority of cases, it would be to his interest, or the interests of those representing him if he has died, to find a successor, because it is from that successor that he is to get compensation.

Land Tenure Bill.

10,240. (*Mr. Lambert.*) I understand that this Bill is not exactly your own Bill, but is the Bill of the Federation which you represent?—Yes. I do not know whether I have explained fully how it came about. I determined to bring in such a Bill when the time for what was supposed to be the second reading was coming on. I had rather to hurry its preparation, and I took the Welsh Bill as the basis. I thought that had been very carefully thought out by a man acquainted with the subject, and I engrafted upon it such changes as I thought necessary.

10,241. But you are not the only one to approve of the principle of this measure?—No; it has the sanction of our Federation. We have had one or two special meetings, and considered it line by line.

10,242. I presume very experienced men belong to that Federation?—Yes, that is so.

10,243. Has the principle of this Bill been approved of in any of the southern counties?—Yes, it has. At various places where I have addressed meetings resolutions in favour of the principle of the Bill have been adopted.

10,244. Of course I am not speaking now of every detail of the Bill, which I presume you are not altogether wedded to?—I am not wedded to them all.

10,245. It is the principle of securing to the tenants fixity of tenure and compensation for his improvements which you aim at?—Yes.

10,246. This principle is approved by the members of your Federation?—Yes.

10,247. Numbering five or six thousand, you said?—Yes.

10,248. Have you had many advantages in securing that very large number of members?—No. I think our membership to-day would have been more likely to be fifty or sixty thousand if we had had real organization. Everything has been done by voluntary effort up till now. We have not even had a paid secretary. If we had at command a tithe of the money which Lord Winchilsea appears to have at his command I do not hesitate to say that the dimensions of the organization would be very much larger. I have announced my intention not to contest my seat again, and I contemplate in the future devoting my time more to this organization. I think I can do more good outside Parliament than in. I find the ground very ripe for this movement.

10,249. Is the feeling in favour of the principle of this measure confined to one political party?—No, it is not.

10,250. Do members of both political parties belong to your organization?—Yes, they do.

Reduction of rents.

10,251. You say in some cases rents have not been reduced at all?—That is so in many cases; in my own neighbourhood, in fact, I might say in the majority of cases.

Competition for farms.

10,252. Is there a great competition for farms?—Yes, there is reasonable competition for farms—not so great as there was.

10,253. Are there any cases in which the rent has been forced up artificially by one tenant bidding against the other?—Yes, there are many such cases. I believe they have been let by tender. The common way of letting farms has been by tender.

10,254. I presume the tenant on being dispossessed of his farm would suffer considerable loss, which you wish to prevent?—Yes, an improving tenant would, but with the bad sort of tenants, of course it would be otherwise.

Land Courts.

10,255. You were asked yesterday questions suggesting that there had been a great block in the Land Courts in Ireland?—Yes, I was.

10,256. Would the necessities of this country be so great as to cause a block here?—The necessity is great, but I do not think myself that a block would occur with some reasonable provision to strengthen the hands of the County Court judges.

10,257. Some mention has been made of the fact that the fixing by an outside tribunal of a rent, would create bad feeling between landlord and tenant; are you of that opinion?—I think at the outset perhaps the landowners would not like this interference with what has been their custom in the past, but I think they would very soon get reconciled to it and would see its fairness, and that the working of it would be satisfactory.

Mr. W. Smith, M.P.
2 Mar. 1894.
Fair rent.

10,258. Would it be the fact that where a man is paying more rent than he can afford to pay, he has not a very—what shall I say—agreeable feeling towards his landlord?—No; if he feels that he is bound to pay a bigger rent than is a fair rent, his feelings will not be very agreeable, that is to say, if he asks for a remission, and does not get it.

10,259. There is also some uncertainty, I believe, of the land changing hands, whereby a good landlord, it may be, to-day is replaced by an indifferent kind of landlord, it may be, to-morrow?—That is a very important thing. I think the position of the tenant under the Bill would be immensely better. This was asked me on the first day, and I did not perhaps reply to it as clearly as I should have done. A man may have to-day a very good landlord in whom he has every confidence, but he has no surety that that man will continue to be his landlord. He may die, or the estate may be sold, and the man who succeeds him may be a man of a totally different character, under whom he would not have made the contract. Under the Bill he would have the absolute certainty that in all cases an impartial and competent tribunal would be the one to fix his rent and the conditions.

10,260. You give the landlord the option of resuming the tenancy by paying to his tenant a fair price for his tenant-right?—That is so—to pay him the sum which may have been agreed upon between the outgoing tenant and the incoming tenant, but subject to the revision of the court in case the landlord can show that it is an equitable one.

Agreements under the Land Tenure Bill.

10,261. Would you compel the landlord and the tenant to go to the court if they could come to a mutual arrangement?—A mutual arrangement as to what?

10,262. As to the conditions of holding and tenancy?—No, I think there is a special proviso somewhere, either that they may appoint one person to settle any point like that between them, or that they may agree between themselves, and by reporting it to the court it is made official—it is reported on the books of the court exactly the same as if a long case had been gone through.

Objects of Land Tenure Bill.

10,263. You were asked just now whether the tenant would borrow money on his tenant-right; was that the chief object for which you drafted this Bill?—No, I must say I really never thought of it before it was named to me in this room just now.

10,264. So you drafted the measure upon entirely different grounds?—I drafted the measure with a view to placing the tenants in such a position that they might do the best by the land, and do justice to themselves.

10,265. And you think such a measure would be of benefit to the nation at large?—I feel that very strongly myself, and that I think is the strongest ground for the Bill. I think we have a right to interfere with existing institutions in the interests of the nation, in respect to land more perhaps than in respect to any other article.

10,266. Why do you think you should interfere with respect to the land more than in any other article?—The land of the nation is a limited quantity, and I take it that so-called owners, &c., are merely trustees for the nation. There can be no absolute ownership in an article which is really necessary to the existence of the nation.

Effect on (*a*) Labourers.

10,267. How do you think it would affect the position of the labourers?—I think it would be of very great benefit. I think that incidentally it might be the means of solving one of the most difficult problems of the day, that is, stopping the inrush of the people from the country to the towns, and even drawing them back from the overcrowded towns to the country, because I believe under such security as the Bill gives an immense amount of additional labour would be employed upon the land.

(*b*) Fertility of soil.

10,268. Would you anticipate that a large increase in the productive power of the country would accrue from

Mr. W. Smith, M.P.
2 Mar. 1894.

the passing of a measure framed upon these principles?—A very large increase indeed, I believe.

10,269. (*Captain Owen Thomas.*) Did you intend this Bill to apply to Wales?—No, because the Royal Commission in respect to Wales had been appointed at the time I drafted this Bill, and I thought I ought not to extend it to Wales.

Mortgaged farms.

10,270. Are you in sympathy with farmers who bought their farms about 20 years ago with borrowed money, and who find now that they are paying more interest at the rate of 3½ per cent. and 4 per cent. for the money they borrowed at that time than the rents would be?—There are no such cases in my own neighbourhood, but when I was in Lincolnshire a few weeks ago I heard of a number of such cases in one district there, where they were very anxious that the Government should provide money with which they might pay off their existing mortgages, and that the Government should lend them money at a reduced rate. I had several persons approach me on that point.

10,271. Do you not think your Bill ought to provide for them as well as for the other tenants?—If I could be shown how to incorporate it, I should be very glad to do so for this coming session.

Fall in prices.

10,272. (*Mr. Everett.*) You were speaking of the fall in the prices of produce in your early evidence, and you said that down to a few years ago farmers in England had a practical monopoly of the markets; are you not aware that, from the time of the passing of free trade, the facilities of transport from different countries kept increasing at quite as great a rate in the first thirty years after, as they have done in the last few years?—I do not think so; I think the ratio of improvement has been very much greater during recent years; first of all there are the compound and triple expansion engines for steamers; steamers now can be made to pay at freights that never would have been dreamt of as remunerative freights a very few years ago.

10,273. But still I thought that the era following from about 1846, for the next 20 years, saw a larger development of mechanism and steam than the last 10 years have done, and that steam was not much used prior to that date?—Those in business now know that steamers are very largely displacing sailing ships in almost every channel, and although in one sense development must have been very great in degree then, it has been very much greater recently, that is to say, the improvements in the speed of ships, and secondly, the rate at which they can afford to carry produce have developed very rapidly during recent years.

10,274. The construction of railways and the introduction of steam vessels all date from the passing of Free Trade, or nearly so, and were developing with considerable rapidity, as much in the first 30 years, as they have done in the last?—Yes, but we have a very much larger body of scientific men now devoting their attention to the perfecting of all those problems. Very much has been done in recent years, and something more will be done, I take it, in electricity as well as steam.

Land Tenure Bill.
Landlords' and tenants' interest.

10,275. Then in regard to the Land Bill that contemplates there being two interests in the land, as of course there are two interests in the land—the landowner will have as his interest the land itself, and the tenant will have as his interest the beneficial occupation of any improvements which he makes upon the land?—Yes; the landowner will have not only the land, but he will have the buildings, and all other improvements which he himself may have made at any time, but the tenant will have the increased value of the land which results from his efforts.

10,276. From his improvements?—Yes, from his efforts.

10,277. And all such value as is attached to the occupation of the land—he would be the tenant in possession?—Yes.

10,278. He will have the tenant-right?—Yes.

10,279. Then with regard to these two interests; as I understand you, the landlord is not to have the full market value of his interest—that is to be limited by the finding of the Court?—I take it the finding of the Court would be the fair market value.

Value of improvements.

10,280. In regard to the other interest, the tenants' improvements and the occupation of the land, you propose no such restriction, but the value of that is to be settled by the unlimited competition of the market?—There is a modified restriction, inasmuch as the landlord has the right of, shall I say, appeal against that bargain; he may appeal to the Court to set it aside on the ground of an unfair sum having been given, or on the ground that the man to whom it is sold is not a suitable man. It is a modified right you may say.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,281. In the event of the times continuing good, the tenant in possession at the time this Bill is passed would have a something which he would be able to sell to an incoming tenant for more than it had cost him probably; he would have the full market value of his improvements and he would have whatever the value of the occupation as an occupation was adjudged to be by a competing incoming tenant, and he would get the full competition price for those two things?—I think I would like to say two things in reply to that. First, it is my object that a man should not get the compensation based merely upon the cost to him of those improvements; I think that is a mistake. I think one man may, by the expenditure of 100*l.*, make as great an improvement as another man with less judgment and skill may make with an expenditure of 150*l.*; and so I want the value of the improvement itself to be the measure of value and not the mere cost. Again the landlord being allowed to go to the Court to object to a bargain which has been made, practically would mean that he would leave it to the Court and the assessors attached to the Court to say what the increased value of those improvements was, and they might by that means exclude any fancy value which had been given from the eagerness of the men to get on the land, because after the first year we should have on record always in the Court the exact state of that land when the man entered upon it, and all subsequent revisions of rents would be there to refer to, and the Court could always say whether it was an unreasonable sum which had been paid. I think they could stop all land hunger by that means.

Competition for purchase of tenant right.

10,282. Of course, you are aware that in this small island, where there are so many who desire farms, and so few farms to have, in good times there are always tenants willing to give more than the land is really fairly worth to yield a living, and what they are willing to give is restrained on many of the estates by the good sense of the landlord, who really does not allow one tenant to outbid another to the extreme point?—I think there is still power under this Bill to prevent any such unwise competition.

10,283. The court would have a little restriction over the competition in bidding for the tenant's part of the holding?—Yes. The landlord is to have notice, both of the person coming, and of the amount agreed, and he would have power to have to ask the court to say whether that was a reasonable sum, and if not, to vary it.

10,284. The point that my mind was on was this: that I can see that your plan might in good times be an excellent thing for the sitting tenant, but for all tenants that follow him it would cease to be beneficial, because they would have to give competition value for the tenant's side, though that competition was restrained in regard to the landlord's part?—No. I take it that the operation would be this: the assessors would first of all go over the farm, and they would value it as a farm in its present condition as being worth so and so, and then so much would belong to the man who has made the improvements; therefore the landlord's interest would be the balance.

10,285. Then turning to bad times, and to cases which unhappily are frequent to-day in the Eastern counties where no tenant at any price at all can be got for the farm, in what kind of a place would your sitting tenant be in regard to compensation for his improvements then? Would he not be in a worse place than he is under the Agricultural Holdings Act to-day?—I do not know. They are in a very unfortunate position if there are many of them who have improvements of value, but I should be afraid that in these very bad counties there are no improvements belonging to the tenant, and that the unlettable character of the land arises very largely from the fact that the farming has not been good.

Compensation for improvements.

10,286. (*Chairman.*) As I understand the Bill, if the tenant fails to sell to an incoming tenant, and at the end of the judicial year wishes to give up his holding, he would be entitled to do so, and then could claim under the Agricultural Holdings Act, and also under this Bill; is that not so?—Yes.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,287. The Agricultural Holdings Act is kept alive?—It is incorporated in this Bill.

10,288. It is incorporated in this Bill to some extent as extended by clause 10?—Yes.

10,289. Therefore if the tenant fails to find a purchaser for his holding, and at the end of five years no longer wishes to continue in his farm, he could give it up and claim under the Agricultural Holdings Act and this Bill for the value of the improvements—that I understand to be the Bill as it stands?—Yes, and I think that is quite fair, because if the land is worth little as it is now, it would be worth still less had he not made those improvements, and he ought to have the value from someone.

10,290. (*Mr. Everett.*) Does it not come to this, that in good times he would get the competition value of his improvements, and in bad times he would be saved by the Agricultural Holdings Act from losing the low competitive value of his improvements?—He would get the competitive value to a certain extent, always subject to that fair revision by the court which I have named.

State loans.

10,291. The only other question I want to ask you has been partly asked. It is with regard to mortgages. Where the court had to fix the rent upon land subject to mortgage, does it not strike you as very hard that they should be allowed to deal with the income of the landowner without also dealing with the obligations which the landowner had incurred?—I was advised, I believe wrongly, when I was quite new to Parliament, and when I was drafting this Bill, that no private Member had a right to put money clauses in a Bill, and I did not think it right therefore to put into this Bill any clauses which would cause the Government to find money for that purpose. Therefore that clause was not inserted, but I should be willing to embody clauses which would deal with the cases you name. I think it is perfectly fair that some provision should be made to meet them.

10,292. (*Chairman.*) When you speak of money clauses, do you contemplate the State compensating the mortgagee?—No. I think the Government might find money to pay off the existing mortgages at a lower rate, which would of course benefit the whole of the property very much. They are paying 4 per cent. in most cases now.

10,293. You contemplate that the Government should advance money?—Yes; advance money, I mean.

10,294. By way of mortgage?—Yes.

10,295. (*Mr. Everett.*) Does it appear to you that the position of a money lender is more sacred than the position of a landowner? Does it appear to you equitable that you should be able to deal with the income of a landowner arbitrarily, and not be able to deal with the position of a money lender arbitrarily too?—I take it that all these mortgages are subject to a certain notice, and that if the landowner knew where the money could come from at a lower rate of interest he would have no difficulty in keeping to his terms of the contract, and paying off the existing contract at a high rate of interest, and reducing it to a low rate.

10,296. I think I gathered from the answer you gave to Captain Owen Thomas, that you would not think it inequitable that the State should interfere in the case of occupying landowners who have bought their lands, and are subject to mortgages which they cannot pay the rent of now; you would not be unwilling that the State should help them by the loan of money at a low rate?—Certainly not. The State would be no loser by it directly, and indirectly would be a gainer by improving the position of those men.

Land tenure abroad.

10,297. (*Mr. Elton.*) You were asked a question whether you had given your attention to cases in foreign countries. I think there are volumes of reports on landed tenures in various foreign countries. Did you go into them before you drafted your Bill?—I do not know which volumes you refer to.

10,298. There are blue books on the subject?—I have not studied those, but I have read the work by the Chairman here, which is a recent issue.

10,299. The Government some years ago ordered the Consuls to report on the landed tenures in the different parts of Europe?—I cannot say that I have studied those.

10,300. Then that will save my asking you whether you have studied the Dutch system of usufruct and fee farm holdings?—I have not studied the Dutch system.

Mr. W. Smith, M.P.
2 Mar. 1894.
Tenants-at-will under Land Tenure Bill.

10,301. The Bill, I see, applies to tenancy in general, and it includes tenants at will, I understand, or would it not include tenants at will?—It includes certain tenancies, and it excludes the leaseholds.

10,302. (*Chairman.*) By the definition in clause 33 it only applies to contracts of tenancy——?—From year to year.

10,303. (*Mr. Elton.*) That, no doubt, would be a counsel of perfection for the Bill, but the Bill itself says "contract of tenancy"—a tenancy at will, I presume, is a tenancy?—It is a contract of tenancy which means a letting of, or an agreement for the letting of, land from year to year.

10,304. Then the contract of tenancy on page 12 will exclude the tenant at will?—Yes, it is on page 11, and it is continued on page 12.

10,305. Of course some generations ago, before a tenancy from year to year was so much adopted, nothing was more commmon than tenants at will, and farms were generally held on a tenancy at will, with covenants, or provisions, or agreements which protected the various parties. Your Bill would not affect a state of things like that?—No. Such a state of things has not been brought under my notice.

10,306. I do not wish to press it, but I wish to ask you whether your Bill would meet the case of two people not wishing to be bound by an ironclad Bill like this—whether suppose they reverted to a tenancy at will with covenants, the Bill would affect their case in any way?—I could not say; I have not contemplated such a state of things. I have not been brought in contact with such tenancies.

Maintenance of buildings.

10,307. In clause 3 I see there are provisions about tenants committing or permitting waste by the dilapidation of buildings. May I take it that you do not intend to make any such general change as that the tenant shall be obliged to keep all the buildings in repair which now perhaps by agreement he has not to keep in repair?—My own intention was that the tenant should keep those buildings in repair. I have got a note on the side here that our Federation have wished me to amend this Bill during the coming session, so as to admit of ordinary wear and tear being excepted. Personally, I felt that in my judgment it would be a fair thing that the tenant should keep the buildings in the state in which he finds them.

10,308. I am very much obliged to you, because we wanted an explanation of that kind. I take it then that your clause is intended to increase a stringency of the law of waste; not merely to replace it, but to give the landlord that extra benefit which you have explained?—Yes, I mean that the interest which the landlord hands over to the tenant shall be kept intact—that the obligation upon the tenant should be to retain it in that state, and the further parts of that clause refer to the power of the landlord to get quit of a tenant who is allowing the land to deteriorate. That and the non-payment of rent is the ground upon which a tenant may still be evicted from his farm.

10,309. I will not go into small things that might be clerical errors, but I notice "deterioration of the soil." I suppose that would be amended to include buildings and so on. You see it in the last line of sub-section 2?—It says, "The tenant shall not, to the prejudice of the interest of the landlord in the holding, commit or permit"——

10,310. Just after that, "specified in such notice by "the deterioration of the soil"?—I was looking at clause 3.

10,311. It is in clause 3, sub-section 2?—The intention is, and I thought I had expressed it, that the tenant should maintain everything in at least as good a state as he finds it, but that if he improved it, he should be compensated, and if not, he should be penalised.

Lifeholders.

10,312. I quite understand that there is some little clerical error there. In clause 15, I see that among leaseholders you include people who are really freeholders, because they are people who hold for a life or lives—is that intended?—I am afraid I am not a legal expert. This clause is copied bodily from the other Bill.

10,313. But still you are dealing with typical matters?—If I find I am doing more than I intended to do, I will try and remedy it.

Mr. W. Smith, M.P. 2 Mar. 1894.

10,314. You will understand I am not criticising so much as just trying to get out the intention underlying it. Did you intend to go from the leaseholder, commonly so-called and commonly so thought about, to such people as freeholders who hold for a life or lives?—No, that was not my intention.

10,315. May we take it then that this clause going for these estates held for a life or lives might be subject to modification in that direction?—Yes.

Common grazings and sheep-walks.

10,316. As at present it stands, I point out to you that it includes certainly freeholds and lifeholds with power of renewal, or with what gives them the power of renewal or the equivalent to the power of renewal. In clause 16 I see there is one thing I wanted to ask you about, it says: "The tenants in any parish or "parishes who share in the same common grazing sheep-"walk or mountain pasture, may at a public meeting "called by public notice, appoint a committee of such "number as the meeting shall think fit, not being less "than three nor more than five." Those things are generally regulated either by the custom of the country or by the rules of law, or by the byelaws that are made by the people at the local manorial courts. Are all those intended to be abrogated or to go on side by side?—No; this I think would perhaps supersede those. It has been pointed out to me that in Cumberland and Westmorland and in North Lancashire the lack of some such power has caused a difficult situation.

10,317. No doubt?—Because they have the right of a certain number of sheep walks on a certain hill country, and of course, in a season like the last, if one man chooses to exercise his right to the full, it is detrimental not only to his own flock but to the others as well.

10,318. Quite so. I understand that there may be a small occasional case, but I was only pointing out that you were upsetting a large number of institutions and not remedying the difficulty?—I thought it would simplify and unify the institution; I did not know whether I was disturbing a better relation; if I was, I am sorry for it.

10,319. I did not presume to say it was better; I only pointed it out. I see you talk of sheep-walks and mountain pastures—those are in Wales. Is it not the fact that in the north of Wales, I think, as a matter of habit and usage perhaps continued for many generations, they do not use all the sheep-walks in common, but each farm has one piece allotted to it—it goes with the farm?—I think in later years also in Westmorland and Cumberland there has been a division of this mountain space.

10,320. I did not ask of late years; I asked about the ancient practice in Wales?—I am not so conversant with Wales as I am with the wants of the districts in my own neighbourhood.

10,321. But you propose to legislate about it?—Not for Wales.

10,322. But it includes those sort of cases you mentioned in Cumberland where the sheep-walks have been allotted to different farms?—No.

10,323. If they are divided it does not come under this at all; even if they are divided only by common consent and practice?—I think they are divided by a fence.

10,324. I think not as a rule, because the land is not worth the expense of a fence?—I do not see how they can be divided then, because the stock must pass from one part to another.

10,325. They are divided by a boy keeping the sheep from going to a particular part?—I never heard of that in my part of the world.

10,326. If you go to Wales you will see it?—Yes, but I would not like the boy's job.

10,327. However, the Bill does not apply to Wales?—This is exactly word for word what the Welsh people have incorporated.

10,328. Exactly; that is what I was trying to drive at—that you have taken a thing that applies to one part of the country, and you want to introduce that as legislation for another?—I may say that although that is a fact, I have had many letters from North Lancashire, Cumberland, and Westmorland, thanking me for having put this into the Bill. My own doubt was whether to put clause 16 in the Bill or not.

Object of Land Tenure Bill.

10,329. (*Mr. Channing.*) What you really care about in this Bill are, the principles of the Bill, I understand?—That is so.

10,330. You look on this Bill as a matter for very serious discussion?—Certainly.

Mr. W. Smith, M.P. 2 Mar. 1894.

10,331. And possibly for considerable amendment, in case of a discussion?—Certainly.

10,332. Now the main object of the Bill is to satisfy the wishes of people who think that by this machinery they will obtain the highest cultivation of the land, and also the best protection for the remaining capital of the tenant farmers?—That is quite so; exactly.

10,333. What the tenant farmers in Lancashire, who came to the Agricultural Conference, stated was, if I remember right, that they did not wish to wait till their capital had been wasted away by a bad land tenure system in the same way that the capital of the tenant farmers of Essex and elsewhere had been wasted?—That is so. I was very much impressed by the report of the Committee which was sent into Essex just prior to that date in which they found that timely remissions of rent had been refused to the man there, but that after his capital had become exhausted, and he was compelled to go, then the landlord did accept the rent from his successor which he would not take from him. I have had friends of my own go to Essex who have lost every penny that they went with and then when their funds were exhausted, and they were compelled to leave the farm, the landlord would do anything to keep them on the farm when it was too late.

10,334. The impression was largely spread among your Lancashire friends that the present system of land tenure led to the tenants paying capital in rent, and on their improvements, and so gradually wearing them down?—Yes, and we believed that, to a greater or less extent, what is now the result in Essex would follow all over the rest of the country if some legislation of the kind is not adopted.

10,335. I understand that the Lancashire Associations you represent made representations to the Central Chamber of Agriculture, and that the Agricultural Conference in December, 1892, was consequently organised by the Central Chamber?—I believe that was so.

10,336. That was so?—The idea of the conference came from this body.

The three "F's."

10,337. A resolution was moved, I believe, at that conference in favour of the general view of compensation for all improvements, and the abolition of the law of distress, and so on, and you moved an amendment to it, I think, in favour of the system of the three "F's"?—Yes, that was so.

10,338. A vote was taken, I believe, on those questions?—Yes. I was in a difficult position, inasmuch as the resolution to which I had to move mine as an amendment was certainly a fairly sweeping resolution, but I thought there was a very strong sympathy with the views I then propounded in that body.

10,339. As a matter of fact, a very large proportion of this conference was gathered together by the Central Chamber of Agriculture, and not by your Association?—Yes.

10,340. Did they vote for your views?—Yes. There was a strong vote, and there was a very strong feeling in favour of our proposals.

10,341. (*Chairman.*) What was the proportion?—I do not know whether any record was taken of it or not, but it was a minority; I do not suppose that more than perhaps a third of the meeting were in favour of my proposals.

10,342. (*Mr. Channing.*) You would put it at about a third?—Roughly I should say about a third of the meeting.

10,343. That corresponds with my own impression. You think that fixity of tenure and free sale give the best security for improvements and the greatest stimulus to the carrying out of improvements in your judgment?—I do.

Free sale of improvements.

10,344. I suppose you think that free sale is also just to the landlord with this right of pre-emption?—I think so, and I think it is the truest means of arriving at the value.

10,345. I want to clear up one point; towards the close of a five years' tenancy do you give option to the tenant to go out under free sale, or to come against the landlord under the Agricultural Holdings Act, or do you place the tenant in this position, that if any offer is made for his improvements outside, the landlord shall be able to say, You are bound to accept this offer,

Mr. W. Smith, M.P. 2 Mar. 1894.

and do not come against me under the Agricultural Holdings Act?—If the farmer himself has negotiated an arrangement with someone who wishes to succeed him, then I take it that he has elected to pursue a certain course, and that he must take the consequences of it, even if that amounts to a revision of the amount by the court.

10,346. I am supposing a falling state of prices in agriculture, and I put it to you that it is not unlikely that an insufficient sum would be offered for the improvements of the tenant; is he bound to accept a sum which he considers below the value of the improvements, or has he the option under your Bill, or under your proposals, of going against the landlord?—Yes, that is so. I misunderstood you before. If he has chosen to act under the new powers of the Bill and sold his improvements, then he must abide by that, but he is not bound to accept any such offer from a succeeding tenant. He may elect to go out of the holding under the present Act, with the additions which are made to it by this Bill, and with that extension of its power.

10,347. Therefore you contemplate that free sale will not always be the most satisfactory method of going out for the tenant?—My own opinion would be that it would be a very rare exception where he did not avail himself of the free sale. I think that would be the system adopted in practice.

10,348. Where there is competition for farms, clearly it would be for the advantage of the tenant?—Yes.

10,349. Where there is none, and a falling market, would it not be to his disadvantage?—In such cases as the state of Essex, if you had not the power of falling back upon the existing Act, it might be to his disadvantage.

10,350. Do you think free sale might tend to keep men on the farms by their having an interest in their improvements to sell?—What I am most anxious about is that the man should feel by one means or another absolutely certain that he will be able at any time to realise the increased value of the land which he has created.

Fair rent.

10,351. In your view fair rent as I understand is to a certain extent to limit competition or rather to prevent the bad results of over-competition in rents?—Yes.

10,352. Mr. Everett questioned you upon that point, and said that many landlords used their common sense in deciding that matter; you wish to make the law a universal assertion of common sense on the subject?—Yes, I think it would be in the general interest that a man should not undertake to pay a rent which the existing conditions on the farm would not enable him to pay.

10,353. I think in some of the Lancashire evidence the opinion is expressed that rent should be based rather on the price of produce?—I may say I had myself, prior to the end of 1892, a very strong leaning towards a sliding scale for rents. For some time I had held that idea and I advocated it publicly, but when I came into close contact with it I found the difficulties were very great, and I had reluctantly to abandon that idea.

10,354. How do you fix a fair rent? Would you not fix a fair rent at the total probable value of the agricultural products, according to current prices of the holding, deducting the expenses of production and what you call the reasonable profits of the tenant?—Yes, the assessors would go over the farm with their practical knowledge. The farm is in Cheshire; say for instance it is a dairy farm. The assessors would estimate that they keep a herd of so many cattle on this—so many milk cattle—and they would be able to work it out roughly in that way what the farm was worth.

10,355. They would have to regard as determining the rent the value of the produce plus the quantities of the produce?—The difficulty with the sliding scale of prices would be that you would first of all have to make a table of all the various commodities, sheep, butter, everything of that kind, and the difficulty would be to know which to apply to the particular farm or which proportion of which to apply to the particular farm. You see you might fix the rent upon the basis of its being a sheep farm or of its being a mixed farm, and in the course of husbandry it might be changed and a different class of stock kept upon it.

10,356. It is a difficult matter and you will prefer to leave it to experts locally?—Yes.

10,357. Another point: you referred to Sir James Caird; are you familar with the passage in his book on the landed interest in which he said that "The relations "of landlord and tenant in these days of competition "with foreign farming could no longer remain "relations of mere mutual confidence but must become "relations of business"?—Yes I have read that.

Mr. W. Smith, M.P. 2 Mar. 1894.

10,358. You are aware probably that he at once went on to argue in favour of fixity of tenure in the form of the system of long leases which is familiar in Scotland?—Yes.

Fixity of tenure.

10,359. He thought of giving it in that way?—That was under a different condition of things, before we had had this, shall I say, upsetting of all our previous calculations of prices. He would not repeat it now, I take it, under the existing circumstances. I take it that the whole position of the farmers in this country is revolutionised practically by the competition now which was not dreamt of in the past when the present conditions were laid down.

10,360. You wish to accept his principle and his argument there, but to substitute a different kind of fixity of tenure?—Yes, to apply it in a different way owing to the change of circumstances.

10,361. But at the same time I notice that you admit that a period of five years may be too long?—If we are to have the very rapid changes we have had during the past few years it might be too long, but you must strike a mean because there is the disadvantage on the other hand of having too frequent recourse to the courts, which I think would be very serious. You do not want the farmer's mind constantly filled with litigation and all that is attendant upon it. I want his energy to be devoted to his proper work of farming.

Compensation for improvements and fixity of tenure.

10,362. The point I want to lead you up to is a passage quoted in Mr. Wilson Fox's report giving the opinion of Mr. Kay and Mr. Barlow, who say that if absolute security were given by Act of Parliament for compensation for unexhausted improvements without expense and litigation, fixity of tenure would be a thing unasked for. Now, the question I want to ask you on that is this: having regard to the fact that you yourself recognise the five years as a difficult period to work, whether you do not think the position of the tenant would be equally good if he had full compensation for all improvements and freedom to make improvements subject to their being of agricultural value, and also an additional compensation for good will, or any loss that he might have in moving; and whether that would not cover the case?—It would depend on how it was drawn. I remember at our first meeting in Cheshire, Mr. Middlehurst, one of the gentlemen I named as having a very great grievance now, was in a minority of one at that meeting. He took a different view, but since then he has been evicted under these peculiar circumstances, and he has changed his view in consequence. It would depend upon what the compensation for disturbance was. It should be a heavy penalty and deterrent from such.

10,363. But if a tenant was in a position by ordinary notice to obtain not only the full value of his improvements, but also to obtain compensation for any loss he suffered—business loss and other losses which he suffered in removing from one farm to another—do not you think his position would be nearly as strong as under your Bill?—The compensation would have to be of such a nature as to make the landowners extremely reluctant to use it.

10,364. You are aware perhaps that in this Bill just now before the House of Commons—the Parish Councils Bill in its final form—the tenant who is to leave receives cash down, full compensation for depreciation and loss in the working of his business?—I have not seen the Bill as it has finally taken shape, it has been bandied backwards and forwards so much.

10,365. If a principle like that were applied to ordinary cases of farming, that the farmer should have cash down, compensation for the business loss, as well as other losses, would that not meet your case?—I would not say yes to that.

10,366. What I ask you is this: if you had full compensation given to the tenant for his business loss and loss for moving, whether that would not operate nearly as well as your fixity of tenure, that is the really substantial question?—It might be drawn very drastically; I should take a good deal of convincing of it. But if you are referring to the rival proposals of

Mr. W. Smith, M.P.
2 Mar. 1894.

Messrs. Kay and Barlow those proposals do not contain any provisions as regards fair rent at all.

Freedom of cultivation.

10,367. I am not referring to any specific proposals. You have attached a great deal of importance to freedom of cultivation?—I have; that is to say getting away from all the old antiquated clauses.

10,368. I suppose one of your arguments for your Bill is that real freedom of cultivation cannot be securely and definitely given to a tenant except through this principle of fair rents, fixture of tenure, and so on?—Yes, with a right to sell his improvements.

Land Courts.

10,369. (*Sir Nigel Kingscote.*) After all your extensive experience of landlords and tenants throughout the country, I ask whether it is your opinion that the tenant farmers of England are not astute enough and that the landlords and their agents are so rapacious or so ignorant that they cannot agree between each other what is a fair rent, and therefore it is necessary to have a Land Court to settle the rent?—We must take things as we find them, and I find in a great many cases that those just conditions do not exist. It may be either for want of will or for want of power in some cases. You have the case of entailed estates and life interests, you have the case of estates in Chancery, and the case of estates that are very heavily mortgaged.

10,370. It is your opinion then that the Land Court is wanted to settle the rents between landlords and tenants?—Yes, I believe so.

The three "F's."

10,371. (*Chairman.*) You said just now that at a meeting of the National Agricultural Conference when you moved your amendment in favour of the three F's, about one third of the meeting held up their hands in favour?—It is a rough estimate; it is some time back now, it might not be quite so many.

10,372. I see in the official report of the proceedings it was stated that your amendment was rejected by an overwhelming majority?—That is an elastic term.

10,373. You think that is hardly a fair description?—I should say it was not.

Leases.

10,374. In Lancashire were leases common before the last few years?—They were pretty general, I think.

10,375. Very general?—Yes.

10,376. For what length of time?—Usually seven to 14 years—very rarely more than 14 years.

10,377. But the tenant could leave at the end of seven years?—No; I am speaking of different cases. In some cases there would be leases of seven years, and in some of 14 years; I do not mean the option of making the leases.

10,378. I thought you said 7 or 14?—Yes, in different cases—in some cases seven years, and in other cases up to 14, but very rarely exceeding 14.

Mr. W. Smith, M.P.
2 Mar. 1894.

10,379. On your own property what were the leases?—We have not had our property in the market to let very long, because my father during his lifetime mostly kept all these farms in his own hands and farmed them himself, but one farm, I think, was on a lease for 10 years—that is the largest farm.

10,380. During the last few years tenants have been unwilling to take leases?—Yes, increasingly so.

10,381. Even leases for seven years?—Yes, they prefer to take them year by year.

10,382. They have been quite unwilling to take a lease for seven years?—They have had a preference for a year-to-year tenancy. I am speaking of the last two or three years.

Judicial leases.

10,383. Practically your proposal is to make judicial leases for five years continuously, that is to say, from five years to five years.

10,384. Would you think that tenants would be more willing at the present moment with falling rents to take a five years' lease than they have been to take a seven years' lease during the last few years?—There are farmers I know personally who I think universally prefer to have such leases, not exactly on account of the period being fixed, but on account of the other conditions that would accompany them—the freedom of cultivation, and the rent being a fair rent, and altogether their position they think is better.

10,385. But they would waive their objections to being bound for five years in favour of the consideration of the other privileges they would get?—It is practically a lease in perpetuity, I may say, with the revision of the rent at the end of five years.

10,386. Supposing a tenant, in coming into possession under this Bill, and having a judicial lease fixed, was to say that he could not pay the judicial rent, what would happen then; would he be bound to go on for that five years paying a rent which he said that he could not pay?—If he entered upon the tenancy, he would.

10,387. He enters upon the tenancy, and the next day he applies to the court for a rent; supposing the court fixes a rent which he says he cannot pay, is he to be compelled for the five years to pay that rent?—If he has entered upon the farms, certainly he must pay the rent which the court says is a fair rent.

10,388. Notwithstanding that he says at the time that he cannot pay it?—Certainly. We cannot allow a man to be judge in his own case. If he goes on the farm, he must pay the rent which is adjudged; if he does not like the rent, he should not take the farm.

The witness withdrew.

Mr. T. Parker.

Mr. THOMAS PARKER called and examined.

Mr. T. Parker.

10,389. (*Chairman.*) You are a farmer of Churton Hall, near Chester?—Yes.

10,390. Are you a member of the Cheshire Farmers' Club?—That is so.

10,391. Are you here to represent their views?—Yes.

10,392. Are you a tenant farmer?—Yes, I have been

10,393. What is the size of your holding?—I farmed about 400 acres. The farm I occupied is about 300 acres. I have some other land.

10,394. How long have you held it?—I have been tenant since 1873.

10,395. (*Sir Nigel Kingscote.*) Are you in occupation now?—I have some other land, a farm of about 100 acres.

10,396. But you are not in occupation of a farm as a tenant farmer now?—I am still at Churton Hall, but I have given up possession of the land all but an outlet. I leave the house and the outlet on the 1st May next.

10,397. (*Mr. Chaplin.*) Then do I understand that you cease to be a tenant farmer on the 1st May?—Not exactly, I have some other land, a little of my own, and some that I occupy under one or two small proprietors.

10,398. You had 300 acres as a tenant farmer up to the 1st May?—Yes a little more than 300, but this one holding is 300 acres.

10,399. (*Chairman.*) Did you hold under a lease or or from year to year?—From year to year.

Competition for farms.

10,400. Is there any difficulty in letting land in your district at the present moment?—There is no difficulty in letting farms which have been well managed. Competition is as keen as I have ever known it.

10,401. As keen as you have ever known?—Yes, as I have ever known it.

10,402. Are there plenty of men of capital ready to take the farms?—We cannot tell whether they have capital or not. There are plenty of men who are supposed to have capital who are prepared to take them. There are plenty of applicants.

10,403. (*Mr. Chaplin.*) Did I understand you to say that competition for farms was as keen as ever?—For well-managed farms.

Reductions of rent.

10,404. (*Chairman.*) Has there been a general reduction of rent in your district?—Not a general reduction.

10,405. But on some holdings, on some farms?—On some estates.

10,406. On some estates or on some farms?—On some estates, on various estates, but not a general reduction.

10,407. On the best land has there been no reduction, should you put it in that way that there has been no reduction on the best land, only on the inferior land?—I should not put it in that way. I should hardly say "the best land" I should say the best-managed land, the best-farmed land. If I may be allowed I think I ought to state that perhaps Cheshire has suffered as little as any county throughout the kingdom from the depression.

Mr. T. Parker. 2 Mar. 1894.

The Cheshire farm produce consists chiefly of cheese and butter and so forth, and the values of those commodities have not fallen in the same ratio as other farm products.

Dairying. Fall in prices.

10,408. Would you say that cheese and butter have not fallen at all, or not in the same proportion?—They have fallen but not in the same proportion.

10,409. What should you say has been the fall in the price of cheese and butter as compared with 10 or 12 years gone?—I should not say there has been any fall in the price of butter at all, or to a very trifling extent, and the fall in the price of cheese has been not more than, I should say, 10 per cent.

10,410. Is there much milk sold from the district?—There is a good deal of milk sold where the farms are favourably situated for railway stations; but we are not well off for railways in Cheshire—very badly off in some parts.

10,411. Has there been much increase in the sale of milk of late years?—Not the last six or eight years I should think.

10,412. Not the last six or eight years?—It would increase considerably, I think, if there was better railway accommodation.

10,413. Looking at the past 12 or 14 years, has it increased?—It has increased.

10,414. Increased since?—Yes.

10,415. As regards the price of milk, has that been maintained?—I do not think there is much falling off. I have not been a milk seller, so cannot speak with much authority. I am very badly situated for railways. I am 5 miles or 5½ miles away from the nearest station.

Land tenure.

10,416. You come here mainly to speak upon the the question of land tenure?—That is so, as applying to Cheshire farming chiefly.

10,417. What is your opinion upon the subject?—I consider that the existing condition of land tenure is very unsatisfactory; that it encourages bad farming rather than good; that the farmer who improves his holding and spends money freely has not sufficient security or fixity of tenure.

10,418. Have leases been common in your district or no?—No, they are not common.

10,419. Generally the land is held from year to year?—Generally.

10,420. Are the tenants not willing to take leases?—Yes, I think the tenants would be willing; I do not know whether they would now; but it is a system that has been carried on on very few estates. I think I ought to make one exception, and it is a very remarkable exception—that is on the estate of Lord Tollemache.

"Lease Notes" on Lord Tollemache's estate.

10,421. On that estate have leases been given freely in that part?—The late Lord Tollemache introduced what are called lease notes some 20 years ago, I think. I am not a tenant of Lord Tollemache, but the fact is well known locally.

10,422. What are these lease notes?—They give the option to the tenants of remaining tenants of their holdings for 20 years. The tenant had also the option of giving six months or twelve months' notice to quit and terminating the tenancy.

10,423. It was not exactly a lease then; it was an arrangement favourable to the tenant, in the sense that he could remain for 18 years; but which he could break at any time by six months' notice?—That is so; they were drawn out by the late Lord Tollemache.

10,424. It gave the tenant power to go but the right to remain for 18 years if he liked?—That is so. It is either 18 or 21 years, but I believe it is 18 years.

10,425. At the rent paid at the time?—Yes.

10,426. The rent therefore could not be raised during the 18 years, but could be lowered by the tenant giving notice to quit?—The tenancy could be terminated.

10,427. The tenant could obtain a reduction by giving notice to quit?—I do not say that. He could terminate the tenancy; it would be optional with the landlord whether he could obtain a reduction of rent.

10,428. Exactly; but I mean that the tenant could obtain a reduction by giving notice to quit and threatening to leave; on the other hand, the landlord could not obtain a greater rent for 18 years?—He could not obtain a greater rent, but I should not go so far as to say that the tenant could obtain a reduction, because owing to these lease notes, which practically give fixity of tenure, the Peckforton Estate (that is Lord Tollemache's estate) is perhaps let at as high a rental to-day as any estate in the county—I do not say higher, but I should think as high as any large estate in the county.

Mr. T. Parker. 2 Mar. 1894.

10,429. It practically gives great security to the tenants?—Yes.

10,430. Has that example been followed by other landlords?—I believe not. I have heard of it in no other case.

10,431. Do you go to the length of saying that the present system of tenure accounts in any way for the depression of agriculture?—Yes I do. I think with greater security we should be encouraged to farm better and more highly, and that the only way to meet the depression is to farm highly.

Depression in Cheshire.

10,432. (*Mr. Chaplin.*) As a matter of fact I thought you said just now that competition for farms was as keen as ever in the county and that Cheshire had suffered less than any other district; how is that compatible with the existence of depression. Is it a fact that there is depression or not—is there a severe agricultural depression in your county?—It is not so severe in our county as in other counties.

10,433. (*Chairman.*) Can you say that a state of things where there is a demand for farms and where the prices of the produce of the land have not been largely reduced amounts to a depression of agriculture?—In the case of Lord Tollemache's estate which I have referred to, I believe that there are very few estates upon which the tenantry at the present time are more prosperous and more contented, because through the existence of these lease notes—which is in reality fixity of tenure—they keep the farms in first-class condition.

10,434. Are there other properties in the neighbourhood where the tenants are prosperous?—Yes, some estates are lower rented, and upon a considerable number of farms in Cheshire now—large farms too—there is not a yard of tillage land; they devote themselves wholly and entirely to dairy farming.

10,435. And there the depression has not been felt?—Not so severely—it has been felt to some extent.

10,436. Has that district suffered from the drought during the last year or no?—Yes, we had very short crops of hay particularly, and the farmers were compelled to use larger quantities of feeding stuffs—cotton cake in the summer time chiefly.

10,437. But I presume it did not suffer so much as the south of England did?—I do not travel very much. The drought was very extensive in Cheshire—very severe.

Fixity of tenure.

10,438. What is your opinion of the effect of the present system of tenure upon the district—what complaints have you to make of it?—I think that a great defect is that we have really no fixity of tenure, no security, and that we have to farm under a system which I may call a hand-to-mouth system.

10,439. (*Mr. Chaplin.*) No security for what—for improvements or for what—in what sense is the expression used?—I was coming to that by and bye perhaps. I consider that the security or rather the compensation due to a tenant under the Agricultural Holdings Act is calculated upon an unsound basis.

10,440. You mean he has not sufficient security, then, for improvements made on the farm?—That is so.

10,441. And it is in that sense that you complain of want of security?—Yes.

Land Courts.

10,442. (*Chairman.*) What are the special defects that you have to point out in the Agricultural Holdings Act?—I think the first step in the way of land law reform should be the establishment of some tribunal—I hardly like to use the term land court, it seems to have an objectionable sound, but call it what you like—some tribunal, an arbitration board—I look upon that as the first necessary step—to which either a landlord or a tenant can refer disputes for settlement as they arise between them; and the labourers too if there is any dispute between them and their employers.

10,443. Do you mean specially disputes between landlord and tenant on the tenant quitting the farm as to the value of the improvements?—Not necessarily on his quitting the farm, but that a sitting tenant may apply.

10,444. What questions would you refer to the tribunal?—I would refer the question of rent. I would

also allow the tenant to apply to the Court—I do not know what I must call it; must I call it a Court?

10,445. You may call it what you like; it is your evidence not mine?—I would give the tenant the privilege of submitting his agreement to that Court and if it considered that that agreement contained clauses which were injurious and hurtful to him and to good farming generally, that those clauses should be eliminated.

10,446. Then this Court ought to have the revision of any terms of agreement between the landlord and tenant, not merely as to rent, but as to the conditions of the holding?—Yes.

Judicial rents.

10,447. For how long should the rent be fixed?—I think Mr. Smith has fixed upon seven years. I do not think that you could reduce that very much.

10,448. For seven years?—It would not do for the Court to be open for a tenant or a landlord to make an appeal every year.

10,449. You think it would be impracticable to refer to it every year?—I think so, certainly.

10,450. And in your opinion seven years is about the mean of what would be desirable?—I think that would be a fair period.

10,451. Then in fact it would amount to giving the tenant a judicial lease for seven years—is that so?—Yes, it would.

10,452. It would come to be a lease for seven years?—Yes.

10,453. At a rent to be determined by the Court or the tribunal?—If there was a dispute.

10,454. And at the end of the seven years is the tenant according to your view to be entitled to another tenancy of the same length and so on?—I hardly understand your question.

10,455. You have told us that the court or tribunal shall have the power of determining rent for seven years; what I want to know is whether, at the end of the seven years the tenant is to be entitled again to another lease of seven years?—I should say that the court ought to be open at the end of the seven years either to the landlord or to the tenant.

10,456. Or to the tenant?—If times revive that the landlord should have the power to appeal to the court to have the rent increased.

10,457. Am I to understand you that the tenant once in possession is to be entitled to remain in possession for ever, subject to revision every seven years?—That would want qualifying.

Eviction of tenants.

10,458. How would you qualify that? I only want to know what your view is?—If a landlord had reasons to know that his tenant was farming badly, he might have the power of appeal to the Court and have him evicted, provided he could prove that the farmer was neglecting his duties.

10,459. But subject to that qualification, then, you think that the tenant in possession should be entitled to remain there for ever, subject to a revision of his rent every seven years; is that your view?—That is rather a strong way of putting it.

10,460. I am only trying to arrive at what your view is?—What I would try to effect in land tenure is this: to prevent capricious evictions, give the tenant a fixity of tenure and security against that happening.

10,461. Does it not follow from that, that your view really is this: that a tenant in possession is to remain if he wishes in possession for ever, subject to the revision of rents every seven years?—Yes, of course, the Court being open to either party to appeal to it.

10,462. To appeal to it on the subject of rent?—Yes, or bad farming

10,463. But the landlord would be deprived of evicting the tenant altogether except with the permission of the Court?—That is so.

10,464. (*Mr. Chaplin.*) Whatever the tenant had done?—No; I say the landlord should have power to evict the tenant for bad conduct, bad farming, at any time—not necessarily at the end of seven years—at any time.

10,465. With or without the consent of the Court?—With the consent of the Court.

10,466. Then, without the consent of the Court, he is not to have the power of evicting him for anything; is that so? I want to know whether that is your view. That is what I gather from what you said, but I want to make it clear as you seem to have some hesitation?—I should not say it was absolutely essential to appeal to a Court to terminate any tenancy.

10,467. It is not to be essential?—No, because the tenant and the landlord might come to an amicable arrangement to terminate the tenancy.

10,468. (*Chairman.*) But without the approval of both parties the tenancy could not be determined without appeal to the Court?—That is so.

10,469. (*Mr. Chaplin.*) What I asked you was this. Whether we are to understand that without an appeal to the Court the landlord could not evict a tenant for anything?—I should make it optional to the tenant, if the landlord served a notice to quit, to terminate the tenancy?—A tenant, if he was guilty of bad conduct or bad farming, would go out without appealing to the Court.

10,470. Who is to decide, then?—I should let him decide for himself; at least, let him appeal to the Court if he wishes and let the Court decide.

10,471. I thought you said just now without appealing to the Court; your last answer to me was that if he was guilty of bad conduct you would let him go out without appealing to the Court?—I should give the tenant the option of appealing to the Court.

10,472. (*Chairman.*) In other words the tenant would not be evicted by the landlord even for misconduct or bad farming, except with the approval of the Court?—He would have the right of appeal.

10,473. (*Mr. Chaplin.*) That is the question I asked you just now, and asked you twice, and you appeared to hesitate a good deal, and that is why I wanted to know whether it is your opinion that without an appeal to the Court the tenant could not be evicted for anything, whatever he had done?—The appeal to the Court would be optional with the tenant if the landlord served him with notice. I think if the tenant was guilty of bad conduct he would not appeal to the Court.

10,474. (*Chairman.*) He would always have the right of appealing to the Court against his landlord's eviction?—Yes.

10,475. Except, I presume, for the nonpayment of rent?—Yes, that would be sufficient cause to terminate any tenancy.

10,476. For any breach of conduct in bad farming or any misconduct, if the tenant was not prepared to accept the notice to quit he would have the right of appealing to the Court?—Those are my views.

10,477. The Court therefore would always intervene between the landlord and tenant in such matters?—Yes.

10,478. Therefore subject to that the tenant would be entitled to remain in for ever?—Yes.

Transfer tenancy.

10,479. And I presume it would follow that the tenant if he did not desire to continue in his tenancy would have the right of handing it to somebody else, —of choosing his successor?—Yes.

10,480. Would you also give him the right of bequeathing his farm—willing it away?—Yes, I should give him that right; I should give him the right of bequeathing his improvements.

10,481. But the farm itself?—That is a very important matter to give an opinion upon. I am only a tenant farmer. I am not versed, and I do not profess to be versed, in the law, but it is the improvements which a tenant farmer has effected in his holding which we want him to have the power of bequeathing.

10,482. But you told us that the tenant is to have the right of remaining on the farm, at all events so long as he lives?—Yes.

10,483. And I thought you said that he should also have the right of handing over the farm to another person?—Yes, he should have the voice.

10,484. Then I go further, and ask whether he should also have the right of willing it away?—That is a matter I have not considered very fully.

10,485. You have not considered that point?—No.

10,486. At all events you go the length of confidently saying that he should have the right of assigning it?—I do.

Mr. T. Parker.

2 Mar. 1894.

10,487. Without the consent of his landlord?—Yes, without the consent of his landlord.

10,488. And in that way you would do away with what you call capricious eviction?—Yes.

Particulars of capricious eviction of witness.

10,489. Have there been cases of capricious eviction in your neighbourhood?—Yes, one—a very pertinent one, I think—my own.

10,490. You were evicted yourself?—I am being evicted.

10,491. When did that occur?—I have given up possession of the land, all but what is called the out-let in Cheshire and the buildings. I give up possession of that in May.

Specimen of unfair agreement.

10,492. What has been the result of your leaving your farm as regards the improvements which you effected upon it?—I mentioned the matter just now of having eliminated from agreements unfair clauses. I have got one here that I should like to read, if I may be permitted, in my own agreement, which deals with this question that you are now raising. This is written specially for my disadvantage, I suppose, or advantage. It occurs, I believe, in no other agreement upon the estate. It is written, not printed.

10,493. (*Mr. Whitehead.*) Can we have the date of it?—This was signed on the 26th July 1884.

10,494. (*Chairman.*) Is that a lease or a yearly tenancy?—Yearly tenancy. "It is agreed between "landlords and tenant, that the present annual value "of the holding to an incoming tenant is 570*l.*; but "inasmuch as the tenant has at his own expense made "certain improvements on the holding, he is to pay "only the reserved rent of 499*l.* 17*s.* 6*d.*, and it is "expressly agreed and declared, that if the tenancy "shall continue for seven years from the second day "of February 1885, the tenant shall be considered to "have been thereby fully compensated for all improve-"ments made by him upon the holding prior to the "date hereof, but this clause shall not be considered "as binding either landlords or tenant to a tenancy "for 7 years, or for any other term than from year to "year." *See reply by landlord*, Appendix A. XXVIII.

10,495. (*Sir Nigel Kingscote.*) Did you subscribe to that—sign it?—I did under pressure of notice to quit (notice to quit was served upon me in January previous), and under a threat of the land agent that if I did not like to sign it I had better leave the farm.

10,496. What is the full rent, and what is the reserved rent—570*l.*?—That is the full rent. Shall I explain, please?

10,497. Yes?—I have told you before, that this farm consists of 300 acres; that is not quite correct, because there are 16 acres of that which belong to the mother of my landlord. I have included it in the same holding—it is really immaterial, but I want to be correct. 16 acres of it are meadows that I occupy under my landlord's mother, so that this agreement refers to 284 acres. At the time that this agreement was signed it was 285 acres, but a small plot of land was taken from me, so those are the real facts now.

10,498. (*Chairman.*) The full rent was 570*l.*?—That is the full value.

10,499. And what was the actual rent that you were to pay for seven years?—499*l.* 17*s.* 6*d.*

10,500. A difference therefore of about 71*l.*?—Yes, 70*l.* and half-a-crown.

10,501. (*Mr. Everett.*) And that was a consideration for improvements you had effected?—Yes.

Improvements effected on witness's farm.

10,502. (*Chairman.*) What improvements had you effected?—I succeeded my father in this tenancy; he had had this farm since 1848, and during the tenancy my father and myself have effected great improvements, and spent a lot of money.

10,503. What kind of improvements?—We had eradicated over 6,000 yards of old fences, and planted 2,600 yards or more of new ones, filled up several old pits; then my father had erected three or four buildings or portions of buildings, improved the roads considerably, and done a lot of paving.

10,504. What kind of buildings—barns?—He put a new corn room over a large cart-house at his own expense entirely, and he built an implement shed at his own expense.

10,505. (*Viscount Cobham.*) In brick?—Stone, and the roof was thatched; it adjoined a building that was thatched.

10,506. (*Chairman.*) I suppose these improvements were effected over a term of years from 1848?—Yes.

Mr. T. Parker.

2 Mar. 1894.

10,507. What was the rent paid before 1884, at the time when this agreement was entered into?—It was, I believe, 429*l.* 17*s.* 6*d.*, but I am not provided with my receipts.

10,508. Had that been the rent for a good many years—since 1848?—It had not been the rent for a good many years, because at my father's death his property was sold. My landlords, who were trustees at that time, purchased some of the land, and it was added to my holding, so of course the rent was altered. My rent previous to the signing of this was 429*l.* and some shillings.

10,509. From the death of your father?—No, not from the death of my father quite; we kept his property in hand for one year.

10,510. Nearly from that time?—Yes.

10,511. When did your father die?—He died in 1873.

10,512. Then from 1874 to 1884 you were paying 429*l.* a year?—That is about it.

10,513. I suppose that was rather a low rent?—It was worth the money at that time.

10,514. (*Mr. Channing.*) When was it fixed at 429*l.*?—I succeeded my father.

10,515. Had it been at that rate for a long time previous?—Yes, with the exception that there had been some land added to the tenancy. Of course, with that addition the rent was increased, but I had been paying 429*l.* before the signing of this agreement for, I dare say, 10 years.

10,516. (*Chairman.*) That you say was a low rent?—I say, consequent upon our improvements, the farm was worth the money.

10,517. Then in 1884 it was valued at 570*l.*?—Yes.

10,518. And you were to pay 499*l.* for seven years?—Yes.

10,519. That reduction—as compared with its full value—of 71*l.* a year being in consideration of your improvements?—That was so.

10,520. Seventy-one pounds for seven years would be about equivalent to the 499*l.*?—Yes.

10,521. Were the improvements valued at that at the time?—No.

10,522. Was there any valuation made of the improvements at that time?—None at all, only this reference made in this clause.

10,523. Then the clause, although it fixes the rent at 499*l.* for the seven years, also contains a provision that neither party should be bound by that for seven years?—That is so.

10,524. Then did you remain in possession till the conclusion of that seven years?—Yes.

10,525. When did the tenancy terminate practically?—It is now terminating, as I may say; I gave up the land on the 2nd February, all but an outlet which I shall have to give up on the 1st May—that is the custom of Cheshire—and the house and buildings.

10,526. Did you pay the full rent for some time—for a year or two?—I paid 570*l.*—this will want careful notice, please—I have paid this 570*l.*, or at least the half of it upon two occasions.

10,527. (*Mr. Little.*) Five hundred and seventy pounds or 499*l.*?—I will ask you to accept it as 570*l.* in round figures. I have told you that there was an acre of land taken from me, and 30*s.* was taken off for that. On two half-yearly audits after this agreement came into force I paid the half of the rent. I actually paid 284*l.* 5*s.* 0*d.*—that is the sum, because 30*s.* a year was knocked off for this plot of land that was taken from me, and that is 15*s.* half yearly.

Compensation for improvements on witness's farm.

10,528. (*Chairman.*) Then when the tenancy came to an end you did not obtain compensation for the value of those improvements?—No. I will call your attention to this fact, that upon looking carefully through this clause and after obtaining advice upon it, at the third half-year's audit I withheld what I considered that I had overpaid the two previous half years; in other words, I paid my half-year's rent less 30*l.* 13*s.* 9*d.*, each for the two half years, that was 61*l.* 7*s.* 6*d.*

10,529. (*Mr. Chaplin.*) Because you considered you had been paying in excess in accordance with your

Mr. T. Parker.
2 Mar. 1894.

agreement?—Yes, I had actually paid this amount; but on looking carefully through it, and upon the advice of my friends, not legal advice, I was told that, although this clause dealt with the value of the farm, and dealt with the question of compensation, it did not really say that they could exact that full value.

10,530. (*Chairman.*) Then you get the benefit of that clause for one year beyond the period which was fixed?—Two years.

10,531. Then you got the lower rent for nine years instead of seven years?—Yes.

10,532. Then what is your grievance under it?—My grievance under it is, that I have been deprived through the existence of this clause from claiming compensation which otherwise I ought to have been entitled to—that I signed this clause under pressure of that notice to quit—and that I was not a free agent in the matter. Of two evils I tried to choose the least, but I have been bound by it for all that.

10,533. Are we to take it, that the fact that you and perhaps your father before were paying a somewhat less rent for some years, and that for nine years you paid about 71*l.* less than the agreed value, was not compensation enough to you and to your father for the improvements you had effected?—No, nothing like it.

10,534. Nothing like it?—Not what I consider I was entitled to. Excuse me, I hardly like the term "low rent" that you apply to it. If we had not effected the improvements it would not have been a low rent—it would have been a high rent.

10,535. It would have been a high rent if you had made no improvements?—Yes.

10,536. (*Mr. Little.*) Were the improvements that you think you ought to be compensated for on quitting those which were made before this agreement, or were any of them made subsequently?—And subsequently.

10,537. (*Chairman.*) Then your real complaint is, that in 1884 under the notice to quit you were induced to enter upon an agreement under which you did not get full compensation in the shape of a reduction of rent for the improvements which you had effected?—That is my contention. I consider that I was equitably entitled to the increased letting value of the holding affected and caused through our outlay and improvements capitalized.

Value of improvements effected on witness's farm.

10,538. What did you value your improvements at then?—The farm has been let I believe at a higher rental, and I think that I should have been at least entitled to the difference between 499*l.* 17*s.* 6*d.* and 570*l.* capitalized—I do not know upon what scale—I have not given that consideration.

10,539. I want to get the measure of your grievance. What in 1884 was the value of the improvements for which you considered you were entitled to the compensation of a lower rent?—I consider that this farm, had it not been for our improvements would have been worth no more than 429*l.* a year, because there is land at the present time adjoining belonging to the same estate, upon which improvements have not been effected by the tenant, that is not worth 1*l.* an acre to-day.

10,540. Did you put any actual capital value upon the improvements that you had effected?—No, no actual value.

10,541. Of course it is difficult for us to form an opinion of the measure of your grievance without knowing what was the value of the improvements which you had actually effected at that time?—Yes, it is difficult for you, only I try to assist you by telling you what improvements I have done. They have been done by the tenants.

10,542. Of course that gives us a very small guide as to what the actual cost of those improvements was?—I should think that the buildings that my father erected, and the pavements that he put down, and the improvement of the road would cost him perhaps 300*l.* at a rough calculation. There was the drainage. We drained 166 acres of it, the landlords finding pipes only. The whole of the expense of eradicating the fences was borne by the tenant, and all the raising of the new ones with the exception that the landlords paid for the quicksets and found timber in the rough to protect the young quicksets adjoining the grazing land. That is all the outlay the landlord ever subscribed towards it.

10,543. What do you put the whole at then?—That does not comprise nearly the whole of the improvements. I have invested very heavily in bones myself and feeding stuffs for cattle. I have fed a lot of fat stock.

Mr. T. Parker.
2 Mar. 1894.

Compensation under Agricultural Holdings Act.

10,544. But would you not, under the Agricultural Holdings Act, get compensation for those on the termination of your tenancy if there was any value remaining?—Yes, that is so; but there is a clause in this agreement that acted very detrimentally to me.

10,545. (*Mr. Chaplin.*) What clause is that?—Dealing with produce—sold off. My claim for compensation amounted to 290*l.*, I think, on the conclusion of my tenancy; that is all I was advised to claim for. The existence of this clause deprived me from making any larger claim.

10,546. You put in a claim for 290*l.* under the Agricultural Holdings Act, do I understand?—Yes.

10,547. And then?—I could not put in any claim for any of those buildings erected, nor any of the roads. The only claim that I had which held good, coming under that clause which necessitates having the written consent, was the planting of a new orchard. That I did obtain compensation for, but under this clause I was prevented making any claim for those buildings. I had also done, subsequent to the signing of this agreement, a lot of draining myself—I daresay 20 acres—and I had also eradicated more fences. I had done it in the hope that I should continue tenant and enjoy the benefits, but through not having the written consent I could make no claim.

10,548. (*Chairman.*) Those were permanent improvements effected, I presume, before the Agricultural Holdings Act was passed?—Yes.

10,549. And effected without the consent of the landlord?—Most of those dealt with in this clause were effected before the Agricultural Holdings Act was passed.

10,550. And without the consent of the landlord?—Without the written consent.

10,551. In respect of the buildings and so forth, they had, I presume—although your agreement, as I understand you, was made rather under duress—been professedly dealt with under the agreement of 1884?—Yes.

10,552. Therefore you could not claim for them a second time?—No.

10,553. Therefore your claim, on quitting your holding, was practically confined to any claim which you might have under the Agricultural Holdings Act?—The fact is I never could claim at all. I was actually compensated for those improvements by having my rent raised. That is what this clause actually amounts to.

10,554. You mean the clause in 1884?—Yes.

10,555. That, of course, is your point of view, that it was over-valued in 1884, and that the immediate reduction of rent, as compared with the valuation, was not sufficient to compensate you for the whole of the improvements?—Yes; and it goes to support my contention that we want some tribunal to which we can refer disputes as they arise. If there had been such a tribunal existing at that time I should certainly have referred this clause, and appealed to them on this question.

10,556. (*Mr. Chaplin.*) Was the rent raised before the agreement of 1884?—No.

10,557. Or has it been raised since?—When the agreement came into force, February 2nd, 1885.

10,558. Before you signed the agreement the rent was agreed to?—That was part of the agreement.

10,559. (*Mr. Little.*) Made subsequent to the passing of the Act?—The agreement was signed in July 1884.

10,560. (*Mr. Chaplin.*) And the rent having been raised, you accepted it and signed the agreement?—Under the pressure of a notice to quit, and the threat that if I did not like to sign it I must leave the farm.

10,561. (*Chairman.*) I suppose at that time the then Agricultural Holdings Act gave you no protection at all, and no claim for the improvements you had effected?—No; not at all.

10,562. Therefore you may say that at the time you signed this agreement in 1884, you had no legal claim whatever to reimbursement for the improvements you had effected?—No.

Mr. T. Parker. 2 Mar. 1894.

10,563. That being your position, you were unable to resist a demand for rent which you thought otherwise excessive having regard to your improvements?—I thought it unjust.

10,564. (*Mr. Chaplin.*) What agreement did you hold under before, or did you hold under none?—None at all.

10,565. No agreement?—None previous to this.

10,566. Why did you enter upon such an arrangement?—I was accepted as tenant in succession to my father upon the same terms. He farmed under no agreement.

10,567. (*Mr. Little.*) Could you not have claimed in 1884, under the Act of 1875, for improvements executed within 10 years before?—If I had made a claim I should have been turned out.

10,568. (*Viscount Cobham.*) Was the Act of 1875 contracted out of?—It was.

Rent of witness's farm.

10,569. (*Mr. Everett.*) Do you know what rent the farm is let at now—what rent the new tenant is going to pay?—It has been let to a market gardener, and I have heard three reports; one is authoritative, because it came from the agent, not to me direct, but indirect, that it had been let at this value, this 570*l.*, but that may be the whole truth, or only part of it. I have heard two other reports, one to the effect that it has been let at 50*s.* an acre, and the other that it has been let at 45*s.*

10,570. Both of those would be more than your amount?—Yes, this valuation is practically 2*l.* an acre.

10,571. (*Chairman.*) You have no certain information on the subject?—I have certain information that it has been let at this rent, but that may mean this rent and more.

10,572. At the rent of 570*l.*?—Yes.

10,573. Namely, the rent which you would have been compelled to pay if the landlord had continued you on as the tenant?—Yes, they would have enforced it when they found out that I had discovered this flaw in it, and have made me pay that 570*l.*

10,574. At all events you had the advantage of two years at the lower rent owing to a technicality rather; is that not so?—I had the advantage of not having my rent raised a second time on my own improvements for two years extended.

10,575. However, in the main, I think you will agree with me that your complaint is of having been put at a disadvantage in the year 1884 by the then state of the law?—By the enforcement of this agreement—by the introduction of this agreement.

10,576. That agreement was forced upon you in 1884?—Yes.

10,577. And you were unable to resist it because the Agricultural Holdings Act at that time did not give you any support?—That is so, because the landlord had contracted out of it.

10,578. (*Viscount Cobham.*) Could you not get compensation if you quitted the farm?—No.

10,579. Not under the custom of the country?—No, not a farthing.

10,580. (*Chairman.*) You relied upon the general faith of the landlord, I suppose?—That is it.

10,581. And came to no agreement with him?—That is it.

10,582. What other matters have you got to bring before the Commission?—I have touched upon the point that the tenant cannot have eliminated from his agreement clauses that can be distinctly shown to be hurtful and obstructive to good farming; there is nothing to prevent the landlord raising his rents upon the tenant's own improvements without compensating him for such.

Valuation under Agricultural Holdings Act.

10,583. Without going into the question of the fixity of tenure or judicial rents, have you any suggestions to make as to better compensation to tenants under the Agricultural Holdings Act?—Yes, I maintain that the system of compensation is unsound.

10,584. What alteration would you suggest?—It is calculated now upon outlay—solely upon outlay and not upon results.

10,585. (*Mr. Channing.*) You mean by the practice of the valuers, do you not, not by the Act itself?—If you claim compensation for feeding stuffs you have to produce your vouchers. I will deal with my own case; of course I am more conversant with that than any other. I have been in the habit of growing about 1,000 or 1,200 bushels of oats annually, and I have always consumed those until this year. I get no compensation at all because I have no vouchers. I am dealing with the system of claiming compensation.

Mr. T. Parker. 2 Mar. 1894.

10,586. Then you think the Agricultural Holdings Act ought to be amended so as to give compensation for any food used for feeding which is grown upon the farm itself?—Certainly.

10,587. (*Viscount Cobham.*) Is that in addition to the improved letting value—I do not quite understand you?—No.

10,588. Do you wish the improved letting value to be taken into consideration?—The improved letting value is not taken into consideration by the Act. It is not acknowledged.

10,589. Do you want it to be?—I want it to be.

10,590. Do you want, in addition to that, the cost?—No, if we could get the improved letting value that would be all I contend for.

10,591. You would be satisfied with that alone?—I say the system of compensation under the Agricultural Holdings Act is unsound—that is what I contend. It deals with outlay not with effect; it does not allow a tenant any compensation for his own efforts, his own skill or his own labour.

Competition for farms.

10,592. (*Mr. Chaplin.*) You say there is plenty of competition for farms in Cheshire; what class of men are the applicants mainly?—They are nearly all dairy farmers.

10,593. The sons of existing farmers?—Yes.

10,594. That is to say, notwithstanding the sense of insecurity in Cheshire the farmers are quite ready to send their sons into the business?—That is so; you see they have very little choice. The families increase and of course the number of farms does not increase.

10,595. Should you be satisfied if the Tollemache lease was of general application?—I would be perfectly satisfied.

10,596. Do you think that would cover the whole grievance?—That has been working most satisfactorily since its introduction.

Land Courts.

10,597. If you could have that you would not care to have Land Courts?—I should be perfectly satisfied because it would be so great an improvement over the existing state of things. I think a Land Court would be preferable too—I think a Land Court should be established as the first step in the direction of land law reform.

Railway accommodation in Cheshire.

10,598. (*Sir Nigel Kingscote.*) I think you said that you suffered very much from want of railway accommodation—I do not know what part of Cheshire you come from, but my experience of Cheshire is that it is very much riddled with railways?—I live in perhaps as unfavourable position as any farmer in the county. I am 5½ miles from the nearest station.

10,599. From any station?—Yes.

10,600. How far from Chester?—About seven miles and a half from the station.

10,601. May I ask whether in your father's tenure or during your own tenure the estate on which your farm was was in the hands of trustees or of the possessor himself?—It was in the hands of trustees for a considerable number of years. The present owner only came of age and attained his majority in December 1891, and for nearly 20 years previous to that time it had been in the hands of trustees.

10,602. I suppose you would agree with me that in such a county as Cheshire, which is principally a dairy county, the cheap corn and cheaper cake have helped the dairy farmer?—Yes, considerably.

Selection of incoming tenant.

10,603. (*Mr. Whitehead.*) In the summary of your evidence you say that an outgoing tenant should have a voice in the selection of his successor. Would you tell the Commission why you say that?—I believe that if he had a voice in the selection of his successor he would have a better chance of making a fair arrangement. You have asked me for my opinion, I must give it you. I do not believe it is right or reasonable that any person should possess the enormous power which is at present possessed by some individuals to either accept or refuse any tenant who may be objectionable in some form, perhaps politically

Mr. T. Parker 2 Mar. 1894.

or religiously, or in some other form; in other words, I do not think it is right that any human being should have the power of populating the whole district, the country side, with one sect or one religion, or one party.

10,604. How far would you let the voice extend—to the absolute dictation of his successor?—I think if a tenancy was being concluded and brought to a termination, and the outgoing tenant wanted to agree with the successor, providing he discovered a respectable man, possessing the necessary capital to stock and farm the holding, and possessing the necessary qualifications of practical knowledge and so forth, that he should be accepted as tenant.

Dairying. Fall in prices.

10,605. (*Mr. Giffen.*) You told us that you did not think butter had fallen much in price, if at all, and that cheese had fallen, you thought about 10 per cent. What dates do you use in making this comparison of prices—since what time?—The Chairman I think applied that term 10 or 12 years ago.

10,606. So that as compared with ten years ago, butter has not fallen in price, and cheese has fallen about 10 per cent.?—Butter has not fallen very much—very little in fact.

10,607. What prices do you get for butter and cheese now?—I believe butter is about 1*s.* 5*d.* per lb. or 1*s.* 6*d.*; that is about the general run during the last 10 or 15 winters I should think.

10,608. And cheese?—Cheese at present is selling very well. I came up part of the way on Tuesday or Wednesday morning with a cheese factor, and he told me that he had bought in a local fair new cheese, made this year, at 70*s.* a hundredweight of 121 lbs.

10,609. Then I understand you do not think that milk has fallen in price to any sensible extent, but that you are not so well acquainted with milk?—These things are not sold so well now throughout the whole year as they were 10 or 15 years ago, but they have not fallen to anything like the same proportion as grain and other farm produce.

Existence of depression. Fixity of tenure.

10,610. Then practically, as far as your experience goes, there is no depression in the agriculture with which you have to deal?—I would not say there is no depression, but there is less probably in Cheshire than in most other counties.

10,611. Then from what cause does the depression arise so far as it exists?—I think it arises chiefly through want of security.

10,612. And that is not a new cause—that is a cause that has been in existence, say, for the last 30 or 40 years?—Yes.

10,613. Was agriculture prosperous with you 10 or 20 years ago?—Yes, 20 years ago.

10,614. Then it cannot be the insecurity of tenure which makes it unprofitable now?—But under better and more thorough security we could farm more highly. I maintain that I have farmed highly, as the result of my tenancy and this agreement prove, but a good many tenants dare not spend money in consequence of the insecurity under which they live.

10,615. Your contention is that agriculture would be more prosperous with more security of tenure, but you cannot say that it is specially depressed at the present time from want of that security?—Not specially, but that is a great cause of the depression. I have told you that the depression does not exist so much in Cheshire as probably in most other counties, but that depression would be less acute and less widespread if we had proper security.

Capricious evictions.

10,616. Can you say that capricious evictions, and the tyranny of one man over extensive areas, have been of such a kind all over Cheshire as to cause depression in agriculture?—No. I give Cheshire landlords credit for fairer treatment generally.

10,617. What you mention then are isolated cases of oppression?—Yes.

Rent of witness's farm.

10,618. (*Mr. Gilmour.*) Is the farm that you are leaving a fair sample as regards rent in that part of the country?—At the present time it is considered a high rent—that is this rent—this valuation.

10,619. You would have been quite willing to have remained on your farm evidently for any length of time at a rent?—Not at this increased rent.

10,620. You would have desired to have got a reduction of that?—I tried to do so.

Mr. T. Parker, 2 Mar. 1894.

Compensation for home-grown produce.

10,621. Then you said in reference to the compensation that you considered compensation ought to be given for produce grown and consumed upon the holding; in what practical way would you propose that that consumption should be vouched for—have you thought that matter out?—A good deal would have to depend upon the truthfulness of the tenant. I generally keep records myself of what crops I grow each year, and if a termination of the tenancy necessitated a claim for compensation to be sent in, I expect that the tenant's statement as to what he had produced would have to be accepted.

10,622. That is the only way that you can see that the landlord's interests would be at all protected—he must accept the word of the tenant as to what amount he had consumed upon his holding?—I believe on some estates—I am not speaking authoritatively—records are kept as to the different croppings of the land; that would give the landlord a knowledge as to what was grown.

Existence o depression.

10,623. (*Mr. Chaplin.*) You told us more than once, I think, that, as far as Cheshire is concerned, the depression is less than in almost any other county; and in one case, I think, you said, speaking of one estate, nowhere else were the people engaged in agriculture more prosperous or more contented?—That is so.

10,624. Then, I suppose, it would hardly be said, as regards Cheshire, that there is any serious depression in that county?—I think I have made that clear before.

10,625. With regard to the insecurity of tenure, I understood you to tell me that you used the expression in the sense that there is not sufficient security for the improvements made by the tenants?—That is so.

10,626. And that there should be a tribunal to refer questions to, as to rents and as to agreements?—Yes.

Land Courts

10,627. Now are not tenant farmers occupying the position that you do at present competent to make agreements for themselves?—Yes, they are competent—they may be competent.

10,628. Then what is the necessity of a tribunal?—The necessity is this: that they have not the power to enforce their views.

10,629. Is it your idea of a fair bargain that one party should always be in a position to enforce his views upon the other?—Those are exactly my views. When a tenant farmer has got a lot of money invested in his holding he has to sing very small and lie low occasionally.

Freedom of contract *v.* Land Courts

10,630. I spoke of tenant farmers in your position at present; I understand that you individually have given up your farm, and are not now a tenant with a lot of capital invested. Now take your own case; if you wish to enter upon another farm, are you not perfectly competent to make a fair bargain for yourself?—Yes, I should have a better chance now.

10,631. Then it arises only in those cases where people are bound by unfortunate conditions which they have entered into before?—And in any case where the tenant has invested a lot of money in his holding.

10,632. Unless he has invested it under an agreement which gives him security?—Yes.

10,633. Now I observe very different opinions have been expressed upon this point by some of the farmers in Lancashire; I observe that the Liverpool Farmers' Club stated at a meeting at which one of the sub-commissioners of this Commission was present that they were in favour of freedom of contract. The Hambleton farmers said that all matters should be settled between landlord and tenant, and that if a man is not fit to make his own bargain he is not fit to farm. Do not you think there is a good deal of truth in those statements?—I do; but there is a good deal of truth wanting. It wants a good deal of explaining. In my own case I was a sitting tenant, and my capital was invested in the farm. That is quite a different matter from a person entering upon a tenancy.

10,634. I quite understand that in the case of a tenant farmer like yourself, in the position which you described to us previously, where you enter upon a farm without an agreement which gives you security, you may be placed in a very great difficulty; but do you think that that applies to the majority of farmers in England at the present moment?—I should not think it applies to the majority, because I do not think the majority of farmers are spending very much money.

Mr. T. Parker. 2 Mar. 1894.

10,635. You are speaking perhaps more of the farmers in your own district?—Yes, my remarks apply chiefly to Cheshire, but from what I hear from reports and from what I read, the tenant farmers are not spending very much money upon their farms in other parts of the country.

Land Courts.

10,636. Do you desire that the proposals which you have suggested to us should apply universally to all parts of England or only to cases such as you have described?—My remarks apply to Cheshire. I should suggest that there should be a separate tribunal for every county.

10,637. Now you have suggested that there should be this outside tribunal and that tenant farmers should have fixity of tenure and a tribunal to fix their rents; if you were provided with other means which would give you full and fair security for the improvements you have made upon your farm, would you not be satisfied then without insisting upon fixity of tenure and an outside tribunal to fix rents?—I cannot see any mode of obtaining them.

10,638. If a mode was shown you by which that effect would be produced would that meet your desires, or do you want something further for compensation for your improvements?—I should never be satisfied myself although I may have to be. I look upon that as the first and necessary step in the way of land law reform, that we should have a tribunal of some kind established—separate ones for each county—to which tenants or landlords may refer disputes, as they arise between them for settlement, and also that employers and employed may refer disputes as they arise between them for settlement.

10,639. Employers and employed?—Yes, labourers.

10,640. You are speaking of farm labourers?—Yes.

10,641. Do I understand you to mean then that the wages of farm labourers are to be fixed by an outside tribunal also?—If they feel the necessity for appealing. If they feel dissatisfied they should have the right of appeal.

10,642. What is the tribunal which is to carry out these very serious undertakings? It is to fix rent, I understand, to fix wages if necessary, and to give fixity of tenure to the tenant farmers. What is the tribunal you propose for that purpose?—It is generally understood as meaning a Land Court.

10,643. Yes, but I am not able to follow the general understanding. What is your understanding of a Land Court? What is to be the Land Court which is to carry out these undertakings?—I think there should be an equal number of officials appointed to act upon that Court selected from the tenant farmer class and from the landlord or land agent class. The labourers, too, should have their representatives, I do not say in an equal number, because if any dispute arises upon a question of labour it may not be of such magnitude and they would probably not desire so many representatives.

10,644. This Land Court then is to be composed of representatives of tenant farmers, of landlords——?—Landlords or land agents.

10,645. And of labourers?—Yes.

10,646. And you propose that they should fix the wages of labourers, the rents of the tenant farmers, and give fixity of tenure to the farmer?—I do not say that they should fix wages but that they should settle disputes upon labour, it may be upon wages.

10,647. If the dispute was upon wages—and you say it may be upon wages—are they to fix them?—That is what I thought.

Fixity of tenure.

10,648. Now with regard to fixity of tenure. It appeared to me from what you stated that you saw some possible objections to the proposition you laid down which I understood to be this: that without the appeal to the Court a tenant was not to be evicted for any reason whatever. Now supposing there was a case of a tenant who was an habitual drunkard or a very bad character upon a landlord's estate, do you contend that the landlord ought to have no power of removing him without the sanction of the Court?—My contention is this, that if he served such a tenant with notice to quit the tenant would know that charges would be brought against him and proved, and he would not carry it to the Court.

10,649. I dare say that is your opinion of the probable effect, and possibly it is right, but is it your desire in a case such as I have mentioned—do you think it right that the landlord should have no power of removing that tenant without the consent of the Court—I want an answer to that, yes or no; it is a very simple question?—The option of appeal would rest with the tenant.

Mr. T. Parker. 2 Mar. 1894.

10,650. Then the landlord is not to remove a tenant of that description?—He would be certain to succeed in removing a tenant of that description.

10,651. Yes, but he is not to have the power of removing him without going to the Court, and getting the sanction of the Court, if the tenant appeals against him?—I am afraid you do not understand me.

10,652. No, I do not?—I think the tenant can dispute the charge, and in that case it would have to be settled by the Court.

10,653. Whether he was a drunkard or not?—Yes, if you call him a drunkard.

10,654. Now I will go a bit further, and I will take the case of a tenant who had been actually convicted of some offence. Is the landlord to be at liberty to remove a tenant of that sort without the consent of the Court?—I should think he would have the power. The tenant would in that case have the power of appeal, but there is very little probability of his appealing.

10,655. (*Chairman.*) Did I understand you to say that if a man is convicted of being a drunkard that would be a sufficient cause for eviction?—The onus of proof would rest upon the landlord, and perhaps the tenant may appeal.

10,656. Of course the first operation would be for the landlord to give notice to the tenant that he was a drunkard, and that he intended to evict him. The tenant would say, "I am not a drunkard," and then would appeal to the Court. Do you think that the Court should evict a man holding a judicial lease because he is a drunkard?—Certainly.

10,657. (*Mr. Chaplin.*) That was not my question. The last question I asked was in the case of a tenant who has been convicted of a criminal offence, which is not a question of opinion, but is a matter of fact. I asked whether, under those circumstances, the landlord is to have an absolute power of his own to evict him or not?—I should think he ought to have the power—you say a conviction proved.

10,658. Yes?—I should think that would be sufficient

10,659. Then so far fixity of tenure would be limited?—Yes.

10,660. You would make some exceptions in the case of fixity of tenure?—Yes; I think I said so before.

10,661. (*Chairman.*) Under a lease now you cannot get rid of a man because he is a drunkard?—That would give the landlord a better chance under my proposal.

Fair rent.

10,662. (*Mr. Long.*) In regard to the duties that this Land Court will have to discharge, the most important, I take it, will be the duty of fixing a fair rent?—Yes; that will be the most important point of appeal.

10,663. That is the line that your evidence has taken chiefly, that there is a difficulty in getting a fair rent; therefore you want a Court that will have the right of arbitrating upon the question of rent?—It would probably form the basis of more appeals than any other, but it would not form the majority of cases.

10,664. It is not a question of whether it would be the most numerous, but you have pointed out to us in your evidence that there is a difficulty in getting a fair rent fixed in many cases, your own to wit?—Yes.

10,665. You desire that there should be a Land Court, or some Court created, which should so have the power of fixing a fair rent?—Yes.

10,666. What I want to know from you as a practical man, thoroughly understanding all these questions, is how you think a Court would be able to get at a fair rent; what is your idea of the principle that they ought to adopt?—They would have to have the farm valued.

10,667. By a professional valuer?—I do not say a professional valuer. He would have to be of course a practical man appointed by the Court. In making that valuation allowance must be made for the improvements which have been effected by the tenant, and the increased letting value arising from the tenant's outlay.

Mr. T. Parker. 2 Mar. 1894.

10,668. What would be the next items to be considered? I understood you to say that wages would have to be considered, and the position of the labourer?—Yes; the labourer should have the power of appealing to some tribunal.

10,669. Do you propose that the Court should consider the question of wages from the point of view of whether the labourer is getting enough wages, or whether the farmer is employing enough labour?—No.

10,670. You are familiar with the fact that in many agricultural tenancies it is alleged, whether correctly or incorrectly, that insufficient labour is employed on the farm?—Yes.

10,671. That consequently the farm is not as productive as it otherwise might be?—That is quite true.

10,672. If a farm affected by such circumstances comes under the purview of the Court, would, in your opinion, the Court be entitled to say "This rent would "be a fair rent, and could be earned if the sitting tenant "employed as much labour as in our opinion he ought "to employ?"—The tenant before he could employ more labour would ask for greater security.

10,673. That is not the question; you have already admitted that in some cases it is said now that farms are not as productive as they might be, because the occupying tenant does not employ enough labour?—I did not say so, but I quite agree with you that it is so.

10,674. You agreed with me that I was right in stating it just now?—Yes.

10,675. You know, as well as anybody, that taking three or four farms side by side, there is the greatest possible variety in the amount of labour employed by different farmers?—That is quite true.

10,676. With consequently very varying results in their productive power?—That is quite true.

10,677. You who have farmed well, and who have spent money on your holding, might say of an adjoining farmer, "He might do better with his land," or, "I, if I were in his place, could do better with his land, "because I should employ double the labour he "employs?"—It would not concern me.

10,678. No, but you might say that of a neighbour?—One tenant farmer of another?

10,679. It is possible that A. might say of B. that he did not succeed in getting out of the land as much as the land could produce, because he did not go the right way to work to do it—that is said frequently in our markets is it not?—I believe it is.

10,680. You have heard it said?—Yes.

10,681. So have I. Would it be admissible to bring evidence of that character before the Court in order to support the landlord's claim for the rent that he considered to be a fair rent?—For the landlord to bring that?

10,682. Certainly?—Yes, I think the landlord would be perfectly justified.

10,683. In bringing all the evidence he could produce in the direction of showing that the tenant was not making the most of the land?—In consequence of the want of labour?

10,684. Or anything else?—I quite agree with you. I think I made the remark that the landlord should have the power of appealing to this Court in case of dilapidations arising through bad management or neglect.

10,685. That is on quitting, or on re-adjustment?—In the case of a sitting tenant.

10,686. (*Mr. Dalton.*) If the judicial rent was determined in that way, might one of the conditions be that a certain amount of money should be expended every year on labour for the next seven years?—No, not a certain amount.

Fair rent and labour.

10,687. How would you bring it in then; you fix the judicial rent on the assumption that a proper amount of labour will be employed, but you take no means of assuring that that amount of labour will be employed for the seven years?—You would have to prove that there had been some neglect in consequence of the shortness of labour.

10,688. I am assuming that you fix the judicial rent on the assumption that the same amount of labour, we will say, will be expended, as has been expended in the past, or as ought to be expended, and you fix the rent for seven years; if you do that, should there not be some condition or stipulation that a certain amount of labour shall be employed upon the land?—I do not see how you can make the stipulation, because on dairy farms the labour account is less than it is on tillage farms considerably. I do not know how you would fix the scale; but if you could prove to the satisfaction of the Court that a farmer had neglected his duties, in consequence of employing too little labour, it should be enforced against him by the Court officials.

10,689. Might they determine the tenancy on that ground?—I think the ground would be too trivial to terminate a tenancy upon.

10,690. Had you the option of keeping on your present tenancy at a particular fixed rent?—I had no option. (*See reply by landlord*, Appendix A., XXVIII.)

Revision of agreement by Land Courts.

10,691. I think you proposed that either party should have an opportunity of going to the tribunal with respect to particular clauses in their agreements?—Yes.

10,692. That would not have assisted you in this particular case, I think?—It would have assisted me materially. I do not believe that any unbiassed official or tribunal would have admitted a clause like that I have read in any agreement.

10,693. Your difficulty at that time was, was it not, that you had no legal claim in respect of the improvements that you had carried out?—I had no legal claim, I admit that.

10,694. Then if you had gone to a land court, it would have been obliged to decide that you had no legal claim?—At that time.

10,695. At that time, I mean?—No, I do not agree with that. They would have to take into consideration the circumstances of the case, not dealing with it there at that present moment, but anterior to that time.

10,696. I understand you had no legal claim for repayment—it was a very unfortunate thing for you that it was so, but that was the condition of things?—I had no legal claim, I admit that.

10,697. Then you go to a court and you ask them about this clause, and they would have had to tell you that you had no legal claim; they could not have given you a right which did not exist in law?—No, but if I had appealed to that court on the grounds that this was an unjust clause, I think I should have had a very great chance of getting it eliminated.

10,698. But it is not so much that that is an unjust clause, is it?—It is the injustice of that clause I am now suffering from.

10,699. I should have thought it was the fact that it was the injustice of the law which gave you no legal claim to any compensation for those improvements at that time?—I really could not have claimed compensation, because they had contracted themselves out of the Act.

10,700. (*Mr. Channing.*) I understand, in talking about the land court, you are not talking as a lawyer?—No.

10,701. You are giving an opinion of its practical utility?—That is all; I am only an ordinary tenant farmer.

10,702. In what you understand by the reform, of which a land court would be a part, you would also consider that there would be a reform of the rights with regard to improvements which would have covered your improvements. I suppose your answers were meant in that sense?—That is so.

10,703. Then, when you said the land court would have helped a case like yours, you meant that the right with regard to improvements should also have been included in such an amendment of the law, did you not?—Yes.

10,704. Is the estate on which you live a large estate with a great many farms?—It is in three or four different parts of the country; in our neighbourhood there are about six or eight farms, two being large ones. Mine is the largest farm on the estate.

Existence of depression.

10,705. What has been the condition of the farmers with regard to the agricultural depression; is their position very much impaired, or have they got on fairly well, the whole of them?—I should say they are about half-and-half in good positions. It is a delicate matter to give an opinion as to a man's finances.

10,706. I do not ask you to do so, but I wanted to know whether the farmers in your neighbourhood

Mr. T. Parker. 2 Mar. 1894.

around you have been specially hit by the agricultural depression?—Those farmers farming dry land have felt it more severely than those who have been farming clay land.

10,707. I understand you yourself have farmed fairly well, that is, you have applied bones and used cake freely?—That is so.

Compensation for high farming.

10,708. One of your points with regard to the tenants' improvements would be, I suppose from your evidence, that they should have further compensation for continuous high farming over a period of years, raising the value of the grass on their farms for instance?—I did not follow you.

10,709. For better husbandry than the ordinary standard you would give compensation?—Certainly I would.

10,710. In addition to specific acts of improvement?—Yes.

10,711. There was a point which I did not quite clearly understand about this 429*l.*, the previous rent, and the 499*l.* 17*s.* 6*d.*; under this agreement, is it your contention that that raising of the rent from 429*l.* to 499*l.* to a certain extent confiscated a part of the value of your improvements?—Certainly it did.

Compensation for improvements on witness's farm.

10,712. That is, you think, that the allowance of 70*l.* 2*s.* 6*d.* did not cover the value of your improvements, and that the rise of 70*l.* 2*s.* 6*d.* over the previous rent amounted to taking away from you part of the value of those improvements?—My contention is that in equity they were not entitled to raise my rent one farthing.

10,713. Over the 429*l.*?—Over the 429*l.*

10,714. Your contention is that you ought to have been left in the enjoyment of those improvements?—That is my contention.

10,715. (*Chairman.*) For how many years?—I think the tenancy at the present time should have been at a reduction. Different farms on the same estate have been reduced; I could prove that.

10,716. (*Mr. Channing.*) I was going to ask you that question. Of course I do not want to press you with regard to other tenants, and any questions you do not wish to answer which affects their interests you need not; but I should like to ask you, have the other tenant farmers on the estate had their rents raised or reduced, or what?—They had their rents reduced, I know, in three particular instances.

10,717. What is the rent they have been paying, and are now paying, per acre as compared with your own rent?—I believe that the highest rented farm on the estate is about 2*l.* an acre; that is about on an equality with its full valuation.

10,718. With the 570*l.*?—Yes. But allow me to explain that it is quite a differently situated farm, or rather that the natural quality of it is quite different, although the homesteads are comparatively close.

10,719. Would you explain that a little further? Do you mean to say that your own land was very much better than the others, or what?—No; this other farm that I am alluding to now is a farm which is naturally of a better quality than mine—of a better character, and upon which the tenant has not been called upon to effect any improvements. The farm which I have been occupying is in a good state of cultivation, consequently its value has been raised through my outlay.

10,720. Naturally it was not?—Naturally it was not of nearly so high a value as this adjoining farm.

10,721. Have you made any claim for unexhausted improvements on leaving now?—Yes, I have made a claim.

10,722. What was your claim?—The total claim was 290*l.* 16*s.* 9*d.*

10,723. That was for improvements under the third part of the schedule, I suppose?—Yes, I can give you the items, which are not many. One was for planting a new orchard—that was the only improvement I had effected with the written consent of the land agent. I claimed for the unexhausted value of oil cake, cotton cake, and other feeding stuffs 137*l.* 1*s.* I also claimed for the unexhausted value of lime 18*l.* 6*s.* 8*d.*, and for the unexhausted value of bones 95*l.* 4*s.* 1*d.*, that amounts to 290*l.* 16*s.* 9*d.*, including the orchard claim.

Counter-claims.

10,724. You referred I think to some clause in your agreement which gave the landlord special power with regard to counter claims did you not?—Yes.

10,725. Was that made use of by the landlord in counter claiming against you?—Yes. I have here the landlord's counter-claim, and there is one item in it which rather startled me when I saw it, amounting to 1,130*l.* This is how it is worded, "penalty for sale of "hay and straw in the years 1892 and 1893."

Mr. T. Parker. 2 Mar. 1894.

10,726. (*Viscount Cobham.*) Is this matter still pending?—No, it is settled, but the day of appeal I think expires to-morrow; either party has the power of appealing within seven days after the award is given.

Compensation for improvements on witness's farm.

10,727. (*Mr. Channing.*) What is the result of the award?—This is the award. This is supplied to me by my arbitrator. I believe it is correct, and I shall have to ask you to accept it as correct; although it is not stamped. It is a copy of the stamped agreement.

10,728. Was there an umpire in the case?—There was an umpire appointed but he was not called in. The total counter-claim was 1,492*l.* 12*s.* 6*d.* I can give you the particulars if you think it necessary; they are not important except this 1,130*l.*, and one item of 40*l.* I want to make an observation about the claim for rent. They claimed 285*l.*; I explained before that at the last half-year's audit I withheld a sum of 61*l.* 7*s.* 6*d.*, which was made up of two equal sums of 30*l.* 13*s.* 9*d.*, which I contended that I had overpaid. My contention was allowed before the arbitrator. They claimed 285*l.*, whereas what they were entitled to and what they received was 253*l.* 11*s.* 3*d.* That is not very material. Then they claimed for tithe, which of course I agreed to, and they claimed 40*l.* for ploughing up land prohibited by agreement after notice to quit. That is wiped out because the agent discovered his mistake, and that I had only been ploughing the land that I had been allowed by my agreement to plough. The last claim is for 1,130*l.*—"Penalty for sale of hay and straw "in the years 1892 and 1893."

10,729. Was that claim made under the form of penal rents in your agreement?—Yes, that is it; under the clause here.

10,730. Was it the maximum amount of penal rents?—Yes, 10*l.* per ton.

10,731. Would you state what the amounts awarded to you and the landlord were?—For planting the new orchard, for which I claimed 40*l.* 5*s.*, I was awarded 38*l.* For the unexhausted value of lime for which I claimed 18*l.* 6*s.* 8*d.*, I was awarded 16*l.* 16*s.*; and for the amount claimed for bones, 95*l.* 4*s.* 1*d.*, I was allowed all but the penny. For the unexhausted value of the oil cake, cotton cake, and other feeding stuffs, I was awarded no compensation; for half-year's rent due they received 253*l.* 11*s.* 3*d.*, and the tithe, which I never disputed, making 287*l.* 11*s.* 3*d.*; then "for "ploughing up land prohibited by agreeement after "notice to quit we award no compensation." The claim was 40*l.* "For penalty for the sale of hay and "straw in the years 1892 and 1893 we award no com-"pensation." That claim was for 1,130*l.*

10,732–3. (*Mr. Everett.*) They struck that out?—They struck that out.

10,734. (*Mr. Channing.*) What is the total award to yourself and to the landlord?—I am awarded 150*l.*, and the landlord is awarded nothing.

10,735. Nothing at all?—Nothing at all.

Counter-claims.

10,736. In your opinion, does the fact that counter claims to that extent are capable of being made by the landlord or land agent deter tenants from applying for compensation under the Act?—The counter claims very often do deter tenants, because they are afraid to take them before a court. The surroundings in my case were I believe so glaring that their own arbitrator was satisfied that there had been no dilapidations arising through my management, and what he saw in the place, and what I produced evidence of, that I had consumed and brought on to the place from other land, satisfied him, so that he wiped out the whole claim.

Capricious evictions.

10,737. As far as I can make out, to sum up your case, you think the sitting tenant has no proper protection for his improvements under the present state of the law, and you also think, I understand, that tenants are liable to capricious eviction?—They are; that is my contention.

10,738. Taking those two together at any time, if a landlord chose to make use of his power under the law, he could practically confiscate a great portion of the tenant's improvements?—The greater portion of them.

Mr. T. Parker. 2 Mar. 1894.

10,739. Tenants in moving from one farm to another lose a great deal, and they lose in business, also, do they not?—It is a very serious matter is an eviction—a removal.

The three F's.

10,740. That means that a very serious fine is held over the heads of tenants in the present state of the law?—That is so.

10,741. So you support, as I understand, fixity of tenure and free sale, and all the rest of it, and fair rents?—Yes.

10,742. On the ground that it is the best form of protection for those evils?—My contention is that upon the establishment of an Arbitration Board or Land Court two of the "F's" would naturally follow, and immediately follow, those are fair rents and fixity of tenure, because the landlords would find that it would be too expensive a process to indulge in, to evict a tenant through caprice.

Valuation of farms.

10,743. (*Captain Owen Thomas.*) Were all the farms re-valued on this estate in 1884?—No.

10,744. Only yours?—Only mine, I believe.

10,745. Did you ask for a re-valuation?—I did not.

10,746. Why was your farm re-valued?—I am not allowed to give the reasons, I believe.

10,747. Was this valuation made by a competent valuer?—It was made by the agent to the estate. I had no voice whatever.

10,748. You had no voice whatever in making the selection of a valuer, I mean?—Not at all.

10,749. Is the agent a practical agriculturist?—Not very practical. He is not agent now to the estate; he left a short time afterwards.

10,750. In which way did he arrive at this valuation, do you know?—I do not know, I am sure. I should not like to give an opinion; it would not be very favourable to him, and I would rather not give an opinion. (*See reply by landlord*, Appendix A., XXVIII.)

10,751. What do you think would be the real value of the farm now if it was let minus the improvements by the tenant?—I do not think at the present moment it would be worth more than 30*s.* an acre.

Mr. T. Parker. 2 Mar. 1894.

10,752–3. Did this farm pay you during the last 10 years, or at least since 1884?—Well, I have made money, but not very much.

Value of improvements on witness's farm.

10,754. (*Mr. Everett.*) Shortly, I understand your case is this: the rise of 70*l.* a year, which took place in your rent in 1884, you considered was entirely due to improvements which your family had made upon the place?—Entirely.

10,755. And therefore belonged to you?—Yes.

10,756. If you capitalise that at 4 per cent. I see that comes to 1,750*l.*, but under the agreement you signed in 1884 you contracted to part with it virtually for 500*l.*, that is for seven times 70*l.*?—That is it.

10,757. They allowed you to get two more years at this 70*l.*?—But I did not actually receive 70 farthings, you see. I was compensated by paying an increased rent; a peculiar method.

10,758. But you consider that you really have lost the difference between 500*l.* and 1,750*l.* in that which was equitably yours?—I should not like to state the sum at 1,750*l.* because I do not know the scale you have calculated it upon.

10,759. I was calculating 4 per cent. at 70*l.* a year?—For how many years?

10,760. For ever. You had added a value of 70*l.* a year to this farm according to the heightened rent which they put upon it?—Yes.

10,761. Capitalising that at 4 per cent., that comes to 1,750*l.*, does it not?—Yes.

10,762. (*Viscount Cobham.*) But the improvements would not last for ever?—They would not. I think that is a high sum to fix upon them.

The witness withdrew.

Adjourned to Thursday next at 12 o'clock.

Twentieth Day.

Thursday, 8th March 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Charles Isaac Elton, Esq., Q.C.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
William Cutlack Little, Esq.

Hebbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. R. G. Wyatt. 8 Mar. 1894.

Mr. Robert George Wyatt, called and examined.

Mr. R. G. Wyatt. 8 Mar. 1894.

10,763. (*Viscount Cobham.*) You are a tenant farmer, I believe, occupying 460 acres in the parish of Whitestaunton?—Yes.

10,764. What part of Somersetshire is that?—It is adjoining the two counties of Dorset and Devon. It is right on the boundaries of Dorset and Devon.

10,765. What is the nearest considerable town?—Taunton is the nearest considerable town. Chard is our nearest market town.

10,766–7. What distance is Chard?—Three-and-a-half miles.

10,768. Are you representing any Farmers' Associations?—No, but I was guardian for something like 20 years. I sat on the assessment committee for something like 20 years.

10,769–70. But you believe that you are speaking the sentiments of those in your own district?—Yes, and of different associations.

Mr. R. G. Wyatt.
8 Mar. 1894.

Existence of depression.

10,771. As to the existence of depression in your neighbourhood, is it of a serious description?—Yes. I have ascertained from the books of the board that in the adjoining parish to me with only 1,100 inhabitants there are 28 vacant cottages, and there have been 20 cottages recently pulled down.

10,772. Cottages that were previously inhabited by agricultural labourers?—Yes, principally.

10,773. What is the cause of those cottages becoming vacant?—The low prices.

10,774. Is there less demand for agricultural labour?—Yes, certainly.

10,775. Is that owing to arable land going down to grass?—A lot of arable land has gone out of cultivation.

10,776. Out of cultivation altogether?—Yes.

Characteristics of district.

10,777. And is much of it going down to grass?—It is supposed to be down to grass, but then it does not bear anything.

10,778. It has been left to itself?—Yes.

10,779. Has much land been laid away to grass besides?—Not a large quantity in my district.

10,780. What is the quality of the soil in your district?—It is a cold hill district principally.

10,781. (*Mr. Elton.*) About 800 feet above the sea, I suppose?—I should think all that.

10,782. (*Viscount Cobham.*) Is it mostly under grass of one sort or another?—No, about half arable and half grass, I should say, taking ever so many parishes just about there.

Reduction in rent.

10,783. The rents, I presume, are falling considerably?—Considerably.

10,784. Can you tell us what the average fall in rents has been in your experience?—I think they must have fallen about 40 per cent. I and my family are connected with the land, and in every case I think we have dropped about 40 per cent. I think my own has dropped nearly the same amount.

10,785. You are speaking of a somewhat exceptional part of Somersetshire then, are you not?—The best land in Somersetshire has not gone down a great deal in value, not the best part of it. It is only what I call the indifferent land that is going down so much, because it is more expensive to grow crops.

10,786. I think one associates Somersetshire land with rich pastures, as a rule?—The rich pastures of Somersetshire let nearly as well as they have for a great many years.

10,787. They have not fallen to anything like that extent?—No, they have not fallen to anything like that extent.

10,788. You are speaking of your own immediate district?—I am speaking of my own immediate district; and a large portion of Dorset is the same.

Farms unlet.

10,789. Are there many farms vacant?—Not many in my neighbourhood—very few in my neighbourhood.

10,790. There is still competition for them, is there?—No, not much competition for them; I think most of the landowners in my district try to meet the tenants as much as possible.

10,791. They do their best to keep their tenants?—Yes.

10,792. But do you know of cases where farms are vacant?—Not in my district—none at all.

Uncultivated land.

10,793. I thought you said a good deal of land was going out of cultivation?—It is not out of cultivation but they do not make anything.

10,794. You mean that on many of the farms where there are still tenants the worst lands have a tendency to be left to themselves?—Yes.

10,795. They do not pay to cultivate?—They do not pay to cultivate.

Size of farms.

10,796. What is the average size of the farms in your district?—Just in my neighbourhood they average about 150 to 500 acres.

System of farming.

10,797. How are they cultivated?—On the four field system principally.

10,798. I suppose there is not much dairy farming?—It is mixed as a rule.

10,799. Are the farmers modifying their system of farming in consequence of the depression?—Yes, a great deal.

10,800. In what directions?—They do not use so much labour; a great many of them do not lay out to the extent on labour that they used to, and consequently they cannot keep so much stock. I should say there is not so much stock kept in our neighbourhood by something like 10 or 15 per cent., because if the land is laid down to grass it will not keep so much stock as it will if you grow roots on it. Artificial grasses are generally left now from two to three years, whereas we never used to leave them more than one year.

Mr. R. G. Wyatt.
8 Mar 1894.

10,801. The result of that is that less stock must be kept?—Less stock must be kept.

10,802. As to the growing of wheat, is that falling off?—That is falling off considerably.

10,803. What has taken its place?—Oats and barley.

10,804. Can you sell off your hay and straw?—There are no objections on the manor that I rent of, so far as I have heard.

Restrictions in cultivation.

10,805. Do you know whether there is much restriction elsewhere on the free cultivation of farms?—There is a great restriction.

10,806. In practice?—Yes, in practice.

10,807. Is there a good market for straw?—There is now an extraordinary market for it.

10,808–9. But I suppose that is exceptional?—There is always a market for it near towns.

10,810. And always for hay, of course?—And always for hay.

10,811. Is it your opinion that there should be fewer restrictions upon farmers?—Yes, it is. In every case I am mixed up with they have all got freedom to sell off everything.

Position of tenants.

10,812. Are the tenants generally, do you consider, in a very poor financial condition?—A great many of them, a large proportion of them, are.

10,813–4. Have many left their farms?—Yes, a great many.

10,815. Have they lost their capital?—Those that have gone have—all of it.

10,816. They kept on until all their capital had gone?—Yes.

10,817. Notwithstanding those very large reductions of rents?—Yes.

Labour.

10,818. What has been the effect of the depression upon the agricultural labourers?—Nothing, except that so many of them are not employed; not the least effect else.

Wages.

10,819. Do those that are employed command the same wages?—They command just the same wages.

10,820. Do you find that the best men remain?—No, it is the worst of them that remain.

10,821. You find that the quality of labour, therefore, is falling?—A great deal.

10,822–3. You entertain no doubt on that point?—Not the least doubt.

Foreign competition.

10,824. Now as to the causes of the depression, what are they, in your opinion?—Foreign competition.

10,825. You do not lay so much stress upon bad seasons?—Not so much on bad seasons as I do on foreign competition.

10,826. Do you consider that as regards the question of live stock, the recent season has had much effect?—No, except bullocks this season.

10,827. Owing to the shortness of keep?—Owing to shortness of keep in the summer; but at the present time I do not consider that there is any effect, except, as I say, with regard to bullocks.

10,828. The prices of corn have been affected solely, you consider, by the foreign competition?—Yes.

10,829. What other disadvantages do you consider that the farmer labours under, as to the burdens on land, for instance?—There are too many burdens on the land; more than the land could bear on any terms whatever.

Rates.

10,830. What alterations should you say should be made in the law with regard to the rating of the land?—I cannot see why the land should bear any portion of the sanitary rate whatever—not the least. Then I do not see what the land should have to do with the schools.

Mr. R. G. Wyatt.

8 Mar. 1894.

10,831. And other local charges such as those for vaccination?—Yes, vaccination and police rates.

10,832. You would consider the burden of local expenditure should be thrown more generally upon all classes of property?—All classes of property ought to bear those.

Local government.

10,833. You do not see much objection in the result which would follow; that the management would be more centralised and less local?—I fancy that the law is driving too much for local management at the present time. I consider that they have been making too many offices at the present time. Since I have been in business, even at the union, the increase in what I call officers' charges, is something considerable.

10,834. And you would be willing to give up a large share in the management of local administration if you could be relieved at the same time of a portion of the charge?—Yes.

County Council expenditure.

10,835. What has been the result of the institution of County Councils upon the rates?—A great waste of money in all directions.

High roads.

10,836. In what directions?—In laying out a large amount on the roads at a time when, as I consider, the ratepayers cannot bear that amount. With regard to technical education also, there have been very large amounts laid out.

10,837. Would you confine yourself to the roads in the first instance. Has your County Council taken over the whole of the main roads?—They have taken over the whole of the main roads.

10,838. From the first?—From the first.

10,839. With the result that a largely-increased expenditure has taken place?—On those main roads it has.

10,840. Have not the main roads improved considerably?—Certainly, they have improved considerably.

10,841. Upon what facts do you base your statement that there has been gross extravagance in the management of the roads. Do you consider that much, too much money has been spent in regard to the improvement that has been effected?—On just the main roads the brewers' and other people's vans and carriages drive about; and then there is the expenditure in steam rolling and other expenditure in that way. Where there are country roads they have not improved but deteriorated rather.

10,842. Is it the main roads you are speaking about?—On the main roads, as I say, they are laying out enormous sums in our district, just for what I consider the public good.

10,843. Are you an expert in the management of roads?—No, but I have seen a good bit of the management of roads.

10,844. Have you been a way warden yourself?—Yes.

10,845. Then you know something about it?—Yes, I know something about it, and I have pointed out roads where they have laid out more, because it has been a main road, than has been laid out for 30 years before, although 30 years ago it was a turnpike road, and the main road from London to Exeter.

10,846. That is a matter of administration purely?—That is a matter of administration with the County Council—nothing else.

10,847–8. You consider the County Council might be the proper authority to take charge of the roads, but that they should do it at a less cost?—At a less cost.

Technical instruction.

10,849. And as to the money spent upon technical education, what have you to say upon that subject?—We have seen not the least good result from it. If there is a technical education class it is mostly attended either by people who intend to get their living by teaching, or else they would be young ladies or gentlemen, who could well afford to pay for educating themselves.

10,850. I suppose you are speaking more of dairy classes?—Dairy classes and different classes of that description.

10,851. But you have agricultural classes and lectures, I suppose?—A few; but in our district we have had no funds with regard to it, not for a great many miles round there.

10,852. Do not the farmers attend those lectures?—No.

Mr. R. G. Wyatt.

8 Mar. 1894.

10,853. Not the younger farmers?—No. I have never known a farmer who has what I call learnt farming, but what he lost the whole of his capital. I never knew one to succeed yet, and I have known ever so many.

10,854. A considerable amount of money is allocated for agricultural purposes out of the technical education grant?—There is a certain amount of it, but I think it is generally considered a waste.

10,855. Have you any suggestions to make as to the better application of that money?—It ought to go to relieving the rates in some way or another.

10,856. Directly for the relief of the rates?—Directly for the relief of the rates.

10,857. And give up technical education altogether?—Yes.

Analysis of food, &c.

10,858. Have you no belief that in any hands, say in the hands of the department in London, this money might not be expended with advantage to agriculture?—It may with regard to getting things and food analysed in a cheap way. If artificial manures or feeding stuffs, or anything like that were analysed at a very low rate, it might do a certain amount of good.

10,859. They are doing that now, are they not?—They are doing that now—they are paying half for samples. If I was selling milks, they would come and take a sample of my milk, and the county pays the whole of that. If I was going to mix a foreign substance with my butter, and a policeman liked to take a pound of my butter, he would say he is going to have it analysed at the county's expense; whereas if I was buying anything I cannot get it analysed at the county's expense, except it is English farm produce.

Model farms.

10,860. Are you in favour of the establishment of model farms in the counties?—Not the least.

10,861. You do not think that they would be of any advantage?—No, I do not.

Income tax.

10,862. I believe you have a strong opinion as to the incidence of the income tax upon landowners?—I think it is very hard upon landowners that they should pay income tax upon what they never receive.

10,863. And you also think it is hard that no allowance should be made to them in respect of money expended in respect of permanent improvements on their estates when assessing the income tax?—I consider that they ought to be allowed for off the property tax.

10,864. Are you in favour of any alteration in the present system of land tenure?—I do not see that any alteration is required except this, that the landlords should only stand the same as any other creditor with regard to the land.

The law of distress.

10,865. You think that the law of distress should be abolished then?—I do, because the landlord has got the chance now to take people who compete for farms, but who have got no means at all.

10,866. Do you think that has forced up the level of rents?—I think it did force up the level of rents at one time considerably.

10,867. Do you think there would be sufficient competition from men having capital for the land that would be left derelict by the non-competition of the smaller class of farmers with insufficient capital?—I do not see but what the large farms let quite as well as the small. I do not see but that the very smallest plots of land have gone down to very near the same in value as the larger ones.

10,868. Do you think that rents would have to be prepaid if the law of distress was abolished?—If the landlords like to say they should be prepaid they would not have the competition for them. The landowner I consider ought to stand the same chance as any other creditor.

10,869. You would be quite content that farmers should prepay their rents, and you think that no harm would accrue if they were men of sufficient capital?—No; I do not think it would.

Leases.

10,870. You say in your brief that many tenants have been made to sign leases or give up their homes; are leases general in your part of the country?—Not terms, not at the present time. 20 years ago nearly all the

Mr. R. G. Wyatt.

8 Mar. 1894.

land was let for terms of years, but now it is most of it let under yearly agreements.

10,871. Then when you say the tenants are made to sign leases or give up their homes, are you alluding to a past state of things?—A great many landowners consider the tenants at the present time under the same lease as previously. They hold without leases, but on agreement, at the present time.

Agreements.

10,872. But there is no pressure upon tenants now to sign leases?—There are agreements; they are just tantamount to a lease.

10,873–4. That is a matter of open contract between the landowner and the incoming tenant, is it not?—Yes; some of the landowners have got very large estates, and if a tenant wished to have any particular farm, or to continue to hold any particular farm, he must either give up or continue on the terms which the steward dictates to him.

10,875. Are new agreements forced upon sitting tenants, as a general rule?—No; but there are still the old ones hanging over their heads.

10,876. They do not feel any confidence that they will not be compelled to sign oppressive agreements in the course of their tenancy?—I consider that they ought to sign a fair agreement, but not what I consider a one-sided agreement.

10,877. But is that the case in a country where there is too little competition for farms, and where the landowner is only too glad to get a tenant? Do you know many cases of the landowners running the risk of losing their tenants by forcing upon them oppressive agreements?—I know plenty that would.

10,878. That would?—That would lose their tenants if they would not submit to their old agreements.

10,879. I rather understand you to speak of a past state of things before the depression arose?—Those agreements are still hanging over their heads.

10,880. Are they strictly enforced?—In some cases.

The Agricultural Holdings Act.

10,881. Should you advocate an alteration of the Agricultural Holdings Act of 1883?—Yes; I should.

10,882. In what direction?—So that it would be much more simplified than it is at the present time. For instance, if I were to take a farm under the Agricultural Holdings Act at the present time, and I go out in two years' time, although I may have improved the farm to what I should call a considerable amount, many hundreds or thousands, if I had any of the farm still dirty, if I had not had time to clean it, I mean to say if all the land had never really come in its course to be cleaned, before I should get any portion of mine the valuer would deduct for cleaning what I had not cleaned, although all the farm may have been foul when I took it. Do you understand me?

10,883. Yes. Is the Act generally adopted in your neighbourhood?—No; I have never known it adopted but two or three times, and then it ended in law suits.

10,884. Then do the tenants prefer their own agreements which you say in so many cases are burdensome to them?—They would rather have agreements than the Agricultural Holdings Act.

10,885. Are they more favourable?—They are more favourable.

10,886. Therefore the Agricultural Holdings Act would not apply to them?—No.

10,887. That does not speak much for the hardships of the present system in your neighbourhood, does it? However, as a matter of fact, you say that they prefer not to be under the Agricultural Holdings Act?—Yes, they do.

10,888. Have you known litigation to take place?—Yes.

10,889. With what results?—That the owner had the longest pocket, and he won the case after it took about two years to go on.

10,890. There had been counter-claims, I suppose?—Counter-claims and a dispute with regard to the arbitrator.

10,891. (*Mr. Little.*) Have you a case in mind?—Yes.

10,892. (*Mr. Elton.*) Was that in Dorset?—Yes.

Valuations at commencement and end of tenancy.

10,893. (*Viscount Cobham.*) Have you any suggestions to make in the direction of the improvement of this Act?—I suggest that on anyone taking a farm there should be a report on every portion of that farm as to the state it was in with regard to the fences, the cleanliness of the land, and the value of the manure that is left there. If that was entered into the schedule of the fields it would simplify matters when the tenant was going out, and he might farm right up home to the last day just the same as if he was going on from year to year.

Mr. R. G. Wyatt.

8 Mar. 1894.

10,894. That would be a considerable expense, would it not?—No; I do not consider so. It would be a very little expense, because, for instance, when most people take a farm there is a schedule of the fields made out, and I do not consider that it would be very much expense to state the condition of those fields.

10,895. Who would make this valuation?—I consider that the tenant should sign for each field and the steward for each field.

10,896. It should be done between the landlord and tenant?—I do not see why they could not do it between landlord and tenant and simplify it in that way.

10,897. You do not wish to call in an official valuer?—I do not see why you should at all.

Land Courts.

10,898. Is there any feeling in your part of the country as to Land Courts for the fixing of rents?—There is some with a great many people, but I think it is a very wide thing to go into. I do not think those that are asking for it would like any Government to step in and say that they should not turn a labourer out of their house at any time. I certainly should advocate that the landlord, if he is tired of a tenant, should have the chance of relieving himself. I certainly do not consider that a Government ought to step in with regard to a contract of that description.

Security for tenants' capital.

10,899. Do you think that the farmers would be satisfied if they were assured of a return of the capital that they had left in the farm?—Yes, I do consider so—the generality of them.

Agreements. Effect on labourers.

10,900. Under the present agreements, or under the present Agricultural Holdings Act they are not so assured?—They are not so assured, and it is very bad for labourers as well.

10,901. The labourers?—I say the present agreements are bad for the labourers as well, because when a tenant is going out of the farm he naturally would cease laying out any amount on labour, and the labourers would be thrown out of their homes.

Ground Game Act.

10,902. Have you any opinions as to the Ground Game Act of 1880?—I consider it a very good Act, but it does not go far enough. I consider tenants ought to have a right either by themselves or their friends to kill the game, or if they like to employ a servant to do it.

10,903. They may employ one person?—They may employ one person, but what is one person on a holding of say 1,300 or 1,400 acres to go out shooting rabbits where he has got perhaps 50 or 60 acres of cover attached to it?

10,904. Are there farms of that size in your neighbourhood?—One of my brothers farms between 1,300 and 1,400 acres. I think about 40 acres of it is cover. If he had not the right to go out with friends to destroy the rabbits the farm would not be any use.

10,905. Is it a country where rabbits naturally increase very much?—It is, and so would mine be if I had not had the privilege of killing them.

10,906. Are the rabbits encouraged by the landowner?—They are in a great many districts.

10,907. Speaking of this farm are they encouraged?—They are not in that farm. There have been several prosecutions, I may state, in my neighbourhood with regard to rabbits of a very recent date. Perhaps you would like to look at those reports (*handing in newspaper cuttings*).

10,908. Have the rabbits greatly increased upon this farm within your recollection?—No. They kill a great many thousands every year.

10,909. Who kill them?—The tenants; but then at some places they will not allow the tenants to kill them.

10,910. Since the Ground Game Act of 1880 has been passed has there been an increase or a decrease in the number of rabbits around you?—A considerable decrease.

10,911–12. We have not found that in many parts of the country, but that is the case with you?—It is the case in a large district around me.

Mr. R. G. Wyatt. 8 Mar. 1894.

10,913. You do not find that the farmers are rather inclined to preserve rabbits on their own account?—No.

10,914. The fewer the rabbits the better in your opinion?—Yes.

10,915. Have hares disappeared?—In some districts they have, but just in my immediate district they are nearly about the same. I think the tenants as a rule as well as the landlord like to see some hares about.

10,916. What are these papers that you have just put in?—I have put in the report of a very recent prosecution which shows how some landlords would serve the tenant under the present law with regard to ground game.

10,917. Will you tell us shortly what the case was—never mind the names?—Two sons were out rabbiting, which they considered they had a perfect right to do; one of them had a gun, and because the keeper thought the wrong one had the gun he was summoned and had before the magistrates, but the magistrates dismissed the case. The owner and his keeper were selling the rabbits, not a man employed by the farmer. The tenant put in a letter showing how many acres of corn adjoining had been entirely destroyed by rabbits, and that the man there was killing them by the cart-load and selling them in the market; yet he could only have one to kill them.

10,918-9. That was land adjoining a cover?—Yes, I imagine it would be adjoining a cover.

10,920. But still the magistrates dismissed the case?—They dismissed it in that case. Now there was a case tried last week where a man asked his father-in-law to come and kill some rabbits for him, and because he had not written out a notice to his father-in-law that he should shoot the rabbits the owner prosecuted the father-in-law and he had to pay the cost of the summons, although he did not consider but what he had a perfect right to be there.

10,921. Do you think there would be much winged game left on a farm if you allowed an indefinite number of men to come?—I think there would be quite as much or more; because I think the tenant would value the landowners too much. I think the tenant enjoys seeing the landowner kill game quite as much and I think they would enjoy it more provided, as I say, they had the privilege of going out and shooting the rabbits or hares for sport, instead of sending out a man merely for putting them into the pocket; because where they send out a man to do it they merely send out for the purpose of destroying them and they are sent to market and put into the pocket; whereas if they had the privilege of going out with their friends they would be better satisfied. A great many farmers do not shoot themselves; I never fired off a gun myself, and although I have three or four brothers who rent something like 3,000 acres, neither of us shoot ourselves; but at the same time we are pleased to see our friends there.

10,922. A thousand acres is a large extent of land, of course; it is a very exceptional holding; but is it your opinion that the existence of rabbits in too large a quantity is a serious evil in your neighbourhood?—Yes; in some places.

10,923. In some places, but is it a widespread grievance?—You see they are preserved in the covers, and they come out and destroy the crops. I consider an owner of property, if he is stocking his cover and destroying a crop belonging to a tenant, ought to pay for the damages done; in the same way, if my stock trespass on my neighbour's land, I have got to pay the damage.

10,924. Would you say, on the other hand, if a tenant farmer encourages rabbits, that he should be called upon to pay for any damage done by them to the landlord's property—to the fences and so forth?—Yes, I do.

10,925. I understand you are alluding rather more to individual instances than to a widespread grievance?—That is a widespread thing. I mean to say there is case after case that I could put before you of what I should call recent date.

Marking of foreign meat.

10,926-7. What would be your main remedy for the depression which you are speaking of, in addition to these what I may call palliatives, which you have run through?—I say all foreign produce ought to be marked and sold as such; if there can be no facility for foreign meat being marked and branded as foreign goods, they ought to be sold in a different shop, not adjoining where the English is sold—if there is no chance of doing it by marking it. That would be one thing.

Mr. R. G. Wyatt. 8 Mar. 1894.

10,928. Do you think that every joint could be marked?—I am rather afraid that the marking of it will not answer. I consider, myself, that it ought to be sold in different establishments—not in the same shop.

Licensed establishments.

10,929. Do you mean that an establishment should have a license to sell one class of meat and no other?—Yes.

10,930. Under heavy penalties? — Under heavy penalties.

10,931. Do you see any other mode of meeting the foreign competition?—I think they will have to go back to protection, that is my opinion, or still more, labourers will have to leave the country districts for certain; that is, providing the present low prices continue.

Protection.

10,932-3. Is that a pretty general feeling among your neighbours?—Universally so. I think the malt tax would give a certain amount of remedy. At the present time the brewers have got what I call a monopoly. They hold nearly the whole of the public-houses in the whole country. I have understood that in 1872 they only used about 1 cwt. of sugar to 193 bushels of malt, but in 1892 they used 1 cwt. of sugar to 27 bushels of malt. That is increasing at a very rapid rate, so that they will be soon doing without malt altogether.

Malt tax.

10,934. You would like to return to the old malt tax?—Yes, I should.

10,935. That was hardly the opinion of farmers before the abolition of the malt tax?—I am aware of that.

10,936. Can you grow good malting barley on your farm?—Not good—not first class quality.

10,937. But good enough for malting?—Good enough for malting.

10,938. I believe you wish to say something as to the railway rates on agricultural produce?—The railway rates on agricultural produce are too much. I remember some years ago, about two years ago, they doubled the rates in about two days without giving any notice.

Railway rates.

10,939. On all farm produce?—On a great deal of farm produce.

10,940. That was the beginning of last year?—That was the beginning of last year, or the year before, but then they have gone back to near about the old ones, though it is higher than it was previous.

10,941. They are somewhat higher still?—They are somewhat higher.

10,942. You have put in a paper dealing with the various rates in the parish of Crewkerne in the Chard Union which is rather instructive. I see under the head of school board precepts the rise has been from nothing at all in 1878—when, I suppose, there was no school board?—There was no school board then.

Rates.

10,943. In 1879 it was 306*l.*, in 1880 it was 501*l.*, and in 1893 it was 422*l.* Has that been coincident with an increase in the population?—No, there is very little increase in population.

10,944. Is it in consequence of the greater demands from the Education Department?—Yes.

10,945. I suppose there are still some further demands in prospect?—There are sure to be if they appoint fresh officers.

10,946. Do they propose now to spend considerable sums of money for structural or other improvements to schools?—That is so, in nearly every district.

10,947. Under the head of sanitary special precept there was none at all in 1878; was that the time of the passing of the Act?—I think that is just about the time it was passed.

10,948. That began with 250*l.* in 1879; there has been a pretty constant rise, but since 1890 it has risen from 585*l.* to 1,369*l.*?—Yes.

10,949. Is there anything special to account for that?—They cannot get rid of the town refuse. They have got some factories there and they cannot get rid of it, and no engineer that we have had can do so.

10,950. Is the town increasing rapidly?—No.

10,951. (*Mr. Elton.*) Is it due to a long litigation?—No, that all comes out of the general fund; that would not come out of the special rate.

Mr. R. G. Wyatt.
8 Mar. 1894.

10,952. (*Viscount Cobham.*) Surely the rise in four years from 585*l.* to 1,369*l.* must be due to some special cause?—They have been laying out a great amount of money there in experimenting how to get rid of the refuse of the town.

10,953. Without any definite result as yet?—Without any definite result.

10,954. Are many farmers rated to these rates who derive no benefit whatever from the expenditure?—Yes, I know ever so many, and some to a considerable amount.

10,955. (*Mr. Little.*) What is the rateable value of your district, do you know?—I do not think I have the figures here.

10,956. (*Viscount Cobham.*) The general rate has risen from nothing at all in 1878, 1879, and 1880 to 315*l.* in 1893; and the burial board precepts began in 1879 at 150*l.*, and have reached 340*l.* Many farmers have to contribute to all these rates without deriving any benefit except, I suppose, from the school board?—Yes, except the school board.

10,957. You say you have found in respect of school board and burial board precepts that the tenants on Lord Paulets agricultural property have paid 1,254*l.*, although the population is less than 200?—Yes; the population is 5,000 I see in the parish of Crewkerne.

10,958. The total population being 5,000 for the entire parish?—Yes.

10,959. And you also say that not a halfpenny of the 10,366*l.* called for sanitary purposes has been expended near Lord Paulet's property, and you know one of his tenants who has paid some hundreds towards paying off loans borrowed for sanitary works; is that so?—Yes.

10,960. As to your own rates, how have they been affected; have they risen or fallen in the last 15 years?—They are near about the same.

10,961. You do not come into one of these urban districts?—No, the only one that we pay in our parish with regard to that would be the general sanitary rate.

10,962. But the total result has been that you have not been much affected?—Not much affected.

10,963-5. Whatever rise there has been has been made good by the Imperial subventions?—Yes. Then the owner in our district pays the whole of the expenses of the school. That would mean something like 6*d.* in the pound.

10,966. (*Mr. Elton.*) I believe your family has been engaged in farming for a considerable time?—Always.

10,967. And that between them they hold a large amount of land in Somerset and Dorset?—Yes, and in Devon.

10,968. You have had great experience I believe?—Yes.

10,969. What did you say the size of your brother's farm was—the Dorset one?—One of them is renting rather over 1,300 acres, and the other about 900.

Characteristics of district.

10,970. I wanted you to tell the Commission a few words more about the nature of the district in which we live. It is a hilly district you said, and that is all you said, but it is a range of hills with a good deal of dairy land intermixed, is it not?—Yes, and I think the tithes rather want to be adjusted.

10,971. I will come to that in a minute. Now I want to get the district described a little better; how many miles long is the range?—A great many miles long.

10,972. From Chard to Wellington?—Yes, from Chard to Wellington, or from the river Tone to Axminster it is a range of hills.

10,973. That is a very large district?—Very large.

10,974. Taking in part of Devon, but mostly in Somerset?—Yes.

10,975. The hills are what they call breeding hills, are they not?—Yes.

10,976. They are used for bringing up a good deal of young stock?—Young stock and sheep.

10,977. The valleys are used as dairy lands?—Yes.

10,978. Sheep farming is carried on to a considerable extent?—Yes.

10,979. I think one of your neighbours has been very successful with sheep; he got prizes the other day, did he not?—Yes, he got all the prizes at Smithfield in that class, but you see mutton has gone down rather over 50 per cent. in the last few years. The decrease in price is over 3*d.* per pound.

Mr. R. G. Wyatt.
8 Mar. 1894.

10,980. I know about the loss, but what I am wanting now is to get the description, because Lord Cobham said it was an exceptional district, and I am going to show that it is rather a typical district of half of Somersetshire, because half of Somersetshire, I suppose, is hills, is it not?—Not half of it, I should think.

10,981. Is it not?—No, it is a large valley.

10,982. It has got Exmoor in it, and the Black Down Hills, the Quantock Hills, and the Brendon hills?—Yes.

Dairying.

10,983. Would you mind telling the Commission very briefly the peculiar dairy system of the country; they are generally let to a dairy farmer, I believe?—A large portion of them are let to dairymen, the farmer finds the cows and lets them to dairymen at so much per head.

10,984. How much would that be, speaking roughly?—According to the districts, from 10*l.* to 12*l.* If any particular one of those cows is not good enough, or if it loses anything in regard to the milking qualities, or one should die, the farmer has got to replace it at once.

10,985. (*Sir Nigel Kingscote.*) Who has the calves?—The dairyman has the calves, the dairyman takes the whole produce of the cows.

10,986. (*Mr. Elton.*) What is the arrangement about the pigs?—The dairyman takes all the pigs.

10,987. (*Mr. Little.*) Does the farmer reserve any of the calves?—If he reserves any of the calves for breeding purposes, he either agrees to buy them off the dairyman at market price when they are a certain age, or in some districts he is under agreement to take them at so much per head, and to give so much per head to the dairyman for keeping them.

10,988. (*Mr. Elton.*) Is there any peculiar arrangement about the butter or the cheese?—No, the dairyman takes the whole of that.

10,989. I thought there was some arrangement sometimes about the pigs that were fed on the butter milk?—No.

10,990. He has them all?—He has them all.

10,991. The farmer has to find them a run, and so on?—The farmer finds sufficient food for carrying the dairy through the season, and if the ground that the dairyman is allowanced to does not bear sufficient, the farmer has to let him have other ground to run on.

10,992. Or to buy artificial food?—Yes.

10,993. Is that system, which is a very old one, decreasing at the present time?—I think it is rather decreasing.

Sheep-breeding.

10,994. What is the breed of sheep chiefly?—A large proportion of the Somerset sheep is what they call the improved Somerset and Dorset horned; they are considered very prolific.

10,995. There is a mixture of the Dorset horned and the Down, is there not—a cross?—No, I think it was originally a cross with the Devon. The Dorset horns, I think, were crossed with the Devon, which makes a rather larger size than the old Dorset horn is, but I think it is generally classed by the Dorset people where they keep the horned flocks——

10,996. I know about the Dorset people, but I am talking about this particular district, the Whitestaunton district?—They are always accepted as Dorset horns.

10,997. They are accepted as Dorset horns, but they have got one cross?—I expect so, years ago.

Rural depopulation.

10,998. Will you just tell us something further about the adjoining village which you mentioned in which there were so many cottages vacant; you employed a good many labourers from there yourself, did you not?—I used to have a great many of my labourers from there.

10,999. And do you have so many now?—Not so many—I do not employ so many as I used to.

11,000. There are no minerals in our part of the county, are there?—No.

11,001. In some parts of Somerset, I daresay, you know great changes have taken place owing to the iron ore being given up—I mean the iron mines at Brendon, and so on, but perhaps you do not know that?—I do not know that.

Mr. R. G. Wyatt. 8 Mar. 1894.

11,002. At any rate that does not exist in our part?—No, it does not affect the labourer in our part in the least.

11,003. You think it is nothing but agricultural causes which have led to this parish being more or less depopulated?—That is the only reason I can see.

11,004. They have some small factories, I think?—They have some small factories, or else it would be more depopulated.

11,005. There is the wool industry,—I mean wool stapling?—That is given up.

Life-hold houses.

11,006. Was this one of the parishes where the houses were held on the life-hold system a great deal?—A great many were held on the life-hold system.

11,007. Do you consider that that depreciated the value in course of time of the village; because we have been told that the life-hold houses were always allowed to fall into decay and ruin, and to tumble down at the end of the holding?—So they were, there is no doubt about that.

11,008. Do you think that has led to any change in the direction of people going away, because the houses have tumbled down?—Yes, I do.

11,009. But that system is now very much given up in that part?—That is nearly all given up now.

11,010. I think the manor belonged to the Ecclesiastical Commissioners?—Yes.

11,011. And they had a great sale there?—And cut it up into small holdings.

11,012. And offered the tenants their holdings?—Yes.

11,013 (*Sir Nigel Kingscote.*) Were those holdings taken up?—I do not think any of the tenants took them up.

11,014. (*Mr. Elton.*) Were they not taken up?—No, except one or two.

11,015. They sold a great deal of the land?—Yes.

11,016. And they made special terms to tempt the tenants by offering to let a great deal of the money remain on mortgage?—Yes.

11,017. And to be only paid by instalments?—Yes.

11,018. Yet you found that there was not very much competition among the tenants?—Not among the tenants.

11,019. There was about half left unsold altogether, was there not?—I should think nearly about half.

Ground game.

11,020. Then about the game. You have told us about that, but you were speaking of two counties, of your Dorsetshire family holdings and of your Somersetshire ones; the Dorset state of affairs of course is different, and there is a different soil, I suppose, where they have such an enormous lot of rabbits?—Yes.

11,021. You said your brother, I think, had shot some thousands?—Yes.

11,022. He makes almost a business out of it?—I do not know that.

11,023. I mean he has very large parties, at any rate?—Yes.

11,024. He keeps it as a game property to some extent, either for business or for pleasure; he has a great deal of shooting?—He has a great deal of fun out of it.

11,025. In your own district have there been no complaints of that kind?—No; no complaints.

11,026. About the cause of the diminution of the rabbits, the wet season of 1879, I suppose, had something to do with it?—I should think that that made a considerable difference.

11,027. In that part of England was not the rabbit very much diseased with the sheep disease?—Yes.

11,028. And they died in consequence?—Yes.

11,029. And never got up again?—They have never recovered since.

Low prices.

11,030. (*Mr. Everett.*) You attribute, I think, by far the principal part of the existing trouble to the low prices?—Yes.

Valuation at commencement and end of tenancies.

11,031. You told us in regard to the conditions under which you thought land should be hired that you would recommend a statement when a farm was entered upon of the condition of each field to be kept for comparison when the farmer left?—Yes.

11,032. Do you think that that is as good a way as can be desired of ensuring that the landlord shall not be wronged or the outgoing tenant done injustice to?—That is my opinion.

Mr. R. G. Wyatt. 8 Mar. 1894.

11,033. If he let the land get into a bad state the outgoing tenant would be fined?—Yes.

11,034. And if he has kept it in a high state, if he has improved it upon the state in which he took it he would be compensated?—Yes.

The malt tax and price of barley.

11,035. And the landlord's interest would be protected. I am obliged to you for advocating that, because it has always appeared to me to be the best way there is of handling the land as between the landlord and the tenant. Then you alluded to the malt tax, and expressed the opinion that we have suffered by the repeal of the malt tax; you also told us that barley has, to some extent, taken the place of wheat, the reason being, I imagine, because barley has not gone down so much as wheat has?—Yes.

11,036. Has not everything that we grow on the farm gone down to some extent, wheat, barley, oats, live stock, and wool; have they not all gone down?—All have gone down something like 30 per cent. or more.

11,037. Has not barley gone down less than the other things?—Yes; but I think there would be a lot better market for barley provided that the malt tax was put on again.

11,038. It looks a little singular to attribute to the repeal of the malt tax what fall has taken place in the price of barley when all those other articles of produce on the farm have gone down more than barley has?—I am well aware that barley has gone down less in value than anything else.

Protection.

11,039. Then in regard to protection, you frankly expressed your opinion that that was the real remedy for our complaint?—I think it must be.

11,040. Are you aware that there are other countries in Europe now enjoying protection where the farmers are in quite as bad straits as they are here; Germany, France, and Italy, for instance?—I am aware of that; but then in those countries there are not what I consider the facilities that we possess in this country with regard to selling the farm produce.

11,041. Do you think it would help us more than it has helped them?—Yes, I do.

11,042. Are you also aware that we had protection in England earlier in the century?—Yes; the thing was different then; I should be very sorry to see protection in what I call dry things. All I want to see protection for is in order that the land may be cultivated so that sufficient labour may be kept upon the land to keep it in a good state, not a bad one.

11,043. You want protection because you want a better price?—Not particularly because of the price as because the labourers should have something to do. Everyone is complaining that the labourers are driven into the towns, and as I say they are bound to be driven into the towns more if the thing cannot pay for growing; and as for growing wheat at something like 12*s.* a sack, English land I say is bound to go out of cultivation.

11,044. I was wondering whether you were aware that earlier in this century a similar fall of prices took place after 1819 to what is taking place now, and that the farmers of that day resorted to protection in order to save themselves, and that protection continued from 1815 to 1846, 31 years, and that during that period of protection there were no less than four inquiries into agricultural distress similar to that which we are holding now, and that they did not find that protection saved them from the distress. You perhaps have not had your attention called to that?—I have not had my attention called to that particular thing.

11,045. (*Captain Owen Thomas.*) Are you a tenant on a large or a small estate?—Only about 2,000 or 3,000 acres.

11,046. How long have you occupied your farm?—24 years.

11,047. Is it a pasture or a mixed farm?—A mixed farm.

Rent; and prices.

11,048. What is your present rent per acre?—I think it is about 17*s.* an acre, it used to be 27*s.*

11,049. What is the average reduction in your neighbourhood?—About 40 per cent.

Mr. R. G. Wyatt. 8 Mar. 1894.

11,050. What would you say the average reduction in farm produce would be?—I should say taking the average about 33 per cent.

11,051. Do you consider that the reduction of rent is in fair proportion to the reduction in prices?—Certainly not. There are three rents to be made before there can be anything else. I consider that if you take the produce at 33 per cent. or 30 per cent. less, and only take 40 per cent. off the other there is 90 per cent. difference. No farmer can exist on a mixed farm until he has made three rents.

11,052. Would you take all that out of the rent or out of something else?—I mean to say that a very large proportion of the last few years has been taken out of the tenant's capital. Some of them have had to take it out of their banking account, and out of money they may have had invested, and a great many of them have taken it out of the land, deteriorating it in value.

11,053. You told us that a great many farmers had lost all their capital and left their farms; what became of those farms?—Let to other people, most of them.

11,054. At a reduction?—At a great reduction.

11,055. Did those farmers apply for a reduction before it was too late?—I cannot tell you; they did not get a reduction enough for certain.

11,056. They must have known for some years that they were spending their capital?—They must.

11,057. This was not in your district, I understand?—Not in my immediate district.

Rates.

11,058. You also complained of the rates being very heavy; may I ask what is the system or custom of the assessment committee in your district in fixing a fair rateable value?—We take about 7½ per cent. off the real rent.

11,059. Has the rateable value been reduced in proportion to the reduction of rent?—Yes.

11,060. About 30 per cent.?—Yes.

Deteriorated cultivation.

11,061. Is the land as well cultivated in your district now as used to be the case formerly?—No, certainly not; especially as I say on many estates. I do not say in my immediate neighbourhood. But then I can go for seven miles where it used to be nearly all hill arable land, straight ahead, and now I do not think there are more than two or three fields of it cultivated; there is no labour laid out upon it.

The Agricultural Holdings Act.

11,062. (*Mr. Channing.*) I did not quite understand how you would wish the procedure of the Agricultural Holdings Act to be altered, or rather how you would wish compensation to be settled between the outgoing tenant and the landlord in case he had to deal with him?—I mean to say that if the majority of the country, through the Parish Councils or District Councils, wish to have what I consider a public surveyor, they ought to be able to do it, and whoever that surveyor may be when the farm is let he should be bound to go over that farm and make a statement with regard to every field.

Valuation at commencement and end of tenancy.

11,063. And would you employ the same man at the end?—Yes; or if that man was dead there would be the report on that particular field in the schedule.

11,064. Are you in favour of giving a free hand to a surveyor or valuer of that kind, to say how much the holding has been improved or deteriorated, or would you adhere to the schedule system with all these items and details in the Agricultural Holdings Act?—I think he ought to be the judge—not the Agricultural Holdings Act.

11,065. You would give him a free hand to say how much, on the whole, the farm had been improved or deteriorated during the time?—Yes, during the tenancy.

Ground game.

11,066. Then, I think, you said something about tenants, in some cases, not being allowed to kill rabbits. I should like to understand what you meant by that exactly?—As I say, in a great many cases a landowner, or the keepers that are under him, will only allow the tenant or one person, appointed in writing, to kill rabbits.

11,067. You mean, then, that the Ground Game Act does not go far enough?—It does not go far enough.

11,068. I did not quite understand your point?—In some districts in my neighbourhood there are gentlemen who come down and rent large tracts of shooting; they stock the whole of the coverts with game and rabbits, and the rabbits go out and do a considerable amount of damage. Now, if my stock trespasses upon the neighbours I have got to pay for the whole of the damage they have done, and I cannot see why the owner of those coverts, or the tenants rather, should not pay the same; I consider the tenant, whoever rented it, ought to pay for the damage.

Mr. R. G. Wyatt. 8 Mar. 1894.

Rent; and prices.

11,069. (*Mr. Dalton.*) I did not quite understand how you made out that your rent was not reduced to the extent that it should have been considering the fall in produce; you said there was a 30 per cent. fall in produce?—Yes; 30 per cent.

11,070. And I understand you think from that, that there ought to be a 90 per cent. fall in rent?—I should say quite 90 per cent. fall in rent.

11,071. There ought to be?—I do not say there ought to be.

11,072. If there was a fall of over 33 per cent. in the produce, you would say there should be no rent?—I mean to say that I have made no rent this year or two above the working expenses of the business.

11,073. How do you make it out that there ought to be three times as great a fall in the rent as in the produce?—Because every tenant must make three rents.

11,074. In what way?—We will take the rent as one of them; there is the labour, which is another of them, and there is the manure and artificial feeding stuff which is another of them; there are the three rents.

11,075. You have one rent which you pay to the landlord?—There is one rent I pay to the landlord, and there is another rent I pay to the labourers.

11,076. Then do you mean that you ought to pay your landlord 30 per cent. less, your labourers 30 per cent. less, and pay 30 per cent. less of the other matter?—We cannot take 30 per cent. less of the other matter.

11,077. You think then, that whatever the percentage of the fall in the produce be, it should be multiplied by three, and deducted from the rent that you pay your landlord?—I say it should for a person to make a profit on the farm.

11,078. He cannot make a profit without it?—No, he could not.

Reduction in expenses.

11,079. (*Viscount Cobham.*) I suppose you would set off against that fall of 33 per cent. in the value of produce the increased cheapness of feeding stuffs?—There is a little in that, but in a hill district you see we feed nearly the whole of our produce with what we grow, all except barley.

11,080. Your labour bill is less?—The labour bill is less, certainly.

Rates.

11,081. (*Mr. Dalton.*) What are the rates in the pound in your parish, do you know; take first the poor rate?—About 15 per cent.

11,082. I mean what is the rate in the pound now?—3*s.*

11,083. That would be altogether?—Altogether.

11,084. That is the poor rate, the county rate, and the highway rate?—Yes.

11,085. To what extent has the county rate gone up of late years?—I think it has gone up 4*d.* or 5*d.* in the pound.

11,086. Do you attribute that to the increased expense on the main roads?—A great deal of it.

11,087. I thought that in most counties the money that they receive from the Imperial revenue covers the cost of the main roads—it does not in your's, I suppose?—I do not know whether it does or not. I know the roads are maintained and I never could see how the County Councils could increase the rates so much if it were not for that.

11,088. You are quite sure they have increased it by about 3*d.* in the pound?—They have more than doubled it.

11,089. Then in Crewkerne, which you were speaking of, do you know what the aggregate rate in the pound is there? You have given us a great many figures as to the amount levied, but do you not know what it is in the pound?—I do not know what it is in the pound.

11,090. The land in that parish would be rated at a fourth for the sanitary rate, would it not?—At a fourth.

Mr. R. G. Wyatt.
8 Mar. 1894.

11,091. It would not be rated so heavily?—I am well aware of that.

11,092. Do you think it is unfair that it should pay any proportion?—I consider that it is very unfair to pay any proportion of it.

11,093. Is not the land worth more on account of its being so near the town? Does it not let for more in consequence?—No, it does not seem to.

11,094. As a rule, I suppose, it does?—I mean to say there is a lot of land there, a mile and a half or two miles out of the town, or what I should call three miles out of the town.

11,095. It may be that it is a big district, but the land which is close around the town, I suppose, is worth a good deal more in consequence?—It is let as accommodation land, not let as agricultural land.

11,096. It fetches a higher price?—It fetches a higher price just near the town, being let for accommodation land to tradesmen and butchers, and people of that description.

11,097. In those cases where it fetches the higher price, do you not think it is fair that the land should contribute to the sanitary rate?—I cannot see what the land has to do with the sanitary rate, because the land happens to be close to the town.

11,098. It contributes to all the rates of the district. Do you think it should contribute to the poor rate?—Yes, I do.

11,099. What distinction do you draw then between it being right for it to be rated for the poor rate and for the sanitary rate?—The sanitary rate is for the benefit of the town, and for carrying off of the people's nuisance. If it was in the country the landowner would pay the whole of the expense himself.

11,100. What do you think is one of the reasons why there is so much greater extravagance on the main roads? Would you say because the expenditure is spread over a larger area?—Yes, and each area is anxious to get all they can.

11,101. Would it not have the same effect if the local expenses were paid out of Imperial subventions, instead of being paid out of the rates in each parish; that is, if they ceased to be local, and were paid by a central authority, which is, I think, what you propose for sanitary and all those other purposes; would it not lead to increased expenditure in the same way?—I consider that house property in the district ought to pay the whole of the sanitary rate.

11,102. It is not the sanitary rate alone; you say in your proof, police, vaccination, lunacy, education, and registration as well?—I consider that ought to be paid out of the Imperial funds.

11,103. You know a great portion of it is now so paid?—I know a portion of it now is.

11,104. Probably more than half?—I consider the whole of it ought to be.

11,105. Would not that lead to increased extravagance?—No, I do not see that it would.

11,106. Not in the same way that the fact that the main roads are paid now entirely by the county rates has led to extravagance in your district in that respect?—No, because the police would be under superintendence the same as they are now, and they would receive the same pay.

11,107. But the county roads have been under the same control to a great extent; the county had to certify that the expenditure had been incurred before they repaid any part of it?—Yes, but a good many of the county roads used to be turnpikes, and those that travelled over them had to pay.

Rent.

11,108. (*Mr. Chaplin.*) Did I understand you to say that you have not made any of your rent this year?—Not when I have paid for the losses.

11,109. What?—Not until the winter is over.

11,110. Then, I suppose, if we were to see a further fall in prices, it would, in your case, cease to be a question of rent at all?—It is at the present time with me. If I thought prices were going to continue as they are now I should cease farming.

11,111. Even if you had no rent at all you could not make it pay?—No, I could not—not on arable land.

11,112. The reductions in your district, I think you said, were something like 40 per cent., and there are many farms vacant?—No, I say there are in a great many districts, and there are a lot within three miles of me that people do not do anything to because the tithe comes to more than the land is worth.

Mr. R. G. Wyatt.
8 Mar. 1894.

11,113. In fact there is very little competition for the farms?—No competition for that class of land.

Oppressive agreements.

11,114. Where that is the case, cannot a tenant who is not hampered by any existing agreement make very good terms for himself?—Not if it belongs to a large owner; they would rather see it uncultivated than they would alter their terms.

11,115. Has that been your experience?—It has.

11,116. In Somerset?—Not particularly in Somerset, but I think it is the general opinion.

11,117. You say they would rather not alter their terms; but you tell me there has been a general reduction in the rent of something like 40 per cent.?—Yes.

11,118. When you go to take a farm what is the most important item in your agreement that you first begin to consider; is it not the rent?—Yes, the rent.

11,119. Very well; then on your own showing you are able to make terms to this extent, that you can get a reduction of 40 per cent. in the rent. Do you mean to tell me that if on that most important point you can make terms, you cannot make terms on other parts of the agreement?—With a great many owners you could not.

11,120. You surprise me very much?—That is the case.

11,121. How do you account for that?—I cannot account for it only by the obstinacy of some gentlemen.

Compensation for improvements.

11,122. What you want, I understand, is that you should have fair compensation for the improvements you have made on the farm when you leave, and when you have not had the opportunity of reaping the advantage of them?—Yes.

11,123. If that is conceded to you, and if that is arranged in a simple manner you would be satisfied?—As far as I am personally concerned I should be satisfied.

11,124. You do not want to see anything in the nature of the Irish Land Bills in this country?—No, I do not.

Protection.

11,125. With regard to what you said upon protection I understand that you would like to see protection generally, and you specially mentioned barley. Would you be in favour of an import duty upon foreign barley?—Yes, and upon foreign wheat too; but I mean to say only so that it should pay for the labour of growing on the poor lands. I do not want to get it at what I call an extravagant price.

Duty on barley.

11,126. A suggestion has been made to us by one or two witnesses, that if part of the present duty upon beer was remitted and an equivalent revenue raised upon foreign barley, that would be in many districts a very material help to agriculturists. Do you share that opinion: do you think it would be of material assistance?—Doing what?

11,127. If part of the duty now raised upon beer itself was remitted and the equivalent revenue was raised by a duty upon foreign barley instead, would that be a material help to the agriculturist?—I do not consider that it would at all.

11,128. You do not think so?—No, I do not; I would be rather of the contrary opinion.

11,129. And why is that?—Because the large portion of the foreign barley is brought in for feeding stuff.

11,130. Then you think a duty upon foreign barley would not meet your purposes?—I do not think it would.

11,131. I thought just now you said you would like to see a duty on barley and on wheat too?—I say so long as it paid for growing.

11,132. So long as what?—So that it may be got to a price that the English crop may pay for the labour of growing it.

11,133. Where is the point at which it pays for growing?—It does not pay for growing.

11,134. No, but where is the point you are referring to,—do you mean after all rent has ceased and disappeared?—I should like to see a small rent so that the

Mr. R. G. Wyatt. 8 Mar. 1894.

landowner should have a chance to live and keep up his repairs. The expense of keeping up repairs is a considerable item I know to an owner of property.

11,135. You cannot make it quite clear to me, I am afraid, what your idea is as to the point where it becomes profitable to grow? How much rent must be paid first?—That is a difficult question to answer.

Cattle disease.

11,136. I will not press you upon that. Have you ever suffered from cattle diseases in your district, such as foot-and-mouth disease or pleuro-pneumonia?—Yes.

11,137. A recurrence of those diseases now, I suppose, would be very injurious?—Yes, it would.

11,138. Are you of the same view as many witnesses who have told us they would like to see all imported animals slaughtered at the port of debarkation in this country so as to prevent the possibility of any recurrence of disease?—I think we may get disease even if that is done.

11,139. Would you go further and prevent the import at all?—No, I should not.

11,140. What?—No, I should not have protection for the cattle so far as that.

11,141. I understood you to say that slaughter at the port would not be sufficient to prevent the importation of disease?—Disease would break out in this country without any accounting for it.

11,142. You are of opinion then that these diseases are indigenous?—Yes, certainly.

11,143. On what do you base your opinion?—I have had foot-and-mouth disease strike in my farm twice without any one near getting it. I have isolated and they have got well.

11,144. But you have never had a case of foot-and-mouth disease break out on your farm unless there have been other cases in the country?—Not without there have been other cases in the country, but then not within a great many miles.

11,145. Are you aware that it is held by the experts on this subject in the Veterinary Department of the Government and elsewhere, that these diseases are not indigenous but come entirely from abroad?—I am rather of a different opinion from those.

11,146. You are?—I cannot agree with their opinions.

11,147. Then you are not one of those who desire to see any more stringent measures taken to prevent the introduction of these diseases from abroad?—No.

Reduced farming.

11,148. You told us I think that farmers neither keep so much stock nor do they grow so much corn; that is all owing to the same cause, I suppose?—That is all owing to the same cause.

11,149. That it ceases to pay?—You see, owing to their not cultivating the land, they cannot keep so much stock. A few years ago the farmers were recommended to seed down the land to keep more stock, but seeding down the land means keeping a lot less stock.

Low prices.

11,150. I think your evidence generally comes to this, does it not, that the real cause of the depression is the fall in prices, and that the only remedy is some rise in prices?—Yes, that is the only remedy.

Dairying.

11,151. (*Mr. Little.*) You have told us that dairying it carried on to a considerable extent, and that the cows were let, did you say they make about 10*l.* to 12*l.*?—Yes, from 10*l.* to 12*l.*

11,152. What did they make 10 to 15 years ago?—From 12*l.* to 15*l.*

11,153. Then there has been a very serious decrease in the price which the cowman or dairyman pays to the farmer?—There has.

Restrictions in leases.

11,154. You spoke of the conditions of leases and agreements; what are the particular conditions that you complained of?—In some instances the owners bar the tenant from selling off any portion of the things; they bar them to crop fields except in some peculiar way or other; and they must consume nearly everything in some particular way.

11,155. Those are the principal complaints?—Those are the great ones.

11,156. That the farmer is compelled to farm in a certain way, and obliged to consume the products?—Yes.

11,157. That is very much relaxed now, is it not?—I think it is relaxed to a certain extent in many cases.

11,158. But it is still kept in the agreements?—Yes.

11,159. And it is held over the head of the tenant and may be the ground for a claim for compensation by the landlord?—Yes, I have known such cases not long ago.

Mr. R. G. Wyatt. 8 Mar. 1894.

11,160. But you would not prohibit such conditions by law, would you—you do not propose to forbid such agreements?—I should like the law to forbid such agreements.

11,161. You would like the law to interfere?—I should.

11,162. I thought I understood you that you did not want to interfere between the landlord and the tenant?—Not with regard to what rent he is paying.

11,163. But you would as to the conditions of letting?—Yes.

11,164. As to the conditions of cropping and the sale of produce, you would wish the law to interfere between the landlord and the tenant?—That is provided the tenant keeps his farm up to a certain standard.

11,165. Would you ask that the State should settle the terms upon which the landlord should let his land with regard to the cropping and the sale of produce?—Yes.

The Agricultural Holdings Act. Compensation for unexhausted improvements.

11,166. You said that the Agricultural Holdings Act was not made use of; do the agreements, of which you complain, give compensation for unexhausted improvements?—Not many of them.

11,167. When a tenant quits in your neighbourhood, what is he paid for?—In a great many cases for scarcely anything at all.

11,168. What is the term for quitting, what is the time of year?—Lady-day.

11,169. Does the incoming tenant have the right of pre-entry for sowing the corn?—Yes.

11,170. The winter corn?—Growing corn.

11,171. Is the manure paid for, or is anything allowed for it?—No.

11,172. Is nothing allowed for the artificial food that may be used?—There is in some cases, but not in many according to the agreements.

11,173. It is not usual to put in the agreement any condition for such compensation?—No, not as a rule.

11,174. If the tenants do not get it by agreement or by the Agricultural Holdings Act, they get no compensation?—They would get none.

11,175. You think that when a tenant takes a farm in foul condition if he leaves it clean, he should be be compensated for that?—Yes.

11,176. Then you do not consider that it is the duty of the farmer to keep and leave his land clean?—Yes, I do, to keep it clean.

11,177. I presume that if he takes the farm in a foul condition he knows the state of it before he takes it?—Yes.

11,178. And he takes it at a correspondingly less rent?—He would not if he only stopped there two years or three.

11,179. You mean he has not had time?—He has not had time to do it.

11,180. Then your contention is that if a man has not had time to reap the benefit of his improvements he should be compensated?—So he should otherwise.

11,181. If he has had time?—Yes.

11,182. We will say that he takes a farm in foul condition, and in seven years he leaves it clean, would you say he was then entitled to compensation?—I do consider he would be.

11,183. Even supposing he got a consideration in the rent he gave when he entered?—He takes it at the market value when he enters I imagine.

11,184. Does not the market value decrease by its being foul?—Yes, and would not the market value be increased when he is giving it up by its being clean?

11,185. Certainly; but the tenant makes an agreement with the landlord and he says, your farm is in very foul condition, I can give you nothing for the first year; you have heard of such a case as that I suppose?—I have.

11,186. Is he not paid in that way for putting it into condition?—It would be very poor pay.

11,187. Must you not assume that he is paid if he makes that agreement; would you not be compensating

Mr. R. G. Wyatt.
8 Mar. 1894.

him twice over if you first of all gave him a year's rent for clearing the land, and then paid him the difference between clean land and foul?—You would have paid him then.

11,188. You would pay him twice over?—Yes.

11,189. (*Viscount Cobham.*) I suppose you would allow it to be considered as a set off to the tenant's claim?—Yes.

Income tax.

11,190. (*Mr. Little.*) You have proposed that the income-tax should be levied only upon the net rent—the rent that the landlord actually gets?—Yes.

11,191. And you would allow him a reduction for repairs?—Yes.

11,192. You would do the same, I suppose, in the case of house property?—With house property the same.

11,193. House property would get a much larger reduction than land?—Not so large in proportion as you would imagine, I suppose.

11,194. The repairs upon house property would be greater than upon land?—It would, a certain amount, but not a great deal.

11,195. It would surely be larger?—I think there are a great many farm houses and cottages, and farm buildings now, that are let at present rents, that would wear out and would cost quite as much in repair per pound of rent as house property would.

Changes in system of cultivation.

11,196. (*Mr. Gilmour.*) Have the farmers in your part of the country struck out any new lines themselves during these times of depression?—No.

11,197. Do you think that there are any new openings that they might follow—any changes in their agricultural methods?—No, I do not see that there are.

Restrictions in leases.

11,198. Then those stipulations in the agreements are not the cause of preventing them changing the mode of their agriculture?—I certainly think they might change their mode of agriculture providing they had freedom to sell at any particular time they like. It would not be of any use for a tenant to hold over two or three years' hay at the present time, because if he did he has got to consume it all before he leaves; but if he was allowed to hold it over and had the chance of selling it, as hay and straw always rise in price occasionally, I consider it would be a great advantage to him.

11,199. If he were to do that without having to bring an equivalent back to the land again, would the land be kept in a proper condition?—They always do I imagine.

11,200. They always do what?—Always bring it back I imagine.

11,201. You imagine that?—Yes, that is the case; it must be the case.

Valuation at commencement and end of tenancies.

11,202. I understood you to say in answer to Lord Cobham that you considered the landlord and the tenant should agree upon the state in which every field in a holding was, and that it should not be done by an official referee?—I say they could or could not; they could refer it to a referee or make those terms themselves; but it certainly ought to be binding, and that statement should be entered in their agreement.

11,203. I am afraid I do not quite follow your answer. I said that I understood you to say in answer to Lord Cobham, that you would leave it to the landlord and tenant to draw up a statement when a man entered his farm of the state that every field was in, and then that that should be agreed upon, and that the state of the fields should be also agreed upon when the man left his farm when the tenancy ceased?—I think that would be fair.

11,204. Do you expect that those two would agree upon these matters so as to avoid the appointment of any official man to settle the matter?—I do not see why they could not. They would certainly have to appoint an official when the tenant went out.

11,205. They would have to have an official then?—They would have to have an official when the tenant went out, for certain.

11,206. But not when he entered?—I do not see that they would require one when he went there.

11,207. Would it not be a simpler way to have one referee to settle, whose opinion would be put upon record? If he is going to settle the matter when the man goes out, surely it is fair that he should settle the matter when the man comes in?—It would be a very large thing to go into—for instance, if an official had to take charge of 10, or 20, or 40 parishes, it would take him some time to make a field statement of them.

Mr. R. G. Wyatt.
8 Mar. 1894.

11,208. (*Mr. Clay.*) With regard to this question of having the fields scheduled of course generally the outgoing tenant's cropping is scheduled, is it not, and there would be no great hardship if he did call an extra man in, a referee or call him what name you like, to give him an index of the state of that farm when the tenant enters; that is your opinion?—That is my opinion.

11,209. So that when that tenant left, that document would go far to prove the condition of the farm, at the time of the entry, and the condition of the farm at the outgoing?—Yes.

11,210. That is your opinion?—That is my opinion.

11,211. With regard to the matter of assessing the compensation at the end of that time, would it satisfy you that an official referee appointed in that way, should go and do the work, taking that document in his hand and settling the increased or decreased fertility of the farm as between the entering and the going out?—Yes, that would do.

Compensation for unexhausted improvements.

11,212. With regard to a question that Mr. Little put to you if a tenant farmer entered into a farm foul, would you say he would get his compensation if he improved the farm?—He would then.

11,213. Then if the landlord let that improved farm, would he get his compensation in the increased rent, owing to the improvements?—Yes.

11,214. So that both would be benefited?—Yes.

The Ground Game Act.

11,215. Regarding the Ground Game Act, one person on the farm is allowed to kill game just now, but if one or two people on the farm were allowed to kill rabbits when they over-run the land, would that satisfy you?—I think if they are stocking the adjoining lands, it would not satisfy me, that is, if the owner preserves rabbits in coverts, and the tenant could not in any way whatever keep them from coming out and eating his crops.

11,216. You have to keep up your fences, and you have to keep your stock in have you not?—Yes.

11,217. If the landlord has plantations where he breeds stock, I do not say of what kind, but say rabbits or hares, why should he not wire fence his plantations, and keep that said stock in?—I think he ought.

11,218. And that would satisfy you?—Yes.

11,219. It would be only just and right that every man should keep his own stock on his own farm?—Yes.

Protection.

11,220. (*Mr. Giffen.*) Your motive for desiring protection is, to keep land in cultivation, and to keep labour upon the land?—Yes.

11,221. Is it in the interest of the agricultural labourer that you propose that?—I speak it as much for the agricultural labourer as for any other class. I think it would benefit all classes, not only the agricultural labourer, but the townspeople also.

11,222. But the agricultural labourer, I think you said, has not suffered by the depression?—There are not so many of them employed, but I do not believe that they suffer from it, because wages have kept about the same.

11,223. Those who are employed are better off than they were before?—Yes, they are better off than they were before.

11,224. And those who have gone away, I presume, have gone away to better themselves?—I suppose that is what they went away for, but I do not imagine they have.

11,225. Then the agricultural labourer is not going to be so much better off from the protection that you propose?—There would be more of them employed in the country.

11,226. But if they are better off than they were before, and if those who have gone away are employed elsewhere, I presume it would be at still better wages; then what is the benefit that that class is going to get from your protection?—You see the very best have gone into the towns, and they have, by being better labourers, driven out a great many other weak labourers from the towns, and a great many of them are scouring the country and living upon the rates. See the quantities that are calling in at every union in the

Mr. R. G. Wyatt.

8 Mar. 1894.

district every day; they are living, as I say, on the rates.

11,227. But pauperism is much less than it was 20 years ago, is it not?—Pauperism is certainly less, but commodities of life have decreased in more rapid proportion.

11,228. Still the decrease in the price of commodities would not do much good to the men who have no money to pay for them; that is to say, it would do no particular good to the pauper?—It would—a considerable amount of good; for instance, a large proportion of it you see is given as out-door relief. If bread was 8*d.* per loaf instead of 3*d.*, the pauper would not require so much relief certainly.

11,229. That is a good thing for the ratepayer, but I do not see that it matters much to the pauper what his loaf costs so long as he gets his loaf?—You see in some districts it is all paid in coin, and there is no bread allowed at all; a great many unions pay the paupers all in money.

11,230. Still you admit as a matter of fact that pauperism has not increased?—I do not consider that pauperism has increased.

11,231. And the agricultural labourer who remains upon the land is better off than he was before?—Yes, he is certainly better off than he was before.

11,232. Then what is the particular advantage to him from protection?—I do not see any advantage to him except, as I say, that more of them would be employed.

11,233. (*Viscount Cobham.*) I think you said in answer to a question in your examination in chief that you wished to keep the labourer on the land?—So I do.

11,234. (*Mr. Giffen.*) I am asking whether that is proposed in the interest of the labourer, and then I am asking how far that agrees with the statement that the labourer has not suffered by the depression of trade but that he is better off than he was before?—So they are; what are left in the country; but then there is only half of them, and the others have got nothing to do there.

11,235. Still if the man that would be employed upon the land is working at something else?—He may or may not be.

11,236. Why should he go to the land if he is better off than he was before—that is the question I am putting?—I do not see why thousands should collect in the towns and be unemployed if those thousands could be employed on the land.

11,237. That is just the other point. The question I put was whether there was more unemployed than there was before?—There is nothing like the quantity employed on the farms that there used to be.

11,238. Not on farms but in other places. There is no increase of pauperism throughout the community? You have no answer to that question?—No, I have not.

11,239. Have you considered apart from the desirability of having a larger cultivation of land for whatever reason what the whole aspect of the question would be to the community as a whole if there were a change to protection, or have you merely looked at the desirability of having more land in cultivation?—I do not think it would raise the price to what I should consider a large amount. If we were to double the present price it would not raise the price of bread more than three halfpence a loaf.

11,240. Still you have merely looked at the question of keeping the land in cultivation, and you have not gone much into the question of the pros and cons as affecting the whole interest of the community?—I think the whole interest of the community would suffer but very little.

11,241. Still there would be many things to be considered; some would have to pay more for the bread than they do now?—They would certainly.

Duty on wheat.

11,242. What would be a sufficient duty on wheat, to cause wheat to be grown at home; what would be the amount of duty that you have in your mind?—I should say put a duty on wheat until you raise it to about 1*l.* a sack; but when we come to 1*l.* a sack, I should take the duty off.

11,243. (*Mr. Clay.*) That is 40*s.* a quarter?—Yes. As soon as it came to that, I should reduce the duty; but until it did come to that I would raise the duty by artificial means.

11,244. (*Mr. Giffen.*) You would have a sliding scale?—I would have a sliding scale.

Mr. R. G. Wyatt.

8 Mar. 1894.

11,245. I suppose you have not studied very much, the controversies about sliding scales as compared with fixed duties upon wheat which existed in former years?—I have not compared them.

The marking of foreign meat.

11,246. With regard to the branding of foreign meat, about which I think you said something, are you quite certain that that proceeding would benefit the agricultural interest?—I think it would and that it would benefit other interests as well.

11,247. Would it raise the price of home-grown meat?—I think it would raise the price of home-grown meat.

11,248. There have been a good many statements to the effect that probably it would not raise the price of home-grown meat, but that it might have the opposite effect?—I think it would raise the price of home-grown meat.

11,249. Then to raise the price of home-grown meat, is your object?—Yes, and not to deceive the public.

11,250. (*Viscount Cobham.*) Are you speaking of the best home-grown meat only or of all home-grown meat?—All home-grown meat.

Uncultivated land.

11,251-2. (*Mr. Giffen.*) Can you give me any idea of the per-centage of land in your neighbourhood that you consider to be out of cultivation in consequence of the low prices, not merely laid down to grass, but out of cultivation altogether?—In my immediate neighbourhood there is, you might say, none but what is called growing grass, but then if it is what I call cultivated weed, instead of the quantity of stock decreasing, it would increase.

11,253. Still it is not absolutely out of cultivation, it produces something?—It produces something, but it is of very little use.

Rent; and prices.

11,254. You would not approve of a sliding scale of rents, that is to say, that rent should rise and fall exactly in proportion to the rise and fall of the prices of the produce?—No, I should not.

11,255. You think that if the gross produce goes down rents should go down in still greater proportion—that I think was the effect of what you told us, that if the gross produce falls in price say 20 per cent., the rent paid to the landlord should fall much more than 20 per cent.?—It would be bound to.

11,256. We had a witness before us the other day who thought that agricultural depression would be diminished very much if you had a sliding scale of rents such as you have just now condemned, are you aware of many discussions upon the subject?—I know of some owners that had reduced their rents in my immediate neighbourhood on the sliding scale.

11,257. And does it answer well?—I think they have had to reduce them more than the sliding scale.

11,258. More than in proportion to the changes in the prices of the produce?—Yes, more than the sliding scale.

Dairying.

11,259. About the prices of dairy produce, you told us that for the living of cows the farmer instead of receiving from 12*l.* to 15*l.* now receives from 10*l.* to 12*l.*?—It would be pretty good to receive from 10*l.* to 12*l.*; for instance, if I was letting mine I would not make more than 10*l.* now, although I have let them for 11*l.* I have managed them myself for 14 years.

11,260. Still you told us, I think, that the usual letting terms were at some time from 12*l.* to 15*l.*, but now they are from 10*l.* to 12*l.*?—From 10*l.* to 12*l.* I should say on the best lands.

11,261. We were told by a witness the other day from a different part of the country that he did not think the prices of dairy produce, butter, cheese, and milk, had fallen materially at all; would that be the case in your part of the country?—No, certainly not.

11,262. The prices have fallen with you?—Yes, considerably.

11,263. Can you account for the difference—why have they fallen in one part of the country and not fallen in another part of the country?—There is a certain amount of dairy produce that has not fallen what I should call considerably; for instance, the dairyman would, I think, calculate something like a fourth for his pigs; those pigs have not decreased in value, the calves have not decreased very much in value, but butter and cheese have decreased in value.

Mr. R. G. Wyatt. 8 Mar. 1894.

11,264. How much?—I sold my butter at 15*s.* the dozen the whole season for several years, and I have only had 11*s.* now for two or three years.

11,265. And you used to have 15*s.*?—I have had 15*s.* for several years.

11,266. How long ago since you had 15*s.*?—That was 12 or 14 years ago; then I had 15*s.* a dozen for several years.

11,267. And you cannot account for how that great change should happen with you, and not with others?—I cannot account for that.

Rent; and prices.

11,268. (*Sir Nigel Kingscote.*) You said you knew instances where rent was fixed upon a sliding scale of prices?—Yes, they go on a sliding scale on the tithe.

11,269. Upon all stock or upon corn?—Only upon tithes—the average commutation.

11,270. Then it is not from year to year?—That is from year to year; as the tithes decrease the average is lowered, and if the tithes should rise they would raise the average.

Duty on wheat.

11,271. I think I understood you to say that wheat could not be grown to a profit under 40*s.* a quarter?—Yes.

11,272. That is your opinion?—I do not consider it would be grown at less than that on my land, and the very poorest of the land will not grow it at that price. On what I call wheat land—where they grow nothing scarcely but wheat—they cannot grow it at 40*s.* a quarter.

11,273. Not, and get rich over it?—Not, and pay their labour.

Mr. R. G. Wyatt. 8 Mar. 1894. Dairying.

11,274. (*Mr. Elton.*) There is one further question I want to ask you to make clear what you have said; besides that wheat land of which we were speaking you also have of course very good grass land on which these cows are placed?—Yes.

11,275. Would you just tell us, please, the proportion, I am afraid I do not recollect, of good dairy bottom water meadow?—About two acres arable to one of pasture.

11,276. I mean the water meadow, you have got a certain amount of water meadow?—We have got a certain amount of water meadow.

11,277. I thought when your answer was taken down that the whole answer would seem to apply to the arable, and not to take any account of that. I understand that the value of the cow now would be not very different to what it was a good many years ago?—About 30*s.* or 2*l.* a cow.

11,278. Or 1*l.*?—More than that.

11,279. You have had 11*l.*, you would have 10*l.* now?—No, I should not get 10*l.*

Oppressive agreements.

11,280. About the agreement, I understood it perfectly, but I do not know whether everyone did; were you speaking of complicated and oppressive agreements that you know of in the district of which you have been speaking?—No.

11,281. Not of your own particular district?—Not of my own district at all.

11,282. That, I presume, would be of a different kind?—Nothing that I say has regard to my own family, I am not speaking of it in that way. It is quite the contrary, I always looked at it in quite a different way.

The witness withdrew.

Mr. A. W. Fox.

Mr. Arthur Wilson Fox, re-called and further examined.

Mr. A. W. Fox.

11,283. (*Viscount Cobham.*) I think you have followed the evidence of Mr. W. Smith, M.P., who gave evidence here?—Yes, I was here when he gave evidence.

11,284. I should like to know how far the opinions of which he was the mouthpiece are held in the district that you visited; I think he spoke for Cheshire to a great extent and for a considerable part of Lancashire?—Yes. Cheshire I do not know, but as far as Lancashire is concerned I think I am quite correct in saying that those who hold views of a similar character to Mr. Smith belong to the association. It is the Federation of Tenant Farmers' Clubs; the Lancashire Federation of Farmers is another organisation altogether, to which Mr. Kay and Mr. Barlow belong.

Farmers' Associations in Lancashire.

11,285–7. It is one of several farmers' organisations in the county of Lancaster?—Yes, those clubs are federated together, and Mr. Smith is president of them. There is another large organisation called, as I have said, the Lancashire Federation of Farmers, which the president tells me numbers 700. The president is Mr. Kay. That also extends over a considerable part of north and over some other parts of Lancashire.

11,288. I gather from your report that they do not hold such extreme opinions with regard to land tenure as Mr. Smith's association?—No. They originally were one, and then there was a difference of opinion, and two separate organisations were formed.

11,289. Did you have representatives of each association before you at your meetings?—Yes, I met the Preston branch, and the Lancaster branch, and the Bolton branch of Mr. Smith's association separately on three separate days, and I met delegates from, I think, all the districts in the other Federation on another day, so that I practically interviewed all those associations.

11,290–1. Had you any discussion before you between the two organisations?—I had one meeting of farmers in a place called Poulton, and I found there was a body belonging to one of the associations there, and another body belonging to the other, so I had them both before me on the same day.

11,292. Was there a strong difference of opinion?—Yes; they held very opposite opinions, certainly, because one association thought that there was no remedy except that of a land court, and as they thought that that was the only remedy they could scarcely discuss or argue on any other basis.

11,293. Besides these two associations there is a Liverpool Farmers' Associations, is there not?—Yes, there is a strong club of farmers at Liverpool; they came up to give evidence before me.

11,294. They are more conservative in their views than the Federation, are they not?—Yes, they do not hold the same views as the Federation in any sense.

Capricious evictions.

11,295. Except from the representatives of Mr. Smith's Association, did you hear much said about capricious evictions and the insecurity of tenants' capital?—No, I did not; and I do not think as far as I can understand—and I went very carefully into this question—that there were capricious evictions. What I understand rather is that they were more in fear of capricious evictions; I did not understand, in fact I could not get instances, that capricious evictions had taken place. If I might draw your attention to page 6 of my report, you will see that I held a very large meeting at Lancaster in the Town Hall, the day before I left the district, and that Mr. Smith, M.P., stated that he "is of opinion that there are farmers who refrain from "giving evidence for fear of offending their landlords "or agents." Then he adds, "I believe in most cases "the fear is groundless, but still there is timidity." It seemed to be more their opinion that there was some fear, to what extent I cannot say.

11,296. Some fear of bad consequences owing to the opinions that they held?—Quite so.

11,297. But you did not find, except from the Tenant Farmers' Association, that there seemed to be much fear of capricious evictions?—No, I do not think so.

Farm buildings.

11,298. Do you say that in many parts of the district there is considerable need for much further outlay of money upon farm buildings, especially dairy farm buildings?—There is no doubt about it, that the dairies throughout the district compare unfavourably with the neighbouring counties such as Cheshire, where dairying is carried on. Dairying in Lancashire has been increasing considerably in the last ten years, and also cheese-making. At a time when there has been less money to lay out on buildings, there has been an increased demand for them.

11,299. Cheese-making is a very old-established industry in Cheshire, is it not?—Yes.

Permanent improvements.

11,300. Do you find that the tenants have effected improvements to any great extent in Lancashire?—

Mr. A. W. Fox. 8 Mar. 1894.

They do no permanent improvements. I believe in the neighbourhood of Liverpool—I did not go there, it was outside my district—on some large estates, the tenants do undertake those improvements sometimes, but not as a rule; the landlord will do them, but it is optional.

11,301. In the districts that you visited, do you think the tenants would undertake those improvements if they had absolute security?—I do not think they would; it is a district of small farmers. In the unions of Fylde and Garstang, it has always been the habit for landlords to do the improvements.

Drainage.

11,302. Should you make any distinction between buildings and drainage in this connexion?—A great deal of money has been spent on drainage all through the district. I do not think that the land is badly drained on the whole. A good deal of the land is subject to flooding, and unless large sums of money were laid out on embankments, it could not be prevented.

11,303–4. Do the tenants carry out their drainage themselves?—The tenants carry out a good deal of drainage; they generally find the labour, the landlord finding the tiles. On some of the large estates the landlords do all the drainage, and then the labour is done by the farmer.

Capricious evictions.

11,305. (*Sir Nigel Kingscote.*) One word as regards the feeling of the members of the Farmers' Associations down there; was it explained to you why they should fear, or was there any cause of fear, say, politically?—I do not think there was any cause for fear, I thought Mr. William Smith answered that question when he said that he thought the fear was groundless. I may say that I held a number of public meetings, and I asked for evidence of capricious eviction, but I think I only got the three or four cases which I have stated in my report. There were four cases of arbitrary dismissal of farmers mentioned to me. One of those was a case in which the witness refused to give evidence before me, and stated that he would give it here, so that I know nothing about that. In another case the farmer would not give the name of the landlord; of course I took no note of that, because I could not take an *ex parte* statement of that description; and the other case was mentioned to me in public and the landlord's name given. The tenant said that he was sent away from his farm for attending a meeting of the Tenant Farmers' Association. The land agent came before me and stated publicly that it was because the tenant had never paid his rent punctually, and because of other matters he did not wish to disclose. The fourth case was that of a farmer who said that he was sent away from his farm for signing a request that fewer rabbits should be kept on that farm.

11,306 It is all in your report. I only wanted to know whether you wanted to say anything besides what appears in your report?—No; those were the four cases which were brought before me.

Farm buildings.

11,307. Are we to understand from what you have said to-day in answer to the question of Lord Cobham, that the state of the farm-houses and buildings generally, in the district you went through, would compare favourably with other districts in the Kingdom, after making allowance for the change in the last 10 years, of those farms being turned into dairy farms, and therefore not having sufficient accommodation for dairying? Is that so?—I should say that that is so generally. On some of those large estates the expenditure has been, I may say, enormous; but in some parts of the Fylde district, which as you know is a peat district, and as one is driving, looks like the west coast of Ireland, some of the farm houses on the small properties, that is to say, the small farm holdings, which run to perhaps 50 or 60 acres of land, I think are bad. All round the direction of Pilling you have conditions which you seldom find in England, they are so bad; but those are exceptional.

11,308. They are small holdings, are they not?—They are rented, they are not freehold. There are certain parts of that district, the peat district, where the farm buildings are distinctly bad. But taking them as a whole, I do not think you could say that they compare unfavourably with other districts.

Cottages.

11,309. As regards the cottages, what would you say?—In the first place, I should say there are not a great many cottages, because the majority of the labourers are hired into the farm houses. There are some bad cottages, but I think, on the whole, they are fair. Of course on some of the big estates they are very good; but I do not think it is a district of which you could say that the cottages are bad, as you could of some parts of the country, in the eastern counties for instance.

Mr. A. W. Fox. 8 Mar. 1894.

11,310. Is there any complaint of the highness of the rents?—I think the majority of the farmers are complaining at the present time that they have not had a sufficient reduction in rent. I think the Liverpool farmers are the only body of men who do not complain.

High rents.

11,311. You gathered generally that if a farm was to be let, there were applicants for it?—Certainly, for farms of all sizes; there is not a farm unlet in the district.

11,312. (*Chairman.*) Were those applications at the old rent?—The applications were at the present rent.

11,313. (*Mr. Giffen.*) In what sense is there agricultural depression in that part of the country?—The outward and visible sign of agricultural depression is rather difficult to state; the land agents say that the land has not gone back, with few exceptions (although the farmers take a contrary view) and that the farms will let easily. But the farmers say that they are making no money, and I got evidence from manure merchants and provender merchants that they are selling much less manure and provender, and are finding it very difficult to get their money in; and also I got evidence from cattle salesmen to say that they cannot get money. They ask for ready money since the depression, and they will not deal on credit.

Existence of depression.

11,314. I daresay the landlords are getting their money?—The landlords are all getting their money.

11,315. It seems to me a peculiar state of things that the landlord should be able to get his money and that nobody else should be able to do so?—I think that the north country farmers will always pay their rent; that is a matter of honour with them. They would do anything rather than not pay the rent; they would borrow the money to pay it.

11,316. Why should they compete for the privilege of paying rent which they cannot afford?—The evidence there is, that they have not acutely felt the agricultural depression until the last three or four years, and no doubt they think that times will mend.

11,317. They have felt it during the last three or four years, have they not?—Yes, during the last three or four years.

11,318. At any rate for the last two years perhaps?—For the last two years; perhaps the last three years.

11,319. Is that partly due to the seasons?—No; it is chiefly from the drop in the prices of cattle; they came down with a run; they dropped 30 or 40 per cent. I do not think that they suffered much from seasons.

11,320. That applies to farmers who keep stock, and not to dairy farmers so much; does it not?—That is the case. Cheese and butter are not paying quite so well as they did; in the last 18 months a number of men who formerly made cheese and butter have given it up for selling milk. The milk trade is increasing very largely.

11,321. But you think there are farms where they grow produce for the cattle, and that if the prices have gone down very much they cannot hold on, except at a reduced rent?—That is the case.

Competition for farms.

11,322. Especially when we hear that in other parts of the country there are farms going a-begging. Why should they compete for farms in Lancashire when farms are going begging in other parts of the country, unless it is the case that it pays them to do it in Lancashire?—One would think that would be the case. One is loth to believe them to be unbusinesslike, and to bid higher rent than they can pay.

Labour of farmers with families.

11,323. But you cannot throw any light on that, beyond what is contained in this Report?—No. There is one point I should like to mention. It is a complaint by the farmers who have no families, that the farmers with families are in a position to bid a higher rent, because they get their sons and daughters to work for nothing, and so, when they bid for the farm, they have not to take the labour into consideration.

11,324. But the sons do not work for nothing. If they are not paid in cash, they are in kind?—They get their clothes and food.

11,325. And something besides, I presume?—I suppose when they want money they get some given them.

Mr. A. W. Fox.
8 Mar. 1894.

11,326. You state in one part of your report that you have a difficulty in arriving at the definition of fixity of tenure?—Yes.

Fixity of tenure. Fair rent.

11,327. Do not you find a similar difficulty with regard to the definition of fair rent?—Yes, I asked both the Lancashire Associations to tell me what they meant by a fair rent, and the Federation of Farmers' Associations said that a fair rent would be 30 per cent. less than they paid; and the other association, Mr. Smith's Association, thought that a fair rent would mean a reduction of 25 per cent. to meet the times.

11,328. But they gave you no definition which would be a guide for a county court judge in settling a fair rent?—None.

The Agricultural Holdings Act.

11,329. (*Mr. Clay.*) With regard to your visit to that country district, what was the general opinion there of the Agricultural Holdings Act?—The farmers in that district have practically no experience of it; it has been very little put into operation.

11,330. Will you tell us the reason why?—Well, they have got a wholesome or unwholesome fear of the law. They are afraid of embarking in expenses, and they think they might be worse off. The Act is very seldom put into operation in the district.

11,331. Is it not put into operation owing to the fear of the expense?—Yes, the fear of a contested claim. There have been very few cases. They complained of the expense, and I tried to get some instances to show how much those cases had cost, but I only got one or two in the whole district.

11,332. There seems to have been an able estate manager, Mr. Jacob Fair, who gave you some opinion about the Agricultural Holdings Act. He said, "The "Act is practically inoperative in Lancashire, chiefly "on account of the expense of procedure"?—Yes.

11,333. Do they find the procedure so expensive?—That is what he said. But I rather think they condemned the Act there before they tried it.

Payment of compensation by private agreement.

11,334. Had tenant farmers any other compensation given them by arrangements through their landlords?—Yes, there are a great many estates where definite arrangements were made, and which I put in my Appendix at pages 36 to 43.

11,335. Do you consider that they were fair and reasonable arrangements?—They have got this disadvantage about them, that in those cases I find the landlords saying that they do not claim for dilapidations All this evidence which I have given here is from the landlords, you will see it on page 40. I will take the first name. It is that of Mr. Laurence Rawstorne, of Hutton Hall, Preston. He puts out a scale, and he says, "I have never received a farthing "for dilapidations." I do not know that that scale is rather lower than arbitrators would give, but at any rate the tenants have got the benefit of getting that compensation without cost, and without any counter-claim made against them.

11,336. Do you fancy that the compensation was full and reasonable?—The tenants on some of the large estates where this same agreement is in operation, told me they were perfectly satisfied with it. It was an agreement drawn up by some leading farmers, and leading land agents in North Lancashire; and representatives of all the large estates near Liverpool came before me on a certain day, and I asked them whether the agreement was fair and reasonable, and whether they were perfectly satisfied with it, and they said they were.

11,337. You know something about the Agricultural Holdings Act in connection with compensation. For instance, what number of years does it take for lime to become exhausted?—They say it varies from about 20 to five years. In the schedule which the Federation of Farmers' Associations have drawn up for compensation I think they allowed 14 years, and so I presume that lime does not last so long in Lancashire as in some parts of Northumberland, for instance.

11,338. I think you referred to the Holker Estate on page 41. I see what they consider fair and reasonable for lime on arable land is four years?—That is so. Then on permanent pasture it is 12 years that they allow.

11,339. We are talking of arable land just now. Do you think that the tenant farmer will bring capital in the shape of lime and only get compensation for four years; do you think that is fair and reasonable?—I do not know what the soil is on the Holker Estate. I should not like to say that it is unreasonable without knowing that.

Mr. A. W. Fox.
8 Mar. 1894.

11,340. But you have some idea of the Holker Estate?—I have not been to the Holker Estate.

11,341. At any rate, you cannot say that it would encourage a tenant to lay lime if it is to be exhausted in four years at the expense that they go to now?—On that I would say that it lasts longer in Northumberland. I have never been on the Holker property.

11,342. How long do you say it lasts in Northumberland?—As long as 20 years in some cases, but only five years in other parts of Northumberland.

11,343. There is another thing on the Holker Estate which we all know something of, namely, linseed cakes and cotton cakes. Now they seem to only allow one-sixth?—Yes.

11,344. Do you think that is sufficient?—The tenants think so.

11,345. Comparing these private arrangements with the arrangements under the Agricultural Holdings Act, do you think that it in any way encourages them to keep up the increase of fertility?—A great many men prefer private arrangements to a contested claim. What Mr. Drewry says here is this: no compensation for dilapidations has ever been claimed by the landlord, so those men who are under this agreement pay nothing for dilapidations, whatever those dilapidations might be.

11,346. Would not it be well, to put things on a proper basis, to allow the landlord to claim for dilapidations and to allow the tenant to claim for a fair and reasonable sum for his having increased the fertility of the soil?—Yes. I certainly think that the farmers in Lancashire would like to see the Agricultural Holdings Act amended, and it is their desire to see it amended.

The marking of foreign meat.

11,347. (*Mr. Gilmour.*) On page 29 you say there is one suggestion upon which all are agreed, whether landlords or tenants, and that is the labelling of foreign meat. Did you get from these men, who are no doubt very practical fellows, any suggestion as to how they would carry that out at all?—No. It was thought a great difficulty; some suggested that a butcher should take out a licence so that people should know that he was a dealer in foreign meat, others thought that the butcher ought to sell foreign meat in a separate establishment, or a separate part of the shop, and have it distinctly stated; and some people, again, thought if they could introduce a Bill with a very heavy penalty, so that it should be worth no one's while to commit a fraud of that sort, it would be of service.

11,348. Could they give any definition at all as to what they would consider to be foreign meat?—Yes; all meat that was killed on landing, or all imported dead meat. Of course there is a difficulty as to foreign meat, because live stock might be brought to England and fed here.

11,349. That is what I was going to ask you about. If those restrictions were taken off and those cattle were finished off at home, after what lapse of time do they become home meat, or how long do they continue to be foreign meat?—Those men consider that it should be meat killed on landing or some killed on the other side and brought across.

11,350. Dead meat, or slaughtered at the port of debarkation they mean?—Yes. I apprehend if they kept cattle here for six months or a year after being landed they could not trace the foreign origin.

11,351. So that virtually it would come to be of very little good to the consumer if these bullocks were landed and taken to a man's place and finished off in four weeks and then sold as home meat—you do not see how much good would result to the consumer?—I think the Lancashire farmers hope that the restrictions will continue in force.

Existence of depression.

11,352. (*Mr. Little.*) The result of your inquiry appears to be that there is no very great depression in the Garstang division?—Well, it is not that there is no depression, but that it has not lasted long enough for it to become very apparent.

Conditions of farming.

11,353. They farm under particularly good conditions?—They farm under as good conditions as any farmers in England, I should think.

11,354. They have good markets and a very large population close at hand, and they get their manures very cheaply?—Yes.

Mr. A. W. Fox.

8 Mar. 1894.

11,355. And they are not dependent upon the growth of corn?—They have very little corn.

11,356. And the produce that they have to sell has not declined in value as in the East of England or the arable parts of England generally?—Yes, and you might add that there is more opportunity for changing the system of farming there.

11,357. In what way?—In the way of supplying those big towns with vegetables and milk and eggs and going in for market gardening.

Farm buildings.

11,358. The inadequacy of the buildings that you spoke of is partly the consequence of the change in the system of farming?—To a considerable extent.

11,359. You gave instances of very large sums having been spent in buildings within the last 20 or 30 years?—Yes, the big estates in Lancashire which are owned by men with such large capital as they have are as well equipped with buildings as any part of England, I think.

Farmers' Associations in Lancashire.

11,360. With regard to the two rival associations of farmers and agriculturists in Lancashire, what is the cardinal difference between them?—The difference is this, that Mr. Smith's Association desires a court which is to interfere with all contracts between landlord and tenant, or rather to which either landlord or tenant could appeal as to questions of rent or conditions of tenancy, and the other association say that there must be freedom of contract.

Differences of opinion.

11,361. Do they desire some alteration in the law with regard to compensation for tenants' improvements?—Yes, both of them do that.

11,362. Do they find fault with the Agricultural Holdings Act?—Yes.

11,363. What particular amendment has there been proposed by either of those associations or by the farmers generally?—Take the farmers. I do not think that I received any suggestions from farmers. They condemned it, but made no suggestions. Now the Tenant Farmers' Association, that is Mr. Smith's association, suggest that the Land Court should settle all questions under the Agricultural Holdings Act as regards compensation, and that there should be two assessors, as was stated the other day, and the county court judge should be the arbitrator. Well, then, Mr. Kay's association—the Federation of Farmers' Associations—suggests that there should be a fixed scale for all these improvements—a fixed scale, so that, as they said, any child could add up for himself exactly the amount he was entitled to. And then, of course, there would be the counterclaim. I find this is the feeling amongst the farmers, that when they put money in the soil, they would like to know how much they are going to get out of it without waiting for the arbitrator to tell them.

11,364. I suppose an Act of Parliament would have to lay down an uniform scale of compensation for the whole country?—That is the point which is raised against this proposal. Mr. Kay's proposal is that there should be a board of arbitrators nominated by the county councils, both tenant farmers and agents, and that the contending parties should each choose one of those men, and then the matter would go to arbitration. But Mr. Kay goes further than the present Agricultural Holdings Act as to first-class improvements. They urge that when a landlord refuses to do one of those first-class improvements they can call in the arbitrators, and if the arbitrators say that the improvements are necessary for the purpose of the farmer carrying on his business, then the improvements are to be carried out and the landlord will have to pay at the end of the tenancy.

11,365. But to return to the question of compensation. You said that the system of arbitration for ascertaining the amount is a different thing to a scale laid down for the whole country?—Yes. Then for feeding stuffs, manures, and so on, Mr. Kay says a fixed scale.

11,366. For the whole country, do you mean?—Yes, incorporated in an Act of Parliament.

Payment of compensation by private agreement.

11,367. You have given in your report several instances of substituted agreements?—Yes.

11,368. Those are agreements which can be set aside now—if proved unfair or unreasonable at the time of making them?—Yes.

11,369. But do you not find that farmers generally prefer a fixed sum by agreement to an indefinite sum arrived at by arbitration?—Yes, that is the reason why Mr. Kay advanced this fixed scale—because there is this feeling among the farmers—they like to know where they are.

Mr. A. W. Fox.

8 Mar. 1894.

Reduction in rent.

11,370. Mr. Smith spoke of reductions of rents, and he said that on some estates no practical reduction had been made. Do you find that to be the case?—Well, I have set out the reductions of rent at some length, and I may say that there have not been many permanent reductions in Lancashire, and I do not think they have been asked for until lately; but now there is a feeling that the reductions have not been sufficient.

11,371. In your report the per-centage by which rent is reduced does not give a fair idea of the present rent or whether the present rent is a fair rent or not?—I have set out on page 18 the rent on some estates of large and small farms, and in the heart of the district, which I thought would be fair samples; and I have given the farms under 100 acres on these estates and the farms over 100 acres, and I have given the rent per acre there.

11,372. Yes; but I meant if a rent was a high rent a reduction of 25 per cent. may not mean more than in a case where the rent was moderate and the reduction was only 10 per cent.?—Yes.

11,373. Therefore you must know whether there had been a high rent or a moderate rent to begin with, and when it was fixed whether it was raised at some former period?—Yes.

11,374. And the instances which Mr. Smith gave where there is no permanent reduction made is given on page 55, where it is said that the property in question was valued in 1826 and there has been no re-valuation since?—That is the Holker Estate.

11,375. If no permanent reduction has been made, at any rate there has been no permanent addition?—No. Of course in a case like that the rents would probably be very low, because in the years when Lancashire was flourishing, between 1865 and 1875, if the rents were not raised in those days the rents fixed before then would be low ones. There was a great tide of prosperity between 1865 and 1875.

Labour of farmers with families.

11,376. With regard to one other point. Mr. Giffen spoke of the small farmers whose families work, and he said that the families were paid, if not in money, then in kind. But is it not the fact that they are paid very little indeed in proportion to the labourers who are hired?—Yes; they are in a much worse position; they get no wages. If a farmer's son wants to go into a town to amuse himself I have no doubt that he gets something from his father to go with, and also something to pay for his tobacco and other trifles.

11,377. The farm servants hired into a farm house and doing the same work as the farmer's son would get in Garstang 20*l.* a year wages at least, would he not?—Yes; he would get that.

11,378. And the son working on the farm would only get the same keep as the farm servant with very little wages?—That is all.

11,379. They would get the same food as the farm servants?—Yes.

11,380. (*Mr. Giffen.*) Why does not the son become a farm servant?—He is more independent at home.

11,381. He does not do the same work, is that the point?—I should think they do more.

11,382. (*Mr. Everett.*) I think at Garstang you met with a gentleman of the name of Simpson?—I regret I did not meet him, but I know all about him.

11,383. He expressed an opinion, a very strong opinion, that the currency causes were the main root of the present agricultural difficulties?—Yes; he holds strong opinions about that.

11,384. Would he probably be willing to give evidence upon that point?—He would be a very good witness.

11,385. Is he a man standing well in the district?—Yes.

Reduced price of cattle.

11,386. (*Chairman.*) Will you turn to page 35 of your report, in the appendix; at page 35 Mr. Collinson gives a table showing the price which he received for cattle, and lambs, and cheese; and from those prices it would appear that it is only within the last two years—1892 and 1893—there has been any great reduction in the price of cattle?—That is so.

Mr. A. W. Fox. 8 Mar. 1894.

11,387. Has that been due to the seasons, to want of produce in the south and centre of England, that cattle has been forced into the market, and therefore the prices have fallen very much?—It was only last year that that was the case. The Lancashire people were hoping and expecting this last year to be able to send their cattle to Scotland on account of the restrictions on foreign cattle. Scotland would then they thought have to draw on Lancashire; but instead of that, as I notice in my colleagues report on Somersetshire, he states that in some dairy farms there was only one-fourth of the hay that they had in other years, and the result of that in Lancashire was that all the Somersetshire and Devonshire cattle were going to Scotland instead of the Lancashire cattle.

11,388. Did not that reduce the price.?—Certainly in 1893.

11,389. In 1892 was not there some special cause for the reduction in the price of cattle owing to the bad seasons in the south of England? In the south of England it was a very wet season in 1892? I do not think that that was so much the case; there is a very large number of foreign cattle and foreign meat brought into Liverpool, and it is increasing, and they attribute the reduction to that.

11,390. Now up to 1892 there was no considerable reduction in the prices?—The great reduction has occurred in the last three years.

11,391. Therefore the depression, so far as it arises from the change in the price of cattle in Lancashire, has occurred only since 1891, 1892, and 1893?—Yes, during the last three or four years.

Price of cheese.

11,392. And the same with the price of lambs. If you look at 1880 you will see that the price was 1*l.* 8*s.* and in 1891, 1*l.* 7*s.* 6*d.* Of course there have been variations in the interval, but apparently there has been no very great reduction. Well, then, we come to the price of cheese, and you will observe that the price of cheese in 1880 and 1881 was 60*s.*, and slightly over; and in 1891 and 1892 it was 55*s.*?—Yes.

The coal strike.

11,393. Showing no very great reduction; about 10 per cent.?—That is all. I think perhaps I might state what I have not stated in my report, that the Lancashire farmers felt the coal strike a good deal. I learnt that after I left the district. The strike went on for some time and the miners who usually eat a good deal of meat and cheese did not do so during the strike, and that affected the farmers a good deal at the close of last year.

11,394. That tended to reduce the price by the decreased consumption; that affected 1893?—Yes.

11,395. There appeared to be exceptional causes at work, both in respect of bad seasons, and the strike?—Yes, there is no doubt that both those causes, particularly the former, affected the Lancashire farmers last year.

11,396. Have you made any inquiries as to the price of milk?—No, the price of milk has not fallen; they are going in for milk more and more.

Wheat growing.

11,397. Of course I presume the amount of corn and wheat grown in Lancashire has never been very considerable?—That need hardly be taken into account in my district.

11,398. But when the statistics say the corn crops, does that mean oats and barley?—Yes. Straw has been sold very well this last year.

11,399. But the corn crops, are they oats and barley, or what?—Yes, oats and barley.

11,400. But not wheat?—Very little wheat indeed.

11,401. And apparently the proportion of corn crops even in 1882 is not inconsiderable for the whole of Lancashire; you will see it on page 7?—Yes.

11,402. The acreage of corn crops was not inconsiderable even in 1882?—No.

11,403. And apparently the total amount has remained stationary?—Yes.

11,404. On the other hand there has been a very large increase apparently of cultivated ground of some kind?—Of course the rotation grasses have increased.

Farmers' accounts.

11,405. Have you obtained balance sheets of any farmers?—No, that is quite impossible in North Lancashire.

11,406. Why?—Because they do not keep them. I sent out 80 circulars to farmers who were more likely than other men to keep accounts, because they were substantial farmers in the districts. I asked on all hands for that information, and I was told that practically no man in North Lancashire ever kept accounts.

Mr. A. W. Fox. 8 Mar. 189

11,407. Therefore there are no definite figures showing the profit and loss of the successive years?—None. I was corroborated by the Income Tax Commissioners and income tax collectors, and I only found three men who did keep accounts.

11,408. Did you ascertain from the income-tax collectors whether the farmers as a rule, or in any considerable number, have availed themselves of the opportunities of being assessed for their income-tax upon their actual profits?—None.

11,409. Do you think we may deduce from that that the profits generally have been more than half their rent?—I do not think so. I held a meeting of some large farmers, they were as large farmers as you will find in that part, and they said that owing to the farmers not keeping accounts they were unable to take that course, and that is the reason they gave; they were all big farmers. You will see that on page 70.

11,410. Even big farmers do not keep accounts, so that they cannot avail themselves of the offers which the State has made to them to pay on their actual profits?—No.

11,411. Does that not seem to show that their profit has been more than half the rent?—I do not think so.

11,412. (*Mr. Giffen.*) What difficulties have the farmers in making up an account?—They would find it difficult. Of course a great number of these men have been labourers, or their fathers were labourers before them, and in the heart of that district you cannot judge them by the same standard as many farmers in other districts; they are men with not much intellectual training; they know their own business in farming, but they are not well educated comparing them with farmers elsewhere.

11,413. (*Chairman.*) You spoke of the number of people who were ready to take farms?—There is not a farm to let.

Advantage to incomin tenants.

11,414. Any farmer coming in now and offering for a farm would come in under advantageous terms, would he not?—He would stock his farm cheaply.

11,415. The price of milk has not been reduced, and the price of cheese has been only slightly reduced, therefore would not he be in a favourable position as compared with what he might have been a few years ago?—Yes; if he was going to carry on a dairy business.

Farmers' e penditure and profits

11,416. If you turn again to page 33 you will see that several illustrations are given of the expenses of certain farmers in the Garstang Union?—That is as near as I could get them.

11,417. They vary considerably. Three farmers pay a little over 2*l.* an acre in their expenditure including their rent; and others vary from 4*l.* 10*s.* to 4*l.* 16*s.* and 6*l.* 13*s.*?—Yes.

11,418. Did you make any inquiries as to which of those farmers make the best profits?—None of these farmers. I know several of them well, and they consider that they are making no profits.

11,419. No profits at all?—I do not think any of them do make a profit.

11,420. Some of them seem to be dairy farmers selling milk largely?—Yes.

11,421. Do you think that they do not make any profit?—It is very difficult to tell. All these men keep large families, at least most of them do, their sons and daughters all live out of the farm, and they only know what they put by in the bank at the end of the year, and that is the only account they keep, and if they have not saved something at the end of the year then they have done badly.

11,422. At all events they have lived, they and their families on the farm?—Yes, they have lived—one of those farmers told me that for the last three or four years he had been making nothing.

11,423. But still it would seem important to ascertain which of them would do best—some made very large outlays in provender and manure as compared with the others.

11,424. One man spends 150*l.* in artificial manure, whereas another man spends only 64*l.*?—And that man spending 150*l.* is one of the best farmers in the district, Mr. Stuart.

Mr. A. W. Fox. 8 Mar. 1894.

11,425. Do you think that he makes no profit?—Well, I cannot say.

11,426. He was not satisfied?—I think he said that he was not losing money; but his brother-in-law, Mr. Pearson, who is one of the best farmers in the district, said that he was not making any money for three or four years.

11,427. Not enough?—Not any.

11,428. (*Mr. Little.*) Are those rough estimates?—The difficulty of producing the receipts is very great in North Lancashire, and those figures are given in round numbers; sometimes out of doors; but I asked for receipts in some cases, and they were not easy to get.

11,429. (*Viscount Cobham.*) Dealing with the same district, on pages 61 and 62, you will find the expenditure in one case 7*l.* 8*s.* 2*d.* per acre, in another case 7*l.* 1*s.* 8*d.* per acre, and in another case 4*l.* 16*s.* 9*d.*?—Quite so.

High farming and low farming compared.

11,430. (*Chairman.*) On the farms illustrated at page 32 the expenditure upon three of them has been only at the rate of 2*l.* per acre?—Yes.

11,431. Including the rent; therefore, that would tend to show that the farm is carried on in a very spare manner?—Yes, one or two of those are so carried on.

11,432. It is important to know whether in that country the farm pays better which is farmed highly and with a large expenditure on manure and so forth?—It does, there is no doubt about that, and that is the reason I have given these instances at length of those men who have done well whose evidence is more definite, and these men do keep accounts, although I was not at liberty to publish them.

11,433. Would you not rather conclude that by spending plenty of money upon the farm in this dairy district, and by keeping accurate accounts so that they may know where they are, it is possible for farmers to make a fair profit?—Of course, these instances really strike one very forcibly; they are remarkable instances, and one would say that if these men can do this others may, on page 61 there is the evidence of a farmer in the Fylde District, and he says: "I am absolutely satisfied with the money I am making."

11,434. And that is a farmer who farms very high in proportion to his acreage?—Yes.

11,435. He is the highest in the expenditure, 7*l.* 8*s.* 2*d.* per acre?—Yes. Then on page 62, in the right hand column, beginning in August 1892, there is a very remarkable instance of a man who bought land in August 1892, and says it will pay well.

11,436. (*Mr. Little.*) He says: "In August 1892 I bought the 120-acre farm I now rent," does he mean the farm he now occupies?—No, he rents it.

11,437. (*Chairman.*) Whose case is that?—Mr. Pearson's.

11,438. He says: "I bought the 120-acre farm I now rent?"—Well, he sold it again within a week; he bought it and sold it and now rents it; he is a man who spends money, and is doing a lot of work on the farm.

11,439. He spends a very large sum of money?—A very large sum of money.

11,440. Has he got a lease of it?—Yes, he has got a lease for 14 years, the first three years rent free and afterwards 14*s.* per acre tithe free. Now that land had been waterlogged for nearly 20 years, and then after this expense he says: "On this land this year I have grown 72 tons of potatoes, over 4,000 loads, and 20 acres of corn and clover. I expect to recoup myself on my outlay in two years." Well, that is a good illustration of not only a considerable sum being spent yearly upon linseed cake and manures and so forth, but also large sums on improvements by the tenant under a lease. Perhaps I might draw the attention of the Commission to the next man, a small farmer with eleven children; he has got a farm of 63 acres, and he says: "Throughout all this agricultural depression I have farmed on lines which have proved successful. I am one of those men who are in favour of high farming." And then he states how he did it and changed his system of farming.

11,441. Now the question is whether the examples of these two men could not be followed very much more largely by others?—Here are instances of two large farmers and one small man who have been successful within the last two years.

11,442. By a large expenditure of money?—And changing their system of farming to some extent.

Mr. A. W. Fox. 8 Mar. 1894.

11,443. (*Sir Nigel Kingscote.*) Would you read the last paragraph on page 63 C. 3?—He has got eleven children, and he says, "I and my family work from "6 a.m. to 6 p.m., and besides that often have a good "deal of night work among cattle. The girls and boys "are simply working for their meat and clothes "Sometimes I put a sheep away for them, so that they "may be their own managers in buying clothes." That shows the conditions under which the man works.

Reduction in number of farmers.

11,444. (*Chairman.*) Now will you turn again to the bottom of page 34. You will see the number of farmers and labourers in Lancashire at each decennial period from 1861 to 1891. From that it appears that the number of farmers has been very largely reduced?—Yes.

11,445. In 1861 it was 16,000; in 1871 it was 16,000; in 1881 it was 14,800; and in 1891, it was 13,200; showing a reduction of 1200 in the decennial period from 1871 to 1881; and of 1600 from 1881 to 1891. Do you know what that is due to?—No, I do not. I found no farmhouses in the district which I was in showing that there had been any consolidation of farms; in fact it rather tends in the other direction.

11,446. It is a district for small farms. I see that in the Garstang Union, out of 918 farms, 564 are under 50 acres; and in the Fylde Union, out of 599 farms, 306 are under 50 acres?—Yes.

11,447. (*Mr. Little.*) The Census returns of 1871 included all superannuated persons belonging to the class, and in 1881 they did not, and the Census Commissioners call attention to the decrease in those classes, and say that the superannuated persons were enumerated in 1861 and 1871, but not in 1881 and 1891?—Among the farmers, do you mean? Is that in the Census Tables?

11,448. You will find it in the 1881 report of the Census Commission?—I did not read the report.

11,449. They give that explanation in the general report of 1881. They say that it does not make above 2 per cent. difference, but it does count for something?—I see.

11,450. (*Chairman.*) It accounts for something, but only 2 per cent. This is a reduction far beyond that; it amounts to nearer 10 per cent. than 2 per cent.?—Yes.

11,451. You have seen nothing in the district that you were in which at all accounts for that?—Certainly not.

Reduced number of labourers.

11,452. If you look down the figures you will see that the number of agricultural labourers has been largely decreased, apparently most largely between the periods 1861 and 1871, when you stated there was great prosperity?—Yes, but I think they went to the towns to get the high wages.

11,453. But that would seem to indicate that that is not the only test of the prosperity of the district. The reduction was from 39,000 in 1861 to 29,000 in 1871; that is a reduction of 10 per cent. From 1871 to 1881 it was reduced by 3,000, and from 1881 to 1891 by about 2,000. Therefore the reduction between 1881 and 1891 which was the period when there had been depression at all in Lancashire, the reduction has been least?—Yes; the population of the Garstang Union has remained fairly stationary within the last 10 years.

11,454. And apparently that has not been coincident with the reduction of the acreage under corn?—No.

11,455. Because the acreage under corn crops has remained the same?—Quite so.

Economy of labour.

11,456. It would be due to improved methods which has enabled them to dispense with the same amount of labour, I suppose?—Or economy in their labour bill. But there is the agents' evidence, which is almost unanimous, that the land has not deteriorated. A great many of the farmers say it has, but the agents, except one or two, say that it has not, and Lord Sefton's agent says that he thinks it has distinctly improved on their property.

Sale of cattle by live-weight.

11,457. (*Sir Nigel Kingscote.*) Did you hear any expression of opinion as to the advantage or disadvantage of both fat and store cattle and sheep being sold by weight?—They send everything to auction marts now;

Mr. A. W. Fox. 8 Mar. 1894.

they do not weigh them. A great many of the farmers think that their judgment is as good as the butchers. I heard the question discussed a good deal. Some men thought it would be much better to have it weighed, but I think the opinion of the farmers generally is that they are as good judges as the butchers.

Mr. A. W. Fox. 8 Mar. 1894.

The witness withdrew.

Mr. J. Turner.

Mr. JABEZ TURNER called and examined.

Mr. J. Turner.

11,458. (*Mr. Little.*) As we know, you are one of the Assistant Commissioners, and you were appointed to report upon the Frome District of Somerset?—Yes.

11,459. That was the first district that you visited?—Yes.

11,460. Your attention was chiefly confined to one particular portion of the county?—Yes, the neighbourhood of Frome.

Characteristics of district.

11,461. What is the description of agriculture chiefly pursued there?—In the immediate neighbourhood of Frome on the one side it is almost entirely pastoral farming laid down to dairy purposes, and on the other, in a more or less degree, to arable.

11,462. Of what description is the soil?—The soil in the dairy district is of a very good description of reddish loam, and the grass land is very good. That particularly applies to the first district.

11,463. And with regard to the hills what is it there?—It is not a specially hilly district in the immediate neighbourhood of Frome.

11,464. Does not your district include high-lying land on the lias?—Not that portion of it.

Deficient produce.

11,465. What was the general condition of the farms in the neighbourhood?—The farms range from 50 to 200 acres, and they were principally devoted to cheese making, not a great quantity of butter, and without any exception they all complained very considerably of the returns, and stated that they were getting no profit.

11,466. Would their complaint be partly on account of the deficient yield of produce and partly the deficient prices?—Exactly so, particularly with regard to the deficient yield of produce on account of the extreme drought of the early part of the season.

11,467. That would be the consequence of one extraordinary season?—Yes, they complained of the two last years, but especially this last year.

11,468. Did they complain of any great decrease in the value of their produce?—A certain amount of decrease but not very considerable, more particularly in the yield.

Losses from farming.

11,469. Were you able to measure the effects of this severe depression in the production?—Well, I found a complaint all over the country that farming was carried on, even when carried on most carefully, without a commensurate return, without a profit absolutely. One particular case is given in my report on page 7. You will observe the case of one gentleman who kept 70 cows on 200 acres of land.

11,470. He complains of having lost money?—Yes.

11,471. (*Chairman.*) He complains of losses during the last two years?—Generally in the last two years, but especially in the last year.

11,472. (*Mr. Little.*) Then the loss has been particularly during the recent years?—Yes.

11,473. And has it shown itself in some farms being untenanted?—There are no farms untenanted in the immediate neighbourhood.

Reduction in rents.

11,474. There are considerable reductions of rent?—Yes.

11,475. Are they abatements or reductions?—Both; sometimes reductions and abatements upon the reductions.

Demand for farms.

11,476. Are there many farms to let at the present time?—Very few at present.

11,477. There is still a demand for the farms?—Yes. I suppose the farmers hope for a turn in the seasons, or a better time.

Agreements.

11,478. Did the farmers with whom you communicated complain of the conditions under which they hired their land?—Not particularly, they were mostly satisfied with the agreements under which they held.

The Agricultural Holdings Act.

11,479. Did you find the Agricultural Holdings Act the subject of complaint?—In the more northern districts on the arable farming there was considerable complaint with regard to it.

11,480. What was the nature of the complaint?—Particularly with regard to the notice required to be given by the tenant, and the additional notice required by the landlord for his counter-claim, the tenants alleging that the time allowed to the farmer to make his counter-claim gave him an undue advantage.

Claims and counter claims.

11,481. The landlord has now two months before the termination of the tenancy, and within 14 days after the determination of the tenancy, to make his claim?—Yes, after the expiration of the tenancy.

11,482. Do you suppose that the tenants desire that the claims should be made simultaneously?—They do not wish them to be made simultaneously, but a very much shorter period allowed between the two claims being made.

11,483. Did they object to a landlord making a claim under any circumstances?—No.

11,484. But the point of the complaint was there being so long a period?—Yes; that the landlord had too long a period, and the farm had time within the two periods to deteriorate by the apparent growth of weeds deteriorating the apparent condition.

11,485. After the tenancy had terminated?—Yes.

11,486. The growth of annual weeds I presume in the stubbles?—Yes.

11,487. Are the tenancies generally at Michaelmas?—No, Lady-day, spring tenancies.

11,488. We must then suppose the land to be untouched. If a tenant enters upon a Lady-day farm, he would cultivate at once?—Yes, a portion of it of course would be cultivated; but that was the statement.

11,489. After a farm has gone out of their possession it may put on an appearance of foulness, for which the landlord may make a claim?—Yes.

11,490. I suppose they think that a valuer would be deceived by that into giving compensation?—I suppose so.

11,491. At any rate the fear of the counter-claim by the landlord is felt or expressed by the tenants?—It is expressed very much.

11,492. Were there any other amendments of the Act suggested?—It has been suggested in that direction because, as I at any rate understood, the Act was practically inoperative through not being called into existence.

Agreements.

11,493. Do you know whether agreements have been substituted for the Act?—In many instances.

11,494. Are they not considered satisfactory?—They are considered satisfactory.

11,495. The tenants prefer them to the Act?—The tenants prefer them to the Act.

11,496. They prefer making their own bargain to the uncertainty of an arbitration?—Yes, because they have the opportunity if the agreement be not equal to the provisions of the Act of falling back upon the Act.

11,497. (*Chairman.*) But if they do not come to an amicable arrangement upon their own agreements when a change of tenure takes place they must go to law equally as they have to go to law under the Agricultural Holdings Act?—They can then claim under the Act. If the private arrangement is not equal to the provisions of the Act the Act would override the agreement.

11,498. (*Mr. Little.*) Was there any complaint as to the cost of procedure under the Act, or was it generally as to procedure?—I could not say that there was, because there was not a case brought before my notice in which it had been contested.

11,499. The Act being inoperative?—Yes.

Rates.

11,500. What other subjects of complaint did you find amongst the farmers?—The incidence of local taxation was one that was particularly mentioned in that district—I am now speaking of Somerset.

11,501. Do you mean local rates generally or some particular rates?—The highway rate and the sanitary rate.

Mr. Turner. Mar. 1894.

11,502. On what ground did they complain of the highway rate?—On the ground that those who use the road most pay least for its maintenance.

11,503. You mean brewers and such like?—Brewers and traders.

11,504. Who used to pay the turnpike tolls?—Yes, the turnpike tolls.

11,505. And largely assisted in keeping up the roads, but these people now pay a small part?—Yes.

11,506. As to the sanitary rates I suppose you say that they are of no benefit to the land?—Yes, in many instances the land is a considerable distance from the drains for which this money is paid.

11,507. The expenditure is for the benefit of the inhabitants, but not specially for the benefit of the occupiers of the land?—It is for the benefit of the houses instead of the land.

11,508. Were there any instances in the neighbourhood particularly with reference to the sanitary rates, given to you?—No, there were none brought under my notice.

11,509. But as a matter of principle taxing land for carrying out improvements for the benefit of houses and of the inhabitants of houses was objected to?—Yes.

11,510. Were there any other subjects of complaint?—Of course the low price of corn was a considerable complaint in the corn-growing district.

The corn returns.

11,511. That is one cause of the depression, but I meant rather with regard to complaints which could be met by legislation. There were some complaints as to the corn returns?—The corn returns were objected to on two or three grounds. The first ground on which they were objected to was their being taken from the merchants and frequently giving a fictitious value to the produce by the addition of railway rates, freight, and profit on re-sales.

11,512. The corn returns are supposed to give the price of certain descriptions of corn in particular markets?—Yes.

11,513. And whether the corn is grown in that neighbourhood or not it is the price of the market that is supposed to be returned. Would that price be affected by the corn having been produced in the neighbourhood or brought from a distance?—By the corn brought from a distance.

11,514. Would it make more because it was brought from a distance?—It is usual, but I suppose that the man who sells the corn has a profit, with railway charges included.

11,515. But only at the price at that market?—I admit that, but it might be sold twice or three times over.

11,516. But no amount of sales could give it any other value than the value of the market?—No, but the contention of these gentlemen was that the grower should make the return and not the purchaser.

11,517. And that complaint was made in order to press a change in the nature of the returns?—It would.

Fixity of tenure.

11,518. Did you find any expression of opinion in favour of fixity of tenure or a feeling of insecurity on the part of tenants?—Not in this neighbourhood at all, not in Somerset. The only remark which I heard with regard to it was at Yeovil, where I attended the market and where there were several farmers, and the generally received opinion was that they did not want a land court.

The Ground Game Act.

11,519. Was there any complaint with regard to the game laws?—One or two in the county of Somerset. One gentleman alleged that he was not enabled to have a sufficient quantity of guns to destroy rabbits which did him a great amount of harm, and that the landlord could have as many guns as he pleased, whereas he was restricted to only one gun.

11,520. The tenant could only use a gun himself or delegate the use to one man?—Yes.

11,521. Damage was done, I suppose, in a few instances?—I had only one other instance of damage done by game besides the one that I have just spoken of. One gentleman said that he had been driven off a farm. That really was in Warwickshire; that was not in Somersetshire.

Tax on barley.

11,522. Was there any demand for the re-imposition of the malt tax?—It was thought by many of the Somerset men that if a tax were put on barley it would be very much in the interests of temperance—that the beer which was brewed would be brewed from barley alone, and not from what it is now composed of.

Mr. J. Turner 8 Mar. 1894.

11,523. But I presume that the object was not so much to promote temperance as to raise the price of barley?—I did not ask that question.

11,524. But if it were put forward as a remedy for agricultural depression it could only be done by raising prices?—By raising prices. It was the intention to raise prices.

Protection.

11,525. Were there any other suggestions for raising the price of home produce?—The unanimous suggestion, I may say, in all the arable districts was for a tax to be put upon the importation of foreign flour—foreign manufactured articles, including flour. That had general acceptation.

11,526. Would not that increase the price of food?—In a very infinitesimal degree, it was stated and believed, because it was not interfering with the importation of wheat and would give large employment to the artizans and would much benefit the English farmer by giving him the offals now left behind.

11,527. That was the suggestion—to improve the agricultural situation by increasing the price?—I suppose it would increase the price in a certain degree—in a small degree.

11,528. Was it argued that with that increase of price there would not be a corresponding increase in the price of bread?—It was supposed that the increase of price would be very small indeed, but the benefit would principally be from the offals and more employment would be given.

11,529. You have heard, no doubt, that complaints are made as to the price of bread not decreasing with the price of corn; you have heard the argument that the cost of making and manufacturing the article is so large a part of the cost of bread that it remains the same whether the price of the ingredients is high or low?—Yes, I have heard that.

11,530. If that be true with regard to a decrease of prices it would be equally true with regard to the increase of prices?—It would.

11,531. And 10*s.* per quarter on wheat which was at 24*s.* would not bring a corresponding increase in the price of bread?—That, I believe, is generally understood.

11,532. That was the argument?—Yes.

11,533. That a moderate duty upon wheat or flour would not increase the price of food considerably?—It would not, and flour especially, I may say, because it would not interfere with the supply.

11,534. Besides the district of Frome, I believe you saw something of the rich grazing district in the neighbourhood of Bridgewater?—I did.

11,535. And you have given some particulars of the present value of certain land which is annually let by auction?—Yes, on page 11 in my report.

11,536. That would seem to show that there has been a very considerable decrease at times, but that during recent years there has been no decrease in value?—There was an increase in the two last years, but in every other year to the end of 1890, an actual decrease; 1891 had an increase and 1892 had an increase, and 1893 has an increase.

11,537. Taking periods of eight years, three years, and five years, the statement shows that the value now is very much less than in 1878, but it is greater at the present time than in 1881?—Yes.

11,538. What I desire to point out is that during the last three years there has been an apparent increase in the value of the rich grazing land which is put up to competition every year?—Yes.

11,539. The tenant paying nothing but the rent, not even the shepherding?—Paying nothing at all.

11,540. That would not apply to the case of arable land?—Yes.

Dairying.

11,541. Do you happen to know what has been the per-centage of decrease in the value of arable lands in the Frome district?—In the Frome district, the first district that I saw, that is the dairy district, being principally grass land, the average decrease of rentals appeared to be from 30 or 40 per cent., or say 25 to 40 per cent.; but in the arable lands, which are higher, nearer to Bath they reached to over 50 per cent.

Mr. J. Turner. 8 Mar. 1894.

11,542. In the Frome district the cows are not let to dairymen; they are kept in hand by the farmers?—They are kept in hand by the farmers, but I have heard of cases in the county in which cows were let.

11,543. That would be in another district; in the arable district?—More particularly on the Wiltshire Downs; in the high Down district.

11,544. Do you know what decrease there has been in value?—From 2*l.* to 2*l.* 10*s.* per cow.

11,545. And that would not be made up to the farmer in any way?—I do not know how it could.

11,546. There is a slight difference in the cost of feeding them. The purchased stuff would be rather cheaper?—The purchased stuff this year; the great bulk of the purchased stuff was foreign hay, which was very dear.

11,547. But I am speaking of the average, not taking an exceptional year, but the average?—Yes; there would be some difference in the prices there.

Depression in the Warminster district.

11,548. Then you extended your observations also to the district of Warminster, which is of an entirely different kind of farming?—Yes, it is different.

11,549. They are large down farms, are they not?—They are large down farms, extending from 1,000 to 2,000 acres each.

11,550. Did you find depression there?—I found very much decreased rentals, and according to the accounts very much decreased returns both from live stock and from corn.

Sheep breeding.

11,551. Particularly in sheep?—Particularly in sheep, which I give an example of.

11,552. You give the price of lambs sold off the same farm, of the same description during six years, with a decrease of something like 33 per cent.?—Yes.

11,553. And the ewes from which these lambs were bred would decrease in value to a corresponding degree, I suppose?—If you look at page 10, the second paragraph, you will see the price of ewes.

11,554. The ewes are 60*s.* per head in 1882, and 28*s.* in 1892, and 22*s.* in 1893?—Yes; 22*s.* is a much greater decrease.

11,555. And the wool has decreased very considerably in value?—Wool has decreased from 14*d.* to 9*d.* per lb.

Corn-growing.

11,556. And the corn; what do you say about that?—And the corn from 44*s.* per quarter in 1882 down to 26*s.* in 1892.

11,557. Would not the difference be something like the difference in the rent of the land—the difference in the receipts from those subjects?—I should think it would be more.

11,558. More than the whole rent of the land?—More than the whole rent of the land.

11,559. Then depression there is not so recent?—No, it has been gradually coming.

11,560. And the corn and sheep districts have suffered much more, and for a much longer period than the cheese and dairy districts?—Yes, and suffered in a greater degree.

Rates.

11,561. Have any other remedies been suggested to improve the position of the farmers?—I may say that there was a feeling that income derived from personal property had a distinct advantage now in being exempt from all contributions to local burdens.

11,562. That is the whole point, I suppose, of the argument against local rates?—Yes.

11,563. That personal property does not contribute?—That personal property does not contribute.

The marking of foreign meat.

11,564. Have you any suggestion as to the selling of foreign meat?—Yes, that all foreign produce should be labelled as such; that is the general opinion throughout the whole of that district. I made an illustration which is rather peculiar, which you will find on page 14, the 81st paragraph. A farmer told me that a tradesman sent to his dairyman requesting the loan of his stamp to stamp a quantity of Italian butter.

11,565. We will presume that the English butter is worth more than the Italian butter?—No doubt.

11,566. You think that ought to be prohibited by law?—Certainly; that the Merchandise Marks Act should be extended to all foreign produce.

11,567. Did you find a general disposition to give you information amongst the farmers?—Very much so indeed, I am afraid that I gave considerable offence to some farmers in the district by declining to visit their neighbourhood on account of the distance.

Mr. J. Turner. 8 Mar. 1894.

11,568. (*Chairman.*) Everybody wanted to see you?—That is so.

11,569. (*Mr. Little.*) You think that the farmers appreciated the Assistant Commissioners coming to inquire into the cause of the depression?—I had every reason to believe so.

Compensation for home-grown produce.

11,570. (*Mr. Gilmour.*) On page 10 it is contended that "Home-grown produce consumed on the farm should "be included in the schedule for compensation." Did you get any practical suggestion how this could be vouched for, and carried out?—It was suggested that samples of the corn should be kept, and if necessary, that the valuers or referees should be allowed to take evidence on oath as to the correctness of these samples, and that a severe penalty should be put on anyone going against them.

11,571. (*Viscount Cobham.*) What is the acreage dealt with in these comparative statements of rents on the Bridgwater lands at page 11 of your report?—1,700 acres; I think I am right in saying that. It is very splendid land.

Deficient hay crop.

11,572. (*Chairman.*) On page 10 of your report, paragraph 45, you give us as an illustration the statement made to you by a farmer in the neighbourhood of Yeovil. He summarises the the hay crop thus: "In "1890 and previously I grew 150 tons annually; in "1892 I made 50 tons; and this year I shall hardly "make 10 tons.—'And this I found to be about the "'proportion of the hay crop, whenever I made an "'inquiry, except where irrigation is practised.' That "is due to two successive bad seasons"?—That is so.

11,573. One of very low temperature, and the other of drought?—Considerable drought.

11,574. Those, therefore, were very exceptional cases?—Yes.

11,575. And it was unfortunate that they should have followed consecutively?—The farmers admit that.

11,576. Speaking of another gentleman in your report. You say, "A gentleman of great experience "gave as his opinion that the hay crop is so deficient "that provision is not made for wintering more than "one-fourth of the usual amount of stock on the dairy "farms. Cattle must therefore be sold for what they "will fetch, and probably from want of means in the "spring will not be replaced." That seems to be an explanation of the low price of cattle, that cattle was thrown upon the market by numbers of farmers who had no fodder for them, and consequently the price was reduced?—That is so. If I may be allowed to mention an illustration which occurred to me after I had written my report. A personal friend of mine was asked by a gentleman to sell 25 cows for him, and he said of course he should be glad to sell them, and he went to value them, and he told the owner that he would have to take 5*l.* each for them; the owner said that he should not think of taking anything of the kind, and my friend said, "Well, you had better give them away than keep them." "How is that?" said the owner, the answer was, "I can prove it in a very few minutes;" it was in October when this took place; "these cows will not "calve until March or thereabouts, and they will each "eat two tons of hay between now and March, when "they will come down, and the two tons of hay is "now worth more than the cows will be worth then."

11,577. The consequence was that large numbers of cattle were thrown upon the market, and therefore the price went down?—Yes.

11,578. And that accounts for the fall of price of the cattle and also the extreme loss of the pasture farmers during the last two years?—I should not think that it applies to the losses with regard to the sheep.

11,579. Not to the sheep?—Not in the same degree.

11,580. But mainly in the case of dairy farms?—Mainly in the case of dairy farms. I have no doubt it does apply.

11,581. The depression in these cases has been mainly during the last two years?—With regard to cattle and dairy farms.

11,582. But in the case of corn farms it has been of longer standing?—Considerably longer standing.

11,583. Owing to the low price of corn and especially wheat?—Yes.

Mr. Turner. ar. 1894. luction rents.

11,584. In paragraph 42 I see that in the case of the large arable farms the reductions of rent have been very large; but in the case of the pasture farms they have been only slight reductions?—That is so.

11,585. That, I suppose, has rather reference to the period before the last two years—the rents were fixed upon an average of years?—Yes. Then I think during the last two years even on all those farms, there have been remissions of rent, abatements of rent and further reductions.

11,586. Remissions within the last two years?—Yes.

11,587. To meet the exceptional case?—Yes, to meet the exceptional case.

11,588. But apart from the last two years, there have not been very considerable reductions on pasture farms?—Not in this immediate district. You will allow me to observe that there are four different districts. In the first district which is all pasture, there has been a considerable amount of reductions, both reductions and abatements of rent; but in this district which is of a more mixed character, where small farms are somewhat an exception, and grass land still an exception, the reductions have not been so great.

the. 11,589. (*Viscount Cobham.*) Should the tithe rent charge be added to the reductions?—The tithe rent-charge was in almost all instances paid by the landlord.

11,590. Before the passing of the last Act?—I was told this: if it had been paid by the tenant previous to the last Act and the tenant refused, the landlord lost it.

11,591. That has to be added to that calculation of yours then?—Yes.

articulars f a dairy rm. 11,592. (*Mr. Little.*) Is there anything else which you would wish to say to the Commission?—I have an account which was given me by a gentleman of position in Somersetshire, but he does not wish to have his name published. He gives an account of his dairy farm for three years.

11,593. It is the last three years?—They are the years 1889–90, 1890–91, and 1891–92.

11,594. Can you give us the extent of the farm?—201 acres.

11,595. Is it a mixed farm?—It is; there are 39 acres 1 rood 7 perches of arable land, and 161 acres 3 roods 6 perches of pasture land.

11,596. The principal business is the production of cheese, is it not?—The chief business is Cheddar cheese making, and a good many pigs are fattened.

11,597. Do you know whether this farm has been carried on on that system for some time?—I believe it has.

11,598. It is not a newly started one?—No.

11,599. What is the net result?—The farm was well farmed and improved in condition so that in giving up at Lady-day in 1892, it was readily let at the old rent. That is what the gentleman says.

11,600. (*Chairman.*) Does he say what the rent was?—The rent was 352*l.*

11,601. Is that for the 201 acres?—Yes.

11,602. (*Mr. Little.*) What are the rates and tithes?—There is no tithe and the rates and taxes are separately charged.

11,603. How much are they?—47*l.* in the first year, 31*l.* in the second, and 38*l.* in the third.

11,604. What are the gross receipts?—The gross receipts were 3,560*l.* in 1889, 3,600*l.* in 1890, and 3,947*l.* in 1891. *Mr. J. Turner.* 8 Mar. 1894.

11,605. What is the balance of profit or loss?—For the valuation of the stock at Lady-day, and, after what is properly taken off, the loss on the first year's farming is 100*l.*, on the second year it is 140*l.*, and on the third year it is 582*l.*

11,606. How much of that was loss in depreciation of stock?—That is rather difficult to arrive at.

11,607. Is not the valuation for each year given?—Yes.

11,608. How does the first valuation compare with the last?—The first valuation of stock is 1,872*l.*, the second is 2,037*l.*, and the third is 1,839*l.*

11,609. Then there had been a very slight decrease in the valuation of the stock, from 1,872*l.* to 1,839*l.*?—Very little.

11,610. And the loss had increased from 100*l.* to 582*l.*?—Yes.

11,611. And that was not from the falling off in the gross value of the produce, because that increased from 3,560*l.* to 3,947*l.*?—Yes.

11,612. Then the expenses of making that profit must have increased very largely?—The manure bill has increased double, and the oil cakes and feeding stuffs are 152*l.* more.

11,613. But the net result of it all is that though there was an increase of produce, there was a greater increase of expenditure, and consequent loss?—Yes.

11,614. And that loss was not in the shape of depreciation of stock?—It would be to a certain extent, because I expect there was more stock kept during last year.

11,615. Had the farm improved by this system of management so that it was possible to let it at the same rental as before?—So says the gentleman.

11,616. (*Chairman.*) How do you account for it, that in a case in which the losses have been serious for three years, and in the last year amounting to 582*l.*, that he should let that farm to any tenant, at the same rent, the rent being a comparatively high one of 1*l.* 10*s.* per acre?—It was in the hands of the owner for three years.

11,617. But I understood you to say that it let at the same rent?—Yes, at the expiration of that time.

11,618. Then, on giving it up himself, he let it readily?—Yes.

11,619. Can you understand that anybody could be found to be giving that high rent in the face of the fact that they had been losing money by it?—There would be two reasons why a person would be likely to do so; for instance, the farm would be increased in value on account of the condition, and then there would be an opportunity of purchasing his incoming stock at a low rate.

11,620. The incoming tenant would come in at an advantage on account of the low price of the stock?—I think so.

11,621. At all events a man was found who expected to make a profit out of it, paying a high rent?—So says the owner.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Twenty-first Day.

Friday, 9th March 1894.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
ROBERT GIFFEN, Esq., C.B.
Captain OWEN-THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.
CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
WILLIAM CUTLACK LITTLE, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq. } *Assistant*
FREEMAN THOMAS, Esq. } *Secretaries.*

Mr. R. H. Pringle.

9 Mar. 1894.

Mr. R. HUNTER PRINGLE re-called and further examined.

11,623. (*Chairman.*) You desire to explain what you have done in the way of making a map of the district of Essex which you have been inquiring into, do you not?—Yes. (*See map appended to the witness's report on Essex.*)

Uncultivated land in Essex.

11,624–5. What do the maps show?—The land which has gone out of arable cultivation. All that which is marked across and coloured has gone out of arable cultivation, and it embraces the peninsula between the Blackwater on the north, the Thames on the south, and the Great Eastern Railway on the east. It is on the six-inch scale.

11,626. Does it distinguish the land laid down into permanent grass from that which has tumbled into grass?—As far as possible it does. I went over a great many fields which undoubtedly were laid down to seed 10 years ago, but they have died off, and it is now almost impossible to tell the difference between that land and the land which has tumbled down. Those green places have been seeded down, but this particular spot (*pointing to the map*) I was on yesterday, and the pasture is no better than the land which has tumbled down.

Land falling down to grass.

11,627. What is the condition of the land which has tumbled into grass after five or six years?—It goes under the name of "barren" in Essex, and it is an uncommonly good word for it.

11,628. Does it ultimately become pasture?—No, it can hardly be said to improve; it represents a very low value as a run for stock.

11,629. But I presume that as time goes on the grass improves upon it?—That (*exhibiting a photograph*) is the natural grass; it takes a very long time to come to anything.

11,630. (*Mr. Little.*) What is the natural grass; is it twitch?—It is twitch, and what is called water grass.

11,631. Supposing an increase in the price of wheat occurred, this land would not be available for wheat growing?—Of course it would have need to be reclaimed.

11,632. It would have to be fallowed?—It would have to be fallowed; it is all wheat growing land, but it would take time, and would be rather expensive to get into wheat growing condition.

11,633. Where there is twitch and water grass it would require a considerable expenditure of money?—It would, undoubtedly. If doing well in pasture land it would be best to leave it so.

Tithe.

11,634. (*Chairman.*) I suppose the whole rent of the farm would govern the question of whether the tithe should be reduced or not under the Tithe Act?—Yes, under the Tithe Act there have been attempts to get remission, and small remissions have in some cases been got; but they are very trifling.

11,635. (*Mr. Giffen.*) How comes it that it is as heavily rated as the rent?—Because the assessment committees do not take the rent as the basis of assessment. You remember asking me with reference to the Appendix M. of my report. I have got the particulars. This is the case of a gentleman who farms 15 farms, and his assessment is 50 per cent. more than he actually pays as rent.

11,636. (*Chairman.*) Has he taken them lately?—Some of them.

11,637. And there are others that he has rented?—Yes.

11,638. Has he taken them lately?—Yes, within the last 10 or 12 years.

11,639. That would seem to indicate that he hopes or contemplates making a profit out of them?—I think not; in a great many instances he could not help himself, and the last tenant left, and he was obliged to take that up.

11,640. But he has rented some, and he was under no obligation to rent others; therefore he took them in the hopes that he would be able to make a profit?—Yes, I am sure that he did. There were two farms that lay near to his place, and he thought that he could work them cheaper than anyone else.

11,641–2. (*Sir Nigel Kingscote.*) Has any attempt been made to improve what you style the barren land by feeding corn or cake upon it with cattle or sheep?—Very little indeed; much more might be done by cake feeding. I am afraid that the farmers of that land are almost ruined, and unable to buy sufficient stock.

Scotch farmers.

11,643. (*Chairman.*) Take the Scotch farmers that you spoke of, they appear to understand how to let the land down into grass; what have they done?—Well, I have been over a lot of three-horse land laid down by Scotchmen, but it has not been a success at all. I think I mentioned that.

11,644. The general conclusion of your report as to the Scotch farmers is that they were making the two ends meet, and some were making a profit?—But I particularly guarded myself against saying that the Scotch farmers had succeeded on the three-horse land. *This* is three-horse land (*pointing to the map*).

Unoccupied land.

11,645–6. (*Mr. Clay.*) What percentage have you of unoccupied land?—I would say that nearly two-thirds of that land is barren; and on *that* map there (*pointing to a map*), I should think half of that, almost.

The witness withdrew.

Mr. J. Turner.

Mr. JABEZ TURNER re-called and further examined.

Mr. J. Turner.

9 Mar. 1894.

Land falling down to grass.

11,647. (*Viscount Cobham.*) With regard to the land which you say in your report upon the Stratford-on-Avon district of Warwickshire is falling down to grass, is it as a rule adapted to carry grass?—A considerable portion of it is; but when you get down within some short distance of Stratford upon-Avon, where I mention in my report the land alters in character so greatly, a vast quantity of it is not good grass, and never will be.

11,648. But still it will carry pasture of a sort?—Yes.

11,649–50. In many of those cases it would pay the landowner better to neglect the farm buildings and allow the fences to go down, and allow the grass to grow as it pleases rather than to let the farms to tenants at the rents he could get?—I should scarcely think it would pay better. If the land were properly put to grass it would certainly pay better, but not in its present condition. I was told in the case of one estate that I mentioned that a good deal of the land only makes half-a-crown an acre for the year. One gentleman told me that he bought something like 50 acres; and the keep for six months was between 3*s.* and 4*s.* per acre.

11,651. But on the better class of land pastures could be profitably made and maintained?—Yes, they could, no doubt, in the case I have mentioned, in which the gentlemen had bought a farm and laid it down to grass, and laid it down properly; it was growing fair grass.

Allotments.

11,652. Referring to the allotments, I presume you got the information mainly from farmers, not from labourers?—I got it from different sources, in one case from a farmer, in another case from a land agent, and in another from a labourer, and another from a town official. I took four different statements with regard to the allotments.

11,653. Do you think that the farmers, as a rule, were against allotments?—Not at all.

Technical instruction.

11,654. The general opinion appears to be very much against technical education as carried on by the county council, is that so?—May I refer to Somerset as well as Warwickshire?

11,655. Yes?—In Somersetshire there was a general concensus of opinion that technical education classes had done a vast amount of good, especially with regard to cheese and butter making; and the same view obtained in Warwickshire to a certain extent, but not to so great an extent with regard to cheese and butter; but a very strong opinion was expressed that the classes for the higher education were utterly useless for the persons whom they were intended to benefit.

11,656. Do you mean the farming classes?—The classes on chemistry, geology, and botany, and such like.

11,657. Those subjects have been taken up with a great deal of energy and care by the county council of Warwickshire, have they not?—I believe they have.

11,658. But the farmers generally think that the money has been more or less wasted?—Yes, that it has been more or less wasted, except in the matter of the dairy classes.

11,659. Were any suggestions made for the better administration of those funds?—The education of farm labourers in the different processes of agricultural work was advocated.

11,660. Beginning at the bottom?—Beginning at the bottom. So with regard to hedging, draining, and such like work, which of late years, I must say, has fallen into a considerable amount of abeyance, on account of the young men leaving the villages.

Absence of labourers.

11,661. (*Sir Nigel Kingscote.*) Did you hear complaints among the farmers that they could not get skilled labourers for hedging and draining, and thatching?—Not that they could not get them, but that there was a difficulty in getting them; much more than there used to be.

Sale of cattle by live-weight.

11,662. Did you hear any expression of opinion as to the advantage or disadvantage of fat and store cattle, and sheep, being sold by weight in the different markets?—No, I did not.

11,663. Neither in Warwickshire nor Somersetshire?—Neither in Warwickshire nor Somersetshire.

9 Mar. 1894.

Slaughter of foreign cattle.

11,664. Nor any expression as to the cattle disease; whether cattle should be killed at the ports of debarkation, for instance?—There was no remark made upon that, because all their cattle are now healthy; there being no disease there was no remark made upon it.

Assessment to rates.

11,665. (*Mr. Whitehead.*) I see the rents have been reduced from 25 to 60 per cent.; have the assessments been reduced proportionately?—I believe they have been reduced proportionately, because the tenant would, of course, have his option of appealing to the assessment committee. I was told that they have been considerably reduced, but whether entirely in proportion I am not able to say.

11,666. All the assessment committees do not reduce the assessment, as you are aware, in proportion to the absolute reduction of the rent?—I thought that they were obliged to reduce the assessment in proportion to the absolute reduction of rent.

Rates.

11,667. Not always. Have the rates increased?—There was a diversity of opinion on that head, but I think the amount of money paid was no more than it was a few years ago. I found when I really came to examine into the parish accounts, that no more money was paid, although the amount in the pound, owing to the decreased assessment, appeared more.

11,668. Therefore the county council have not been so extravagant as is set forth in this report?—Well, in the report I embodied the opinions which I received.

11,669. At the same time the rates have not increased, they are rather less?—In one or two cases in the parish books I found that the amount of money, as I have mentioned in my report, was something like the same, but the amount in the pound had increased.

11,670. (*Mr. Little.*) A considerable quantity of the land in the neighbourhood of Stratford-on-Avon is adapted for wheat and beans?—It is almost entirely adapted for that.

Existence of depression.

11,671. And all land of that description has very seriously deteriorated in value from the price of wheat?—Very seriously indeed.

11,672. And is that land adaptable for other purposes?—I should be sorry to try to adapt it; it is strictly wheat and bean land.

11,673. Mixed up with it there is a good deal of grazing?—A fair amount of grazing.

11,674. And is the grass of fair quality?—Not of a high quality, except in some few instances.

11,675. I presume that where grass is a considerable portion of the farm there is less depression than where it is entirely arable?—Certainly.

11,676. Do the grazing farmers complain of their profits diminishing?—Most of them are of a mixed character and the reply that I had was, that the greater the amount of arable land the greater the amount of depression felt.

11,677. Then the particular evidences of depression are that the rents have been very much reduced?—Yes.

11,678. That there are a great many farms in hand, and that the changes of tenancy have been very frequent?—Yes.

11,679. You publish one set of farm accounts, which I understand is the only one you were able to get?—With this exception.

11,680. That is only an account for one year?—Yes.

11,681. But it shows a loss which is practically equivalent to the whole rent of the farm?—Yes.

Changes in the system of cultivation.

11,682. Did you observe any great changes in the system of cultivation?—In the system of cultivation I could observe no changes, but want of cultivation was very evident.

11,683. There is no substitution of other crops for which cereals are not profitable?—I do not think there was any substitution.

11,684. It is rather that the land has been allowed to go away to rough grass?—Simply so: it was specially wheat and bean land.

Potato-growing.

11,685. But you have given evidence of one farm, where there was a very large growth of potatoes?—Yes.

11,686. Is that a business that could be largely extended in that country?—I think not. I think where the land is suitable for the growth of potatoes, there they are grown.

11,687. And where the land is accessible to railways and labour?—That farm was extremely well situated with regard to the town, and to the delivery both of manure and goods, and the land was peculiarly adapted for the growth of potatoes.

Large and small farms compared.

11,688. Did you discover that there was any great difference in condition between large and small farmers, or did large farmers farm with more or less success than small farmers?—There did not seem to be very many small farmers in that district; when I say small I may say that there were few farms of less than 200 acres, or from 150 to 200 acres.

11,689. There were no working farmers, no small farms, where the work was all done by the farmer?—A few, but not very many.

11,690. Were you able to observe any great difference between the comparative prosperity of large and small farmers?—The idea that was expressed to me generally was, that the small farmer would be utterly ruined this year, would be crushed by the prices which he had to take for his produce.

11,691. More so than the large farmer?—Well, the large farmers, in many instances, supplement their business by other pursuits, such as steam cultivation, steam engines, and some cattle dealing, and other pursuits of that kind in connexion with agriculture.

The Agricultural Holdings Act.

11,692. There was some complaint as to the operation of the Agricultural Holdings Act, was there not?—There were many complaints with regard to the time allowed for the landlord to send in his claim for waste.

11,693. But was that the only cause of complaint?—Another cause was that home produce was not scheduled.

11,694. The consumption of home produce was not the subject of allowance, do you mean?—Yes; and the farmers there contend that it should be.

11,695. You instance one case where the Act was not put into operation, and you say "proceedings of "this character are certain to bring the Act into "contempt"; will you explain that; it is at page 10 of your Report. In that case the tenant failed to give notice of his intention to claim?—Yes, that was so.

11,696. The farmer neglected to give notice, and consequently could make no claim under the Agricultural Holdings Act, and then the landlord made a claim for waste, but not under the Act?—Yes, under the Act.

11,697. But not as a counter-claim?—No; because there was no claim. There was not a counter-claim, but he claimed for waste on the last permissible day.

11,698. The landlord claimed under the common law and, therefore, it is not an instance of the Act failing, but an instance of the tenant losing by neglect what he might have got?—I understand it now, but the tenant gave me the information, and I took it as he gave it to me and I repeated what he said.

11,699. (*Chairman.*) Very likely he did not understand?—He did not understand the distinction, because he told me that he did not claim under the Act, but the landlord did. I have not looked into it myself.

Complaints and suggested remedies.

11,700. (*Mr. Little.*) The subjects of complaint by the farmers were similar to those in Somersetshire as to the local taxation and railway rates and want of security?—They were of the same kind.

11,701. And the remedies proposed were similar to those we discussed yesterday?—They were of the same character.

Highway rate.

11,702. (*Mr. Dalton.*) In both counties they seem to have complained of the highway rate?—They complained of the highway rate.

11,703. But that is only payable in respect of country lanes. Did they maintain that these country lanes did not add to the value of the agricultural land?—I did not hear any remark of that kind. The complaint was against the highway rate generally as being paid by the land instead of by the people who used it.

11,704. Does it not benefit the land? Are not those roads made nearly entirely for the benefit of the land? They are not made for the butchers and bakers there; the land would be worth nothing without the roads?—I found in Somerset great complaints on account of colliery traffic, for instance.

11,705. Yes, but that would be extraordinary traffic, they might recover that from the colliery under the Highway Act. But those highways have been a charge upon the land from time immemorial, and their cost has not increased, has it, in the rural districts?—I am told that they have increased in the rural districts.

11,706. Then you have the case of a factory and a farm; is that a hypothetical or an actual case?—It is an actual case, that is in Somerset.

Rates.

11,707. What kind of a factory was it? It employs 2,000 hands and it is rated at 400*l.*, and it seems a very low assessment?—I am informed of that by a gentleman who lived in the immediate neighbourhood, and he was a man who would know.

11,708. Was it in an urban district or a rural district?—I think a rural district.

11,709. You say they employ 2,000 hands, and, therefore, would it not be in a town?—It was not in a large town.

11,710. Well, but it must have employed the whole of the population of a small town?—It is in the neighbourhood of Glastonbury.

11,711. Do you feel sure about those figures?—Yes.

11,712. But with 2,000 hands, you see, would there not be a population of at least 6,000 or 7,000 people in the town when one factory employed 2,000 hands?—I have the statement of the gentleman himself, and those are the figures he gave me.

11,713. Five hundred children are sent to the Board School, so that there must be a large population round it?—Of course there would be a population to that extent—that was in Somerset also.

11,714. Did you find that the assessment for the whole county had gone down either in Warwick or Somerset?—I did not inquire as to that.

11,715. My impression is that it has gone up in both counties?—I did not inquire.

11,716. Has the county rate gone up in the pound?—I inquired only as to the sum total of the local rates. I did not divide them.

11,717. Nobody seemed to attach any value to dividing the rate between the owner and occupier?—Not at all.

11,718. What was the precise reason of that; if they felt the burden of the rate was very heavy, why did they not think it was worth while to be relieved of half of it?—Of course I am speaking the opinion that was given me. The general opinion was that the depression was so great that even the relief of the whole of the rates would be a very inadequate remedy.

11,719. But if the rates are so high it would give them a very great relief if the half was taken off the occupier; or do they think that it would go on to the rent?—The opinion received was that if the whole of the rates were taken off it would be inadequate, therefore, if half were taken off it would be still less adequate.

11,720. But still they complained of the rates?—They complained of the incidence of them on account of the injustice of them.

Quality of farming.

11,721. (*Captain Owen Thomas.*) You say in your report that there is a great variation in this district in the quality of land within a small radius?—Yes.

11,722. Is that the result of good and bad farming?—Certainly not, because it sometimes exists in the same field. The men say that it is very extraordinary that there should be such a great variation in so short a distance.

11,723. Did you find that the farmers who are farming the best land are doing fairly well in this part of the country?—They all complained, but the farmers who are farming the best land are doing the best, there can be no doubt about that.

11,724. And are those who are farming inferior land farming as well as they can, or are they short of

Mr. J. Turner. 9 Mar. 1894.

capital?—I do not think that they are short of capital for farming a considerable portion of the county, that is, the strong land; because the men who are doing best are those who keep the best stock and sheep on the ploughed land, and there is only a small proportion of the land which will grow turnips. Therefore the others are losing on account of their produce being at a very low price.

11,725. Is the land as well cultivated as it was formerly?—No, not even in cases where it is still under cultivation; it is not so well done as it used to be.

11,726. Then it deteriorates in quality in that way, and naturally they will feel the depression all the more?—I should say so.

Characteristics of district.

11,727. (*Chairman.*) The district you visited near Stratford was, I believe, until lately, mainly an arable district?—A considerable portion of it.

11,728. And I understand from you that it was heavy land, suitable for growing wheat and beans?—A short distance from Stratford, immediately round Stratford, the land is of a much better quality, and it still remains arable; but when you get about 5 miles or 6 miles away from Stratford, you find quite a different class of land, gradually hardening and stiffening into strong wheat and bean land.

11,729. Is it that land that has suffered most severely?—Yes.

Particulars of a farm.

11,730. Has the better land that you spoke of in the neighbourhood of Stratford suffered?—It has suffered, but not so much; but the rentals have decreased very much indeed. If you turn to one rental on a very good farm, which I noted particularly in Appendix D, page 14, you will see that the rent in 1875 was 1,027*l.*

11,731. Does that farm consist of good land?—Very good land, very useful land indeed.

11,732. The rental was, in 1875, 1,027*l.* for 470 acres, which is over 2*l.* an acre?—Yes.

11,733. And it is now 450*l.*?—It is now 450*l.*

11,734. And therefore it is about 1*l.* an acre?—It is not quite 1*l.* an acre. It is a very good farm—some of it very good turnip land indeed.

11,735. Does that farm pay at that rent?—The tenant informs me that it scarcely paid even now at the reduced rent. I may say that the farmer who occupied it was a butcher as well as a farmer.

11,736. It is not a case merely of a tenant farmer?—Not entirely a tenant farmer.

Depression in the heavy land district.

11,737. Now, going to the worst land you spoke of, namely, the heavy land, at a distance from Stratford, which is suitable for wheat and beans, I presume that that land has suffered more than other districts on account of the comparatively great reduction of the price of wheat?—Exactly.

11,738. Then I presume that the last two years it has suffered to an unusual degree owing to bad seasons?—In both the two last years it, no doubt, has suffered in an unusual degree, owing to the bad seasons. The results are given on page 13. The returns for the different quantities of wheat grown during the last year show a very great difference.

11,739. The last two years have been extremely bad as regards the season?—Yes.

11,740. And have not been compensated for by any increase of price?—No, they have been made worse by a decrease in price.

11,741. The price has fallen still more?—Yes.

11,742. Therefore the farmers in that district have had the double disadvantage of the bad seasons and the low prices?—Yes.

11,743. During the last few years, apparently, there has been a considerable extent of land laid down in grass?—It has laid itself down.

11,744. To what extent have you observed that some farms in that district can be made to pay under the present conditions? There is a case mentioned on page 5, paragraph 14, of a farm, consisting of 365 acres, which you carefully inspected, which was purchased a few years ago by an enterprising farmer. Is that in the worst district?—No, it is not in the worst district, and it is not in the best district.

11,745. But it is about the medium?—It is about a medium farm.

11,746. This person, having bought his farm, "converted the whole into pasture by seeding in a proper "and business-like manner, has put up additional "buildings, and is occupying the whole as a dairy and "stock-raising farm"?—Yes.

Mr. J. Turner. 9 Mar. 1894.

11,747. I rather gather from you that he has made it pay?—He hopes to make it pay; he has not been there above three years, I think. He is a very enterprising man, with a fair amount of capital, and attends strictly to his business. He has turned it all into pasture; it is rather a peculiar thing, showing that he did not trust in the arable.

11,748. In that case, time has not yet been given to show the results?—Not positively.

11,749. Did you find him sanguine about it?—Fairly so.

11,750. Fairly so?—He was complaining to a certain degree of the price of stock which he had to sell, but not in any special degree, because he both buys and sells, naturally.

Value of dairy produce.

11,751. Has the price of milk and dairy produce fallen or no?—The price of milk has not fallen; the price of butter, as far as I could learn, has fallen somewhat.

11,752. Somewhat?—Yes, but not much; and cheese has fallen apparently in accordance with the quality of it.

11,753. According to the quality?—Yes.

11,754. Had the bad seasons resulted in a bad quality of cheese; was it something like that?—Not exactly; one result I found generally mentioned was that the cheese was not so good as it used to be on account of the sale of milk.

11,755. That has interfered with the production of cheese on the farm?—It has interfered with the quality of the cheese to a certain degree. I was told that generally. I made several inquiries, especially in Somerset, with regard to the cheese-making industry, and I was told that there was a very great demand for the very best cheese which could be made, but that it was difficult to find.

11,756. (*Viscount Cobham.*) There is no cheese of that quality produced in Warwickshire, is there?—No.

11,757. (*Chairman.*) At page 9, paragraph 38, you say, "I hear of some successful milk farms in the "district, but have not been favoured with a return "from any of them." Were those farms in the worst district that you speak of?—No, they were not. It is a very difficult question to answer directly because, as I have stated, one farm will be a fairly good one and the next adjoining will be of a very middling character indeed, on account of the great variation of the soil.

11,758. Did you go over any of these successful milk farms?—No, I did not.

11,759. Of course it is very important to ascertain the causes of success on some farms in districts which otherwise are in a bad condition?—All the farms which sell milk as far as I could learn were in the immediate neighbourhood of the towns—in the immediate neighbourhood of Warwick and in the immediate neighbourhood of Stratford—and wherever the delivery was easy.

Successful farms.

11,760. Then you speak of the prize farms of the Royal Agricultural Society's Warwick meeting of 1892 being within the district?—Yes.

11,761. Did you go over any one of those prize farms?—Not on this occasion. I had been over one of them before.

11,762. There were three prize farms apparently, one in each class?—Yes.

11,763. And it is a condition, I think, of the prize that the farm must be worked to pecuniary advantage, is it not?—I expect so.

11,764. I think that is one of the conditions made of giving the prize?—Yes, it is.

11,765. That it must not be merely a fancy farm, but that it must be carried on to an advantage?—Not at a loss, at all events.

11,766. That it must be carried on to a profit?—Yes.

11,767. Did you go over any of these farms in your present visit?—I went through one of them, the third

Mr. J. Turner. 9 Mar. 1894.

prize farm. I found it a very useful farm, and fairly cultivated.

11,768. Do you know whether the rent in that case had been reduced?—It had been reduced during the last two or three years—about three years ago I understood.

11,769. Do you know what rent he was paying?—At the present time?

11,770. Yes?—I was told, not by the gentleman himself, for he was rather reticent with regard to what he was doing, but by an agent, that he would be paying from 22*s.* to 25*s.* per acre.

11,771. A fair rent?—About a fair rent.

11,772. What district was that farm in?—That was between Stratford and Warwick.

11,773. Was it in the very best district, or in the medium district?—It was in the medium district.

11,774. Then at paragraph 39 you say, "A gentle- "men of much experience writes, 'Devon and Cornish "'men have come here in numbers, and hold their "'own'"?—Yes.

11,775. Did you see any of the farms held by these Devon and Cornish men?—No, I did not see any of those.

11,776. But you heard that they were holding their own?—I quoted the gentleman's words from the report of the steward.

11,777. Would it not have been well to ascertain what they are doing, how they are cultivating their land—how they are making their land pay?—It might have been, but I may say, as I said in the commencement of my report, that the season is rather unpropitious for going over farms. There was snow on the ground a good deal of the time, and the weather was unkind. I got a great quantity of replies.

Mr. J. Turner, 9 Mar. 1894.

11,778. Do you know what district these Devon and Cornish men were farming in?—In the medium district.

11,779. The cases that you mention seem to show that it is possible, at all events, in the medium district, for men to farm the land with advantage?—I should not think to any great advantage, but, as far as I could judge, from what I heard, and, in fact, from what I saw, with a great deal of care and the greatest economy it was possible not to lose a great deal of money, simply because many of those farms grow little or no wheat at all.

11,780. Evidently a change of a serious character has come over the district; the farmers could no longer cultivate the land to an advantage growing wheat only, or mainly, and a change was necessary; but apparently some farmers have come in and made the thing pay?—I do not think that these new farmers have changed in the mode of cultivation more than those who remain on the same class of land. If you will excuse me saying so, I do not think they have brought any specially new ideas with regard to farming.

The witness withdrew.

Dr. W. Fream,

Dr. WILLIAM FREAM called and examined.

Dr. W. Fream.

Andover district. Average rent.

11,781. (*Viscount Cobham.*) I gather from your report as Assistant Commissioner upon the Andover district of Hampshire that there has been a very heavy fall of rent in that district?—Exceedingly heavy.

11,782. You say in paragraph 13, a farmer stated to you, "It has come to this, you may regard the land as "practically of no value, and look upon the rent as "merely covering the interest on the outlay on house "and buildings." Is it largely the case, should you say, in the Andover district, that the landowner is really getting not more than the interest on his outlay?—Yes, I am afraid that statement applies very widely.

11,783. And I should think a good deal less than the interest on his outlay in a great many cases?—A good deal less in many cases.

11,784. Have you ever calculated what a landowner should get in the way of interest upon his capital upon an acre on an average estate managed in the ordinary way? I have heard it stated by a competent authority that as much as 1*l.* an acre should be got by the landlord in order to recoup him on what he has done?—It is a question that I have considered. Of course the value of the house enters into the calculation, but, as a rule, it is left out by the tenant farmer.

11,785. I presume that a rent of 1*l.* an acre in the Andover district is quite exceptional?—Now it is. I think I have stated in my report what is the general rental of the neighbourhood.

11,786–87. Is it half that?—10*s.* an acre. There is a case mentioned on page 8. "Land lying south-west "of Andover, that let 30 years ago for from 15*s.* to "20*s.* an acre in addition to tithe, is only letting at 5*s.* "now, tithe free."

11,788. Do you think 10*s.* an acre would represent the average rent of the district?—I should think it would more than represent it

Tithe.

11,789. The landowner paying the tithe?—Yes.

11,790. Is the tithe a comparatively high one?—It runs to something like 4*s.* 6*d.*, I think, taking the county generally, or the district rather, as a whole.

11,791. (*Mr. Little.*) Is that the commuted, or the present value?—The present value.

11,792. (*Viscount Cobham.*) It is quite clear that the landowners are receiving in such cases next to nothing?—Even less where they have to pay the tithe, I am afraid, and the rent does not equal it.

Value of land.

11,793. We had it from one of the local witnesses that he knew of land in the Andover district that could be bought for 2*l.* an acre. Do you confirm that opinion?—I should think that is quite possible; in fact I believe there is some land in the district quite unsaleable at present, between Andover and Basingstoke.

11,794. It is more or less adapted for sporting, is it not?—Yes; I refer in my report to that very point.

11,795. But still for sporting purposes it would be necessary to keep part of the land, at all events, in cultivation?—Yes, and there would be some covert necessary.

Cost of labour.

11,796. Then, from what you say in paragraph 13, it appears that the cost of labour has gone up in that district, rather than fallen?—Yes, up to last year.

11,797. The wages bill of a good farm near Andover formerly let for 560*l.*, now tenanted at 320*l.*, has gone up 100*l.* during 25 years?—Yes, I found it to be very generally the case that during the last quarter of a century wages have increased, and the quality of the labour is not so good.

11,798. Has the quality of the labour so much deteriorated that more labourers have to be kept?—That may possibly be the case.

11,799. But as a rule I imagine that the farmers have been reducing the labour on the farms in such a depressed district as this, is that not so?—Yes, the reduction of labour was commencing last Michaelmas, but not till then.

11,800. Then you give another instance of a large farm of 1,100 acres, and there in 1892 the labour bill was 887*l.*, as compared with only 868*l.* in 1875; is it not, arguing from your general experience, rather exceptional that in a thoroughly depressed district the labour bill should be, if anything, somewhat increased?—Of course this present depression has only become acute in the Andover district within the last year or two, and wages have been steadily approaching a maximum, which was reached, we will say, at the beginning of last year.

11,801. Were the farmers not hit in 1879 and subsequent years?—Not in 1879 as they were in 1893. This is a district which can stand a great deal of wet weather. It is the drought that punishes a country like the Andover country, which is almost entirely situate upon the chalk.

11,802. Have not the rents fallen ever since 1879?—Yes. I think I have given instances (*see* page 22) in which rents have fallen.

Dr. W. Fream. 9 Mar. 1894.

11,803. Still, as judged from the labour bill the farmers have been spending as much in recent years as at any other time?—Yes, quite as much, I think.

Small holdings.

11,804. In the paragraph relating to small farms you quote the instance of a farm of 250 acres being broken up into a dozen small holdings ranging from 3 acres to 150 acres in size. Were all those small holdings provided with buildings by the landowner?—I think so—farm buildings; of course, there were no residences.

11,805. The tenants incurred no capital outlay in respect to buildings?—No, I believe not.

11,806-07. Did they reside upon their holdings?—No, I think they resided in the village. There may have been one or two houses on the largest of these small holdings.

11,808. At the present time, I see, all except one of the tenants follow some other occupation, but were they originally small farmers and nothing else?—I believe they were, but they found it was impossible to hold on.

11,809. Did you see that place?—I saw the place; I visited it. The buildings were left in a very sad state of dilapidation. Evidently there is not sufficient capital to enable the holders to keep them in repair.

11,810. Of what quality was the land?—Fairly good for the district; some of the best land in the district.

Characteristics of district.

11,811. Has much of this arable land of a thin description resting on chalk been ploughed up within the last 50 years in the Andover district?—I believe the original breaking up of that land dates back to about the time of the Peninsular War in the early years of this century. That is when it is believed the great mischief was done in that country, by breaking up the old down land when the price of wheat offered such a great inducement to cultivators.

11,812. Would you be of opinion that it cannot go back into permanent pasture?—It would take many years to re-establish it as pasture of the same quality as that which it originally was.

11,813. Quite an indefinite time?—Yes, quite indefinite.

11,814. Still, originally it was, I suppose, good pasture?—Yes, fine down turf—most admirable sheep pasture.

11,815. You saw some land going back to grass, no doubt?—Yes, unfortunately I saw a great deal.

11,816. But it was growing next to nothing?—Growing scarcely anything at all. In some cases the "seeds" crop was allowed to remain, and the farmer never troubled to plough it up; in other cases the stubble was not removed, and the land was allowed to become grassed over.

11,817. Were they feeding beasts with cake?—The cattle and sheep that I saw on those lands I do not think were getting any cake at the time.

11,818. You do not think that a farmer would be encouraged to spend any money on such lands?—I do not think so. All the cattle I saw on these lands were quite rough beasts, that would live on the commonest herbage.

The corn returns.

11,819. As to the Corn Returns Act, referred to in paragraph 60, on page 15, the instance quoted there by a farmer as to the fluctuations of price at Winchester market must be a very exceptional case, must it not?—I took great pains to get a correct account of that case. I believe it is quite correct. It was given to me by a man of very wide experience.

11,820. I see that A. sold to B. 100 quarters of barley at 24*s.* the quarter, which included the cost of getting it to market, I presume?—Of course it would not be at the market; it would have been on his farm at that time. He sold it in the market at 24*s.* a quarter.

11,821. Still he would have to deliver it to the buyer?—That comes subsequently; but he would have to deliver it, as a matter of course.

11,822. B. at once sold it at an advance of 1*s.* to C., who disposed of it at a further advance of 2*s.*?—Yes.

11,823. And eventually D. sold it at a figure which included the freight to a railway station?—Yes; as a matter of fact from Winchester to Bristol.

11,824. Do you know what the freight would have been?—No; I could not tell you that.

Dr. W. Fream. 9 Mar. 1894.

11,825. At all events he made some profit?—Yes; he would make a profit; these were all one day's transactions.

11,826. Is that not a very exceptional case of fluctuation in one market?—I do not know. I believe corn merchants do make fortunes in this way.

11,827. It would seem as if the farmer was a very poor seller?—That may be so; but I should like to say, respecting this case, that I believe it is perfectly genuine. It was given to me on most excellent authority, and I checked the figures after putting them on paper.

11,828. (*Mr. Giffen.*) Were the sales in the same market?—They were in the same market.

11,829. On the one day?—On the same day.

11,830. (*Sir Nigel Kingscote.*) Did you know this district before you went there this time?—I knew the chalk country pretty well; but I had not an intimate acquaintance with the country round Andover.

Uncultivated land.

11,831. Then you cannot say whether the cultivation generally has fallen off very much or not?—It has fallen off in this way, that the outlying fields which used to be tilled are not now tilled; they are not cultivated.

11,832. In paragraph 12 on page 7 you say, "In "some localities the land is looked upon as exhausted." Will that apply to the arable land, or to the pasture land, or to what?—That would be the arable land.

11,833. Is that not being properly manured?—I should say it would be primarily due to the original poverty of the soil. It is a very poor soil at the best of times; and though a grateful soil for treatment, farmers have not been able to spend much money on the land of late years.

11,834. Therefore, in that district it would take a good deal to get that sort of land up again, I suppose?—Yes, it would indeed.

Sale by live-weight.

11,835. Did you hear an expression of opinion whether it was desirable or not for cattle and sheep to be sold by weight—both store and fat cattle?—It was never mentioned to me in the district.

11,836. Not once?—Not once.

Slaughter of foreign cattle.

11,837. Was any mention made to you as regards cattle diseases, or the desirability of all cattle coming from abroad being slaughtered at the ports?—I found scarcely any interest taken in that question either.

Dairying.

11,838. (*Mr. Whitehead.*) There would not be much dairy farming in that district, I take it?—Scarcely any.

11,839. You have a paragraph about it in which you say an attempt was made?—Yes, and that attempt has proved abortive.

11,840. Would that be because of the soil and surroundings not being suitable?—I should imagine so; it was certainly not due to any lack of capital for there was plenty of capital behind this attempt. It is essentially a wheat and sheep country, and is not adapted for dairy farming.

11,841. (*Chairman.*) That was a case on a very large scale; the attempt was made on a farm of 1,200 acres, but would it be possible in the case of smaller farms?—Yes, it would to some extent where there are water meadows, and I think elsewhere I have mentioned such cases.

11,842. (*Mr. Whitehead.*) I was going to say that where there was a portion of water meadow such a farm would be suitable for dairy farming?—Yes, that is so, then they can adopt dairy farming, but where they have no water meadows it is almost impossible.

11,843. Water meadows are a very great help to hill farms?—Yes, and they have been specially so in the last two or three seasons.

11,844. But they are limited in extent?—Yes.

Rates.

11,845. There does not seem to be any very great complaint as to the local taxation in the district that you visited, so I gather from your report?—They complained a good deal of the highway rate in this district.

11,846. Do they know that the great part of the highway rate as far as regards the main roads is recouped by the Imperial Exchequer?—No. I am

Dr. W. Fream. 9 Mar. 1894.

afraid that the local knowledge on these points is very limited.

11,847. And, therefore, such knowledge ought to be distributed?—It ought to be distributed, certainly.

11,848. They cannot complain of the roads which are not main roads, because those are mainly used for farm purposes?—Of course, they mend those themselves.

11,849. You point out in paragraph 22 that if the local rates were all taken off that would not very much benefit them?—Quite so. I felt it necessary to put that question to a farmer who had made a number of complaints to me. The fullest relief of local taxation would not meet this trouble from which they suffer.

Tithe.

11,850. One question as to paragraph 22, which deals with the assessment of tithe to the tenant, the landlord paying it too; you say there that it is virtually paid twice in some cases?—Yes.

11,851. It ought not to be paid so; it ought to be deducted from the tenant's assessment?—Quite so.

11,852. Do you think it is paid twice in many cases?—I have no concrete example that I could adduce at the present moment, but this case was put to me in the manner in which I have reported it to the Commission, and I should think that cases may arise in which through some negligence or ignorance of the law an amount may be paid twice over.

The corn returns and tithe.

11,853. (*Mr. Giffen.*) With regard to the corn returns, do complaints come to you from the farmers, am I to understand?—Not entirely. This particular case that I have quoted about the re-sale in Winchester market came from a corn dealer in larger practice.

11,854. But the corn dealer is not concerned in the matter, is he?—No, but he was good enough to give me a great deal of information, and amongst that information was this particular case.

11,855. The question I am putting is with reference to those members of the agricultural community who are interested in this grievance; is it the farmers who made the complaints to you of the thing as a grievance?—I think the farmers were fairly indifferent in the matter; I do not think the farmers regarded it as a grievance except in so far as it might give a more rosy view of their position than was actually correct. They say that if the price of corn is returned at an artificial value, people will get an idea that they are in a better position than they really are.

11,856. That is to say, that the Gazette average prices are not true, and that it affects the farmer unfavourably in that manner?—Yes.

11,857. That is the idea?—Yes.

11,858. It is not a question of the bearing of these things upon the tithes, is it?—Yes, I found that; I found that tithe receivers who had to pay taxes on tithes were especially eager with regard to this matter.

11,859. That is to say the landowners were interested?—Yes.

11,860. But not the farmers?—Not the farmers.

11,861. Then the diminution of the tithes would not relieve the farmer to any extent—of course that would be a question of rent?—Yes, quite so.

11,862. Assuming it to be a complaint by some persons interested in agriculture, have you considered at all the question whether these complaints are in effect just, and whether the remedies which you mention in paragraphs 61 and 62 ought to be adopted?—I did get the impression that the return should be made by the grower, and by him alone.

11,863. I suppose you are aware that when the tithe commutation was fixed in 1836, the returns were made exactly in the same way that they are now?—Yes, I am aware of that.

11,864. And that they were turned to use for a purpose in which it was necessary to take the market price (in which re-sales had to be included), namely, that they were taken for the sliding scale of corn duties?—Yes, I am aware of that fact, but among the people I have met I do not think any of them know anything about it. It is just one of those cases which Mr. Whitehead has mentioned on which greater local information is necessary.

11,865. If the total rentcharge were fixed upon market prices of that nature, would it not of itself, if you were to change the returns which you are making, necessitate that you should begin with a change in the commutation so that you should do no injustice?—Yes, I quite admit the force of that argument. I should only like to say that the farmers themselves, the wheat growers, look upon this return so far as it affects them, as merely showing the money which wheat is bringing into the market, and that the effect of the wheat sales is to give a better complexion to the wheat market than it should have.

Dr. W. Fream. 9 Mar. 1894.

11,866. As far as the tithe payer is concerned you would hardly think it would be just, if the system of taking the returns is to be changed, that it should be changed unless you begin by considering what the original tithe settlement had been?—Quite so.

11,867. That would apply to some extent to the complaint of the farmers as well, that if you were to change the basis you ought to consider a great many circumstances which are perhaps not referred to here, is that not so?—Yes, that is quite my opinion.

The corn returns.

11,868. Then with regard to these prices again, assuming the case that you give to be a true one completely, and that it is not a thing to be disputed, is it not rather the case that by including these four different prices in the return, the farmer's position generally is shown to be more favourable to the farmer than if the Gazette price had been 32*s.*, which was really the market price of the day?—That 32*s.*, I might point out, includes the railway carriage from Winchester to a distant station—Bristol, I believe it was.

11,869. It was the highest price?—It was the highest price including delivery.

11,870. It was the highest price of that day?—Including delivery; of course if that had been sold for delivery, we will say up in Scotland, to put an extreme case, the price would have been much higher, because the freight would have been greater.

11,871. Still, taking one with another, the prices included in the Gazette return do include the freight to the place of delivery; that is the mode of dealing in the market, and that has always been the case?—I do not know about that. I think grain may be sold on the spot or it may be sold delivered; in the one case the buyer pays the freight, and in the other case the seller does.

11,872. Surely those interested in these prices must be well aware that all these qualifications have to be included, and the landowner knows quite well that these prices do not show the money which the grower actually gets, but they show the course of the market according to the usual conditions?—Yes.

11,873. So that by including in the return, not merely the best price of the day, but all the other prices, the farmers' position is shown more accurately than if the true market price alone was shown?—I scarcely think the farmer himself—I mean the wheat grower—would admit that.

11,874. Is it not evident, on the face of it, that that farmer was a bad seller, all these prices being in the market on the one day?—That is quite possible.

11,875. The farmers generally get the benefit of these bad sales made by a particular grower, because they show a lower average price for wheat or barley than would otherwise be shown?—Yes; but we must remember that the farmer stands in the market a solitary unit, without any co-operation, whereas the dealers are a confederated band, if one might so term them.

11,876. Still the farmer is not penalised to that extent, I should think; there is a difference here between 24*s.*—and I will not say the 32*s.*—but 27*s.*, which seems to be a very large difference?—Yes, it is a wide margin, and that is why I reported the case; it seemed to me such an extraordinary one.

11,877. Then, if it is not a usual case, if it is an exceptional case, the result would be that the Gazette average prices are not so far wrong?—I could not say that; of course the average price in this case was 27*s.*

11,878. Would it not be the case that, in order to prove that the Gazette average prices are materially wrong, you would require to have a very large proportion of the corn sold in the market dealt with in this manner, and that the difference between the first price and the last price should be very considerable? If the cases are few, then the Gazette averages will not be much affected?—I quite admit that.

Dr. W. Fream. 9 Mar. 1894. The Agricultural Holdings Act.

11,879. (*Mr. Clay.*) You seem to have had very little evidence given you to help your report regarding a very important question just now, the Agricultural Holdings Act. I am referring to paragraph 55, page 14 of your report?—Yes.

11,880. Did you inquire into the working of that Act in the district?—Yes, I did, very fully.

11,881. You have not given us much report here?—Simply because I found that very little interest was taken in it—that was the reason.

11,882. Why was that?—Primarily, because the farmers said they did not understand it; in the second place, because they find it an expensive Act to set in motion.

11,883. Have the farmers any other mode of getting compensation, through their private arrangements for instance?—They are contented to go by what is termed the custom of the country.

11,884. Do you know what the custom is?—Yes. I could not give you the details offhand; but it is a well recognised Hampshire custom.

11,885. Is it fair and reasonable?—The farmers are contented with it, I think, locally.

11,886. You cannot give us a detailed report upon it?—No, I could not. There is some custom with regard to sainfoin. Sainfoin is a very important crop down there, and that always comes into a letting or a leaving transaction.

Compensation for home-grown produce.

11,887. The report suggests an amendment in the Act, because the farmers in that district think that the produce they grow, and consume on the holding, should be allowed in the Agricultural Holdings Act for compensation?—Yes, that point was put to me upon several occasions.

11,888. Do you agree with that, that the corn grown should be included in the claim?—We are in a transition period just now with respect to that point, because I think during the last year or two there has been a great deal more wheat fed, in one way or another, than in any previous year.

11,889. Is it not likely, as far as you know and see, that the wheat now will come more into use for making beef and mutton, and for stock, than it has been in the past?—It may very likely be so.

11,890. Does it not all point in that direction?—Certainly.

11,891. In England especially?—No, I should say in the Andover district generally.

11,892. Is it the general idea that the price of wheat is gradually lowering?—Yes.

11,893. Do you see any prospect, in view of the competition which we have from abroad, that wheat is ever likely to return to its old price?—No; they do not look for a return to the old prices.

11,894. If not, will it not be therefore used more for feeding purposes?—If they continue growing wheat at all, but that is the problem.

11,895. It is grown more for consumption by the stock?—Yes.

11,896. In that way do you not think it is fair and reasonable that that wheat should be allowed to be incorporated in the compensation to an outgoing tenant?—That is the point that was put before me. I find a good many farmers are in favour of the inclusion of wheat.

11,897-901. The fertility of the farm is more largely kept up if the wheat that he grows is consumed on the farm?—Yes.

11,902. Therefore on that ground is it not more reasonable that these things should be brought into play, and incorporated upon the compensation basis in going out of the farm?—Yes.

11,903. (*Mr. Gilmour.*) Among these farmers who thought they ought to get compensation for home-grown produce consumed on the farm, did any of them propose to you any practical way in which the interest of all parties should be guarded?—No, I do not remember any case in which a farmer gave me what might be called working details.

Farmers' accounts.

11,904. I notice that in that district the farmers hardly kept any accounts, at any rate that they did not keep accurate accounts?—That is so.

11,905. So that there would be a great difficulty in proving what had been consumed on the place; and therefore the suggested amendment of the Act would entail the keeping of accurate accounts in connection with the produce?—Yes; I think all the farmers there know, of course, how much wheat they get from the threshing machine, for example; they all keep a record of that, and of any other grain that they thresh out; they would know to a bushel, I should imagine, how much it was.

Dr. W. Fream. 9 Mar. 1894.

11,906. Do they keep accurate accounts of what they sell? From your report I would judge that they do not keep them, except just a memorandum?—I am afraid there is nothing, except a pocket book and the bank book.

Characteristics of district and prospects.

11,907. (*Mr. Little.*) The district round Andover is principally one marked out by nature for large farms, is it not?—Yes, quite so.

11,908. The cultivation of that land must be mainly for the purpose of growing corn and sheep?—Corn and sheep are the great staples of that country.

11,909. They have both fallen exceedingly in value?—Yes, exceedingly so.

11,910. There is no great chance of the land being devoted to any other purpose?—The only alternative I see is grass of some kind, but it is not land that takes kindly to grass.

11,911. It would be a long process to get it into profitable cultivation as grass?—Yes, it would indeed, and it would be very costly.

11,912. If the present prices continue, a good deal of the land must go out of cultivation?—Some of it has already gone out of cultivation; more will do so.

11,913. If these prices continue, the area must be extended?—I think so.

Reduced estate rental.

11,914. In Appendix G you have shown us the effect upon one landlord in the shape of the rental. It seems that the rent reached the highest point in this table in 1877, when it was 7,916*l.*?—Yes.

11,915. In 1891 it had come down to 5,129, which is a reduction of nearly 35 per cent.?—Yes.

11,916. In the next year it had come down to 4,463*l.*, which is a reduction of 44 per cent.; you can take the percentages from me?—Yes.

11,917. And in 1893 it has come down to 3,626*l.* which is 54 per cent.?—Yes.

11,918. And there is no certainty that we have got to the bottom yet?—None whatever. I should like to say that it is a very good estate.

11,919. It seems to have been, within a very small quantity, the same quantity of land throughout, there are 100 acres less now, but only that difference?—Yes, a very slight difference indeed.

Reduced value of produce.

11,920. Now on page 8 you have given an account of the corn and seed sold from a large farm for a series of years, from 1875 to 1891. I find on comparing the different periods, that for the first six years, the average amount was 1,782*l.*; for the next six years 1,609*l.*; and for the last five years 1,390*l.*; that is, in the last period of five years, 22 per cent. less was received on those articles alone, than was received in the first seven?—Yes, I think it would work out to that.

11,921. Then you have given in another Appendix (page 20, from 1872-1892), the comparative prices of sheep, and from that it would appear that the value of sheep has decreased at least as much as corn?—Quite so.

11,922. That would sufficiently account for the depression unless the farmer had been able to decrease his expenditure?—Quite so.

Cost of labour.

11,925. The expenditure on labour, to which Lord Cobham referred, is compared in the same statement, on page 6. It seems that in the last six years labour has cost just as much as it did in the first six, or within a fraction; for the last six years it was on an average 900*l.*, as against 919*l.* for the first six years?—Yes.

Particulars of farm accounts.

11,924. So that there is no great decrease in the total amount paid for labour. Now, I refer you to some accounts on page 19, which seem to be the accounts of a gentleman who occupies his own land, and who has done so for many years. They are summarised for three periods of seven years each. I find that the total receipts for the first seven years were 18,481*l.*, and that the wages were 3,964*l.*, that is about 21½ per cent. of the whole receipts?—Yes.

Dr. W. Fream. 9 Mar. 1894.

11,925. Then in the next seven years the receipts were 15,190*l.*, and the wages 4,057*l.*, that is 26 per cent. ?—Yes.

11,926. In the next period of seven years the receipts were 15,317*l.*, and the wages 4,516*l.*, that is nearly 30 per cent.; so that of the total produce, wages took 21 per cent., roughly, in the first seven years, and 30 per cent. in the last seven. Then I will ask you to compare the amount which was available for the landlords' rent and the tenants' profit, that is the balance in this account, the man being his own tenant. There is an average yearly balance of 1,246*l.* in the first seven years to cover rent and tenants' profit; am I correct? —Yes, that is so.

11,927. And the yearly average of wages is 566*l.* ?—Yes.

11,928. That is to say, wages were in ratio to rent and tenants' profit, as 45½ to 100 ?—Yes.

11,929. In the next seven years the wages average annually 579*l.* as against 684*l.*, the balance; that is to say, the ratio of wages to the landlords' and tenants' profit is as 84 to 100 ?—Quite so.

11,930. In the next seven years the wages average annually 645*l.*, and the landlords' and tenants' share is 323*l.*, the ratio of wages to rent and tenants' profit being as 200 to 100 ?—Yes, just double.

11,931. That is a correct inference from the accounts that you give ?—Yes. In the earlier period, when he let the cows, we have the advantage in the balance in favour of the dairy. When he let the cows there was a clear profit coming in which, in the later years, when he kept them himself, would not be shown.

11,932. (*Chairman.*) The actual receipts from the dairy are very much greater in the latter years; they average 687*l.* in the last seven years, as against 308*l.* in the first seven years ?—Yes.

Rates.

11,933. (*Mr. Dalton.*) Did you have any evidence as to whether the rates in the pound had gone down, or not, in Hampshire ?—My impression was that the rates had gone up, but that the assessment had been lowered.

11,934. It appears from Mr. Fowler's return of last year that up to 1891, speaking of Hampshire as a whole, there had been a heavy fall in the rate in the pound, but you did not have any specific figures, did you ?—If I had them, they are here in the Report.

11,935. I do not think there are any ?—No, I find there are not.

11,936. In paragraph 22, you say, "A farmer of "800 acres for the last 40 years said, that at the best, "such relief would only benefit him to the extent of "30*l.* a year," that comes out to 9*d.* per acre, which is pretty low ?—He said "30*l.* a year, or so," which is a rough approximation.

11,937. I think, as a matter of fact, the rates, certainly until the last year or two, have not been high in Hampshire, as a whole; you have had no complaints that the rates are high, have you ?—No, I have not. It was not so much a complaint of high rates as a complaint of the rates being in existence at all.

Uncultivated land.

11,938. Do you know any land in the neighbourhood of Andover that has gone out of cultivation owing to the tithe ?—There is a big estate between Andover and Basingstoke, most of which, I think, is out of cultivation; or at all events some 6,000 or 7,000 acres.

11,939. Do you attribute that to the tithe ?—Partly, no doubt, to that, and partly to the very bad prices for wheat and sheep.

Tithe.

11,940. You say in paragraph 50 that "The nationalization of the tithe" was advocated. What is intended exactly by that ?—It was a phrase used to me by one or two tenant farmers. The idea was that the nation, the Government, should purchase or redeem the tithe in some way. I have gone into that point a little more fully in my report on the Maidstone district of Kent.

11,941. (*Captain Owen Thomas.*) May I ask whose estates you visited in this district ?—I visited, amongst others, the Red Rice Estate, the Tedworth Estate, the Stratton Estate, the Laverstoke Estate, those would be Sir John Kelk's, Lord Northbrook's, and Mr. Portal's.

11,942. (*Chairman.*) Did you go over Lord Northbrook's estate ?—Yes.

11,943. Did you see Mr. Caird ?—He was away, but I saw his farm. I went over his farm.

Dr. W. Fream. 9 Mar. 1894.

11,944. (*Captain Owen Thomas.*) Did you find that the landlord and tenant were generally on fairly good terms in this part ?—Yes, I found very little evidence of bad feeling.

Ground game.

11,945. I see in your report, that complaints were made to you of the damage done by ground game ?—Yes.

11,946. In paragraph 57, page 14, you say, "One "tenant stated that hares from an adjacent covert "belonging to the landlord, had this season, well nigh "destroyed his mangel, which at the best was a "poor plant," Why did he not avail himself of the Ground Game Act, and send those hares to market, to compensate himself for the loss ?—I do not suppose that he knew he could.

11,947. Has he contracted out of it ?—I think many of the tenants in the neighbourhood have made some agreement.

11,948. Are they satisfied with the agreements they have made ?—I presume, that if they make agreements they must be satisfied; but in this particular case, where the mangel was destroyed, I do not suppose that gentleman had ever read the Ground Game Act, or knew what he could do under it.

11,949. The tenant you mean ?—Yes, the tenant.

11,950. Was he compensated by his landlord ?—Are you referring to the case where the mangel was destroyed ?

11,951. Yes ?—I do not think he was.

11,952. Would that be a large field ?—Yes, I dare say he had all the mangel he would grow in that field. It would be about a dozen acres, as far as I remember, and it was bordered on one side by a large covert.

11,953. What would that mean now in the way of loss to the farmer: what would it represent ?—It is difficult to say what the prospective loss was, because mangel is especially valuable this season. It was a greater loss last year than it would have been in most years. There was not much mangel left by the drought, and what there was left these rabbits seem to have appropriated.

11,954. Was this farm in particular overstocked with ground game would you say ?—Yes.

11,955. Is it true that some of the landlords in this part of the country turn out the ground game at a certain time of the year ?—I did not hear that.

11,956. You did not ?—I did not hear that.

11,957. On this particular estate, where this field of mangel was that was complained of, does the landlord himself shoot, or does he let the shooting ?—This estate belongs to a nobleman in the neighbourhood, and I should almost think that he would himself shoot, but I do not know for a fact.

11,958. (*Chairman.*) Did you hear of any general complaints in the districts that landlords compel their tenants to contract themselves out of the Ground Game Act ?—No, I cannot say that the complaints were general in that respect; in fact, in many cases I heard the tenant farmers speak very well of the Ground Game Act. They thought it had been a great boon to them. But there are other cases in which I presume, some private arrangements have been made, the nature of which I did not ascertain, which seemed to have placed the tenant in an unfortunate position.

11,959. (*Captain Owen Thomas.*) In this particular case that you mention, where the tenant complains of this field, are you prepared to give the landlord's name, or the name of the tenant ?—I do not know whether the tenant would like that.

11,960. Would you give the name of the tenant ?—The tenant of that farm wrote the letter quoted in paragraph 71 of my report, but his name is not given there.

11,961. (*Chairman.*) Would he desire that his name, and that of his landlord, should be given ?—I should hardly think so, because I must say that, in getting my evidence most farmers requested me not to give their names, and I think if this gentleman had given me permission to use his name, I should have put it at the end of the letter.

11,962. Have you examined the case yourself personally ?—Yes; I saw the farmer who wrote the letter quoted in paragraph 71. I called upon him, and I had some talk with him. He is the same farmer who

complained of his mangel being destroyed. He subsequently wrote me that letter, because he was going away that day by train, and I had only about 20 minutes conversation with him, and so he supplemented our conversation with this letter.

11,963. (*Mr. Everett.*) On page 12, paragraph 45 speaking of a farmer who purchases a great deal of foreign barley, you say, "This barley grittled and mixed with chaff," and so forth. I want to ask you what is the meaning of that word "grittled"?—It means passed through a mill with the jaws set wide apart. It is coarsely ground barley, coarsely broken.

Existence of depression.

11,964. (*Chairman.*) I presume this district has suffered a very great deal during the last two years?—Very greatly.

11,965. First, from the low temperature of 1892, resulting in a very bad harvest, and, secondly, from the drought of 1893?—Yes, more particularly from the drought of 1893.

11,966. Previous to that it had suffered to a less degree from the low prices?—Yes, it had done so.

11,967. And the fact that the land is mainly suitable for growing wheat?—Yes, and breeding sheep; the two things are worked in together.

11,968. In both of which the prices had fallen considerably?—Yes, they have fallen enormously.

11,969. Especially in the case of wheat?—Yes, and unfortunately, last year, in the case of sheep too. It is a great ram-breeding district, and the Hampshire Down rams made very poor prices last season.

Change of system of cultivation.

11,970. Of course the question under these circumstance is: What change can be made in the system of cultivation to meet the new conditions consequent upon the fall of prices? That is the problem in that district—how to meet the fall of prices by some change of cultivation?—Yes, and it is a very serious problem.

11,971. Can you say whether any change is taking place in that direction which is likely to lead to good results?—The change, I am sorry to say, is an unsatisfactory one; it is really abandoning the poor land and concentrating their efforts upon the remaining land of the farm.

11,972. Did you find cases of farmers who were making the change successfully?—In one or two cases where there are water meadows, I think the farmers are weathering the times better, perhaps, than where there are not water meadows.

11,973. Of course farms with water meadows would be exceptional cases, but can you call to mind any men without water meadows, who have succeeded in making the change?—No, I cannot call to mind any such case.

11,974. You say, in paragraph 46, "If there are any "men who, as pure farmers, have done better than "their neighbours, they are those who have practised "extreme frugality, and exercised the greatest care, "and also men who have attained the highest excel- "lence in the art of agriculture, and who possess both "the experience and the capital to enable them to do "their land well, and to get good returns. I had the "pleasure of meeting two or three such men." Did you go over the farms of those men?—Yes, I went over one of the farms.

11,975. Where is that?—About four miles from Andover. I might call your attention to this, that I have mentioned two qualifications—experience and capital. I know that in these particular cases the men have money behind them. That, of course, gives them confidence, and they will do things which a poor farmer dare not do—they do not mind facing the risk sometimes.

11,976. Were these men doing well?—I would not like to go so far as to say they were doing well, but they were certainly doing better than their neighbours.

11,977. I think you said you went over Mr. Caird's farm?—Yes.

11,978. Do you know whether he has been carrying on his business to a profit?—I could not say that. I have not had an opportunity of talking with him, except for about a moment, since I was there, but I noticed that his work was being exceedingly well done, in fact, he seemed to have introduced there some of the best methods of Scottish farming.

11,979. It seems so very important to ascertain what changes of cultivation men are making who are really doing well, and then to consider whether that might be extended in the district?—Yes, I am afraid there is very little initiative in this district; the farming is what one might term monotonous; it is very uniform in character. Wheat and sheep, as I have already mentioned, are the great staples, and the occupiers lay themselves out for the cultivation of wheat, and the breeding of sheep, and one farmer is like another.

11,980. Of course, that form of cultivation, when carried on exclusively, is unprofitable?—Yes.

11,981. Therefore, it becomes all the more important to consider what changes can be made so as to give a reasonable hope to farmers of making a profit, and so it would seem to be extremely desirable to investigate those cases where farmers are doing fairly well, and where they have been able to make changes in their cultivation?—There is a case in point here somewhere in the report—I do not know whether I can put my finger on it at once. It is the case of a very good farmer. I went over his farm, and had a long conversation with him, and he told me that this last season he was giving up sheep breeding. He said, "I shall not "keep a wet flock this winter; I shall keep a dry "flock. It will pay me much better, and I shall buy "what lambs I want. I shall let other men breed the "lambs, and lose 10*s.* a head on them." He is a man who trims his sails to the winds, and I have no doubt he will come out a little better at the end of the season, and will let other men continue on the old road.

11,982. That, however, scarcely seems a charge of cultivation; that was a case of change of method owing to an exceptional year, of course?—Yes.

11,983. That of substituting a dry flock for—I do not know what the alternative phrase is?—A ewe flock; a wet flock; a lambing flock.

11,984. What one would like to see in this district is the case of a farmer who has changed his system of cultivation, and by doing so has been able to do well, whereas by following in the ordinary ruck, as you say, he has not succeeded?—If I might say so, in this particular case, even the change of method was a change of cultivation, because, instead of rearing the lambs, he was going to buy them. No doubt in the course of a year or two, if the sheep trade should improve, he would re-establish his wet flock.

Butter.

11,985. I see in paragraph 44, speaking of the district, you say: "Very little butter is made in the district, "save for home consumption. Some, of course, finds "its way into the tradesmen's shops in Andover, "around which town I was assured that the best and "the worst butter 'in the world' is made. The town "relies chiefly, however, upon its imported supplies "of Danish, Normandy, Australian, and New Zealand "butter, 'all of splendid quality.'" Now, one would like to know whether, in your opinion, it is possible that the town might be supplied from the district with some of the best butter, because apparently some of the best butter in the world is produced there, and some of the very worst?—Yes.

11,986. Is there any reason why the better quality of butter should not be increased in quantity at the expense of the worst?—I believe the difficulty would be in maintaining a constant supply of uniform quality. Of course, in the case of these Danish, Normandy, Australian, and New Zealand butters, people get a certain quality of butter one week; they like it, and they go and get the same quality of butter the next week; they ask for that quality, and there is an almost unlimited supply.

11,987. Has that not been achieved in Denmark by a co-operative system and by butter manufactories, by the farmers sending their milk in to a manufactory to be made into butter, and in that way arriving at a uniform quality?—I think, with regard to Denmark, the chief secret of their success was that they had a big market here for their butter.

11,988. But there is the same market for the English farmer; what one would desire to know is why the best and the worst butter should be produced in the same district, and whether it would not be possible for improvements to be effected there, so as to put these farmers in the district on the same equality as the producers of the Danish, Australian, and New Zealand butter?—With regard to that, I would like to say this, that I doubt if a large quantity of good butter could be made in the neighbourhood, because it is not a dairying

Dr. W. Fream. 9 Mar. 1894.

country. Of course, if people want to command a market they must be prepared to supply that market regularly, and I think it is in connexion with that regularity that they would fail—they might supply them during the summer for a few weeks.

11,989. The market seems to be there?—The market is undoubtedly there.

11,990. Because you say Andover receives a considerable supply from these other countries?—Yes.

Change of system of cultivation.

11,991. Can you give to the Commission the name or names of any farmers who have changed their method of cultivation, and who have made their industry pay?—I have not my notebook with me, but the name of the gentleman who gave up breeding lambs this winter was Mr. Bailey, who lives a few miles from Andover. Another very good farmer in the district is Mr. Allen, but he combines a little pedigree short-horn breeding with his other work; he is a very shrewd man who went down into that country from Norfolk; he is one of the few immigrants into the country, who has done well; he went there as a young man some 30 or 40 years ago, and he has been there ever since, but then he has got a good farm, the land lies well, and it is a kind soil, and so forth.

11,992. You see the point, how very important it is to ascertain to what extent a change of cultivation may result in something better?—Yes, I quite see the point; but I am sorry to say that in the majority of cases these men are so bound up with wheat and sheep that you must get a new race of men to alter the farming of that country. I do not think the present men will adapt themselves to the new circumstances.

Migration of farmers.

11,993. Has there been any tendency hitherto for new men to come in from other districts?—I have mentioned a few cases. As a rule they have not done well. Some of the men who have come into the district have been out of Devonshire, and, as a rule, they have not stopped long. I believe they migrated into the Andover country, because in the east of that country there is a nobleman who has large estates in Devonshire, and he would perhaps bring some of his tenants up from his Devonshire estates to the Hampshire ones.

Butter.

11,994. Before we leave the Andover district there is one question I should like to put to you. You pointed out that Andover, a town in a purely rural district of England, is largely supplied with butter from Denmark, Australia, and New Zealand, and you have expressed some doubt as to whether the butter can be produced largely in the neighbourhood; do you think it is a satisfactory condition of things when a purely rural town in a purely rural district in England is supplied from such distant quarters with butter, might it not be supplied from districts not immediately round Andover, but from other rural districts of England?—Yes, no doubt the supply might be obtained from other districts in England, but so far as the immediate locality is concerned, it is not a dairying country, and I do not think it ever will be.

11,995. But still, going rather farther afield, one might suppose that these products might be raised there instead of being brought from these different countries?—I think so; the reason the grocers use this foreign butter is that they find they can get any quantity of it at a very short notice, and it is always of the same quality; uniformity of quality is everything in selling butter.

11,996. (*Viscount Cobham.*) Is it not the least the worse for the journey?—It may be so.

11,997. But it fetches a high price?—Yes; my informant in this particular matter, paragraph 44, is a tradesman who has been engaged in the provision trade in Andover for about 50 years, and I do not think I could have had a better authority for the statement.

11,998. (*Chairman.*) The uniformity of quality appears to be one of the principal causes of the demand?—I think so.

11,999. That uniformity in quality must be obtained by combination of some kind?—Yes, I believe that is how it is obtained abroad—the butter is blended abroad.

12,000. If there was a greater combination in the dairy districts of England might not the market for English butter be greatly improved?—I think so.

Maidstone district. Condition of the hop district.

12,001. Now going to the Kentish district, you there examined into the neighbourhood of Maidstone; you found a condition of things there on the whole very superior to that of Hampshire, mainly owing, apparently, to the fact of the hop cultivation and of the fruit cultivation?—Yes, in the hop districts themselves, I found the state of affairs very much superior to what I found in Hampshire, but outside the hop country in Kent, things were almost as bad, perhaps quite as bad, as I found them in Hampshire.

Dr. W. Fream. 9 Mar. 189

12,002. But immediately around Maidstone, and, I suppose, in the Malling district you found the conditions good?—Yes, Maidstone and West Malling.

12,003. Generally in what is called the Garden of Kent?—Yes.

12,004. Just where the hops are grown you found the condition of things very good?—Yes, I found there was not very much to complain of there.

12,005. No farm is to be found there untenanted, and when the farms are vacant the landlords can find new tenants?—I believe so.

12,006. The rents appear to be low; is that so?—I do not know that they are low in the hop district itself, but outside the hop district you get poor land on the chalk, which I dare say is in quite as bad heart as much of the land in Hampshire at present.

12,007. You find that the hop growers have done well?—That is the impression I have derived.

12,008. You recollect, probably, that five or six years ago there was a committee of inquiry into the condition of the hop growers in England?—Yes, I met several hop growers who mentioned it.

12,009. At that time the hop industry was represented to be in a bad way, but since then an improvement has taken place?—I had no personal knowledge of this hop country six or seven years ago.

12,010. At all events you find they are doing well now?—I find they are certainly not in the depressed condition that many of the farmers outside the hop district are.

Fruit growing.

12,011. There has been a great extension of fruit growing in that country?—Yes, a fair extension of fruit growing.

12,012. In paragraph 32 of your report, you say, "In 1879–80, Kent had 14,685 acres in orchards and "fruit plantations. In 1891 the area of orchards alone "was 20,130 acres, which had increased to 20,528 acres "in 1892." and of small fruit 20,000 acres. Therefore the area of cultivation in orchards and fruit together had grown from 14,600 to over 40,000 acres?—Yes; from 14,600 of orchards and fruit. That would not include the small fruit, I think.

12,013. You think it would not include the small fruit?—I mention the small fruit separately, but I could not get the figures for 1879–80. I do not think they were separately returned then.

12,014. Are they not included then in the 14,600?—They might possibly have been.

12,015. At all events there has been a very great extension of fruit cultivation?—Yes, the cultivation of fruit is increasing in the county.

12,016. How did you find that industry?—I found that—to put it in a few words—the growing of the best fruit pays. What is injuring the market is the raising of inferior fruit.

12,017. Where the farmer goes in for good qualities of fruit he can be paid?—I think so.

12,018. But if he merely goes in the ordinary ruck, and produces an inferior quality, the profits are small I suppose?—Yes.

Successful hop-grower.

12,019. Did you find many men in the district who made money by hops?—Yes, I believe some of the hop growers down there have made handsome fortunes. I did not get at the exact amounts, but several of them seemed to be in a position of considerable affluence, and I concluded that they had found hop growing on the whole a remunerative industry.

12,020. Did you find men who had begun with a small acreage and gradually increased their acreage of hops?—Yes, there was one notable case in which a man, I think, began with nothing many years ago, and he now grows about 200 acres of hops, and has made a fortune.

12,021. You may conclude from the gradual increase of his cultivation that he has made it pay well?—Yes, I think so.

Cost of hop-growing.

12,022. The cultivation of hops is a very expensive one, is it not?—Yes, and quite a special one.

12,023. (*Mr. Clay.*) What amount per acre does it take to grow a crop of hops?—If you will kindly look at page 41 of the Report, you will see that there I have given an estimate. I believe this estimate would be considered, as a rule, a very high one, and that is the reason I asked the gentleman who furnished me with it to allow me to use his name in connexion with it. He explained to me that he himself grew the very choicest hops of the very finest quality, and with his hop growing he also combines shorthorn breeding—he is well known as a shorthorn breeder.

12,024. (*Viscount Cobham.*) In the mid-Kent district?—That is about four or five miles from Maidstone.

Hop-growing.

12,025. (*Chairman.*) I suppose you found many cases of men farming hops exclusively—having hop gardens?—I do not know that I found many who relied solely upon hops, because in growing hops, a large quantity of manure is required, and hence it is necessary to maintain a certain head of cattle, and to keep in association with the hop-yards a fair amount of grass land. But these are all subsidiary to the hop growing.

12,026. In other cases you found, I presume, a great number of farms in which a small amount of hops was grown?—Yes, in some cases there was a very small acreage of hops indeed.

12,027. But where it is an important element in a farm?—Yes, it is the great central feature after all, if you get hops on a farm at all, I imagine.

12,028. Probably it is owing to that, that the farmer has done fairly well, as compared with the men in other districts?—Yes, I think so.

Leases of hop-gardens.

12,029. Are the hop gardens generally let on lease?—I believe they are. I think I have said so in the report, for the simple reason that it would scarcely pay a man to take hop land on a yearly or two-yearly agreement.

12,030. There would be too great a risk?—There would be too great a risk, and the capital required——

12,031. Is so large, and the cultivation of such a high order, that he must have the security of a lease?—That is so.

12,032. What are the leases generally?—I have mentioned them in one part of the report. I think something like 10 years.

12,033. Did you find any desire among the farmers in the district for judicial rents?—Not amongst the hop growers.

Land Courts.

12,034. Or in the Andover district, did you find any general demand for it?—In about two cases in the Andover district I heard a demand for Land Courts.

12,035. Only two cases?—Two or three cases, not more than three certainly; that was rather on the Basingstoke side of Andover than in Andover itself.

12,036. You did not find any general demand?—No.

12,037. Nor in the Kent district?—Not in the hop district, but outside the hop country I did. I have mentioned it in the report on page 34, paragraph 54. I refer there to cases of the kind.

12,038. That appears to have been one case of a farmer?—Yes, but he was a very representative farmer. Although he is a hop grower, he was rather outside the hop district. He was an energetic man, and, I believe, in his conversation with me, he was expressing the views of a number of his friends.

12,039. He advocated an independent tribunal or court appointed by the Board of Agriculture with whom, in cases of raising or lowering rent, the determination should be?—Yes, that was his suggestion.

Production of manure.

12,040. (*Viscount Cobham.*) You quote a case in paragraph 64, where a man found it more profitable to get his manure from a large herd of dairy cows, rather than to feed bullocks?—Yes, that was a very interesting case. That was a farmer about two or three miles from Maidstone. Of course he had the Maidstone market close at hand for milk.

12,041. Did he make the production of milk subsidiary to the production of manure?—I think so. The production of milk was, if I might so express it, incidental to the manufacture of manure, which he used upon his hop land.

12,042. You would not think, as a general rule, that it would hold good?—No, the case seemed to me so exceptional that I thought it worth mentioning here.

12,043. Did he give the cows a large quantity of cake?—Yes, he fed them very well; he used a great deal of wheat. He was feeding his wheat, and he used the waste steam from the dairy every day for grinding up the wheat. He found that wheat freshly ground, was better feeding than stale wheat, and he said he preferred working it off in that way to selling it. He ground it up fresh every day for the cows.

Railway rates.

12,044. There is a great deal of complaint in Kent apparently about railway rates, especially among the fruit growers?—Yes, that is so.

12,045. How do they meet the argument that the foreign fruit would get to the London market by sea if it did not come by rail; did it appear to be considered by them?—I did not argue the point with them, I simply took their statements. I did not hear that suggestion at all. It might come by sea.

12,046. Of course you are aware that it is contrary to law, for the railway companies to give a preference to foreign produce as such?—I do not think they know that.

The Agricultural Holdings Act.

12,047. (*Mr. Whitehead.*) With reference to the Agricultural Holdings Act as applied to the hop growing industry, it is suggested that "Part I. (Improvements to which consent of landlord is required) should be transferred to Part II. (Improvements to which consent of landlord is not required)." That is at para. 56 on page 34?—Yes.

12,048. That would mean that a tenant might put up an oasthouse, we will say, without the consent of the landlord?—Yes, that was one of the cases brought before me.

12,049. In your opinion would that be desirable?—There seemed in some cases to be a desire to have more oasthouse accommodation. It appears that in Kent many of the estates instead of being in the hands of the actual owner are in the hands of trustees, or in some way they are administered in such a manner that the tenant cannot get directly to the real owner, and then it is that difficulties arise.

12,050. If the hop-growing industry was to fail, as it has done before, these oasthouses would be practically useless to the landlord?—Quite so.

12,051. Therefore there would be an objection to that suggestion that you make in paragraph 56?—Yes, that is quite an objection that might be anticipated.

12,052. Would not the same apply to wiring hops—putting up wirework in hop growing?—Yes, I think that would hardly be included in the present schedule of the Agricultural Holdings Act. I do not know whether it would be specifically included, because it is such a modern process.

The purity of beer.

12,053. Did you have any information from hop growers as to the necessity of brewers declaring what beer is made from?—Yes, I did. I have mentioned that. Some of them were strongly in favour of a Bill which has been introduced into the House of Commons by Mr. Quilter. I have mentioned that on page 38, paragraph 75, "Hop growers generally are in favour "of the Bill which has been introduced into the "House of Commons (Bill 55, 1893) 'for better "'securing the purity of beer.'" I found a very general concensus of opinion in favour of that.

12,054. That the material of which beer is made should be declared?—Yes.

12,055. Because much of quassia and other things as hop substitutes, and sugar, are used in beer making now?—Quite so; and there is a reference also in the Appendix to my Andover Report, to the same subject.

12,056. Was that opinion general among hop growers?—Yes, especially in the western side of the Maidstone district, towards Tunbridge Wells.

12,057. I think a resolution was carried lately at the Central Chamber of Agriculture on the same point?—Yes, I believe it was.

Existence of depression.

12,058. You say you have found outside the hop growing area a condition of things quite as bad as in the Andover district?—Quite as bad, I think.

12,059. On the purely corn-growing lands?—Yes, upon the hill sides, upon the chalk slopes.

12,060. Would that be because of the nature of the soil?—Yes, to some extent I should think so. They seem to have a very thin soil, not unlike the North Hampshire soil, resting upon the chalk.

Dr. W. Fream. 9 Mar. 1894.

12,061. Did you hear in that district that there was great trouble to collect the rates for the Union?—I did, especially between Maidstone and Ashford.

12,062. Would that be in the Hollingbourn Union?—Yes, I had forgotten the name.

12,063. In two or three parishes rates have not been collected for some time?—That is so I think I have mentioned the circumstance in my report.

12,064. Within a mile I dare say there would be comparative prosperity on account of hops and fruit?—Yes, quite so.

12,065. With regard to the railway rates and the carriage of fruit, I think you found great complaints of those in the district?—Very great dissatisfaction at the railway rates.

Railway rates.

12,066. Especially because the railway companies bring the foreign fruit from the ports cheaper than they carry English fruit?—Yes.

12,067. And at the same time they give them the advantage of quick trains, did you gather that?—Yes, I think I have almost expressed that in paragraph 70, page 37.

12,068. And the home-grown fruit is put upon slow luggage trains, did you gather that also?—No, I do not know that I had the details of that; I did know this, that the home-grown fruit was collected from station to station, and that would naturally involve a slow train, essentially so.

12,069. You found, on the whole, great complaints with regard to railway rates?—Yes; the fruit-growers especially were very indignant about the preferential railway rates, as they term them.

The Agricultural Holdings Act.

12,070. (*Mr. Clay.*) Did the farmers, resident in this district, pay any more attention to the Agricultural Holdings Act than they did in your other district?—The farmers outside the hop country did, but not in the hop district itself.

Compensation for wiring hops.

12,071. Referring to the improvement in growing hops on the wire system, do you not think that should come under the Agricultural Holdings Act, and that compensation should be given for these wires when taken over by the incoming tenant?—The wiring of hops is such a recent introduction that I do not think it is provided for, specifically, in the present Act.

12,072. I expect the dissatisfaction with the Agricultural Holdings Act is so general in the country that it will have to be amended?—Yes.

12,073. Will you recommend that such an improvement of that kind, such an outlay by the tenant, should come under the amended Act if it is ever made?—It is such a very heavy outlay for wiring that it is a question that would require considerable thought.

12,074. If it is costly it would still be of more value to the incoming tenant than to the outgoing tenant who would have to take it away, would it not?—Quite so.

Cost of hop-growing.

12,075. (*Viscount Cobham.*) What is the cost of wiring per acre?—I have mentioned it in the report; paragraph 58, page 34, gives the cost of wiring.

12,076. On page 41 you give the cost per acre of hop cultivation at 61*l.*, but that includes only 2*l.* 10*s.* for poles or wire?—Yes. You will see that the Appendix only gives the cost of growing; you would not have there the initial cost of the installation of the wire.

12,077. That is interest?—Interest only on putting up the wires at from 20*l.* to 50*l.* per acre, the cost of which would be spread over a number of years. For instance, I say, "Another grower said he would "require a long lease, and land that would carry "hops for many years, before going to the expense "of wiring."

The Agricultural Holdings Act, compensation for wiring hops.

12,078. (*Mr. Clay.*) The Agricultural Holdings Act of 1883 was passed to enable the tenant to put increased fertility into his land. If any buildings or other things were put up, or draining done, would that not come under that category; and if he has done that, and any unexhausted improvements in these wires is left, should not the outgoing tenant receive the benefit?—I think so.

12,079. Would you, if the Agricultural Holdings Act were amended, consider that the landlord should give up that schedule?—Do you mean that Part I. should be transferred to Part II.?

12,080. Yes?—I have simply given here the opinions that I received.

Dr. W. Fream. 9 Mar. 189

12,081. The gentlemen you reported upon and the farmers were clearly of opinion that Part I. and Part II. should be grouped into one?—Yes, I found a very general opinion to that effect.

12,082. And that the building part of it should be left to the sanction of the landlord?—There again I must distinguish between the hop country and the country outside the hop lands, as I have done in the introduction to my report.

12,083. I am not talking specially about buildings. I am talking really about the Agricultural Holdings Act?—In the case of hops there is the case of oast houses to be considered, which we should not have in the districts outside the hop country.

12,084. Still the farmers you visited were inclined to have Part I. and Part II. put together?—Yes, that is so.

12,085. (*Mr. Little.*) Wiring hops is a very expensive proceeding, is it not? Hop gardens are grubbed frequently, and hops are planted on fresh grounds for various reasons?—Yes.

12,086. Might not the effect of allowing a tenant to put up wires without the consent of the landlord be to leave the landlord what was no use to him after a short time?—Yes.

12,087. That is, supposing he thought it desirable to grub the hops?—The answer to that question, I think, would be this: A hop-grower would hardly trouble to wire hops unless he was going to leave the land in hops for some time.

12,088. Suppose it occurs that he has to give up the land, and he has a claim upon his landlord for 40*l.* or 50*l.* an acre, it might be a great hardship upon the landlord to have to pay, if he did not want to keep the land in hops?—Yes, it would.

Extraordinary Tithe Act.

12,089. That is an argument in favour of retaining the proviso that the landlord's consent should be given. With regard to the Extraordinary Tithe Act, you have drawn attention to a curious omission—that there is no power to apportion this; is that so?—If I am rightly informed it is so. I discussed this point with several practical men, and I certainly got the impression which I have endeavoured to convey in my report.

12,090. You say in paragraph 43: "If, for example, out "of 100 acres of such land 25 are sold, the whole of the "extraordinary charge has to be borne by the remaining 75 acres." Then, supposing another 25 was sold, would it remain on the 50?—I believe so.

12,091. And then another 25?—Yes.

12,092. And then another 20?—Yes.

12,093. So the tithe owner's property might be completely extinguished, because the land would not bear it, if by successive sales you left the whole of the charge upon the remainder of it?—Yes, I put that very point to my informants. I should like to say that my chief informants on these points were a firm of very well known land agents, who have had to deal with this subject. It was novel to me, and I expressed my surprise, but they assured me it was correct. They said no doubt the object was to force owners to redeem the tithe altogether.

12,094. I am not disputing it in the least?—I understand; I just mentioned the incident.

The Agricultural Holdings Act.

12,095. Then you say in paragraph 51, with regard to the Agricultural Holdings Act, "Complications and "dissatisfaction arise out of the operation of the law "of entail." Has the present owner, who has only a life interest, to get the consent of his successor before he can approve of an improvement?—I suppose that would depend to some extent on the conditions.

12,096. Is he not the owner under the Act; has he not power to give consent?—I think the essence of that paragraph is contained in the end of it: "Even if the "consent of the successor be obtained to proposed "improvements, there is quite likely to be a lack of "the necessary means.

12,097. But that does not apply to the Agricultural Holdings Act; if he had the means he would do it himself, and the tenant would not be called upon to do it?—Yes.

12,098. I take it that the life tenant has power to give consent to an improvement, because if you remem-

Dr. W. Fream.

9 Mar. 1894.

Rates.

ber he can, when such an improvement has to be paid for, charge the estate?—Yes.

12,099. (*Mr. Dalton.*) In paragraph 20 you say that "there is a tendency in all local rates to increase, "in some cases rapidly. Until the county council "came into existence, rates ran from 2*s.* to 2*s.* 6*d.* in "the pound; since then they have increased con- "siderably, though this is partly due to the lowering "of assessments, 3*s.* 8*d.* in the pound, and probably "more." Where have you got that information from?—It was given to me by a county councillor himself.

12,100. For a particular parish?—He was on the county council of Kent.

12,101. Yes, but he would not necessarily know the rate in the pound of all the rates in the county. I have been looking at the rates in the Maidstone Union, and I find that in the poor rate, instead of there being an increase, there was a considerable fall after 1889. Does this statement apply to the whole county or to any particular union? I find several rates seem to have fallen in different parts. This is a tremendous increase; it is nearly half as much again, and I have not yet been able to find any locality in which the increase is so large, although very likely there are some places, and if we had particular places given to us we could test the figures. The county council rates, I daresay, have increased a few pence in the pound, but in the poor rate there seems to have been a general fall throughout the county, and I should have thought the highway rate would have fallen in some places?—I do not know how far the information might be based upon the fact that the assessment is lowered; the report says, "this is partly due to the lowering of assessments."

12,102-3. Of course there may be particular parishes where that is so?—This was given to me a little way south of Maidstone, I remember, by a county councillor himself. He was a member of the council yet he complained bitterly of the existence of the county council.

12,104. Possibly it was in his own parish?—It might have been so.

12,105. You have some other figures. You say, in paragraph 21, "Some figures furnished to me in "connexion with the subject of local rating are repro- "duced in Appendix II." Are those figures in a particular parish?—Yes, that is on the western side of the Maidstone district.

12,106. What parish is that?—That would be not far from Tunbridge Wells; it is very likely Frant.

12,107. Frant is close by Tunbridge Wells, is it not?—Yes.

12,108. Is any part of it in an urban district? At any rate it is part of the suburbs of Tunbridge Wells?—Yes.

12,109. You would expect the rates to be higher there than in a purely rural district?—I think it was Frant.

12,110. There are some very curious figures in that Appendix, "Tradesman doing good business, keeps three "or four horses and carts going. Assessed for poor "rate at 23*l.* 10*s.*" "Tradesman doing extensive "business, keeps five horses and carts going. Assessed "for poor rate at 12*l.* 10*s.*" Do you know what kind of tradesmen they would be?—No, I do not. I may explain that I attended a meeting of the Tunbridge Wells Farmers' Club, and these figures were used in the course of a speech by a farmer in the neighbourhood, and I asked him for his manuscript afterwards.

12,111. You would expect a tradesman doing an extensive business to be rated, when you take his business premises and his residence into account, at a great deal more than 12*l.* 10*s.*; 12*l.* 10*s.* would have been a small cottage, I should have thought, in the parish of Frant. Do you know whether these were given as real cases, or were they hypothetical?—These were given as real cases.

12,112. Do you think, if we were to examine the rate-book of the parish of Frant—were they all given as being in the parish of Frant?—I am not quite certain about that, but they were very near to Tunbridge Wells, and as far as my memory serves me, it was Frant or a place close to Frant.

12,113. Could we find out?—I could find out myself, I think. I would refer you to the original with pleasure.

12,114. Then we could get the figures up from the local people?—I will look up the details of those and send them up.

Dr. W. Fream.

9 Mar. 1894.

Tithe.

12,115. Then with regard to the proposals for the tithe rentcharge, I see in paragraph 39 the proposal is that the tithe should be redeemed compulsorily—that the landlords should find one-fourth of the redemption money, the tithe owners one-fourth. What does that mean, that the tithe owners should lose a fourth, and the Government pay one-half?—Yes.

12,116. (*Viscount Cobham.*) I suppose that means the fourth that the tithe owner has already lost?—That was suggested. The tithe owner had already lost his —— third, somebody said. This was an idea that was suggested at a meeting that I attended, and it seemed to find general favour, so I thought it would be worth placing before the Commission. It was the only practical proposal I had—at all events, the only one approaching the practical.

Compensation for wiring hops.

12,117. (*Mr. Channing.*) I should like to ask you one or two questions about this wiring of hops and the compensation for it. Have you analysed what the cost of setting up the wire is each year in the 30*l.* or 50*l.* per acre quoted—what the value of the wire in itself is, and what the cost of the labour is. Have you separated those?—No, I have not got the separate items, I have simply got these details as shown in paragraph 58.

12,118. You could not give us the proportion of the 50*l.*?—That would be the cost of labour and the cost of material?

12,119. Yes?—I have not got that. It is an operation such that, when once performed, the wire lasts for a number of years.

12,120. You mean the wires——?—Are suspended permanently.

12,121. Permanently?—Yes.

12,122. Not in the same field, you do not mean that, do you?—Yes.

12,123. Really?—Yes, they remain on the land from year to year.

12,124. If they remain on the same field from year to year, I want to ask this question: What is done with the land when it becomes hop-sick?—Then, of course, everything has to go, and as I suggested just now, probably a hop grower would not go to the expense of wiring hop land that was very near the term of its continuation in hops.

12,125. Then if they claimed compensation for it, the labour and the materials would both have to be considered?—I presume so.

Entailed estates.

12,126. (*Captain Owen-Thomas.*) In your Report you say that "complications and dissatisfaction arise out of "the operation of the law of entail." Are many of those estates in Kent entailed?—Yes, I believe they are very generally.

12,127. Do the farmers think it would be to their advantage if the law of entail were abolished?—I heard some rather violent opinions on that subject in the direction of abolition.

12,128. What do you mean by "complications and dissatisfaction"?—I give an example immediately afterwards. It is where the existing tenant or the life tenant, for example, has certain propositions made to him in the way of improvements, and he procrastinates—he puts the question off, and says, "Well, I "do not know, very likely I shall be gone in another "year or two; I do not care about entering on "anything new, and I do not have anything to do with "my successor." Matters are brought to a deadlock in that way.

12,129. But, on the other hand, really it may be an advantage to the tenant; it means a certain amount of security, does it not?—Cases were given to me where the new landlord or the new owner was a very different person, perhaps less liked by the tenants than the owner who had just passed away. In fact that was given to me in some cases as a reason for the determination of tenancies; the estate had passed away not from father to son, but perhaps from one landlord to another, having very little connection with the former owner; the new owner would have no sympathy with the tenants—no knowledge of them—and it would lead to a rupture of the old friendly relations which formerly subsisted.

Dr. W. Fream. 9 Mar. 1894.

12,130. Are agreements made as to hop lands to cover permanent outlay for wiring?—I believe in most cases they do get the owner's permission. I did not come across a case where a tenant had wired the land at his own risk.

Ground game.

12,131. I see in your Report as to damage by rabbits that one farmer seems to have lost about 100*l.* Was this man compensated in any way by his landlord, do you know? That is mentioned in paragraph 46, page 33?—Yes, and I mention a case at the bottom of page 32, where the shooting tenant bought the crop up as it stood at 5*l.* per acre. In this particular case I did not hear of any compensation being paid. I might mention that last season rabbits were especially troublesome. On account of the drought they had very little of their natural food, and the rabbits came out, and I was told they even ate up the young bines climbing the poles.

Dr. W. Fream. 9 Mar. 1894.

12,132. What would be the rent of this farm that you speak of in paragraph 46?—I do not know. That fact was given to me by the agent to the landlord.

The witness withdrew.

Mr. James Hope called and examined.

Mr. J. Hope.

Scotland. Existence of depression.

12,133. (*Chairman.*) I gather from your Report as Assistant Commissioner on the counties of Perth, Fife, Forfar, and Aberdeen, that the districts of Scotland which you have inquired into have not suffered as the South of England and the East of England have suffered during the last year from drought?—I believe that is so.

12,134. On the whole they had a favourable season last year?—They had a very favourable season last year, but still I think it is going to turn out about the worst year that the farmers have had for many a long year in those counties.

Potato growing.

12,135. How is that?—Because (if you keep out Aberdeenshire) Fife, Perth, and Forfarshire are very large potato growing counties, and the potatoes of those counties have come to be quite unsaleable this year; they will not bring 30*s.* a ton.

12,136. Why is that?—Because the supply is in excess of the demand; there is no market for them, and many of the farmers use them largely for feeding. Of course that has made turnips, where they have been letting turnips, very cheap, many turnips let at 2½*d.* per week, and in some cases less; they used to bring perhaps 5*d.* or 6*d.* per week.

12,137. That would tell especially in those districts where the potatoes are generally grown?—Generally all over Fife, Perth, and Forfarshire there is a large breadth of the best land where potatoes are largely grown, and that is going to come out to be the case this year.

Hay and corn crops.

12,138. But in other cases in respect of hay and corn crops?—Really hay is mainly grown for their own use, if they do grow it, in those counties.

12,139. It is still grown for the feed of their cattle?—Yes. The crops are good, but the prices are very small.

12,140. Crops of oats are good, I suppose?—They are good, but fetch small prices.

Low prices.

12,141. Then the depression you speak of resulted mainly in consequence of the low prices of the last few years?—Exactly.

12,142. In spite of that, I gather from your report that no farm is to be found untenanted in the district?—That is so.

12,143. And that where farms are vacant they find tenants?—Yes.

Reduction of rent.

12,144. I suppose at a reduction of rent?—Yes, at a reduction of rent.

12,145. And the reduction of rent, I think you say, has varied from 20 or 30 per cent. to 40 per cent.?—Yes.

Leases.

12,146. Are the new tenancies on lease, or from year to year?—Mostly on lease.

12,147. The result of the depression, therefore, has not been to break up that system of letting land by lease in Scotland?—No. There are a good many let on shorter leases, say on 19-year leases with a break at five years. There are a good many in that way now.

12,148. A break of five years in favour of whom?—In favour of either party, but generally speaking the land is all let on lease.

12,149. Generally on a 19-years' lease?—Yes, generally on a 19-years' lease.

12,150. Did the landlords generally reduce their rents in cases where leases were granted?—I think they did. Perhaps they were a little too long, some of them in doing it, but still I think that the depression has been pretty fairly met by the proprietors in the end.

12,151. Despite the fact that the tenants held on leases?—Exactly. If they had done so a few years sooner it might have been better for both parties.

Mr. J. Hope.

12,152. Still in the main the landlords have done their duty?—Yes.

Judicial rents.

12,153. You have referred in your report to the fact that in Aberdeenshire you found a demand for judicial rents?—Yes, that was talked about in some measure there.

Small holdings.

12,154. Was that, do you think, due to the fact that the holdings there average smaller than in other parts of Scotland?—I think so.

12,155. They are more nearly approaching to the Highland system?—Yes, to the crofters.

12,156. What do the farms average there?—I think about 100 acres will be pretty near the average of a great many of them.

12,157. Are there a great number below 100 acres?—Yes, plenty.

12,158. And in cases of farms below 100 acres are they generally cultivated by the tenants themselves?—Yes.

12,159. And their families?—And their families.

12,160. Do they erect any of the buildings themselves?—No, the landlord has to do that.

12,161. There is no parallel between them and the Irish case of the tenants effecting the improvements?—No, I do not think so.

12,162. When the leases fall through do the same tenants generally continue, or is there generally a change in the tenancy?—I think they generally get a fair chance to remain on.

12,163. Are changes frequent on the termination of the leases?—No, I do not think they are.

12,164. I am now speaking of Aberdeenshire?—Quite so.

12,165. In other parts of Scotland what is the rule?—I do not think they change very much.

12,166. Not very much?—No.

12,167. Out of Aberdeenshire did you not find any general demand for judicial rents?—No, I never heard it spoken about except at Aberdeen.

The Agricultural Holdings Act.

12,168. Then in respect to the Agricultural Holdings Act, you say at paragraph 51: "the principle of the Act "is unanimously admitted to be a sound one, but it is "equally considered that some simpler and less expen- "sive method must be adopted for ascertaining the "rights of parties." What changes in that direction were you asked to recommend?—At present a large farmer who had a big claim of 1,000*l.*, say, can face the cost, which may be 100*l.* or 200*l.*, in contesting his claim; but if you come to a small man with a claim of 50*l.* or perhaps under 100*l.*, and if he had to go into an arbitration and employ an agent, and perhaps go to proof, the money would be all eaten up and far more. That has prevented a great many small men from making a claim.

12,169. Are many claims settled outside the Act?—There are a good many cases. Some of the proprietors in the north have schedules put to their leases providing a certain right to claim compensation, and a good many, I think, in Forfarshire—I would say principally in Forfarshire—are settled in that way without going to arbitration.

Method substituted for the Act.

12,170. What is the method adopted of settling the claim where not under the Act?—They have a schedule

Mr. J. Hope.

9 Mar. 1894.

put to the lease allowing certain compensation for manure applied and cake consumed.

12,171. I am not speaking of that. I mean assuming that there is a certain scale of compensation laid down under private agreement, what is the method adopted of ascertaining the quantum when a change of tenancy takes place?—I can hardly give a general answer to that question. Whether they employ an arbiter or not depends on their agreement. I fancy it would be done in most cases by the factor on the property. He would work it out to see what they were entitled to get.

12,172. It is rather important to know what is the method adopted where the people proceed by arrangement in substitution for the method adopted in the Act?—Quite so.

12,173. Because, that would point to the direction in which a change could be made?—That I could hardly say, unless it is just done with the factor. There are certain things that the tenant is to get, in the terms of his agreement, and he would show the factor how his claim is made up; that is the way it would be done.

12,174. Generally speaking, I suppose as often as not, there is some dispute as to the amount?—Yes, if the tenant has not kept his vouchers properly.

12,175. The probability is, that on a change of tenancy, whatever may be the scale laid down by the agreement, there would be some dispute as to the facts?—Quite so, if the vouchers are not there.

12,176. Then arises the question, how is that dispute settled?—I do not know whether in that case it is done by arbitration; I really do not know.

12,177. If one could ascertain that, it would point to the direction in which a change could be made in the Act itself with a view of simplification?—Quite so.

12,178. As you have pointed out, the principle appears to be sound, but the method is expensive?—It is principally in Forfarshire, on a few estates where they have a schedule; in the case of Lord Dalhousie and Lord Strathmore, and one or two others up there.

12,179. (*Mr. Little.*) There is the Duke of Richmond?—I believe the Duke has a scale of that sort.

Change in system of cultivation.

12,180. (*Chairman.*) Has there been much change in the method of cultivation, in consequence of the depression?—There has been a good deal of land put down to grass all over these counties. Perhaps farmers that were keeping eight pair of horses, might reduce them to something like five, or something of that sort. That is about the general thing all over, I think.

Reduced expenditure.

12,181. Have they reduced the labour bill, in consequence?—Well, I think they have so far.

12,182. What do they produce?—They just grow more grass.

12,183. I mean is it dairy farming?—No, there is very little done in dairy farming, except in some few places near a town or near a village. They just keep more sheep and more cattle.

12,184. Then, I presume, to some extent the other matters have been adjusted to the lower prices?—They have tried to reduce the expenditure; that is one thing they have tried to do to meet it.

12,185. The expenditure is reduced somewhat?—Yes.

Rates.

12,186. Are the rates reduced in proportion to the reduction of rents?—No, I think the rates have rather been going up.

12,187. Going up in the £?—Yes; the rates have been generally going up in the £.

12,188. Has there been a reduced assessment in proportion to the reduction in the rent?—Of course, the rent coming down, would naturally put them up in the £ a little.

12,189. Do you think on the whole that the actual burthen of the rates is heavier than it was?—Yes, I think so. They complain in the 'north' very much in regard to the poors rates, that they are not represented on the boards; they say that generally it is so many members of the Kirk Session, as they call it up in Scotland. Really there are very great complaints in Forfarshire and Fifeshire, especially, and in Perthshire too, that they are not represented on the boards. Whether that would make any difference or not, I do not know.

12,190. Then would you say that there is no lack of men of capital ready to take those farms?—You cannot say there is much.

Mr. J. Hope.

9 Mar. 1894.

12,191. Not much?—No.

The letting of farms.

12,192. There are men ready to come forward?—Yes; it is wonderful just now when farms are thrown into the market how people are ready to take them.

12,193. With capital?—With fair capital. Of course they are taking them at reduced rents.

12,194. I suppose they come in with some advantage as compared with past times, in consequence of the lower valuation?—Yes, there is something in that.

12,195. Somewhat less capital will do?—Quite so.

12,196. And there are men of sufficient capital ready to take these farms?—Yes, there are.

Labour.

12,197. (*Sir Nigel Kingscote.*) Is there any scarcity of agricultural labour?—I cannot say that there is very much, but in some districts near the towns it is complained of. In Forfarshire, near Dundee, they were complaining very much about the men going away into the towns. But now I think there is some reaction taking place, and they are beginning to come back again from the towns.

12,198. Has the cost of agricultural labour increased?—It has. During the last 10 or 12 years I think it has gone up something like 15 per cent.

Sale by live-weight.

12,199. May I ask your opinion as regards selling cattle, both fat and store cattle, and sheep by weight—what is thought of that by the tenant farmer?—It is generally recommended all over that cattle should be sold by weight, at so much the hundred-weight.

12,200. Is it put into execution now; is it done in the market?—It is increasing every day, I should say, at all the sales.

Cattle disease.

12,201. As regards cattle disease, is there any expression of opinion as to that?—No, except that they say that tuberculosis is a great hardship just now. I forget what the percentage is of cattle that every week are found with it. Say at a cattle sale, when butchers go to buy their cattle, if one is found to have tuberculosis it is condemned. There is a considerable percentage condemned every week in Edinburgh owing to that, and there is no doubt that is a thing that will have to be taken up very shortly.

12,202. It is condemned as dead meat?—Yes. It is condemned as unfit for use. At present the butcher has to lose that, and of course that is against the sale of cattle. The butchers know that if they have a beast that turns out to have it, it might be condemned, and they naturally try to buy their cattle all the cheaper.

12,203. How is that to be met; what is the opinion?—I do not see how it is to be met unless the Government come in and pay for those cattle, and I think that is what it is looking to.

12,204. For cattle affected with tuberculosis?—Yes. It is a very serious matter. I forget the percentage although I was told the other day.

12,205. Is that the general opinion of the farmers in Scotland?—Yes.

12,206. That there ought to be compensation for cattle slaughtered?—Yes.

Slaughter of foreign cattle.

12,207. As regards the foreign importation of cattle, have you any opinion as to whether they should be slaughtered at the ports or not?—All over those northern counties they complain very much of not getting any cattle this last year. They wish to see the ports open again for them. They want to get them alive as stores, you understand. The price of stores is raised very much, and that is how feeding is paying so very ill in Scotland this year.

12,208. They are not afraid of cattle from abroad bringing disease?—No they are not.

Potato growing.

12,209. (*Mr. Whitehead.*) Has there not been an exportation of potatoes to America?—There have been a few exported, but then the duty on the export of potatoes to America is some 4*l*s. a ton, and the potatoes can be bought just now in England at 30*s*. or 28*s*. Of course, you can easily see when this 4*l*s. is to be paid that that is almost a preventative from them going to America at all.

12,210. So that that has not helped potato growers much?—No, it has not. It would help them very much if the Americans were to take off that duty.

Mr. J. Hope.
9 Mar. 1894.

12,211. May I ask if you have had a new potato disease this year in Scotland?—Yes, we have had a new potato disease this year which is very serious. It is something like a string through the potato, and when you cut the potatoes they get quite black inside, yet the potato looks perfectly well outside.

12,212. This is quite new, is it not?—Yes, some people have it one part of the field, and in another part of the field they have not got it, but if it is there at all, it destroys the sale of the whole.

12,213. Can you say whether the potatoes have been sent to an expert to say what the disease is?—No, I cannot say that I know of that being done.

12,214. It is very important that it should be discovered?—It is a very serious matter to a great many of the potato growers. It is mostly on light sandy land, a sort of softish land; on clay land they do not have it.

Dairying; and fruit farming.

12,215. You say "dairy, fruit, and poultry farming "have made no material increase"?—That is so.

12,216. Is that because of the want of markets?—I think it is because the cost of labour to work a dairy farm is very serious nowadays.

12,217–8. Would that apply to fruit also?—There is not such a thing as a fruit farm; there is some little near Perth, but it is comparatively trifling.

12,219. (*Mr. Whitehead.*) Might it not be made part of farming if people set their minds to it?—I do not think so. You can get fruit from abroad far cheaper than you can grow it. You know you can get far cheaper and better fruit from America than you can grow in your own garden.

12,220. (*Mr. Clay.*) You have had large experience of valuations?—Yes, I have done a good deal.

12,221. And sometimes under the Agricultural Holdings Act?—Quite so.

Potato growing.

12,222. Your farming is mostly confined to growing potatoes and food for cattle and sheep?—Exactly.

12,223. Have your potatoes been rather a failure in price this season?—They have been a great failure this year.

12,224. In East Lothian what would you say the loss on a potato crop per ton, or per acre would be?—Well, I should think from 10*l.* to 15*l.* an acre, at least I lose 10*l.* myself this year over 330 acres. I lose more than 10*l.* an acre.

12,225. Do you grow 330 acres of potatoes?—Yes.

12,226. What is the cost of making them as a general rule?—They cost me about 20*l.* an acre.

12,227. May I ask you what rent you are paying now?—I pay on an average fully 4*l.* 10*s.* an acre.

12,228. And how much is the gross sum that you are paying now?—A little over 5,000*l.*

12,229. Have you had any experience in dairying in Midlothian?—Yes, I kept a dairy of between 70 and 80 cows for some 21 years.

12,230. The produce was mostly sold in Edinburgh itself, I believe?—Yes, the milk was sold in Edinburgh.

Reduction of rent.

12,231. You have been asked by the Chairman whether the general reduction of rent has been rising on an average to about 30 per cent.?—Yes, 30 per cent.

12,232. In the Lothians has it been anything like that sum?—In some cases it has, in some it has not.

12,233. Landlords, as a rule, have met their tenants, perhaps some a little too late, but, as a rule, in a very friendly spirit?—Yes, I think, as a rule, they have, but they were a little too late in doing it.

12,234. You say in your report that the question of the rent is the root of the whole matter, would you explain what you mean by that?—I mean by that that we are not likely ever to get Protection again to raise prices, and I cannot see how the men are to live at all, unless it comes off the rent. That is about it.

12,235. It cannot come off the labour market?—No, I would never approve of that.

12,236. If we curtail our expenditure on cakes and manure, we are letting it down?—You let down the land.

12,237. You let down the fertility of the land?—Quite so.

12,238. I think, in your report, you say that you had two or three people talking to you about the malt tax?—Yes.

Mr. J. Hope.
9 Mar. 1894.

The malt tax.

12,239. What effect do you consider, or do the people you visited consider, did the change of price, owing to the abolition of this malt tax on beer, have upon first-class barley?—It is thought, generally speaking, that it has reduced the price of barley from 5*s.* to 10*s.* a quarter.

12,240. And that the general public has not been benefited by the change?—No, it has gone all into the pockets of the brewers, and of the foreign growers of barley.

12,241. Has it not enabled the brewers to make their beer from maize, and rice, and sugar, and other things?—Quite so, and some of them make 100,000*l.* a year that were only making 50,000*l.* before. That is how it turned out.

Sale by live-weight.

12,242. Another important point touched upon is the selling of cattle by live weight; you know the American system?—Yes. I have been attending sales pretty often lately just to see how the thing has been working in Edinburgh, where they had the weights put up. Every bullock taken in, you saw his weight put up on the board; if two came in, you saw the weight of the two, and people knew at once what they were doing. There was a sale in East Lothian the other day which I did not get to. Messrs. Swans were beginning this sale. They had no weighbridge. I myself sent some very good cattle to the sale, and I am quite sure that if the weights had been there I would have got 30*s.* a head more for my cattle. People could not believe the weights that they were. I would certainly say that cattle should be all sold by live weight.

12,243. I suppose there is a general understanding, as a rule, that all auction marts must have a weighbridge?—Quite so.

12,244. If they are bound to have that they might as well be bound to sell cattle on the American plan, by live weight?—Exactly.

12,245. You think it would be a benefit to the farmer?—I think it would.

12,246. The farmer has no chance with the butcher, otherwise?—No.

State loans.

12,247. Would you advocate giving money to the landlords at a cheap rate for making substantial improvements?—I think so. I think it very important that cheaper money should be provided by Government. At one time, you know, there was a great deal of money granted at 6½ per cent., I think it was, and there was a great deal of land drained at that time, which was some number of years ago; but now in the last few years there is almost no draining being done at all, and there is no doubt that the land would suffer shortly very seriously from the want of new draining. I think that is the principal thing, that would help landlords and tenants both if they could get money at a cheap rate. A tenant would pay perhaps 3 per cent. for money even in these bad times to get land drained; he might pay that percentage, but at 6½ per cent. tenants will not look at it at all.

12,248. If the small holding system came in, the landlord would have to have his farms divided, and it would be very hard for the landlords to raise the money for the steadings, and roads, and other things?—Quite so; you cannot expect them to do that, they will never do that.

12,249. And this money which would be lent by the State would be not only for the benefit of themselves and the tenants, but for the benefit of the labourers performing the work?—Of course.

The Agricultural Holdings Act.

12,250. Now to come to a burning question in Scotland just now, which is the Agricultural Holdings Act?—Quite so.

12,251. You have had several valuations and arrangements under that Act, and regarding what you said about private arrangements you were perfectly certain that landlords settle them with their tenants, but they were not many until the landlords and tenants saw the new process, were they?—Exactly.

12,252. Do you not know that the rate per ton for cakes and the value per unit for manures is laid down in the lease?—Exactly.

12,253. Therefore when the incoming tenant comes to be the outgoing tenant, it is a very simple thing for

Mr. J. Hope.

9 Mar. 1894.

the factor, or the landlord, to settle the compensation; it is a mere rule of three question?—Exactly.

12,254. I think those things are then settled quietly, and without ado, and without the expense of going to law?—Yes.

12,255. Regarding the Act itself, you say, I think, in your report, that it has failed to accomplish the object it was intended to serve?—Quite so.

12,256. Has not the procedure been cumbrous, and the working of that Act very expensive?—Quite so.

12,257. Where is the principal expense?—The tenant makes a claim and the landlord has the tenant's claim, according to the law just now, a long time before he has to make up his, and, of course, the landlord or his factor tries to swamp the tenant's claim, and it is just a fight between the two.

12,258. And then if you go to law it is a fight between whom?—The lawyers; the lawyers get the best of it, I think.

12,259. And so, therefore, it deters many a medium tenant farmer making his claim?—A man with a small claim cannot face it at all. You or I, perhaps, if we had a claim of 1,000*l.* or 1,500*l.*, would have to face it, but a man with a claim of 100*l.* cannot face it at all.

12,260. I suppose the tenant is often deterred from making his claim for fear of a counter claim?—Exactly.

12,261. And of thereby risking a law suit?—Yes.

12,262. Regarding the claim and counter claim, would it not be better to have the same parties, the landlord and the tenant making their claims together, say, two months after the tenancy?—Quite so; it should be made at the same time, and one should not see the other's claim. They should be both lodged at once.

12,263. Just now the landlord for his deteriorations on the farm has the course of law before him?—Quite so.

12,264. So that it does not require him to go to the Agricultural Holdings Act even just now to get his claim. It has been stated here that the claim for deterioration of the land has prevented people from making the claim, but the landlord has a claim just now, has he not, through the course of Common Law in Scotland?—Quite so. He often does not come on very well, I think, though.

12,265. In your report I think you say you would abolish the schedules?—I would most certainly.

12,266. What would you put in their place?—I would just go to the sheriff and get him to appoint an arbiter.

12,267. And he would be always willing to give the tenant the enhanced letting value of that farm that he has made for the landlord?—Exactly.

12,268. The landlord and the outgoing tenant are the only parties to the contract?—Exactly.

12,269. You think the incoming tenant has nothing to do with it?—No.

12,270. How?—Of course it is a great advantage to him to get a farm in good order. No doubt if you or I were looking out for a farm we would want to get one in good order, but we would have to pay for it on that account.

12,271. So that the incoming tenant takes a farm and bids a rent for it, according to the condition and fertility of the soil?—Yes; that the late tenant has left it in.

12,272. Left in and made through his acts of fertility, through the manures and cakes put upon the land?—Quite so, and if he left it in bad order the landlord would get less for his farm.

12,273. So that the outgoing tenant and the landlord are the only two parties to that contract?—Quite so.

12,274. And they should settle; and as an act of justice the landlord has no right to throw his obligation over to the incoming tenant?—Quite so.

12,275. What other amendments would you suggest?—You mean in the Holdings Act.

12,276. In the Agricultural Holdings Act something should be allowed, do you think, for what you might call increased fertility?—Yes, most certainly.

12,277. The Act never yet has faced that question?—No, but there have been two or three cases in Scotland settled where that has been given effect to; two cases, I think, one that I had to do with myself where it was settled outside of the Act, and there was no appeal made. However, there might have been.

Mr. J. Hope.

9 Mar. 1894.

12,278. But has the Act sufficient power to let you go back to that increased fertility?—At present, you mean?

12,279. Yes?—No, it has not the power; but there are two cases I know of where it was settled and where they did not appeal.

12,280. Is it not of very vital importance in the present time when land to all appearance is laid down to grass because it will not pay in wheat or cereals that the Act should comprehend such a proceeding?—Quite so, no doubt.

12,281. You think it would be a great advantage?—A great advantage.

12,282. Of course we all agree that at the same time the landlord should be protected against bad cultivation?—Most certainly. I think he is not protected enough, that is my idea.

12,283. If the compensation through that Act was sufficient there would be less bad cultivation?—I think there would. I think it would tend to less bad cultivation.

Official referees.

12,284. To save expense we have had it before us here that we have the machinery in Scotland to work it uncommonly well; instead of having arbiters all round, and lawyers all round, if we had these cases left to an official referee—official referees being appointed in each county ——?—In the hands of the sheriff.

12,285. Appointed by the sheriff?—Yes.

12,286. Of course there is no such person in England?—I would not approve of the sheriff's substitute. I say the sheriff.

12,287. The head sheriff of the county?—The head sheriff of the county or counties, whoever he may be.

12,288. That official referee would be a responsible man, and when he had the claims of the tenant and the dilapidations of the landlord laid before him, they would bring what evidence they liked, and thereby he would settle without appeal?—Quite so.

12,289. Without appeal? Would you allow the Court of Appeal to come in after?—No, I would allow no appeal after that.

The scheduling of farms.

12,290. It has been raised here too, and I think it is a matter of considerable importance, that when an incoming tenant enters a farm the general condition of the farm should always be scheduled in the same way as cropping is scheduled?—Quite so; it should always be reported upon when he goes into the farm.

12,291. And so on leaving that farm it would be on evidence and a factor to enable the next man who gets possession to see how he got it?—How he got it and how he is leaving it.

12,292. Do you consider that very important?—Yes.

12,293. If it were scheduled, and if the farm were left in bad condition, and the incoming tenant took it that incoming tenant when he became the outgoing tenant, if he left that farm in good condition, would have the more credit?—Exactly.

12,294. And they would have it in black and white to show what condition he got it in, and *vice versâ*; if he got it in good condition and left it in a bad condition the incoming tenant, then being the outgoing tenant, should answer for his dilapidations?—Quite so.

12,295. (*Captain Owen Thomas.*) Assume that there is a farm to let, and that it is to be scheduled, I understand you would have it fixed at par, or below par, or above par, by a certain valuer, or a man who is supposed to understand the quality of the land. Then it would be let to the incoming tenant, and the incoming tenant, say in 20 years, would leave it, the man who scheduled it for him, of course, might be dead, or anything else might happen to him, and another man is called in who may have a very different view when he takes into consideration the quality of the land, how would you get a uniform standard?—If you had it all down in black and white how he got the farm they would just have to report on it at the end of the lease. As you say, some men might

Mr. J. Hope. 9 Mar. 1894.

take different opinions. You or I might go over a farm, and we might have a good bit of difference, you know, but still I cannot see how you are to prevent that unless you have the one opinion to set against the other.

12,296. You know in some parts of the country that you find the farms really and naturally dirty; I mean to say you cannot clean them?—I do not believe that.

12,297. In Herefordshire, for instance, I was very much surprised to see it?—I think if land is not cleaned it is a bad farmer that has it. He should not have it at all if he has not cleaned it.

12,298. A man going from a neighbourhood where farms are well cleaned, and so forth, to a district where farms are not, and where they have never been cleaned?—I think if we had some such rule as I have just suggested we should not have so many dirty farms. I am sure we should not.

12,299. (*Viscount Cobham.*) Are you giving the opinion of the farmers with whom you have come in contact?—Yes, I think I am.

12,300. (*Mr. Clay.*) But do you believe that that schedule, that that document, would be a good index as to how he got that farm?—It is the only thing you can have, I think.

12,301. Of course, in all cases men will differ?—Yes.

12,302. You can only get as near the point as possible?—You cannot get nearer than that

Security for compensation.

12,303. There is one other thing I will put to you; without an extended Agricultural Holdings Act to give security you will not get men now to put money into the land?—No, you will not.

12,304. They will not risk their money without they see some chance of——?—Getting security.

12,305. Getting the balance that remains unexhausted?—Exactly.

Rent.

12,306. (*Mr. Gilmour.*) On page 8, in reference to what you call the solution of the difficulty of low prices, namely, a reasonable adjustment of rent, you go on to state the basis upon which all rents ought to be calculated; that you say is "after making due "allowance for working expenses, interest on capital "invested, and a fair return for the skill and labour "of the farmer." I would like to know how these different points are to be arrived at?—Do you mean when a man goes to take a farm?

12,307. I mean if the question of rent is to be settled, after taking all these things into account, the first thing you have got to do, I suppose, would be to come to some sound way of arriving at a wise decision as to what those ought to be; and how would you come to that?—If a man goes and looks at a farm he judges of the land, to begin with, and he makes up his mind as to what crops it would grow, and he frames his offer very much on that.

12,308. But you have nothing new or novel to put before us in any way that would lead to a way of fixing this reasonable and fair rent?—No, that is the difficulty of it. Look at the difference of offers that go for farms sometimes—they are often very wide.

12,309. None of those whom you interviewed say that there should be no change, then, in the agreement between the landlord and the tenant as to what is a fair and a reasonable rent. I refer to what you say in paragraph 10, on page 8?—"The question of rent "lies at the root of the whole matter, and is the main "factor which ultimately determines the margin of "profit; and so long as the letting of land continues "to be dealt with on the footing of an ordinary "commercial transaction, the natural laws of supply "and demand will ultimately bring the question of "rent to its natural and proper level."

12,310. What I meant to try to get out was this: You state here that rent should only be a residuum after certain factors have been taken into account, and I want to know what rule you yourself lay down to settle these factors?—I think it is very difficult to lay down a rule.

Land Courts.

12,311. You go on to say that you do not consider, at least I take it that this is the opinion of those whom you met, that legislative aid should be called in to help the farmer—that was the general opinion?—Quite so.

12,312. Therefore, that matter still remains as it was?—It was only in Aberdeen where they went in for legislative aid.

Mr. J. Hope. 9 Mar. 1894.

The Agricultural Holdings Act.

12,313. In regard to that question which the Chairman asked you as to how the matter was settled as to compensation when the tenant and the landlord agreed in the lease upon certain percentages of manures and feeding-stuffs during certain years of their lease, is it not in a very simple way settled by there being a clause that the vouchers must be produced to the agent or the landlord, and upon that, without further parley, the matter is settled?—I believe that is so.

12,314. Then I wanted to ask you what is the object of putting off the time of lodging the claim for two months after the expiry of the tenancy?—A farmer might not know just exactly until he saw the very end, perhaps two months might be long enough.

12,315. You think that that would be a convenient period?—I think it would.

12,316. And that they should be lodged simultaneouly?—They should be lodged both at one time.

The marking of foreign meat.

12,317. With regard to a matter which I suppose you admit—in fact you do—is a matter of importance up there, the marking in some way of foreign meat. I notice that the result of these gentlemen's opinions came to be, that the best way to carry out the matter was by licensing the place where the meat was sold?—Yes.

12,318. Did they consider that the consumer's interests would be protected sufficiently by doing so in establishments where both kinds of meat were sold?—Quite so.

12,319. Did the question come up of how soon meat was to be termed home-grown meat, or was to cease to be foreign meat, in the event of the restrictions being taken off, you understand, and cattle being bought and perhaps finished off in a month's time or six week's time; was that taken into account in any of the proposals that were made to you?—No, I think these cattle would be held as Scotch beef, and would be Scotch fed.

12,320. Anything that went away from the port on its legs?—Exactly.

Conditions in leases. Manuring.

12,321. At page 12 you speak of cleaning and manuring the farm properly; is there any difference between that and the present clause that is in leases "in accordance with the rules of good husbandry"?—They have one and the same meaning. At the same time I think that "the rules of good husbandry" is a general clause which is very much departed from; it has got to be a mere lawyers' phrase, I think.

12,322. Would not the same construction come to be placed upon the obligation to clean and manure the farm properly?—I think there is more in that than in the other. "The rules of good husbandry" has fallen very much into disuse.

Rotation at end of leases.

12,323. Then I see in the report there is a good deal of weight put upon leaving the farm in a specified rotation at the termination of the lease?—Yes. I think it is generally allowed that whatever freedom of cropping there is, there should be a course of cropping left for the last four or five years, or something like that.

12,324. In the present position when, as a rule, tenants are not very willing to take a 19 years' lease without a break, and these breaks of five years being the usual thing, that means really laying down a specified rotation for the whole of that lease?—Well, it does so far, there is no doubt.

12,325. Then there would be very little change from the present position?—I think there would not be much change where that would be.

Freedom of sale.

12,326. Has it been proved to your satisfaction that where freedom of sale exists the farmers are in a better way?—I think they are. For instance, this year in some parts of Scotland straw is very dear, a very great many men are selling their straw this year and selling their hay too. I think those men will be doing themselves good, and I think if they are getting money into their own pockets that is all in favour of the landlord.

12,327. Have you found in these districts which you visited that those small proprietors or tenants who really had a free hand to do as they liked, are in any

Mr. J. Hope. 9 Mar. 1894.

better condition and keeping the land also in better order than those who are tied down under the rotation?—I think they will keep it in quite as good, I will say better order. You may tie down a bad farmer to any rotation you like, but he will leave his land in bad order in spite of you, do what you like.

Entailed estates.

12,328. I see a strong opinion expressed here against the law of entail?—It is that it is standing in the way of improvements in a good many cases.

12,329. In those districts that you visited?—Yes, many of the landlords have not a free hand to deal with the property as they would like to do owing to the entail.

12,330. Did you make any rough estimate of the amount of land that is under this law of entail in these different districts?—No, I did not, because it comes largely over Scotland.

Compensation for home-grown produce.

12,331. Then in regard to a question which I see is spoken of a good deal, that of compensation for home-grown stuff consumed on the farm?—I think that is only fair.

12,332. How could you carry it out practically?—Many a man just now is consuming all his wheat on the farm; surely you would pay him for that.

12,333. Yes, but are you to take the man's word for it?—According to the thing just now he could sell his own wheat and he could buy his next neighbour's.

12,334. (*Viscount Cobham.*) What vouchers could he produce?—If he could not produce vouchers you could know how many acres of wheat he had, and it would not be very difficult to make up an estimate how much those acres of wheat turned out.

12,335. (*Mr. Clay.*) Would he not have the evidence from the steward, and the other people?—Exactly. I do not think it would be difficult to do it at all.

12,336. Would it not be a safe thing for the landlord?—I would not allow them for oats, for instance, that were required to feed the working horses. I certainly would not allow that. But many a man just now is feeding all his potatoes; if it were the last year of his lease it would be a very great hardship that he had to consume all those potatoes, and not get anything for them.

12,337. Would it not meet Mr. Gilmour's question if when he used perhaps 100 quarters of wheat he gave a statement to the landlord, or the land agent or factor, that he was going to consume 100 quarters of wheat, or 20 tons of potatoes, and if that were kept as a document?—Yes. I do not think it would be difficult to work that part of it. That is a thing they are all very strong upon. Go where you like that is the first sore that they raise in connection with the Agricultural Holdings Act.

12,338. (*Mr. Gilmour.*) I am quite aware of that, and that is an expression I wanted to get out. But you cannot expect that the landlord is going to take the word of every tenant with regard to the matter?—No, certainly not; I know some men might try it on, no doubt.

Abolition of the law of hypothec.

12,339. Then there is one other question in regard to the abolition of the law of hypothec; what effect has that had now in Scotland?—Since you have spoken about that I may say that the only place where the law of hypothec was raised was Aberdeen, and it was raised there by a Member of Parliament. I was really very much astonished at its being raised. If there is a thing that I have a very strong opinion upon myself it is with regard to that law of hypothec. I was one of those men who thought when they abolished the law of hypothec that we, the tenantry of Scotland were entitled to a re-valuation of the land, on the ground that the law of hypothec had artificially increased the rent of the land. If we had got that re-valuation of the land, then there would have been many of our best farmers who have gone to the wall—dead and buried, killed with the bad times—there would have been many of those men farming to-day, and our landlords in Scotland would have been getting more rent to-day for their land than they are getting, and would have got it all along. I think that is the first thing that hurt the tenantry of Scotland when they did away with the law of hypothec. The landlords began on the back of that, and fore-rented the land. Previously the land was taken, and perhaps the tenants got a year and a half's credit, and they might have two years credit. Very well, they did away with that, and I know many an estate where there were good men farming at that time, who got a new lease just on the back of the abolition of the law, and they had to come down with the two rents, and the landlord simply took away the money of these men, the capital that they had to work their farms with. That crippled a great many farmers financially.

Mr. J. Hope. 9 Mar. 1894.

12,340. Do you consider now that the majority of the rents lately given in Scotland are forehanded?—Well, these forehanded rents are greatly done away with.

12,341. I mean on those back-rented farms?—They are almost all shoved forward as the leases have come out.

12,342. (*Mr. Clay.*) Did the law of hypothec not create that extreme back renting and false value, and raise the price of land?—It created a false value for the farms, because a man that should have taken 3,000*l.* on a farm could easily go in with 2,000*l.*; and it brought Tom, Dick, and Harry, everybody, into the market for these farms, and raised the rent to beyond what it had a right ever to be.

12,343. It did not give the trader or the merchant a fair chance when he was risking his capital while the landlord was only risking the interest on his money?—Exactly, and these men that traded with the tenant very often lost their money and failed, but of course the landlord got his 20*s.* in the £.

Corn crops.

12,344. (*Mr. Little.*) You have given us some statistics as to the farming in the counties that you have inspected; it appears that barley has decreased in area very much more than wheat?—Yes.

12,345. Wheat, I find, has decreased in 10 years only about 5 per cent. and barley 18?—Exactly.

12,346. Is that because wheat is only grown upon land specially suitable for it, or where the straw is specially valuable?—Exactly, you will see in those counties very little wheat has been grown all along, and they have changed it very little, very likely kept it on for the sake of the straw.

12,347. It is grown on the very best wheat-growing land?—On the very best.

Cattle and sheep.

12,348. There has been a very large increase in the number of cattle and sheep?—Yes, there has been more land put down to grass.

12,349. Twenty-five per cent. increase in the sheep, and 16 per cent. in the cattle I make it?—Quite so.

12,350. That indicates a change from corn growing and root growing to pastoral farming?—Quite so.

12,351. That has diminished the labour?—It has diminished the labour bill so far.

12,352. Has it been brought about by the dearness of labour to some extent, or by the low prices of corn?—I think the dearness of labour has had a little to do with it, and another thing that has caused it a good deal, especially in Aberdeenshire, I would say perhaps in all the counties, is that we are a good deal bothered with "finger and toe." The great thing has been to give the turnips a little wider space, from four years to six years, or something like that.

Cost of labour.

12,353. With regard to the cost of labour you say in paragraph 14, "during the period embraced in this report," do you mean to say since the period that you were acting as an Assistant Commissioner?—Since the Duke of Richmond's Commission—going back to that.

12,354. Are you of opinion that there has been a considerable increase in the cost of labour?—I think about 15 per cent.

Wages.

12,355. Is that in the wages of the labourers?—Yes, in the wages.

12,356. Is that borne out by a comparison with the present wages?—Yes, I think so, our wages are very much bigger in Scotland than you have them in the South here.

12,357. But payment in kind still exists?—In a small way.

12,358. In Aberdeen and in Fife?—Yes, but it is coming down very much.

12,359. But still a considerable portion of the wages are paid in kind in Aberdeen and Fifeshire?—Well there is a portion but nothing to what it used to be.

12,360. So far as the wages have been paid in kind they cannot have been increased?—No, they would have been down.

12,361. But the value of the payment in kind has decreased?—At the same time if they were paid in milk

Mr. J. Hope.
9 Mar. 1894.

and paid in meal there has not been much difference in the meal and the milk, and so if they were paid in potatoes there has not been much difference there.

12,362. In Aberdeen and Fife?—I would hardly take it that in that part it has gone down much. You see cats have not come down.

12,363. The difference to the labourer would not be great so long as he had to consume those products?—No, of course not.

12,364. And the difference to the farmer would not be great in so far as he pays in kind?—Quite so.

12,365. He is so far unaffected by the change in price, but the money wages which are only a part of the men's earnings have largely increased?—Yes, they have.

12,366. Is it the wages you mean that have increased 15 per cent. or the earnings?—The money wage, putting it altogether.

The Agricultural Holdings Act.

12,367. I just wanted to make that point clear, because I arrived at a rather different conclusion from a comparison of the Reports of 1879 with the recent Reports. Now with regard to the Agricultural Holdings Act, I should like to ask you is it a necessary consequence of that Act that there should be such a great expense?—Great expense?

12,368. Yes, in an arbitration under the Act?—That is the fault of it just now, that it can only be worked at a great expense, and anything that I have been asked to propose is in the way of simplifying the Act.

12,369. Why should it cost more than an ordinary arbitration which is taking place every day in England between the outgoing and the incoming tenant?—On account of the expert witnesses and legal agents who are employed in a contested reference under the Act, but who are not required in an ordinary valuation between an outgoing and incoming tenant. In Scotland there have been two or three important cases contested; the tenant had an arbiter, the landlord had an arbiter, and then they had an oversman; they each had a clerk, and then they went to a proof, and there were perhaps 8 or 10 or 20 men on each side called in as witnesses. You have no idea where it went to. I have sat myself three or four days at a time. It is to prevent all that do you not see?

12,370. You say that the incoming tenant has nothing whatever to do with it, and that the landlord should pay, and he would be recouped by letting the farm at an increased rental?—Quite so.

12,371. As regards manures which are very easily exhausted, are they not?—Some of them very.

12,372. The landlord pays down a capital sum, the tenant gets possession, and in the course of three or four years he could exhaust those improvements?—Yes, quite easily.

12,373. The capital would be gone, but would he pay an equivalent rent which would compensate the landlord for the amount of capital?—It is thought that he would. It does not always give an increased rent when the farm is let again, it might be all the lower.

12,374. You think that the landlord should pay down a capital sum for a thing which is put into the tenants hands, and which he may consume and carry away?—Quite so. You cannot prevent that unless you come on him for——

12,375. I do not understand that you would impose freedom of cultivation by law. You would not insist upon agreements giving freedom of cultivation and of sale?—No.

12,376. You would leave it a matter of bargain?—Yes, I think so.

12,377. But you think that land agents, particularly lawyer agents, might learn a little wisdom about these restrictive covenants?—Quite so.

12,378. Would you say that a landlord would be quite protected if he could ensure that a tenant would leave his farm with good crops and clean?—I think so.

12,379. Good crops would imply condition?—Yes.

12,380. Cleanliness would secure that there was land in such a condition that the incoming tenant could crop it?—Yes.

Income tax.

12,381. You report that the farmers are dissatisfied at having to pay income tax upon one third of their rent?—Yes.

12,382. You know perhaps that an English farmer has to pay upon seven-sixteenths of his rent?—I believe that is so.

Mr. J. Hope.
9 Mar. 1894.

12,383. If the Scotchman is unfairly rated, you would think the Englishman still more so?—They get their farms at a cheaper rent.

12,384. Then you think the house tax is not a proper tax for a farmer to pay for a farmhouse?—No, I think not.

House tax.

12,385. The farmhouse is an essential part of his business premises, and he ought to be exempt from the house tax?—Quite so.

12,386. (*Mr. Dalton.*) What is the average rate in the pound in your rural districts?—They alter very much in every county.

Rates.

12,387. To what extent do they vary?—In some counties I believe 6*d.* will be about the lowest, and in some cases it will be 1*s.* or something like that.

12,388. In the northern counties of England, the rural rates are, speaking generally, lower than in the southern?—Lower in the northern.

12,389. They are lower in the northern than in the southern counties of England, certainly; do you get them lower still when you get up to Scotland; or are they higher, do you think?—I do not know what they are in England at all.

12,390. I think they would come to about 1*s.* 6*d.* in the counties in the north?—All our rates since we got the county council are, I know, increased very much. In the case of the road rate in East Lothian, Lord Wemyss told me the other day it has increased about 100 per cent. in something like the last 13 years—it is something enormous. The poor's rates in the same way. There are many parishes in Scotland where the poor's rates were kept up by putting a few shillings into the plate on a Sunday. Then they got on, and the tenants were asked to contribute 5*l.* On some of these farms, where they got off with a mere nominal sum, they are now paying 25*l.* That shows how the poor's rates have got up.

12,391. Do you know what the whole of the rural rates are in your parishes; do they come to 2*s.*?—I do not know. In the parish that I am in myself, I pay about 7*d.* for the road rate, and I think the poor's rates are about the same, 7*d.*

12,392. That comes to 14*d.*?—Yes. Then there are other small things coming up.

12,393. That would be a low rate in England?—Yes; that is not a big rate with us, but you know it is very much higher in some parts.

12,394. Do you take the rates into account when you fix the rent of a farm?—Generally speaking, they are taken into account; but my experience since I began farming is, that I have known very heavy rates put on a tenant in the middle of a lease. Once for the school rate, for instance, I had 29*l.* a year to pay, which was just put on me during a lease.

12,395. That is halved between the owner and occupier, is it not?—Yes; but we just had to pay it.

12,396. Do you find that a good rule?—The landlords at that time were largely relieved when the school rate came on.

12,397. You do halve all your rates between the landlords and tenants, do you not?—Generally speaking.

12,398. There are none that fall wholly on the tenant?—No, I do not think so.

12,399. Some fall only on the owners in Scotland, I think?—Yes, some do.

12,400. But none only on the occupiers?—No, I think not.

12,401. Do you think it would be much relief to the tenant if the rates were taken off, and put upon the owner?—I think it would give much relief to the land altogether if the poor's rates were altered. I do not see why the land should have to pay so much towards the poor's rates, seeing that it is the principal industry in the country, and an industry that does not make paupers, yet we have to keep our own paupers, and we have to keep the paupers largely from all trades. I do not think that is fair at all.

12,402. In the towns the houses are rated too, I suppose, are they not?—Yes, they are rated too.

Mr. J. Hope. 9 Mar. 1894.

12,403. You have the same system of rating there that we have in England, have you not?—Quite so, but look at a landlord of a property getting, say, 1,000*l.* a year; see what he has to pay for poor's rates—he may have a neighbour living just within a door or two from him, spending 20,000*l.* a year, living in a house and paying nothing almost, paying on the rating of that house, it might be at 200*l.* a year.

12,404. I see that you raise that point very strongly in your report?—Yes.

12,405. But how would you remedy it?—It should be put on means and substance.

12,406. You cannot have a local income tax?—I am talking of the poor's rates principally; but I do think that it is very hard that the tenantry should have to pay on a third of their income in regard to income tax.

12,407. How would you raise the money for the relief of the poor? How would you bring the means and substance to account?—I think you would just have to put a little more on those people.

12,408. In what way, by an income tax?—You would have to shift the burden, and put the saddle on the right horse, it is not on the right horse just now.

12,409. But would you raise it by way of an income tax?—No, I would raise it just by changing the system of laying on the poor's rates. In some parishes in Scotland it is done just now; and the land pays at reduced rates.

12,410. That is dying out, is it not?—I do not know whether it is dying out, but there are only a few of them; where they have land near a burgh say, in some cases they pay at a reduced rate, but that is not usual.

12,411. What you do there is to charge fully on the houses and the buildings, and on the land at a reduced estimate?—Yes, exactly.

12,412. That is what you mean to recommend?—Yes, that is what I would like to see.

12,413. As the sanitary rate in England is, you would have it done in that way?—Exactly.

12,414. You do not mean that you would have it levied by a central authority or anything of that kind?—No.

12,415. You would simply rate agricultural land at a lower assessment?—Quite so, and I think it is only fair.

The Agricultural Holdings Act.

12,416. (*Mr. Channing.*) You said in answer to Mr. Gilmour that you were only pressed in Aberdeen for legislative aid to be given to the farmers, but I understand from your report that there is a general demand in Scotland for an amendment of the Agricultural Holdings Act, is there not?—Yes, all over.

12,417. A very general demand?—Yes, all over.

12,418. Just one word about the Aberdeen case; do you think that many farmers in Aberdeenshire would make use of provisions like those of Lord Ashbourne's Land Purchase Act if they were introduced?—I believe some of those small farmers would.

12,419. And they would be willing also to undertake improvements themselves?—I think they would.

12,420. Upon the question of the Agricultural Holdings Act, you had an Act passed for Scotland a few years ago?—We had.

Official referees.

12,421. To introduce the principle of a single referee. I do not know whether you state in your report how far that has been a success or not; what is your opinion as to its working?—My opinion is in favour of a single referee. At the present time, of course, if both parties agree upon a single referee they could have one; but I would like to make it the law that there was only to be one.

12,422. The present Act does not provide for making it compulsory?—No, it does not do that.

12,423. Practically the old system is going on, do I understand?—Yes, if cases arise it goes on, they appoint arbiters.

12,424. They do not have recourse to a single referee in practice?—Well, if both parties agree of course there is nothing to prevent them, but I do not think they do agree as a rule as to one single referee.

12,425. Is it your opinion that the use of a single referee would be cheaper?—I think so, it will cheapen it very much, because it would prevent a proof, and if you go to a proof it is a very expensive matter.

Mr. J. Hope. 9 Mar. 1894.

12,426. Then I understand your summary of recommendations for the amendment of the Agricultural Holdings Act to be pretty much this: that you would give the tenant freedom to make improvements which increase the agricultural letting value?—Quite so.

12,427. Subject to a reference being held as to their being of value for the purpose for which the holding was let?—Quite so.

The scheduling of farms.

12,428. And that you would have the condition of the land scheduled on entry and a general compensation for improvements?—Quite so.

12,429. For increased fertility and all the rest of it at the end?—Quite so.

12,430. And for deterioration on the other side?—Certainly.

12,431. You are in favour of a very simple Act therefore?—Yes, of a simple Act for that.

12,432. You were asked some questions as to the necessity of vouchers. Cannot an agricultural expert, such as you would wish to have for an official referee, judge of the general improvement of the land independently of the vouchers, although vouchers would help him?—If he applies so much manure and uses so much cake, and all those things, I do not see how you could get at it without vouchers.

12,433. The vouchers would be necessary?—Yes, they would.

12,434. But you are in favour, I understand, of compensating for continuous high cultivation?—Quite so.

12,435. That is, you would not limit the tenant merely to his outlay on manures and cakes for the last year or two?—Certainly not.

The Corshope case.

12,436. You have a case in Scotland, I think, which proves that the landlord receives value for giving compensation of that kind, that is the Corshope case?—Quite so.

12,437. It is the fact, is it not, that that farm where continuous high cultivation had been carried on for a number of years was re-let at a higher rent than farms in the neighbourhood?—Quite so, and it would not have brought the rent.

12,438. Without that continuous high cultivation?—Not without it.

12,439. Is it also the fact that after a five years' lease to the new tenant, the new tenant has taken it again at the same rent?—I believe he has.

12,440. That shows, I understand, that the fertility was not exhausted in the first five years?—Quite so.

12,441-2. (*Viscount Cobham.*) When did the old tenant go out?—It is about five years ago that that tenant went out, and there was a very serious claim raised, I believe it is the fact that they have taken it on again after being five years on the farm.

12,443. (*Mr. Clay.*) What was the increase of rent in Corshope?—I think it was a diminution of rent. I think the rent was down, and that is the strange thing.

12,444. (*Mr. Channing.*) The rent fell?—But then it would have fallen far more.

12,445. Was it not estimated that if the rent had fallen in the same proportion as the rents of adjoining farms the farm would have been re-let for somewhere about 200*l.* or 300*l.* less than it was re-let, and it was re-let for only a little less than the old rent of 700*l.*?—I believe that is so, but still the farm was not improved all the money that had to be paid; it was not all paid for increased letting value, at any rate.

12,446. (*Mr. Clay.*) If that money had not been laid out, it would have gone down so much more?—Yes, 200*l.* or 300*l.* down.

12,447. (*Mr. Channing.*) In the Corshope case this increased fertility was due to a very heavy use of cotton and linseed cake over a great number of years, was it not?—Quite so, a long consumption of cake on grass land, land that grew nothing before; in fact, it was growing heather, and it got from that to feed bullocks. I believe at the rate of more than a bullock an acre.

12,448. And it was contested whether this fertility was as great and as durable as stated?—Quite so.

12,449. But the fact of its re-letting for the second term is a presumption that it was so?—Exactly.

Mr. J. Hope.
9 Mar. 1894.

12,450. Now I want to ask you one question on paragraphs 25 and 26, dealing with freedom of sale and of cropping; are we to take those as representing the general state of affairs in the counties you have examined?—Quite so.

Freedom of sale and cropping.

12,451. That there is not a practical freedom of sale and of cropping in Scotland at present?—As a rule there is not. They are awfully tied up in many leases by these Edinburgh lawyers that put in conditions which they do not understand themselves, but still they keep them there.

12,452. Do you think these penal rents are really a hardship to the farmers, that they are actually being used as a hardship, or do they merely exist on paper?—I do not think they get them very often.

The marking of foreign meat.

12,453. Now about the question of the marking of meat; you say that the license to the dealer is the only way of dealing with it; have you considered the Danish way of marking the actual parts of the carcase?—I think there would be a good deal of difficulty and expense in that. I think licensing would be the best.

12,454. It would be impracticable to carry out a system like that without public slaughter houses, would it not?—I think it would. I think there would be nothing like the license; they should be bound to take a license out if they want to sell it.

12,455. If you have public slaughter-houses and inspectors, as they have in Denmark, could you not have marking on every part?—It is not so easy to follow every leg of beef. I would say the license would be far the cheapest and most economical way.

Cattle disease.

12,456. Now about the proportion of tuberculosis, you did not give the percentage?—No.

12,457. I see it is 25 per cent. in the case of cows slaughtered in London on account of pleuro-pneumonia, and 20 per cent. in your own county, Midlothian?—With cows?

12,458. Yes?—But it was with bullocks I was referring to more; I think it is 6 per cent., but I would not be sure. I know that is right with the cows, but it is a serious matter with bullocks.

12,459. Do you mean in the case of slaughtering under the Acts for pleuro-pneumonia?—Yes, exactly.

12,460. Have you formed any opinion, or has any practical man in Scotland formed an approximate opinion of the proportion in cattle generally of tuberculous cattle; have you formed any opinion yourself in dairy farming?—No, but I believe it is about what you say, 20 per cent. in Edinburgh.

12,461. That is in the case where they are slaughtered for pleuro-pneumonia, but do you think it is like that with cattle generally?—I thought you meant tuberculosis.

12,462. Do you think the percentage of tuberculosis would correspond in cattle generally to the proportion found in cattle slaughtered for pleuro-pneumonia?—I think it would, at the present time it is greater, because there is no pleuro-pneumonia at all just now.

Reduction of rent.

12,463. About the reductions of rent: you have not specified what they are in different counties, in Forfarshire, for instance; in the better parts of Forfarshire would the rents be reduced very much?—About 30 per cent.

12,464. (*Captain Owen Thomas.*) A question or two about the meat. You have said that the Scotch farmers are in favour of marking imported meat, and I suppose the meat of foreign cattle slaughtered at Birkenhead, or any other port of arrival?—Quite so.

Mr. J. Hope.
9 Mar. 1894.
The marking of foreign meat.

12,465. Are we to understand from what you said in answer to Mr. Gilmour that these cattle imported by Scotch farmers and slaughtered by them, and sent to the London market may be labelled "prime Scotch"?—There is something in that; generally speaking, these Canadians when they are bought will be fed on an average something like 10 or 12 weeks, and I do not think it is very fair that they should be allowed to label them as the best Scotch.

12,466. But that is done now by the Scotch farmers themselves?—Well, I do not know if it is. I think there would be very few of those cattle coming to London. Those Canadian cattle that are fed in Scotland will be all slaughtered in Scotland I think; I do not think they come to London at all. Take Aberdeen cattle, for instance, they are of a different breed of cattle altogether from fed Canadians. But there is no doubt, as you say, that the thing might be done, I grant you, but it would be a very different thing to bring cattle fed 10 or 12 weeks in Scotland from bringing cattle into this country dead.

12,467. I do not mean cattle brought dead, but cattle slaughtered at Birkenhead, for instance?—Exactly, I see what you mean.

12,468. I know butchers will guarantee meat killed at Birkenhead to be pure English?—I do not know if you could find so much fault with cattle slaughtered at Birkenhead, it would be rather cattle coming in as dead meat that I should go for mostly.

12,469. One can easily tell that?—Yes.

12,470. I mean to say there is no difficulty, you need not mark foreign meat which is sent over here?—I think it is the principal thing to prevent dead meat being sold as the best Scotch or English. The other thing there is no doubt there is a difficulty about.

Compensation for home consumption.

12,471. (*Viscount Cobham.*) Do you think that compensation ought to be given to a man for feeding his stock with potatoes?—You mean consuming them on the farm.

12,472. Yes?—I do.

12,473. You would not extend that to turnips, I presume?—No.

12,474. I do not quite see the difference, perhaps you will explain the difference in principle?—The potatoes are things that are grown to take to market, and in the last year of a lease if a man eats all his potatoes on a farm it must go to improve the farm very much, and I think it would be a hard thing if he was not to be paid for those potatoes the same as he would be paid for his oats.

12,475. He really would be paid because the market for potatoes has fallen, would not that be so? I see no reason why he should be paid for potatoes and not for turnips?—It is a small price he would get for passing them through the cattle.

12,476. (*Mr. Clay.*) I suppose it would not be more than 20*s.* per ton?—That is about it.

12,477. So the compensation would be very small?—Very small.

The witness withdrew.

Adjourned till Thursday next at 12 o'clock.

Twenty-second Day.

Thursday, 15th March 1894.

PRESENT:

THE RIGHT HON. GEORGE JOHN SHAW-LEFEVRE, M.P., IN THE CHAIR.

Viscount COBHAM.
The Right Hon. HENRY CHAPLIN, M.P.
Sir ROBERT NIGEL FITZHARDINGE KINGSCOTE, K.C.B.
CHARLES ISAAC ELTON, Esq., Q.C.
Captain OWEN-THOMAS.
FRANCIS ALLSTON CHANNING, Esq., M.P.
JOHN CLAY, Esq.

CORNELIUS NEALE DALTON, Esq., C.B.
ROBERT LACEY EVERETT, Esq., M.P.
JOHN GILMOUR, Esq.
GEORGE LAMBERT, Esq., M.P.
WILLIAM CUTLACK LITTLE, Esq.
CHARLES WHITEHEAD, Esq., F.L.S.

HERBERT LYON, Esq., *Secretary.*
R. F. CRAWFORD, Esq. } *Assistant*
FREEMAN THOMAS, Esq. } *Secretaries.*

Mr. T. Worthington. 15 Mar. 1894.

Mr. THOMAS WORTHINGTON called and examined.

12,478. (*Sir Nigel Kingscote.*) You are a tenant farmer, are you not?—I am.

12,479. Where do you reside?—Near Wigan, in the Wigan Union.

12,480. How much land do you rent?—95 acres.

12,481. Are you acquainted with the rest of the Wigan Union?—With the whole of the Wigan Union.

12,482. Roughly, what is the extent, in acres, of that Union?—About 48,000 acres.

12,483. Have you resided there for some time?—All my life.

12,484. Are you a guardian?—No, I am a Justice of the Peace for the borough of Wigan.

12,485. (*Viscount Cobham.*) Do you represent the Wigan Tenant Farmers' Association?—I do, I am the secretary.

12,486. How many members are there?—133.

12,487. Are they all tenant farmers in the district of Wigan?—Exclusively tenant farmers in the Wigan Union.

12,488. Do you consider that the drop in prices of agricultural produce has been the main factor in the present depression?—I do. Shall I give you the price, at the present time?

Produce and prices in the Wigan district.

12,489. Do you mean the prices of the produce raised in your district chiefly?—Yes. I may say that Wigan is a large centre; it is a large market, and practically the produce raised in the Wigan Union is consumed in the Wigan Union. It has a large population. The prices last week were for wheat, 3*s.* 3*d.* for 70 lbs.; it is sold by the bushel of 70 lbs. Oats were 2*s.* 2*d.* for a 45 lbs. bushel.

12,490–1. (*Viscount Cobham.*) You can hardly give it in quarters because it is sold by weight?—No, they vary all the way up; a bushel in one town is 42 lbs., and in our town it is 45 lbs. It is a most anomalous business.

12,492. Is barley grown?—No barley is grown in the neighbourhood. Potatoes from 22*s.* 6*d.* to 30*s.* per ton. All these are delivered at the dealer's place: turnips, 11*s.* 6*d.* per ton; hay, from 5*l.* to 6*l.* per ton; straw, from 4*l.* to 4*l.* 6*s.* 8*d.* per ton.

12,493. Is there dairy produce?—Yes; butter, 1*s.* 4*d.* to 1*s.* 5*d.* per lb. delivered in the market. Milk is 3½*d.* per quart delivered to the house up to the 1st of May, and 3*d.* per quart from the 1st of May to the 10th of October.

12,494–5. Is cheese made in the district?—There is no cheese made in the Wigan Union.

12,496. And the whole of the milk produced is consumed in the neighbourhood?—Yes, and a large quantity besides.

12,497. Of course, some of those prices are at quite their lowest point?—I should say that turnips were never so low as at the present time.

12,498.—Has that been the cause of the large reduction of stock recently?—Yes.

12,499. I suppose that keep is not very plentiful?—Keep is not very plentiful excepting turnips; the root crops have been plentiful, the wet season rather favoured that to the disadvantage of other things.

12,500–1. We know that wheat at all events is quite at its lowest price?—I do not think it has been lower in our neighbourhood.

12,502. But there are other articles such as hay and straw which are exceptionally high?—Hay and straw is higher than it has been for seven years. Four years ago I bought all my hay for my own use at from 2*l.* to 2*l.* 7*s.* 6*d.* per ton, believing that the price would go up.

12,503. I hope you have a good deal of it left?—I have not needed to buy any.

Stock breeding.

12,504. Can you speak as to the reduction of stock by the Wigan farmers?—It is fairly large; on some farms they have abandoned stock altogether.

12,505. Do they breed cattle?—It is not a great breeding district in consequence of the smoky atmosphere; really cattle bred in our district would soon go off. Ours is more an importing district say from the north, beyond Preston.

Characteristics of the district.

12,506. What is the character of the farming in the district?—Arable, generally.

12,507. Is there much dairy produce made?—Not a great deal.

12,508. Is it ordinary mixed farming?—It is ordinary mixed farming.

12,509. On the four-course system?—Yes.

12,510. Is arable going down to grass to any great extent?—Near the town it is almost entirely laid down to grass. Four miles from the town it is kept on the four-course system; they are compelled practically by their agreements, many of them, to keep to the four-course system.

12,511. Then all the prices that you have given do very materially affect farmers?—They do.

Reduction of rent.

12,512. And what has been done to meet the depression that you speak of?—Very little in the Wigan neighbourhood. I think on one estate there has been a reduction of from 5 to 7½ per cent.; on another estate some of the tenants have had 10 per cent., and others none. On another estate there has been none whatever; and on a fourth estate there has been what I should call fairly large reductions, that is, reductions calculated to meet the requirements of the farmer.

Mr. T. Worthington.
15 Mar. 1894.

12,513. Is that estate of very much the same quality as the others as regards the soil?—Yes, if anything it is looked upon as rather a superior district.

12,514. What is the largest reduction made within your knowledge?—The largest is 25 per cent., and that has been made a permanent reduction, not temporary, the others are all temporary.

Existence of depression

12,515. Has the depression been of long standing in that part of Lancashire?—It has been, you may say, gradually coming on for four or five years, but it has assumed a very acute phase these last two or three years, the last two years particularly.

12,516. You do not think the farmers have been suffering so long as those in the more southern districts of England?—I do not suppose they have.

Effect of the depression.

12,517. The depression began in the southern districts in 1879?—Yes; the farmers as a class have been deteriorating in our neighbourhood for a considerable time.

12,518. Do you mean in their financial position?—In their financial position.

12,519. Have any of them given up their farms?—Yes. I was just comparing the sales by auction. In 1874 they did not average more than three per month, and over the same area these last two years they have averaged nearly 10 per month.

12,520. I am afraid a good many of those farmers have lost a considerable part of their capital?—In many of the instances with which I am personally acquainted the sale has been a voluntary one, but this is by arrangement with the land agent, that if he would hold off the auctioneer would have authority to pay over his arrears; many of them have been under arrears of rent, and many have practically had nothing whatever when they have left their farms.

Size of farms.

12,521. What is the average size of the farms in that district?—From 40 to 100 acres.

12,522. 100 acres is quite a large farm there, is it not?—It would be considered a fairly large farm in our neighbourhood.

Buildings.

12,523. Are the buildings fairly up to the mark?—They are far from the mark. Many of them are dilapidated and ill adapted for the purposes of modern farming. Most of the houses would not be considered fit for the business, and the out-buildings, in many instances, are inadequate.

12,524. Are you speaking of large estates as well as small?—We have practically no small estates; the large bulk of the land is held by about five people.

12,525. I think you mention seven in your statement?—The bulk is held by the five. There are two others who do not own a very large part of the agricultural land.

Average rent.

12,526. What is the general range of rents?—The rents range from 1*l.* per statute acre, to 2*l.* 10*s.*, tithe and rates added.

Tithe.

12,527. Since the Tithe Act was passed has the tithe been added to the rent?—It has been added to the rent.

12,528. It has been paid by the landlord and added to the rent?—Yes.

12,529. It is the invariable practice?—Yes.

Interest on drainage and buildings.

12,530. And interest on drainage and buildings, I suppose, you would add?—Yes.

12,531. Wherever new buildings have been put up with borrowed capital, has interest been charged to the farmer?—That is so.

12,532. At what rate?—Five per cent. generally; in my own case, it is just over, with my landlord. I have protested, of course, against draining the land at all, or paying interest upon it. My argument with him was that I am entitled to have the land from him in a cultivable state in the same way that I am entitled to have my house in a habitable state, it is as much his duty to have the water taken from under my feet in the field as to have my head protected from the rain when I am in my house.

12,533. Was the water there when you took the farm?—It was there when I took the farm; he has agreed to drain the land without charging the interest.

12,534. When you took it or now?—No, not when I took it. Now, he is doing it to-day.

Mr. T. Worthington.
15 Mar. 1894.

12,535. You have no grievance individually?—I have no grievance upon that, but I am acquainted with a large number of farms where the tenants have the interest rate added to their rent annually, and they are paying it; and in my case it was after a fair good fight that I got the concession. My neighbours are paying the interest on the drainage.

Abatements of rent.

12,536. Abatements and reductions of rent stand by themselves?—They do.

12,537. Are there no other concessions?—There are no other concessions made.

12,538. Neither indirectly or directly?—No.

12,539. Are the abatements made in cash generally?—In cash.

12,540. Not in manures?—There are no manures that I am aware of given to any farmers in our neighbourhood. They are all cash remissions.

The letting of farms.

12,541. And there is a considerable demand for farms in Lancashire, which enables the rents to keep up well, comparatively with the rest of the country?—Latterly there have been more farms advertised to let; these last two years they have let at considerable reductions.

12,542. But have they been well competed for?—Not well competed for.

12,543. You are speaking of the Wigan Union?—I confine myself to the Wigan Union; I do not profess to know the general run of Lancashire farms.

12,544. Have the farms come into the landlords' hands, to any extent?—They have.

12,545. Then would you say that the competition for farms is rapidly diminishing?—It is rapidly diminishing, and those that have been let, have been let at a considerable reduction.

12,546. If that state of things continues, no doubt rent will necessarily fall?—Rent will necessarily fall.

Agreements.

12,547. As to the nature of the agreements upon which farms are held, would you describe them?—The agreements are generally, first of all, limiting the ploughing land, describing the system of the coursing of the tillage. The tenant is liable for fences and dilapidations to buildings.

12,548. You do not mean ordinary wear and tear, under a yearly agreement, do you?—You can construe it in that way. It has been construed that way under some agreements. I know one tenant who has had to spend a lot of money on his buildings.

Laying land down to grass.

12,549. And as to the laying down to grass, what do you say?—As to the laying down to grass it is not a stipulation in the agreement—the breaking up is stipulated. The general fine for breaking up is 5*l.* per acre.

12,550. You would not complain of that, would you?—I should complain of it very often.

12,551. If you took old pasture land on entering a farm, do you consider that you would be entitled to break up that pasture land without any compensation?—I do not think that I ought to break it all up, but there are lands where the root practically becomes worn out, and it is to the interest of the landlord and the tenant that it should be broken up to get a better root.

12,552. You would not say that a tenant has a right to reduce the amount of old pasture on the farm without any reference to the landlord?—I do not think that the tenant has any right to reduce the productive farming at all. Bad farming I think should be punished.

The Agricultural Holdings Act.

12,553. Are these agreements the rule in your district, and do they supersede the Agricultural Holdings Act?—Yes, I have never known the Agricultural Holdings Act to be brought into operation excepting once.

12,554. How was it brought into operation in that case—how did it supersede the agreements?—In this particular case that I am referring to the man had not an agreement. He was without an agreement and he went under the Act.

12,555. But these agreements are held to supersede the Act as being considered to be equally or more favourable?—I do not suppose that many of the farmers know much about the Agricultural Holdings Act.

12,556. Then there is no feeling about it one way or the other?—In this case the man was under no agreement, and he took advantage of the Act, which was both a dilatory and expensive process, and it spread dismay amongst the farmers as regards the Agricultural Holdings Act. It is considered with us a dead letter.

Mr. T. Worthington. 15 Mar. 1894.

12,557. Is there much dissatisfaction with the existing agreements, then?—Yes, many of the farmers consider the agreements exacting, and in some instances a little vexatious.

Agreements.

12,558. Are they strictly adhered to?—They are not strictly adhered to. If they were, then of course there would be a difficulty.

12,559. A good deal of latitude is naturally given to the tenant, I suppose?—There is no doubt about that.

Freedom of sale.

12,560. Are hay and straw forbidden to be sold under the covenants?—Not in all cases; it is the rule with us. We have a good hay and straw market, and the hay is allowed to be sold, providing manure for a certain sort is brought back again.

12,561. Is that largely availed of?—Yes; the hay and straw market is a big one now.

12,562. You say that the farming has deteriorated. Has the encouragement or the permission for the sale of hay largely contributed to that?—I do not think so.

12,563. You do not think that hay is sold off without an adequate return to the landlord?—I think that the farmers for every load of hay—both in hay and potatoes—have invariably taken back a load of manure.

12,564. You do not think that they mow too frequently?—I do not think so.

Dairying.

12,565. Is the dairy industry of recent introduction comparatively?—There has always been a fair quantity of milk produced in the neighbourhood.

12,566. But where butter is made, you say that the accommodation is quite insufficient?—Decidedly.

12,567. Is that because it is a comparatively new demand?—Oh, dear, no. Most of the houses are very old; very old indeed.

12,568–9. Is the land of a wet character?—On some parts it is rather clayey; on the north and north-east side of the Union it is more of a clayey soil. On the south and west it is more of a sandy subsoil, with a light moss surface.

Drainage.

12,570. For all except the last, I suppose, drainage is required?—Yes.

12,571. Has it been generally carried out?—A great deal of the land really requires draining at this moment.

12,572. Is that because the drains are worn out?—They have been worn out; there have been drains, but they have been worn out.

12,573. And is drainage not properly carried out then? Is there much of it remaining to be done?—I think there is a large area requires to be done.

12,574. Do the tenants drain to any considerable extent?—Not much; they rely upon the landlord doing the draining; the usual plan being for the tenant to carry the tiles, put them on the land, and the landlord to do the work when that is done.

12,575. But if they are invariably charged 5 per cent. interest upon the outlay that makes them reluctant to moot the question?—They will often moot the question, but demur to the interest, and the landlord will not do it unless they undertake to pay the interest.

Labourers.

12,576. As to the supply and quality of labour; has it been maintained?—Yes, the labour is rather a big item with us. We are in the neighbourhood of large works, where fairly good wages can be obtained. I keep four men on my farm, and the lowest wage I pay is 20*s.* per week, the man finding himself with everything, and the highest wage I pay is 21*s.* with a good house, rent free.

12,577. Is that the waggoner?—No, the cowman; he looks after the cattle.

12,578. What is the acreage of your farm?—95 acres.

12,579. Is there no difficulty of procuring labour at all times?—Not at any part of the year.

12,580. Have those wages increased in the last 10 years?—Yes, they have gone up considerably; a farm labourer 10 years ago would get 15*s.* per week; now you cannot get a man, even an off man, for less than 18*s.* or 19*s.*, and if you want a good man permanently you must give 1*l.* a week.

12,581. Does that include everything?—I add nothing. I will not find anything for the men.

12,582. Do you pay nothing extra in harvest time?—We pay nothing extra in harvest time. If I take them the year round, they will come for the 1*l.*, because they know that in winter there is plenty of make up time.

12,583. Can you speak as to the quality of the labour?—You can get first class men; there is no doubt about the quality.

12,584. (*Mr. Everett.*) Did you not say that the labourer was rent free?—In one case 20*s.* includes everything.

12,585. (*Viscount Cobham.*) Then the position of the agricultural labourer has been thoroughly well maintained; he is as well off as ever?—He is as well off as a colliery labourer; or in any other department of life in our neighbourhood. He has no off time, and consequently, though another man may get 22*s.* or 23*s.* per week, take year in and year out, the agricultural labourer is better off at the end of the year; at any rate he considers so.

Rates.

12,586. Then you say something about the incidence of local rates?—Yes; of course with regard to the rates, they have gone up considerably during these last 10 or 15 years. The local boards have been established throughout the whole of the neighbourhood; they have incurred liabilities which the township, of course, is bound to meet, and many of the improvements are such that the farm labourer does not derive much benefit from them, although he is liable for his contribution.

12,587. Are you within the urban district of the town of Wigan?—Yes; I am in the next township, part of my land is in the borough. The borough boundary runs through one of my fields.

12,588. Then you are rated for sanitary and school board and other purposes?—There is not a school board in the township; there is not really a school board in Wigan, it is only nominal, it is practically an attendance committee; it has no schools.

12,589. Do you bear any part of the sanitary rates?—We have to bear them both in the out-township and in the borough, it is a Local Board district, and then it has a sanitary committee, and a water committee, and lighting committee which now lights the whole of the highways.

12,590. And you are assessed to the extent of one-fourth?—Yes, of the land, and to the full extent on the buildings, with the sixth off.

12,591. To what extent have you benefited from the expenditure?—Except the advantage of getting to and from the end of the highway, practically nothing. The sanitary part does not touch me at all.

Wigan market.

12,592. Still, I presume, that it is in your interest that the town of Wigan should be there and should continue to flourish?—It is in the interest of good government that health should prevail, and it is in the interest of farming that everybody should be healthy.

12,593. You say you have a first-class market in Wigan?—Yes, the finest out of London or Liverpool. It is not an uncommon thing to have 200 farmers there on a Friday morning with their farm produce. They sell direct to the shopkeeper. There is practically no merchant or middleman; the farmer brings his own product and he sells it to the person who retails it.

12,594. Notwithstanding the great advantage that Wigan is, do you think it a grievance?—I do not think it a grievance.

12,595. I mean that you have to share so largely in the expenses of the borough?—I do not complain of the expenses of the borough, but it is mainly the out-townships that surround the town that have to pay.

12,596. What is the distance of your district from the town?—Two and a half miles from the centre of the market.

Re-adjustment of rent.

12,597. Now as to the remedies for the present state of things, what would you suggest; take rent, for instance?—I think, in fact I am certain, that there ought to be a re-adjustment of the rents. I referred to one estate where the rents had been reduced 25 per cent. I believe that that estate is not only well managed, but that the rent is satisfactory to the tenants on that estate. There are, as I said, large estates in the immediate neighbourhood where little, in some instances no, reductions have been made, and the farmers on those estates are certainly suffering and are at a disadvantage as compared with their neighbours.

12,598. Then you consider the landlords are not making any efforts to maintain the tenants on their

Mr. T. Worthington.
15 Mar. 1894.

property?—That is so. Many of them, if I might say so, in three of the largest cases are absentee landlords altogether. In my own case I do not know, I should not know, my landlord if I met him.

12,599. He has not a mansion house there?—He has no residence there whatever. I do not know where he lives. I do not know whether he is in this country or any other.

Land Courts.

12,600. Then how would you adjust the rents on a fair basis?—So far as the farmers that I represent are concerned we believe that the fairest method of adjusting the rent would be through a land court constituted of legal gentlemen assisted by one or two persons representing both interests.

12,601. I take it that you are generally in accord with the Bill presented by Mr. Smith?—Generally that is so.

12,602. Is your association affiliated to his association?—It is affiliated to the Tenant Farmers' Federation.

12,603. In the manner proposed in that Bill, you think that rents should be adjusted?—Yes.

12,604. Would you be satisfied with such an adjustment of rents?—No, I do not think that that is the whole of the remedy, I think that is a very small part of the agricultural depression, very small indeed.

Fixity of tenure.

12,605. What would you further suggest?—I would further suggest fixity of tenure.

12,606. In the manner proposed by that Bill?—Yes.

12,607. By a reference to the court every five years?—Yes.

12,608. What, in your opinion, would be the effect upon the landlord's expenditure by such a measure as that—I mean his expenditure upon farm buildings and drainage?—I think the landlord in that case would be willing to expend money sufficient to put his farm in first class condition for the tenant. I do not think a reasonable landlord would limit his expenditure in consequence of the fixity of tenure.

12,609. Do you think that he would get a return for his outlay, as much as he would get if he put it into Consols?—I think he would.

12,610. Are you speaking strictly of your district?—I am. With regard to my buildings they are entirely inadequate. I have agreed with my landlord to pay him 3 per cent. upon the buildings that he shall erect, and I believe that if fixity of tenure was to be brought about at the end of five years even in a land court he would have awarded to him as against me, for rent, quite as much as I have agreed to pay him.

Right of landowners to inspect property.

12,611. Would you debar the landowners from setting foot upon his land, as is proposed in Mr. Smith's Bill?—I should not debar him from setting foot upon it. I think he ought to have the right to inspect it.

12,612. It is subject to that right in the Bill, but to that right alone?—If the land is farmed I do not think that he has very much more to do with it.

12,613. You think that all sporting rights should be transferred from the owner to the tenant?—I think that those who keep should kill.

12,614. Notwithstanding any agreement to the contrary?—I do not think that there should be an agreement for one to keep, and the other to kill.

12,615. Then the relation between landlord and tenant would be an absolutely business relation?—Certainly; just like taking a shop.

12,616. And any outlay by the landlord on his property would be made in a purely commercial spirit?—Decidedly.

12,617. What pride or satisfaction would he have in the land if the property was not practically his?—The pride of seeing his farm in splendid condition, and seeing his tenant making ends meet, would, I should think, be the highest pride that could animate a man's mind.

12,618. But he would have to see his buildings from the high road, and not from any other point of view?—I cannot conceive a man so much at variance with his tenant that he should have to look through a telescope at his farm.

12,619. He would not have the right to look at the property unless there was a public footpath through it?—I should think that he should have a perfect right to see that the land is cultivated, and that it is not deteriorating.

Mr. T. Worthington.
15 Mar. 1894.

12,620. At all times?—Yes.

12,621. I do not think that that is the provision in the Bill?—I could not conceive of a state of things where a land court, having fixed the rent for five years, would set these people as long away from each other as possible.

12,622. He is allowed to go on to the land for certain purposes only. It says that any person authorised by the landlord can have the right to enter upon the holding for "viewing or examining at reasonable times the state of the holding." Those are the only purposes for which he can enter upon the farm?—That is so.

Insecurity of tenure.

12,623. Are you of opinion that the sense of insecurity is so deep and widespread that it affects considerably the cultivation of the soil?—I am certainly of that opinion.

12,624. What was the case before the depression arose? You held under the same tenure, I suppose? Was farming bad at that time, and the expenditure of tenants' capital insufficient?—I believe for many years the expenditure of tenants' capital has been inadequate to the requirements of the land; for many years that has been so.

12,625. But I mean before the depression set in; I am speaking of the more prosperous times?—I do not think even then that everything was done to the land that the tenant ought to do. I know plenty of farmers who, in the prosperous times, preferred to put their money into cottage property, or shop property, or mortgages, rather than invest in the land further.

12,626. Is that because they considered that they were liable to capricious and unreasonable eviction, or because they doubted whether, under their agreements, they would be able to get the capital back again?—I do not think that vexatious eviction was one of the great frights. Personally, I do not know a single vexatious eviction in the neighbourhood.

12,627. You do not think that the fear of it really operates upon the minds of the tenants?—This fear more operates: that if a person has his farm in what I call first class condition, he does not get the same attention and appliances to any requirement of his from the landlord, that he would if his farm was not in first class condition. I have a case in my mind of that sort. One of the largest farms in the Wigan Union was known to be in the very best condition; the farmer saw that the decline of price was largely interfering with his profit, and he immediately applied for a reduction, and the agent who was living at that time—I am bound to say, an imperious man—began at once by saying that if he did not like it he could go; he knew perfectly well that he could let the farm at the same rent, because of its high condition. The man did leave the farm practically without a penny of compensation. The farm has been let twice since then within the last seven years, and to-day it stands at half the rent that that man paid, because those who have been in the farm have gradually deteriorated it.

12,628. Did the tenant who took the farm immediately after him hold it at an increased rent?—He held it at a reduction shortly after.

12,629. The landlord has not profited then?—He paid the same rent at the beginning and then he got a reduction, but he cleared off and another man succeeded him, and is paying half the rent that he was paying. If the good farmer had had a reduction he would be there now. It is a premium upon bad farming when they go away and leave a poor farm, and a reduction takes place because no one will have the farm.

Free sale of improvements.

12,630. You further propose a free sale of improvements?—That is so. I will take my own case. For three years upon one part of my land I have practically spent 100*l.* more than I have received to get the farm into what I call first-class condition; my contention is that that investment of mine in the land should be as much mine, and as much at my disposal as if I had put it in Consols instead of putting it into land.

12,631. What is the nature of the expenditure of that 100*l.*?—In manures—not in what I should call highly excitable manures, but in farm-yard manures. I bought lime and farm-yard manure in the town and carted them.

12,632. When you came into your farm I gather that you came in on comparatively favourable terms?—Yes,

Mr. T. Worthington.

15 Mar. 1894.

I did; I came in on the value that it was then, I struck my bargain.

12,633. And you paid your predecessor a great deal less than you will receive from your successor if you have "free sale"?—I paid my predecessor practically nothing; he had reduced it to common land. I expect the difference between the farm as is was, almost common land, and what I am leaving, that is what I expect.

12,634-5. Your successor would come in with a pretty heavy load upon his shoulders?—My successor would come in for the difference in the value which either he or the landlord would have to pay. If you will allow me I might say that I have two neighbours, both at this moment on the look-out for farms. I know it. Now their farms are gradually deteriorating year by year, and they know that they can practically get nothing, and they are going to be sure that they will leave nothing.

12,636. But is that not due, to some extent at all events, to loss of capital, owing to the terrible fall of prices?—They have lost some capital, but if they had fixity of tenure, and free sale of their improvements, they would largely have increased the product upon their farms as I have done.

12,637. Notwithstanding the agricultural outlook?—Notwithstanding the agricultural outlook. I cannot conceive that for ever the agricultural business of this country is going to be in the state in which it is now.

Technical instruction.

12,638. I hope not, I am sure. Then, lastly, I believe you wish to say something as to agricultural education. What is done in your neighbourhood in that direction?—For the first time with regard to agricultural education the Lancashire County Council have sent round, I do not want to use a ridiculous word, but something in the shape of a circus, a sort of tent with churns and a lecturer on dairying—that has been a sort of travelling affair—but I cannot say that it has done much for the farmers, and in Wigan as a centre, they have had, I think, three lectures. I attended those lectures myself; but I should consider that the whole of the money was as good as thrown away.

12,639. Was that because the teaching was of an inefficient description?—I think the people did not understand what the man was talking about.

12,640. How would you teach it?—The way I think that they ought to be taught, of course a great many of us are past teaching.

12,641. Who are you speaking of, the farmers?—I am speaking of farmers who hold their farms, and many of them are from 40 to 60 years of age; their opportunities are too few, and they could not be spared from their farms to go to any school to learn a new method. I think myself with regard to agricultural teaching it should be scientific and practical combined, that attention should be given to agriculture such as we see given to it in America and in Canada.

12,642. You are speaking of model farms?—I have been there and seen their farms, and in my opinion if in our great counties we had fairly large farms where, say, 20 or 25 young men from 18 to 21 years of age could be sent, dividing the instruction in the school, if I may call it so, and in the forenoon for half of them to go to the school, and the other half in the afternoon, and alternately work on the farm and putting their knowledge into practice, I think that would be a far better way of increasing the knowledge and practice of agriculture; I do not suppose that you could find one man in a hundred who knows anything beyond rule of thumb work in connexion with the character of his soil, and few, exceedingly few, know anything about the nature of the plant that they grow, or what that plant will best feed on. If you talk to them about nitrogen, or potash, or phosphates it means practically nothing to them; it is a foreign language altogether and a foreign idea.

12,643. You are the very first farmer we have had here who has taken that view. In every case when the question has been put to the witnesses they have been dead against instruction in the principles or theory of agriculture?—Against it!

12,644. Against it?—Then you can know what construction to put upon those witness's evidence. Of course where ignorance is bliss,——If a man does not think it is wise to know he never will know.

12,645. How many farms of that sort would you establish in a county like Lancashire?—Lancashire is a fairly good county, I should think one or two good farms. Take the North Lonsdale Division, which stretches right to Barrow, the county is over 100 miles long from point to point, the class of farming that would do for the northern part would not do at all for the southern part because they have a rocky land in the north, and I should say that two farms, one in the southern part of the county and the other in the northern part of the county, would be sufficient. Lancashire is so wealthy that it could well afford them.

Mr. T. Worthington.

15 Mar. 1894.

12,646. Not out of the grant entirely?—Not out of the grant entirely.

12,647. Would you do anything for the education of the labourers?—I should certainly in the schools, particularly in the agricultural districts, instead of reading all sorts of nonsense I should like them to read something practical and interesting. In our elementary schools they teach them all sorts of action and all sorts of Kindergarten exercises. I think if the reading books were adapted to the kind of work that the boys and girls would have to do in after life, and that they were trained in action in some of those things it would be a large help and development to agriculture.

12,648. But you think that the technical education at present afforded through the County Councils is on mistaken lines?—I am certain that it is, and I think they themselves will agree that they have thrown a good deal of their money away up to now. I know many of them, and I cannot find one that can justify it, and the fact that they are thinking of altering the course shows that they do not think they have got value for their money yet.

12,649. (*Sir Nigel Kingscote.*) Then we are to understand from you that you think the farming class in England are generally very uneducated for their work?—I speak of those around me.

12,650. You confine yourself to them?—Yes, because I do not wish to insult some one further off. But the class about my neighbourhood I do not consider are anything like educated to what they ought to be for the business they are in. In my own opinion there is not a business that presents so many problems of a technical and difficult character as agriculture itself.

Leases.

12,651. Are there any farms held on lease at Wigan?—I do not know of any.

12,652. Were they formerly?—Years ago. There were some held on a 14-years' lease.

12,653. When did they cease to take leases?—About 1879 and 1880.

12,654. That was not owing to the depression of agriculture, because, I think, you told us that until the last three or four years, in your neighbourhood, agricultural depression has not been felt?—Not a great deal, so far as I can gather. About 1880 the leases began to be given up.

12,655. And now they are never taken?—I do not know one. They are taken from year to year as a rule.

12,656. Is that because the tenant farmer does not wish to take them, or because the landlord will not grant them?—I think that it is more on the tenant farmer's side; that he does not want a lease; he would rather take his chance of being able to give up when he wants to.

12,657. How much notice must either side give in your agreement?—Twelve months—in some instances six months; but, of course, the notice commences on the 2nd of February for the land, and on the 12th of May for the building. In many instances I think that is rather a stupid arrangement—the land and the building should be given up at the same time.

Dilapidations.

12,658. (*Mr. Whitehead.*) In your statement under the head of "Restrictions" you say the tenant is liable for dilapidations, will you say how those dilapidations are assessed?—I think I said only in one case had I known that to be put into operation. I did in one case and that was assessed by going through the whole of the buildings and outside chambers and spouts and that kind of thing and ordering them all to be replaced or mended.

12,659. And that would apply to gates and gate posts?—To gates and gate posts.

Effect of the depression.

12,660. Is there any difficulty in letting the land in the Wigan Union?—There has been great difficulty and there are many farms to let at this moment, they are advertised in the papers.

Mr. T. Worthington.
15 Mar. 1894.

12,661. Is there any land out of cultivation absolutely?—I do not think so. The landlord of course, takes it in hand whenever it is vacant.

Small holdings.

12,662. They are all comparatively small holdings ranging from 50 to 100 acres?—I said from 40 acres upwards.

12,663. Are there any smaller holding than that where the people live?—There are some farms of less than 40 acres, but as a rule, the family although they live in the house go to other kinds of work.

Fruit growing.

12,664. Do they cultivate fruit to any extent?—It is not cultivated to a large extent with us. The smoky character of the district in the immediate neighbourhood of the town prevents it. Just outside the union there is a pretty large fruit culture.

12,665. Having such a fine market there ought to be more opportunities for fruit growing?—As soon as you get out of the smoky region which is rather outside the union, then fruit is grown pretty largely, and disposed of in the market.

12,666. Is the cultivation of fruit profitable under such circumstances?—I believe so.

Vegetable growing.

12,667. As regards vegetables, is that a profitable cultivation?—It is said to be so. I do not cultivate many vegetables, but those who do consider that they make a fair profit out of it.

12,668. It is not largely cultivated?—It is not largely cultivated.

12,669. Ought it not to be largely cultivated, seeing that there is such a large market?—If there was more diversity in the cultivation of the land, the farming would pay better.

12,670. Would not vegetable growing, in those circumstances, be a remedy for agricultural depression to some considerable extent?—I think it would.

12,671. Why not adopt it?—It would involve a higher state of cultivation and more labour, and unless a farmer feels that he will be compensated for the investment of his capital, and that it is his own, he will not go into it.

12,672. Would that require more education?—That would require more education.

Labour.

12,673. With regard to labour, do the women work in your district?—Not a great many of them.

12,674. Do the farmers and their families work themselves as a rule?—Yes, as a rule.

12,675. Does that apply to farmers with as many as 100 acres?—Yes.

12,676. They would not, of course, keep bailiffs?—No.

Technical instruction.

12,677. With regard to agricultural education, can you tell me whether, in the agricultural experiments connected with America, pupils are taught as you suggest they should be taught in England?—In some places they are, I believe.

12,678. I thought the agricultural experimental stations applied only to the experiments for the good of agriculture generally, and that they were not schools?—In some instances I think the farmers' sons have opportunities of going to experimental stations. I had a letter from Secretary Rusk, who died a few weeks ago, saying that they encouraged the farmers to send their sons to the experimental stations.

12,679. Would you suggest that such experimental stations should be provided by the county councils or the Government?—I should say by the county councils.

12,680. Where they would expend the grants?—Yes; and I think, in connection with that, that where a farmer sends his sons, say at 18 years of age for two years, that the farmer should be compensated for the loss of their labour—slightly compensated for the son for two years.

12,681. Do you mean that there should be a grant made to him in that respect?—I would not compensate him fully.

12,682. You are not aware that that does hold in some counties, for instance, at Swanley in Kent?—I am not aware of that.

12,683. That is so; that might be applied equally in Lancashire, might it not?—I think so.

12,684. Do you not think that teaching by lectures would answer in course of time when the lectures are levelled up to the proper mark in chemistry and botany. Would not that convey instruction to the pupils?—Yes, I think so; I think that you learn some parts of it away from the experimental farm.

Mr. T. Worthington.
15 Mar. 18.

12,685. And that might obviate the necessity of establishing one?—It would lessen it.

12,686. In Germany that system prevails, and lecturers are sent to the farmers and labourers there?—I think so.

12,687. Might not that be adopted by the county councils?—I think so; that might be done on all those subjects where practical work is not actually required.

12,688. With regard to agricultural experimental stations, that would be necessary irrespective of the teaching of the pupils?—I should certainly think an experimental farm useful.

12,689. Would you have them in every county?—In every county.

12,690. Notwithstanding that the Royal Agricultural Society, and other large societies in England, institute experiments?—I do not think that it is possible to be in touch with the Royal Agricultural Society.

12,691. Why?—In the first place it would be almost unmanageable to bring them into touch with the different counties. I think in the counties where the farmers were contributing, they would be more in sympathy with the farming which was amongst themselves. I do not think that many farmers even in connection with the late Manchester and Liverpool Society made themselves acquainted with the experiments carried on at Saltney.

12,692. That is rather their fault, is it not?—That rather confirms what the Chairman said that they object to education.

12,693. It is not so much want of teaching power as the unwillingness to be taught?—Yes, the disposition to be taught is to be cultivated yet.

Position of tenants.

12,694. (*Mr. Clay.*) In profitable times had the tenants sufficient capital to farm the land?—I think many of them had.

12,695. Was their financial position sound in prosperous times?—I think so.

12,696. Since the bad times came, do the landlords meet them in time to save them?—That has not been so in my neighbourhood.

12,697. If they had met them they would have been in a better position to keep up the cultivation of the soil?—I think so.

12,698. I gather from you that the tenants in your district are afraid to put capital into the land for the want of sufficient compensation?—That I believe.

12,699. You only believe it?—Those that I have come into contact with have said so.

The Agricultural Holdings Act.

12,700. And they do not take advantage of the Agricultural Holdings Act?—That is considered a dead letter with us.

12,701. What is the reason of that?—In the first place, the procedure is slow and cumbersome, and so far as the reported cases that we have heard of go, the tenant has almost always been swamped by a counter-claim. Of course the counter-claim has never been delivered until his claim has been given in, and the counter-claim has always been the largest, and the fight, as a rule, has been expensive, so that people would prefer getting all out of the land rather than leave it in and try to get it afterwards.

Land Court

12,702. But if the expense of the procedure in getting compensation was modified and brought into a narrow compass, would you say that that would be an advantage?—That is what we propose, that there should be a land court with two practical men sitting as assessors with the judge, or whoever is the legal person; that it should be simpler and less complicated.

12,703. (*Viscount Cobham.*) Would you give the judge a casting vote in the event of a difference of opinion between the two assessors?—I think I would; as a rule judges are common sense men.

12,704. (*Mr. Clay.*) Those men would not only fix the compensation, but fix the rent?—Fix the future rent.

Land Court and wages.

12,705. Would then this court have anything to say in regard to the labourers' wages?—No, I do not think it should do that.

Mr. T. Worthington.
15 Mar. 1894.

12,706. Why not the labourer as well as the tenant?—I should be in favour of the labourer having a fair wage, but too many references under one head I think would hardly be advisable.

12,707. You would not allow the labourer to come under the same principle and have his wage fixed as you would the tenant, in regard to the rent which he has to pay to the landlord for the farm?—I would put the labourer on a little different footing. In the first place he has nothing at stake in the farm. I should like though to say that I should want the labourer to be dealt justly by. This is not exactly the time perhaps for saying what I should like the labourer to have, but I do not think it would be satisfactory to go to court to fix a fair rent, and also to bring in all the expenditure which is to take place upon the farm, and how it is to be done.

12,708. In the past do you think that the labourer has ever had his fair share of a living wage out of the land?—I do not.

Technical instruction.

12,709. Regarding the mode of teaching the young farmer or the labourer, you have referred to Canada, I think. You have been there yourself you say?—I have just had a run through.

12,710. Have you seen any of the colleges or experimental farms?—I have not been on them. I have only been to the headquarters of the Government, I have only been to Ottawa. I have only heard a description of the farms, and I have not been on them.

12,711. So that you have not seen that well-equipped college or farm to teach the Canadians in Guelph?—I have not.

12,712. Have you heard about it?—I have heard about it but I have not seen it.

12,713. The young farmers and the young labourers can afford to go there for a certain time, I believe?—Yes.

12,714. And there they see both the theoretical part of farming as well as the practical?—Yes, I believe that is so.

12,715. But you cannot speak to it?—I cannot speak from observation.

Position of landlords.

12,716. (*Mr. Gilmour.*) Have you any knowledge as to the position of the landlords in your district; are they men of substance or are they men in the opposite position?—Will you describe the "opposite position."

12,717. I mean men without capital who are relying upon incomes from their estates?—Upon one estate the landlord, I believe, is largely hampered by mortgages and it would be almost impossible for him of his own will to give reductions. On another estate the lady who owns it, or in whose name it stands, cannot live at the Hall at the present time and cannot give reductions. In most cases the landlords are not in a position to grant reductions in our neighbourhood.

12,718. You also mentioned that the farmers there had the benefit of selling the produce direct without any middleman, as a rule?—That is so.

Sale of cattle: (*a*) by auction:

12,719. In the case of their cattle do they sell them by auction, or how?—Very rarely by auction.

12,720. Do they sell their fat stock direct?—Their fat stock are sold straight to the butcher. My own plan has been when the market has been high to sell to the butcher, and when it has been low to kill them myself and sell them to the people. That plan I have advocated with the farmers.

(*b*) by live-weight.

12,721. Has your association had the subject of the weighing of cattle brought before them? Have they discussed it?—They have not discussed it largely. For myself I have a weighing machine, and I weigh my own cattle before I sell them, and I calculate the price upon the live weight.

12,722. Do you consider that is a great help to you?—Yes. Of course I have had to fight the butchers. They do not like a weighbridge. A butcher who buys so many cattle per week likes to pit his judgment against the farmer who only sells one beast a fortnight.

12,723. (*Viscount Cobham.*) Will the butcher take your weights?—Yes; I generally sell them hand over hand, as it is called, by the lump, that is; but every butcher who buys off me knows that they have been on the weighbridge before I quote.

12,724. (*Mr. Gilmour.*) You practically do not want merchants, because you weigh your cattle?—We do not need merchants.

Mr. T. Worthington.
15 Mar. 1894.

12,725. And you have always some party who will buy?—Yes; we have such a large population in the Union that we can always sell what we have to sell. I may say in regard to cattle that perhaps we have suffered as much in that as anything. We are near to Liverpool and Birkenhead, and where 30 butchers of Wigan used to kill their own meat, I do not suppose there are more than four killing now; they can slip off to Birkenhead by train, buy at the lairage, bring the meat back by the next train or have it sent on by goods train, and it is in their place almost immediately. A butcher now does not work all the week round, he generally works from Friday morning till Monday at dinner time, sometimes only till Saturday night.

The marking of foreign meat.

12,726. Has your Association had the question of the marking of foreign meat before it?—We are in favour of all foreign meat being marked and sold as foreign meat.

12,727. Have you considered the practicability of marking meat so that it can be recognised when it reaches the consumer in the small proportions in which he buys it?—We see that there is a great difficulty in that. I may say that in our own town there is not a great amount of deception upon that point, because the shops are specially labelled for foreign food.

12,728. They are so at the present time?—They are; they make no secret about it that the beef that they sell is foreign, and they sell the biggest quantities.

12,729. Do not the shops where foreign meat is sold entirely keep themselves to the sale of foreign meat?—Some of our largest shops keep themselves entirely to the sale of foreign meat. There are some butchers who mix and who do not say that it is mixed.

12,730. Then probably the result of your discussion of this matter is to make all who sell foreign meat declare that they do so?—That is what we want. We should be glad for that to be done.

12,731. I think I understood you to say that in your opinion the farmers in your district do not possess a very sufficient knowledge of farming?—I do not think they do.

12,732. Are these men members of the association?—Yes.

Land Courts.

12,733. And these same men are those who desire to have a land court?—They do.

12,734. Is that because they do not possess the qualification for making their own bargains?—No.

12,735. Why?—It is because they want somebody who can hear both sides and decide between them; they do not consider that they are in a fair position to make the bargain always, because the word to them is, "You can either take it or leave it." Now, many of them do not want to leave, and they do not want to take; they want somebody to settle what it is to be, in order that they can stop.

12,736. They do not want to leave, because they yet see that there is a good living to be made out of the land?—They do not want to leave, because they have an opinion that if they have their farms upon secured tenure and fair conditions they could yet make a living. They believe that by meeting them they could yet make a living, and some of them do not know how to get a living in any other way. To turn those men off the farm would simply be this: they cannot go into the mines, and they cannot get into the workshops; they would simply become street sweepers.

The Federation of Tenant Farmers' Association.

12,737. (*Mr. Little.*) The Farmers' Association that you represent I think you said had 136 members?—133 I think I said.

12,738. Are they *bonâ fide* tenant farmers?—Every one is a tenant farmer direct.

12,739. Is it a condition of membership that a man should be a tenant farmer?—It is.

12,740. Is it laid down in the rules?—It is.

12,741. Is there a subscription?—There is an annual subscription.

12,742. And you hold meetings for the expression of opinion on agricultural topics?—We do.

Particulars of witness's farm.

12,743. I think you said that you farm 95 acres?—That is so.

12,744. Is that your sole occupation?—No.

Mr. T. Worthington.
15 Mar. 1894.

12,745. You do not depend upon this farm chiefly for your living then?—I depend partly upon that and partly upon an auctioneering business that I have.

12,746. Carried on in combination with the farm?—Yes; in combination with it.

12,747. Your farm is in close proximity to a large town, I believe?—It is.

12,748. Do you object to tell us what the rent is?—135*l.* is what I pay for the land.

12,749. Do you pay tithe in addition?—I pay tithe in addition.

12,750. What would the tithe be?—4*l.* 8*s.* 7*d.*; it is a light tithe.

12,751. And ordinary rates?—Ordinary rates.

12,752. How much of the land is arable?—40 acres.

12,753. And is the remainder in permanent pasture?—Yes.

12,754. Can you mow the whole of it?—Yes.

12,755. It can all be mown?—Yes.

12,756. What does the rent cover in the shape of house and buildings; is there a farm house?—There is a farm house, and I have two cottages in connection with it.

12,757. Included in the rent?—Included in the rent. I get 14*l.* 6*s.* for the cottages.

12,758. Then the cottages are not included in the rent?—The cottages are included in the rent, and I draw the rent of the cottages. It is 135*l.* less 14*l.* 6*s.*

12,759. The 135*l.* then is for the rent of the farm-house, 95 acres of land, and two cottages?—Yes.

12,760. And buildings?—Yes; but very few buildings.

12,761. Sufficient buildings for 95 acres of land?—No; I have had to erect buildings for my cattle; the buildings were not fit to put the cattle in so I put buildings up myself.

12,762. How is the 40 acres of land employed?—The 40 is on the four course system. We often first of all plough for potatoes, or if we are breaking up from the clover root we take off a crop of oats, follow on with potatoes or turnips, then take off a crop of oats and lay it down with clover seeds and rye grass for two years.

12,763. That is really a five course?—Yes, it is really a five course. In some instances we have to plough it after the first year because it is not a root that sticks very well.

12,764. You consume the hay, I understand, on your farm?—I consume everything off my farm except perhaps a few excess turnips, and I spend, as a rule, 300*l.* a year in provender besides.

12,765. The potatoes, I presume, you sell?—We often give the cattle the potatoes at the price they are now.

Price of potatoes.

12,766. (*Mr. Clay.*) What did you say was the price per ton for potatoes just now?—The potatoes are from 22*s.* 6*d.* to 30*s.* delivered to the shopkeeper.

12,767. Do you consider that a poor price?—I do.

Particulars of witness's agreement.

12,768. (*Mr. Little.*) You hold on a yearly agreement?—Yes.

12,769. What are the conditions of that agreement?—My conditions are very fair. After I have paid the rent I have practically no conditions.

12,770. You use the land as you please?—Yes.

12,771. And sell what you please?—I do.

12,772. Are you bound to return to the land a particular specified quantity or a specified description of manure?—No. I have all the conditions I am advocating here.

12,773. Have you any separate agreement for the manures?—No.

12,774. Or feeding stuffs?—I have taken my farm like taking a house. When I have paid the rent I am master of the show.

Agreements.

12,775. Is it usual in the agreements under which the tenants hold their farms to give compensation for manures and feeding stuffs?—If they can get it from the succeeding tenant, the landlords do not give it.

12,776. Does the agreement provide for any such compensation?—No.

12,777. Then if the agreement does not provide for any compensation they might have a claim under the Agricultural Holdings Act?—That is what they might have.

Mr. T. Worthington.
15 Mar. 1894.

12,778. Does custom give any?—No.

12,779. Nothing?—No, except for seeds.

12,780. Simply the cost of sowing the seeds?—Yes; and that is often referred to two local valuers, or "burly" men, as they are called in the townships.

12,781. Is it usual in these agreements to prescribe a return for hay and straw sold?—It is.

12,782. What is the usual agreement?—The usual agreement is that for every load of hay that is taken away they should bring back a load of manure.

12,783. How much is a load of hay?—A ton.

12,784. How much is a load of manure?—Two tons.

12,785. That is considered an equivalent?—Yes.

Land courts. Fair rents.

12,786. You propose a court to fix rents; how do you suppose that the value of a farm shall be ascertained if you exclude competition altogether?—I should say that what would be taken into account would be the character of the soil, its possible production, its distance from a market, and its general surroundings. I recognise a great difficulty in defining what is a fair rent. My own opinion is that, if an agreement could be come to of a profit of so much per acre after paying for all labour and all out-goings, that would be the best way of fixing a fair rent.

12,787. The profit that could be made by a skilled farmer do you mean?—Yes. I would not give any quarter to unskilled farmers.

12,788. You would assume that they would manage the land in the best way that it could possibly be done?—That is so.

12,789. That would not benefit bad farmers?—I would cast bad farmers out.

12,790. You mean you would improve them by a process of elimination?—That is what I would do.

12,791. Then you would substitute for the higgling of the market the opinion of experts?—Yes.

12,792. And you think that would be satisfactory?—I think that would be best.

Valuation of improvements.

12,793. Would you leave the Land Court to decide questions of valuation of improvements?—Yes.

12,794. How would they ascertain the value of the improvements?—I should say that on a person going on to the farm a record book should be kept at the Land Court, containing a full specification of the condition of the farm when he went on, and that that should be the basis from which improvements should be calculated.

12,795. This court must take evidence to ascertain the facts?—Yes.

12,796. Do you suppose that that would be a less expensive process than a valuation under the Agricultural Holdings Act?—I would make it less expensive; I would limit the expenses.

12,797. The expenses depend upon the cost of proving the facts?—There would not need to be many witnesses on either side to do that.

12,798. There might be?—Yes, there might be.

12,799. You cannot employ experts without paying them?—The assessors I admit would have to be paid.

12,800. If they are worthy of their position they must be gentlemen who are entitled to some considerable pay?—That is so.

The Agricultural Holdings Act.

12,801. One instance of the Agricultural Holdings Act being taken advantage of has been sufficient to disgust the whole of your neighbourhood I understand?—That and the reports that have come into the newspaper of a great many other cases.

12,802. It is not that there are no improvements for claims to be made upon?—I think in many instances persons have improved their farms but when they have made up their minds to move they have run out their improvements rather than run the risk of the Agricultural Holdings Act; that is what I should do.

12,803. They have left nothing, and therefore they have not claimed?—That is so.

Land Courts.

12,804. Do you think that the establishment of a Land Court would induce them to improve by securing them compensation?—I think so.

Mr. T. Worthington.
15 Mar. 1894.

laughter f foreign attle.

he Federaon of enant armers' ssociations

eases and rxity of enure.

LandCourts.

Reduction of rent.

12,805. To pass to another subject, has your Association discussed the slaughter of foreign animals at the ports, and expressed any opinion with regard to it?—They are in favour of slaughter at the port of landing.

12,806. Has tuberculosis been prevalent in your neighbourhood?—Not largely.

12,807. Has it not been the subject of discussion?—It has not come to what we might call an epidemic; there is no doubt there have been odd instances, but the supervision of the local authorities is very keen.

12,808. Are you, may I ask, the secretary of the Tenant Farmers' Association that Mr. Smith belongs to?—I am not the general secretary. I am only the Secretary of the Wigan Association.

12,809. I think Mr. Smith led us to believe that you would give us some information as to the number of members?—I could not tell you that. I am not the general secretary.

12,810. Who is the general secretary?—Mr. Dutton, of Chester. The membership is growing.

12,811. But you do not know the number of members?—I could not say.

12,812. Do you know the condition of membership?—The condition of membership in all cases is subscription and being a *bonâ fide* tenant farmer.

12,813. (*Mr. Dalton.*) Is not the fact that the tenants are not willing to take leases in your neighbourhood rather an indication that they do not desire fixity of tenure?—No, it is not an indication in that direction. A man takes a lease, we will say, for 10 years now; he does not know how he is going to work between now and the end of 10 years because there has been such a change in agriculture. He would rather take the thing as it comes now.

12,814. He takes it now from year to year?—He does.

12,815. If you had this Land Tenure Bill, would he not be compelled to take it for five years?—He would.

12,816. That would be a species of lease?—It would be.

12,817. Do you think he would wish to do that?—I do not think he would object. It would only be a short lease.

12,818. But there are no short leases at present?—There are no short leases. I do not suppose any landlord would grant a five years' lease; he would hardly get his course through in the time.

12,819. What is the precise position that a tenant would take who came in under the Land Tenure Bill; would he be compelled to remain in for five years when the rent was fixed?—He would be compelled if he could afford to; if things went so adverse to him that he went bankrupt that of course would end him.

12,820. I mean if he was solvent?—If he was solvent he would have to stop in or find somebody else.

12,821. For five years?—For five years.

12,822. At the end of that time, he might remain on from year to year?—At the end of the 5 years he would have to have his rent fixed again I should say.

12,823. For another 5 years?—For another 5 years, unless the landlord and he agreed. I take it, to begin with, that nobody is compelled to go to the Land Court, that, if my landlord and I agree for 5 years, we can simply take our consent, like we can take a consent to a prognient and we can have the consent entered in the court without any hearing whatever.

12,824. (*Viscount Cobham.*) It has to be registered?—Yes, I think that would be so. We should discuss this matter ourselves first to see if we could settle. If we could settle, we should come to terms and we could go and register our terms in the land court just as though we had made a consent to a judgment after being sued; and that should be a binding process, as if we had gone before two assessors. My own opinion is that the fact of there being a Land Court, would do away with nine-tenths of the appeals, and that people would come to terms knowing that if they do not, there would be something to compel them to come to terms. I believe that most landlords would meet their tenants.

12,825. (*Mr. Dalton.*) Do you consider your own rent is too high at the present time?—No.

12,826. Has it been raised at all in consequence of the great improvements that you have carried out?—No; I took mine at a big reduction.

12,827. And it has remained at that reduction?—Yes.

12,828. I think you say that some farms in the neighbourhood have lately been let at considerable reductions?—On some estates.

12,829. Can you say to what extent those reductions have been made?—25 per cent.

Value of land.

12,830. Have any sales of farms taken place in your neighbourhood?—There have been a few sales of freehold farms.

12,831. Has the price gone down?—The price has gone down.

12,832. To what extent?—I believe the last lot of farms that were sold formerly used to command about 100*l.* per statute acre, and I believe when they were sold they went down to 60*l.* If I might interpolate here, as a proof of what I said with regard to the effect of security of tenure on farming I might say that this was on Sir Thomas Hesketh's estate. He disposed of some out-lying farms, or rather he consolidated his estate and some of the farmers bought their own holdings. I have seen those farms. The expenditure in lime and other manures, has been very extensive, and most of those farmers have told me that they have been fully recouped for the high class farming into which they have gone, knowing that it is their own farm. That is rather out of the Wigan Union; it really adjoins the Ormskirk and Preston Unions, but I can speak personally to that.

12,833. (*Viscount Cobham.*) Would many farmers buy if they had an opportunity?—Most farmers could not afford it just now. Where a farmer can afford it or where he can make arrangements to borrow money to add to the money he has, he has been disposed to buy and is desirous of buying. I have assisted in one or two instances in the purchase of farms, and I do not hesitate to say that the difference to anybody who has seen the farm before the purchase and say two or three years after the purchase, is apparent.

12,834. By the same man?—By the same man.

Rates.

12,835. (*Mr. Dalton.*) Can you give me what the total rate in the pound paid on your farm is in the borough and in the Local Board District?—Yes.

12,836. Paid on the land I mean after allowing for the one-fourth?—The land rate would be for district purposes 10*d.* in the £.

12,837. That would not be the total rates would it?—No, the poor rate of course is paid in full, 2*s.* 1*d.*

12,838. 2*s.* 1*d.* poor rate?—Yes, that is rather heavy. Then in the country in the outside township the district rate would be 8*d.* in the £. on the land and 2*s.* 8*d.* on the building of course.

12,839. And the poor rate the same, 2*s.* 1*d.*?—The poor rate would be 1*s.* 6*d.*

12,840. Then it comes to 2*s.* 2*d.* in the Local Board district and 2*s.* 11*d.* in the borough part?—Yes.

12,841. Do you think that is too high a rate to pay for a farm in such a near neighbourhood to the borough?—I think this, that the expenditure is often incurred for many things that the farmer gets no advantage from.

12,842. On the other hand he gets the advantage of the market?—Yes.

12,843. And has not the market been provided from the same rates?—No, not from the borough rates.

12,844. What from?—Really the market has been provided without the rates because the tolls are so high that the Corporation make a profit of 3,000*l.* a year out of it.

12,845. After paying ——?—Interest on capital and everything.

12,846. For the capital cost?—Yes, they contributed to the district rate last year 1,800*l.* after providing for sinking fund and everything else. It is one of the most successful markets in England.

12,847. What alteration do you recommend in the law relating to rates?—I should say that agricultural land should be rated in proportion to its production. I, we will say, pay 135*l.* a year, and if I produce 1,500*l.* worth of produce that would be paying my assessment of 135*l.*; but a person takes a shop, and he turns perhaps as much over in a week as I turn over in a year, and yet I have to pay the same as he. I think the assessment should be more upon the annual production of the soil than upon the annual rent of the soil.

Mr. T. Worthington. 15 Mar. 1894.

12,848. Do you think it would be fair that the poor rate on the land should be reduced proportionately the same as the sanitary rate?—My opinion of adjustment is that the proportion between house property and other property outside land and land should be more in favour of the land.

12,849. In the same way that your sanitary rate is?—That is so.

12,850. You would not propose to alter the law of assessment?—I do not think I should.

12,851. But to charge a lower rate to the land?—I would create a greater disparity between the one and the other.

12,852. In the same way as you have got a precedent in the sanitary rate?—Just so.

12,853. (*Mr. Lambert.*) Could you give us the proportion of arable land in the union which you represent?—I could not exactly; it would be mere guess work.

12,854. Give us a rough estimate of arable and pasture?—As between arable and pasture I should say about half.

12,855. In this recent depression upon whom has the burden fallen most heavily, upon the landlord or the tenant?—The tenant.

Reduction of rent and value of produce.

12,856. When did the reduction of rent begin?—About 18 months ago with us.

12,857. When did the reduction in the value of produce begin?—About four or five years ago. As I say four years ago I was buying hay at from 2*l.* to 50*s.* a ton delivered.

12,858. What is the proportionate depreciation in the value of produce as compared with five years ago? Give us a general estimate?—I should say 30 per cent.

12,859. How much do you say rents have been abated?—Rents have been temporarily abated upon three estates, in some instances five, in some seven and a half, and in some ten per cent. but that has not been general, nor have all the tenants of those estates received abatements. On another estate, the Wrightington estate, there has been practically a general permanent reduction equal to 25 per cent. If that could be made legal that would be a good thing but unfortunately the landlord is a very old man, he has no family, and even the tenants there, though they have got a permanent reduction, do not know what may happen to them any year because there may be another man come on who does not know Joseph and very likely will not.

12,860. So the price of produce has gone down 30 per cent. whereas rents have depreciated from about five to ten per cent. on an average?—Yes, ten per cent. is the highest except on this particular estate, the Wrightington.

12,861. (*Captain Owen Thomas.*) How far back do you compare the prices when you say they have been lowered 30 per cent.?—This last six years.

12,862. Does that apply to corn, or grain, or cattle?—Cattle as far as fat stock are concerned have been going down for some considerable time. I would not speak to corn because I was not a corn grower six years ago, but potatoes and turnips, and hay and straw (except this last year, when we have had a very good year for hay) have largely depreciated.

12,863. (*Viscount Cobham.*) Do you say that on the produce raised in your district there has been an average fall, taking the whole together, of 30 per cent.?—I do.

12,864. After taking into consideration the rise in the hay and the straw?—Yes; this is the first year that there has been the rise at all.

12,865. That includes very little wheat, does it?—We are practically going out of wheat growing altogether.

12,866. (*Mr. Lambert.*) I understood you to say just now that landlords, owing to heavy charges on the farms, were not in a position to give a reduction of rent?—I believe that is so.

12,867. So even though they would, these heavy charges militate against a reduction?—If they would they could not, and I am not sure that some of them would if they could.

12,868. But some, perhaps would, if they could?—I believe that may be so.

12,869. The restrictions are not adhered to, although in some cases they are stipulated, and would be rather detrimental to the tenants' interest?—I think so.

Mr. T. Worthington. 15 Mar. 1894.

Restrictions in agreements.

12,870. But although these restrictions are not adhered to, they may be adhered to at the option of the landlord?—At any moment.

12,871. You hold your own farm upon a yearly tenancy?—I do.

12,872. Are you liable to be turned out at the end of a year?—At the end of the year.

12,873. (*Sir Nigel Kingscote.*) With 12 months' notice, of course?—Yes, at the end of any year.

The Agricultural Holdings Act.

12,874. (*Mr. Lambert.*) Then I presume you would not be able to claim compensation for the improvements you have executed upon your estate?—Except under the Agricultural Holdings Act.

Compensation

12,875. What do you think would be the result were you to claim for those?—The result would possibly be that I should have a bigger claim against me.

12,876. How much do you consider that you have improved that farm?—I say at that farm I have been spending 100*l.* a year for these last three years.

12,877. (*Chairman.*) What on?—Lime and manures. I have consumed all my own produce, and I have spent 300*l.* a year in provender, besides the manures I purchased.

Drainage.

12,878. (*Mr. Lambert.*) Do you think if the tenants were paid for draining the land at the end of the tenancy they would perform the drainage themselves?—That would a great deal depend upon what they were going to be paid for at the end of the tenancy.

12,879. The increased letting value of the holding?—Yes, I do not think many of them would object.

Labour.

12,880. The price of the labour, you say, is 21*s.* a week. Do you find that men who are paid those wages have a tendency to gravitate towards the towns or to other employments?—They are practically mostly in the town.

12,881. They are?—Yes; they come out of the town to their work.

Land Courts.

12,882. I understand you would constitute your Land Court of an official valuer, who would be a legal gentleman?—Yes.

12,883. And two practical men?—Yes.

The fixing of rent.

12,884. By whom would they be paid?—I should have them paid out of the Consolidated Fund, I think, like the judges, and let the fees go to the reduction of the amount. That would be my method. Just as you pay assessors for nautical business. You have a judge to assess in Admiralty cases, but you have two captains or two nautical assessors, and they are paid, I believe, out of the Consolidated Fund, but the legal fees are paid into the Consolidated Fund. I think that would be fair with regard to farming.

12,885. When a tenant went into a farm you would at once bring this Land Court into operation, or allow the tenant and the landlord at their mutual option to fix the rent?—I should have the state of the farm, when the tenant went on properly, described and recorded in the Land Court. With the conditions of the tenancy the landlord and the tenant could agree, but let them be recorded, and there must be a recognised basis from which the improvements could be calculated.

12,886. I want to know how the rent would be fixed in the first five years?—The rent would be fixed by mutual arrangement between the landlord and the tenant, but the condition of the farm must be ascertained and recorded.

12,887. (*Chairman.*) Then the Land Court is not to be called in only after the first five years; is that so?—If I was taking a farm from the landlord, we should agree about the rent, and then having agreed about the rent, we should have the rent recorded. We should also have the state and value of the farm recorded in the Land Court as the basis for calculation of either depreciation or appreciation at the end of each five years.

12,888. (*Mr. Lambert.*) At the end of the five years, if the rent were fixed by the Land Court, upon the application of either the landlord or the tenant, presuming the tenant did not agree to that valuation and refused to pay it, what would be the result?—That he did not agree?

Mr. T. Worthington.

5 Mar. 1894.

12,889. Yes, if he refused to pay it?—He could leave the farm.

12,890. Then presuming that the landlord did not agree to take the valuation of the Land Court, what would be his remedy?—He would have no remedy; he would have to agree. The thing would be settled as a fair thing as between man and man. The other man goes on, but if he does not agree to what the Court believes to be fair, then he goes off.

12,891. Presuming that the landlord did not agree to the rent of the Land Court, would you allow him to determine the tenancy by charging compensation to the tenant?—No, certainly not.

12,892. I meant compensation for disturbance?—No, I would not have the man disturbed.

Free sale of improvements.

12,893. You advocate the free sale of improvements?—Yes.

12,894. Would the valuation of the Land Court be equivalent to that?—Yes.

Wigan market.

12,895. Going to another subject altogether, you pay something like 3,000*l.* a year in tolls to the Wigan Market?—More than that. After providing for the sinking fund of the market they generally have about 2,000*l.* a year to spare for the rates.

12,896. So that is somewhat of a tax upon the agriculturists of the community?—It is.

12,897. You have no complaint as regards railway rates, I presume?—There is very little produce sent; we consume practically all our own, and a bit beside.

Particulars of witness's farm.

12,898. What are the commodities that you mostly cultivate?—I cultivate general produce in the shape of oats, turnips, and potatoes, and I grow my own hay. There are other farmers further out who have orchards and who also cultivate cabbages and general vegetables.

12,899. Do you keep any cows?—Yes, I keep 25.

12,900. Then you depend a good deal upon dairy produce?—I depend upon selling all my milk; mine is milk.

The marking of foreign meat.

12,901. In your evidence just now you said that some butchers' shops sold only foreign meat?—That is so.

12,902. And that they had a larger sale than those who sold home-grown meat?—Yes.

12,903. For what reason is that; is that because the foreign meat is superior?—It is cheaper.

12,904. It is cheaper?—It is cheaper a bit.

12,905. According to that, presuming that all foreign meat were sold as such, and sold cheaper, then foreign meat would have a greater sale than even home-grown meat?—I think the home-grown meat would hold its own in many localities. The working classes are not very particular whether they get home-grown meat or whether they get foreign meat if they get it at a price, but there are a large number of people who would be quite prepared to pay even a differential price in favour of home-grown meat if they knew that they could always get it.

12,906. (*Viscount Cobham.*) Of the best quality?—Yes, or even what I should call of a middle class quality. I do know butchers who kill say a beast or two of their own and then buy three or four from Birkenhead and then call it all English meat. That is to the detriment of our trade and to the detriment of the purchaser.

Arrears of rent.

12,907. (*Mr. Lambert.*) Do you know many farms that are in arrears?—Yes, I do.

12,908. What do arrears mean?—Arrears mean that they are half a year behind in rent.

12,909. I know, but is it through paying or agreeing to pay too much rent that they are in arrears?—It is because the rent has been too much. The rent might not have been too much say in 1874 or 1875, because then, taking butter for instance, it was 2*s.* a lb., but to-day it is 1*s.* 4*d.* or 1*s.* 5*d.*; it is because their rates and their expenses have been gradually going up.

12,910. And the rents have not been reduced quickly enough?—There has been nothing done at all practically in the shape of reducing the rent until these last 18 months.

Improvements.

12,911. (*Mr. Channing.*) What is your idea as to making what you would call first-class improvements? Do you contemplate their being made by the tenant or by the landlord?—So far as I am concerned it would not matter which if the security was given to the tenant.

Mr. T. Worthington.

15 Mar. 1894.

12,912. Would you give the tenant the right of enforcing the carrying out of improvements if they added to the agricultural value of the holding?—I should say that in the case of the tenant requiring some first class improvements and the landlord disputing either the necessity of the improvement or its great cost, that it should be a matter to be referred to the Land Court.

12,913. Then you think that the tenant should have the right to say what the equipment of his farm should be and to have that question referred to the Land Court if necessary?—He should have the right to make the demand.

Drainage.

12,914. You said about drainage that that ought to be an essential part of the farm?—I think so.

12,915. Would you extend that remark to any other improvements?—Not to all other improvements.

12,916. You said that no interest ought to be paid, I think, on drainage?—Not on that.

12,917. Because it is an essential part?—I think that that is essentially a landlord's provision. The remark I made was that I was as much entitled to have the water taken from under my feet on the farm as to have the water kept off my head in the house.

12,918. You would not extend that remark to any of the buildings, for instance to equipment for dairy work or things of that kind?—The necessary buildings for carrying on the farm I think the landlord ought to provide.

12,919. But you would allow some consideration for them in the rent I suppose?—Certainly.

12,920. But not for drainage?—Not for drainage.

Free sale of improvements.

12,921. Then as to free sale, would you regard that as the best practical measure of what the compensation for the improvements should be?—I think so.

12,922. In your theory of what would happen supposing you parted with your own farm you would claim as I understand the full value of your improvements?—Some of those improvements of course manurially will exhaust themselves. I should say that a person taking my farm would say "Now your rent is "so much; I can see that if the farm had to be taken to-"day it is worth so much more, so I will pay you, taking "your farm at its present rent, what I consider or what "we agree is the improved value."

12,923. That is just it; do you not consider that the tenant is entitled to the total value he has added to the farm?—I do.

12,924. The increased fertility of the farm?—I do.

12,925. In addition to a mere proportion for a year or two of the outlay on manures, cake, and so on?—I do.

12,926. Then supposing your successor pays you that full value, how is his rent to be fixed?—His rent would be my rent to begin with.

12,927. Is the rent to be increased on your rent?—It would be continuous. My permanent rent would be his rent. If he kept the farm up to its present fertility he would then be able to ask for the same consideration when he left.

12,928. You would make it impossible for the landlord to raise the rent?—Decidedly; if he did he would be raising it upon my improvements and upon the other man's purchase.

12,929. And so the incoming tenant would have to pay the landlord for your improvements as well as paying yourself?—Decidedly, as well as buying them.

Fair rent.

12,930. I understood your definition of a fair rent to be this, the balance of the gross produce of the farm after the outlay and after a reasonable profit had been paid to the farmer; is that it?—That is as near as I can get to a fair definition. I recognise a very great difficulty in what you would call a fair rent.

12,931. How would you fix the profit of the farmer; would you make that a fixed amount from year to year?—The profit, in my opinion, would have to be arrived at from the books kept by the farmer.

12,932. I understood you to mean that the rent was the balance left after the outlay had been accounted for, and also after the profit for the farmer, and I am asking you whether that profit is to be fixed from year to year, or is to vary from year to year?—I think

Mr. T Worthington. 15 Mar. 1894.

that the farmer having lived on the farm, the rent should come in before a set aside profit was put down.

12,933. That is the rent should be a fixed quantity?—Yes.

12,934. That is just what I wanted to clear up; your answer gave me the other impression?—No, certainly not, I did not intend that.

Fixity of tenure.

12,935. Your position is this: that if you had security of tenure, farmers could still make a living, I understood you to say?—Yes, I think so.

12,936. That would be by high farming?—That is so.

12,937. By really high farming?—And more scientific farming.

12,938. Do you think there are many men who are ready to carry that out?—I think there are many who would carry out a higher class of farming even with their present knowledge.

12,939. They would put money into their farms?—That is so, and labour.

12,940. A great many farmers have at the present time, as you know, a very small capital, that is too small a capital to undertake high farming, how would you make a bridge for them to get to the position of high farming?—I do not propose a bridge for those men. I do not see how I could make a bridge for those men.

12,941. A man may be a good farmer and yet his capital may have been whittled down by having to pay too high rents, may it not?—That may be, but I do not see how you can give that man capital.

12,942. What is your remedy for farmers in that position; there are a great number of farmers in that position; would you make them give up their holdings and take smaller holdings?—I think smaller holdings would be better for them.

Credit to farmers.

12,943. Are you prepared to give any evidence or to express any opinion as to the credit that farmers can obtain now, that is loans for their purposes; do many of them have recourse to money lenders at high interest, do you think?—I do not think that many in our neighbourhood do. Money lenders are rather held in low repute, but the provender dealers and implement dealers give rather long credits.

12,944. That leads to a certain control of the farmer by the dealer, does it not?—That is so.

12,945. He is able to dictate what sort of implements and what sort of manures the farmer buys?—Yes, that is so.

12,946. And perhaps the farmer does not do so well on that account?—The farmer does not buy so many artificial manures. A great many farmers do not know the nature of them.

12,947. They ought to?—That is exactly why I go in for education, that they should know what they are dealing with.

12,948. (*Captain Owen Thomas.*) How long have you occupied this farm?—10 years.

12,949. How long have you been engaged in farming?—One way and another 15 years.

12,950. In your notes of evidence I see you say: "In 1874 the average number of sales of farms by "auction was not more than 78, while the average for "1891-93 would be nearly 200"?—Yes.

12,951. I think in answer to Mr. Dalton you said that only very few sales had taken place during the last two or three years?—I said a great many sales.

12,952. I misunderstood you, do you mean in the Union?—Purely in the Union.

12,953. In the Union of Wigan?—Yes.

Sales of farms.

12,954. How do you account for the large increase in these sales during the last two or three years?—A great many people have found that their farming was unprofitable and rather than go on until they had nothing, have cleared out with what bit they had; others have gone on and have been compelled to sell in order to discharge their liabilities, and many of them have not covered their liabilities even when they have cleared off.

12,955. Were any farms sold?—There have been some farms sold in the neighbourhood of Wigan, say within seven or eight miles.

12,956. Did any of these belong to large landowners?—None, except in the case of Sir Thomas Hesketh, who was consolidating his estates. He reclaimed, I believe it was, about 1,200 acres of land on the marsh, drained it and turned it into cultivable land and sold what I should call his outside farms in the outlying districts so as to make his estate more compact.

Mr. T. Worthington. 15 Mar. 1894.

12,957. How did he treat his tenants when these farms were sold? Had the tenants any claim for compensation?—Not except under the Agricultural Holdings Act. I might say that the sales were rather put upon a good basis. They had three or four years to pay for them and they had free conveyance. Sir Thomas was rather liberal in his arrangements at the sale.

Field valuations.

12,958. (*Mr. Everett.*) With regard to the field valuations when farms are entered, you do not see any practical difficulties in the way of a written description of the condition of each field at entry to be kept for comparison when the tenant goes out?—There may be some little difficulty in doing that but I believe it could be overcome.

12,959. And on the whole you think it would be a good plan?—I think so.

Wigan market.

12,960. (*Mr. Elton.*) In reference to Wigan market I recollect that the Market Commission was very much against the Corporations making such a large profit as you have mentioned there, and recommended that steps should be taken for doing away with the tolls altogether?—I believe that was so.

12,961.—Of course no legislation has been proposed yet on that?—Not on that.

12,962. Would you be in favour of legislation on that line?—I should be in favour of legislation limiting the profit of the market and simply letting the tolls cover the cost.

12,963. That is practically what the recommendation of the Commission came to?—Yes, that is what I understood the Markets Commission to recommend.

12,964. Practically to abolish markets except as far as paying the necessary expenses already incurred or necessarily to be incurred?—That is so. As I said before ours is rather an exceptional market in the country. I do not suppose our tolls are higher, and I believe in many cases they are actually lower than the tolls in many markets that do not pay. But the attendance now has got to such a pitch, the contributary elements from all around have assumed now such proportions that the market is a very valuable property.

12,965. That is an exceptional tax of 2,000*l.* a year which comes out of the farmer?—Yes, that is so; it comes really out of the farmer.

12,966. Yet, notwithstanding this toll, you say the farmers sell to the consumer direct?—The market farmer puts his produce on the market and the shopkeeper comes to the market. There is no middle profit.

12,967. You do not take it to the shop door?—You do afterwards.

12,968. But you have paid the toll?—You have paid the toll. As a rule you put your horse up and pay the toll; the man goes there, he buys, and away you go with him. Perhaps you would allow me to say in addition to that that the farmer is bound to sell, say, a large proportion of his produce in smaller quantities than loads; in that case he sells direct to the consumer and never comes near the shopkeeper at all. In Wigan that is becoming now a very large business, so that the farmer really does the retail on the market up till 11 o'clock in the forenoon.

12,969. Are the shopkeepers prevented from competing with the market stalls; have they to take a license out, or anything of that sort?—No, they can go onto the market and buy, but they must not sell again except by paying toll again.

12,970. But those that have shops may sell all sorts of produce without paying for a license to the market trustees?—That is so.

12,971. You know that in some towns they have to pay for liberty of trade?—Yes, that is so.

Technical instruction.

12,972. You were telling us something about the knowledge of these people, the labourers, for instance. Do you not think that a labourer, though no doubt he cannot as a rule explain the scientific terms that you mentioned, knows a good deal about the soil and has sometimes a very minute knowledge?—I believe some of them have a very large and keen observation.

12,973. So much so that they would know the different corners of fields, and the lands on different sites

Mr. T. Worthington. 15 Mar. 1894.

very well?—They would be able even in one field where the soils differed to give you a fair description of the different soils without being able to account for it or to adjust it to a particular crop.

12,974. That about the particular crop is more important, but the mere names, what names they call it, is a matter of indifference, I suppose?—Yes.

12,975. The farmers you think are very ignorant?—I think they are behind time. I would not like to describe them as ignorant, but I think they are behind their business.

12,976. I understand that, but not very exceptionally so?—I think they are behind their business as compared with almost any other business we have in the kingdom, but that I do not consider their fault; their opportunities have been few.

12,977. You do not think that they would suddenly meet a difficulty by a clever device?—I do not think they would.

12,978. Like a catch crop or something of that sort?—I do not think they would generally. My experience of them is that if they fail in an early crop then they fail for that year.

12,979. They do not have a catch crop?—They have not catch crops very often and they do not know which way to look for a remedy for the failure they have undergone.

12,980. I recollect reading in an agricultural journal of a particular farmer who was taking the trap rock, I do not know whether you have got trap rock, but it was at any rate a rock with considerable manurial value, from one field where it was a foot thick, and was spreading it an inch thick over a corresponding quantity of land. Being asked why he did it, it appeared that he did not know the name of the rock but that he knew it would improve the ground. That would show more than an average knowledge of scientific farming, would it not?—Yes.

12,981. More than you would credit as a rule?—It would show keen observation, that he knew the value of it; that where it was a foot thick he knew there was too much of it, and so he put it where it was not.

12,982. In the same way you will find farmers extremely intelligent in the use of, perhaps you have not got them in your part, phosphatic marls, and phosphatic bands or chalks?—We have no marls or chalks in our neighbourhood.

12,983. What you describe as the school is rather like the Agricultural College at Cirencester, is it not? Is that the sort of thing you mean, where young men go and learn partly practically and partly theoretically?—If you assume that it was a sort of college I am afraid you would drive most farmers to think it was only for what they call the upper class. If you call it a farm school, or a farm with a school attached, where they would have to use a spade and where they would have to follow a plough, and where they would have to milk a cow in the morning and clean a horse, then they would understand something about it.

12,984. You will excuse me for mentioning it, but I thought the young farmer you were contemplating could go to almost any place, because the Consolidated Fund is to provide the capital to compensate his father in his absence?—I said the County Council might do that and that he should be partially compensated for his absence.

12,985. I was not saying anything against it. I mean to say that that is the sort of institution?—I do not know exactly how the affairs at Cirencester and Aspatria are carried on; what I can imagine is a real farm where the actual work is done by the people who are endeavouring to learn, coupled with their oral knowledge given in the laboratory.

12,986. Do you think the Board of Agriculture could do a good deal more in the way of instruction after the manner that the Agricultural Department in America does?—I think so.

12,987. By sending out special information for farmers?—I think as the farmers are now asked to give their censuses in June, or up to August, the Board of Agriculture might also communicate with the farmers any facts ascertained, and any methods that have been devised for the benefit of those. No doubt there would be some of them of service.

12,988. Therefore they should do so?—I think so; at present I do not think the Board of Agriculture have done much for us.

12,989. A good deal of the experimental information which has been given in the country, I understand you to regard as a kind of circus business, you said, I think, that it was rather more fit for youths and children than for practical purposes?—It is only dairying, and in the shape of butter-making.

Mr. T. Worthington 15 Mar. 1894.

12,990. I know; I have seen the thing as well as you?—I do not consider that it has done a great deal of good.

12,991. It is an experiment that might have been done better?—I think so.

12,992. About the buildings; I think Mr. Smith's Bill contemplated that the farms should be equipped, and then that the buildings should be kept up by the tenant after that time; he told me so, in fact?—Ordinary wear and tear, such as weather work, should be exempt.

Land Tenure Bill Buildings.

12,993. I think he said he would let the landlord off during the building if he was practically expropriated, and that the tenant, I will put it in my own language, the tenant having become a kind of owner, would look after his own buildings?—He would keep them in repair, in the shape of painting and that sort of thing.

12,994. Supposing he wanted new ones; supposing he wanted extra buildings to those already provided?—He would have, first of all, to make his demand to the landlord, and then, if that was refused, he would apply to the court.

12,995. Take it out of the rent?—I should ask the landlord to provide it, and let it be assessed to the rent.

12,996. Take it out of the rent?—I would add it to the rent if it was a necessary building that was valuable to the tenant.

12,997. About the drainage, I understood one part of your answer very well, I think, that the landlord when he lets a drained farm ought to let it properly drained and properly equipped?—That is so.

Drainage.

12,998. And that it is no excuse to say there were drains which have now broken down and caved in, or that they are so old-fashioned that they will not work?—Yes, that is so.

12,999. But then of course your answer might have been taken to go rather further than that, that he is to come in and make speculative drainage improvements every now and then, whenever he thinks he can get rid of a little water?—I do not understand speculative drainage. If water is there, draining is such a matter of fact business that it can be done, and the water drained away.

13,000. I could tell you of plenty of cases; for instance, a flat piece of land, where it is rather doubtful how to get the water away, and you dig pits hoping that the water will run from the soil; there are special ways of draining, and even they may not succeed; it is very difficult sometimes to drain a flat district?—It is very difficult.

13,001. You would not require the landlord to come and try his best, and to keep on draining?—I should require the land to be handed over to the tenant in a tillable condition.

13,002. That I understand to be in its former condition, in a reasonable condition?—In a reasonable condition, capable of being tilled.

13,003. As warranted?—Warranted.

13,004. As what it pretends to be?—Yes, decidedly.

13,005. And that he has got to come in and keep it improved, according to the latest theories?—If the drains exhausted themselves, then I should say it is his business to replace them.

13,006. That is quite reasonable; I understand that. Suppose a person took a bit of that marshy land you spoke of, Sir Thomas Hesketh's land, of course you would not say that that contract to take a bit of marshy land *qua* marsh involved the duty on the part of Sir Thomas Hesketh to come and take it, and make it valuable dry land?—That is, I believe, one of the most exceptional takes that a man would ever go into. The whole thing is practically one of development from marshy land to agricultural land.

13,007. To save time I took that extreme sample, because it carries the whole argument, of course. I could lead you step, by step, up to that example. I understand it would be reasonable, in your view, that

Mr. T. Worthington.
15 Mar. 1894.

a man, when he lets a tillable farm, presumed to be drained, should see that the drains were in good order?—That is so.

13,008. And that you do not press on that point about the landlord finding out what further improvement could be made from time to time?—I do not.

13,009. You appear to have rather an exceptional holding, because you have practically got the whole to do what you like with, when you have once taken it?—I have.

13,010. You took it as you might have taken a house?—Practically everything is ruled out after the rent is paid to the end of the term.

13,011. Would you like to see other people like that?—I would like to see my neighbours on as good a footing as I am.

Right of landowners to inspect property.

13,012. Of course it is a very exceptional one at present. You rather regarded the landlord, I thought, except he came on specified business, as an intruder in the land he let for agricultural purposes?—I should never look upon my landlord as an intruder when going over my farm in any way.

13,013. I do not mean going over the buildings?—No, but looking about, walking about.

13,014. Walking about picking brambleberries and blackberries?—He can do just what he likes in that respect; if he has nothing better to do he can do that.

Transference of ownership.

13,015. You understand what I mean, there is such a thing as letting for agricultural purposes with various licences reserved, fragments of ownership reserved?—Yes.

13,016. But there are lettings, like house lettings, which practically transfer the ownership for a time?—Yes.

13,017. I do not want to press anything about the Bill, but do you think that when the landlord had been put upon this new kind of terms, and he is only to have the chance of the tenancy being continued at the same rent every five years, that really the subject of the rent charge, the freehold, will have passed practically to the tenant?—To a certain extent it would.

13,018. So that you think a little profit might still be made out of the land by giving what is practically the freehold to the agriculturalist?—That is really fixity of tenure. I do not think a profit could be made. I believe there are men to-day in our neighbourhood who are making a profit out of land, out of farming.

13,019. And of course you can improve their position by practically transferring the ownership, less this variable rent charge, from the landlord to them?—Yes, that is as good a definition as I can have.

13,020. When I said freehold, I did not mean to be very technical, but I meant the beneficial ownership?—Just so; I understood the question.

13,021. If I had wanted to be very technical I should have said you were trying to create a new kind of copyhold, but perhaps you would not agree with me?—I understood the limit of the term freehold as expressed.

Profits from farming.

13,022. (*Chairman.*) You say that there are men who make a profit in your district?—I believe so.

13,023. Are you one of them?—Yes.

13,024. You are?—Yes.

13,025. Has it been by carrying on their farms in a particular manner, or by greater industry?—It has been by what I call high farming, and by special scientific feeding of cattle.

13,026. But other cases than your own; have they had the same facilities that you have had of doing what you like with the land?—Many of them have not the same facilities that I have; there are others who own their own farms who, I believe, make them pay to-day, and who are practically banking their money.

13,027. Has it generally been by dairy farming?—It is mixed.

13,028. Portions of the land arable?—Yes.

13,029. In spite of the low prices they have been able to make a profit?—That is so at present.

13,030. Do you think the number of those who make profits might be considerably increased if farmers were sufficiently instructed?—I certainly do. If I could go out of my own district, I could mention a farm where the accounts are actually published—that is in connexion with the Imbecile Institution at Lancaster. I have been up there. No person who knows anything about agriculture can pass by the farm attached to that institution without being struck with the great difference of farming. The gentleman, who is in charge of that farm, publishes an account every year, I believe, and he has never failed to show a profit upon that farm.

Mr. T. Worthington.
15 Mar. 1894.

13,031. Is he a tenant?—It is the freehold of the Institution. He has full limit to farm as high as he can.

13,032. (*Mr. Everett.*) Does he charge anything for labour?—All the labour is charged.

13,033. (*Chairman.*) Is he the owner or the tenant?—He is simply the manager of the farm.

13,034. Could you get us his accounts?—I cannot; but I believe Mr. Smith would have no difficulty in obtaining a balance sheet from him.

13,035. (*Mr. Gilmour.*) Have you looked into his labour bill to see the rates at which labour is charged?—I have not; not critically.

13,036. The reason I ask is that most of our asylums and other places show a very large profit on the working of the farm, but the labour, which they get really almost for nothing, at a very low rate, enables them to bring out a very different result to that which they would otherwise have to bring out; but you do not know about that?—No, I do not know, but I believe that that question of labour has been very closely gone into.

The letting of farms.

13,037. (*Chairman.*) Is there any difficulty in finding tenants for farms in your district?—We have had in these last two years more farms to let than I have ever known in my district.

Reduction of rent.

13,038. Have they been let?—Many of them are now let at considerable reductions in rent.

13,039. What have the reductions been?—From 20 up to 25 per cent.

13,040. Are they larger reductions than have been conceded to tenants already in possession?—The highest reductions that I can find that have been made to sitting tenants, and those only temporary, are 10 per cent.

Land Courts; position of landlords and tenants.

13,041. Your proposal is that there should be freedom of contract between landlord and tenant on the first commencement of the tenancy?—That is so.

13,042. But that at the end of five years the rent should be subject to the revision of the court?—That is so.

13,043. In the interval of five years is the tenant to be allowed to give up his holding?—If he cares to, yes.

13,044. Is the landlord to be allowed to get rid of his tenant if he thinks him a bad one within that 5 years?—I should say that the landlord should not be allowed to get rid of him until the man had appealed to the court if the landlord wants to get rid of him in the five years.

13,045. I mean pending the five years; it is only at the end of the five years, I understand you, that the tenant is to be entitled to go into court?—Yes.

13,046. Before that five years has expired, is the landlord to be entitled to get rid of the tenant if he thinks him a bad one?—Not without going to the court.

13,047. Not without going to the court?—No.

13,048. I only want to understand what your proposal is. Does it mean this: that a landlord is not to be allowed to let his land, except upon the terms that the tenant is to be there if he likes for ever?—That is so.

13,049. But there is a freedom of contract for the first five years as to rent?—Yes.

13,050. But not as to the continuation of the tenancy?—Not as to the continuation.

Transference of ownership.

13,051. (*Mr. Chaplin.*) I think I understood you to say just now that the transfer of the freehold of the farm, in your opinion, would enable agriculture to be carried on at a profit?—I think that people would invest more in it and that it would become profitable.

13,052. Was that statement limited to your own district?—To my own district. I do not profess a knowledge of anything out of my own district.

The witness withdrew.

Mr. W. Dobson. 5 Mar. 1894.

Mr. William Dobson called and examined.

Mr. W. Dobson. 15 Mar. 1894.

13,053. (*Chairman.*) Are you a tenant farmer in Cumberland?—Yes.

13,054. I believe you are a representative of the Cumberland Farmers' Association and Chairman of the Technical Education Committee of the County Council of that county?—Yes.

13,055. Have you been asked to come here by the Cumberland Farmers' Association?—Yes, they wished that I should come.

13,056. On what subjects have they particularly asked you to give evidence?—They did not instruct me in anything specially.

Condition of agriculture.

13,057. What is the condition of agriculture in your district?—It is very much worse now than it was in the seventies.

13,058. On account of the low prices?—On account of the great fall in prices.

Reduction of rent.

13,059. Have rents been reduced?—Of course they are less than they were in the seventies.

13,060. How much have they been reduced?—Varying amounts. Those that were relet in the early seventies at rents based upon the high prices then have since fallen from what they were increased to then by 30 or 40 per cent.

13,061. They were increased in the early seventies and now they have been reduced again by 40 per cent.?—Yes.

13,062. How much were they increased in the early seventies?—The same.

13,063. Then the rent must have gone back to what they were before the prosperous times of the early seventies?—That is so.

13,064. They have not fallen below that?—No.

13,065. What is about the average present rent of land in your district?—I should think 1*l.* an acre for the tillage lands, but mine is not tillage.

13,066. And the pasturage land—grass farms?—Those that are good pasturage may be 30*s.* an acre.

13,067. Are all the farms occupied?—Yes, they are all occupied.

The letting of farms.

13,068. Was there any difficulty in finding tenants for them?—There is a certain difficulty now—more difficulty now than there was in the seventies.

13,069. When a farm falls vacant can the landlord find a tenant for it?—Yes, they are always let.

13,070. But there is not such keen competition?—No.

13,071. I suppose on that account rents have fallen again?—Yes.

Particulars of witness's farm.

13,072. What has been the effect of low prices in respect of wool? Has that been a serious item in your district?—Very serious. I ought to say that I have no tillage. It is all mountain—purely sheep farming.

13,073. (*Mr. Chaplin.*) That is not what you called pasturage just now?—No.

13,074. It is something quite distinct?—Yes.

13,075. (*Chairman.*) What is the rent of your farm?—The rent is 650*l.*

13,076. How many acres?—About 4,200.

13,077. How much of that is mountain land?—It is all mountain land.

13,078. All of it?—Yes, some of it is grouse moor and some of it mountain grass, but none of it is cultivable.

13,079. It is entirely a sheep farm then?—Entirely; I have a small proportion of cattle—cows.

Rent.

13,080. Has the rent then been decreased?—Yes, it has been decreased since the seventies.

13,081. How much was it then?—At one time it was 1,000*l.*

13,082. When was it reduced?—By several stages commencing about 1880.

13,083. When was the last reduction?—I think about 1884.

13,084. No reduction since then?—No.

13,085. Have there been abatements since then?—There have been some per-centage abatements given at times in special years.

13,086. Have you had the full benefit of the reduction of rent in your assessment?—Yes.

13,087. For poor rates?—Certainly when it is permanent, not when it is casual.

Rates.

13,088. What?—Not when it is a per-centage abatement.

13,089. How are the rates; are they about the same in the £?—No, they are increasing.

13,090. What do they increase in the £; how much?—Ordinarily about 2*s.* in the £ in a rural district, but in certain cases they are getting up to 2*s.* 6*d.* and as far as 3*s.*

13,091. What are your own?—This last year they were, I think, about 2*s.* 10*d.*

13,092. What were they in the seventies?—They would be about 2*s.* It is owing of course to the education rate having increased.

13,093. Is that the main cause?—That is the chief cause of that increase.

Price of wool.

13,094. Now will you come to the fall in the price of wool?—Yes. I have it in the form of a diagram, which I will put in, from 1860 to this year, showing the price in pence per pound each year of the two leading classes of wool that sheep farmers have, cheviot wool and black-faced wool. The same figures would apply of course to all the border counties in England and Scotland, and to mostly all the sheep farms in Scotland. The prices are those actual prices got by me and by relatives on a pretty large clip of wool. Commencing in 1860 with cheviot wool at 19*d.*, it varied as high as 2*s.* and as low as 14*d.* until 1876, the average over those years being 1*s.* 6½*d.*

13,095. (*Mr. Chaplin.*) That was up to 1876?—Yes. Then it began to fall, and since 1880 it has remained almost stationary at an average level of 9½*d.* Black-faced wool during the years from 1860 to 1876 averaged 11*d.* per lb.; during the last 13 years it has averaged 6*d.* per lb.

13,096. (*Mr. Clay.*) Was that washed wool?—Yes. I have some figures showing how it affects 1,000 sheep. The decrease in the price of cheviot wool betwixt these two ranges is 9*d.* per lb., from 18*d.* to 9*d.* That upon a 4 lbs. fleece makes 3*s.*, and of course per 1,000 sheep makes 150*l.* less. In the case of black-faced wool, which has fallen from 11½*d.* to 6*d.*, the loss of 5½*d.* upon a 4½ lbs. fleece makes 2*s.* less per fleece per year, or a loss of 100*l.* per 1,000 sheep. That is the direct loss from wool. That also affects the price of the sale of sheep. On purely sheep-breeding farms I assume the annual sale of lambs beyond those required for up keep to be 400 lambs per 1,000 stock. I take it that these lambs sell for 3*s.* less on account of the wool, which makes a depreciation of 60*l.* The draft, as we term it, of cast ewes would be 200 per 1,000 at 3*s.*, which affects their price 30*l.*; so that on a cheviot stock per 1,000 sheep I make a depreciation of 150*l.* directly from the wool, and 60*l.* and 30*l.* from lambs and ewes, or together 240*l.* In the case of black-faced sheep the direct loss of wool is 100*l.*, of lambs 40*l.*, and of ewes 20*l.*, making a total depreciation of 160*l.* per 1,000 on the black-faced sheep.

13,097. (*Chairman.*) Then, as I understand you, the low price of wool has not merely told upon the annual receipts from the flock, but also has told upon the capital value of the sheep—upon the price of the sheep? That would be in the case of a valuation on leaving the farm, but I have not reckoned that.

13,098. You have not reckoned that?—No; only the annual sales of wools, lambs, and ewes.

13,099. But the low price of wool has affected the price of the lambs?—Yes.

13,100. Then I presume any tenant coming into a farm would have rather an advantage in coming in at a low valuation by paying less for his stock?—There would be a lessened valuation because of the lessened value of the wool. I ought to say that the sheep farmer has no such remedy as is open to other classes of farming. His ground carries only sheep; we cannot substitute any other crop; we cannot lessen the production of the crop; we cannot, as in the case of food crops grown, convert wool into any other form of produce, and we are obliged to take the price.

Mr. W. Dobson. 15 Mar. 1894.

13,101. Then the only remedy you have is a reduction of rent, I presume?—Yes.

13,102. And the question is whether the rents have been reduced in proportion to the fall in the value of the wool?—I think they have very largely.

13,103. Very largely?—Yes, owing to these causes.

Prospects of the wool market.

13,104. Then in that case a tenant coming in at the present time and paying less value for his stock, and a reduced rent, and having a reduced assessment for the rates, is not so badly off, I suppose?—No; the ingoing would be very much easier now. The only gleam of hope for better prices for wool that I see might be the taking off the American duty on the large quantity of this class of wool previously sent to America.

13,105. That depends upon the American Government and not upon our Government?—Yes. I might, perhaps, mention another remedy, but not a nearly probable remedy, namely, the opening of large new markets.

13,106. In this country?—No.

13,107. Where do you mean?—The foreign market—it has been mentioned before in the North—I mean in China. It is said that China is largely a country with a cold climate, that the people there are very numerous, and that in cold weather they wear only silk and cotton, and frequently have on three, four, five, or six cloaks of silk. A suggestion has been made that if woollens, which are warmer, could be introduced there there would be a very large market in the 380 millions of Chinese.

13,108. Then there is a hope in that direction in the future?—Yes, which might be a help, perhaps, through the aid of the English consuls abroad.

Rates.

13,109. Now you have come here to speak upon the incidence of local taxation on tenants and yeomen?—Yes.

13,110. What have you to say on that?—I think that each person ought to contribute according to his ability to all local charges. When the measure of ability was arrived at in the age of Elizabeth, it was fixed at the annual rent, each person paid for the real property he occupied. That might be a fair basis in those days and also the easiest attainable, but now when new forms of wealth are housed in houses and premises of much smaller relative value it has become inequitable.

13,111. You think that persons ought to be charged with rates upon their property other than land and houses which they have in their possession?—No; I should say that if this measure be tested with a standard of either capital or income it would be found that agricultural land is rated at from four to six times more according to the ability of its occupier than the capital or income of people in other professions and classes. I take the capital necessarily employed on a farm to be somewhere about six rents; therefore tenant farmers are rated on one-sixth of their total capital yearly. Each penny of additional rate is to the farmer equal to a 2*d.* income tax; to other classes it means only a farthing or a halfpenny additional income tax. In the time of Elizabeth the rate levied was for the maintenance of the destitute poor and for county bridges, since then a large number of new rates have been added one by one, and they have all been imposed on this basis because it is the first subject that offers itself for this purpose and the most easily get-at-able. I point out that Parliament has already admitted the injustice of charging certain rates on the basis of rental in the case of agricultural land. In the lighting and watching rate of 1830 land was to be charged on, I think a fourth; in the Public Health Act of 1875 the general district rate in urban districts and the special expenses rate in rural districts is also charged on one-fourth the value of agricultural land, and in the case of free libraries and museums upon one-third.

13,112. Then, I understand you think that principle ought to be extended to some other rates?—I should extend it to I think, all rates now levied by county councils and by guardians and highway boards. I might read a list of rates here, and I do not recognise any of them as being of special benefit to agriculture more than to other classes except the cattle diseases rate:—Cattle diseases, poor, highway, education, police, asylums, industrial and reformatory schools, burial boards, weights and measures, food and drugs, coroners, registration, vaccination, jury lists, rivers pollution, fish, conservancy and damages from riot.

13,113. Then you think that all those rates should be levied upon the same principle as the rates you have just referred to?—Yes.

Mr. W. Dobson. 15 Mar. 1894.

13,114. Has your association considered at all the question of land courts for the determination of rents?—No, not for the question of rent.

Land Courts.

13,115. Are they not in favour of that?—Not with regard to the rent. Our association and also the Chamber of Agriculture of the county are in favour of some kind of judicial tribunal to settle differences.

13,116. But is that for the determination of compensation on the termination of a tenancy?—Yes.

13,117. Not for the purpose of determining the conditions of the tenancy?—No, for all questions betwixt landlord and tenant except rent.

13,118. Except rent?—Yes. We prefer Mr. Channing's Bill, and a judicial tribunal consisting of a legal president who would be paid by the State, something like a county court judge, and practical assessors paid by a fixed scale of fees.

13,119. For the determination of all questions under the Agricultural Holdings Act in fact?—Yes.

13,120. (*Viscount Cobham.*) If your suggestion were carried out as to the assessment of rates there would be a large deficiency to make up—how would you make that up?—Necessarily by an increase in the rate per pound, but levied on a fairer basis as betwixt different classes of the community.

Rates.

13,121. On other classes of property?—Yes.

13,122. Not by an extension of the system of subsidies and subventions?—No, I think not.

13,123. I think you have been through all the subjects in your proof? Is there any other subject that you wish to mention?—I would suggest the equal division of rates betwixt owners and occupiers as recommended by Mr. Goschen in 1870, and by the Richmond Commission.

13,124. Do you attach much importance to that?—Yes, I do.

13,125. It is the case in Scotland, is it not?—It is the case in Scotland.

13,126. Have you noticed any marked advantages derived in Scotland from that system as compared with England?—I have not been much in Scotland. It must tend to make both owner and occupier more sensitive to increase of rates.

13,127. You do not want to make any alteration in the system of local management and administration in consequence of the change that you advocate?—I do not see anything that would be required in consequence, there might be a representation of ownership.

Tithe.

13,128. Have you any other point to make?—Yes. The tithe is now largely paid by the landlord. In that case the amount of tithe charged upon a farm should be deducted from the rental in order to arrive at the "gross estimated rental" of the farm. That is too seldom done, I think it is not generally known, and I think it should have been explained more fully in the Circular which the Board of Agriculture issued on this subject some time ago.

13,129. It was explained, if I remember right?—I think not. At any rate not fully. As a member of the Rural Assessment Committee and also of the County Council Rating Committee, it has come to my knowledge that in scarcely any case does the farmer obtain a deduction of the amount of the tithe-charge upon his farm from the rental when ascertaining the "gross estimated rental," and that therefore the tithe is paid both by the receiver of the tithe and by the occupier of the farm out of which it issues. Then, as a stock rearing county, Cumberland would be interested in an extension of the Merchandise Marks Act or other effectual remedy to the sale of foreign produce and of adulterated produce. With regard to agricultural education I should say that we give scholarships to the agricultural college at Aspatria.

Merchandise Marks Act.

Technical instruction.

13,130. You are, as you have told us, chairman of the Technical Education Committee of the County Council?—Yes.

Dairying.

13,131. How is the money chiefly spent in the promotion of agricultural education?—We have had for three years a migratory dairy van which has been staying a fortnight in each village, and in which the pupils practice themselves with the appliances that we furnish them with.

Mr. W. Dobson. 15 Mar. 1894.

13,132. Has that been much appreciated?—It has been very well appreciated.

13,133. And by the classes for whom it was intended?—Farmers' daughters and farmers' sons attend as pupils.

13,134. And there is a continued demand for the dairy instruction?—Yes.

13,135. Is the money spent in any other direction?—It is spent in agricultural scholarships to the college at Aspatria, in the dairy van, in short courses of lectures by one of the permanent staff, and by scholarships to the Durham College of Science which has an agricultural department.

13,136. Have you heard of no expressions of dissatisfaction from the farmers about it?—Some of them do not attend it. They do not admit that they have anything to learn.

13,137. But you are satisfied that the money is now on the whole well spent, and that a good return is obtained from it?—We are anxious to concentrate the work into a permanent institution. We have had under consideration the taking of a fixed dairy school, and with that a farm.

13,138. An experimental farm, or a farm on which instruction could be given?—A small experimental farm formed in conjunction with a fixed dairy school, where cheese-making might be taught in addition to butter and cream cheese.

13,139. Is that likely to be carried out?—The Northumberland County Council are very anxious to join us in establishing one jointly. It has been recommended by Mr. Brooke-Hunt, the Board of Agriculture Inspector, and we shall be entertaining the matter this summer.

13,140. (*Mr. Elton.*) Is Cumberland a cheese-making county at present?—No, it is chiefly butter-making at present.

13,141. But you propose to start a new industry if possible?—We cannot very well teach cheese-making in a temporary school, staying a fortnight at each village. If we had a fixed farm we might then have better plant and undertake it if it was required.

13,142. Would you have anything in the nature of a creamery to which people would bring in milk, or would you get milk from the experimental farm itself—which is your plan?—If the experimental farm be added to the dairy school, naturally we should get it from the farm.

13,143. If necessary you would enlarge it by an enlargement of the plant?—Yes, that is so.

13,144. What class of people go to the Aspatria College?—Mostly farmers' sons; the fees are low.

13,145. Are there a good many scholarships there?—A great number given by county councils; we give a number.

13,146. They come from Westmoreland and Northumberland, I believe?—And from Northamptonshire and Norfolk.

13,147. (*Viscount Cobham.*) Do you know what the fees are?—About 45*l.*

13,148. A year?—A year; they have very little amount of land themselves, but they have the advantage of seeing everything that is going on on the adjacent farms.

13,149. Does the 45*l.* a year include board, lodging, and instruction?—I think 50*l.* a year includes everything there; I think it is the only institution within the means of farmers—unlike Cirencester.

Rates.

13,150. (*Mr. Elton.*) When you were speaking about the alterations in the law of rating just now, did you recollect that the Legislature put rates on to mines some years ago?—I do remember that—on to mines and sporting together.

13,151. You did not mention it among your instances, but that would be another instance of the Legislature bringing a new class of property or an old class of property back again into the rating area; mines had not been rated for a very long time?—That is so.

13,152. They were intended to be rated in Queen Elizabeth's time, very probably; then they were rated the other day by the Mines Rating Act?—In 1874.

13,153. With a slight reduction, because people had not expected to be rated?—Yes, I think that was allowed for.

13,154. That reduction was allowed for some time to the people who had not expected to be rated; and then, as you say, the sporting rights were rated?—That is so.

Mr. W. Dobson. 15 Mar. 1894.

13,155. Now as to the price of wool; that is determined outside this country by the climate of the Antipodes, I suppose?—Yes, the supply from Australasia is so great that it controls the market.

Price of wool.

13,156. The droughts in Australia or New Zealand make the difference in your rent and the value of your flock, do they not; the existence of drought or no drought in Australia is what determines the value of your flock?—The range of prices of English wool has not varied much at all these last 13 years.

13,157. But occasionally there have been very great droughts in New Zealand?—There have.

13,158. Great destruction of sheep?—Yes.

13,159. Did that make a great difference, to your knowledge?—No, it has not done so. You see, according to the diagram I have handed in, the prices have not varied for some years, since 1880.

13,160. I forget when the last drought was, but a few years ago?—Yes.

13,161. Do you find that the continual application of new water power in Australia makes any great difference; you know they are sinking artesian wells and watering all the valleys, and that counteracts, I suppose, the effect of the droughts?—Evidently.

13,162. It keeps things at a steady price?—Yes.

13,163. What you lose in one direction you keep on gaining in another?—Yes.

13,164. So that, practically, you would be of opinion as I suggested that it is the circumstances out there which determine the value here?—Yes, and the Argentine wool. But the variation in the Australian quantity produced has not affected the prices of home wool since 1880; it is steadily one price.

Fall in prices and the currency.

13,165. (*Mr. Everett.*) The fall in prices you consider the chief cause of agricultural trouble in your district?—Yes, entirely.

13,166. The late Sir James Graham was a large landowner in Cumberland, was he not?—That is so, and there is a large estate there yet.

13,167. The late Sir James, I mean?—Yes, the great Sir James.

13,168. Have your had your attention called to a book he wrote in 1826 pointing out the connexion between prices and an expanding or contracting currency?—I have only heard of it, not seen it.

13,169. You have not read it yourself?—No, it is referred to in his life, in the memoir.

The marking of foreign meat.

13,170. (*Captain Owen Thomas.*) I understand that your association is in favour of labelling foreign meat—how do you propose to do that?—I do not think we could mark the meat itself directly, other than by putting notices at the door of the retailer or by licensing him, or having a ticket on the counter, as in the case of margarine.

13,171. Would you label the meat of foreign cattle slaughtered in England, or simply the imported dead meat?—Certainly the imported dead meat.

13,172. But what about the meat of foreign cattle slaughtered at Birkenhead?—That would not be of such great consequence as the other.

13,173. Do you think that frozen meat sent over here is sold at much less than ours?—Yes, the frozen mutton and the chilled beef, sent from abroad is sold very largely as an English production to the loss of the producer and to the hurt of the consumer.

13,174. (*Mr. Channing.*) What class of farming do you come here to represent, is it chiefly grazing?—Sheep farming on hills.

13,175. Not so much stock farming?—Sheep farmers necessarily keep some cows; a few, but they only have meadow hay, no tillage.

13,176. Do you use a large quantity of cake on your holdings?—Not much.

The Agricultural Holdings Bill, 1892. Compensation for improvements.

13,177. Still, the question of compensation is a question for the use of cake and manures, and for general improvements, and that is a question keenly felt in the district?—Yes, in Cumberland generally.

13,178. You expressed an opinion in favour of the Bill which I have introduced for the last two or three years in the House of Commons?—Yes, clearly.

Mr. W. Dobson. 15 Mar. 1894.

13,179. Perhaps I might ask you whether the general scheme of that Bill, or particular points of it, were favoured by your association?—I think our association, when we discussed it, approved of the Bill entirely, except that we should prefer in place of the procedure clauses, some fixed tribunal with a legal president, and practical assessors, working under a fixed scale of fees.

13,180. Are you aware that the procedure clauses in my Bill were based on an Act passed two or three years ago for Scotland to have these questions settled by a single referee?—No, I was not.

13,181. Then you were not aware of the working of it in Scotland, I suppose?—No.

13,182. You are aware, though, that the principle suggested in the Bill was that there should be a list of referees appointed by the county council, subject to the approval of the Board of Agriculture?—Yes.

13,183. And that where the parties did not agree the county court judge was to select the official referee from that list?—From that panel, yes.

13,184. But you would prefer a more judicially constituted court than that?—Yes.

13,185. Do you think that farmers would generally prefer to have a county court judge with two assessors, as has been suggested by Mr. Smith?—Yes, I think so.

13,186. Instead of having a single expert from a list specially selected by the county council and the Board of Agriculture?—I have not thought of that.

13,187. You have no opinion as to whether one process would be cheaper than the other?—No.

13,188. The main points that you approve in the Bill, I suppose, are the striking out of the words, "On quitting his holding"?—Yes; that we consider very essential.

13,189. And is it your opinion that, if those words were struck out, and a tenant was always enabled on the change of the terms of the tenancy—on the determination of the tenancy—to get a settlement for his claims, that would be a great protection to the tenant in carrying out improvements?—That would be the greatest advantage that the Bill would confer. We attach extreme importance to the words, "On quitting his holding," because if the words "On quitting his holding" were deleted from the Act, then, of course, it would be impossible to have a farm revalued, and a higher rent fixed without compensating the tenant for any improvement which might be due to him during the previous years' tenancy.

13,190. The result of introducing this amendment, which, I presume, you are aware was suggested by Sir James Caird——?—Yes.

13,191. Would be this, that without interfering with the right of the landlord to charge what he could commercially for his farm, the tenant would have the right to have all his improvements valued before the new rent was agreed upon?—Yes, that is so.

13,192. So that you get protection to the tenant without having necessarily the fixing of the fair rent by a court?—Yes, clearly.

13,193. Does your association also agree to another provision in the Bill that the tenant should have a right to claim for first-class improvements—to give notice to the landlord to carry them out, and if the landlord dissents to carry them out himself?—Yes, we agree entirely with the placing of the first Schedule along with the second.

13,194. And you would also agree with two important amendments suggested in this Bill, namely, that a tenant should be compensated for general improvements, increasing the fertility of the holding, and also for good husbandry above the usual standard in the district?—Yes, and also that liberty of notice of claim should be given within one month after the termination of the tenancy.

Claims and counter-claims.

13,195. I was going to ask you a question on that—do you attach any importance to having the claims made by the landlord and tenant at the same time or would you give the landlord his extra time to make a counter-claim as at present?—No, we think the claim should go in on the same day.

Schedules of improvements.

13,196. Have you any opinion as to the schedules?—Opinions have been expressed from two points of view by a number of witnesses to the effect that it would be best to banish the schedules of specific improvements from the Bill altogether and to give a general compensation for a general increase of fertility and a general compensation for depreciation in the fertility of the holding; would you prefer to adhere to the schedules of specific compensations or would you take the other view?—We should prefer to have the first schedule placed in the same category as the second, and both of them increased by the addition of the two additional things that you have mentioned.

Mr. W. Dobson. 15 Mar. 1894.

13,197. Then I understand you generally approve of keeping the schedules rather than of leaving it to be estimated by a valuer or by a court what the general improvement or the general deterioration would be—you would prefer to have that specified?—There would be a great advantage in leaving the schedules as they are, because the valuer in his award might specify for which class of improvement the compensation was awarded and then, if necessary, a further sum for general improvements beyond the items mentioned in the schedule.

13,198. There is this further advantage, is there not, that if you have a list, as you have in the schedules, of specific improvements you can divide those improvements into improvements which a tenant can claim compensation for, whether he has consent or not, and improvements which he is entitled to make and get compensation for if he gives notice to his landlord and if the court approves of them as agricultural improvements?—Yes, that is so.

13,199. You could classify them, could you not, if they were specified in separate schedules?—That would be necessary.

13,200. That would be a difficulty you think in abolishing the schedules, namely, that you would not have that power of classification?—Clearly.

The Agricultural Holdings Act.

13,201. Have there been many cases under the Agricultural Holdings Act in your district?—Very few.

13,202. What has been the result of those?—It was found that the provisions were not understood because they are complicated, and the procedure is found to be expensive.

13,203. They have not been satisfactory to the farmers?—No.

13,204. Do you think the rents have been reduced to the point at which farmers can make a fair profit on their farms or not?—I think they are not quite so low just now to bring that desirable result about, having regard to what prices are.

Land Courts.

13,205-6. However, you are not in favour of fixing a fair rent by a court?—Not by a court.

13,207. You are only in favour of giving absolute security to the tenant for ——?—His improvements.

13,208. For all the improvements he can make on a farm?—Yes.

The letting of farms.

13,209. (*Mr. Lambert.*) Are there any cases in which farmers have had to leave their farms through paying excessive rent?—I have not heard of any. A great number of farms have been let.

13,210. Is there a good competition for farms?—Very fair, especially near towns.

13,211. Presuming a fairly well-cultivated farm was put up to let at, say, 150*l.* a year rent how many applicants would there be for it?—There might be seven or eight.

13,212. How are the farms let—by tender?—Some are advertised, others are not.

13,213. How is the rent fixed?—Usually the same rent is charged, or in case they are advertised the offerers offer a rent, then the owner selects which he prefers.

13,214. So you have seven or eight farmers competing against each other for a particular farm?—Yes, that does happen.

Ground game.

13,215. Do you express any opinion upon giving to the tenants the right to kill ground game upon their holdings as they please?—I think it is very needful.

13,216. That they should have the right of killing ground game as they please upon their own holdings?—In any method?

13,217. Yes?—I think they ought to have that right in the case of rabbits especially.

Technical instruction.

13,218. Now as regards agricultural education. Do you find that there is somewhat of an unwillingness

Mr. W. Dobson. 15 Mar. 1894.

on the part of farmers to partake of agricultural education?—Yes, that is so undoubtedly.

13,219. What do you find is the best method of reaching the farmers in this respect?—At present we have a lecturer on agriculture who does other work for the county council, and when times can be arranged he gives courses of six or eight lectures on definite departments of agriculture in the same village, weekly lectures.

13,220. Are those lectures well attended?—They are fairly well attended now.

13,221. Do you think they are beneficial to the farmers?—No doubt, if they are willing to take in the information given.

13,222. Do you find that the farmers are willing to attend the lectures?—Yes, they do attend them very fairly well.

13,223. Is there any other suggestion you can make as to reaching the farmers to give them a better education for further facilitating the production of produce?—I do not think so, except through the elementary schools. Our county council have inaugurated what we call teachers' classes, whereby the elementary schoolmasters have had their train fare and other expenses paid in order that they might qualify to teach the elements of agriculture in their own schools.

Railway rates.

13,224. Do you find any difficulty as regards railway rates?—Personally I do not, because what I sell does not go much by railway, but Cumberland feeders who feed a great many fat sheep and fat cattle and send them to Liverpool and Manchester do complain.

13,225. I suppose you have no specific instance of that?—No, I have not.

13,226. (*Mr. Dalton.*) In what union is your farm situated?—Brampton Union.

Rates.

13,227. You say that the rates have been increasing lately. Have they in your own union, your own parish?—Yes.

13,228. What has been the cause of that principally; which rate has gone up?—The school board rate.

13,229. But the other rates have gone down?—Yes, the poor-rate and the highway rate have gone down a little; on the other hand, there are sanitary works which have been carried out, and there is a small balance not recovered from the property benefited which is charged in the general sanitary rate.

13,230. What is the school board rate in your parish?—Last year it was 1*s.*; it averages 8*d.*

13,231. If you leave that out of account your other rates would have gone down, speaking as a whole, would they not?—Slightly.

13,232. Yours is an exceptional parish, I suppose, there are not a great number of school boards I suppose in your neighbourhood?—There are a good number now. The average school board rate may be from 4*d.* to 7*d.*; our average is 8*d.*; in special years more.

13,233. Do you regard the question of rates as mainly a question for the owner or for the occupier?—Chiefly for the occupier.

13,234. You do not think they are taken into account in fixing the rents?—No, they are not much taken into account in fixing the rents.

13,235. In reference to that 1*s.* school board rate that you spoke of, you get no reduction of rent in consequence of that coming on to the parish?—No. Rents do not decrease in consequence of increase of rates.

13 236. They do not in your district?—No.

13,237. (*Mr. Chaplin.*) Your farm, I think you said, was purely a sheep farm?—With a small number of cattle—black cattle—Galloways.

13,238. It is a hill farm?—It is a hill farm; some of it is grouse moor.

The Agricultural Holdings Act. Compensation for improvements.

13,239. What are the improvements that would usually be made on a farm of that description to which the Agricultural Holdings Act would apply?—Making enclosures from the open moor, and fencing and limeing probably—making additional meadows for hay.

13,240. You do not mean buildings?—No.

13,241. Those would be the two principal improvements that you make?—Yes.

13,242. Are those the improvements to which you refer when you suggest that the words "On quitting his holding" should be left out of the Act?—I was referring more to tillage lands in that case.

13,243. Not to your own farm?—Not specially to my own farm.

13,244. What would be the improvements you would refer to in the case of hill farms?—New fencing, enclosing additional ground, breaking it up, limeing it and cultivating it. There is always a great want of enclosure of hill farms. You only have four or five little fields round the house, and we are constantly aiming to enclose more.

13,245. Do you include compensation for the use of manures or the manure that has been used, and feeding stuffs and that kind of thing, as part of the compensation which should be paid before the rent is raised; because I see a difficulty in that?—The manurial value?

13,246. I understand you to say that you want to omit the words "On quitting his holding" from the Agricultural Holdings Act?—Yes.

13,247. The effect of that, I understand, would be that the rent then could not be raised until you had been paid your claim for compensation for improvements?—Clearly that is so.

13,248. Very well; then I want to know exactly what improvements that is to include; is it to include compensation for feeding stuffs and manures that have been put upon the land?—Yes, that would be so.

13,249. Then are you not in this difficulty: is the tenant in that case to be paid his compensation for these improvements, and also at the same time to reap the full profit of them in the future—because he is going to remain the tenant?—But at a new rent.

13,250. Then the landlord is to be compensated by an increase in rent?—Yes.

13,251. Would it not be very difficult to apportion an increase in rent, which is of a permanent character, for the use of cake or manures or feeding stuffs, which have only been used for one year?—Of course the life of the improvement from cakes and manures would be very short, three years probably.

13,252. That is a practical difficulty, is it not, in the working out of such a scheme?—Clearly more so than in the case of enclosure or fencing or draining.

13,253. I can understand its being made a perfectly workable scheme in the case of improvements which are in the nature of either durable or permanent improvements, but I see a great difficulty with regard to smaller improvements?—They would be reckoned over a shorter existence.

13,254. Would you be satisfied with the application of the Bill, amended as you have described to us you desire it to be amended, to the improvements of a more permanent or more durable character?—I do not quite understand; do you mean the Act of 1883?

13,255. Yes?—No, we should not be satisfied with any amendment of the Act of 1883 short of a new Bill.

13,256. I understood you to say that what you were chiefly anxious about was that the words "On quitting his holding" in the first section of the Act should be omitted?—Yes, clearly, that we make a strong point of.

13,257. Even if they were omitted the Act itself does not satisfy you?—No, I think not; the procedure is cumbrous, and other matters are defective.

Schedules of improvements.

13,258. Then I also understand you wish the first and second Schedules in the Act to be put together?—Yes.

13,259. And practically, therefore, that these considerable improvements should be made without the consent of the landlord?—But with the consent of the land court.

13,260. With the consent of the land court?—Yes.

13,261. Then, having been made with the consent of the land court, the tenant is to be entitled to compensation for those improvements?—On conditions settled by the land court if the landlord dissents from it originally as in Mr. Channing's Bill.

13,262. I am sorry to say Mr. Channing's Bill has never reached second reading yet, and therefore I am not sufficiently acquainted with it?—But I can explain the clause, I think.

Mr. W. Dobson. 15 Mar. 1894.

13,263. I should be very glad to hear the explanation?—The clause is that the schedule of permanent improvements should be placed in the same part of Schedule I. as drainage in the Act of 1883, which is that notice only and not consent from the landlord is necessary. If the landlord dissents from the proposal of the tenant to execute any of the stipulated permanent improvements in that schedule, he can express his dissent in writing, but that does not dispose of the matter wholly, because the matter would be referred to the court of reference, as I prefer to call it; they would entertain the matter as to whether the proposal was one for the benefit of the holding, and they could exercise their discretion in saying that it was not a desirable improvement, whereupon the tenant would not be permitted to carry it through. They could say that it would be a permanent improvement and might be executed by the tenant on such terms as to compensation as they should award.

13,264. As the court would award?—Yes.

13,265. I see one great difficulty in the case; even supposing that it is a legitimate improvement and the tenant has to give up his farm for some reason or other, and comes down upon the landlord for a large sum as compensation for the permanent improvements, the landlord may be a very poor man and he may have no possibility of raising such a sum?—Then there is a provision to make a charge upon the holding to cover it.

13,266. Is that to take precedence of the other charges, supposing it is a case of an estate which is already charged to the full, which I am afraid is the case with a good many at present having regard to the immense fall in the value of land?—In the case of a mortgagee foreclosing it would take precedence in full.

13,267. This charge for improvements which is authorised by the land court?—Yes.

13,268. That is part of the Bill?—Yes; it would take precedence in full. There have been instances where the injustice of that has been very glaring where the mortgagee took possession of a farm greatly improved by the tenant upon it, and the tenant was not able to get compensation from his landlord nor from the mortgagee.

13,269. I speak from memory, but I am perfectly confident that that law has been altered?—It has, I think, been altered lately.

13,270. But that existing law would not apply so far as I am aware, to such a proposal as yours, to future arrangements. However, that does not interfere with your view of the difficulty or the hardship of compelling the landlord to make a payment which he really is not in a position to do?—Of course if the land court decided that the improvement was really wanted, and that the methods proposed by the tenants were suitable, they could decide upon what terms compensation could be paid.

13,271. Yes; but the position I want to put clearly before you is this: Here is a case we will say where a tenant may desire new buildings to be erected upon a farm which may possibly entail on a considerable farm an expenditure of 2,000*l*., or possibly 3,000*l*., and the landlord is situated in such circumstances that it is quite impossible that he can make the outlay; then I understand you to say the tenant is to go to the court, the court quite irrespective of his wishes or his circumstances is to allow this improvement to be made, the tenant subsequently gives up the farm, and then this unfortunate man is to be called upon to make a great payment in compensation, which he is absolutely powerless to do; is that not a position which arises under your proposal or which might arise?—Yes; but we think that it would be a less hurtful position to the country than that a farm should be badly equipped.

13,272. Less hurtful to the country, but at the same time it would have the effect of making the owner bankrupt?—I do not think so; his land would be of more value.

Notice of claims.

13,273. With regard to the notice of claim, is there any special object in having any notice at all either upon one side or the other?—The objection that our association feel to the present notice is that when a farm is about to be vacated naturally the tenant and the landlord enter into negotiations as to any compensation that may be due to the tenant; while those negotiations are proceeding the tenant naturally does not think of sending a formal notice to his landlord at the proper time before the expiration of the tenancy, hoping to arrive at a mutual arrangement; if those negotiations are prolonged beyond that period he then finds he cannot legally claim. That would not apply if the time were extended to one month after the termination of the holding, because then he would naturally serve the claim unless a previous arrangement had been come to.

Mr. W. Dobson 15 Mar. 189

13,274. My question was directed to this, whether it is necessary for the purpose of settling the compensation between landlord and tenant, or the incoming tenant and the outgoing tenant, that there should be any notice at all?—No, perhaps not, if the Act did not stipulate it.

Price of sheep.

13,275. (*Mr. Clay.*) What was the highest price per sheep put upon the sheep in calculating the rent in your county?—I have heard 7*s*. 6*d*. to 9*s*.

13,276. For cheviots?—Yes.

13,277. What for black faces?—Probably 6*s*. and 5*s*. 6*d*.

13,278. May I ask what you are paying just now on your reduced rent for sheep?—650*l*. for 2,000 sheep—that is 6*s*. 6*d*., and they are some of both black face and cheviots.

The Agricultural Holdings Bill, 1892.

13,279. Regarding the Agricultural Holdings Act as I understand from your evidence, you are in full accord with Mr. Channing's principle of simplifying it?—Yes, generally.

13,280. And making it less expensive?—Yes.

13,281. As well as putting a single official referee in place of two?—Yes.

Technical instruction.

13,282. (*Mr. Whitehead.*) Do you think there is great need for improvement in agricultural education?—I think there is great need.

13,283. Should you be in favour of agricultural experimental stations in various counties as they have in America?—Yes. In Northumberland the county council there have taken plots in various districts and treated various crops with various manures, and they have published a very useful report of the result of their proceedings.

13,284. What is the acreage?—Perhaps four to six acres.

13,285. What kind of experiments?—Every sort of land and every sort of crop.

13,286. Has it been suggested by your association that the Government should establish experimental stations?—No, I do not think so—not that they should be established by the Government.

13,287. That has not been suggested?—Not by the Government.

13,288. Do you not think it desirable?—I think it desirable that the county councils should take small farms.

13,289. That the county councils should?—Yes, say as an experimental station combined with a fixed dairy school.

13,290. To take pupils do you mean, or merely to publish the results of their experiments?—I do not think we should take pupils, except dairy pupils.

13,291. Your county council send lecturers into various parts of the county?—Yes.

13,292. What are the lectures upon?—Manures and feeding stuffs.

13,293. Have you heard them?—A few.

13,294. Are they practical?—Yes, they are very good.

13,295. And calculated to do good?—Yes.

Sheep-breeding.

13,296. (*Sir Nigel Kingscote.*) Has the fall in the price of wool induced you to alter your mode of proceeding, do you sell your sheep as lambs now instead of keeping them for a clip?—Yes, we sell all our lambs as lambs; we do not keep them till they are old.

13,297. Is that recent?—At one time the wether lambs were kept till they were three or four years old, now it is not so.

13,298. And the change is chiefly owing to the drop in the price of wool?—Partly that and partly because old mutton is not now so fashionable as it was—they go in for young mutton.

13,299. What generally becomes of your lambs?—They are fed for a year or 18 months.

Mr. W. Dobson. 15 Mar. 1894.

Compensation for improvements.

13,300. In the neighbourhood—not by you or the breeders?—No, we cannot feed them.

13,301. (*Mr. Channing.*) I want to ask you with regard to these improvements which might be authorised after a reference whether the compensation is not to be assessed in the same way as all other compensations, that is by reference to the official referee?—Yes, that is so.

13,302. Therefore the landlord could only pay for the value actually added to the holding?—Quite so.

13,303. If he were in an embarrassment he would have received an addition to his assets in the form of the improvement?—Yes.

13,304. And that would simply be estimated by the court?—Nothing more.

Mr. W. Dobson. 15 Mar. 1894.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Twenty-third Day.

Friday, 16th March 1894.

PRESENT:

The Right Hon. GEORGE JOHN SHAW-LEFEVRE, M.P., in the Chair.

Viscount Cobham.
The Right Hon. Henry Chaplin, M.P.
Sir Robert Nigel Fitzhardinge Kingscote, K.C.B.
Robert Giffen, Esq., C.B.
Captain Owen Thomas.
Francis Allston Channing, Esq., M.P.
John Clay, Esq.
Cornelius Neale Dalton, Esq., C.B.
Robert Lacey Everett, Esq., M.P.
John Gilmour, Esq.
George Lambert, Esq., M.P.
William Cutlack Little, Esq.
Walter Hume Long, Esq., M.P.
Charles Whitehead, Esq., F.L.S.

Herbert Lyon, Esq., *Secretary.*
R. F. Crawford, Esq., } *Assistant*
Freeman Thomas, Esq., } *Secretaries.*

Mr. J. F. L. Rolleston called and examined.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,305. (*Chairman*). You are a land agent and surveyor, and have practised for the last 25 years in that capacity?—I have.

13,306. You are a member of the Council of the Surveyor's Institution, and a surveyor to the Board of Trade?—Yes.

13,307. Do you farm largely on your own account?—I farm largely for other people, but I am also a tenant farmer on my own account.

13,308. How much do you farm for other people?—About 1,000 acres; usually about that.

13,309. And on your own account, how much do you farm?—About 100 acres on my own farm.

13,310. In what counties are your agencies?—In Leicestershire chiefly, but I have also estates in Bedford, Huntingdon, Kent, Essex, and Wilts.

13,311. Where are your headquarters?—At Leicester.

13,312. It is mainly with regard to Leicestershire, that you have come here to-day, I understand?—I was asked to come here on behalf of Leicestershire.

Depression in Leicestershire.

13,313. Will you give your opinion as to the degree of depression felt in the various districts with which you are connected?—As far as my experience goes, agricultural depression has not been nearly so much felt in Leicestershire, as in some other counties I know of, for instance, Bedfordshire and Huntingdon, and Essex. The Leicestershire farms are farms of moderate size, mostly under 200 acres, and are what are known as mixed farms. Stilton cheese is made very largely in Leicestershire, on the north and east side of the county, and the flat Leicestershire cheese on the west side. The south is a grazing district, in the neighbourhood of Market Harborough, and the north-west is a forest district.

Dairying.

13,314. It is not a wheat-growing county, then?—No, Leicestershire is not a wheat-growing county. The dairying industry is the industry that is now very largely increasing, especially in the direction of milk selling, because it is found that that is the most rapid system of converting the produce into money.

13,315. Where do they send their milk to?—To Leeds, Newcastle, and London.

13,316. Even to London?—Chiefly to London.

13,317. Is there a continually growing demand for it or is the market now fully supplied?—I understand that notice has been given by the buyers of a very large reduction in price, and that the milk producers are rather despondent accordingly.

13,318. In the past has there been any reduction in price, or has it been maintained up to now?—The price of milk has been fairly well maintained. It has been about 1*s.* 2*d.* a barn gallon in the summer, and 1*s.* 6*d.* per barn gallon in the winter.

13,319. (*Viscount Cobham.*) Has not there been a special rise this last winter?—There has been a special rise this last winter.

13,320. And are prices likely to fall below the point at which they were before that rise?—I rather think they will, because of so many people going into the business.

13,321. (*Chairman.*) But that has not yet occurred; it is merely threatening?—It is threatening.

13,322. Is the immediate object of the threat to bring down the prices to what they were?—I am hardly able to answer that. The milk buyers have given notice of a considerable reduction, and I do not think that the price is actually settled yet.

13,323. Then with regard to cheese; is the produce still large in the county?—I think that there is less cheese made than there was, because the milk is sold in this way.

13,324. Has the price been maintained, or not?—Only of the very best cheese: the prices of the inferior sorts have gone down.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,325. Is much of the very best cheese produced in the county?—Yes, a good deal.

Markets.

13,326. Then the whole of the county has access to good markets?—It has; there is very fair railway accommodation in all parts of it.

13,327. And the county is one famous for its fox-hunting?—Yes, it is still the metropolis of fox-hunting, and a large number of people settle in the county every winter, and that is the means of a very considerable sum of money being imported and spent in it every year.

13,328. And there is consequently a considerable demand for local products?—Yes. It is also very largely a manufacturing county, and a mineral county. Besides the large towns there are a great many large villages where local manufactures are carried on, and there are considerable deposits of coal and limestone, and there are large outcrops of granite, all of which are extensively worked.

13,329. Then there are local markets for produce of all kinds?—Except milk, which is usually sent away; and cheese also I should say.

Reductions of rent.

13,330. With these advantages what has been the experience with regard to rents?—The fall of price, which seems to have been going on for the last 15 to 20 years, has been severely felt. Rents have fallen, on an average, I should say 40 per cent., and as a rule taxation has increased.

13,331. (*Mr. Chaplin.*) That is in Leicestershire?—That is in Leicestershire, but there is no land that I know in the whole county that is out of cultivation and the proportion that is held in hand is not considerable.

Prices of dairy produce.

13,332. (*Chairman.*) When you speak of the fall of price, I gather from you that milk has not fallen, and that the best quality of cheese has not fallen?—No, it has not. The generality of the farmers do not make the best qualities of cheese and the inferior qualities have very largely fallen in price. I have known stilton cheese sold at 4*d.* and 5*d.* per pound.

13,333. The majority of farmers produce the inferior qualities of cheese only?—Yes, the county council and the agricultural societies are very active now in sending about lecturers to instruct people in the art of making better butter and better cheese.

13,334. Is much butter produced in the county?—A good deal of butter.

13,335. Has the price been maintained or has it fallen?—The price has fallen considerably.

Uncultivated land.

13,336. Is there any land out of cultivation?—I do not know of any land in Leicestershire out of cultivation.

Land in hand.

13,337. Is there much land in hand?—Very little: the amount in hand is quite inconsiderable.

Competition for farms.

13,338. Is there a demand for farms when they are vacant?—There is ample demand for farms when any are vacant but always at reduced rents.

Reductions of rent.

13,339. When you speak of reduced rents do you mean rents lower than the average rents of the farms occupied or at the reduced rents that you speak of on reductions which are conceded to all?—At still further reduced rents; we can hardly ever get the same rent from the incoming tenant as the outgoing tenant paid.

13,340. As compared with tenants in possession?—As compared with tenants in possession.

13,341. Are greater reductions conceded to incoming tenants than are conceded to the tenants in possession?—I am afraid that that is the case.

13,342. Does that give rise to the demand for further reductions from the tenants in possession?—Yes, it does.

13,343. And are they generally conceded?—They are generally conceded.

Competition for farms.

13,344. But you say there is ample demand for farms?—According to my experience whenever a farm is advertised there are always a great many applications for it.

Tenants' capital.

13,345. Are there many persons with sufficient capital to enable them to cultivate?—The majority of them are applicants with not sufficient capital to cultivate the farm for which they apply; we have to make very careful inquiries of that kind.

13,346. Still it is possible to find men with capital sufficient to enable them to cultivate?—Yes, it is in Leicestershire.

13,347. I presume any new tenant coming in, comes in at a considerable advantage?—Yes, a considerable advantage. He generally makes his own terms as to rent, and he always asks for buildings in many cases to be remodelled to suit his own peculiar style, whether rearing or dairying or anything of that kind and these requests are generally granted.

Mr. J. F. L. Rolleston.
16 Mar. 1894.

13,348. What is the average amount of capital now required for the entry upon a farm in this district?—It should be about from 6*l.* to 7*l.* per acre, but there are a great many tenants who have nothing like that.

13,349. As compared with a few years ago is not that amount reduced?—The amount of capital possessed by the tenant is considerably reduced.

13,350. But I mean in letting a farm to a new tenant will the landlord put up with a tenant of less capital than formerly on account of the reduced prices?—I think a landlord would rather than not let his farm.

13,351. You say it should be from 6*l.* to 7*l.* per acre; I presume that a a few years ago it would be rather higher?—It was.

13,352. What I wanted to get is what the reduction has been?—It was generally supposed that a man should have 10*l.* an acre on taking a farm.

13,353. Then in consequence of the reduction of prices, whereas only a few years ago 10*l.* per acre was considered the proper capital with which to enter upon a farm, now it is from 6*l.* to 7*l.* per acre?—Yes.

Arrears of rent.

13,354. Then besides the considerable reductions in rent, have there been also arrears of rent in bad years?—Yes, to a very large extent.

13,355. Did the district suffer last year from drought?—Very much so, and the class of farming suffered.

Abatements of rent.

13,356. Were there temporary abatements made in consequence?—Yes, there were.

13,357. What did they amount to?—From 15 to 25 per cent.

13,358. Beyond the reductions of rent which had been previously conceded?—Yes, beyond the amount of re-adjusted rents.

Rates.

13,359. You said that rates had advanced; have the tenants as a rule had the benefit of the reduction of rent in reduced assessments?—Yes, they have.

13,360. Then if rents had been reduced 40 per cent. the assessments would have been reduced in the same proportion?—They have been.

13,361. Has that in itself led to an increase of rates in the £?—Yes, it has.

13,362. What has been the increase of rates in the £?—I can hardly answer that; the rates have increased mainly in places that have gained in population, and where sanitary arrangements have been required.

13,363. Quite so, but those would be exceptional cases. One would like to take a case of an average rural district which has not been affected by exceptional circumstances of that kind?—I should say that in an average rural district, beyond the highway rate which has increased, there has not been an increase of taxation. The villages of Leicestershire, where all this mining and manufacturing is going on, are largely of an urban character. It is very largely a manufacturing and mineral county; and the Local Government Board has grouped whole groups of parishes to form a local board in the mining districts; and their taxation has very largely increased.

13,364. But does that fall upon the land?—Yes, it does.

13,365. I thought that they were exempted from the burden?—They have to pay the School Board, the education rate, and the lighting.

13,366. But I am speaking of the sanitary rates?—The sanitary rates are one-fourth upon land. As soon as the Local Board is created in those places under my control, I have at once complaints from the tenants of the increase in the rates, and we have to reduce their rents and make concessions in proportion.

13,367. I think you said you farm yourself about 100 acres?—Yes.

13,368. Are you a tenant farmer?—I am.

13,369. In that case has your assessment been reduced in proportion to the reduction of rent?—It has.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,370. And in your own case do you pay a higher amount in the pound than you did?—My own is rather a peculiar case; the parish in which my land is was on the outskirts of the borough of Leicester and under the control of a rural authority. The rates were excessive, nearly 8*s.* in the pound, and the urban part of the parish has now been included in the borough of Leicester, which has left the remainder of the parish purely rural, and in consequence of that extension, which we, of course, largely supported, our rates have gone down.

13,371. What are they in the pound now?—About 3*s.*

13,372. Then, of course, your case is somewhat accidental?—It is accidental.

13,373. In your case there has been a reduction in the assessment of 40 per cent., and a reduction in the rate in the pound from 8*s.* to 3*s.*?—Yes; in my own case. We fought for many years for the extension of the boundaries, because we thought that the rates caused by the people of Leicester settling in our parish were unjust.

Condition of farmers.

13,374. Now, taking generally the condition of tenant farmers, having regard to the reductions in rent and to the reductions in their assessments, and I suppose the reduced prices that they pay for the manures and feeding stuffs, what is their position?—If I except the unfavourable season of last year, I think the position of the tenant farmers of Leicestershire is a fairly good one. I know there are cases where abatements have not been made, but certainly in all cases in my own experience, they have been made, and the tenants have made their own terms and are farming now, if prices should prove to be stable, under favourable conditions.

13,375. Then if prices are maintained at present rates, if they do not fall any further, you consider that the adjustments on the whole, on taking the average of the cases, have been made so as to enable the farmer to carry on his business?—I think if prices are stable, that the rents have been lowered proportionately. It is rather a difficult question, because prices of wheat have fallen so rapidly the last six months.

Wheat growing.

13,376. But the production of wheat is small?—It is small in Leicestershire.

13,377. I suppose not more is grown than is necessary for the straw?—Yes, for the straw; that is all.

Store stock.

13,378. Then it is not an important item?—Not in Leicestershire, but still the price of store stock is so exceedingly low.

13,379. I suppose that is due largely to the seasons, which have forced the stock into the market—there was not sufficient produce to feed the stock?—That is so; it is due, to a large extent, to that.

13,380. And that led to a great fall in prices?—Yes.

Position of landlords and tenants.

13,381. That, of course, would be an exceptional case. But omitting last year, do you consider that with the prices, which prevailed last year, considering the reductions of rent, and the reductions of rates and assessments, and so forth, the farmers could carry on their business?—I think, with the prices prevailing about 12 months ago. I ought to say that even beef has been very low; as little as 5½*d.* per pound has been realised for good first class bullocks.

13,382. But that was exceptional, I suppose, owing to the drought largely; was it not?—I suppose it was. But the tendency of prices has been downwards for the last 15 years.

13,383. With regard to the position of the landlords, what do you say?—I think the landlords are now bearing the brunt of the depression. Having reduced their rents as demanded, and having expended the money in improvements asked for as far as they have been able, they have put their tenants in a proper position. They are left with the reduced income while the charges, if any, on their estates, remain the same as before. Therefore, while it has been possible to lighten the load of the tenant, it has been impossible for the landlord to divest himself of his liabilities.

Tenure.

13,384. Has there been a change in the tenure of the farms?—They are all yearly tenancies. I do not know of a single case where a farm is held for a long term.

13,385. Were leases common before the last few years?—They were not exactly common; but farms were frequently let with leases.

13,386. But now there are none?—Now there are none. I do not know one single case.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,387. They are all let on yearly tenancies?—Yes.

13,388. That is partly what enables the tenant to demand a reduction of rent?—He always comes in before the quarter-day, and says, "I must ask you to "take off some of my rent, or I must give you notice "to leave," so that it is entirely in the tenant's hands.

Concessions to tenants.

13,389. And they are able to get concessions?—If the tenant is a fairly good tenant, all the landlords that I know of prefer to make concessions to their sitting tenant rather than to let him go, and run the risk of having to make still greater concessions to a new tenant.

13,390. I gather from that that the landowners are prepared to make the concessions rather than incur the expense of taking a new tenant?—Certainly.

Labourers.

13,391. With regard to the labourers, what do you say?—There is no distress amongst agricultural labourers in Leicestershire, there is a great deal of employment for them in the mines and the quarries and in the large manufacturing villages.

13,392. Have the wages been maintained?—The wages of labourers have increased.

13,393. What is the average wage now?—Well, I should say for a day labourer 16*s.* per week, and for a seven day man 18*s.* per week.

13,394. From what point did they rise to that?—I should say they have risen from 15*s.* and 17*s.* to 16*s.* and 18*s.* In Bedfordshire of course they are very much lower. In Leicestershire you cannot get a good casual man for less than 18*s.* per week.

Low prices and bad seasons.

13,395. What in your opinion is the main cause of the depression?—My opinion is that the main cause of the depression is the great fall of prices which has taken place.

13,396. And to that rather than to the bad seasons you attribute the depression?—Certainly I do. We have not had an average of bad seasons, although it was a bad season last year.

13,397. Apart from last year, the seasons have been fairly good?—Fairly good; 1879 and 1880 were bad years.

13,398. Between 1879 and last year, have the seasons been rather above the average?—There have been no bad seasons during that time; they are perhaps above the average.

The currency.

13,399. Then what in your opinion is the remedy?—I think that the first thing is to find the cause of the fall of prices, and if that fall of prices can be arrested or restored, that will be the remedy for agricultural depression. I attribute the cause of the fall in prices to the monetary legislation of this country, of Germany, of the Latin Union, and of the United States, all of which countries now draw their supplies of money from one source instead of from two as before. It seems to follow that that must have caused a contraction of the volume of money; and the consequence is that its purchasing power has very greatly risen, and its command over labour and all other forms of property has increased; and now that India and the United States are competitors for gold money, it seems that it must be that prices must still further fall, and that the prospect before the agricultural classes is a very bad one.

13,400. Then you consider that the depression in the past has been due to the enhanced price of the value of gold, due to monetary causes; and with regard to the future you are alarmed in the sense that it may go still further?—Yes, I feel, and every one who has capital invested in land, I think, agrees with me, that the main cause of depression is the great fall in prices that has taken place, and I do not think that the readjustment of taxation or more favourable rates for internal traffic, or the licensing of shops for the sale of foreign meat, though all these things are most useful and beneficial, and ought under any circumstances to be seen to, but not even the whole of them put together would be in any way a remedy for agricultural depression.

13,401. They are desirable in themselves, but they would not be a remedy for the existing state of things?—None whatever, in my opinion. The great complaint in Leicestershire (although it is better than other counties), and in every other county, is, even from uninstructed people, that there is no money. If you

Mr. J. F. L. Rolleston. 16 Mar. 1894.

congratulate a farmer upon the excellent way in which his stack yard looks, he says, "Oh, yes, but I cannot "get any money for it." The amount of money which farm products command is now so very small, and that applies to all products, not to farm products only.

13,402. Then, in your opinion, unless the fall of prices can be arrested there cannot be a remedy for agricultural depression?—That is my opinion.

13,403. And that fall can only be arrested by an expansion of the volume of money?—By an expansion of the volume of money which might be arrived at in various ways, by a large discovery of gold in various parts of the earth, for instance, or it might be expanded by the issue of, say, an amount of irredeemable paper, or by the re-issue of silver money as before. All those three matters would expand the volume of money.

13,404. Then assuming that no changes are made in that respect, and, in consequence, the value of gold still goes up, what do you consider will be the result?—If gold continues to rise in value the margins of debtors must run off, and there must be repudiation on the part of public debtors and bankruptcy on the part of private debtors if the appreciation of gold goes on, which there is every evidence of.

13,405. Well, what would follow, and what ought to be done?—If a large amount of gold is not found, if silver is not used again, nor paper issued, the only way would be to lessen the rate of interest very considerably on all debt; to considerably curtail the expenses of the country, to reduce all official salaries; the pay of the army and navy; the pay of the inspectors; reduce the price of postage stamps; every gold price must be reduced proportionately to the reduced price which producers are getting.

13,406. All these changes in your opinion would become necessary?—I think that would be the logical outcome of an extreme state of gold appreciation.

Wages Leicestershire.

13,407. How do you account for the fact that wages have not fallen in your district on those assumptions?—Agriculturally I account for it because our county is very largely a manufacturing county and a mining county, and we have a very great progressive town in the centre of it, Leicester, where the agricultural labourers to a large extent flock.

13,408. But that has been the case for many years past?—Yes, for many years past.

13,409. One would gather from your evidence that while the wages in these towns have been falling concurrently with the fall in prices, they have somewhat risen?—Agriculturally.

13,410. I presume that has followed from the rise of wages in the towns themselves?—Yes.

13,411. Therefore it would appear that in spite of a general fall in prices the rate of wages has been rather increasing?—Well, up to a certain point they have. The trades unions have been a very powerful influence in maintaining the rate of wages, but there has been a very considerable decrease in the amount of employment even in the large town of Leicester. I should say the average rate of wages during the last 12 months in Leicester has considerably decreased.

13,412. That is a temporary matter during the past year; but, eliminating the past year from your comparison, are we to gather that the rate of wages has somewhat increased in the towns in your district as well as in the rural districts?—I think the rate of wages had increased up to about a year ago, but now the employers are beginning to find their profits are very much cut, and in many cases have gone to a vanishing point, and so there is beginning to set in a conflict between capital and labour as to the rate of wages.

13,413. Then you think that it may be that in the future there may be a fall in the rate of wages?—There is at the present moment.

13,414. There is at the present moment?—Yes, there are a great many unemployed.

13,415. But that has not produced its effect upon the rural district?—Not upon the rural districts.

13,416. (*Mr. Chaplin.*) I understand that this applies to Leicestershire?—Yes; the wages are much lower in other counties that I know, but they certainly have increased agricultural wages in Leicestershire.

13,417. (*Chairman.*) Then the farmers in your district have not been able to obtain any adjustment with respect to lower wages?—No.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,418. On the contrary, they have had to pay rather higher wages?—Yes, the difficulty of getting good labour is a general complaint.

Sub-division of farms.

13,419. Has there been much change in the district in the way of reducing the size of farms?—The tendency is to reduce the size of farms. A large farm, if it has been found difficult to let it as a large farm, is generally cut up and let in various pieces. The difficulty of that is building further houses and farm buildings.

13,420. Apart from that difficulty would it be desirable to reduce the size of the farms?—The small farms are always the more readily let. There are always more applicants for the small than for the large farms. A farm of 120 acres is a very popular size.

13,421. I suppose the tenant works himself on such a farm?—The tenant works himself. A farm of 300 or 400 acres is very difficult to let as a whole.

Loans for expenditure on improvements.

13,422. Have the landlords much difficulty in finding capital for the increased buildings?—Yes, they have great difficulty.

13,423. Do you consider that anything could be done to assist them in that direction?—No. Except that I think that borrowing under present conditions ought to be discouraged by any class. Take, for instance, the small ownerships which are now encouraged by Act of Parliament. Under a stable standard of value, of course, the extension of those small ownerships is in every way desirable, but to tempt people by offering facilities for borrowing money into an occupation which under present conditions means certain loss, does not seem to me to be expedient or politic. I hear of it—it is not my own experience—that even potatoes are sold as low as 1*l.* per ton. Now the occupier even of an allotment can make better use of his time than growing potatoes which he can buy at 1*l.* per ton.

13,424. I presume in the case of allotments the rent would fall in proportion to the fall of other rents?—Yes, the rents of allotments have fallen.

13,425. What you are now speaking of is rather the case of the small holdings formed for the creation of small ownerships under the Small Holdings Act?—Yes, in the first instance I spoke as to that.

13,426. Where the new purchaser would have to pay a fixed sum for the next 45 years, including interest and instalments of the debt?—Yes.

13,427. I gathered that you think that unless prices are likely to be stable we shall be inviting persons to go into a poor transaction?—To undertake, under circumstances of which the essence is borrowing money, or, in other words, contracting to deliver gold at a future date, that which is no longer legitimate business, but which is on the other hand a dangerous speculation.

13,428. That is based on your idea that the prices will continue to fall, but that we have not yet reached the bottom of the difficulty?—Quite so. I have some proof of what I was saying as to the fall of prices in the city article of the *Times* on the 23rd of last month. It reports that from an index number made up this month, wholesale prices appear to be quite the lowest ever known. There are three records reported to be broken in that article in the space of a very few lines; the largest bank balance ever published, the highest prices of converted Consols ever reached, and the lowest range of wholesale prices ever known.

13,429. Have the landowners, in your experience, been able to borrow money on rather better terms of late or not?—It is usually borrowed from Lands Improvements Companies. There has been no alteration at present in their terms.

Interest on mortgages.

13,430. But taking mortgages generally?—Where there have been a variety of mortgages on an estate they have been very often consolidated at a lower interest if the security was ample.

13,431. And you say, generally, that landowners have been able to reduce the interest of their mortgages?—On the large mortgages, I think so.

13,432. How much reduction has been made, about ½ per cent.?—Yes, from 4 to 3½ per cent.; but on the

Mr. J. F. L. Rolleston.

16 Mar. 1894.

smaller sums invested in that way the owners of the mortgages are very reluctant to reduce the interest.

Appreciation of gold.

13,433. Generally we may take it from your evidence that we have not yet reached the end of the difficulties, and that the same causes which have operated of late years in the direction of enhancement of gold values will continue in the future, and you foresee greater difficulties to come?—I do.

13,434. And that the adjustment will be more difficult as the prices continue to fall?—Quite so.

Technical instruction in dairying.

13,435. (*Viscount Cobham.*) Has the county council succeeded in improving the quality of the cheese made in Leicestershire?—I think it has in a great many cases. You hear various opinions about it. Some, of course, of the best farmers who have made it all their lives rather resent the lecturers coming into their neighbourhoods and teaching them to conduct their business; but I think amongst the smaller and more inexperienced class of dairymen the county council have done a great deal of good; I understand that the improvement is very marked amongst the small farmers.

13,436. The classes are well attended, and they have profited by them?—Yes, and they have listened with great interest to the lectures.

Experimental or model farms.

13,437. Should you be in favour of the establishment of a model farm or model farms in the county?—I think that anything involving a considerable expenditure of money is not desirable just now.

13,438. I mean out of the technical education grant, instead of sending lecturers about, would you centralise the instruction?—Yes, I think I am in favour of that. There is a proposal of the kind in our county at the present time to join with one or two neighbouring counties and found an institute for the purpose of instruction, but then that would only accommodate 30 students from Leicestershire.

13,439. Would you make it an experimental farm as well?—Yes, an experimental farm.

Foreign competition.

13,440. Would you give a little more explanation of your reason for thinking that foreign competition has had nothing to do with the present depression?—I find that there is a considerable agricultural depression in the United States of America, in France and Germany, all of which countries have very high protective duties. In France the duty on wheat is from 13*s.* to 14*s.* per quarter, and in the United States beef and wheat have fallen very largely in price.

13,441. It does not prevent them from sending large supplies over to England?—I understand that the area under wheat is decreasing in the United States because of the low price. I read what Sir Albert Rollit said in the House of Commons the other night that there were four million acres less under wheat cultivation in America last year than in the year before.

13,442. Then it is reasonable to suppose that the competition from America will decrease?—Yes.

13,443. Will not that have a tendency to raise the prices here?—I think it is the eastern wheat that sets the price, the wheat that comes from India and Russia. I think that the value of the rupee has a great deal to do with the price of wheat.

13,444. You think that even if the United States supply ceases that we shall be still exposed to the same amount of competition?—I think so, the Indian purchaser is getting, even at the low price of wheat, the same amount of money that he did before. He is not losing anything at present.

13,445. Supposing the prices increase here should not we be exposed to a more keen competition?—If it substantially increases, probably.

13,446. Do you consider that competition has a tendency to depress prices?—If there is a very great production of any commodity the price must be lower than when there is a small production.

13,447. Foreign competition then has not had anything to do with it?—I think there is absolute proof that it has not, because there is as much agricultural depression in countries which have high protective duties. If high protective duties were a remedy, why then is there agricultural depression in countries which have those duties?

Technical instruction in dairying.

13,448. (*Mr. Whitehead.*) Is the cheese you speak of produced largely by small or large farmers?—Small farmers.

Mr. J. F. L. Rolleston.

16 Mar. 1894.

13,449. Would there be a large demand for cheese if it were better made?—Yes, there would; the best qualities are always readily sold. It is the inferior qualities that there is a difficulty in getting rid of.

13,450. And therefore there is a good deal of ignorance as to the mode of making cheese?—Yes.

13,451. But which is now being improved by the Technical Education Committee?—Yes, I think they have done a great deal of good in that way.

13,452. They have equipped a laboratory dairy, have they not?—Yes, and an itinerant lecturer who has all his appliances with him, and who illustrates his lectures by churning butter, and all that sort of thing.

13,453. You think that that has proved a benefit to the small farmers?—Yes.

Price of milk.

13,454. With regard to the price of milk, lately, you suggest that it is not likely to be maintained?—I am not a milk-seller myself, but I am told that there is in sight a considerable fall in the price of milk.

13,455. As a fact it has been increased since last year?—The price of milk increased last winter.

13,456. That would be, probably, owing to the drought?—Yes, and the short supply.

Railway rates on milk.

13,457. Do not railway rates affect milk-sellers very much?—Very much.

13,458–9. Do you suggest that they should be reduced?—Yes, I do. I do not think that the extra rate should be put on.

Prices.

13,460. (*Mr. Giffen.*) Have the prices of other commodities fallen as much as the prices of agricultural produce?—Yes, I should say they have.

13,461. Have you looked specially into that point?—Land, house property, and every other commodity with which I have had to deal, has considerably fallen in price.

13,462. The question I am putting is whether there is a greater fall in leading articles of agricultural produce than there is in wholesale articles in other commodities?—I cannot say.

13,463. You have not looked into that?—No, I have not.

13,464. Supposing you were to have a rise of price, not merely in agricultural produce, but in other things would that be a state of things that you would anticipate a rise in agricultural prices?—I think it would.

13,465. The prices all round?—All round.

13,466. Do you think that it is likely that there would be a rise of prices without a rise of money wages as well?—No, I think there would be a rise in wages, and fuller employment.

13,467. There would be a rise in money wages?—Yes.

13,468. And the effect of that would be, would it not, that along with the rise in agricultural prices the agriculturist would have to pay more for everything that they purchased, and more wages, would he be so much better off than now, if you had a rise of prices of that kind?—In theory perhaps not, but in practice yes. I never find anybody who is in favour of low prices.

13,469. That is to say, that people in the market always like the rising market?—Yes.

13,470. But is that a possibility?—It ought not to be a constantly falling market.

13,471. But is it conceivable or possible that you could have a constantly rising market?—Not for ever rising.

13,472. There must always be fluctuations?—There must always be slight fluctuations, but even stability could be arrived at with fluctuations.

Currency and fluctuations in prices.

13,473. Are there not always considerable fluctuations owing to the changes in the state of credit at different times?—Is not the state of credit influenced by the monetary causes to which I have referred?

13,474. But is it not the case that if you go back a long period, you find periods of years in which prices are rising, and periods of years in which prices are falling—that you have really always changes of prices going on?—Yes, that is the case.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,475. If the prosperity of agriculture is dependent upon the condition which, as a permanency, is certainly impossible, what then?—It is not impossible to prevent prices from perpetually falling.

13,476. But I am asking, if the prosperity of agriculture is dependent upon a condition of things which is impossible?—No, it is not impossible.

13,477. You cannot have a constantly rising market, and therefore you cannot have the condition of things which you believe most favourable to the prosperity of Agriculture?—You can have stable prices.

13,478. Can you?—I believe that prices in India, for instance, during the time that there have been various fluctuations in Western Europe, have been comparatively stable.

13,479. That is, that over a good period of time, you find that prices in India of silver have been more stable than prices in European gold?—Yes.

13,480. But can you say that that stability of prices is a thing to be expected permanently in India or anywhere else?—If there is to be any change of prices it should be in the direction of a gentle rise.

13,481. But I have just been getting an admission from you that a gentle rise, as a permanent condition of things, is an impossibility; it is not conceivable?—That of course is an argument that prices should not be for ever expected to rise.

13,482. If they cannot for ever be expected to rise how can that be put forward as a condition of the experiment on any trade including agriculture?—I say that prices can be expected to remain stable.

13,483. Is that really so; have you looked into the history of prices; is there any record of stability for any very long period?—There have been great fluctuations; never so great a fall I understand as to-day.

Fall in prices.

13,484. I do not wish to go into controversy upon that point, but are you quite sure that there has never been so great a fall as within the last 20 years?—I am informed from statistics I have looked up, that prices are lower than they have ever been; wholesale prices.

13,485. How long have these conditions been in existence to test them?—I am informed that prices are lower now than in the bad times from 1840 to 1850.

13,486. That is to say, that in a certain given period they are lower now than at the beginning of that period?—Yes.

13,487. But that does not meet the question whether you have not fluctuations of prices equally with what you have had?—As far as I have been able to learn I do not think there has been any such protracted fall of prices as we have experienced during the last 20 years.

13,488. Have you looked at the period between 1815 and 1840?—Yes, I have read about it.

13,489. And would you say that, after considering that period?—Yes, I think I would.

13,490. But you are not prepared to go into the question at the present time?—I am not prepared to go into the period between 1815 and 1840, but I am familiar with the history of that time.

13,491. But still, when you say that the fall of prices of recent years, the last 20 years, is quite unprecedented, is not that a general statement that ought to be very fairly considered?—Yes, certainly.

13,492. And assuming that you have had very considerable falls in prices in former times extending over long periods, can you say that although the recent fluctuation has been somewhat greater in degree that that is such an unusual state of things in business?—For instance, I do not think if you take the period since the 15th or 16th century that wheat has been so low as to-day.

Currency and fluctuations in prices.

13,493. It might be with many articles that after fluctuation you get a different point in prices to what you are speaking of now as fluctuations over a considerable period which are the things which affected the industry for the moment?—There was a very considerable fluctuation in prices in the period you referred to when the irredeemable paper was taken in.

13,494. You admit considerable fluctuations in prices before the recent 20 years?—Yes; attributable usually to alterations in monetary laws.

13,495. But not alterations in monetary laws of the kind that you describe now?—Whenever contraction has taken place there has been a fall of prices; whenever expansion has taken place there has been a rise in prices.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,496. Still is it not the case that along with a state of things such as you would not desire to arrive at again—that is, the contraction of gold and silver money, the standard money—you had a considerable fall in prices and fluctuations in prices?—I scarcely understand your question.

13,497. You are suggesting that a certain amount of monetary contraction has taken place this last 20 years and has produced an unprecedented fall in prices, and I am asking you if the period to which I have referred was not a period in which no monetary contraction of the kind took place, yet you had the fall of prices?—But the monetary contraction did take place.

13,498. But not of the kind that you spoke of?—The withdrawal of the amount of legal tender—the contraction of the amount.

13,499. The withdrawal of inconvertible paper money?—The legal tender.

13,500. The legal tender?—Yes.

13,501. But you do not approve of inconvertible paper money?—No.

13,502. Therefore you would approve of the fall of prices that occurred between 1815 and 1840, because it was due to the withdrawal of inconvertible paper, but you object to the fall of prices now because it is due to a different cause?—I do not approve of the contraction of the amount of money available for the use of the people at any time.

13,503. So that if you had inconvertible paper you would always stick to it?—Failing something else it would be necessary. There is no occasion in the present age to revert to incontrovertible paper because you have a money metal—a money metal which is held in favour by three-fourths of the inhabitants of the globe. You have a money metal to which you should resort instead of paper, and which, I think, is a sounder resource.

13,504. But I am pointing out cases of fall of price which has occurred when you have got that purchase money in metal?—We have not had that monetary metal in use in this country for the last 20 years.

13,505. Not a standard metal, but you have had the metal in use?—Yes.

Contraction of currency.

13,506. About the course of the contraction of gold that you spoke of, are you quite sure that it is due to the monetary legislation of the last 20 years?—I feel absolutely sure.

13,507. Can you correct it with specific Acts of Legislation, and exclude the other courses which affect the gold?—The specific Act of Legislation which I can claim first would be the disuse of silver in this country as long ago as 1816.

13,508. That could not have caused the fall of prices in the last 20 years; that was not a change of monetary legislation in the last 20 years?—That disuse, I was going to explain, did not affect us, because the Mints of the Latin Union during the whole of that time were open to the free coinage of both metals. It was in 1873, after the French and German war, when Germany demonetised silver, and that was immediately followed by the closing of the mints of the Latin Union. Since that time, silver has been demonetised generally, which must have caused a contraction in money. There must be a loss.

13,509. You say it must have caused a contraction of gold. The phrase you have got in your paper is, a contraction of gold?—The disuse of silver would, of course, cause a much greater demand for gold.

Increased demand for gold and disuse of silver.

13,510. But you have not investigated how much greater the demand for gold there has been on account of the disuse of silver. have you gone into the question?—I cannot go into the figures as to the amount of the increased demand.

13,511. But is it worth having an opinion at all unless you go into the figures?—I think that the legislation to which I have referred must account for a contraction of the volume of money.

13,512. But is it not a question to be examined according to the facts?—Yes.

13,513. Let me put the case hypothetically; if it should be the case that the chief cause in the demand for gold in the last 20 years has been a demand by certain military governments, presumably for military

Mr. J. F. L. Rolleston.

16 Mar. 1894.

purposes, how can you say that it is the monetary legislation which has caused a great demand for gold, and the contraction of gold in the last 20 years?—The demand for gold is not wholly on the part of governments for military purposes. There is a great demand for gold on the part of the public and an increasing demand.

13,514. Are you quite sure?—The use of gold is very much increasing.

13,515. How much gold has the Government of Russia accumulated in the last 20 years?—I do not know, perhaps ten millions.

13,516. Supposing I should tell you that they have accumulated 100 millions, that is five years' production, according to the production of recent years, would not that affect your opinion as to its being a monetary legislation which has caused the depression?—It would intensify my opinion. If there is an increased demand on the part of the nations for gold, how can we sustain gold prices here, if everyone is swabbing up gold.

13,517. But is it monetary legislation or other action of a different kind; you are pressing the monetary remedy because you say the depression is owing to monetary legislation, but how far is it monetary legislation?—Of course, the absorption of gold by countries would cause scarcity and appreciation. If Russia has locked up 100,000,000 of gold it would help towards the appreciation of gold, and, so far, that would not be monetary legislation.

13,518. If I were to tell you that one of the principal other demands for gold in the last 20 years has been the demand for India, which has not been promoted by monetary legislation at all, would not that affect your opinion?—I think it intensifies my opinion.

13,519. I am suggesting other causes for the contraction of gold, and what I wish to have your opinion upon is whether these causes have not been sufficient without monetary legislation; it is a question of degree?—I see. There are various causes for the appreciation of gold; the large absorption of it by other countries is one.

13,520. Then I am suggesting that, and I wish to know whether you can go into a point of that kind?—The increase of demand for gold and the disuse of silver.

13,521. How much silver has been disused?—It is not used at all; the mints are not open to silver.

13,522. Not used in a particular way, but is not silver used much more largely now than it was 20 years ago?—As money?

13,523. As money?—Not in this country.

13,524. I am not saying in this country?—Not in gold standard countries.

13,525. I am speaking of the question generally?—I do not know; I cannot answer that question.

13,526. How much less silver is used in Germany than was the case 25 years ago?—I cannot answer that. I have been very anxiously looking for statistics on this very point, as to the amount of money in this country.

13,527. You attach so much importance to monetary legislation, and to a certain disuse of silver, that I wish to put this question as to the existence of other causes, to elicit your view of the facts, but you cannot go any further, can you?—To some extent the increased demand for gold has caused an appreciation. I allow that to be so to some extent.

13,528. But still it is not a matter of monetary legislation?—To what proportion I cannot say.

13,529. You cannot give me any information as to the disuse of silver?—No, I cannot, but my argument is that the disuse of silver has been one of the causes of this increased demand for gold.

13,530. Has it been such a serious cause?—A very serious cause.

Statistics of circulation of gold and silver.

13,531. To what degree has it operated, and I ask the question, what has been the disuse of silver?—I cannot tell you. The Board of Trade do not issue any statistics as to the amount of money, of legal tender money, in this country. We have had so far to get what information we have from the United States.

13,532. The Mint, I believe, have published estimates at different times?—I have never been able to discover any figures published by our own Board of Trade as to what is the amount of legal tender per head of the population of this country.

Mr. J. F. L. Rolleston.

16 Mar. 1894.

13,533. I say that it is the business of the Treasury?—I did not know that.

13,534. Has your attention been drawn to a statement by Mr. Goschen in a speech which he made some years ago in which he gave various estimates as to the circulation of gold and silver?—I do not remember the speech that you allude to.

13,535. You are not aware that certain estimates are made by different authorities?—I have heard of estimates being made.

13,536. Is it possible to have anything made but an estimate?—I am not aware that they are official.

13,537. They are not official?—Of course not, the only official estimates we have come from the United States even with regard to our own currency.

13,538. Are not some of those estimates of the United States with regard to the United States very wild and misleading altogether as to the amount of gold and silver coin in circulation?—I believe Mr. Atkinson, who was the head of the Mint in the United States, was supposed to be one of the first statists of the world, and his figures I have read, and his figures give a considerable amount of reduction in this country in the ten years from 1882 to 1892.

13,539. But he cannot have known much about it, I think?—It has never been asserted that he was wrong.

13,540. But surely there are means of finding out these things, and they are not worth anything unless you know how the sum is done?—If Mr. Atkinson's figures are wrong we should like to know it.

13,541. Have you looked at how they are made up?—Mr. Atkinson's figures were 142,000,000 of gold in this country in 1882, and 102,000,000 in 1892.

13,542. But he did not tell you how he did the sum?—No, he did not.

13,543. Mr. Atkinson is not the Master of the Mint in the United States, I think that is not his position, is it?—I think he was.

13,544. I know Mr. Atkinson was a distinguished statistician of the United States, but he is a gentleman of Boston and not a Master of the Mint?—I suppose that he had all the information that could be afforded to him in order to form those estimates.

13,545. But is it not the case that the United States, I mean the currency authorities, continually put forward statements as to the amount of legal tender in the United States which are untrue, because they determine the amount of gold and silver coin and the amount of issue of paper and add them together?—That may be so. I could not say that it is not so. I do not know enough of the United States and the preparation of their statistics to say whether he is wrong or not.

Fall in prices.

13,546. (*Mr. Little.*) When you say that you desire stability of prices you do not mean a dead level of prices, but a comparative stability?—I mean a comparative stability.

13,547. Upon which a bargain can be based with a hope of carrying out the contract?—That is exactly what I do mean.

13,548. The continual fall of prices has made it impossible for a farmer to calculate the value of the land that he is hiring?—Quite impossible.

13,549. And rents that are fixed to-day which are perfectly reasonable rents may be made excessive rents by a continual fall?—Certainly.

13,550. There is no basis of value at the present time that can be really depended upon?—There is none.

13,551. And is not that one of the most serious features of the present depression?—It is one of the most serious features of the present depression.

13,552. You are an inspector under the Board of Agriculture, are you not?—Yes.

Leicestershire custom and Agricultural Holdings Act compared.

13,553. And president of the local branch of the Surveyors' Institution?—I was for three years, and now I am a member of the Council of the Surveyors' Institution.

13,554. You are fully acquainted with the relations of landlord and tenant, and with the agreements which are in force, and of the operation of the Agricultural Holdings Act?—Yes, I am.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,555. Has that Act been put into operation much in Leicestershire?—It is not a popular Act in Leicestershire. We have in Leicestershire a very good custom of the country which has worked very well and very fairly between landlord and tenant.

13,556. Did your Valuers' Associations after the passing of the Act meet and discuss the subject of allowances for improvements, and lay down a scale?—They did, and very fully.

13,557. Is that scale generally accepted as fair between landlord and tenant?—It is generally accepted as fair.

13,558. Is it adopted in preference to the Agricultural Holdings Act?—Yes.

13,559. Without putting the Act into operation?—It is.

13,560. Is it secured by the tenants' agreements?—The custom is held to secure it.

13,561. Even without an agreement?—Even without an agreement. The allowances are not usually stated in the agreement.

13,562. But it is not thought necessary to give notice of the claim under the Agricultural Holdings Act; the arbitration is not made under the Act, is it?—In many cases it is not.

13,563. In many cases it is simply made between the incoming tenant and the outgoing tenant, or between the landlord and the outgoing tenant?—It is usually made between the landlord and the outgoing tenant.

13,564. Do you think that there is in Leicestershire any real or substantial grievance in connexion with the Agricultural Holdings Act?—None whatever.

13,565. Have you any suggestions to make as to the practical working of the Act; could it be simplified in any way?—We have discussed it on various occasions, I do not myself see any practical use in an amendment of the Agricultural Holdings Act.

13,566. Is it not a necessary consequence of the interference between landlord and tenant that a complicated procedure must be gone through?—Yes, I think it is found most unfortunate, and it always works badly. When the notices are given by the tenants it usually follows that a counter notice is given by the landlord and friction arises which never did arise before. I think it is very unfortunate that these notices are required at all. With regard to the first schedule, the improvements under the Act as to which I believe there is some discussion now, as a matter of fact the tenants do not do these improvements at all.

13,567. Would you say that they were prevented from doing them from the fear of not getting compensation?—No.

Labourers' wages.

13,568. With regard to the cost of labour, I think you said that the present rate of wages is 15*s.* per week, the ordinary wages of an agricultural labourer?—16*s.* per week.

13,569. Have you seen Mr. Bear's report of the Melton Mowbray district?—Yes.

13,570. He reports the wages at 15*s.* per week?—The lowest rate of wages in the county would be in the Melton division.

13,571. Does not he state in the report that it is the lowest wage district in the country?—I think he does.

13,572. Therefore if a statement were made to this Commission that the report of the Labour Commission gives wages several shillings per week lower than they are, that would not be an accurate statement?—No.

13,573. The statement that Mr. Bear's report shows the wages several shillings lower than they are actually would be inaccurate?—It would.

13,574. And Mr. Bear's statement would be accurate that 15*s.* per week would be the wages in the Melton district which is lower than the average of the country?—Yes, I think it would.

Milk.

13,575. (*Mr. Chaplin.*) I think you said that milk selling was increasing in Leicestershire?—I did.

13,576. And also that the prices were beginning to fall?—Yes.

13,577. Do I gather from you, then, that there is no considerable opening in your view for agriculture in that direction in Leicestershire by increasing the sale of milk?—I do not think there is.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,578. You think it has reached its limits?—Yes.

13,579. Are great towns like Leicester amply supplied? Do you think that the children of the poor people get milk regularly?—I think so, they get the separated milk, too, from the dairies. They now take the creamy fat away and sell that milk at a very low rate.

13,580. So that if there was a large increase of the trade it would tend to make the whole of it unprofitable?—Yes, I think it would.

Claims and counter-claims.

13,581. One word with regard to the Agricultural Holdings Act. The difficulties arise generally when the notices of the counterclaims are given, do I understand that?—That is generally the cause of a difficulty, and bad feeling arises in the settlement of those things.

13,582. Is there any practical necessity for notices being required by law on either side?—That has been the subject of arbitration in various cases that I know of, and it has been held that there is no necessity for the notice.

13,583. But I want to ask your opinion as a gentleman of much practice and having great experience in a great many valuations as I understand. When there is a change of tenancy, is there any practical necessity for notices being given by the tenant on the one side or the landlord on the other? Can a fair compensation be made between the two without notice?—Perfectly well.

13,584. It is the case, I think, in many countries where compensation is given under custom that no notice is required by either side?—It is the case.

13,585. And you never found any practical difficulty?—The difficulty arises from the notice, the notice creates the difficulty.

13,586. There would be no difficulty in carrying out compensation as far as you are aware of if no notices were given at all?—None whatever.

Position of new tenants in Leicestershire.

13,587. I think you said that the new tenants in Leicestershire were in such a position now that they would make their own terms practically, on taking a farm?—Yes.

13,588. Does that apply to the terms of tenure as well as the rent?—Yes.

13,589. If a tenant wished to have a more liberal agreement on any changes under his system of tenure he would be able to get them?—Certainly; he practically makes his own terms.

13,590. Are many changes made in agreements now?—Oh, yes, the restrictions as to selling off produce have been very largely relaxed.

13,591. So that practically the tenant even in Leicestershire where distress is not so great as in other counties, is in a condition to make favourable terms?—Yes, he can take land on almost any terms that he chooses.

13,592. That is not an exaggerated statement at all?—Not at all providing, I should say, that the landlord has a good substantial man.

13,593. What you mean is that a tenant who would be held to be a desirable tenant by a landlord can take a farm in Leicestershire practically on his own terms?—That is what I mean.

Changes in currency and fall in prices.

13,594. You said the real cause of depression was the fall in prices and that there could be no real remedy unless by some means the fall was arrested?—That is my view.

13,595. And this applies, I assume, still more to other districts where the distress is greater than it does to Leicestershire?—Yes, it does.

13,596. You told us just now that you attribute the fall in prices to the monetary changes which occurred 20 years ago by legislation, and that fall should be arrested, in your opinion in one of three different ways: I want to ask you with regard to the first one, do you see any prospect of an increase at all, in the increase of gold proportionate to the increased demand for it?—I do not. I think that the world has been fully explored, and that placer or alluvial gold does not exist in the world to any extent.

13,597. You disapprove of an issue of irredeemable paper?—I do.

Mr. J. F. L. Rolleston.

16 Mar. 1894.

13,598. And the remedy I gather, from what you told me, that you look to, is the re-use of silver?—That seems to be the only possible remedy, for that fall of price which is the cause of the agricultural depression.

13,599. You were asked by Mr. Giffen whether there had not been periods of great changes of prices in former days, I would ask you this question in addition to that; there was a great change of prices I think at the time when the great gold discoveries were made?—A very great change.

13,600. There was then a great expansion of the currency?—Yes.

13,601. But that was accompanied by a period of almost unequalled prosperity?—Very great prosperity in industries of all kinds.

ncreased emand for old and isuse of lver.

13,602. Well, then, I understand you to contend that by the disuse of silver as legal tender money by many nations during the last 20 years there has been a great contraction in the volume of the money of the world?—Yes.

13,603. And that has been accompanied by a period of very great depression?—Yes; in consequence a fall in prices has taken place.

13,604. Mr. Giffen suggested to you just now that there might be other causes for the appreciation of gold besides the disuse of silver. I understand that you do not deny that, but you contend that the disuse of silver has had a very large effect in causing the appreciation of gold, and the fall of prices which has resulted from it?—Yes; and I meant to say further that the disuse of silver has created that unusual demand for gold to a great extent.

13,605. As to the details, and the precise amount by which silver has been used in any given country, such as Germany, you do not pretend that you are prepared to give figures of that kind?—No, I do not.

13,606. You were asked this question: Can stability of prices under any circumstances be permanently expected? What you aim at, I understand, is the greatest stability that is attainable?—That is what I mean.

13,607. And you hold, if I understood you rightly, that that could be attained by the joint use of gold and silver as legal tender money, to a greater degree than by the use of gold alone?—Certainly.

Rates.

13,608. (*Mr. Dalton*). I think you expressed the view that personal property should pay, as well as real, towards the poor and highway rates?—Yes.

13,609. You know that a considerable portion of the expense of the maintenance of the poor is now borne by Imperial subventions?—Yes.

13,610. And it is the case, is it not, that in your county, as well as in others, the rates levied for the relief of the poor have gone down?—Yes, I think that that is so.

13,611. Then with regard to the highway rates, in most counties now nearly the whole cost of the maintenance of the main roads is covered by the extra money that they receive under the Act of 1888?—A proportion is paid in that way.

13,612. Is not the amount the county gets, sufficient to cover nearly the whole; it would be an exceptional county if it is not?—I cannot answer that question.

13,613. Taking the remainder of the highways—the country lanes—these are necessary to maintain the value of the land, are they not?—Yes.

13,614. Do not they add very largely to the value, and would not the value of the land go down altogether, if they were not kept up?—It would.

13,615. What kind of personality do you think should contribute towards the highway rates?—What I rather meant was, that these roads are so largely used by people who pay nothing towards their maintenance. We find that particularly in our county, which is so largely occupied by renters, people who take large houses, with great fortunes derived from business. They entirely escape the payment of local rates, although they have got a large establishment of horses and carriages.

13,616. How do they escape the payment of the rates if they come and settle down in the county?—They take furnished houses as a rule, and those rates are always paid by the owner.

13,617. But the property pays it, and they are paying rates in their own district, I suppose?—In what way?

Mr. J. F. L. Rolleston.

16 Mar. 1894.

13,618. Would you bring them in more than now; how would you rate them; have you any plan for it?—No, I have no plan for it. I think that the people with large incomes, say from Funds and Consols, if they take a small house in the county, pay nothing.

13,619. They pay to the Imperial subventions?—They pay income tax, that is all; we have to pay income tax as well.

13,620. How would you rate them; you have got no plan for it?—No, unless they were rated in the same way as tithes are rated.

13,621. How could they be?—I have not considered any plan, but it seems to me to be fair.

Effect of closing ports to foreign produce.

13,622. (*Mr. Lambert.*) What would be the effect, presuming that the English ports were shut to foreign produce for 12 months?—Were closed altogether?

13,623. Yes, to foreign commodities?—I do not know how the people would be fed.

13,624. Would it result in a considerable rise in price?—Yes, considerable.

13,625. So, in the absence of foreign competition prices would then rise very considerably?—If no food stuffs came in from abroad for 12 months the price of food stuffs would very largely rise.

Contraction of currency.

13,626. What contraction do you estimate there is in the volume of currency as compared with 20 years ago?—The only information I have been able to get, as I explained when Mr. Giffen asked me, is that obtained from the statistics of Mr. Atkinson of the United States, and he gave it that the volume of money in this country, the legal tender money, was 142,000,000 in 1882 and 102,000,000 in 1892, showing a decrease of 40,000,000 in the 10 years.

13,627. Would your proposals allow silver to be coined to any amount?—The same as gold, to any amount.

Effect of bi-metallic currency.

13,628. What effect would that have upon the amount of silver that would be coined?—A very large amount of silver would be coined, I think, which would expand the volume of money and increase the amount of legal tender money.

13,629. Supposing I wanted to go to the bankers to cash a cheque, should I be compelled to take it in silver?—Yes, if they chose. The same thing happens in France exactly at the present moment. If I take in a cheque for 1,000 francs on the Bank of France they can pay me in silver if they choose.

13,630. Would not that be a considerable inconvenience?—I do not know that the notes of the Bank of France are at a discount on account of that: they are usually at a premium in foreign countries, and as good an instrument of credit as the Bank of England note.

13,631. (*Mr. Giffen.*) Does the Bank of France issue to customers in small change?—They could, if they chose, pay in silver. You asked me about the amount of money?

Amount of money per head of population.

13,632. Yes?—I do not know whether I know accurately, but I have information that the amount of money per head of the people in this country is about 51*s.* as compared with 8*l.* a head of the population in France, and 5*l.* a head in the United States of America, so you see that although we are supposed to be the country possessing a very large amount of the money of the world, the amount of money per head of our population is considerably less than in those two countries.

Balance money at banks available for currency.

13,633. You said just now that there were, in the "Times" Financial Report, three records broken, that the largest bank balance was now held?—Yes.

13,634. And the highest price for converted Consols?—Yes.

13,635. Would not that tend to show that there was a large amount of money—larger than there has ever been before—waiting to be used?—It would show, in my opinion, that trade being bad and risky in consequence of ever falling prices, the tendency is to withdraw money from trade and to put it out to interest, so that the very contraction of which I made complaint might be the cause of that large balance which is accumulated and visible.

13,636. But there is a large volume of money now waiting to be used?—There is a large balance at the

Mr. J. F. L. Rolleston. 16 Mar. 1894.

Bank, but I do not know where else there is a large volume of money than at the Bank of England—not in the other banks.

13,637. And this is available for use, if the people who own it wish to use it?—Yes, I think that that large balance is accounted for in the way that I said, that now the tendency is to withdraw money from trade. This money is not used for paying wages or exchanging products, and it is put on deposit; if, in the country bank it comes to the London agent, and the London agent deposits it with the Bank of England, so that all this available money is seen and visible.

13,638. But the largest amount of money that has ever been in the Bank of England is now ready for currency?—In the Bank of England.

13,639. (*Viscount Cobham.*) And in the other banks too?—I thought that the large balances of the other banks were deposited with the Bank of England.

13,640. (*Mr. Lambert.*) You would not like to say there was a larger amount of balance in other banks besides the Bank of England?—I would not like to say that.

Competition for farms.

13,641. You say there is a great demand for farms in Leicestershire?—Yes, in Leicestershire.

13,642. How many applicants do you say you would get for a decent farm of 120 acres?—10 or 12.

13,643. Did I understand you to suggest that the tenants could make their own terms?—Practically.

13,644. How are the farms let; I mean, is it by the higgling of the market?—I hardly understand your question.

The fixing of rent.

13,645. How is the rent fixed, and how are the other conditions fixed?—A certain amount is asked, and it is very seldom obtained, the man says I will not give more than so much.

13,646. But there are a dozen men who are in competition?—In the first instance, if an advertisement appeared for a farm of 120 acres, a dozen applications would be received; half of the applicants would, probably, come and look at it and not entertain the proposal; half of those left would not be suitable, and it would be left in the hands of two or three eligible applicants.

13,647. And those would compete one with another for the farm?—In the way of rent they would not compete.

13,648. But if the general conditions of tenancy were favourable, would they not?—They would not outbid each other for the sake of getting on the farm.

13,649. Has not that been the case?—No, I think not.

Tenants' capital.

13,650. Why do you say that some tenants have been ruined?—In the first instance, when prices began to go down and agriculture began to be bad it was supposed that every year would be a better one than the last one, and they paid more rent than they ought to have paid—considerably more.

13,651. A large amount of rent out of capital?—Yes, very large.

13,652. Does that mean that tenants have not so much capital now as formerly?—Nothing like it; it has completely melted away.

13,653. Owing to paying a great deal of rent out of capital?—In part.

Reduction of rents.

13,654. You say that a greater reduction is usually given to a new tenant than is given to the old?—I am sorry to say we do find that in practice. If a landlord lets his old tenant go he has to take less rent and spend more money for the new tenant than if he had kept the old tenant.

Leases and yearly agreements compared.

13,655. The system of yearly tenancies is now mostly in vogue?—Yes, I do not know of a lease anywhere.

13,656. That does not tend to encourage the expenditure of capital on the farm by a tenant if he has it to spend?—No, but beyond acts of husbandry and the ordinary matters of cultivation and feeding stuff; the tenant according to my experience never does execute improvements.

Diminution of capital and tenants' improvements.

13,657. You say that the number of labourers employed on the land is much reduced owing to the reluctance of farmers to effect improvements as formerly, what improvements do you mean?—When the man was making money by farming he would not object to doing draining; if a portion of a field wanted draining he would do it himself. Now, I do not know a case where a tenant lays a single drain pipe.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,658. Is that owing to the insecurity of the tenure?—Not at all, but owing to the reduction of the amount of his capital he has not the money to spend; he really has not it. He does not farm as well as he used to do.

13,659. He does not farm as well as formerly because he has lost a good deal of capital?—Exactly.

Railway rates.

13,660. Do you know of any case of preferential railway rates, I mean of railways giving better facilities or cheaper facilities for transit for foreign produce than they do to home produce?—Yes.

13,661. Could you give an instance?—Yes; take the carriage of American cheese from Liverpool to London. Leicestershire would be half way on the line between Liverpool and London. The rate from Leicester to London would be as great—I believe it is slightly in excess—as the rate would be from Liverpool to London although it is only half the distance. The preferential rate is given to American cheese.

13,662. Could you give any other instance. This is rather important in my own judgment?—I do not know of any other, I am afraid.

Bi-metallic currency.

13,663. (*Mr. Channing.*) I suppose in contemplating the free issue of silver, in addition to gold you would not contemplate it being used in bulk, but rather with the view of being a monetary basis for cheques and bank notes and other ways of transacting business?—Yes.

13,664. Your object is to extend the monetary basis?—Yes.

13,665. And you do not contemplate the physical inconvenience of a large amount of silver having to be handled?—You never experience it in France.

13,666. You believe it possible to obtain by international agreement some stable relation between the silver and the gold?—I think that legal enactments are absolutely omnipotent in maintaining the relative values of silver and gold.

Causes of fall in prices.

13,667. I suppose you recognise the other causes of the fall of prices; that is, of competition and the increase of means of communication and other causes of that kind have all lowered prices, as well as the cause to which you attribute the main fall?—Fractionally, I may say.

Small holdings in cheese-making districts.

13,668. I should like to ask what your experience is of the success of small holdings in the Melton district in connection with the dairy work and cheese work; do you think that the small holders have on the whole succeeded there or not?—I think they have in the cheese-making districts.

13,669. Are they men who have a large amount of capital in proportion to their acreage?—No, they would be men with a small amount of capital who work themselves and their families. The women of the family will principally do the cheese-making.

13,670. Have they found no difficulty in having these small holdings equipped by the landlords with the necessary buildings and so on?—That is always the difficulty, but I have not known any case where there has been any real difficulty about that where large farms have been divided up and the cottages have been converted, or something of that sort. The landlords have done what is necessary.

13,671. You say that the dairy work might be carried too far—that it might be over done. Would that remark apply to cheese-making too, or do you think there is room for further expansion?—Cheese-making is so slow a process that I do not think there is any likelihood of that being overdone. I think rather the milk selling might be overdone. As they are laid down to pasture of course farms are turned from plough farms into grazing farms.

Adulteration of milk.

13,672. Have you any opinion of the extent of fraud in using separated milk with other milk, and selling it as genuine and fresh milk?—No, I have not heard of it.

13,673. You have not heard any opinion as to the necessity of dealing with the matter?—No, I have not.

Diminution of tenants' capital and reductions of rent.

13,674. I understand from your answers to Mr. Lambert that the tenant's capital in a great many cases is being whittled down and reduced?—Very much.

Mr. J. F. L Rolleston.

16 Mar. 1894.

13,675. And that would have been partially prevented by a greater reduction of rent?—Partially.

13,676. How far do you consider the reductions of rent have been uniform and general in Leicestershire?—I think very general. The cases where reductions of rent have not been great are with small owners who own one farm perhaps, and perhaps their main income comes from that; of course they are very reluctant, and fight against a reduction of rent much more than the large landowner does.

13,677. Still the tenant's capital has been whittled away in this way, and rents have not been fully earned by the land?—Oh, no; in the first instance, particularly. I think now, as far as possible, the rents have been adjusted to meet the times, but in the first instance, I think that the tenants did pay more rent than they should have done.

Labourers' wages.

13,678. Can you give any particulars of the agricultural wages in Rutland, for instance, adjoining Leicestershire?—No; I do not think I can.

13,679. Are they considerably lower?—I think they would be the same as about Melton Mowbray, the 15*s.* that Mr. Bear speaks of in his report.

Reduction of rent of allotments.

13,680. With regard to the rents of allotments, are you aware that the general practice of landowners is not to make the same reduction to the allotment tenants as to farmers?—The allotments are usually let at more rent than the average rent of the farm from which they are taken, but the rent of allotments, as far as my experience goes, has considerably fallen of late years.

13,681. What I am asking is whether it is not usually in places like Northamptonshire, where there is a regular annual reduction to the tenant farmers that the reduction is not proportionately made to the allotment tenants; is that your experience?—I think that would be so.

13,682. It is stated by agents that the allotment tenants consume what they grow upon the holding, and therefore there is not the same need for a reduction?—Yes.

13,683. That is the view that the agents generally take of it?—I think the rents of allotments have not been reduced in the same proportion as the rents of farms.

13,684. I do not mean that. I mean where there is a reduction or remission made to the tenant farmer that the remission is not extended proportionately to the allotment holder?—No.

13,685. I thought you gave the Commission rather the other impression. I wanted to clear that up?—That is so. What I mean is that in cases where allotments are taken now the rent at which they are taken is very much less than it used to be when a new field was taken.

The Agricultural Holdings Act.

13,686. Less than it was five or 10 years ago?—Considerably less.

Official valuers.

13,687. That is a matter of notoriety. Now about the Agricultural Holdings Act. You are aware that it has been suggested that the procedure might be cheapened by taking a single referee selected from an official list of valuers; that is a suggestion which has been frequently made?—Yes.

13,688. You are connected with the Surveyors' Institute?—I am.

13,689. Is it probable, in your opinion, that the umpires who have been placed on their lists by the Land Commissioners in past years, especially those in connexion with the Surveyors' Institute, are competent men to deal with questions of that kind?—Very much so, I should say.

13,690. Do you think that you could for each county select a list of competent men of that kind?—I think it would work very well in practice, but I think there would be a very great feeling against it. The tenants have always liked to choose their own men to act for them. I always find that when I name one person he is generally resisted.

13,691. As a matter of fact, would not men selected in this way by the County Council and the Board of Agriculture, and perhaps in connection with the Surveyors' Institute, be more competent than voluntary valuers scattered about in the counties?—I think perhaps they would.

Payment of rent in kind and currency compared.

13,692. (*Captain Owen-Thomas.*) Supposing that 20 years ago farmers had agreed with their landlords to pay rent in kind, and that they had continued up to the present time under that agreement, would they have felt the depression as they do now; that is to say, if they had agreed to pay so many quarters of corn and so many bullocks and so many sheep, and to hand them over to the landlord, instead of a money payment, would they have felt the depression the same as now?—No, but rent is not the greatest factor in the depression. I believe in some counties if land were let at no rent at all the occupier could not make it answer; in fact, I am sure that that is the case. In such a county as Essex, for instance, and parts of Bedfordshire, I find we cannot get any rent on some of the plough farms there.

13,693. (*Chairman.*) Do you mean on an average of years or only last year?—On an average of years. Of course it would have been much better to pay in wheat than in gold; they would be much better off, because gold has very much risen in value and wheat has very much fallen in value. Of course they would have been better off to that extent.

13,694. (*Captain Owen-Thomas.*) It would be better for the farmer at the present day to pay in kind than in money in the case of land that does not pay rent?—Yes, only that the rent is constantly being re-adjusted; it amounts to the same thing. I understand you mean that if 20 years ago a farmer had agreed to pay so many quarters of wheat to his landlord he would be paying the same amount in quarters of wheat to-day?

13,695. Yes?—But, as it was, he agreed to pay so much gold, and as a consequence of gold having risen he is paying much less gold to-day.

13,696. Would it be possible to arrange to pay rent in kind?—No, I do not think so. I think that it is going back to barter, which does not seem to be popular at all; that would be retrocession.

Currency and fluctuations in prices.

13,697. (*Mr. Everett.*) You have evidently by your evidence given a good deal of attention to matters of currency, and your reading shortly is, I take it, that there is a very intimate connection between the general level of prices and the supply of money, the greater abundance or less abundance of money in supply at the time?—A very intimate connection.

13,698. Should I be going too far in saying that it is the main factor in the higher or lower general level of prices?—In my opinion it is the main factor.

13,699. That great changes in price over a period of a good many years, upwards or downwards, have almost always proceeded from that root?—I should say always.

13,700. You are aware probably that there was a great expansion in the supply of money after the discovery of America?—Yes.

13,701. And that was followed by a very great rise in price, was it not, all round?—Prices rose, I believe, four hundredfold.

13,702. Not so much; but there was a considerable rise established, and the era of industrial prosperity was greater than had ever been known before?—In the 15th century a bullock could be purchased for about 15*s.*, so small and valuable was the amount of money.

13,703. You were asked about the stability of prices; I do not know whether you were aware of it—was the supply of gold and silver comparatively stable during the last century, the 18th century?—Yes, I believe it was.

13,704. And were the prices through the whole of that century, on the whole, fairly stable?—Yes, they were.

13,705. (*Mr. Giffen.*) Throughout the whole of the century?—I think so, so far as I know.

13,706. (*Mr. Everett.*) I do not know whether you have read the Report of the Committee that sat on agricultural distress, and which reported in July 1822. I see they say that the price of wheat, according to the Eton College Tables, whether taken in periods of 10 or 50 years, upon the average of the 150 years before 1797, had not exceeded 46*s.* per quarter?—They ranged near about that for an average of 150 years.

13,707. From 1797 to 1819 we came to a period of much higher prices, I think?—Yes.

13,708. 1797 was the period when inconvertible paper money took the place of gold and silver?—Yes.

13,709. We hung up our metallic standard and got a paper on printing-press standard, and as that was issued

Mr. J. F. L. Rolleston. 16 Mar. 1894.

abundantly we got to a much higher level of prices?—Yes.

13,710. And when we returned to the metallic standard in 1819, was that attended by any great change of prices?—By a great fall of prices, and great agricultural depression.

The Corn Laws, 1815.

13,711. The Corn Laws were imposed, I think, in 1815?—Yes.

13,712. Did the Corn Laws imposed in 1815 override the fall in prices?—No.

13,713. You are not cognisant of that. Though the Corn Laws were imposed in 1815, in the period of 30 years following 1819, there was a great descent in the general level of prices, was there not?—Yes. The Corn Laws had no effect, it was the change in the monetary standard.

Low prices.

13,714. And the years following 1819 were a period of low prices in comparison with the previous period?—Yes.

13,715. I believe there is a general idea at the present time that low prices are very beneficial to a country, is there not?—I believe there is.

13,716. Did the country find them beneficial, do you happen to know, between 1830 and 1840?—No, they did not.

13,717. Do you know the history of Leicester and the parishes round there, and the depth to which wages fell during those disastrous years, and the height to which poor rates rose?—I have heard of it.

13,718. The low prices did not bring a great blessing to the nation?—No.

Effect of gold discoveries and free trade on prices.

13,719. Then we come to the period of the gold discoveries, beginning in 1848 or 1849; they were followed by rising prices?—They were; and great prosperity.

13,720. Instead of the rising prices cursing the nation they blessed the nation?—It was a very great blessing.

13,721. And free trade came in about the same time as the gold discoveries began?—A few years before 1846, I think it was.

13,722. And we had free importation of foreign corn, and goods of nearly all kinds?—The whole time that prices were rising.

13,723. And yet in spite of foreign competition prices rather rose than fell?—That is so.

13,724. And notwithstanding that they rose the country prospered very much?—Very much.

Effect of legislation against silver.

13,725. In this country legislation against silver began in 1816?—Yes.

13,726. When we changed the standard of the country, which had been silver, to gold?—Lord Liverpool's ministry affected that change.

13,727. But no considerable effect followed that for many years, did it?—There was no disruption of the ratio at all; it was only fractional. Although silver was demonetised in that year, it made no change in the relative values of gold and silver.

Demonetisation of silver by Latin Union.

13,728. Gold and silver were linked together by the open mints of other countries?—It was a legal enactment of the Latin Union.

13,729. (*Mr. Giffen.*) When did the Latin Union come into existence?—About the beginning of the century.

13,730. Would you be surprised to know that it was not until 1860?—No.

13,731. (*Mr. Everett.*) You referred to the French law; not the arrangement under the Latin Union?—The French law, under which silver and gold were taken and coined in France.

13,732. Then beginning shortly after the Franco-Prussian war, I think Germany first, and then the United States, and then France, Italy, Austria, and lately India, have legislated against silver?—Yes, they have legislated to destroy the monetary value of silver.

13,733. Did this country appoint a Committee of the House of Commons in 1876, over which Mr. Goschen presided, to inquire into the cause of the divergence between gold and silver then beginning to show itself?—Yes.

13,734. Did that Committee report that if effect should be given to the policy of substituting gold for silver, and displacing silver from the place it had occupied over at least as large an area as gold, that no possible limit could be assigned to the further change in value which would inevitably take place?—I have understood so.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,735. This series of enactments against silver were in the nature of protection to gold, were they not?—Certainly.

13,736. They were favouring the gold metal over the other?—Favouring the gold owner, the creditor, against the debtor and producer.

13,737. And giving an artificial value to the protected metal?—Yes, favouring the wealthy classes as against the many poorer classes.

13,738. Did that injure the producers of commodities generally who had to buy their gold with their commodities?—Yes, it did.

13,739. Did that very seriously interfere with contracts, with mortgages and leases?—Very seriously.

13,740. In effect, did it rob and ruin wholesale by law?—Yes, it did; it ruined debtors very largely.

13,741. And the cause which ruined them was not a natural cause, but a change of legislation?—Yes.

13,742. In one country after another that was the case?—It was a work of human law.

13,743. You desire, I understand, to see a stable standard?—Yes.

13,744. The most stable that can be obtained?—Yes.

13,745. And which is the most stable of the two of the most precious metals, silver or gold?—Silver, certainly.

13,746. For the last 20 years has there been any serious change in the general level of prices in silver standard countries?—In India the prices have been fairly stable.

13,747. Would you say then that the movement between the metals, has been in the gold and not in the silver?—I say that gold has risen, not that silver has fallen, as measured by commodities.

13,748. Are you aware that it is a current idea that gold in this country is absolutely stable and immovable in value?—I am aware that there is an opinion of that kind, which is absolutely erroneous, as it seems to me—

13,749. And you are an advocate, to use a figurative term, of re-marrying the two precious metals?—I am.

13,750. And in that way, judging from the experience of the past, you anticipate an increased stability of the standard?—Certainly.

13,751. Are you aware that the Gold and Silver Commission reported that during the 200 years previous to 1873, in which period the two metals were kept married through open mints, there was no material change of value between the two metals?—I am.

13,752. And also that the probability was, that if a group of nations agreed again to re-marry them, they would continue as one money?—Yes.

13,753. Was money of either of the two precious metals a good thing?—Certainly.

13,754. A thing very acceptable to everybody?—A most necessary thing.

13,755. Do you know of any experience of any individual or any country having had too much either of silver or gold?—I have never heard of it.

13,756. Since mints have been closed in different countries against silver, has the tendency to protection increased or decreased?—It has increased very largely.

13,757. The closing of the mints to one metal has encouraged the putting of duties on imports in France?—In France and Germany and the United States, and it is causing an agitation in favour of protection in this country.

13,758. Are you aware that we ourselves are proposing to resort to protection in India, at least to import duties in India, this free trade Government?—I am.

Free mints and free ports.

13,759. Do free mints and free ports go particularly well together?—Yes, they do.

13,760. The protection of one of the precious metals leads to other protections to counterbalance it?—The protection of one of the precious metals is a protection of the richer classes against the poorer.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,761. You were asked by Mr. Lambert with regard to the accumulation of money at the bank; is it the fact that when industry is unprofitable, money always tends to accumulate at the centre?—Always; money which is not used in paying wages is withdrawn and hoarded in consequence of the fall in prices.

13,762. People are afraid to use the money in industry and in the purchase of property?—Yes.

13,763. It is less risky to hoard the money than to use it in investments and in industry?—Yes; and yet that hoarded money is not unproductive. Money increases in purchase power while it is remaining idle. I think that the last blow, in my opinion, to the use of silver was the stopping of the free coinage of silver in India, which was necessarily followed by the repeal of the Sherman Act in the United States; those two recent blows to silver have been followed by the lowest level of wholesale prices ever known.

Particulars of farms.

13,764. (*Chairman.*) What has been your own experience in your own farm during the last few years; have you made a profit?—No. I have lost every year by it.

13,765. In respect of the 1,000 acres which you manage, what have you done there?—We lose very considerably; we cannot even make a rent. Our object is to keep it in an efficient state, and to work it so as to get some one to take it.

13,766. Has it been mainly land left in bad condition by the tenants?—No; it was in fairly good condition. I have 1,100 acres in one place in the arable part of Bedfordshire, but I have just let a large portion of this.

Statistics of Leicestershire.

13,767. Have you looked at the return which was prepared by Mr. Sparkes for this Commission?—Yes.

13,768. It apparently consists of a considerable number of details which he has gathered from circulars which he sent out to every parish in Leicestershire?—Yes.

13,769. Returns appear to have been gathered from 1,400 different farms, and he has tabulated these different returns into six divisions, and he makes out the result that the average rent per acre obtained at the present time is 1*l.* 8*s.* 11*d.*, and the average rent 10 years ago was 1*l.* 16*s.* 7*d.*; that appears to show a reduction of rent of 7*s.* 8*d.*, making an average of 21·29 per cent.?—Yes.

13,770. That seems a less reduction than you have estimated yourself?—I think that the reduction is more than that.

13,771. This apparently is the result of actual figures?—Yes; but I think he has not had replies to a great many of his applications.

13,772. It is apparently the result of 1,400 returns?—Yes.

13,773. That seems a rather large number from which to give an average?—There would be a tendency of those who have not been reduced to send returns while those who had all they wanted would take no notice of it.

13,774. Then he gives the average rates at 2*s.* 2*d.* in the pound?—Yes; in four divisions of Leicestershire.

13,775. That is an average of six divisions; they vary from 2*s.* 7*d.* in the pound to 1*s.* 9*d.* in the pound in the Melton division?—Yes; the Melton division.

13,776. 2*s.* 7*d.* in Hinckley and 1*s.* 9*d.* in the Melton division?—Yes.

13,777. The average for the whole county is 2*s.* 2*d.*?—I should have thought that was hardly high enough.

13,778. It seems a low rate?—In the next parish where I live it is between 5*s.* and 6*s.*

13,779. Is that an urban district?—No; it is a village of between 5,000 and 6,000 people.

13,780. Apparently it is rather the purely rural district which he has taken?—Yes.

Fluctuation of prices and inconvertible paper.

13,781. (*Mr. Giffen.*) You stated that the rise of prices at the beginning of the century reduced the issue of inconvertible paper?—Yes.

13,782. At what date did the issue of inconvertible paper begin?—At the end of the last century.

Mr. J. F. L. Rolleston. 16 Mar. 1894.

13,783. And when did it begin to be in excess?—In excess of what?

13,784. In excess so that it fell to a discount compared with gold?—I cannot say.

13,785. Did not the rise of prices take place before the paper came to a discount at all and when there was no over issue?—I am not aware that they did.

Closing of the Mint to silver.

13,786. The other question I wish to ask you is about what happened in 1816. You spoke of it as if that was the date when the change in the standard took place and silver ceased to be a standard money?—I believe that was so.

13,787. Is it not the case that practically for more than 100 years before 1816 there had been no coinage of silver in the country?—I am not aware of it.

13,788. Is it not the case?—I do not think so.

13,789. I believe it is the case. I am asking you whether you know the facts at all?—I believe the Mint was open to silver up to that time.

13,790. Is it not the case that the Mint was nominally open to silver, but that no silver came to the Mint?—I cannot say.

13,791. Was there not a law towards the end of the last century prohibiting silver being brought to the Mint?—I am not aware of that.

Changes in relative value of gold and silver.

13,792. Then do you say there has been no change in the relative value of gold and silver between 1803 and 1873, and that that was due to the Bi-metallic Law in France?—Yes; for a period of about 70 years antecedent to 1873 there was only a fractional change in the ratio.

13,793. Was there not a similar period in the 17th century from 1650 when you had a great fall in the relative value of gold and silver although every country in the world practised bi-metallism?—I do not know about the 17th century.

13,794. Was not that great change in the relative value of gold and silver in the 17th century the reason why the English economists in the 17th century like Sir William Petty and Locke at the end of the 17th century came to the conclusion that bi-metallism was impossible because you never had a stable ratio between gold and silver?—I am not aware of that. The bi-metallists of the 19th century came to a different conclusion.

13,795. But you have not heard of that?—I am not familiar with that.

13,796. (*Mr. Everett.*) In the time of Locke and Petty and the great writers on currency at that period, was it not the fact that gold and silver were both full legal tender in England, and that the mints were open to the coinage of both, and a mint value fixed as between the gold and silver?—That is my impression.

13,797. And they never suggested closing the mints to either metal, or that any alteration should be made other than in the ratio?—I never heard of it.

Fall in prices of agricultural produce.

13,798. (*Mr. Little.*) Might I ask one question on Mr. Sparkes' figures which you have referred to; would you look at page 9? You will find there that a calculation is given of the fall of prices of wool, beef, and mutton. The decrease in the price of wool is given at 32·12, that of beef 24·15, and that of mutton 22·55. Those are added altogether, and the table is divided by 3 to give the average loss of 29·60?—Yes.

13,799. That would be correct if wool, beef, and mutton were produced in the same quantities?—Yes.

13,800. But would that be the case that they would be produced in the same quantities?—No.

13,801. Wool, which has decreased 32 per cent., is only a small part of the gross production?—It is only a small part of the gross production.

13,802. And therefore the average arrived at is deceptive; it is not perfectly accurate?—Quite so.

The witness withdrew.

Hon. E. G. Strutt. — 16 Mar. 1894.

The Hon. E. G. Strutt called and examined.

13,803. (*Chairman.*) You are acting as agent for your brother, Lord Rayleigh, of his farm property in Essex, are you not?—Yes.

Land in hand.

13,804. And you have a very large amount of land in hand?—About 4,000 acres.

13,805. Besides that do you farm a considerable amount for other people?—Yes. I farm about 1,500 acres for myself, about 1,500 acres for Guy's Hospital, and 500 or 600 acres for other people.

13,806. Besides the 4,000 acres that you have in hand for your brother?—Yes.

13,807. Do you rent the 1,500 acres that you farm yourself?—Yes.

13,808. And in respect of your brother's property has that 4,000 acres gradually come into hand?—Yes, year by year.

13,809. From the tenants giving up?—Yes.

13,810. Is that the greater portion of his property?—About half of it is greater; the smaller half.

13,811. How long have you had it in hand?—About eight or nine years, the bulk of it.

13,812. How had it turned out as an operation?—This last year it had been a great failure. Taking the last seven years, I find after paying a moderate rent there has been about 6 per cent. on the capital invested of about 32,000*l.*; there is no charge for management there, the charge for management has to come out of that.

13,813. But you say that you have charged yourself with rent?—Yes, rent is charged; a moderate rent.

13,814. At what rate?—It varies on different farms, but I think the average is about 17*s.* or 18*s.* per acre after paying tithe.

13,815. The landlord paying the tithe?—Yes.

13,816. What do the tithes come to?—The tithes are roughly about 4*s.* to 5*s.* an acre.

13,817. Therefore the landlord only gets 14*s.*?—Yes.

13,818. But, including the tithe, it is about 18*s.* per acre?—Yes.

Particulars of farms.

13,819. What do you pay in respect of the 1,500 acres which you farm for yourself?—I do not do so well for myself.

13,820. What rent do you pay?—For a farm of 265 acres we pay a rent of 15*l.* and the tithe.

13,821. But in respect of the others what do you pay?—For another farm of 350 acres we pay a rent of 200*l.* and no tithe; the landlord pays the tithe. For another farm of 350 acres we pay a rent of about 28*s.* per acre, the landlord paying the tithe; that is all good grass land.

13,822. And in the case of Guy's Hospital, what has happened there?—The result of the farming of the Guy's Hospital land for the nine years that it has been in hand is that there is a total loss of 400*l.*, no interest upon the capital employed of 13,000*l.*, and no rent was paid for two years, and in the other seven years rent was paid.

13,823. At what rate?—An average rate of about 17*s.* per acre, tithe free.

13,824. Is that nine years including the last?—Yes; that includes this last year.

13,825. And on this last year there has been a heavy loss?—Yes, the result would look better if the last six years were taken instead of the nine years; the first three years were very bad.

13,826. Was that because you took the land in bad condition?—It was in very bad condition.

13,827. Therefore you had to work it up before you began to make it pay?—Yes; it was in very bad order.

13,828. What course have you adopted to bring about this good result on your brothers' farms?—We went in seven or eight years ago for keeping cows.

Sale of milk.

13,829. And you supplied milk to London?—We supplied milk to London.

13,830. And that on the whole has paid well?—It has paid better than any other kind of stock-keeping.

Wheat and barley growing.

13,831. Do you continue to grow corn and wheat?—We grow wheat and barley, but we shall not grow much more wheat if the present prices continue, we shall grow a little for the sake of the straw.

16 Mar. 1894.

13,832. But you have laid down a great deal of the land to grass, have you not?—Yes, I suppose during the last three or four years we have laid down between 600 and 700 acres in grass.

Land laid down to grass.

13,833–4. (*Viscount Cobham.*) Do you sell off much produce besides milk?—We sell a great deal of wheat and barley.

13,835. (*Chairman.*) Has the price of milk been maintained?—Last winter, owing to the drought, the price of milk has been higher than for some time. That was owing to the temporary effects of the drought.

Price of milk.

13,836. But apart from that has it been maintained?—It has rather gone down than otherwise, and this year it has a tendency still to fall because the farmers have found it pay better than other things, and the milk buyers have offered lower prices for the milk contracts than they have done before.

13,837. Have the farmers done much the same in connexion with milk?—A great many Scotch farmers have come into Essex; the Scotch farmers have gone in for it, but the old fashioned Essex farmer has not.

13,838. Do you attribute the success over your neighbours to the large amount of land you have got in hand?—It enables us to work cheaper than it otherwise would be done.

Cost of working large areas.

13,839. You mean working on such a large scale?—Yes; I fancy so.

13,840. Are there any other properties in Essex dealt with in the same way?—No, I do not know of any.

13,841. Have you found that you can let any of the land on your brother's estate?—We can let the best of his land that he has got now, but we have got into the swing of this milk business, and we continue it.

Letting of land.

13,842. What could you let the best land at?—Perhaps 1*l.* an acre; the landlord paying the tithe. That would be for the best of it.

13,843. Is the land very stiff?—None of his land is stiff, it is not the three-horse land. It is fairly mixed soil, clay sub-soil.

13,844. Can it be laid down to grass?—It does not take to grass very well; it grows moderate grass.

Laying land down to grass.

13,845. Have you experience also of some of the very stiff land?—Some of the farms we farm ourselves are very stiff land.

13,846. It is perhaps due to that?—It is quite hopeless at the present price of corn to continue to grow it. The only alternative is to lay it down to grass.

13,847. What kind of grass would that grow?—Very moderate; but still, if treated well it might be worth a little laid down to grass.

13,848. What would you say it would be worth?—After a liberal treatment it might be worth 10*s.* per acre.

13,849. It would take some time and some expenditure to bring it to that?—Yes; the first year or so, I think it does pretty well, but three or four years after that it does badly, and then it begins to mend if you treat it well.

13,850. And you think it would be capable of producing a rent of 15*s.* per acre?—That includes tithe; the landlord paying the tithe, it is only 10*s.* really to the landlord.

13,851. Tithe must be very heavy in Essex?—Yes; it runs to about 5*s.*

Tithe.

13,852. In the case of your land, what has resulted in the way of assessment to the poor rate?—The assessments to the poor rate are a great deal higher than the rental of the land at this moment in a great many of the unions of Essex. I gave a statement to Mr. Hunter Pringle, of all the farms which we had to deal with in the unions of Malden, Dunmow, and Chelmsford. I took every farm, not only those which suited my case, but every farm we had in hand. In all there was some increase; some of it small, but some very large.

Assessment to poor rate.

13,853. Has application been made to reduce the assessment?—I have appealed for about half the farms to the Assessment Committee and failed, and in one case I went to a higher tribunal, the Quarter Sessions, and I was beaten there, and had to pay 160*l.* costs.

. E. G. rutt. ar. 1894.

13,854. Which case was that?—That was the case of Number 4 in Mr. Pringle's list. It was a farm of 345 acres, and the rent is 130*l.*, and the assessment is 238*l.*, and I got beaten; why I got beaten I cannot tell you.

13,855. What was contended on the other side?—It was contended that the valuation was fair compared with other farms. That was the only argument used. It was not contended that the farm was worth 238*l.*, but it was contended that other people were paying in the same sort of proportion, and therefore there was no reason for us to complain.

13,856. (*Viscount Cobham.*) And the whole was agricultural land?—Not the whole of it, but in the Union there is a great deal of property besides agricultural property.

13,857. (*Chairman.*) Would you say generally in these parishes that the assessment is higher than the rent?—I should say, in these particular unions nearly all the purely agricultural land the assessment is higher than the rent. In these 15 farms it comes out 50 per cent. higher than the rent.

13,858. And you failed altogether to get the assessment reduced?—Yes, I failed; very much so.

13,859. The result is that the rate in the pound is apparently very high?—The average rate in the pound, on the 15 farms is 6*s.* 8*d.*

13,860. In the case of farm number 1 the assessment is 52*l.* more than the rent?—Yes, that is an extreme case.

13,861. And the rate in the pound is 24*s.*?—Yes, that is a farm we have at 15*l.* a year rent.

13,862. What is the acreage?—265 acres. That 15*l.* is the actual rent. There is no estimate about that. It is a most extreme case.

13,863. Is that a farm in bad condition?—No, it was not let cheaply for that reason; it is simply a heavy land farm, and no one would have it. It adjoins another farm of ours, or I do not suppose that we should have taken it.

spects heavy ls with ling ces.

13,864. What are your views as to the future of this district?—I think the heavy land of the district is hopeless if the present prices continue. It is all a question of price of farm produce.

13,865. I suppose all the farms have suffered during the last year on account of the extremely bad seasons?—No doubt; last year was specially bad.

13,866. I suppose the hot weather of last year has done good to the land?—As far as the heavy land is concerned, it is in very good order.

13,867. But the very low prices of wheat makes it difficult to know what to do with it?—You cannot possibly grow wheat at the present prices.

13,868. Can you substitute any other corn for wheat?—Then the other corn comes down equally.

13,869. Still the fall is not so heavy as in the case of wheat?—Not quite.

13,870. Will it grow barley and oats?—It will grow barley and oats, but it will grow wheat best. The fall in barley, of course, has been very great. At the present moment they will not buy Essex barley at all.

rice of dder.

13,871. Do you buy much food for your cows?—Yes, on farms where cows are kept, there is an outlay of nearly 3*l.* an acre in bought food.

13,872. I suppose you have bought that at a great advantage with the low prices?—Yes, we are able to do so, but not all cow food, because brewers' grains, which are one of the chief products used, are very dear.

13,873. Are they exceptionally dear?—Exceptionally dear this year.

13,874. What is that due to?—Owing to the scarcity of food this winter. Brewers' grains are a bulky food and any food that is used as a substitute for hay and straw is dearer this year than the more condensed foods.

13,875. That is exceptional and due to this year only, generally speaking you have bought the food for cows at low prices, have you not?—Cheap, no doubt.

tise in rices only emedy.

13,876. Have you any recommendations to make to the Commission?—No, I want better prices, that is the only thing that will make things right with us. Of course some small things, such as the relief of rates, charging highway rates not on land and house property only; and something might be done by bringing more pressure upon the railway companies to cheapen the rates.

Hon. E. G. Strutt.

16 Mar. 1894.

13,877. But those do not amount to very much compared with the main difficulty, and that is the price?—That is so.

13,878. Still in your own case there seems a considerable margin of rent which you charge yourself from which to draw in the future?—Yes, rent does not do more than pay the interest on the buildings and drainage.

13,879. On buildings erected within recent times?—Within the last 30 years.

13,880. Then the true rent of the land has disappeared, practically?—Practically, except in favoured situations.

13,881. (*Viscount Cobham.*) If you charged management on the usual professional scale it would pretty well eat up half of the profits?—I think it would, it would bring it to nearly half.

System of dairying.

13,882. What number of cows do you keep?—About 500 shorthorn cows, and a few Jerseys, not many.

13,883. Do you keep any pure shorthorns?—Anything that will give milk.

13,884. Have you any special system of feeding them?—No, we do not feed them scientifically particularly. Everything is measured and weighed out and a certain limited quantity is given them every week, and the milk is measured once a week from each cow and an account is kept of what each cow gives.

Sale of milk.

13,885–6. Then as to the sale of milk, is it sold to a contractor or does any go to market?—It is all sold to contractors.

13,887. You are quite independent of the London markets?—It is sold for the year, or six months, or something of that sort.

Railway rates on milk.

13,888. I presume that owing to the large amount of milk which you send, you get a favourable railway rate?—We do not get anything special, it is the same as other people get.

13,889. The same as other people sending a large amount, I suppose?—The same as other people sending a small amount, we have no advantage over other people, we never could get any.

Scotch farmers in Essex.

13,890 As to the Scotch farmers, have they introduced dairy farming largely into Essex?—Yes, they are the chief cause of Essex becoming a dairy county.

13,891. How are they doing?—I think, on the whole—I have not personally much acquaintance with them—but on the whole the majority of them, I think, are making ends meet—just to keep things going. They are very careful, they spend nothing; they go on the principle of spending nothing.

13,892. They lay the land down to grass where they can?—Yes, they do the arable rather badly, but the grass pretty well, and their expenditure on labour as compared with the Essex farmer is about one-third.

13,893. Have they mostly remained?—The greater part of them.

13,894. Are they doing better than the Essex farmers?—Yes, undoubtedly. The old-fashioned Essex farmer, except an exceptional man, is gradually being ruined. The exceptional man has been able to keep on in the old way by his being able to do the best with everything, but the ordinary man is being gradually ruined.

13,895. He finds it difficult to adapt himself to new methods?—Yes.

13,896. (*Chairman.*) Are there exceptional cases of individuals making a profit?—I suppose certain individuals do better, but the same individuals in any other business would make larger profits. There are certain people who can always make profits.

Advantages of tenant farmer and occupying owner compared.

13,897. (*Viscount Cobham.*) You have the advantage of the ordinary run of farmers in the price you give for the various articles you have to buy?—I think in many ways we can manage quite as well as the ordinary farmer, rather better.

13,898. You buy on a larger scale, and your credit being better probably you pay less on that account?—Perhaps we do. The supervision of an ordinary farmer is much better than ours, and in the case of labour and things of that sort probably he is able to look into the details more.

Hon. E. G. Strutt.
16 Mar. 1894.

13,899. (*Mr. Whitehead.*) On the farm of 15*l.* rent what was the assessment?—67*l.*

13,900. Your Assessment Committee does not regard rent as the basis of assessment then?—Quite so.

Assessment to rates.

13,901. Why do they do that, because the rates would be so enormously high if they did not?—They say, Where are the rates to come from?

13,902. How do you make 8*s.* 6*d.* in the pound rate?—It is an error; it should be 6*s.* 8*d.* The way I got these figures was this: I took the rating in the pound upon each of those 15 farms, and I added them together, and divided by 15.

13,903. Did you take it on the urban, or was it entirely rural?—Entirely rural; there is no School Board in any of those districts.

13,904. And that makes it exceptionally high?—It is not that the rates are high, but the assessment is high. It is the assessment being so much higher than the value.

13,905. Is the tithe deducted from the assessment?—Yes, the tithe is rated by itself.

Large and small farmers compared

13,906. Have you small farms under you at all?—Yes.

13,907. Do you find that the tenants of those do better than the tenants of the larger ones?—I think they do.

13,908. Could you say why. Do they adopt a different system of cultivation?—On the whole they are able to do better.

13,909. Is it because they work themselves, and their families also?—I should think it was, and they are able to do a good deal themselves, and they work with the men, and see more of it.

13,910. Do they grow vegetables and fruit, or any small things of that kind?—Hardly any of them.

13,911. Still they do better?—Yes.

13,912. Of what size would such farms be?—These farms would be rather under 100 acres than over.

13,913. And they would keep cows on those smaller farms?—No, not much.

13,914. So that the cowing industry would not account for the greater success?—No.

13,915. It would only be because of the labour of the tenant and his family?—I should think so; and better looking after it.

Scotch farms in Essex.

13,916. (*Mr. Gilmour.*) When these Scotch farmers took their farms, did they get freedom as to the rotation, or working of the farm?—I think everybody in Essex is practically allowed to farm as he likes.

13,917. Was that a change when the bad times came on?—I think there has been more liberality in covenants since the bad times commenced, no doubt.

13,918. Then their neighbours have, to a large extent, copied the mode of the Scotch farmers?—I do not think so. The Essex farmers think that they farm very badly; the majority of them.

13,919. Is the Essex farmer rather inclined to continue on in his own way?—Yes.

13,920. Although with the changes he sees that his Scotch neighbours are paying their way?—He says that the Scotch farmer is ruining the land.

13,921. And is that idea likely to predominate over his own personal advantage to do pretty well for himself, rather than for his farm?—The average man does not believe much in change. He says that he tries the other things, and nothing comes of them.

Assessment to rates.

13,922. (*Mr. Dalton.*) This farm, where the rent is 15*l.*, and the assessment is 67*l.*, contains 265 acres?—Yes.

13,923. Then the rent is about 1*s.* per acre?—Yes.

Hon. E. G. Strutt
16 Mar. 14.

13,924. And the assessment 5*s.* per acre?—Yes, roughly.

13,925. Would 5*s.* an acre be a higher rent for that land than the other land in the parish is paying?—About the same.

13,926. Is not that the reason that the Assessment Committee have put them at the same assessment? They are bound to assume a hypothetical tenant who would take that farm?—This is an actual rent paid as a tenant, and has been going on for three or four years.

13,927. But the rest of the land would let at 5*s.* per acre?—Yes.

13,928. And therefore they put that assessment on these?—Each farm is separate; that is what they would maintain, but as a matter of fact, one farm is worth 5*s.*, or 10*s.*, or 15*s.*, and another only 1*s.*

13,929. But that would be their ground for assessing?—Well, I do not know; they would say that rates must come from somewhere.

13,930. But if it was not let at all, they would not charge rates for it, I suppose?—If it was in the landlord's hands they would.

13,931. Has that been a profitable farm at all, when taken at a rent of 1*s.* per acre?—No; it has been a loss.

13,932. Has that been the case with all the other ones?—Not every one of them in this list. I should think that there has been more loss on the larger number. This is all the worst land. But this list includes every farm in this union that I have to do with, every farm, except one farm, which has been hired on a lease of seven years, and it does not apply to the present situation.

Constitution of Assessment Committee.

13,933. Of whom did the assessment committee of this union mainly consist; are they men representing the urban district, or the rural districts?—They are mixed; fair representatives of rural and urban.

13,934. It is not that you have got a majority of urban representatives against you?—No.

13,935. It is alleged in some districts that that is the case?—I do not think that is so here.

Average rate in £ in the district.

13,936. Apart from this exceptionally high rate as compared with the rent, what is the average rate in the pound in these parishes?—I think the average rate is 4*s.*, assuming that the assessment is about right; that is roughly about it.

Effect of fall in prices on cultivation of land.

13,937. (*Mr. Everett.*) I suppose from what you have said that there is a great deal of land in Essex, that if you took the whole of the rates and taxes off it, would still be unprofitable to cultivate?—It would, probably, if one would cultivate it. It might be worth something as a sheep run.

13,938. And your opinion is, that if prices do not rise, and if, on the whole, they tend to go lower; then a great deal of Essex will go out of cultivation?—The three-horse land must go out of cultivation.

13,939. There was some went out in the period of low prices, just after free trade, was there not?—About 1851, I think, they were very bad in Essex. I do not remember it.

13,940. You do not happen to know that near to the River Crouch there was some land that then went out of cultivation. What has happened to that?—That is still abandoned now. I daresay it was cultivated between 1860 and 1870.

13,941. You cannot give any comfort as to any different method by which, without better prices, we can see our way back to prosperity in the eastern counties?—I think the only thing is to lay it down to grass.

13,942. (*Viscount Cobham.*) I suppose these poor lands have next to no sporting value?—Very little; they would make 6*d.* per acre, perhaps.

The witness withdrew.

Adjourned to Thursday, the 29th of March.

INDEX TO EVIDENCE.

SIR R. NIGEL F. KINGSCOTE, K.C.B., Commissioner of Her Majesty's Woods and Forests:

Acreage of estates, 3, 8. Agricultural Holdings' Act, compensation under, 288–302, 341–56; farms let under, 192–3, 225–33, 243. Agricultural land, net amount received from, 65–77. Agriculture, condition of, in Lancashire, 277–80. Allotments, 130–2, 324–7. Bad seasons and low prices, 146–8. Crown surveyor, 9, 308–9. Cultivation, changes in, 137–45; restrictions in, 133–6, 194–7, 234–7. Depression, causes of, 243; in Lancashire and Yorkshire, 216–41, 277–81; district not affected by, 198–200. Drainage rates, 14. Estates, acreage of, 3, 8; comparison of in different counties, 78–93; particulars of, 156–7. Farms, difficulty in letting, 303–5, 328–31; large and small, 126–9, 210–15; method of letting, 282–7; sub-division of, 106–20, 238–42. Improvements, expenditure in, 29–52, 172–8, 260–6, 317–23. Isle of Sheppey, value of land in, 158–60, 181–7. Labourers, 161–5. Land in hand, 53–64, 153–7, 179–80, 206–9. Large and small farms, 126–9, 210–15. Leases, 94–100. Low prices and bad seasons, effects of, 146–8. Rates, assessments to, 306–7; drainage, 14; local, 269–72. Rents, 10,245–60; deductions, 11–13; reductions, 15–28, 149–52; settlement of, 223–4; since 1879, 201–5, 222, 273–6; valuation of, 166–71. Restrictions in cultivation, 133–6, 194–7, 234–7. Shooting rights, 101–5. Subdivision of farms, 106–20, 238–42. Tenancies, number and size of, 121–5. Tenants' capital, 332–40. Tithes, 267–8. Whichwood Estate, 188–90, 311–16.

MR. ALFRED DE BOCK-PORTER, Secretary and Financial Adviser to the Ecclesiastical Commissioners:

Agents' commission, 611–13, 669, 680–81. Agreements, terms of, 595–603. Agricultural Holdings' Act, 670–71. Allotments, 543–54, 580–581, 640–650, 682. Changes in tenancies, 468–470. INDEX TO APPENDIX A.

Page

I. Statement of amount expended by the Crown upon farms in charge of Sir Nigel Kingscote from 31st March 1879 to 31st March 1893 - 403
(*Handed in by Sir Nigel Kingscote.*)

II. Statement of the agricultural lands in England belonging to the Crown, showing 1st, their extent; 2nd, the rental for year to 10th October 1892, and the authorised allowances therefrom, and the tithe rent-charge included therein; and 3rd, the rents received in the year to 31st March 1893, and the allowances made in that year, and the tithe rent-charge paid in that year - - - 403
(*Handed in by Sir Nigel Kingscote.*)

III. Return showing approximately the net revenue derived from certain Crown Agricultural Estates, viz. at Stagsden, Bedfordshire; Hainault; and Stapleford-Abbots in Essex; Billingbois, Lincolnshire; Bishops Cannings and Bromham, Wiltshire; and Sunk Island and Borobridge, Yorkshire, for the six years 1888 to 1893, both inclusive - 405
(*Handed in by Sir Nigel Kingscote.*)

IV. Schedule of agricultural estates that belonged to the Crown at 31st March 1879, and belonging to the Crown at the close of the financial year 1892–3, showing the rents and acreage of each estate, and the amount realised by the sale of part of any such estate, and the amount expended in the purchase of any additional land; also the amount expended in repairs and improvements on those estates between those dates - - - 412
(*Handed in by Sir Nigel Kingscote.*)

V. Statement by estates of agricultural holdings above three acres in Sir Nigel Kingscote's charge in the year to 10th October 1892 - 415
(*Handed in by Sir Nigel Kingscote.*)

VI. Copy of draft form of agreement - - 416
(*Handed in by Sir Nigel Kingscote.*)

VII. Table showing extent of agricultural property (including bishoprick permanent estates), with gross and net receipts therefrom in the years 1880–92 - - - 420
(*Handed in by Mr. A. de Bock Porter.*)

VIII. Scheme for the sale of agricultural holdings, communicated by the Ecclesiastical Commissioners to their agents, to be applied from time to time as the Commissioners may direct - - - - - 421
(*Handed in by Mr. A. de Bock Porter.*)

IX. Statement of rents for the years 1801–93 received by Guy's Hospital from estates in Lincolnshire, Essex, and Herefordshire - 423
(*Handed in by Mr. E. H. Lushington.*)

X. Summary of statement showing the occupations of persons renting small holdings upon an estate in Devon; with the extent of land held by each - - - - - 427
(*Handed in by Mr. W. J. Harris.*)

XI. Analysis of the Murrumbridgee soils, New South Wales, and report thereon by Dr. Voelcker - - - - - 428
(*Handed in by Mr. W. J. Harris.*)

Page

XII. Statement showing acreage of wheat grown by Mr. J. Martin in Cambridgeshire and Norfolk from 1854 to 1892 inclusive, with average yield per acre, and average price per coomb - - - - - 428
(*Handed in by Mr. Joseph Martin.*)

XIII. Rentals of three properties, belonging to the Duchy of Lancaster, 1880 and 1892, compared, also capital expenditure on the same, 1879–91 - - - - - 429
(*Handed in by Sir Gardner Engleheart.*)

XIV. Expenditure upon the agricultural property of the Duchy of Lancaster - - - 429
(*Handed in by Sir Gardner Engleheart.*)

XV. Acreage of the Duchy of Lancaster property in 1892 - - - - - 430
(*Handed in by Sir Gardner Engleheart.*)

XVI. Sizes of agricultural holdings under the Duchy of Lancaster - - - - 431
(*Handed in by Mr. Bolden.*)

XVII. Abstract of particulars of Lord Wantage's estate in Northamptonshire, arranged in triennial periods, 1872–94 - - - 431
(*Handed in by Lord Wantage.*)

XVIII. Scheme for sliding-scale for rent - 432
(*Handed in by Mr. Gilbert Murray.*)

XIX. Statement of outlay of capital, 1880–92, on the Duchy of Cornwall estates - - 434
(*Handed in by Mr. Holzmann.*)

XX. Statement of rack rents receivable in 1892 from farms of 40 acres and upwards, held on leases and annual tenancies from the Duchy of Cornwall - - - - - 435
(*Handed in by Mr. Holzmann.*)

XXI. Comparison between the years 1878 and 1892 of acreage and rents of all lands belonging to the Duchy of Cornwall in hand - 436
(*Handed in by Mr. Holzmann.*)

XXII. Number of tenancies in the year 1892 according to acreage, with total of rents received by the Duchy of Cornwall - - 437
(*Handed in by Mr. Holzmann.*)

XXIII. Statement handed in by Mr. James Stratton of Chilcombe, Winchester, showing the assessments to poor and highway rates on his farm at certain periods - - 438

XXIV. Schedules of estates of which Messrs. Rawlence and Squarey are agents, 1893 - 439
(*Handed in by Mr. E. P. Squarey.*)

XXV. Scheme prepared by Mr. Scott relative to the appointment of county boards of valuers, and the settlement of compensation for improvements. Reprinted from the Appendix to Mr. Coleman's Report to the Duke of Richmond's Commission, p. 22 - - 439

XXVI. Land Tenure (England) Bill - - 440
(*Handed in by Mr. W. Smith, M.P.*)

XXVII. Extract of official return of the basis of the county rate as settled by the County Rate Assessment Committee respectively in 1876, 1883, and 1893 - - - - 442
(*Handed in by Mr. Carrington Smith.*)

XXVIII. Observations in reply to Mr. T. Parker's evidence - - - - 444

APPENDIX A.

Appendix A., I. and II.

I.

STATEMENT of amount expended by the Crown upon Farms in charge of Sir Nigel Kingscote from 31st March 1879 to the 31st March 1893.

(*Handed in by Sir Nigel Kingscote. See Question* 40.)

Year to 31st March.	On Permanent Improvements.	On Repairs.	Total.

Net Receipt							£65,267	10	9

III.

(*See* Questions 71, 157, 270.)

Sir Nigel Kingscote writes as follows:—

When I gave evidence before the Royal Commission on the 9th ultimo, I was asked if I could furnish a classified statement of the expenditure on certain typical Crown estates over a period of years particularly distinguishing the expenditure on buildings and on drainage. I was also asked to supply a statement showing, for a moderate period, the approximate net income derived from a certain number of Crown estates which would be available for payment into the Exchequer.

For each of these returns, I have selected six of the principal Crown estates situate in various parts of the country, viz., at Stagsden in Bedfordshire, Hainault in Essex, Billingborough in Lincolnshire, Bishop's Cannings and Bromham near Devizes in Wilts, and Sunk Island and Boroughbridge in Yorkshire. I now hand in the returns I have been asked for in respect of these estates.

The return as to outlay in repairs and improvements I have carried back to the year 1867 (or, where the estate was purchased since, to the date of purchase), because that year was the first in which the outlay on permanent improvements is separated from other works of repair, the Act authorising the payment of that outlay temporarily out of capital having been passed in 1866.

I should explain that, in the Return of the approximate net income, I have not charged any of the expenses of maintaining my office. It would be very difficult indeed to arrive at any opinion as to the proportion of that cost, which would be properly charged to these estates, and a good deal of the cost probably would only represent the time and attention which a private landowner would devote to the management of similar estates.

I was also asked to endeavour to ascertain the amounts at which the farms now in hand were assessed in 1879, and those at which they are now assessed, and I now hand in a return giving those amounts as nearly as I have been able to ascertain them.

NIGEL KINGSCOTE.

14th December 1893.

(*See* next page for return.)

RETURN showing approximately the Net Revenue derived from certain Crown Agricultural Estates, viz., at Stagsden, Bedfordshire; Hainault and Stapleford-Abbots in Essex; Billingboro', Lincolnshire; Bishops Cannings and Bromham, Wiltshire; and Sunk Island and Boroughbridge, Yorkshire, for the six years, 1888 to 1893, both inclusive.

N.B.—Prior to the passing of the Tithe Act, 1891, Tithe Rentcharge where payable was paid by the Crown Tenants direct. Since the passing of that Act it has been paid by the Crown, subject to the provisions of the Act.

STAGSDEN ESTATE, Co. BEDS.

This Estate was purchased in 1874, and shortly afterwards a considerable outlay was made in permanent improvements, which ought rather to be regarded as part of the purchase money and not as part of the outlay now being repaid out of Income.

Year to 31st March.	Acreage.	Rental.	Receipts.	Deductions and Outlay.								Net Receipt *or the Reverse.*
				Allowances made to Tenants.	Agency.*	Tithe Rentcharge, Rates and Taxes paid or allowed by the Crown.	Repairs, &c. paid out of Income.	Charge in respect of Permanent Improvements, being $\frac{1}{20}$ part of Outlay in previous Years.	Excess of Receipt over Expenditure *or the Reverse* on Farms in Hand.	Miscellaneous Expenditure.	Total Deductions and Outlay.

IV.

SCHEDULE of Agricultural Estates that belonged to the Crown at 31st March 1879 and belonging to the Crown at the close of the financial Year 1892-93, showing the rents and acreage of each Estate and the amount realised by the Sale of part of any such Estate, and the amount expended in the purchase of any additional land; also the amount expended in repairs and improvements on those Estates between those dates.

(*Handed in by Sir Nigel Kingscote. See Question* 36.)

Estates which are principally Building Estates are not included in this Schedule, even though they comprise some Agricultural Land, &c.

N.B.—This statement does not show temporary allowances which were made from the rentals for both 1879 and 1892. The 1892 rental includes the Tithe rentcharge paid by the Crown, the amount of which is shown in *italics*.

VI.

(*Handed in by Sir Nigel Kingscote. See Question* 155.)

THIS INDENTURE made the day of 189 . Between the Queen's Most Excellent Majesty of the first part, Sir Robert Nigel Fitzhardinge Kingscote, K.C.B., the Commissioner of Her Majesty's Woods, Forests, and Land Revenues in charge of the premises hereby demised of the second part and

herein-after called "the Lessee" of the third part Witnesseth that in consideration of the rents and covenants herein-after reserved and contained, he, the said Robert Nigel Fitzhardinge Kingscote as such Commissioner as aforesaid in exercise of the powers of the Acts 10, George IV., chapter 50 and 14 and 15 Victoria chapter 42, and of all other powers and authorities enabling him so to do and with the consent of the Lords Commissioners of Her Majesty's Treasury signified by their warrant dated the day of 189 . Doth on behalf of Her Majesty demise and lease unto the lessee all that farmhouse buildings and lands containing a. r. p. or thereabouts situate in the parish of in the county of

more particularly described in the schedule hereto and delineated and coloured red on the plan these presents and known as . Reserving thereout unto Her Majesty, her heirs and successors all timber and other trees, tellers, pollards, spires, saplings, (whether on stools or otherwise) and plantations, and all mineral substances, and substrata whatsoever (except such materials as may be required for making and repairing roads upon the premises) with liberty for the lessor and his grantees and agents or any of them with or without horses, cattle, carts, engines, and carriages from time to time to enter upon the premises and to mark, fell, cut, search for work, make merchantable and carry away the same respectively and for such purposes to make and erect all requisite conveniences on the demised premises paying reasonable compensation for damage done to the crops on the land, the amount thereof if not agreed upon being fixed by a valuation made by two arbitrators or their umpire appointed in manner herein-after provided and reserving power also for the lessor at any time or times upon giving to the lessee or leaving for *him* on the demised premises three calendar months' previous notice in writing of the intention so to do to determine the tenancy of any part or parts not exceeding acres in the whole of the land demised paying to the lessee on possession being given in addition to any other compensation to which *he* may be by law entitled either the value of any crops being ordinary annual crops grown from seed sown on the land included in the notice previous to the service thereof and the value of any crop of grass thereon or the value of the seeds sown and manure purchased other than manure purchased in lieu of produce sold and labour bestowed in preparing the land previous to the service of the notice, but from which no crop shall have been subsequently taken, such compensation, if not agreed upon, being settled by a valuation made by two arbitrators or their umpire appointed in manner herein-after appearing, and making an abatement in the rent for the land taken, the amount thereof and the period from which it shall commence being settled by Her Majesty's Receiver for the time being of the rents and profits of the premises. To hold the premises unto the lessee from the 10th day of October 18 , for the term of years. Paying unto the Queen's Majesty, her heirs and successors the

yearly rent of l. by equal quarterly payments upon the 5th day of January, the 5th day of April, the 5th day of July, and the 10th day of October in every year (except that the rent for the last quarter of a year of the tenancy shall be paid in advance on the 5th day of July preceding the end thereof), the first payment being due on the 5th day of January 18 . And also paying in manner aforesaid a further yearly rent equal to 5*l.* per centum upon all monies and expenses laid out or incurred by Her Majesty, her heirs or successors, at the request of the lessee in or incidental to draining, building, or other improvements on the premises, except in erecting cottages, for which 4*l.* per centum only shall be payable, any such rent payable in respect of any building or other improvement except draining to commence from the quarter day next after the completion of such building or improvement, and any such rent payable in respect of draining to commence on the 5th day of April or the 10th day of October, whichever shall first happen after any monies or expenses shall have been laid out or incurred. And it is agreed that as to the amount of the monies and expenses laid out or incurred as aforesaid, and as to the purposes for which, and the dates when the same were laid out and incurred, and as to the date of completion of any building or improvement, the certificate in writing of Her Majesty's said Receiver shall be conclusive evidence. And also paying in manner aforesaid a further yearly rent of 40*l.* for every acre (and in proportion for a less quantity) of meadow or pasture land broken up or used otherwise than as meadow or pasture land without the previous licence in writing of the lessor, and during the last two years of the tenancy a further yearly rent of 10*l.* for every acre (and in proportion for a less quantity) of land hereby demised, which during that period shall without such license as aforesaid be managed or cultivated contrary to the covenants hereinafter contained, such last-mentioned additional rents (which are reserved as liquidated or fixed rents agreed to be paid in the cases aforesaid and not by way of penalty) to be paid quarterly upon the days aforesaid, the first payment thereof respectively to be made on such of the said days as shall next happen after the same rent or rents shall have been incurred. All which said several rents herein-before reserved, or such of them as may from time to time be payable, are to be paid into the hands of Her Majesty's said Receiver free from all deduction whatsoever, except in respect of the landlord's property tax and tithe rentcharge. And the lessee hereby covenants with the Queen's Majesty, her heirs and successors, in manner following, that is to say:

1. To pay unto the Queen's Majesty, her heirs and successors, the rents hereby reserved at the times and in manner aforesaid.

2. To pay the land tax, drainage and sewer rates, and all other taxes, rates, and outgoings whatsoever now or at any time hereafter payable in respect of the said premises (except the landlord's property tax and tithe rentcharge), together with a proportionate part thereof up to the end of the tenancy.

3. To keep, and at the end of the tenancy to leave in good and substantial repair order and condition, all buildings (with the fixtures therein), walls, gates, stiles, mounds, banks, bridges, roads, drains, outfalls, culverts, watercourses, sluices, sewers, hedges, ditches, and fences, now being or that may hereafter be on the demised premises, and as to such parts of the said buildings and fences as have been, or are usually, painted or tarred, properly painted and tarred. And to keep, and at the end of the tenancy to leave the demised land clean and in good heart and condition, and cultivated and managed in a good and husbandlike manner, and in accordance with the special provisions herein-after contained. Provided that the lessor or his agents may at all times enter upon the premises and examine the same, and take any plan thereof; and if any want of repair shall be found, or any ditches, watercourses, sluices, sewers, or drains shall be found not properly cleared out, or if the land shall be found not in good condition and properly cultivated, and the lessee shall not within three calendar months next after a notice in writing of any such matters shall have been given to or left on the said premises for *him*, repair and amend the same according to the covenants herein contained, the lessor may (but without prejudice to any other remedy of Her Majesty, her heirs, or successors) cause the same or any of them to be done, and the lessee shall, on demand, repay to the lessor all expense incurred in respect thereof.

4. At all times during the tenancy to keep all the buildings for the time being on the said premises insured against loss or damage by fire in the joint names of the Queen's Majesty, her heirs and successors and the lessee in some insurance office or offices approved of in writing by the lessor, in a sum equal to three-fourth parts at the least of the actual value thereof respectively, and to show whenever required so to do, to Her Majesty's said Receiver the policy or policies of insurance, and the receipt or receipts for the premium or premiums in respect thereof for the current year. And if default shall be made in keeping the buildings or any of them so insured, or in the production of the policy or policies, or receipt or receipts as aforesaid, the lessor may insure the said buildings or any of them in such name or names as *he* may think fit in the amount herein-before mentioned, or in any less amount; and all monies paid for such purpose shall be recoverable as rent hereby reserved and in arrear. And all monies payable under any insurance shall be received by the lessor and applied in rebuilding, or reinstating the buildings in respect of which the same shall be paid.

5. To lay up and stack in the barns or other convenient places upon the demised premises, all the corn, grain, hay, and straw produced thereon, and to consume and spend thereon all such hay and straw, and the chaff and other fodder arising from the said corn and grain, and to leave on the premises at the end of the tenancy so much of such hay, straw, chaff, and other fodder as may be unconsumed, being paid for the same as for consumption on the premises. And also to consume on the premises all the root crops and green crops grown thereon, and all linseed cake, cotton cake, and other feeding stuff which shall be brought on the premises, in pursuance of any of the provisions herein contained. And to pay to Her Majesty, her heirs and successors, as liquidated damages, the sum of 5*l.* for every load of any of the produce of the premises which should under these presents be consumed on the premises, or of dung or manure which shall be carried off the said premises, without the consent in writing of the lessor. Provided that until the lessor shall, by notice in writing given to or left on the premises for the lessee, require *him* to discontinue doing so, the lessee may sell and carry off the premises hay and wheat straw (except the produce of the last two years), not exceeding one half of the produce in any year, on condition of bringing back upon the premises within six months after any such sale or carrying off, either one half of the market value of the hay and straw sold or carried off, in good rotten dung, bones, or other manure approved of in writing by the lessor, or three-fourths of such market value in linseed cake, cotton cake or other feeding stuff not produced on the holding and approved of in writing by the lessor. And the lessee shall, if required, produce correct and duly vouched accounts of all hay and straw sold or carried off, and of all manure, cake, and feeding stuff brought back, specifying therein the times of sale or carrying off and bringing back respectively.

6. To spread over the said land or such part thereof as may most require the same in a husbandlike manner all the dung and manure arising from and brought on the said premises, and in the last year of the tenancy to spread such proportion as may be approved of by the lessor or the incoming tenant over such part of the land as shall have been properly prepared for root crops, green crops, and fallows, and at the end of the tenancy to leave in the proper places upon the said premises all the dung and manure then being thereupon without requiring any compensation for the same.

7. To reside upon the demised premises unless the lessor shall by some writing dispense either wholly or partially with such residence.

8. To keep upon the demised premises a field-book showing how every field or parcel thereof has been cropped and cultivated in every year of the tenancy, and permit the lessor and all other persons appointed by him to inspect such book, and to take copies thereof or extracts therefrom, and to deliver to the lessor when required true copies of or extracts from such book verified if required by a declaration in writing under the hand of the lessee.

9. Not to cut any coppice, wood, or underwood growing upon the said land at any other periods than those fixed by the custom of the country, nor without giving to the lessor one calendar month's previous notice in writing of *his* intention so to do, and not to cut any tellers, whether growing from stools or otherwise, without the consent in writing of the lessor, who

Appendix A., VI.

may plant upon the said coppice or wood land any quantity of young trees that he may think proper.

10. To preserve all the trees, tellers, pollards, spires, and saplings for the time being growing upon the said premises from bite of cattle or other injury, and not to commit or suffer any wilful or voluntary waste, spoil, or destruction in or upon the said demised premises or any part thereof.

11. Not to cultivate any part of the demised land with hemp, flax, teazels, woad, or other unusual or exhausting crops, nor leave for seed on the said premises a greater quantity of turnips, rape, mustard, rye, grass, or any such plants than may be necessary for seeding the farm from year to year without the previous consent in writing of the lessor. Provided nevertheless that (except during the last two years of the tenancy) the lessee may, until required by notice in writing from the lessor given to or left on the premises for the lessee to discontinue doing so, leave a quantity not exceeding in the whole acres of for seed on condition of bringing back upon the said premises within six months next after the sale of any such seed either one-third of the market value thereof in good rotten dung bones or other manure approved of in writing by the lessor, or one-half of such market value in linseed cake, cotton cake, or other feeding stuff not produced on the holding and approved of in writing by the lessor, and the lessee, shall, if required, produce correct and duly vouched accounts of all seed sold, and of all manure cake and feeding stuff brought back specifying therein the times of sale, and bringing back respectively.

12. Not to cut for hay any of the pasture lands hereby demised, and once at least in every year to spud and destroy the thistles and docks thereon; and not to cut for hay more than once a year the meadow land hereby demised, and after every crop of hay to spread thereon not less that 10 cartloads per acre of good dung or other manure equivalent thereto, and at all times to keep cut and levelled the ant-hills on such pasture and meadow land.

13. Not to cultivate during the last two years of the tenancy more than one half of the arable land with any white straw crops, including wheat, oats, barley, and rye; and not to cultivate in the last year of the tenancy with any such crops any part cultivated with any such crops in the preceding year; and not to plant any field with potatoes more than once in such last two years.

14. In each of the last two years of the tenancy to sow with the spring corn (such as barley or oats) the land which shall have been cultivated with green crops or fallowed and properly manured in the preceding season, not being less than one-sixth part of the arable lands hereby demised, with a sufficient quantity of good clover or other grass seeds, and properly harrow in the same. The clover and grass seeds sown in the last year (provided no cattle, sheep, or other live stock shall have been depastured thereon), to be paid for by the lessor.

15. To leave at the end of the tenancy (subject as herein-after mentioned) properly fallowed and sown with turnips or other root or green crop, properly hoed and managed one-fourth part of the arable lands hereby demised, which shall be in due course for the same the labour and seed properly bestowed on the land being paid for by the lessor. But the lessor or the incoming tenant may, if he so desire, enter with servants and agents, and with horses, carts, ploughs, and other implements, upon such lands to be left fallowed at any time after the commencement of the last year of the tenancy for the purpose of making such fallows, sowing and otherwise preparing and manuring the land in the usual course of agriculture.

16. To leave at the end of the tenancy one-sixth part of the arable land in clover lay of one year's continuance only and permit, if required, the lessor or the incoming tenant at any time after the 24th day of August next preceding the end of the tenancy to enter upon, plough, sow, and otherwise prepare the lands so to be left in clover lay as aforesaid as he shall think fit.

17. To give up to the lessor or the incoming tenant proper and sufficient accommodation on the premises for him or his agent, and for his servant's horses, carts, engines, implements, and cattle from the respective times herein-before mentioned for entering upon the lands to be left for fallow and in clover lay to the end of the tenancy without any abatement of rent or other allowance for the same and to permit him and them to carry out and spread the manure upon the said premises to and upon the lands to be left for fallow and in clover lay.

18. Not to assign or underlet the demised premises or any part thereof (except that cottages may be underlet) or part with the possession of these presents without the previous consent in writing of the lessor and to procure every assignment of the demised premises or any part thereof and all orders of court probates of wills and letters of administration affecting these presents or the tenancy hereby created to be within six calendar months from the date thereof respectively inrolled in the Office of Land Revenue Records and Inrolments and a minute or docket thereof entered in the Office of the Commissioners of Woods.

19. And it is agreed that the lessee may use the barns, granary, and rickyard until the 25th day of March next after the determination of the tenancy (unless determined by re-entry under the provision herein-after contained) rendering up the same in good repair for threshing out, dressing, and marketing the corn grown on the premises in the last year of the tenancy, and the lessee shall so thresh out such corn as not to lessen the value of the fodder, and in such manner that the lessor or the incoming tenant shall be supplied with straw as may be reasonably required for use on the premises.

20. And it is also agreed that in the event of the lessee cultivating any part of the demised premises as a market garden *he* shall be entitled before the end or determination of *his* tenancy to remove any asparagus, rhubarb, peppermint, lavender, hops, or any perennial crop sown or any plants, fruit-bushes, or similar market garden crop sown or planted by *him*, and then growing on the said premises if *he* shall desire so to do but *he* shall not be entitled to be paid any compensation whatsoever, for or in any way in respect of any such crops, plants, or bushes that may not be so removed, and nothing herein contained shall be deemed or taken to be a consent by the landlord within the meaning of the Agricultural Holdings (England) Act, 1883, to an improvement by the making of any garden or by the planting of any orchards or fruit-bushes.

21. And it is agreed that in the event of the lessee not making any claim on the determination (as to the whole or part of the demised premises, of the tenancy for compensation under the Agricultural Holdings (England) Act, 1883, all claims which either the lessor or the lessee may be entitled to make against the other of them under these presents shall be referred to two arbitrators or their umpire to be respectively appointed in conformity with the provisions of sections 9 and 10 of the last-mentioned Act, except that the President for the time being of the Surveyors' Institution shall be substituted for the County Court, and for the Land Commissioners and every such arbitration shall be subject to the provisions as to references contained in the said last-mentioned Act, and the arbitrators or arbitrator or umpire appointed hereunder shall have and may exercise all the powers conferred on a referee or umpire appointed under such Act, and their or his award shall be made within the respective times limited by and in all other respects in conformity with the provisions of such Act with reference to awards of a referee or umpire appointed thereunder, and as if the arbitrators or arbitrator or umpire appointed under these presents were referees or a referee or umpire duly appointed under that Act except that the award in writing shall be final and conclusive, and that each party shall bear the costs and charges of the arbitrator appointed by him or on his behalf, and all expenses incurred by him with reference to such arbitration, and that the costs and charges of the umpire (if any) shall be divided equally between the said parties.

22. Provided that at the end of the tenancy, the lessee shall not be entitled to any payment, allowance, compensation or rights, founded upon the custom of the district in which the demised premises are situate. And further that all money due to Her Majesty, her heirs or successors, from the lessee, for rent, breaches of covenant or otherwise shall be deducted from any compensation to which the lessee may be entitled under these presents or otherwise.

23. Provided always and these presents are upon this condition, that if any rent hereby reserved, shall be in arrear for 40 days or if there shall be a breach of any of the covenants and conditions on the part of the lessee herein contained, or if a receiver in bankruptcy of *his* estate shall be appointed, or a receiving order made against *him*, whilst the premises hereby demised or any part thereof remain vested in *him*, or if the lessee shall either voluntarily or involuntarily do, or suffer anything in consequence whereof *his* interest in the demised

premises shall, without such consent as aforesaid, become vested in any other person, except by bequest or by representation as executor or administrator. Then, and in any of the said cases the lessor may re-enter and retain possession of the demised premises, as fully in all respects as if these presents had not been made, and in case of any such re-entry there shall be payable by the lessee to Her Majesty her heirs and successors, in addition to any rent then due, a proportionate part of the accruing rent for the then current quarter of a year, up to the day on which such re-entry shall have been made.

24. It is hereby agreed and declared that the term "lessor" herein means the Queen's Majesty, her heirs, successors, and assigns, or so long as the reversion of the demised premises is vested in the Crown, the Commissioner or Commissioners, or other the person or persons for the time being entitled by law to the management and direction thereof, and that all rights and obligations of the lessee under these presents, shall devolve with the leasehold interest hereby created and be accordingly enjoyed, observed and performed by the person or persons in whom such interest shall for the time being be vested.

And the said Robert Nigel Fitzhardinge Kingscote doth hereby direct that this deed shall be deemed to be fully and sufficiently inrolled by the deposit of a duplicate thereof in the Office of Land Revenue Records and Inrolments, and the filing or making an entry of such deposit by the keeper of the said records and inrolments. In witness whereof the said parties to these presents of the second and third parts have hereunto set their hands and seals the day and year first above written.

A. DE BOCK PORTER,
Secretary.

VIII.

ECCLESIASTICAL COMMISSION (SALE OF AGRICULTURAL HOLDINGS).

(*Handed in by Mr. A. de Bock-Porter. Question* 514.)

SCHEME for Sale of Agricultural Holdings communicated by Ecclesiastical Commissioners to their Agents, to be applied from time to time as the Commissioners may direct.

The Ecclesiastical Commissioners are prepared to sell to the agricultural tenants on their estate at , at a price to be agreed upon, the freehold of their holdings on the following terms.

The Commissioners would require the payment of 15*l.* out of each 100*l.* of the purchase money on the date from which the transaction takes effect, and would allow the balance (that is, 85*l.* out of each 100*l.*) to remain upon mortgage to be paid with interest in equal half-yearly instalments spread over a period of 30 years.

The balance of the purchase money, with interest at the rate of 3⅝ths per cent., would be paid off by 60 half-yearly instalments of 2*l.* 15*s.* each, for every 100*l.* remaining on mortgage, being at the rate of 5*l.* 10*s.* per cent. per annum for 30 years, at the end of which time the whole liability would have been fully discharged.

The title of the Commissioners is Parliamentary, and the conveyance and mortgage deeds would be in the simplest form; and, assuming the title and the deeds to be accepted without question, the deeds would be provided by the Commissioners, free of charge to the purchaser, subject only to the payment of the Stamp Duty on the conveyance of mortgage.

Minerals, with full mineral rights, would be reserved to the Commissioners.

The mortgage deed would have a schedule attached, which would show the balance of the loan remaining unpaid after each of the half-yearly instalments has been paid, and should it suit the convenience of a purchaser, the Commissioners would at any time accept payment of the balance without requiring the usual notice.

Should the tenant be unable or unwilling to purchase his holding, the Commissioners would feel at liberty at the end of, say, one year from the date of their offer being made, to dispose of the property, subject, of course, to the existing tenancy, and with or without similar facilities as to the payment of purchase money.

In order that the proposition may be fully understood the following example is given:—

Suppose A. to be the tenant of 20 acres of land with a house, &c., thereon, at a rent of 45*l.* per annum, the price required for the purchase of the freehold being, say, 1,300*l.* Of this sum there would be paid down at the outset, 195*l.*, leaving 1,105*l.* on mortgage of the property. The half-yearly payment in respect of the mortgage, calculated at 5*l.* 10*s.* per cent. per annum, would be 30*l.* 7*s.* 9*d.* This payment would clear off the mortgage debt in 30 years. If at any time during that period, say at the end of the fifteenth year, A. should be in a position to pay off the balance of the mortgage, the Commissioners would be willing at once to accept such balance, which in this case would be 698*l.* 0*s.* 9*d.* The Stamp Duty payable would be 8*l.*, viz., 6*l.* 10*s.* for the purchase deed, and 1*l.* 10*s.* for the mortgage deed.

10, Whitehall Place, London, S.W.,
23 April 1885.

Appendix A., VIII.

TABLE for the Repayment of a Mortgage Loan of 100*l.*, together with Interest at 3·63*l.* per cent. per Annum in 30 Years by means of 60 half-yearly Payments of 2*l.* 15*s.* each, to include Interest and a proportionate repayment of the Loan.

Half-yearly Payments.	Interest at 3·63*l.* per Annum.	Instalment of Loan repaid.	Balance of Loan unpaid.	Half-yearly Payments.	Interest at 3·63*l.* per Annum.	Instalment of Loan repaid.	Balance of Loan unpaid.

5. Agricultural labourers, past or present	1 to 60	9	182	42
6. Agricultural labourers combining other occupations	10 to 16	2	26	—
7. Widow	—	1	7	—
		23	306½	107

Appendix A., XI. and XII.

XI.

ANALYSIS of the Murrumbridgee Soils, New South Wales, and Report thereon, by Dr. Voelcker.

(*Handed in by Mr. W. J. Harris. See Question* 4762.)

Comparing these with the Mallee soils, they are the richer, decidedly; they are heavier soils, containing more mineral plant food, and more soil nitrogen. They show almost no deficiency, even where the soil has been continuously cropped for 20 years with wheat. They ought to make very suitable wheat soils, and would, I have no doubt, maintain a long succession of crops.

I.—Uncultivated Top Soil.

A rich soil with plentiful nitrogen, potash, lime, and fair proportion of phosphoric acid.

II.—River Flat.

A heavier soil than No. I., with more lime, and equally rich in phosphoric acid and nitrogen. It has a remarkably large amount of potash. The richest of the three samples.

III.—Top Soil after 20 Wheat Crops.

As compared with soils I. and II., this one shows some depreciation resulting from the continued cropping, more especially in the lime, nitrogen, and phosphoric acid. There is hardly a *marked* deficiency, however, of any constituent, though a process of exhaustion is clearly going on. A soil must have been rich originally to have shown so little diminution of quality.

Soils from Murrumbridgee Country, New South Wales.	Soils dried at 212° F.		
	I. Uncultivated Top Soil.	II. River Flat Top Soil.	III. Top Soil of Field after 20 Years Wheat Cropping.

XIII.

DUCHY OF LANCASTER.

RENTALS (of three properties) of 1880 and 1892 compared.

Also CAPITAL EXPENDITURE (on same properties) 1879–1891 (inclusive), with interest at 5 per cent. on such Expenditure.

(*Handed in by Sir Gardner Engleheart. See Questions* 4106, 4148, 4167, 4178.)

Estate.	Acreage.	Gross Rental 1880, less authorised allowance.	Outlay (capital) in Improvements 1879–1891 (inclusive).	Rental of 1880 interest at 5 per cent. on outlay in Column 3.	Gross Rental 1892, less authorised allowance.	Per-centage *decrease* on comparison of Columns 4 and 5.
	A.	£	£	£	£	Per Cent
Needwood (Staffordshire) -	3,949	5,484	5,803	5,774	5,178	$10\frac{1}{4}$
Myerscough Park (Lancashire) -	1,368	*2,572 (*1886*)	14,379	3,291	2,201, After deducting average annual cost of pumping engine, 164*l.*	$33\frac{1}{8}$
Fen Farms (Westville, etc.) (Lincolnshire).	876	1,076	2,018	1,177	944	$19\frac{4}{5}$

* This is the rental of the Duchy Lessee in *1886* (when the property was held from the Duchy on a beneficial lease). Column 2, relating to *this estate*, therefore refers to 1886 (instead of to 1880). The comparison in Column 6 is between *1886* and 1892, and the outlay in Column 3 is for the period 1885–91 inclusive.

Appendix A., XVIII.

XVIII.

A SLIDING SCALE FOR RENTS.

(*Handed in by Mr. Gilbert Murray. See Ques.* 5166.)

In order to make my scheme for a sliding scale for rents more clearly understood, I ask for permission to further elucidate my views. It must be conceded that any equitable method of fixing the rental value of land must be based on its capabilities of production, this being the first and most important factor in the calculation, and on which the subsequent success or failure of the scheme entirely depends. Take the land in a normal state, without regard to extra manurial condition, which according to the Act of 1883 belongs to the tenant, or to delapidations for which the landlord is entitled to compensation. The valuer carefully inspects each separate enclosure belonging to each holding, making a note of the average quantity of produce it is best adapted to produce; having done this calculating the quantities and attaching to each the market prices of the day are purely clerical; having scheduled the quantities under the different heads a permanent standard is arrived at, forming a basis on which all future fluctuations of prices are calculated; by this means the average gross value per acre of the produce is ascertained. The next factor is the cost of production which varies on almost every occupation. The items which go to make up the gross cost of production are manurial labour, horse labour, seeds and plants, tradesmen's bills, interest on capital, tenants' remuneration, insurance of stocks and crops, and depreciation on implements and machinery, collectively these are the out-goings which, deducted from the gross value of the produce per acre, the balance is the amount available for rent, rates and tithe, the latter in whatever way they are put, are landlords' payments. This may fairly be taken as a fixed amount, the only quantity liable to fluctuation is manual labour and although wages have nominally increased during the past 15 years, the cost of labour per acre has decreased owing to the more general use of labour-saving machinery. Practical experience confirms that this is the only correct and fair method of ascertaining the rental value of land; if applied to a sliding scale it will mete out equal justice to owner and occupier. The tenant has a free hand for the exercise of his skill and judgment and the expenditure of his capital in increasing the productive power of the soil to its utmost limit without the fear of an increase of rent, which is ruled by the average prices of the year calculated on the normal produce of the land which still remains a fixed quantity. Here we have an incentive to an improved system of cultivation by which the land would be stimulated and the produce greatly increased. So far the rent has been fixed on the basis of its present capabilities of production. In many cases drainage and buildings are necessary in order to fully develop the natural capabilities of the soil. In every case it is essential that all estate improvements should be done by the landlord. Arrangements should be made that would enable the owner to borrow money for legitimate estate improvements at a rate of 3 to 3½ per cent., to reimburse principal and interest within a fixed period. The interest on the outlay on drainage and buildings should be paid by the tenant. Wherever the money is advanced, either by the Government or a financial company, the work should be carried out under inspection.

In order more clearly to explain my views as to the system to be adopted in fixing produce rents several hypothetical cases are worked out and appended in the hope that the idea may be more easily and clearly understood.

SLIDING SCALE FOR RENTS.

With the tenant the chief grievance is the rent, as this to a certain extent regulates the other payments, nevertheless there are other important matters which press more or less heavily upon him. In the matter of rent there are two interests to consider, that of the owner and that of the occupier. Within the last quarter of a century the position of both have considerably changed, the owner has not only to equip the farms with buildings, roads and fences, he has also in most cases to keep them in a tenantable state of repair, leaving the capital of the tenant free for the cultivation of the land.

During a cycle of prosperous times rents sometimes rise beyond the normal standard of values, whilst in seasons of depression they fall below their legitimate values. In order to protect the interests both of owner and occupier I submit a scheme that will meet out equal justice to both.

As a practical illustration of my meaning I will select a representative mixed farm of 260 acres in a Midland county consisting of:

60	acres tillage,
50	,, feeding land.
100	,, good dairy land.
50	,, ordinary store pasture.
260	

The tillage land would be worked as follows:—

	£	s.	d.
1. Oats, 10 acres, produce 36 bushels, 2*s.* 6*d.*, straw, 25 cwt. 3*s.* -	8	5	0
2. Wheat, 10 acres, produce 26 bushels, 4*s.*, straw, 30 cwt., 3*s.* 6*d.*	10	0	9
3. Roots, 10 acres, produce 140 lbs. mutton at 7*d.*, 20 lbs. wool, 1*s.* -	5	1	8
4. Barley, 10 acres seeded down, 32 bushels, 3*s.* 6*d.*, 25 cwt. straw, 2*s.*	8	2	0
5. Seeds, first year, 10 acres produce 120 lbs. mutton, 7*d.*, 15 lbs. wool, 1*s.* - - - -	4	5	0
6. Seeds, second year, 10 acres produce 140 lbs. mutton, at 7*d.* 20 lbs. wool, 1*s.* - - - -	5	1	8
The gross value of the crops on the tillage land is - - -	£41	4	4

1-6th = 6*l.* 17*s.* 4½*d.*

	£	s.	d.
60 acres arable average produce per acre 6*l.* 17*s.* 4⅔*d.* - -	412	2	6
50 acres feeding land. 180 lbs. beef at 6½*d.*, 4*l.* 17*s.* 6*d.* - -	243	0	0
100 acres good dairy land, 180 Imperial gallons of milk at 7*d.*, 5*l.* 5*s.* - - - -	525	0	0
50 acres store pasture, 120 lbs. meat at 6½*d.*, 3*l.* 5*s.* - -	162	10	0
	£1,342	12	6

According to this calculation the gross returns are 1,342*l.* 12*s.* 6*d.* on the 260 acres, or 5*l.* 3*s.* 3½*d.* per acre; from this the following deductions must be made, cost of manual labour, horse labour, seeds and plants, tradesmen's bills, insurance of stock and crops, interest on capital embarked in the stocking and cultivation of the farm, tenant's remuneration for his labour and superintendence, which in this case would amount to 3*l.* 1*s.* 6*d.* per acre deducted from 5*l.* 3*s.* 3½*d.* the average value of the produce would leave 2*l.* 1*s.* 9½*d.* to cover rent, rates and tithe; the last two are an unknown quantity, and would be dealt with as they arose. Here you have the phases of a normal standard of production entirely independent of the fluctuations of prices; these rise and fall with the state of the markets, whilst the original calculations as to the productive capabilities of the land remains undisturbed. Through the exercise of skill and intelligence and the application of capital to the land may increase, or as some enthusiasts affirm, double, the produce of the land; unless there is a rise in prices the rent is not increased a single penny. There are those who clamour for continuous occupation and free sale, this to the extent of a 21 years' lease with breaks at seven and 14 years. Then as to compensation we should have a reliable landmark with which to compare the present state of production with the state of the land on entry, the increase or decrease of production would be taken at its value to an incoming tenant; the capitalised value of the increase would be the measure of the tenant's culture and manurial residuum.

No. 1 Crop 1892.

	£	s.	d.
Total returns on 260 acres - - -	1,342	12	6
or an average of 5*l.* 3*s.* 3½*d.* per acre.			
Cost of cultivation and management:—			
Manual labour, per acre -	1	3	0
Horse labour, per acre -	0	9	0
Seed corn, seeds, and plants, per acre - -	0	3	0
Tradesmen's bills - -	0	3	6
Interest on capital, 8*l.* at 5 per cent. - -	0	8	0
Tenants' remuneration for skill and labour employed, 5 per cent. on 8*l.*	0	8	0
Insurance of stock and crops - - -	0	4	0
Depreciation on implements and machinery -	0	3	0
	3	1	6
Average per acre - - - -	5	3	3½
Deduct from gross returns of expenses of production as above - - -	3	1	6
	2	1	9½

The balance is rent, rates, and tithes payable by the tenant if the landlord pays the outgoings, if not tithes and rates must be deducted. In every case tithe is now a landlord's payment.

Gross rental, 543*l.* 14*s.* 2*d.*

No. 2 Crop 1893.

In this case we have a drop in prices, not generally but in some descriptions of produce.

	£	s.	d.
One course, 10 acres oats, 36 bushels at 2*s.* 6*d.*, 25 cwt. straw at 2*s.* 6*d.* - -	7	12	6
Two course, 10 acres wheat, 26 bushels at 3*s.* 6*d.*, 30 cwt. straw at 2*s.* 6*d.* -	8	6	0
Three course, 10 acres barley, 32 bushels at 2*s.* 3*d.*, 25 cwt, straw at 2*s.* - -	7	14	0
Four course, 10 acres roots, 140 lbs. mutton at 7*d.*, 20 lbs. wool at 10*d.* -	4	18	4
Five course, 10 acres first seeds, 120 lbs. mutton at 7*d.*, 15 lbs. wool at 10*d.* -	4	2	6
Six course, 10 acres second seeds, 140 lbs. mutton at 7*d.*, 20 lbs. wool at 10*d.* -	4	18	4
	37	11	8

One sixth of this amount is 6*l.* 5*s.* 3*d.*, gross value per acre on 60 acres tillage.

	£	s.	d.	£	s.	d.
60 acres tillage, gross value of produce - -	6	5	3	375	15	0
50 acres feeding land, 180 lbs. beef per acre at 6½*d.*	4	17	6	243	15	0
100 acres good dairy pasture, 180 gallons milk per acre at 6½*d.* - -	4	17	6	487	0	0
50 acres store pasture, 120 lbs. per acre increase in dead weight at 6*d.* - -	3	0	0	150	0	0
Gross value of produce - -				1,256	10	0

Thus reducing the rental to 1*l.* 15*s.* 2½*d.* per acre, or a gross reduction of 86*l.* 2*s.* 6*d.* on the rental of 1892—over 15 per cent.

Gross rental for crop 1893, 457*l.* 11*s.* 8*d.*

No. 3 Crop 1894.

Here we have a slight rise in prices, not generally, but on some descriptions of produce.

	£	s.	d.
First course, 10 acres oats, 36 bushels at 3*s.*, 25 cwt. straw at 3*s.* - -	9	3	0
Second course, 10 acres wheat, 26 bushels at 4*s.* 6*d.*, 30 cwt. straw at 3*s.* 6*d.* -	11	2	0
Third course, 10 acres barley, 32 bushels at 3*s.* 9*d.*, 25 cwt. straw at 2*s.* - -	8	10	0
Fourth course, 10 acres roots=140 lbs. mutton at 7½*d.*, 20 lbs. wool at 1*s.* -	5	7	6
Fifth course, 10 acres first years' seeds =120 lbs. mutton at 7½*d.*, 150 lbs. wool at 1*s.* - - - -	4	10	0
Sixth course, 10 acres second years' seeds=140 lbs. mutton at 7½*d.*, 20 lbs. wool at 1*s.* - - - -	5	7	6
	44	0	0

	£	s.	d.
60 acres tillage, average 7*l.* 6*s.* 8*d.*, gross value - - - -	440	0	0
50 acres feeding pastures, 180 lbs. beef per acre at 7*d.*, 5*l.* 5*s.* per acre, gross	262	10	0
100 acres good dairy land, 180 Imperial gallons milk at 6½*d.*, 4*l.* 17*s.* 6*d.* per acre - - - - -	478	10	0
50 acres store pasture, 120 lbs. increase of deed weight at 5½*d.*, 2*l.* 15*s.* per acre, or gross - - - -	137	10	0
	1,318	10	0

Gross value of produce, 1,318*l.* 10*s.*

For crop 1894 we have an increase of 62*l.* over that for crop 1893; and still a drop of 24*l.* 2*s.* 6*d.* on crop of 1892.

Rent per acre, 1*l.* 19*s.* 11½*d.*, or a gross rental of 519*l.* 11*s.* 8*d.*

Crop 1893.

220 acres strong land, too strong for the winter feeding of roots on the land.

Worked on a six-course rotation.

	£	s.	d.
First course, 33 acres oats after two years' ley, 36 bushels at 2*s.* 6*d.*, 26 cwt. straw at 3*s.* - - - -	5	11	0
Second course, 33 acres barley, 28 bushels at 3*s.* 6*d.*, 24 cwt. straw at 1*s.*	6	2	0
Third course, 33 acres roots, part mangle to be drawn for consumption in yards, part catch crops to be eaten on the land during summer months, 100 lbs. increase in dead weight of meat at 6½*d.*, 18 lbs. wool at 10*d.* -	3	9	2
Fourth course, 33 acres wheat=26 bushels at 3*s.* 6*d.*, 30 cwt. straw at 1*s.*	6	1	0
Fifth course, 33 acres, first year's seeds, 100 lbs. mutton at 6½*d.*, 20 lbs. wool at 10*d.* - - - - -	3	10	10
Sixth course, 33 acres, second years' seeds, 120 lbs. mutton at 6½*d.*, 20 lbs. wool at 10*d.* - - - -	4	1	8
	28	15	8

One sixth, 4*l.* 16*s.* gross produce per acre.

Deductions:—

Wiltshire†	43,364	4,947
Acres	195,183	15,253

2nd Schedule of Estates of which Messrs. Rawlence and Squarey are consulting Agents.

County.	Area.	Area in Hand.
	Acres.	Acres.
Dorsetshire	66	—
Hampshire	5,339	2,000
Wiltshire	54,564	5,317
Acres	59,969	7,317

It should be noted that some portion of the lands in hand, excluding woodlands, are held in hand for sporting purposes and not intended to be let.

The 2nd Schedule are estates for which we are consulting agents, and when any farms come into hand the management of them devolves on our firm.

It will be observed that the per-centage of the lands in hand is 7·8 per cent., the greatest per-centage being in Wilts and Hants. 10·9 and 38·3 per cent. respectively in Schedule No. 1.

Elias P. Squarey.

February 22, 1894.

* 38·3 per cent.
† 10·9 per cent.

XXV.

Scheme prepared by Mr. Scott relative to the appointment of county boards of valuers, and the settlement of compensation for improvements. Reprinted from the Appendix to Mr. Coleman's Report to the Duke of Richmond's Commission, page 22.

Referred to by Mr. Wilson-Fox (*see* question 9,190).

1. That Great Britain be formed into districts, say, for instance, England into 12, and Scotland into six districts.
2. Three arbitrators or commissioners for each *district* to settle all matters (as afterwards specified) by a majority.
3. A commissioner's office for each *district* with clerk attached, in which office all records and papers are to be kept.
4. For court of appeal, the country to be formed into larger *divisions* consisting each of three adjoining *districts*. That the nine commissioners of each of these *divisions* should assemble quarterly to decide, by a majority, all appeals from *district* decisions, and their decisions to be final and subject to no review by any other court.
5. Election of commissioners (under existing circumstances difficult to define). If there were county boards of magistrates and guardians, as has often been proposed, the election would properly devolve upon them. In principle a fair election would be equal numbers chosen by the owners, occupiers, and community respectively. Election to be confirmed by Government through Minister of Agriculture.
6. The amount awarded by the commissioners, either for compensation or depreciation in regard to condition, not to exceed five years' annual rental of the land. The said maximum amount, viz., five years' rental, might be divided in 25 parts, fixing upon 0 as average condition, so that *good condition* might be marked to 25, and *bad condition* to a like figure. That is, each 1 above 0, opposite *good condition*, would mean $\frac{1}{25}$th part of five years' rental compensation to the tenant, and like figures marked in the schedule or form opposite *bad condition* would mean compensation to the owner for depreciation in the same ratio. The basis for estimating the rental to be that of the average of the enclosed land upon the holding.
7. After the passing of these laws or rules any owner or occupier might demand from the commissioners an examination of a holding. If the condition of the holding was found to be above the average it should be so stated in the report. But if the occupier prove that the good condition in whole or in part was caused by himself, it should be so marked, and that part should not be counted against him when he quits. In the same manner when the condition was found to be below the average, it should be so recorded. But if the owner proved that the want of condition or any part of it was caused by the occupier it should be so stated, and at the termination of the tenancy that part should not be counted against the owner. Condition to mean manurial richness or poorness; freedom from twich or weeds or the reverse; fences and roads in good condition or the reverse.
8. Farm buildings. Owner to have the preference in erecting, but when the buildings so provided were considered insufficient by the tenant he might erect buildings himself. Compensation to be given at the termination of the tenancy to the amount which buildings so erected might add to the letting value of the holding, or compensation in the same manner to the landlord to the amount which said buildings might lessen the letting value of the holding. Before the tenant erected buildings he should give the owner notice, and if the owner considered that such erections, or the manner of erecting them, would deteriorate his property, he might apply to the commissioners for a prohibition.
9. The owner to have the preference in executing tile drainage or permanent drainage of any kind, the tenant paying 5 per cent. per annum on the expenditure. But when the drainage so executed was considered insufficient by the tenant he might execute drainage at his own expense, compensation to be given for improvement or allowed for depreciation at the termination of the tenancy to the amount which such drainage might add to or take from the letting value of the holding. The owner to have the power to apply to the commissioners for a prohibition on the plea that his property would be injured by the making of such drains or by the manner of making them. On the other hand, if the owner was being at the cost of drains, the occupier to have the power to apply for a prohibition on the plea that the improvement would not be sufficient to enable him to afford to pay 5 per cent. on the expenditure.
10. If the tenant reclaim waste lands he should receive compensation to the amount which he had added to the letting value of the holding by so doing, or pay to the amount to which he had thereby decreased the letting value.

App. A., XXV. and XXVI.

11. If the tenant by tile drainage, or any drainage of a permanent nature, or by manuring, is proved to have increased the letting value of hill, down, or moor land, he should receive compensation to that amount. But if thereby he has deteriorated the letting value he should pay to that amount.
12. In regard to farm buildings, the commissioners should estimate on the principle that the tenant keep in repair the roofs, windows, gutters, and such like (natural wear and tear excepted).
13. If within 18 months of the passing of these rules the commissioners were not asked by the owner or occupier to examine and make a report, the enclosed arable and grass land should be taken as having been 10 below average, that is, 10, bad condition; and when at the termination of the tenancy, or at any other time, a report was made, the compensation for improvement or deterioration should be calculated as if the previous report had been 10 bad condition.
14. The report either at a termination or beginning of a tenancy to serve in the case of either an outgoing or an incoming tenant, unless the farm should have been for a period of not less than 12 months in the occupation of the owner.
15. When a report is made by the commissioners it must apply to the entire holding, and such reports to be looked upon as arbitrations, and no question whatever arising thereon should on any pretence be carried before the law courts.
16. The commissioners' powers not to extend or apply in any way whatever to the question of the regulation of rents between owner and occupier.
17. The commissioners, in calculating compensation or depreciation, to exclude in their estimate any increase or decrease which might have taken place in the value of land from circumstances other than those connected with the cultivation or occupation of it.
18. Fees. Each report or each appeal, 6*d.* per acre for field land and 2*d.* per acre for hill, down, or moor land. Expense of first report to be borne equally by owner and occupier. Expense of appeal to be borne by person who appeals. Fees to be paid to district tax surveyor, who should in the case of each report or appeal receive a note from the commissioners.
19. The commissioners should give their time and attention exclusively to the duties devolving upon them under these provisions. Salaries direct from Government.

25. Decision of Court final.
26. Land Court to settle disputes except as otherwise provided.
27. Power for Land Courts to use court houses and employ officers of county courts.
28. Land Courts to make annual report to Parliament.
29. Record of proceedings of Land Courts.
30. Sole referee may be chosen.

Miscellaneous.

31. Avoidance of contracts inconsistent with the Act.
32. Tenancies to which this Act does not apply.
33. Interpretation of terms.

A BILL to amend the Law as to the Tenure of Land in England.

BE it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

Short title.

1. This Act and the Agricultural Holdings (England) Act, 1883, shall be construed together as one Act, and this Act may be cited as the Land Tenure (England) Act, 1893.

Extent of Act.

2. This Act shall apply only to England.

Security of Tenure.

A tenant shall not be removed except for breach of statutory conditions.

3. A tenant shall not be compelled to quit the holding of which he is tenant (save as herein-after provided) except in consequence of the breach of some one or more of the conditions following (in this Act referred to as statutory obligations); that is to say,—

(1.) The tenant shall pay his rent at the appointed time, or within *three months* thereafter.

(2.) The tenant shall not, to the prejudice of the interest of the landlord in the holding, commit or permit persistent waste by the dilapidation of buildings or fences, or after notice has been given by the landlord to the tenant not to commit, or to desist from the particular waste specified in such notice by the deterioration of the soil.

(3.) The tenant shall not commit any breach of the judicial conditions of tenancy after notice by the landlord to desist from the particular breach complained of.

(4.) The tenant shall not, without the consent of the landlord in writing, assign or underlet his holding or any part thereof, except as herein-after mentioned.

Agistment or the letting of land for depasturage for a period less than *a year*, the letting of land for the purpose of its being solely used, and which shall be solely used for the growing of potatoes, cabbages, beans, peas, turnips, or other green crops, the land being properly manured, or the letting of cottages

with or without gardens or land to labourers employed on the holding, shall not be deemed an assignment or a subletting for the purposes of this Act.

(5.) The tenant shall not do any Act whereby his tenancy shall become vested in an official receiver or trustee in bankruptcy, or in an assignee or trustee for the benefit of creditors.

(6.) The landlord and any person or persons authorised by him in that behalf (he or they making reasonable amends and satisfaction for any damage to be done or occasioned thereby) shall have the right to enter upon the holding for any of the purposes following; (that is to say,)

Mining or taking minerals, or digging or searching for minerals:

Quarrying or taking stone, marble, gravel, sand, brick-clay, fire-clay, or slate; cutting or taking timber, save timber or other trees planted by the tenant or his predecessors in title, or that may be necessary for ornament or shelter:

Opening or making roads, fences, drains, and watercourses:

Viewing or examining at reasonable times the state of the holding, and all buildings or improvements thereon:

And the tenant shall not persistently obstruct the landlord, or any person or persons authorised by him in that behalf as aforesaid, in the exercise of any right conferred by this subsection. All mines and minerals, coals and coal-pits, subject to such rights in respect thereof as the tenant under the contract of tenancy is lawfully entitled to exercise, shall be deemed to be exclusively reserved to the landlord.

ower of esumption y landlord.

4. The landlord may, by *twelve months'* notice to quit, to expire at the same period of the year as the tenancy commenced, determine the tenancy of any holding for any of the following purposes:

(*a.*) For some reasonable and sufficient purpose having relation to the good of the holding or of the estate, including the use of the ground as building ground or for the benefit of the labourers in respect of cottages, gardens, or allotments, or for the purposes of making grants or leases of sites for places of religious worship, schools, dispensaries, or the residencies of ministers of religion or schoolmasters.

(*b.*) For the provision of small holdings in accordance with any Act of the present or any future session of Parliament.

(*c.*) For the bonâ fide purpose of taking any holding, or any part thereof into his own permanent occupation, or for the bonâ fide purpose of permanently letting the same, or any part thereof, to any relative or relatives or member of the family of the landlord, being the father, mother, wife, husband, brother, sister, son, daughter, or son-in-law of the landlord.

Subject to the following conditions:

1. The notice to quit shall state the purpose for which the tenancy is to be determined, and the land intended to be taken;
2. If the notice to quit be given for the purpose of resuming a part of the holding for any of the purposes authorised by this Act, the tenant may require the judicial conditions of tenure and rent of the remainder of the holding to be fixed;
3. The tenant shall be entitled to compensation under the Agricultural Holdings (England) Act, 1883, and this Act, for improvements made by him or his predecessors in title on the land which shall be taken from his holding; and
4. When the land is taken for any purpose other than for the provision of small holdings or for the benefit of labourers in respect of cottages, gardens, or allotments, the tenant shall be entitled to compensation from the landlord for disturbance. Such compensation for disturbance shall, failing agreement with respect thereto, be fixed by the Land Court.

andlord or s relative occupy sumed olding for ven years, herwise nant titled to occupy sell the uancy of e holding.

5.—(1.) If the notice to quit be given under the preceding section for the purpose of the landlord taking the holding or any part thereof into his own occupation, or for the purpose of the landlord letting the same or any part thereof to a relative or member of his family, and the landlord or the relative or member of the family of the landlord to whom the land shall be let shall not continue in the beneficial and bonâ fide occupation of the land so taken for *seven years*, the tenant from whom such land shall have been taken, his executors, administrators, or assigns, shall be entitled to re-occupy such land, or to sell the tenancy thereof, and the tenant, his executors, administrators, or assigns, shall thereupon be entitled to occupy such land on the terms upon which the land was held by the tenant at the time when such notice to quit was given.

(2.) The tenant may, by notice given not less than *two months* before the expiration of the tenancy, apply to the Land Court for a schedule of the agricultural condition and precise state of cultivation of the land to be taken.

(3.) The tenant, his executors, administrators, and assigns, within *one month* after re-occupying land under this section, may by notice apply to the Land Court to determine whether the land, owing to any act or default of the occupier or occupiers, shall have deteriorated in agricultural value since the date of such schedule. The Land Court shall, if the land be so deteriorated or improved, determine the value of such deterioration or improvement, and the landlord shall pay to the tenant the value of any such deterioration, or the tenant shall pay to the landlord the value of such improvement, as the case may be. In any application under this subsection such schedule shall be evidence of the agricultural condition and state of cultivation of the land taken from the tenant at the date of the schedule.

(4.) If any permanent improvements shall have been made on such holding or part thereof, the landlord, on the tenant re-occupying the same, or within *two months* thereafter, may by notice require a new judicial rent to be fixed.

Land Commission may relieve against forfeiture on breach of statutory conditions.

6. Where a notice to quit is served by a landlord upon a tenant of a present or future tenancy for the purpose of compelling the tenant to quit his holding, in consequence of the breach by the tenant of any statutory obligation, the tenant may, at any time before the commencement of an ejectment founded on such notice to quit, apply to the Land Court for an order restraining the landlord from taking further proceedings to enforce such notice to quit.

(1.) If the Land Court is of opinion that adequate satisfaction for the breach of such obligation can be made by the payment of damages to the landlord, and that the tenant may justly be relieved from the liability to be compelled to quit his holding in consequence of such breach the Land Commission may make an order restraining further proceedings on the notice to quit, upon the payment by the tenant of such sum for damages as they shall then, or after due inquiry, award to the landlord in satisfaction for the breach of the statutory obligation, together with the costs incurred by the landlord in respect to the notice to quit, and the proceedings subsequent thereto.

(2.) If the Land Court is of opinion that no appreciable damage has accrued to the landlord from the breach of such obligation, and that the tenant may justly be relieved as aforesaid, they may make an order restraining further proceedings on the notice to quit, upon such costs as to costs as they may think just.

(3.) The service of a notice to quit, to enforce which no proceedings are taken by the landlord, or the proceedings to enforce which are restrained by the Land Court, shall not operate to determine the tenancy.

Reasonable Conditions of Tenancy and Fair Rent.

Judicial conditions of tenancy and rent.

7.—(1.) Either party to a contract of tenancy, present or future, may apply to the Land Court to fix reasonable conditions of tenancy and a fair rent to be paid by the tenant to the landlord for the holding, and thereupon the Court, after hearing the parties and considering all the circumstances of the case, holding, and district, and particularly after taking into consideration any permanent or unexhausted improvements on the holding and suitable thereto which have been executed or paid for by the tenant or his predecessors, may determine what is such fair rent and what are such reasonable conditions of tenancy, and pronounce and order accordingly.

(2.) The rent fixed by the Court (in this Act referred to as the judicial rent) shall be deemed to be the rent payable by the tenant as from the period commencing at the rent day next succeeding the decision of the Court, and shall come in place of the existing rent, and, save by mutual agreement, the judicial rent shall not be altered for a period of *five years* from such term.

(3.) Where the Land Court shall fix a rent which shal be less in amount than the existing rent, the

App. A., XXVI.

tenant shall be entitled, at the next payment of rent, to deduct from the amount of the judicial rent such sum or sums as he may have paid over and above the amount of the judicial rent in respect of the period between the date of the notice of application to fix the fair rent and the date when such rent was fixed.

(4.) When an application is lodged with the Land Court to fix a fair rent and reasonable conditions of tenancy it shall be in the power of the Land Court, either under the same or under another application of the tenant, to stay all proceedings for the removal of the tenant in respect of non-payment of rent till the said application is finally determined, upon such terms as to payment of rent or otherwise as they shall think fit.

Judicial rent may be increased in respect of capital laid out by landlord.

8. The rent of any holding subject to statutory conditions of tenancy and rent may be increased in respect of capital laid out by the landlord under agreement with the tenant to such an amount as may be agreed upon between the landlord and tenant and sanctioned by the said commission, and the landlord shall have the same rights and powers to enforce the due fulfilment of such agreement as to recover payment of the rent.

Damages substituted for penal rents.

9. If any claim is made by a landlord on a tenant, under a present or future contract of tenancy, for any penal or additional rent in respect of breach of or deviation from any condition or covenant in the contract, the claim shall be limited to the damages suffered by the landlord from any such default, and that notwithstanding any provision in the contract of tenancy.

Amendment of Law as to Compensation for Improvements.

Power to refer to Land Commission on landlord's refusal to consent to first-class improvement.

10. Whenever a tenant shall intend to execute any improvement mentioned in the first part of the First Schedule to the Agricultural Holdings (England) Act, 1883, and shall give notice in writing to the landlord or his duly authorised agent of such intention, and shall in such notice specify the particular improvement or improvements intended, and the estimated costs thereof, and the landlord or his duly authorised agent shall not, within *two months* after such notice, deliver to the tenant an assent in writing to such intended improvement or improvements, the tenant may require the matter in difference to be referred to the Land Court. If the Land Court shall be of opinion that the improvement or improvements specified in the notice will increase the productiveness of the holding, or will enhance the value thereof, or be a suitable and a desirable improvement to the holding as an agricultural holding, the Land Court may award leave to the tenant to execute such improvement or improvements without conditions, or subject to such conditions as they may set forth in the award, and thereupon the tenant on quitting shall be entitled to compensation for the improvements which he shall, within *five years* after the date of the award, execute in pursuance of such leave in the same manner as if the landlord had duly consented to the making of such improvement or improvements.

Amendment of schedule.

11. Part I. of the First Schedule to the Agricultural Holdings (England) Act, 1883, shall be read and have effect as if the following were added:

"(14*a*.) Any other improvement increasing the value "of or improving the holding and not specifically "mentioned in any part of this schedule."

Valuation of compensation.

12. Where any improvements are valued under the Agricultural Holdings (England) Act, 1883, with a view to compensation to be paid to a tenant, such valuation shall be made, unless the landlord and the tenant agree, by the Land Court.

Power of Tenant to nominate Successor or bequeath Tenancy.

Tenant may nominate his successor to tenancy.

13. A tenant may nominate his successor to the tenancy,—

(1.) Notice of the intended successor, giving name, address, and present occupation of such party and intended date of transfer must be given to the landlord not less than *six months* prior to the intended date of transfer.

(2.) The landlord shall have the right within *one month* from receipt of such notice to object to the proposed successor, and may himself re-enter into possession of the tenancy of the holding upon paying to the tenant such sum as may have been agreed to be paid by the person nominated to succeed to the tenancy.

(3.) In case the landlord shall doubt the *bona fides* of the agreement as to the amount to be paid to the outgoing tenant by his successor, he may, by giving notice to the present tenant within not less than *three months* from the proposed date of transfer, apply to the Land Court to decide whether the sum agreed upon between the tenant and his nominee is a fair and reasonable sum or not, and the Land Court shall have power to vary the amount to be paid.

(4.) The landlord may apply to the Land Court to determine whether the nominee of the tenant is a suitable person to enter upon the holding, due regard being had to his possession of the requisite capital for the proper working of the land, and as to his character and abilities for such occupation, and the Land Court shall have power to set aside such nomination.

Power for tenant to bequeath tenancy by will, and for the administrator of a deceased tenant to assign to next-of-kin without landlord's consent.

14. A tenant may bequeath his tenancy by will, and in case of intestacy the tenancy shall devolve as personalty upon the person or persons entitled under the statutes for the distribution of the personal estate and effects of intestates to the personal estate and effects of the deceased tenant.

Leaseholders.

Lessees and sub-lessees in occupation to be deemed tenants from year to year at expiration of leases.

15. At the expiration of leases of holdings existing at the date of the *passing of this Act*, and which were originally granted or held for lives or a life, or for lives or a life and years, or for a term of *five years* or upwards, the lessees or sub-lessees who shall be bonâ fide in occupation of their holdings shall be deemed to be tenants from year to year of the holdings at the rents and subject to the conditions of their leases or sub-leases respectively so far as such conditions may be applicable to tenancies from year to year.

Regulations as to Common Grazings, Sheep-walks, and Mountain Pastures.

Appointment of committee.

16. The tenants in any parish or parishes who share in the same common grazing, sheep-walk, or mountain pasture, may, at a public meeting called by public notice, appoint a committee of such number as the meeting shall think fit, not being less than three or more than five, who shall be charged with the duty of making regulations as to the number of stock which each tenant shall be entitled to put on the common grazing, sheep-walk, or mountain pasture, and as to any other matters affecting the fair exercise of their joint rights therein by the several tenants.

The notice of meeting may be given by any two tenants interested in the common grazing or other right, and the notice shall be given by being published for two successive weeks in any newspaper circulating in the parish, or by being posted for two successive weeks at or near the door of every place of worship and every public school in the district affected.

In the event of any dispute arising as to the sufficiency of any such notice, such dispute shall be decided summarily by the Land Court, and their decision shall be final.

The regulations so made shall be submitted to the Land Court, who shall cause reasonable notice to be given to the landlord of the said common grazing, sheep-walk, or mountain pasture; and shall hear the parties, if this be desired by any party, and make such inquiry as they may deem necessary; and they shall, in considering the said regulations, have regard to any existing custom of the district in the matters affected, whether founded on estate rules or otherwise; and they may approve of the proposed regulations with or without alteration, or they may refuse to approve of the same; and, when so approved, such regulations shall come into force and may be added to or altered by the committee from time to time with the like approval.

Casual vacancies.

17. Such committee shall remain in office for *three years*, and at the end of every such period a new committee shall be appointed at a public meeting, and after public notice as aforesaid. Outgoing members shall be eligible for re-election. Vacancies occurring by death or resignation shall be filled up by nomination of the remaining members. A majority shall be a quorum. The said committee shall appoint one of their number to act as clerk or constable.

On failure of tenants to appoint committee, Land Commission may do so.

18. In case the tenants interested in any common grazing, sheep-walk, or mountain pasture shall at any time fail to appoint a committee, the Land Court may, on the request in writing of any two tenants interested,

or the landlord or landlords, and after making such inquiry, if any, as the Court may deem necessary, appoint a committee, who shall have the same duties and powers, and remain in office for the same period, as if they had been appointed by the tenants, and in the event of such committee failing to make regulations within *three months* after their appointment, the Land Court may make such regulations themselves on the request in writing of any two tenants or of the landlord.

Land Court.

ppoint- ient of ommis- oner.

19. The Land Court under this Act shall be the county court of the district in which the holding is situated.

The county court judge of such court shall preside at all sittings of the court under this Act, and shall have sitting with him on all occasions (except where points of law only are to be decided) two assessors, who shall advise him on techical points.

Such assessors shall be practical farmers or land or estate agents, or such persons as shall have a thorough practical knowledge of farming as practised in the district.

lection ' assessors.

20. The selection of the two assessors to act in any case shall rest with the registrar of the county court, but it shall be his duty to provide that one of the two assessors shall be an estate or land agent, and the other a tenant farmer.

ppoint- ient of ssessors nd valuers.

21. The county council for every county (other than the county council of a county borough) shall from time to time appoint a number of fit persons to be assessors for such county, and shall forward the names of such persons to the registrars of each of the county courts in such county, and the registrar of each court shall select assessors from the list for the county in which the holdings are situate, and the assessors shall receive such remuneration out of the county rate as may be sanctioned by the county council.

orms of rocedure.

22. The Land Court may, subject to the approval of the Board of Agriculture, frame and issue such printed forms of application and other forms of procedure as they shall think proper.

It shall be in the power of the Land Court to make rules with reference to proceedings before the Court, and also, with the approval of the Treasury, to fix a scale of costs and fees to be charged in carrying the Act into execution, and the taxation of such costs and fees, and the persons by whom, and the manner in which, such costs and fees are to be paid.

rocedure fixing fair nt and asonable onditions tenancy.

23. When an application is made to the Land Court to fix a fair rent and reasonable conditions of tenancy intimation thereof shall be given to the other party interested in the holding, landlord or tenant, as the case may be, and the Land Court shall appoint a time and place at which parties shall be heard in reference to the matter of the application.

It shall be competent for the assessors, by order of the court, in case of such application, to visit the holding.

owers of and Com- ission to ke evi- ence and ake order to ex- enses.

24. In any application under this Act, it shall be competent to any of the parties thereto to demand, and for the Land Court to order, that the evidence shall be taken upon oath, and it shall also be competent to the Land Court to make such order as to expenses as they think fit.

ecision of ommis- oners final.

25. The decision of the Land Court in regard to any of the matters committed to their determination by this Act shall be final.

and Com- ission to ttle dis- tes except otherwise rovided.

26. The Land Court shall have exclusive jurisdiction in respect of any matter or dispute arising under this Act, the mode of settlement of which is not otherwise provided for by this Act.

owers for and Com- ission to se county urt houses nd employ fficers of ounty ourts.

27. The Land Court may use, free of charge, for holding its sittings, the court houses commonly used for county court purposes or for the holding of courts of petty sessions, and the officers of the county courts shall be bound to attend the sittings of the Land Court, and to perform analogous duties to those which they perform in the case of a sitting of a county court.

ommission make eport of eir pro- eedings.

28. The Land Court shall once in every year make a report to the Board of Agriculture as to their proceedings under this Act, and every such report shall be presented to Parliament.

ecord of roceedings; ansmis- on of pplications

29. There shall be kept in the clerk of the peace's office of the county to which this Act applies, a book to be called the "Tenant Holdings Book." In this book the clerk of the peace shall record every order of the Land Court with the application on which it proceeds, and any other proceeding in the case which the Court may think necessary to be recorded. It shall be the duty of the Land Court to send such orders and applications to the clerk of the peace to be recorded.

App. A., XXVI. and XXVII.

by sheriff clerk; sheriff clerk's remuneration.

30. Where, in any preceeding under this Act, the Land Court is empowered to pronounce an order, the landlord and the crofter may agree to accept the decision of a sole referee mutually chosen instead of the decision of the Land Court, and in that case any order pronounced by such sole referee shall, when recorded in the "Tenant Holdings Book" along with the agreement to accept his decision, be as effectual to all intents and purposes as an order of the Land Court; and all regulations applicable to the Land Court, and to the orders pronounced by them, shall apply to sole referee and the orders pronounced by him.

Sole referee may be chosen.

Avoidance of contracts inconsistent with the Act.

31. Every contract, agreement, covenant, condition, or arrangement which purport to take away or modify the rights of the tenant as declared, given, and reserved to him by this Act, or which gives to such tenant any advantage in consideration of his forbearing to exercise such rights (otherwise than is permitted or provided for by this Act), or imposes upon him any disadvantage in consequence of his exercising such rights, shall be void both at law and in equity so far as it takes away or modifies his rights or gives him any advantage or disadvantage as aforesaid.

Tenancies to which the Act does not apply.

32. This Act shall not apply to tenancies in—

(1.) Any holding which is not agricultural or pastoral in its character, or partly agricultural and partly pastoral, or cultivated in whole or in part as a market garden; or

(2.) Any demesne land, or any land being or forming part of a home farm; or

(3.) Any holding which the tenant holds by reason of his being a hired labourer or hired servant; or

(4.) Any letting for the purposes of temporary depasturage; or

(5.) Any holding let to the tenant during his continuance in any office, appointment, or employment, or for the temporary convenience, or to meet a temporary necessity, either of the landlord or tenant: Provided that any such letting made after the *passing of this Act* shall be by contract in writing, which shall express the purpose for which such letting is made, but such contract shall not be registered.

Interpretation of terms.

33. In the construction of this Act the following words and expressions shall have the meaning hereby assigned to them, unless there be something in the context repugnant thereto:

"Contract of tenancy" means a letting of, or agreement for the letting of, land from year to year, or for a term not exceeding *five years*.

"Agent" includes a person authorised to receive rent.

"Tenant" means a person occupying a holding under a contract of tenancy.

"Holding" includes all land, agricultural or pastoral, or partly agricultural and partly pastoral, or cultivated in whole or part as a market garden, held by the same tenant of the same landlord for the same term under the same contract of tenancy.

"Ejectment" includes every proceeding for the recovery of a holding or any part thereof.

"Conditions of tenancy" shall mean agricultural conditions or restrictions for the purpose of securing the proper cultivation of the holding and maintaining or increasing the productiveness of the soil thereof.

XXVII.

(Handed in by Mr. T. Carrington-Smith. See Questions 9667 and 9771.)

Since the completion of his examination the witness has made application to the clerk of the council for the county of Stafford for an official return of the basis of county rate as settled by the County Rate Assessment Committee respectively in 1876, 1883, and 1893.

The appended extract is a fair representation of those parishes—which the whole area of the county being considered—are specially typical of its agriculture. Whilst the witness desires to draw the attention of the

Appendix A., XXVII. and XXVIII.

Royal Commission to the corroboration furnished by the "extract" to the answer given to Question 9771, viz., that rents have not been reduced in Staffordshire more than 10 per cent., he begs that the information conveyed in the answer given to Question 9667 may be taken in conjunction with that given by the County Rate Assessments.

APPENDIX XXVIII.

The following letter was received from Messrs. Boydell, Taylor, and Huitt relative to the evidence given by Mr. Thomas Parker.

2, Pepper Street, Chester,
May 29, 1894.

DEAR SIR,

MR. BARNSTON'S attention having been called to the evidence given before the Royal Commission on Agriculture by Mr. Thomas Parker, of Churton Hall, Chester, who was until lately a tenant of Mr. Barnston's, and to the fact that in this evidence Mr. Parker referred to some extent to the dispute existing between himself and his landlord, we think it right to submit the enclosed observations on Mr. Parker's evidence so far as it appears to us to affect Mr. Barnston, and we shall be obliged if you will lay the same before the Commissioners.

Yours truly,
BOYDELL, TAYLOR, and HUITT.

H. Lyon, Esq.,
Royal Commission on
Agriculture.

OBSERVATIONS ON MR. THOMAS PARKER'S EVIDENCE.

Question 10,743–50.—In the year 1884 *all* tenants on the estate were served with notice to quit, but, with the exception of a Mr. George Parker (a brother of Mr. Thomas Parker), they were all told that they would be allowed to remain on signing fresh agreements.

The agent, a Mr. Wilmot, was directed to make a valuation of all the farms, and this he did, and with three exceptions it was found that the tenants had previously paid what he considered was the value. In two of these cases the amount was so small that no alteration was made, and they were allowed to remain on at the same rent. The other exception was Mr. Thomas Parker, and in this case the difference was so great that the trustees were bound to increase his rent or else reduce the rent of the other tenants, especially as the agent, in his report, stated that he had heard that there was much dissatisfaction on account of the farm being underlet.

This course was adopted by the trustees under the advice of their solicitors to bring the tenants within the provisions of the Agricultural Holdings Act passed the previous session, and to prevent any claims being made for improvements before the Act.

Question 10,494.—This clause was inserted in Mr. Parker's agreement to meet his claim for unexhausted improvements. The trustees were, of course, unable to recognise his claim for improvements effected by his father, and in agreeing to its insertion they were under the impression that they were fairly meeting his claim, as for seven years he would hold the farm at a considerable less rental than it was admitted to be worth.

Question 10,690.—This is not correct; in October 1892 Mr. Parker requested Mr. Barnston not to insist upon the payment of the rent, he and the present agent of the estate were both under the impression he was liable to pay under his agreement, viz., 570*l.*, and at the same time stated that if he did he would have to leave the farm. Mr. Barnston, having consulted with his agent, saw no reason to alter the terms of what both parties thought was the agreement, especially as if he did he was advised that the other tenants would probably also ask for a reduction, he, therefore, told Mr. Parker that he could not do so. Mr. Parker then told him he would have to go, and would look out for another farm. Shortly after Christmas Mr. Parker asked Mr. Barnston to reconsider his determination, but this he declined to do. Mr. Barnston then, after consultation with his agent, decided to serve Mr. Parker with notice, as he objected to have one of his tenants holding threats over his head, but at the same time gave instructions that the farm was not to be relet, as he hoped that Mr. Parker would, on consideration, express himself willing to carry out his agreement, but in this hope he was disappointed, as, although Mr. Parker was told by the agent, if he liked he could apply for the farm, he never did so until after four months, and the farm was then on offer to Mr. Bellis, the present tenant.

Appendix B.

APPENDIX B.

SCHEDULE I.

TABLE showing for the UNITED KINGDOM the ACREAGE under WHEAT, and the ESTIMATED NET PRODUCTION and the ESTIMATED VALUE of the CROP, excluding STRAW, in each HARVEST YEAR from 1869–70 to 1892–3.

1. Harvest Years. Sept. 1 to Aug. 31.	2. Acres of Wheat under Cultivation.	3. Estimated Yield of Wheat per Acre.	4. Average Price of Wheat per Imperial Quarter.	5. Estimated Total Production of Wheat (less Seed) in Quarters.	6. Value of Crop.

Average of six years	2,751,000	3·48	37 4	8,756,000	16,344,000
1887–88	2,387,000	4·00	30 11	8,951,000	13,837,000
1888–89	2,668,000	3·50	30 8	8,671,000	13,296,000
1889–90	2,544,000	3·74	31 2	8,879,000	13,836,000
1890–91	2,484,000	3·83	35 4	8,893,000	15,711,000
1891–92	2,392,000	3·91	33 5	8,755,000	14,628,000
1892–93	2,299,000	3·31	26 8	7,035,000	9,380,000
Average of six years	2,462,000	3·71	31 4	8,531,000	13,365,000
1893–94	1,955,000	3·26	26 0	5,885,000	7,650,500

NOTE.—In the above Schedule the figures shown in column 2 have been extracted from the Annual Agricultural Returns; the yield per acre (col. 3) from 1869–70 to 1883–4 has been taken from the statement issued by Messrs. Lawes and Gilbert (Journal of Royal Agricultural Society, Vol. IV., Part I., 1893), and for subsequent years from the Produce Statistics published by the Board of Agriculture. The average price of wheat (col. 4) has been calculated from the official prices of British corn, ascertained under the Corn Returns Act, 1882, and earlier statutes. In calculating the production of wheat (col. 5) 2¼ bushels per acre has been deducted for seed from 1869–70 to 1886–87, and for subsequent years 2 bushels per acre has been deducted for seed, in accordance with the practice adopted by Messrs. Lawes and Gilbert.

The figures in column 6 have been obtained by multiplying the figures in col. 5 by those in col. 4.

The price quoted for 1893–4 is the average price for the first eight months of the harvest year 1893–4.

Appendix B.

SCHEDULE II.

TABLE showing for the UNITED KINGDOM the ESTIMATED NET PRODUCTION and the NET IMPORTATION of WHEAT in each HARVEST YEAR 1869–70 to 1892–3.

1. Harvest Years Sept. 1 to Aug. 31.	2. Estimated Total Production of Wheat (less Seed) in Quarters.	3. Imports less Exports in Quarters.	4. Total of 2 and 3.	5. Estimated Population at middle of Harvest Year.
	Qrs.	Qrs.	Qrs.	No.
1869–70	12,583,000	10,206,000	22,789,000	31,164,000
1870–71	13,322,000	8,278,000	21,600,000	31,456,000
1871–72	10,612,000	9,641,000	20,253,000	31,768,000
1872–73	10,634,000	12,793,000	23,427,000	32,076,000
1873–74	9,469,000	11,627,000	21,096,000	32,393,000
1874–75	13,179,000	12,033,000	25,212,000	32,726,000
Average of six years	11,633,000	10,763,000	22,396,000	31,930,000
1875–76	9,242,000	14,224,000	23,466,000	33,080,000
1876–77	9,031,000	12,474,000	21,505,000	33,451,000
1877–78	10,262,000	14,849,000	25,111,000	33,821,000
1878–79	11,938,000	14,620,000	26,558,000	34,183,000
1879–80	5,165,000	16,953,000	22,118,000	34,516,000
1880–81	8,677,000	16,683,000	25,360,000	34,831,000
Average of six years	9,052,000	14,967,000	24,019,000	33,980,000
1881–82	8,210,000	17,654,000	25,873,000	35,117,000
1882–83	9,397,000	20,740,000	30,137,000	35,369,000
1883–84	8,899,000	16,477,000	25,376,000	35,633,000
1884–85	9,518,000	18,749,000	28,267,000	35,919,000
1885–86	9,242,900	15,799,000	25,041,000	36,217,000
1886–87	7,263,000	18,125,000	25,388,000	36,507,000
Average of six years	8,756,000	17,924,000	26,680,000	35,794,000
1887–88	8,951,000	17,490,000	26,441,000	36,790,000
1888–89	8,671,000	18,700,000	27,371,000	37,083,000
1889–90	8,879,000	18,891,000	27,770,000	37,387,000
1890–91	8,893,000	18,768,000	27,661,000	37,693,000
1891–92	8,755,000	22,873,000	31,628,000	38,005,000
1892–93	7,035,000	22,011,000	29,046,000	38,644,000
Average of six years	8,531,000	19,789,000	28,320,000	37,600,000
1893–94	5,885,000	—	—	—

The figures in column 2 are based on the figures shown in columns 2 and 3 of Schedule I. In calculating the production of wheat (col. 2) 2½ bushels per acre has been deducted for seed from 1869–70 to 1886–87, and for subsequent years 2 bushels per acre has been deducted for seed in accordance with the practice adopted by Messrs. Lawes and Gilbert.

The figures in column 3 have been taken from Messrs. Lawes and Gilbert's statement for the years 1869–70 to 1887–88 inclusive, and they have also been compared with the Trade and Navigation Returns. For subsequent years the imports less exports have been obtained solely from the Trade and Navigation Returns.

The estimated population has been taken from the statement issued by Messrs. Lawes and Gilbert and compared with the Returns issued by the Registrar-General.

SCHEDULE III.

Appendix B.

TABLE showing the ESTIMATED AVERAGE YIELD per ACRE of WHEAT, and the ESTIMATED VALUE of the CROP per ACRE, excluding STRAW, in GREAT BRITAIN for each Year since 1857.

Harvest Years.	Estimated Production of Wheat per Acre in Bushels.	Production of Wheat per Acre as compared with Standard of 100. (100 = 28 bush.)	Average Price per Imperial Quarter.	Estimated Value of Crop per Acre in Money.

Average of six years	29·7	106	31 4	5 16 4
1893–4 - -	25·9	93	26 0	4 4 3

NOTE.—In this Schedule the figures from 1857 to 1880 inclusive have been reproduced, with a few corrections, from the tables presented to the Duke of Richmond's Commission of 1880 by the Right Hon. G. J. Shaw Lefevre, M.P. For the three years 1881 to 1883 the yield of wheat per acre has been taken from the statement published by Messrs. Lawes and Gilbert, referred to under Schedule I., while for the years 1884 to 1892 the yield has been extracted from the Produce Statistics issued by the Board of Agriculture.

The average price of wheat per imperial quarter has been obtained from the sources indicated in the note to Schedule I.

The price quoted for 1893–4 is the average price of the first eight months of the harvest year 1893–4.

Appendix B.

SCHEDULE IV.

TABLE showing for GREAT BRITAIN the ACREAGE and the ESTIMATED PRODUCTION of BARLEY, and the ESTIMATED VALUE of the CROP, excluding STRAW, in each Year since 1869–70.

Harvest Years.	Acreage.	Estimated Yield per Acre in Quarters.	Estimated Gross Produce in Quarters.	Average Price per Imperial Quarter.	Estimated Value of Crop.
	Acres.	Quarters.	Quarters.	s. d.	£
1869–70	2,251,000	4·4	9,904,000	42 0	17,293,000

1892–3	2,037,000	4·33	8,811,000	24 10	10,940,000
Average of six years	2,092,000	4·16	8,703,000	27 1	11,785,000
1893–4	2,075,000	3·59	7,442,000	28 4	10,543,000

NOTE.—In this Schedule the figures for the years 1869 to 1880 inclusive have been reproduced from the tables presented to the Duke of Richmond's Commission of 1880 by the Right Hon. G. J. Shaw Lefevre, M.P.

The statistics of acreage from 1881 to 1892 inclusive have been obtained from the Agricultural Returns. The yield per acre for 1881 and 1882 has been obtained from *The Farmer*, and that for 1883 has been taken from the *Mark Lane Express*.

For the years 1884 to 1892 inclusive the yield per acre has been obtained from the Produce Statistics issued by the Board of Agriculture.

The average price per quarter has been calculated from the official prices of British corn referred to in the note to Schedule I.

The price quoted for 1893–4 is the average price of the first eight months of the harvest year 1893–4.

SCHEDULE V.

Appendix B.

TABLE showing for GREAT BRITAIN the ACREAGE and ESTIMATED PRODUCTION of OATS, and the ESTIMATED VALUE of the CROP, excluding STRAW, in each Year since 1869–70.

Harvest Years.	Acreage.	Estimated Yield per Acre in Quarters.	Estimated Gross Produce in Quarters.	Average Price per Imperial Quarter.	Estimated Value of Crop.

1888–9	2,882,000	4·66	13,418,000	17 6	11,741,000
1889–90	2,889,000	4·87	14,180,000	18 6	13,166,000
1890–1	2,903,000	5·17	15,023,000	19 1	14,344,000
1891–2	2,899,000	4·84	14,048,000	20 9	14,575,000
1892–3	2,997,000	4·85	14,537,000	18 9	13,628,000
Average of six years	2,943,000	4·79	14,097,000	18 6	13,040,000
1893–4	3,172,000	4·45	14,111,000	18 0	12,700,000

NOTE.—In the above Schedule the figures from 1869 to 1880 inclusive have been reproduced from the tables presented to the Duke of Richmond's Commission of 1880 by the Right Hon. G. J. Shaw Lefevre, M.P.

The statistics of acreage from 1881 to 1892 inclusive have been taken from the Agricultural Returns.

The estimated yield per acre from 1881 to 1892 inclusive has been obtained from the sources indicated in the note to Schedule III.

The price of oats per imperial quarter has been computed from the statistics of prices of British corn referred to in the note to Schedule I.

The price quoted tor 1893–4 is the average price of the first eight months of the harvest year 1893–4.

In considering this Schedule it should be noted that it has been estimated that 50 per cent. of the oats produced in England and Wales are consumed on the farms. It should also be observed that the acreage includes a large area under oats in Scotland, and that there are no official records of the prices of oats in that country.

Appendix B.

SCHEDULE VI.

TABLE showing the NUMBER of CATTLE and SHEEP in GREAT BRITAIN from the year 1870.

(Extracted from "The Agricultural Returns.")

Year.	Cattle.			Total of Cattle.	Sheep.		Total of Sheep.
	Cows and Heifers in Milk or Calf.	Two Years of Age and above.	Under two Years of Age.		One Year Old and above.	Under one Year Old.	
1870	2,161,804	1,355,993	1,885,520	5,403,317	18,410,250	9,987,339	28,397,589

APPENDIX C.

STATEMENT showing the RATES of CUSTOMS DUTY which are at present leviable in the different EUROPEAN COUNTRIES and the UNITED STATES on IMPORTS of the various Descriptions of GRAIN and FLOUR other than RICE and RICE FLOUR.

Tariff Classification.	Tariff Rates of Duty.	English Equivalents.
	Rbls. cop.	s. d.
Russia:		
Cereals of all kinds other than rice	Free.	Free.
Flour of all kinds	Poud. gross - 0 20	Cwt., gross - 1 11¾
	Kron. öre.	s. d.
Sweden:		
Rye, wheat, barley, maize, pease, and beans	100 kilos. - 1 25	Cwt. - 0 8½
Oats and vetches	Free.	Free.
Other kinds (not including malt)	100 kilos. - 1 25	Cwt. - 0 8½
Flour and groats of all kinds	„ - 2 50	„ - 1 5
	Kron. öre.	s. d.
Norway:		
In grain:		
Buckwheat	100 kilos. - 0 22	Cwt. - 0 1½
Barley	„ - 0 22	„ - 0 1½
Beans, pease, and lentils	„ - 0 36	„ - 0 2½
Oats	Free.	Free.
Wheat	100 kilos. - 0 22	Cwt. - 0 1½
Maize	„ - 0 22	„ - 0 1½
Rye	„ - 0 22	„ - 0 1½
Rye imported at the ports of Hammerfest, Vardo, or Vadso	Free.	Free.
Ground:		
Groats:		
Of buckwheat	100 kilos. - 0 50	Cwt. - 0 3½
Of barley (including pearl barley)	„ - 0 50	„ - 0 3½
Of oats	Free.	Free.
Of wheat or millet, including semolina	Kilog. - 0 13	Cwt. - 7 4
Meal and Flour:		
Of buckwheat, beans, barley, pease, lentils, or rye	100 kilos. - 0 50	„ 0 3½
Of maize, including crushed or broken maize	„ - 0 50	„ - 0 3½
Of oats	Free.	Free.
Of wheat	100 kilos. - 1 25	Cwt. - 0 8¾
Rye meal or flour imported at the ports of Hammerfest, Vardo, or Vadso	Free.	Free.
Bran	„	„
Denmark:		
Cereals, corn, pulse, and flour, viz., buckwheat, barley, beans, oats, millet, wheat, lentils, maize, rye, vetches, or pease; all these ground or not	„	„
	Mks. pfg.	s. d.
Germany:		
Bran	Free.	Free.
Wheat	100 kilos. - 3 50	Cwt. - 1 9¼
Rye	„ - 3 50	„ - 1 9¼
Oats	„ - 2 80	„ - 1 5
Buckwheat	„ - 2 00	„ - 1 0¼
Pulse	„ - 1 50	„ - 0 9¼
Barley	„ - 2 00	„ - 1 0¼
Maize	„ - 1 60	„ - 0 9¼
Other descriptions of grains, not separately mentioned	„ - 1 00	„ - 0 6
Millers' products of grain and pulse, *i.e.*, hulled or pearled grain, pearl barley, groats, meal, and flour	„ - 7 30	„ - 3 8½
Holland:		
Corn, grain, meal, and flour of all kinds	Free.	Free.
Belgium:		
Corn, grain, meal, and flour of all kinds	=	„
	Frs. cts.	s. d.
France:		
In grain:		
Wheat, spelt, and meslin	100 kilos. - 7 00	Cwt. - 2 10¼
Oats	„ - 3 00	„ - 1 2¾
Barley	„ - 3 00	„ - 1 2¾
Rye	„ - 3 00	„ - 1 2¾
Maize	„ - 3 00	„ - 1 2¾
Buckwheat	„ - 2 50	„ - 1 0¾
Dari and millet	„ - 3 00	„ - 1 2¾
Wheat, spelt, and meslin, crushed or as grist, containing more than 10 per cent. of flour	„ - 11 00	„ - 4 5¾
Pearled or cleaned grain other than millet	„ - 16 00	„ - 6 6
Millet, hulled or cleaned	„ - 6 00	„ - 2 5¼
Groats, grits (coarse flour)	„ - 16 00	„ - 6 6

Tariff Classification.	Tariff Rates of Duty.	English Equivalents.
Meal and Flour:		
Of wheat, spelt, and meslin:		
At the rate of extraction (*taux d'extraction*) of 70 per cent. and above	Frs. Cts. 100 kilos. 11 00	*s. d.* Cwt. 4 $5\frac{3}{4}$
Ditto, ditto, between 60 and 70 per cent.	„ 1 50	„ 5 $5\frac{3}{4}$
Ditto, ditto, of 60 per cent. or less	„ 16 00	„ 6 6
Of oats, barley, rye or maize	„ 5 00	„ 2 $0\frac{1}{2}$
Of buckwheat	„ 4 00	„ 1 $7\frac{1}{2}$
Of dari or millet	„ 4 50	„ 1 10
[*Note.*—All the foregoing descriptions of grain, flour, &c., of extra European origin, but imported from European entrepôts will pay the duties specified above with the addition of a surtax of 3 frs. 60 cts. per 100 kilos. (1*s.* $5\frac{1}{2}$*d.* per cwt.)]

APPENDIX D.

Summary of Replies received from the Land Office Inspectors of the Board of Agriculture as to the extent of Agricultural Depression in their respective Districts.

County.	Heads of Inquiry.			Inspector's Name.
	Does Agricultural Depression exist?	Is it long standing or recent? Is it increasing or decreasing?	Has any land gone out of Cultivation?	
ENGLAND.				
Bedford	Depression exists most seriously	Depression is of long standing and increasing.	A large extent of heavy land has gone out of cultivation.	Mr. W. H. Haughton.
Berks	Depression exists largely	Depression is of long standing and more acute on poorer land.	A considerable area is out of cultivation, particularly on the Berkshire Downs.	Mr. A. Castle.
Buckingham	Same as Berks	Ditto	-	Mr. A. Castle.
Cambridge	Depression exists	Depression is of long standing, and increasing.	A good deal of land is out of cultivation.	Mr. J. Bird.
Isle of Ely	Depression exists to a considerable extent; stronger lands and inferior fen lands have suffered most; the better and medium lands least.	Depression is increasing, and has been accentuated by bad corn crops of 1892-93. No part of England so dependent on corn as the Isle of Ely.	Is not aware of any land out of cultivation, but the standard of farming is lowered generally.	Mr. W. C. Little.
Chester	Depression exists	Depression is decreasing	No land out of cultivation; farms not difficult to let.	Mr. A. Wyatt.
Cornwall	Depression exists	Depression commenced about 1877-78, and is not decreasing.	Is not aware of any land out of cultivation. It is a question of rent.	Mr. Jas. W. Dymond.
Cumberland	Depression exists to some extent.	Depression is decreasing, owing to favourable effects of last season.	All land is occupied, but less land is ploughed.	Mr. J. M. Richardson.
Derby	Depression exists to considerable extent, but as it is a dairy-farming district, it has not suffered so much as wheat districts.	Depression has existed to a certain extent for several years, but more severely felt this year on some farms on account of drought.	A large portion of arable land has been laid to permanent pasture, and agricultural labourers consequently out of employment.	Mr. G. M. Dixon.
Devon	Depression exists generally throughout the county.	Depression began about 1877-78, and has continued and increased since.	Is not aware of land having gone out of cultivation.	Mr. F. W. Dymond.
Dorset	Considerable depression exists	Depression began about 1876, and has increased.	Not much land out of cultivation in Dorset.	Mr. C. Paterson.
Durham	Depression does not exist to any extent.	-	All land is under cultivation, and no lack of applicants for farms. Could not recommend local inquiry.	Mr. H. Wallace.
Essex	Depression exists	Depression is of long standing, and is increasing.	Is not aware of more than 100 acres actually out of cultivation. But a great many farms are unlet and in owners' hands.	Mr. R. Creed.
"	Depression exists considerably		Land has gone out of cultivation.	Mr. G. H. Taylor.
Gloucester	"Vale of Gloster." Depression exists to a limited extent (chiefly grass and dairy farms). Depression more severe east of Cotswold.	Depression began 1878-80, and has since continued with fluctuations owing to low prices.	No land has gone out of cultivation, but land has been laid down to grass.	Mr. J. J. Harle.
Hampshire	Considerable depression exists	Depression has existed for 12 years.	Land has gone out of cultivation in light land districts.	Mr. G. H. Taylor.
Hereford	Depression exists to a serious extent.	Depression has existed since 1879.	On poorer land, especially clay loams or "wheatland," large areas have gone out of cultivation, and produce little but weeds.	Mr. H. J. Wyley.
Heriford	Depression exists	Depression is of long standing, and increasing.	Some clay land is out of cultivation.	Mr. J. Bird.
Huntingdon	Depression exists	Depression is of long standing, and increasing.	Some land has gone out of cultivation, and a large portion is greatly deteriorated.	Mr. J. Bird.
Kent	Depression exists	Depression has existed since 1878, and is increasing.	No land out of cultivation, but land has been allowed to fall down to grass.	Mr. F. Reid.
Lancaster	Depression exists to a considerable extent.	Depression has existed for 10 years, last year being the worst.	No land has gone out of cultivation.	Mr. J. Cranston.
Leicester	Depression exists to a great extent, but the mixed farms in the county have not suffered to the same degree as other counties.	Depression in prices has existed for some 15 years, and is increasing.	Is not aware of any land having gone out of cultivation, but a great deal has been in hand. A local inquiry would be of little service.	Mr. J. F. L. Rolleston.
Lincoln	N.E. and E. Lincolnshire. Depression exists.	Depression dates from 1876-77, and has increased in last two years.	Is not aware of any land having actually gone out of cultivation, but certain lands have gone into a partial and imperfect state of cultivation.	Mr. F. Higgins.
Middlesex	Considerable depression exists	Depression has existed for 12 years.	-	Mr. G. H. Taylor.

Appendix D.

County.	Heads of Inquiry.			Inspector's Name.
	Does Agricultural Depression exist?	Is it long standing or recent? Is it increasing or decreasing?	Has any land gone out of Cultivation?	
ENGLAND—*cont.*				
MONMOUTH	*See* SOUTH WALES.			
NORFOLK	Depression exists to a very considerable extent.	Depression has continued with increasing force for the past 15 years.	No land out of cultivation, but large areas have been left in grass as sheep walks.	Mr. E. W. Beck.
NORTHAMPTON	Depression is very acute	Depression is of long standing and rapidly increasing.	Does not know of any land out of cultivation.	Mr. J. P. L. Rolleston.
NORTHUMBERLAND	Depression exists seriously	Depression is of long standing and increasing.	No land has gone out of cultivation; some has been laid to grass.	Mr. George Grey.
NOTTINGHAMSHIRE	Depression exists	Depression has existed from 1880 to present time.	Is not aware of any land having gone out of cultivation, but the Duke of Portland has ceased to farm 1,000 acres of very light forest sand land.	Mr. F. J. Turner.
OXFORD	Depression exists, more seriously on arable farms.	Depression began in 1878, and arable farmers have not recovered ground.	No land out of cultivation, but some fields allowed to go to grass.	Mr. J. J. Harle.
RUTLAND	Depression exists in parts of the county.	Depression is increasing in parts.	No land out of cultivation	Mr. F. Higgins.
SALOP	Depression exists to a serious extent.	Depression has existed since 1879.	On poorer lands, especially clay loams, large acres have gone out of cultivation, and produce little beyond weeds.	Mr. H. J. Wyley.
SOMERSET	Depression exists	Depression commenced about 1877–78 and is not decreasing.	Is not aware of any land having gone out of cultivation. It is a question of rent.	Mr. J. W. Dymond.
STAFFORD	Depression exists, but is less intense in the dairy districts.	Depression was first felt with the fall in prices of grain and is increasing.	Is not aware of any land out of cultivation, but much land has been converted to pasture.	Mr. G. Menzies.
SUFFOLK	Depression exists	Depression is of long standing and increasing.	A good deal of land is out of cultivation.	Mr. J. Bird.
SURREY	Depression exists	Depression began in 1877–80 and is increasing.	A few fields roughly laid down to grass.	Mr. P. Reid
SUSSEX	Depression exists	Depression has existed since 1878 and is increasing.	No land out of cultivation, but land has been allowed to fall down to grass.	Mr. P. Reid.
WARWICK	Depression exists	Depression is of long standing and increasing.	Land has gone out of cultivation in his district.	Major W. T. E. Fosbery.
WESTMORLAND				
WILTS	Depression exists to a great extent.	Depression began about 1876 and is increasing.	Land has not been regularly cultivated owing to depression in prices.	Mr. C. Paterson.
WORCESTER	Depression exists to a serious extent.	Depression has existed since 1879.	On poorer lands, especially clay loams, large areas have gone out of cultivation.	Mr. H. J. Wyley.
YORK, NORTH RIDING	Depression exists. (Pretty general and strong feeling that sub-commissioner should visit the district.)	Depression has existed more or less for last 15 years.	Is not aware of any entire farms having gone out of cultivation, but there are cases where worst fields are no longer considered worth the cost of cultivating.	Mr. J. Rutherford.
YORK, EAST RIDING	Depression exists, but not seriously as in districts where the soil is heavy.	Depression has gradually become more intense and culminated in 1892, but keener inquiry for farms now (1893) than for past seven years.	Is not aware of any land having gone out of cultivation, but strong land is being laid down to grass.	Mr. D. Cayley.
YORK, WEST RIDING	Depression exists	Depression has existed since 1876, prices are still very low.	Is not aware of any land having gone out of cultivation.	Mr. J. Farrer.
WALES.				
NORTH WALES	Depression has existed, but there is now a slight improvement.	Depression commenced about 1879, but things are now turning slightly upwards.	No land out of cultivation	Mr. H. R. Hughes. Mr. W. B. C. Jones.
SOUTH WALES	Depression exists, especially in store cattle and mountain sheep trade. Great poverty amongst farmers in North Cardiganshire.	Depression began about 1879 and has become more acute during last few years owing to falling prices.	No land out of cultivation, but the land has been starved owing to the depression.	Mr. B. Forrest. Mr. H. C. Fryer. Mr. D. W. Drummond.
SCOTLAND.				
ABERDEEN	Depression exists	Depression began 12 to 15 years since, and there are few indications of any improvement.	Some land has gone out of rotation and has been laid down to pasture.	Mr. J. A. Beattie. Mr. A. Murray.
ARGYLL	Depression exists	Depression has existed since 1878–79, but few indications of improvement.	Land has been laid down to permanent pasture.	Mr. J. Ritchie.

County.	Heads of Inquiry.			Inspector's Name.
	Does Agricultural Depression exist?	Is it long standing or recent? Is it increasing or decreasing?	Has any land gone out of Cultivation?	
SCOTLAND—*cont.*				
Banff	Depression exists	Depression began in the Highlands as early as 1877.	Only a small area of poor land gone out of cultivation.	Mr. G. Gordon.
Berwick	Depression exists	Depression has existed since 1879; some signs of a decrease in the depression.	No land out of cultivation, but land has been laid down to grass.	Mr. J. Scott Dudgeon.
Dumbarton	Depression exists	Depression has existed since 1878–79, but there are a few indications of improvement.	Land has been laid down to permanent pasture.	Mr. J. Scott Dudgeon.
Dumfries	Depression exists	Depression has existed since 1879; some signs of a decrease in the depression.	No land out of cultivation, but land has been laid down to grass.	Mr. J. Scott Dudgeon.
Edinburgh	Depression does not exist	Farms are more readily let now than eight to 10 years ago.	No land out of cultivation	Mr. J. J. Davidson, (reports for suburban district of Midlothian only).
Elgin, or Moray	Depression exists	Depression began in the Highlands as early as 1877.	Only a small area of poor land gone out of cultivation.	Mr. G. Gordon.
Fife	Depression exists	Depression has existed for 10 or 12 years, but a slight improvement in demand for farms.	No land out of cultivation	Mr. W. M. Stewart (reports for western portion of Fife).
Forfar	Depression exists	Depression has existed during the past 15 years.	No land has gone out of cultivation, but land has been laid down to permanent pasture.	Mr. J. A. Beattie.
Inverness	Depression exists	Depression has existed during the past 15 years.	No land out of cultivation, but land has been laid down to permanent pasture.	Mr. J. A. Beattie.
"	Depression exists	Present serious depression began about 5 years ago.	Large areas of inferior land left in permanent grass.	Mr. R. Black.
Kincardine	Depression exists	Depression has existed during the past 15 years.	No land out of cultivation; but land has been laid down to permanent pasture.	Mr. J. A. Beattie.
Kirkcudbright	No agricultural depression, strictly speaking, exists.	The late exceptionally favourable season has undoubtedly improved the position of agriculturists.	No land out of cultivation	Mr. R. F. Dudgeon.
Orkney	Depression exists	Depression has existed for three years, and is not increasing.	No land out of cultivation	Mr. S. Leitch.
Perth	Depression exists	Depression has existed since 1878–79. Few indications of any improvement.	Land has been laid down to grass.	Mr. J. Ritchie.
Ross and Cromarty	Depression exists	Depression has existed during the past 15 years.	No land out of cultivation, but land has been laid down to permanent pasture.	Mr. J. Beattie. Mr. R. Gordon.
Roxburgh	Depression exists	Depression has existed since 1879; some signs of a decrease.	No land out of cultivation, but land has been laid down to grass.	Mr. J. Scott Dudgeon.
Stirling	Depression exists	Depression has existed since 1878–79; few indications of improvement.	Land has been laid down to permanent pasture.	Mr. J. Ritchie.
Islay, Jura, Colonsay	Depression exists	Depression has existed for nine years, and has increased.	No land has gone out of cultivation.	Mr. P. Reid.

	Statistics of the acreage of crops in Hampshire in 1879–80 and 1892–93.	21
	Appendix D.	
	Statistics of the number of cattle and sheep in Hampshire in 1879–80 and 1892–93.	21
	Appendix E.	
	Statement of corn grown and amount realised for same on a farm of 470 acres from 1887 to 1892 inclusive.	22
	Appendix F.	
	Statement of corn grown on a farm of 250 acres (1887 to 1892 inclusive).	22
	Appendix G.	
	Statement of rental on an estate in the Andover district, 1866 to 1893.	22
	Appendix H.	
	Summary of accounts of the Rollestone Farm of 1,060 acres, from October 1871 to October 1892.	23

THE ANDOVER DISTRICT OF HAMPSHIRE.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

Downton, Wilts,
October 31st, 1893.

Sir,

1. I have the honour to present to you my report upon the inquiries I was directed to make with respect to the general condition of Agriculture in the Andover District of Hampshire.

I.—Introduction.

Mode of inquiry.

2. In pursuance of my instructions I made my head-quarters at Andover, shifting them occasionally, as seemed required, to other centres embraced in the area. Eastward, I extended my inquiries through Whitchurch and Overton as far as Basingstoke; westward, as far as Salisbury; southward, my limits were Wallop, Stockbridge, and Micheldever; whilst to the north I was able to include Tedworth, Ludgershall, and Hurstbourne Tarrant. I attended the Andover and Basingstoke weekly markets, and travelled over and inspected considerable areas of the country, at the same time calling upon farmers, landowners, and others who were in a position to afford information relative to the subjects of the inquiry. I was everywhere received with courtesy and kindness, and I found a very general willingness to supply information. Besides the evidence given to me verbally, I have received, from residents in the district, various letters which have afforded additional material for the subject of this report.

General description.

3. The Andover District occupies portions of the west and north-west of the county of Hampshire, and adjacent parts of Wiltshire. It is a purely agricultural district, characterised chiefly by thin light soils, resting upon the Chalk formation.

Population.

4. Taking the Andover Union as a typical section of the Andover District, it may be mentioned that this Union, with an aggregate area of 71,683 acres, comprises 27 parishes, of which the most remote is about 10 miles from the town of Andover. A more thoroughly agricultural Union it would, perhaps, be difficult to find anywhere in the country. It will be seen from Appendix A., p. 19, that the population in 1881 was returned at 15,701, and in 1891 at 15,561, showing, on the decade, a decrease of 140. As, however, the population of the town of Andover simultaneously increased by 231, this number may be deducted from the rural parishes, thus bringing the decline in the population of the exclusively rural parts of the Union up to 371, which is equivalent to 2·4 per cent. of the population of 1881.

II.—Comparison with Depression of 1879.

General condition of agriculture and causes of the depression.

5. I made a point of asking all farmers, whose experience had been of sufficient length, how the present crisis compared with that of 1879. The answer invariably was that the existing depression is worse—far worse—than that of 13 or 14 years ago. In the first place, this light-land chalk country suffers much more in a season of drought than in one of excessive rain, such as that of 1879. Then again, besides this droughty season's miserably deficient yield of crops, the prices of both wheat and sheep are much below those of 1879; labour is dearer, and not so efficient; and farmers have no reserve of capital to fall back upon, though some were more fortunate in this respect in 1879. One large farmer said to me, "The great blot at the present time is the low "price of wheat." Another said, in effect, it is not now a question of rent, but of (1) low prices, (2) bad seasons, (3) dear labour. In 1879 farmers entered upon the winter with plenty of straw, though of inferior quality; they begin this winter with straw at a prohibitive price. A farmer of more than 50 years' experience in the district says that this is the worst season he has ever known. Another, who considers that 1874 was the last really good wheat year, maintains that the present depression might have been foreseen years ago, and the great evil is that it was not met promptly at the outset. Up to about 1874–75 bankers were usually very ready to permit farmers to overdraw, and even encouraged their doing so, "now they would sooner trust a dealer than a farmer." In Appendix B. is presented an instructive summary of the history

U 81190. Wt. 11544.

for the last three septennial periods of a Hampshire farm in the Andover district. Appendix H. contains a summary of the accounts for the last twenty years of a Wiltshire farm situated in the extreme north-west of the Andover district. Respecting these accounts Mr. Hugh Wyndham writes to me as follows:—

"It may strike anyone looking at the figures that the amounts paid for tithe cannot, in some of the years, be correct, and they are not actually correct, as in Mr. Heathcote's books I find in several cases an entry of balance of account due on tithe, after deducting sums due from the parson for milk, butter, and eggs. Not knowing the amounts due for these articles I have taken no notice of them, but have put down the actual sums paid to the parson as tithe.

"I would say also that I have given the quantities of wheat, barley, and oats actually sold, but have no record of the amounts ground up for food, which have naturally been much larger of late years, since prices have fallen so greatly. This applies to the wheat crop in the last few years.

"Though not given in my summary of accounts, I was much struck, in looking through Mr. Heathcote's books, at the large quantities of wheat sold to his labouring men up to the year 1878, after which such sales ceased almost entirely. I suppose the men then gave up baking at home, as hardly one of them eats home-made bread now."

III.—Yield of Crops in 1893.

Wheat.

6. Near Stockbridge good land that has been known to yield as much as 12 sacks of wheat per acre only gave 6 sacks. On an adjacent farm a field of 34 acres gave 150 sacks of wheat, or 4½ sacks per acre. A third farm here produced wheat of excellent quality, but only 5 sacks per acre. Good land near Basingstoke yielded but 2 sacks per acre. Near Whitchurch the yield was 4 to 5 sacks per acre. At Hurstbourne Priors the yield was 6 sacks per acre on one farm and 6½ sacks on another. Quite exceptional yields for the season were 10 sacks per acre at Micheldever, and 13 sacks per acre (from a 12-acre field of Cone wheat) at Ludgershall. At one place a farmer had not threshed his wheat "owing to the high price of coal." See statement of corn grown on a farm of 250 acres from 1887 to 1892 inclusive, Appendix F.

Barley.

7. Near Stockbridge a field of 15 acres gave 20 sacks of barley grain, or less than 1½ sacks per acre. At Hurstbourne Priors 20 acres yielded 62 sacks, or a little over 3 sacks per acre.

Oats.

8. Good land near Basingstoke yielded only 4 sacks of oats per acre. Near Stockbridge the yield was 6 sacks per acre. At Hurstbourne Tarrant 50 acres gave less than 2 sacks per acre, and this off some of the land best adapted for oats. Near Micheldever 34 acres gave 8 sacks per acre after two root crops.

Hay.

9. On a large farm at Thruxton, where about 44 stacks of hay and corn are usually made each year, there are this year 22, and these are described as "mere pooks," unworthy to be called stacks.

On some farms the hay crop was totally lost through the drought. On others the later cuts compensated to some extent for the deficiency in the earlier.

Prices.

10. It should be noted that the diminished yields of hay have resulted in a marked rise in price, whilst the deficient yields of corn have had scarcely any influence on values, notwithstanding that much of this season's wheat is of superfine quality, samples weighing 64 lb. and 65 lb. per bushel being common, and some scaling as much as 66 lb. I had the opportunity of seeing samples of this unusually high quality at Andover and Basingstoke markets. On a farm near Basingstoke a stack of oats, the produce of 10 acres, was sold as it stood at 25*l.* 10*s.*, and a stack of wheat, the produce of 8 acres, was similarly sold at 34*l.* See statement of corn grown and amount realised from the same on a farm of 470 acres, from 1887 to 1892 inclusive, Appendix E. On the other hand, a stack of meadow hay, estimated to contain 8 tons, sold for 66*l.*, and straw at the same time made 3*l.* 10*s.* per ton, which is more than one-half the price of wheat. At Wallop hay is very scarce, and is worth over 7*l.* per ton. At Ludgershall a farmer sold hay at 6*l.* 12*s.* 6*d.*, the buyer cutting and trussing, and the seller carting to the railway station at a very short distance. Near Micheldever sainfoin hay was sold at 7*l.* 5*s.* per ton. At Andover wheat was selling at 7*l.* per ton, and hay at a trifle over that price.

The annual circular, issued privately, of a large firm of corn merchants in the West of England states (October 1893):—"There is at present a very marked anomaly in the value of produce; the price of a ton of flour is 8*l.*, and of good foreign grinding barley 4*l.* 5*s.*, whilst good hay is worth as much as flour, viz., 8*l.*"

IV.—Changes of Tenancy.

Changes of tenancy numerous.

11. Whilst I had the pleasure of meeting, in the various sections of the district, tenants who had occupied the same farms for 20 years, and some for even more than double that period, I yet found that taking the district as a whole the changes in tenancy had

been numerous during the last 10 or 12 years. In one case that came under my notice a farm had changed hands three times since 1882, whereas the adjoining farm has been occupied by one and the same tenant for more than 40 years. In another case, where altogether eight or nine tenants farm the land in one parish, it is asserted that not one of these men will continue his tenancy for another three years. A light land farm of about 600 acres has had eight tenants during the last 40 years; it is characterised by the poverty of its soil, the land having been broken up many years ago when the high price of wheat offered a sufficient inducement. Large crops were grown for a brief time, but the land has been of little value since, and the farm is now practically out of cultivation, though the tithe upon it amounts to 4*s.* 6*d.* per acre. Another farm, with a very similar history, has had 10 tenants in the course of 50 years. It is asserted that outgoing tenants are often replaced by inferior men. Though a few farms have been let lately, yet tenants are giving notice freely, with the view to leaving if it should suit them to do so. The extent to which changes of tenancy are in progress is evidenced by the numerous auction sales taking place this autumn.

In connexion with a dispersion sale on a farm about half-a-dozen miles from Basingstoke, an invitation, dated September 30th, was sent to me to be present. The writer proceeded:—

"This sale is of special interest, because it is the "ending of a connexion of 300 years of one family as "landlords and one family as tenants. The farm is "one of the best for corn-growing in the country, and "there are very few farms upon which the growth per "acre has been exceeded. The rent, never an excessive "one, was reduced about 10 years ago, and more "recently there has been abatement of 15 and this "year of 20 per cent. Now the old tenant retires, and "it will not be an easy matter to find a successor. "Such a severance of old connexions is a national "calamity, and if your Commission can find a remedy, "it will be a national benefit."

V.—Unoccupied Farms, or Farms taken in Hand by the Owners.

12. The inquiries in this direction reveal a deplorable state of affairs. On several estates not only are numbers of farms "in hand," but much of the land is passing, or has passed, out of cultivation altogether, being merely utilised at times as sheep runs. Old family mansions are let to successful commercial or professional men, who are fond of country life and of sport. In one case an entire parish would have fallen into the owner's hands but for an enterprising farmer who consented to take the land at a very low rental. In some localities the land is looked upon as exhausted. In every direction from Andover uncultivated land may speedily be met with, either corn stubbles never broken up and allowed to grass themselves, or old "seeds" or sainfoin layers remaining down long beyond the usual time. The poorer the land the less likely is it to be kept under cultivation. Numerous farms in hand, and land passing out of cultivation.

Between Whitchurch and Basingstoke there is an extensive area of land out of cultivation. Much of this land was so burnt up by the summer drought that its appearance forcibly recalled to my mind that of the irreclaimable "bad lands" south of latitude 49° N. in the western prairies of the United States.

South-east of Micheldever, and again north of Hurstbourne Tarrant, are other areas in the same unenviable condition. The risk lest adjacent lands, still under cultivation, should become fouled by the seeds of weeds flourishing on these derelict wastes scarcely needs insistance.

VI.—Reductions or Abatements of Rent.

13. In the area that came under my observation, I did not meet with a single exception to the rule that rents have been reduced during the last 12 years. In some cases these reductions have been so great that tenants are practically keeping on the farms at their own rentals. A large tenant farmer said to me: "It has come to this,—you "may regard the land as practically of no value, and look upon the rent as merely "covering the interest on the outlay on house and buildings." And he added that, by the time the landlord has met all expenses, he has got scarcely anything left for himself. Not only are rents a diminishing quantity, but some have not been paid for years, though the reduction may have gone almost as far as possible short of extinction. In one part of the district I was assured that the rent had been reduced more than half within the last eight years, but that the land is not worth even the present rental. Many concrete cases were furnished to me. Thus, of a farm of 500 acres which was let in 1851 at 500*l.* a year, 420 acres are now let at 100*l.* North of Andover there is much land letting at 2*s.* 6*d.* an acre upon which the tithes amount to 6*s.* an acre. In such cases the landlord does not get even a fair interest on the Reduction of rent universal.

cost of the buildings, and yet, with "rents down to nothing," as it was expressed to me, the tenants, many of them, continue losing money. A farmer of 40 years' experience stated that most landlords, being aware that they could not make money by farming their land themselves, were therefore inclined to act generously towards their tenants. On the other hand, in one locality which I visited, it was asserted that the tenants had borne the brunt of the bad years, and now—when too late—the landlords were offering reductions, which, at an earlier stage, might have saved the tenants from collapse; this state of affairs was attributed to "a want of knowledge "or of appreciation on the part of the landlords." Many farms are let at rentals that only slightly exceed the tithe, and I was informed that tenants are continually giving notice to quit, with a view to fresh arrangements as to rent. That which was regarded as so desirable 40 years ago, namely, a long lease, would now be looked upon as a misfortune. A well-known farm which used to let for 1,300*l.* is now tenanted at less than 500*l.* A farmer who rents under the Ecclesiastical Commissioners is not now paying half the rent he used to do, whilst he obtained a reduction of 100*l.* as recently as last year (1892). A tenant who has been under one and the same landlord for more than 45 years says that reductions in his locality have been fairly general, amounting in some cases to one-half and even more, and they are permanent. Land lying south-west of Andover, that let 30 years ago for from 15*s.* to 20*s.* an acre, in addition to tithe, is only letting at 5*s.* now, tithe free. A good farm, near Andover, that formerly let at an inclusive rent of 560*l.*, is now tenanted at 320*l.*; on this same farm, however, the wages bill amounts to 100*l.* a year more than it did 25 years since, and the labour is not so good. A farmer occupying 1,100 acres said that he was giving more than double his present rent 20 years ago, and yet was paying his way and saving money; during the last year or two he would have lost money even if he had had no rent to pay. Part of his farm is not worth 2*s.* 6*d.* an acre, and some, he says, is not worth cultivating at all, so he has given notice to quit. I took from his books the following details showing the amount realised each year for corn and seed sold, and the amount paid annually for manual labour (exclusive of the cost of threshing).

Year.	Corn and seed sold.	Paid for manual labour	Year.	Corn and seed sold.	Paid for manual labour.	Year.	Corn and seed sold.	Paid for manual labour.
	£	£		£	£		£	£
1875	1,900	868	1881	1,400	910	1887	1,470	877
1876	1,700	909	1882	1,750	938	1888	742	893
1877	2,096	928	1883	2,080	927	1889	1,900	916
1878	2,200	978	1884	1,700	920	1890	1,600	880
1879	1,300	939	1885	1,550	897	1891	1,240	943
1880	1,500	890	1886	1,170	939	1892	885	887

In 1892 the home-grown corn was very largely fed to stock; in fact, no barley was sold, whilst most of the oats and a good deal of the wheat were used as food on the farm. The receipts for 1893 are not expected to reach 500*l.* The corn sold has been the produce of approximately the same acreage year after year.

14. On one of the best managed estates in the district the permanent reductions of rent have amounted to from 50 to 60 per cent. within the last 10 years, whilst temporary reductions to the extent of 25, 12½, 12½, and 25 per cent. respectively have been granted during the last four half-years.

See statement of rental on an estate in the Andover District from Lady Day to Lady Day 1893, Appendix G.

15. It has been urged upon me that temporising by means of occasional abatements of rent has a bad moral effect alike upon landlord and tenant.

VII.—Incidence of Local Rates.

Temporary abatement of rates.

16. Where a permanent reduction of rent is made the tenant obtains a corresponding relief in rates and taxes, but where only a temporary abatement is made, as, for example, the return of 10 or 15 per cent. at a given audit, this is not the case. In reply to inquiries as to whether relief might not be obtained where temporary abatements of rent had been allowed, I was told it would be a difficult and troublesome process.

Highway rate.

17. Complaint is made of the incidence of the highway rate, and of the extent to which bakers, grocers, brewers, cyclists, and others make use of the high roads at the farmers' expense. In several cases the imposition of a wheel tax was advocated.

18. The school rate is objected to as a local rate, because rural parishes have to pay for the education of children the brightest and most intelligent of whom go elsewhere in their early teens, and are lost to the locality. School rate.

19. In the case of sickness or misfortune, however, they return and become a burden upon the parish, and hence it was argued that the poor rate also should be met by the Imperial Exchequer. Poor rate.

20. On the other hand, it was pointed out that even if all local taxation were thrown upon the Imperial Exchequer the money would still have to come from the ratepayers, and that defrayment from Imperial sources would involve Imperial supervision, which might be less welcome than that now in force. Payment of rates out of Imperial Exchequer.

21. The opinion was freely expressed that land contributes more than its fair share of rates and taxes, and that real property is taxed out of all proportion to personal estate. Incidence of local rates.

22. I felt it necessary to put the question as to whether, if the fullest relief in the matter of rates and taxes which farmers desire were granted to them, it would enable them to tide over their difficulties, and restore them to a solvent position. I was assured it would not. A farmer of 800 acres for the last 40 years said that, at the best, such relief would only benefit him to the extent of 30*l.* a year or so; what he must have is something that will make a difference of 400*l.* or 500*l.* a year. Relief from rates no material benefit.

VIII.—Large *v.* Small Farms.

23. Opinion is divided as to whether the depression has been more felt by the holders of large or of small farms, but it is probable that the latter have been the greater sufferers. The district generally is one of large farms, wheat and sheep, which are the staple products, being more economically raised on large holdings. The smaller men were the first to feel the effects of Free Trade, and most of them had disappeared 10 or 12 years ago or even earlier. In such a district it is alleged that the small man both buys and sells at a disadvantage. In the case of selling, for example, dealers will hardly deign to look at the modest quantity of wheat which a small farmer may have to sell. Depression affects small holders more than large.

24. A case came under my notice in which there were two small farms of 10 acres and 15 acres respectively in the same parish. The 15-acres tenant has gone. The 10-acres tenant keeps a shop, and in order to work his small farm he is continually borrowing carts, implements, and other accessories from his neighbours.

25. On a large estate in the district a farm of 250 acres was, about 20 years ago, broken up into a dozen small holdings, ranging from 3 acres up to 150 acres in size. It is significant that all the original occupiers of these small farms have given up, and at the present time all except one of the tenants follow in addition some other occupation, most of them being village tradesmen. These small holdings are badly farmed, the land has deteriorated in quality, the buildings have not been properly cared for, and it is probable that—possessed, as they were, of insufficient capital—the occupiers would have done better not to have taken the land. Small tenants, I was told, do not hold on—they are likely to leave at any time. In the case of a farm of 200 acres, with the rent down to 10*s.* an acre, which includes the sporting rights, the tenant is leaving after three years' occupation.

IX.—Allotments.

26. Where the allotment system is pursued in the district it is generally found that a quarter of an acre is the maximum area that one man can work to advantage. Many of the farmers give their labourers 10 perches or so of land for potatoes, and plough it once or twice for them. This year, however, one farmer had not a single application for potato land, and he believes the reason to be that the labourers have enough land in their cottage gardens. On an estate where the labourers are supplied with good cottages and large gardens at the moderate rent of 1*s.* per week—which, by the way, it is maintained should add a little to the estimated value of the labourer's earnings—they seldom take allotments exceeding one-eighth of an acre, as they have so much land with their cottages. Size of allotments.

27. In the vicinity of Whitchurch some good land, close to the railway, is let out in quarter-acre allotments to about 30 holders, farm labourers and artisans, at a rent equivalent to 2*l.* per acre. The rent is paid to the owner annually, in advance, by the head or "captain" of a club to which the holders belong, so that the landowner does not come into direct business relationship with the individual allotment holders. Allotments in Whitchurch District.

District in which desire for allotments is not general.

28. In one part of the district it was suggested to me that farm labourers, as a rule, show no desire to obtain allotments, which are really more suited to mechanics and other artisans, as affording them a complete change of work possessing much of the merits of a recreation. For allotments, moreover, the land must be good; poor land is not attractive for this purpose.

Allotments in Andover District.

29. In the Andover District the allotments are chiefly utilised in the raising of kitchen-garden produce, very little fruit being grown.

X.—Tendency to divide or to enlarge Farms.

Tendency to divide farms general.

30. As to whether the recent tendency has been to divide or to enlarge farms, the opinion is unanimous that all change of this nature is in the direction of division, *i.e.*, the breaking up of large farms into smaller ones. Inasmuch, however, as the partition of a large farm into two smaller ones usually involves the erection of a new farmhouse, and of a separate set of buildings, this movement has not progressed so rapidly as it might have done had landowners been possessed of sufficient capital to defray the cost of the necessary additions. The result is that large farms have tended to become smaller by a process of contraction; the cultivation of the remote fields, lying at a distance from the homestead, has been abandoned, and the workable area of the farm correspondingly lessened.

Causes militating against division: (*a.*) General.

(*b.*) In the river valleys.

31. In the river valleys of the Chalk country in Hampshire, as in the valley of the River Test, for example, the farms are commonly long and narrow, the object being to provide each tenant with a fair proportion of water meadows, of rich bottom land, and of lighter down land. The most desirable parts of such farms are those near to the river, and it is to be feared that, rather than permit the whole of the land to go tenantless, there has been a disposition, on the part of owners or their agents, to let the choice selected parts and to allow the remainder to fall out of cultivation. There is thus a tendency to "pick the eyes out" of the farms.

(*c.*) In Andover District.

32. As the Andover District is essentially a sheep-breeding country, this, in itself, operates against the division of the land into very small farms. The general size of the farms is from 400 or 500 acres to upwards of 1,000 acres.

(*d.*) Where land is inferior.

33. A circumstance operating against the tendency to divide large farms is that some of the land upon such farms is so inferior that it could not be let even rent-free.

State loans for dividing farms.

34. A large landed proprietor, with most of his farms let, suggests that the Government should advance money, as a first security on land, in order to enable landlords to erect buildings on divided farms. On the other hand, another proprietor, with most of his land in hand, argues that such Government advances would only make matters worse, for as they fell due they would have to be paid. Buildings, he points out, are expensive to erect and to maintain, and facilities for obtaining loans might lead to extravagance on the part of landowners.

XI.—Outlay of Landlords' Capital on Permanent Improvements.

Permanent improvements not maintained.

35. This outlay has not been maintained of late years, for the all-sufficient reason that most of the landlords have not the means. Not only is the outlay on improvements stopped, but even necessary repairs are in some cases not effected. Though landowners may promise repairs or improvements there is difficulty in getting the promise fulfilled. Little or nothing has been done by the tenant during recent years in the direction of permanent improvement, for he is suffering equally with his landlord from scarcity of capital. Hence the question as to whether there is sufficient protection for the outlay of tenants' capital has, for the time, only an academic interest.

XII.—Farmers' Accounts.

General absence of farm accounts.

36. Accurate detailed accounts are seldom kept. One large farmer said he had no time to keep accounts, and "it would not pay" if he had. Another, whilst admitting that there is no general system of keeping farm accounts in the district, said that his own carefully kept accounts had been most valuable to himself. A third maintained that, whilst farmers do not keep as accurate accounts as they should do, their figures are yet sufficient to indicate the branch of their business which is making or losing money. It is noteworthy that most of the farmers who keep good accounts have had, either directly or indirectly, some experience of, or connexion with, mercantile business.

XIII.—Changes in the System of Cultivation.

37. As a general statement, it is correct to say that during the last 10 or 12 years the wheat area has undergone diminution, and the area seeded to oats has increased, though not to an equivalent degree; a moderate area has been laid down to grass, whilst a much larger area has been allowed to "tumble down," or to grass itself. A fairly dry district, with a thin cap of soil resting on chalk, is not adapted, even under the most favourable circumstances, to much extension of permanent pasture, and at the present time the various requirements as to fencing, water supply, and temporary removal of sheep are prohibitive. Not a few of the attempts to make permanent pasture have failed, and resulted in considerable loss. Decrease in arable land.

38. On a large farm, of which 425 acres were once arable, the occupier has laid down altogether 146 acres to grass, this procedure being forced upon him by the increased cost of labour. Notwithstanding this, he has not been able to diminish his expenditure, which has rather increased than otherwise. The old pride, which, in bygone days, farmers took in preparing their land for wheat in this typical wheat-growing district, has disappeared, and it is undeniable that the land is far less well "done" than formerly. In one part of the district the area under wheat has declined quite one-third in the last 10 years. Elsewhere, on a farm of 470 acres, half arable, 21 acres of bottom land have been successfully laid down within the last four years. On a farm of 1,100 acres, where the tenant has been accustomed to put 200 acres into wheat, he is this season sowing only 120 acres. Another farmer, of upwards of 1,000 acres, is this season seeding to wheat considerably less than half the area he was accustomed to devote to this crop a dozen years ago.

For a comparison between the number of acres under various crops in Hampshire in 1879–80 and 1892–3, *see* Appendix C.

XIV.—Employment of Labour.

39. The withdrawal of land from under the wheat crop, the extension of the time during which the "seeds" crop is allowed to remain, and the absolute falling out of cultivation of considerable areas, have co-operated in bringing about a lessened demand for labour. Most farmers are endeavouring to reduce their staff of labourers by one or two hands through the approaching winter. Michaelmas engagements were not entered into so freely as usual, and, after enjoying a period of unusual prosperity, the labourer suddenly finds himself face to face with adversity. During October there was already a marked increase in the number of casuals who applied for relief at the unions in and around Andover. The town of Andover, which is dependent almost entirely upon the agricultural industry, is also suffering, and the tradesmen view the coming winter with feelings of dismay. At an agricultural implement factory in the district it was found necessary at the beginning of October to discharge 30 or 40 men, and to put others on three-quarters' time. Lessened demand for labour. Increased casual relief. Effect on tradesmen.

XV.—Changes in Farm Live Stock.

40. The changes in the cropping of the district have been accompanied by some changes in the stocking of the farms. There is no more typical sheep-farming district in the whole of England than that which centres around Andover. Nevertheless, at the present time, it is decidedly under-stocked with sheep,—under-stocked with the class of animal which, more than any other, is specially useful to the rent-paying farmer of arable land. Moreover, even where sheep are present in something like normal numbers, I was assured that, in many cases, they belong not to the farmers but to dealers who have made their arrangements with the farmers. Worse still, from the point of view of the well-being of our great national industry, is the circumstance that sheep-breeding is, for the present, in any case, undergoing a rapid decline in the district, great losses having been sustained in this business during the current year. A farmer of 1,100 acres, partly his own and partly rented, and who is preparing to feed 1,500 or 1,600 sheep through the winter, told me he had given up breeding, and now keeps only a dry flock. He significantly remarked that he would let other people lose 10*s.* per head in the breeding of sheep, and whilst buying in stock at the current low prices he would at the same time avoid the breeder's trouble and risk. A tenant who has held the same farm for 47 years, and has been accustomed to keep his flock up to 200 breeding ewes, is now reducing it to one-third the number. An estimate was given to me that for every two lambs bred in the district last winter there will only be one this winter. Decline in sheep farming.

Increase in dairy stock.

41. Whilst sheep have declined, cattle have increased in numbers, though not to a proportionate extent. Nor is the increase at all uniformly distributed over the area, for it is composed mainly of milch cows, to the maintenance of which some of the farms are wholly unsuited. Where a railway station is within convenient distance, cows are kept for supplying milk to towns, either London, Portsmouth, or Southampton. The increase in this business is attributed to the circumstance, not that the farmers of the district care much about it, but that it brings in a little ready money at regular intervals. At the same time it is believed that this constant export of milk from the farm, without any consequent return to the soil, must conduce to the rapid impoverishment of the land.

42. On exclusively arable farms there has been no increase of dairy stock, because of the absence of pasture. As an illustration of the opposite extreme, on a farm of nearly 500 acres, including water-meadows, favourably situated near a station, and carrying a flock of 210 breeding ewes, 50 cows are kept and their milk is sent to London.

For a comparison between the number of cattle and sheep in Hampshire in 1879–80 and 1892–3, *see* Appendix D.

Conversion of water-meadow herbage into silage.

43. On the last mentioned farm, as well as on two others, I was interested in learning that the herbage of the water-meadows is converted into silage, and with the best results. After more than a dozen years' experience of Hampshire and Wiltshire water-meadows, I am prepared to say that the attempt to make hay on these grass lands more frequently than not ends in an unsatisfactory manner, and often involves much loss, especially of time and labour, for July is so showery and uncertain a month that it is frequently difficult to get the water-meadow hay sufficiently dry for the stack. In the three cases referred to the water-meadow herbage has for several years been made into common stack silage—no "silo" being required—with success, and with satisfaction to the farmers. The product, fed to the milch cows, was found at the outset to taint the milk. It has been ascertained, however, that if the silage is given to the animals out on the grass, and just after milking, no unpleasant odour is noticeable in the milk. This method as applied to water-meadow herbage seems to me sufficiently important and interesting to be mentioned here.

Dairying.

44. On a farm of 1,110 acres there were 60 cows in milk, besides 40 others. On a combined farm of about 4,500 acres in the landlord's hands, 120 cows were in milk. In both cases the milk is sent to London.

Very little butter is made in the district save for home consumption. Some, of course, finds its way into the tradesmen's shops in Andover, around which town I was assured that the best and the worst butter "in the world" is made. The town relies chiefly, however, upon its imported supplies of Danish, Normandy, Australian, and New Zealand butter, "all of splendid quality." The New Zealand butter sells at about 1*s.* 3*d.* a lb. in the winter, and is equal to the Dorset or the first Cork butter. The Irish salt butter which finds its way into the town is, according to my well-qualified informant, inferior in quality and badly packed. Canadian factory-made cheese is consumed in large quantity in Andover.

An attempt made in the district, by a successful manufacturer from the North, to embark upon dairy farming on a large scale does not appear to have met with sufficient success to warrant its continuance. A farm of 1,200 acres, described as "a good *sheep* farm," was bought, and much of it was laid down to grass. It was stocked with cattle, and a town milk trade was begun. The proprietor is now, it is understood, anxious to sell out.

XVI.—Farmers who have done Well as compared with Others of the District.

Farmers who are comparatively successful.

45. Such few farmers, answering this description, as came under my notice, are those who combine some other business, usually dealing, with that of farming; they can hardly be regarded therefore, as farmers pure and simple. One of these whom I met, and who occupies upwards of 1,200 acres of land, sells from 6,000*l.* to 8,000*l.* worth of fat stock yearly. His cake bill amounts to about 2,000*l.* a year, and at the end of September he was using weekly 40 quarters of foreign barley, which he was buying at the low cost of 15*s.* 3*d.* per quarter. This barley grittled, and mixed with chaff and malt dust, makes an excellent food stuff. At the time he was buying in store cattle very cheaply, as holders were afraid to face the winter.

46. If there are any men who, as pure farmers, have done better than their neighbours, they are those who have practised extreme frugality and exercised the greatest care, and also men who have attained the highest excellence in the art of agriculture, and

who possess both the experience and the capital to enable them to do their land well and to get good returns. I had the pleasure of meeting two or three such men, not more.

XVII.—Cases in which Farmers from other Parts of the Country have taken Farms in the District.

Immigration of farmers not general.

47. Most of the farmers in the Andover District have had a long family connexion, if it may so be termed, with this part of Hampshire. The district is one into which farmers do not, as it was expressed to me, "transplant" well. There has been no invasion of the locality, no general migration into the district of farmers from elsewhere. Two cases came under my notice of men who hailed from Norfolk, but they both entered the district as young men and have been there for many years. A few farmers have come up at various times from Devonshire, but with one or two exceptions they have not done well, and some of them have gone.

XVIII.—Tithe Act, 1891 [54 Vict. c. 8.]

Dissatisfaction with Tithe Act.

48. Notwithstanding the provision of section 1 of this Act, whereby the tithe rentcharge is made compulsorily payable by the landowner, there still exists a feeling of dissatisfaction amongst tenants upon the subject. Despite the great reduction in rents, there is prevalent a belief that but for the tithe rentcharge the reduction would have been greater. A farmer, writing to me from the southern part of the Andover District, refers to "the tithe, which is supposed to be paid by our landlords, but which indirectly "comes out of our pockets." The yeoman farmers, and those who farm partly their own land and partly land which they rent, complain bitterly of the tithe. One of them put it to me that tithes are a great handicap, and a great hindrance to the profitable prosecution of farming; he looks upon the tithe owner as a sleeping partner, and believes that some of the smaller landowners will be compelled to relinquish their land. He further says that where tithes go to the Ecclesiastical Commissioners they are of no benefit whatever to the district in which they are collected.

On the other hand, it is alleged that, in many cases, the landlord now in effect loses the value of the tithe where the tenant paid it previous to the coming into operation of the Act of 1891.

Tithe rentcharges.

49. The tithe rentcharge in Hampshire is said to average about 4*s.* per acre, though on some lands it has been redeemed. A few instances may serve to illustrate recent comparative changes in rent and tithe. A farm near Stockbridge, which was formerly let at 23*s.* per acre rent, *plus* 5*s.* tithe, is now tenanted at 14*s.* 6*d.* per acre tithe free. Another farm, which is at present rated on 45*l.*, pays a tithe rentcharge of 50*l.* Land that 12 years ago was paying 20*s.* per acre rent, *plus* 5*s.* tithe—the tithe being then equal to one-fourth of the rent—has had the rent reduced to such an extent that the tithe is now equivalent to one-half the rent. Other land that 30 years ago used to let at 15*s.* to 20*s.* per acre rent, *plus* tithe, is now worth only about 5*s.* per acre, tithe free. On a large estate, upon which thousands of acres are out of cultivation, the payment of tithes has been resisted, and this has led to litigation not yet ended.

Nationalisation of tithe.

50. In several cases the "nationalisation of the tithe" was advocated, so that thereby the land might be freed of the charge for ever.

Demand for reconsideration.

51. I was informed on good authority that the Act of 1891 "nearly killed all the land agents in England!" but that its effect has been to relieve the tenant of all concern in the matter, and so to narrow the circle of those interested in the subject. Persons well qualified to express an opinion appear to think that the whole question needs re-consideration, and the suggestion has been made that in times like the present the tithe rentcharge should be based on three years' average prices of corn, instead of on seven years' average—in other words, a triennial in place of a septennial average. As bearing upon this part of the subject, I must refer to what is said elsewhere on the Corn Returns Act, 1882 (*see* para. 59).

52. An interesting question arises with regard to taking the gross estimated rental as the basis for rating. If, as tenants argue, this rental still virtually includes the value of the tithe—notwithstanding the Act of 1891—then the tithe is taxed twice over. Upon this point a land agent of extensive experience writes to me as follows:—"The "operation of the Tithe Act, 1891, putting the annual burden of the tithe rentcharge "on the landlord instead of heretofore as customarily paid by the tenant, renders

" necessary careful adjustment of the assessment to the poor rate. The tenant too " frequently returns the rent which he actually pays to his landlord as the gross " estimated rental, and for Schedule A. Property Tax. The gross estimated rental " where tithes are payable on the lands assessed usually includes, and in all new let- " tings must include, the tithe rentcharge, and obviously is exaggerated by the amount " of such tithes. The true assessment, so far as rent may be regarded as reliable for " rateable purposes, is the rent paid, the rates being borne by the tenant, minus the " tithe rentcharge. These terms bring it into uniformity with the Assessment Act, " 1862."

XIX.—Agricultural Holdings (England) Act, 1883 [46 & 47 Vict. c. 61.].

Operation of the Act.

53. The replies to my inquiries concerning the working of this Act were very varied. I was told that it is regarded as useless, and as a dead letter; that nobody troubles much about it; that farmers are indifferent to it or have ceased to believe in it; that valuers in Hampshire ignore it; that there is a tendency to fight shy of it; that tenants hardly know what it means till it is called into operation and then it goes against them; that very few farmers are aware of the two months' written notice of claim required by Section 7 of the Act, and that the expenses and formalities connected with it render the Act unworkable. On the other hand, it is asserted that the Act has worked fairly well, and that it operates very well where a tenant has practised thoroughly good farming and kept everything in a sound state of repair,—otherwise " he had better steer clear of it." In fact, I am assured that very few tenants " dare to claim " under the Act. On a large estate, where the Act is available, the tenants are nevertheless indifferent to it, and prefer to go out on " the custom of the country." The Act is a costly one to set in operation because, it is said, people choose to make it so. At the same time it is claimed that the Act has made tenants more cautious as to the state in which they give up their farms. An interesting commentary on this last-mentioned point is afforded in the remark of a very extensive farmer to the effect that a tenant who " beggars a place " can have the land " for nothing," but the tenant who farms well has his rent kept up. As relevant to this subject, it was asserted that tenants have got at present everything they struggled for in the good times. A farmer who has occupied the same land for more than 30 years says he farms as he likes, irrespective of his lease. Another looks upon his lease as non-restrictive. It is also asserted that the tenant exercises as much freedom as he likes, and that there is abundant protection for the tenant's outlay, though this last assertion is—on equally good authority—contradicted. In some cases the establishment of land courts was advocated on the ground not that they are called for just at present, but that they would be were times to improve, and higher rents were consequently to be demanded.

Establishment of land courts.

Restrictions in leases.

54. The prevailing system of farm tenure in the district appears to be based on the condition of two years' notice to quit on either side. Of restrictions as to cropping, the most noteworthy perhaps is that which provides that not more than one-fourth or one-fifth of the land shall be under sainfoin at one and the same time.

Suggested amendment in Agricultural Holdings Act.

55. As a desirable amendment to the Act, it has been suggested that the stipulation [Act, First Schedule, Part III. (23), " Improvements to which consent of landlord is not required "] relating to " Consumption on the holding by cattle, sheep, or pigs, of " cake, or other feeding stuff not produced on the holding," should be modified so as to include also certain home-grown produce. The increasing extent to which wheat, for example, is now being fed to live stock is instanced in support of the suggested amendment.

XX.—Ground Game Act, 1880 [43 & 44 Vict. c. 47.].

Operation of Act generally successful.

56. The consensus of opinion is that this Act has, on the whole, worked very well, and it is described as one of the most useful Acts of recent years. One large tenant assured me that, but for the passing of this measure, nothing would have induced him to remain on the land; previously the farm was really in the hands of the gamekeeper, now the position is in effect reversed.

Complaints.

57. Several complaints were made of the damage done by ground game. One tenant stated that hares from an adjacent covert, belonging to the landlord, had this season well-nigh destroyed his mangel, which at the best was but a poor plant. In another case, where two properties adjoin, the tenant under one landlord has suffered from the ground game harboured in the preserves of the other landlord. To protect him his own landlord has lately spent upwards of 50*l.* in putting up wire around

the adjoining landowner's coverts. A tenant on a third estate lets his ground game, the winged game being reserved by the landlord. He suffers much from the ravages of ground game, and suggests that the Act (clause 6) should be amended so as to permit of trapping above ground; he would further empower tenants to enter coverts and destroy rabbits for a period of, say, three months in the winter.

A tenant, who said that in his case the Act is inoperative, allows his landlord to shoot everything. In another case the landlord reserves the shooting rights, and the game is continually feeding on the tenant's corn crops. Where tenants have contracted out of the Act, the land gets over-run with ground game, and the lessee and his keepers are "rather a nuisance." Where, by arrangement, the tenant has the sporting rights (shooting and fishing) included in his agreement, an adventitious value is thereby given to the land, for the tenant usually sub-lets, frequently on advantageous terms.

58. A gentleman whose lengthened experience entitles his opinion to respect expressed to me his conviction that the ultimate fate of much of the land in the Andover District would be to fall out of arable cultivation, to be largely planted for the sake of covert, and to become a residential and sporting locality resorted to by those who had been fortunate in making money in other pursuits than agriculture.

XXI.—Corn Returns Act, 1882 [45 & 46 Vict. c. 37.].

59. Though the operations of this Act did not come within the scope of my instructions, I nevertheless find it necessary to refer to this measure. (*See* para. 11.) Section 5 of the Act provides that every buyer of British corn (wheat, barley, oats) in certain specified towns shall, weekly, make a return as on the form below of the quantity and price of every parcel of such corn bought by him, whether from the producer or otherwise. For failure to make such return the penalty, on summary conviction, is (Section 11) a fine not exceeding 20*l*. The making of a false or fraudulent return constitutes (Section 12) a misdemeanour. Section 5 of the Act.

Form of Return.

No. 182. *No.*_____

A RETURN of all British Corn purchased at _____ Market, or at or within the Town (or City) of _____ during the Week ended _____ 189 , by the undersigned, on account of himself, or of the Person named in the second Column.

Kind of Grain purchased, stating whether Wheat, Barley, Oats.	Names of Buyers, if other than the undersigned Person making the Return.	The Sellers' Names.	Particulars of Purchase.					
			By what Weight or Measure Bought.	The Rate or Price Paid for each such Weight or Measure.	The Quantity Bought at that Rate or Price.	The Total Price or Sum paid for that Quantity.		
						£	s.	d.

Signed _____

60. Complaints are numerous as to the working of this Act. An illustration given to me by an extensive corn-dealer from his own recent experience is very much to the point. At Winchester Market A, the grower, sold 100 quarters of English barley to B at 24*s*. per quarter. B at once sold it to C at 25*s*. C disposed of it to D at 27*s*., and eventually D sold it to E at 32*s*. delivered—this last price including the freight to a distant railway station. In this case, therefore, under Section 5 of the Act, each of the four buyers, B, C, D, E, was compelled to make a return, the result of which would be that 400 quarters would be reported as sold, whereas the quantity was only 100 quarters. Moreover, four distinct prices, of 24*s*., 25*s*., 27*s*., and 32*s*., had to be returned, making the average price 27*s*., whereas the first seller (the producer) only received 24*s*. Again, the last price of 32*s*. was over and above what the last buyer Inaccuracy of corn returns.

really paid for the barley by the amount per quarter which the railway company would charge for freight, whilst the price of 24*s.* paid to the original seller would probably include cost of loading and carting to a railway station. The gist of the matter is that an artificial return is made of 400 quarters of barley bought at 27*s.* per quarter, whilst the correct state of affairs would be only 100 quarters bought at 24*s.*

Effect on the tithe rentcharge.

61. It is argued that, as a result of this system of making returns, the calculated average prices of British corn, as published weekly in the "London Gazette," are chronically higher than they should be, and represent the position of the corn grower to be better than it actually is. Further, as the septennial average prices of corn, required for the purposes of the Tithe Commutation Act, are, under Section 10 of the Corn Returns Act, determined by the returns made in accordance with the last-mentioned Act, it is maintained that the tithe rentcharge has been and is kept at too high a rate. The additional circumstance is insisted on that so much of the native corn as is consumed at home,—and the proportion has risen considerably in the last two years—finds no place at all in the returns. Yet, as a rule, only the best corn is sent to market, whilst the inferior produce is retained for home consumption. The inclusion of the latter, at a fair market price, in the returns would, therefore, still further reduce the amount of tithe rentcharge. An estimate was given to me stating that during the last 30 years 15 per cent. more money has been paid in tithes than the real price of English corn would have warranted.

Suggested amendment.

62. It has been suggested that the Act of 1882 should be amended so that only the first seller (the grower) would make a return of the quantity sold and of the price realised, and that means should be devised for ascertaining the quantity and value of corn consumed at home. It is claimed that lower, and more accurate, annual averages would thus be established than under the system at present in operation, and that the tithe rentcharge would be correspondingly reduced.

XXII.—Suggestions or Recommendations.

Protection."

63. Only better seasons and improved prices can, it is argued, restore agriculture to a flourishing condition in this district. As the seasons are beyond control, the question remains, By what means can improved prices be established? The answer I received, in nine cases out of ten, in all parts of the district may be summed up in one word—"Protection." A farmer, who has this year sold some of his hay for the first time since 1847, advocates a moderate import duty on corn, as he believes the English consumer "would never feel it." Many farmers are in favour of "some sort of Protection" without being in a position to specify the exact form it should take. Others maintain, "Protection alone can save us; without it we must go." Some are of opinion that even though Protection did find favour with the nation at large, wheat would be about the last commodity to be brought within its scope. This led up to the suggestion that all manufactured articles should be liable to import duty. Wheat would still come in free, but flour, as a manufactured article, would be taxed. In support of this view it was stated that some of the millers in the district, particularly those who were not equipped with the modern roller mills, had virtually become dealers in foreign flour; a proof of this is afforded by the fact that broad bran—so much desired by grooms for stable-fed horses—and other wheat offal are dearer than the wheat grain. It is thought that an impost on manufactured goods would meet with the support of the artisans in towns, who are themselves beginning to feel the effects of foreign competition.

64. A plausible argument for Protection was put before me by several farmers in the following form:—England still imposes a duty on tea, coffee, cocoa, &c., articles which we do not and cannot produce. Let these be admitted duty free, thereby helping to secure a "free breakfast table," and make good the deficit so occasioned by imposing a sufficient duty on barley, rye, beans, peas, hops, sainfoin seeds, and clover and grass seeds. Wheat and oats are purposely omitted from this category, because they are "food of the people," and must not be taxed. A duty on barley, it is argued, would promote the cultivation of English malting barley; on rye it might have the effect of causing land now out of cultivation to be seeded to this crop; an impost on hops would extend the area of a crop which employs more labour per acre than any other field crop; and duties on sainfoin, clover, and grass seeds would discourage the importation of foreign seeds, which are often so foul as to be a source of considerable injury to the land upon which they are sown. Though wheat is omitted from the schedule, flour, as a "manufactured article," would be included, especially as English labour would be employed in the preparation of flour from the grain, whilst

the offal would be set free in this country. It will be observed that the general principle underlying these proposals is to admit duty free such articles as cannot be produced at home, and to impose a tax upon imported articles similar to those which this country can readily produce.

65. Some farmers advocate a bounty on wheat, the bounty to be per acre sown to wheat, and not per quarter of wheat produced. Others would prefer a sliding-scale arrangement, whereby the duty would be suspended directly wheat reached a certain specified price. Again, it is proposed to keep bread up to a minimum price of 11*d.* per gallon (or 5½*d.* for the 4 lb. loaf) by means of a duty on imports. *Apropos* of this, a very old farmer stated that formerly the price of bread bore a definite ratio to the price of wheat; they used to reckon 1*d.* per gallon of bread to every 1*l.* per load (*i.e.* 5 qrs.) of wheat, so that when wheat was 12*l.* a load (or 48*s.* per qr.) bread would be 1*s.* a gallon (or 6*d.* for the 4 lb. loaf). On this reasoning, wheat at 30*s.* a quarter (an average price which has not been reached within the present year) would correspond with bread at 7*d.* per gallon (or 3½*d.* for the 4 lb. loaf), whereas bread is now decidedly dearer than, measured by the ratio referred to, it should be.

66. A landowner argued that such duty on imported articles, especially manufactured goods, as would at least cover the cost of rates and taxes on the land, would greatly increase the demand for farm labour.

67. I only met two or three farmers who did not advocate Protection in one or other of its forms. One of these farmers plainly stated he did not believe in a duty on wheat, or in Protection of any sort. Another said it was of no use for farmers to ask for Protection, because he did not think they would get it. A third said, "We can only fight prairie corn with prairie rents," and he desired a still further reduction of the rents which are already greatly lowered. In a part of the district admirably suited to wheat growing, a large farmer has come to the conclusion that, at present prices, the cultivation of wheat must cease, "and what," he asked, "can we possibly substitute here?"

Reduced taxation.

68. Other suggested means of meeting the depression included the reduction of taxation which bears solely upon the land; the reduction of railway rates; the compelling of brewers to specify such materials as they may use instead of malt; the infliction of very severe penalties for fraud or adulteration in connection with the sale of meat, milk, &c., the imposition of paltry fines being held to have little effect upon traders who are making big profits; the branding of imported meat; keeping rents as low as possible; and the extension of the parcel-post system, whereby butter and other farm and garden produce might be safely and expeditiously transported at very low rates. The hope was expressed that Parliament would refrain from any course of legislation that might be calculated to impose fresh burdens upon the land.

Suggested remedies by tenant-farmers.

69. The subjoined communication, dated October 2nd, was sent to me by a farmer whose family have been tenants on the same estate for two centuries. He has since sold off, being unable to make the farm pay:—

"Since our conversation I have considered the matter somewhat, and writing from a tenant farmer's point of view, and solely as regards arable land, I beg to append my humble opinion, formed from costly experience, of the causes of the present ruinous state of our industry:—

"1. Bad seasons resulting in poor yield of grain and depreciation in value of sheep and cattle.

"2. Foreign competition resulting in low prices all round. England is the only market the foreigner can glut, he is comparatively untaxed, untithed, and with no rent; the British farmer, therefore, finds himself handicapped out of the race.

"3. Pressure of burdens on the land, chiefly tithes; these are now in this district equal to the annual value of the land. Also rates; the land as real property is taxed out of all proportion compared with personal property, and bears an unfair proportion of rates.

"4. The disinclination and refusal of landlords, in most cases, to meet their tenants. Some, not all, are now offering 15 or 20 per cent. abatement. When, as is the case for the last two years, more than the rent has been lost, this is too little. In seasons like the last two, 50 per cent. should be allowed to tenants of a few years' standing, to enable them hold on.

"5. Heavy inland rates of carriage as compared with oversea.

"6. Absence of combination and any real representation in Parliament. Both Houses are overdone with landlords and their advisers, hence the interests of tenant farmers are now, and have always been, neglected."

70. From the western part of the Andover District a correspondent writes (October 14th) as follows:—

"I have been farming on this estate for 28 years about 400 acres of land. I think personal property should be rated in the same manner as real property. Also, that the brewers should be brought under the Adulteration Act, the same as the margarine manufacturers. I am certain that if brewers were compelled to call their concoction of sugar-scum and other substitutes for barley and malt by a new name,—sugarine, for instance, English malting barley would advance 10*s.* per qr. I have been told it is no unusual thing for 40 tons of sugar-scum to arrive at our station for a local brewer at one time. For generations beer was made only from malt and hops, and most people fancy it is so at the present time. I cannot see where the hardship to the brewers would come in; they could still make their mixture, and if people liked 'sugarine' better than beer, they could get it."

71. A tenant farmer residing within the district writes to me under date of October 20th, as follows :—

I have much regretted I was unable to have a longer talk with you when you called.

The subject is so large, and has so many ins-and-outs, but I do not for a moment believe in Protection.

This terrible drought, with its scanty crops, has accentuated difficulties, thereby lessening greatly the value of live stock, but we felt the depression long before that, in finding the cost of production far too heavy.

Good farmers have not been sufficiently well treated and met by the landlord, and so long as any balance was thought to be at the bankers *no reduction* was made, and even after, not considering whether or no the farm paid any interest on tenant's money.

I believe in abolition of game laws and law of distraint, freedom of cropping and sales, and *security for capital invested in farm*; free and easy sale of land; more *burdens* taken off the land, as tithes and rates.

We have poor rates, where originally the tithes, at least partly, were levied for that purpose.

Tithes should be on other properties beside land, and might well be taken by the nation.

Rates should be taken on differently-made assessments; the farmer pays on his 400 acres, say, rates on 300*l.*, where adjoining lives a gentleman with income of 500*l.* who pays only on 40*l.* or 60*l.*

Just now as farmers we are lessening hands, as there is little work to do, and expenses must be cut down, but the last four weeks able-bodied men have come to the guardians, and have obtained relief by work being given them and paid for at 9*s.* per week; thus we still have to pay these men in work through the rates. These men have come from a village six miles from here, where there is great complaint of want of work, for the surrounding land, some of it useful, is not properly farmed, and has been as an estate badly managed, and the tenants have been driven away by high rents and losses, and now the land is going out of cultivation. If a landlord will not properly work his estate, to the detriment of the working class, I believe morally he ought to sell it to some one *who will*, taking market price, and not let men starve, or farmers in the same union keep them on the rates. There is not the same distress in the neighbouring village of ———; the land is farmed in smaller holdings, though not all. There are 400 and 500 acre farms, and though the land is not always well cultivated, there have been few out of work.

The great thing for the labourer is that the land should be cultivated, then for the capitalist, whether tenant or landlord, that it should *be possible to produce at a profit*; for this the *burdens on the land must come off*, and even then there seems but one profit.

Anticipated effect of the depression.

72. The effect of the depression, the existence of which is unhappily only too fully attested on all sides, will, it is said, not make itself fully felt until Lady Day and Michaelmas of 1894. Where rents, which will then be due, are to come from, nobody can tell. A large farmer—one whom I had the pleasure of conversing with on several occasions in the course of my inquiry, and whose opinion, I take it upon me to say, is deserving of respect—assured me, when I last saw him, that unless some change for the better should speedily intervene, the tenant farmers in the Andover district must inevitably be "squeezed out," and the landowners and the labourers must be left to settle matters between them. This statement he communicated to me after full and serious discussion with many of his brother farmers.

I should add that, saving on one or two technical points connected with agricultural practice, I have not considered it necessary to give expression to my own views or opinions.

In bringing this report to a close I wish to express my sincere thanks to those representing all classes who have so kindly assisted me in my inquiry in the Andover District.

I have, &c.
(Signed) W. FREAM,
Assistant Commissioner.

APPENDIX B. (*See* paragraph 5.)

The following letter (dated October 7th) speaks for itself:—

I enclose herewith a copy of my accounts made up for three periods of seven years each. I should say these are my figures as owner and occupier, there being no charge for rent except that paid to others. I own 514 acres, which I have occupied continuously since 1871, and for six years I rented about 19 acres grass land adjoining until September 1877, when it was required by a new owner, and again since 1886 I have had about 15 acres of it in addition to my own.

My farm was about 425 acres arable, 25 water-meadow, 50 pasture, and 14 woods, roads, yards, and gardens; and of the arable I had laid down to pasture about 146 acres, and consequently I do not grow so much corn as formerly by about 70 acres each year, whilst more and more of that grown is consumed on the farm; probably prior to 1892 about 300 qrs. of oats and barley had been used each year, and of the crops of that year about 500 qrs. have been and will be fed to horses, sheep, and cows. For 11 years I let cows (for 8 years ending with 1879, 25, 12*l.* each), then I determined to sell milk, and since 1886 I have kept about 30 to 34, and have used much more cake than before. You will observe an increase in the item "miscellaneous," largely due to carriage of milk, which is entered there. I find for the seven years ending with 1878, the price of wheat averaged 51*s.* 5½*d.* per qr., and that of barley 37*s.* 3¾*d.* For the second period, ending 1885, wheat averaged 42*s.* 5*d.*, and barley 28*s.*, per quarter. For the third period, ending 1892, wheat averaged 32*s.* 6*d.*, and barley 24*s.* 3*d.* per qr.

The increase in wages is partly accounted for by the dairy being managed and not let as formerly, but much more by labour being more costly and less efficient than it was 20 years since.

I enclose a statement of receipts for corn each year for 21 years, and another giving price per head of best ewes and lambs each year.

FIRST PERIOD of Seven Years, 1871–78.

ROYAL COMMISSION ON AGRICULTURE.

ENGLAND.

REPORT

BY

DR. W. FREAM
(ASSISTANT COMMISSIONER)

UPON THE

MAIDSTONE DISTRICT OF KENT.

TABLE OF CONTENTS.

Paragraph.	Subject.	Page.
	I.—Introduction.	
3	Population	27
	II.—Comparison.	
5	Extent of depression	27
	III.—Yield of Crops in 1893.	
6	Wheat	28
7	Barley	28
8	Oats	28
9	Hops	28
10	Fruit	28
	IV.—Changes of Tenancy.	
11	Fewer farms given up than formerly	28
	V.—Unoccupied Farms, or Farms taken in hand by the Owners.	
12	Farms unlet	28
13	Uncultivated land	28
15	"Out of cultivation" defined	28
	VI.—Reductions or Abatements of Rent.	
16	Reductions of rent	28
17	High rents	29
19	Temporary abatements of rent	29
	VII.—Incidence of Local Rates.	
20	Local rates	29
21	Highway rate	29
	VIII.—Large *v.* Small Farms.	
22	Sub-division of farms	30
	IX.—Small Holdings and Allotments.	
23	Small holdings	30
24	Allotments	30
	X.—Outlay of Landlords' Capital on Permanent Improvements.	
25	Landlords' outlay	30
	XI.—Outlay of Tenants' Capital on Permanent Improvements.	
26	Tenants' outlay	30
	XII.—Farmers' Accounts.	
	XIII.—Changes in the System of Cultivation.	
28	Changes in cropping	30
29	Wheat	30
30	Permanent pasture	30
31	Bare fallow	31
32	Fruit	31
33	Live stock	31
	XIV.—Employment of Labour.	
34	Demand for labour	31
35	Wages and quality of labour	31
36	Rural depopulation	31
	XV.—Tithe Act, 1891.	
37	Effect of the Act	31
38	Rating	31
39	Suggestions	32
	XVI.—Extraordinary Tithe Redemption Act, 1886.	
40	Opinions on the Act	32
41	Object of the Act	32
42–43	Effect of the Act	32
44	Suggestions	32
	XVII.—Ground Game Act, 1880.	
45	The Ground Game Act	32
46	Damage by rabbits	33
47	Suggestion	33
	XVIII.—Corn Returns Act, 1882.	
	XIX.—Repeal of the Malt Tax.	
	XX.—Agricultural Holdings (England) Act, 1893.	
51	The law of entail	33
52	Buildings	33
53	Tenants' capital	34
54	Valuation	34
55	Freedom of sale	34
56	Suggested amendment	34
	XXI.—The Hop-growing Industry.	
58	Wiring	34
59	Washing	35
60	Cost of production	35
61	Size of hop gardens	35
62	Labour	35
63	The hop market	35
64	Hop growing and cattle feeding	35
65	Underwood industry	36
66	Areas under hops	36
	XXII.—The Fruit-growing Industry.	
67	Over-production	36
68	Fruit markets	36
69	Salesmen's commission	37
70	Foreign fruit	37
	XXIII.—Suggestions or Recommendations.	
71–73	Protection	37
74	Railway rates	37
75	Merchandise Marks Act	38

THE MAIDSTONE DISTRICT OF KENT.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

I.—Introduction.

Downton, Wilts,
December 21, 1893.

Sir,

1. I have the honour to present, for the consideration of the Commissioners, the following report of the information collected by me, in pursuance of my instructions, in the Maidstone District of Kent.

2. For the purposes of the inquiry I made my headquarters at Maidstone, from which centre I obtained evidence from localities as far east as Faversham and Ashford, and extending westward to Tonbridge and Tunbridge Wells. In addition to the places named, I visited Allington, Aylesford, Bearsted, Boughton Monchelsea, Boxley, Ditton, East Barming, East Farleigh, Harrietsham, Hunton, Lenham, Linton, Loose, Otham, Paddock Wood, Penshurst, Sutton Valence, West Barming, West Farleigh, Yalding, and other localities. I also attended meetings of the Tunbridge Wells Farmers' Club, the Maidstone Farmers' Club, and the Hollingbourn Board of Guardians, as well as various corn and cattle markets.

Population.

3. As showing the changes in population during the decade 1882–91, two unions within the district have been selected. The Maidstone Union, with an area of 36,760 acres, embraces 16 parishes. As will be seen in Appendix VII., the population was returned in 1881 at 45,075, and in 1891 at 47,576 thus showing an increase of 2,501. It appears, however, that simultaneously the urban parish of Maidstone increased by 2,532, thus leaving a decrease of 31 on the rural parishes of the Union.

4. The Hollingbourn Union, comprising 23 parishes, occupies an area of 57,624 acres. There is in this Union no urban centre of population, whilst only three of the parishes have each more than 1,000 inhabitants. As seen in Appendix VI., the population of 14,044 in 1881 had declined to 13,318 in 1891, this being a decrease of 726, or more than 5 per cent., on the decade. I may remark that as the decrease of 191 in the parish of Sutton Valence seemed to be high, I found upon inquiry that a large school in the parish was in vacation when the census of 1891 was taken. In Hollingbourn parish a decrease of 187 is partly attributable to the removal of a paper manufactory.

II.—Comparison with Depression of 1879.

Extent of depression.

5. In seeking for a comparison between the existing depression and that of 1879–80, I was invariably told that matters are worse now than then. Since 1879 there has been a steady drain upon farmers' resources, and whereas 1879 followed a series of good or of moderately good years, 1893 has been the last and worst of a bad series. As bearing upon this point, I may refer to the statements contained in Appendix I. and Appendix VIII.

It is necessary, however, to draw a distinction, between the hop-growers and those farmers—dependent chiefly upon sheep and corn—who surround but are not within the hop-growing area. Around Maidstone many of the hop-growers are capitalists, and are able to face a loss, however much they may dislike it. Some of them, too, are engaged in other industries, particularly brewing. On the corn-growing farms, as distinguished from the hop farms, the depression is severely felt. "Corn," I was told, "pays no rent," whilst hops and fruit have enabled many a man to weather the storm, who might otherwise have gone under.

As suggesting a possible compensation for some of the evils of the present year it was pointed out to me on several occasions that the land has never yet recovered from the thorough drenching it was subjected to in 1879, and that the effects of this year's baking of the soil are bound to be good, though they can only be realised in a future season.

III.—Yields of Crops in 1893.

Wheat.

6. This year's average yield of wheat in the district was put by a competent authority at about 5 sacks per acre. The quality, however, has never been equalled since 1868, many samples scaling 66 lb. per bushel, and this in a district not noted for the superfine character of its wheat. On a very good farm which I visited the yield of wheat was given as less than 8 sacks. Near Lenham it did not reach 4 sacks.

Barley.

7. In an outlying district east of Maidstone barley is not yielding 4 sacks per acre, and is unfit for malting. Much of the land intended for barley was not sown, and some of it was never even ploughed till autumn.

Oats.

8. Oats are estimated in the neighbourhood at the miserable yield of 6 sacks per acre, and many samples are so inferior in quality that they only scale 28 lb. per bushel.

Hops.

9. Hops appear to have given a better yield than the estimate of 6·63 cwt. per acre, as recorded for Kent in the Board of Agriculture return. In several cases yields of 11 cwt. per acre were reported to me.

Fruit.

10. Most kinds of fruit were so abundant that the result was "a glut." In one case a grower left 100 bushels of red currants unpicked. In another instance, free permission was given to the poor people of the neighbourhood to gather as much as they liked of this fruit.

IV.—Changes of Tenancy.

11. On the whole, changes of tenancy do not appear to be frequent, at least in the hop country, where there is no great difficulty in finding tenants, though not at the old rents. Fewer farmers are giving up, and clearance sales are less numerous than in recent years. Outside the hop districts changes are more common, and on an estate in the eastern part of the Maidstone District all the tenants are new within the last twenty years.

V.—Unoccupied Farms, or Farms taken in hand by the Owners.

Farms unlet.

12. In the hop districts there are very few farms unlet. Around Maidstone the small farms have found tenants because (1) rents are low, (2) live and dead stock are cheap to buy, (3) valuation on entry is much depreciated, and (4) the outlook, especially as regards prices of cattle and sheep next spring, is hopeful, whilst (5) a very moderate expenditure of capital per acre is at present needed. If land will grow hops, even 40 or 50 acres will afford a livelihood, and many men are tempted to try their skill at hop-growing.

Uncultivated land.

13. Outside the limits of the hop country, as from Lenham to Hythe, and along the slopes of the Chalk hills extending in a south-easterly direction from Boxley, north of Maidstone, to Dover, much land is practically out of cultivation, and this is attributable in some degree to climatic causes. Some of the land is out of cultivation because owners wish to avoid payment of tithes. Land is also thrown out of cultivation to escape rating. A reason assigned in some cases for land being out of cultivation is that it was given up in too bad a state by the last occupier. On some of the unoccupied farms men are put in as mere caretakers, without any intention of working the farms.

14. Much of the land in Kent is in the hands of mortgagees or trustees, who are less free to make terms than an absolute owner would be, and several tenants complain of the deadlock which thereby is sometimes occasioned.

Out of cultivation.

15. I endeavoured to get a definition of the phrase "out of cultivation," and was told that, for example, taking the gate of a field off the hinges and proclaiming the land as open to the public would place the field "out of cultivation." It was considered, however, that such a procedure as sending sheep over the land in order to pick up what food they could find might be interpreted as an act of cultivation, and thus render the land liable to rating.

VI.—Reductions or Abatements of Rent.

Reduction of rent.

16. In some parts of the district, especially outside the hop lands, very material reductions have been made. These reductions may be said to vary in extent from 15 to 100 per cent., in the latter case the tenants only paying a sufficient amount to meet the

tithe rentcharge. It appears that in this district very few landlords are wholly dependent upon their estates, which, as a rule, are not large in the heart of the Maidstone district. In the poor land localities outside the hop country the reductions have been very great, notwithstanding which much rent remains in arrears. It was represented to me that, in such cases, landlords' losses are heavy enough in good seasons, but in such a season as that of 1893 they are terrible. On some farms all the produce is sold, and where the manure for next year's tillages is to come from is a problem. Landlords are also losing heavily through deterioration of buildings. Two cases illustrative of reduced rentals are worth citing. A farm of 800 acres which was bought for 32,000*l.*, and subsequently let at 900*l.* a year, had the rent ultimately lowered to 300*l.* a year, and the farm is now in hand. A farm of 500 acres which eight years ago was letting at 900*l.* a year is now let at 300*l.*, and the tenant is anxious to get out.

High rents.

17. In cases where what were regarded as only fair and reasonable rents were maintained even in the good times the tenants have been held together, but on other estates where old tenants were got rid of for the sake of others willing to pay higher rent the effect has been disastrous. Unduly high rents were accompanied by short tenancies; many and frequent changes were consequently the result, and the general tendency of such a policy has been ruinous.

18. It is maintained that those landlords who have been in the habit of making reasonable reductions when asked have done best in the long run, and on the other hand that a generation of farmers has been ruined through the lack of timely concessions.

Temporary abatements of rent.

19. Considerable variety of opinion prevails on the subject of temporary abatements of rent. Where, for example, a landowner allows an all-round abatement of, say, 25 per cent. to his tenants on the half-year's rent, it is urged that this system operates unfairly. The tenant of the choicest farm on the estate, who perhaps is quite capable of paying the full rent, gets the reduction equally with the tenant of one of the poorest farms, who might be well able to show cause in favour of even a 50 per cent. reduction. But, besides the inherent characteristics of the farm, the capacity of the man who rents it is a factor to be considered. It is argued that if, a man by hard work and skilful application improves his farm and gets good results, he is liable to have his rent raised. On the other hand, an unskilful and slovenly farmer who lets the land down in condition tells a tale of woe upon which he bases a petition, often successful, for a permanent reduction of rent. Land in good heart is let at a high rental to a tenant who runs it out in a few years, and a premium is thus placed upon bad farming, because it is said that it pays to run land out in this way. A yeoman farmer who has mortgaged his farm becomes in effect the tenant of the mortgagee. He is worse off, as a rule, than an ordinary tenant farmer, because the bargain between the two parties is entirely unaffected by the course of the agricultural industry.

Before leaving the subject of abatement of rent I may mention that I was asked if I had ever heard of a case in which the tenant after an unusually good year had presented his landlord with a temporary increase of rent.

VII.—Incidence of Local Rates.

Local rates.

20. Where temporary abatement of rent is allowed there is no corresponding relief in local rating. The abatement is regarded in the light of a gift.

There is a tendency in all local rates to increase, in some cases rapidly. Until the County Council came into existence rates ran from 2*s.* to 2*s.* 6*d.* in the pound, since then they have increased considerably, though this is partly due to the lowering of assessments. The school rate, which is not included in these figures, runs up to 6*d.* in the pound for voluntary schools, and is much higher for Board Schools. In certain agricultural parishes the authorities are unable to collect the rate at present, and it is doubtful whether on some of the farms there are sufficient goods to distrain upon.

Highway rate.

21. Complaints are general as to the unequal imposition of taxation upon land as compared with other forms of invested capital. The present incidence of the highway rate is, in particular, objected to. A farmer had a point on a high road watched one day in October, during which it was found that 16 tradesmen's carts, 10 private carriages, and one farmer's cart passed.

Some figures furnished to me in connexion with the subject of local rating are reproduced in Appendix II.

VIII.—Large *v.* Small Farms.

Sub-division of farms.

22. The general tendency appears to be not to divide good farms. On the other hand, poor farms are to some extent broken up, with the object of letting at least the more desirable portions. It is feared that the smaller farms thus provided attract a class of tenants with insufficient capital for the acreages they rent, and it is stated that there is a marked depreciation in the general quality of the agriculture of the district.

IX.—Small Holdings and Allotments.

Small holdings.

23. Small holdings are not numerous. They were described to me in one part of the district as "a distinct failure." Choice land may let in the form of small holdings, but there is little demand.

At Coxheath there are small holdings of from five acres to 20 acres in extent. The rent is about 3*l.* per acre, and the land is utilized for fruit growing, usually bush-fruit and damsons.

Allotments.

24. The district, especially around Maidstone, appears to be fairly well supplied with allotments. This may be partly due to the circumstance that in many parishes the gardens are extremely small. In one hamlet, a few miles from the county town, the cottages are built back to back, and there are no gardens. It was suggested to me that cases such as this are possibly a result of the land passing away from the possession of large owners.

X.—Outlay of Landlords' Capital on Permanent Improvements.

Landlords' outlay.

25. The general opinion seems to be that the outlay of landlords' capital during recent years has been maintained. This is modified in some cases to "where the landlord is master of the situation, and not merely the nominal owner"; in the latter event but little expenditure is incurred.

XI.—Outlay of Tenants' Capital on Permanent Improvements.

Tenants' outlay.

26. There is not sufficient protection, it is alleged, for tenants' outlay. If a tenant, extending his acreage of hops, required new oast-houses, which his landlord refused to erect, he might put them up himself, but at his own risk, and without right to compensation, unless the landlord could be persuaded to make this a matter of special arrangement. Cases came before me in which rents had been raised on tenants' improvements, and it was urged that, if there were better security for tenants' capital, more money would be invested in the soil. To induce tenants to freely embark capital in their holdings the system of land tenure would need to be modified.

XII.—Farmers' Accounts.

27. Very few farmers keep good accounts, though some do, and in one or two cases I heard of a clerk being employed. In one carefully made set of accounts which came under my inspection, in the case of a farm growing no hops, the last year to show a profit was 1888; and no charge was made in any year for rent or tithe. In many instances it is to be feared that the farmer can show little in the way of record save his bank-book and his annual valuation.

XIII.—Changes in the System of Cultivation.

Changes in cropping.

28. The changes in cropping have been mainly directed to an increase in permanent grass land and an extension of the fruit-growing area, accompanied by a marked decline in the acreage of wheat.

Wheat.

29. The county of Kent had in 1870–71 as much as 111,273 acres of wheat; in 1879–80 the area had fallen to 89,573; and for the two years 1892–93 the annual area is only 60,456 acres. The wheat area of Kent in 1893 was 14,859 acres less than in 1892, this representing a decline in one year of over 20 per cent.

Permanent pasture.

30. The area of permanent pasture in Kent in 1879–80 was 315,212 acres; in 1892–93 it was 374,918 acres, or 59,706 acres more. The increase in permanent pasture on the dozen years is greater, therefore, than the entire area which Kent now

assigns to the wheat crop. Much of the hill land that has been laid down to grass, or allowed to grass itself, is ill-fitted for permanent pasture.

Bare fallow.

31. Some indication of what has been happening in Kent during the last year or two is afforded by the fact that the area of bare fallow, 11,143 acres in 1892, had increased to 20,180 acres in 1893. See Appendix IV.

Fruit.

32. In 1879–80 Kent had 14,685 acres in orchards and fruit plantations. In 1891 the area of orchards alone was 20,130 acres, which had increased to 20,528 acres in 1892. Of small fruit (gooseberries, currants, strawberries, &c.), the area was 18,061 acres in 1891, 19,821 acres in 1892, and 20,458 acres in 1893.

Live stock.

33. With reference to live stock, tables showing the numbers of cattle and sheep in Kent in 1879–80, and in 1892–93, are given in Appendix V.

XIV.—Employment of Labour.

Demand for labour.

34. The district is exceptionally circumstanced with regard to labour, on account of the great demand therefor in the hop gardens, and in a lesser degree in connexion with fruit culture. Granting that well-managed grass land employs 75 per cent. less labour than well-managed arable land, the labour displaced by the extension of permanent pasture seems to have been more than absorbed by the demands of the hop and fruit-growing industries. Labour in some parts of Kent last spring is, indeed, said to have been very scarce.

Wages and quality of labour.

35. Labourers' wages have increased during the last half-dozen years. On account of the depression one farmer told me he had discharged for the winter every hand he could possibly dispense with, and has thereby reduced his wages bill by 10*l.* per week. The quality of labourers' work, both in hop gardens and on ordinary farms, is said to have greatly depreciated. Thatching and other kinds of work requiring skill are performed by the old hands; it is difficult to get the young men to take the trouble to learn.

Rural depopulation.

36. Very few village lads care to go on the farms, or, if they do, as soon as they have learnt to be useful they get town employment in breweries, corn and paper mills, or as shop boys or builders' labourers. In a village, three or four miles from Maidstone, I was told that out of every 10 boys leaving school about three would go upon the farms or gardens in the neighbourhood, whilst the rest migrated to the town. Young men, I was there informed, never learn mowing now. It was suggested that labourers might be induced to stop on the land if larger allotments were accessible to them, with a prospect of passing from them to small holdings.

XV.—Tithe Act, 1891. [54 Vict. Ch. 8.]

Effect of Act.

37. The effect of this Act, at least in some cases, is that the landlord has virtually lost the annual value of the tithe rentcharge. Thus, supposing that before 1891 a tenant was paying an annual sum of 300*l.*, made up, say, of rent 240*l.* and tithe 60*l.*, he may now be paying only the 240*l.* to his landlord, out of which the latter has to meet the tithe rentcharge.

Ordinary tithe has not fallen in the same proportion as rent, and in certain cases it absorbs all the money which is paid as rent.

Land "out of cultivation" cannot, it is said, be made to pay tithe, and some land has been allowed to fall out of cultivation in order to escape paying the tithe rentcharge upon it.

Rating.

38. As regards rating, I am informed that, in assessing the tenant, the value of the tithe rentcharge is deducted. If, for example, a tenant is paying 200*l.* a year to his landlord, and the latter out of this sum has to pay 50*l.* as tithe rentcharge, the tenant is assessed for rating purposes on the 150*l.* only. Compared with former arrangements the matter is simplified because the titheowner can be rated at one operation upon the entire sum he thus receives. But there can be no doubt that the deduction, for rating purposes, of the value of the tithe rentcharge from the gross sum the tenant pays to the landlord tends to foster in the mind of the tenant the impression that it is he who still pays the tithe, and that were the tithe abolished he would reap the benefit in a further reduction of rent.

The Act of 1891 was described to me as "bad, being greatly in favour of the titheowner, and against the landowner, though beneficial to the tenant farmer."

Suggestions.

39. It was urged that the tithe rentcharge should be compulsorily redeemed at a moderate rate extending over a number of years' purchase, and it was argued that if this were done the effect would be to stimulate good farming. So far as the land itself is concerned no advantage has accrued from the transference of liability for tithe rentcharge from tenant to landlord. A proposal to relieve the land of ordinary tithe rentcharge took this form :—The landlords to find one-fourth of the redemption money, the tithe owners one-fourth, and the Government one-half.

XVI.—Extraordinary Tithe Redemption Act, 1886. [49 & 50 Vict. Ch. 54.]

Opinion of the Act.

40. This Act was so frequently brought under my notice that I feel it necessary to make some reference to it, the more so inasmuch as it was variously spoken of as "iniquitous," as "the worst and most unjust Act ever passed," and as having "saddled the land in "perpetuity." I was further told that the extraordinary charge was "a good thing "abolished, but not abolished in the right way," that the effect of the Act has been "good for tenants, bad for landlords," and that the Act itself was "a compromise, "which did some good, some harm, and operated in favour of foreign hops."

Object of the Act.

41. The object of the Act in question was "to amend the Tithe Commutation Acts as "to Extraordinary Tithe Rentcharge on hop grounds, orchards, fruit plantations, and "market gardens, and to provide for fixing the capital value thereof and the redemption "of the same." Section 1 limited extraordinary charge by providing that henceforward no charge should be levied under the Tithe Commutation Acts on any hop ground, orchard, fruit plantation, or market garden, "newly cultivated as such after the passing of this Act." Section 2, however, is the part of the Act which has been productive of so much dissatisfaction. It reads: "The Land Commissioners for "England . . . . . shall as soon as may be after the passing of this Act "ascertain in each parish in England and Wales, and certify the capital value of the "extraordinary charge on each farm, or where not a farm on each parcel of land, in "respect of which the said charge is payable at the date of the passing of this Act."

Effect of the Act.

42. The Act, I am informed, happened to come into operation at a time when the hop acreage was at, or nearly at, the *maximum* of recent years. Those who had luckily grubbed up hop land just before this period escaped scot free, but land under hops at the time was saddled with the charge "for ever." Such of this land as has since been grubbed up is, consequently, still paying the charge. A case was given to me in which an extraordinary charge of 13*s.* per acre is being paid on 70 acres of land which are not now worth 10*s.* per acre rent, but which were under hops at the time the Act came into operation. In another case, a farm paying over 30*l.* extraordinary charge has now no hops upon it. I was shown land, at present in grass, which is paying the extraordinary charge under Section 2, and other land now carrying hops which escapes the extraordinary charge under Section 1. A gentleman who has had left him some land which was in hops in 1886, but which it has not been found practicable to keep in hops, is, I am told, poorer on account of his inheritance.

43. It seems there is no power for apportioning the extraordinary charge if a part of the land concerned is sold. If, for example, out of 100 acres of such land 25 are sold, the whole of the extraordinary charge has to be borne by the remaining 75 acres. Any application to the Commissioners for apportionment of the charge results merely in the recommendation to solve the difficulty by redeeming the tithe.

Suggestion.

44. Those who complain of the Act say that it should be applied to the whole of each parish and not merely to the land within it which happened to be under the specified crops at the time. Others who are affected by the operations of the Act assume a more philosophical spirit, and admit that, as by the Act of 1886 a contract was made, it must accordingly be kept.

As of the Tithe Act, 1891, so of this, it is alleged that the Act is "bad, being in "favour of the tithe owner, and against the landowner, though beneficial to the "tenant farmer."

XVII.—Ground Game Act, 1880. [43 & 44 Vict. Ch. 47.]

45. Of this Act I was told in one part of the district, "We never hear of it; if rabbits do damage we square it with the tenant." In the case of a field almost surrounded by woods, rabbits did much harm to the corn crop last season, whereupon the shooting tenant bought the crop as it stood at 5*l.* per acre. Elsewhere it was stated, "The Act

is a good one and works well." A farmer who said that there were plenty of hares about, but that they did no harm, added that "the Act was the best that had been passed in his time." Another farmer said he had nearly two miles of wire netting round his farm to keep rabbits back. A case was also mentioned in which the tenants of two farms had recently been compelled to give them up owing to the ravages of ground game.

Damage by rabbits.

46. There can be no doubt that, in consequence of the drought, rabbits were unusually troublesome last season. In one locality, where they had not been sufficiently kept under in the coverts, they invaded a hop garden and ate off the young hop bines climbing the poles. The loss was estimated at 100*l.*, but there was no remedy at law, and an amendment of the Act providing a remedy in such cases was advocated. A gentleman of wide experience in Kent said he had never before known rabbits perpetrate so much mischief. Underwood in particular suffered, especially young ash, which rabbits always like. This season, however, they "attacked everything;" there are always complaints on the uplands, but this year complaints were equally frequent on the clays of the Weald as well.

Suggestion.

47. At a meeting which I attended a speaker advocated an alteration of the Act to the extent of permitting tenants not only to shoot both ground game and winged game upon the occupied land, but also of enabling them to enter coverts for this purpose.

XVIII.—Corn Returns Act, 1882. [45 & 46 Vict. Ch. 37.]

48. I was informed on good authority that many buyers of English corn do not make returns, though by Section 11 of the Act they are supposed to do so. They find it "too much trouble." When returns are made the prices usually include the cost of delivery. The opinion is that the average prices err on the side of excess, both on account of the sales of the same parcel of grain being liable to return several times, and also in view of the considerable quantities of home-grown grain consumed on the farm. Complaint was made of the circumstance that at many local markets no returns at all are made. It has been suggested that each corn grower should be called upon to make a strictly correct return.

XIX.—Repeal of the Malt Tax.

49. Nothing "except Free Trade," I was told, ever did farmers so much harm as the repeal of the Malt Tax. But for this abolition, in such a season as the present, good English malting barley, now fetching 35*s.* per quarter, would have sold at 60*s.* The repeal was advocated because it was thought farmers would malt the low-class barley for stock-feeding purposes, but it has really proved of no practical value. On the contrary it has stimulated the importation of inferior foreign barley for malting purposes. Prices of barley are consequently depreciated, and, "as the brewer can use anything he likes," the result to the English barley-grower is the reverse of beneficial.

XX.—Agricultural Holdings (England) Act, 1893. [46 & 47 Vict. Ch. 61.]

50. Replies to inquiries concerning the working of this Act were of varied character. In some cases the utmost indifference was expressed as to the measure; at the other extreme it was asserted that the Act had been beneficial in its operation and had tended to encourage good farming. Hop and fruit farms appear to be commonly taken on leases of 7, 14, or 21 years, and it is regarded as desirable by the tenant that, where hops and fruit are a consideration, the lease should extend over a number of years. On ordinary farms, however, yearly leases are increasing, a common arrangement being for a tenant to start with a two years' agreement, terminable subsequently upon one year's notice.

Law of entail.

51. Complications and dissatisfaction arise out of the operation of the law of entail. If, for example, the present owner has only a life interest he cannot exercise a free hand, and even if the consent of the successor be obtained to proposed improvements there is quite likely to be a lack of the necessary means. Tenants, in such cases, complain that they "cannot get anything done," and several hop-growers said they had tried in vain to get additional oast houses built.

Buildings.

52. I was assured that tenants of hop and fruit farms sometimes put up buildings, without any claim for compensation against the landlord, who declines to give consent

"because he does not want to encumber the estate." More especially is this so where the landlord is represented by trustees.

Tenants' capital.

53. On some of the hop and fruit farms it is asserted that many of the tenants have as much capital at stake as the landlords, and "this in spite of the lack of security." In reply to the question as to why tenants thus embarked their capital, the answer was "the tenant signs the agreement and trusts to Providence that the landlord will not "enforce it." Where, on account of death, or sale, or other equivalent circumstance, land is transferred from one owner to another, the feeling of confidence which may have grown up between landlord and tenant is liable to be entirely destroyed.

Valuation.

54. The valuation of farms in connexion with changes of tenancy is a subject that gives rise to considerable difference of opinion. One enterprising farmer put forth the suggestion that, upon a tenant's entry, a farm should be classified as No. 1, No. 2, No. 3, &c., and that on giving up the tenant should reap the advantage if the farm were then placed in a higher class, and should forfeit to the extent of deterioration if the farm were put in a lower class, the tenant during his occupancy to enjoy perfect freedom in every direction. He objected to the phrase "Land Courts," but in case two valuers did not agree he advocated some independent tribunal or court, appointed by the Board of Agriculture or other official body, to which the case might be referred for settlement. Any question as to the raising or lowering of rent should likewise be submitted to two valuers, and subsequently, in case of their disagreement, to an impartial tribunal. He would stipulate on behalf of the tenant for compensation for disturbance. He also advocated a re-adjustment of rents every five or seven years, as one of the greatest difficulties under the present system of voluntary abatements was the *uncertainty* as to whether any reduction would be made, and, if so, what would be its extent.

Exception was taken, however, to the valuers themselves, for it was urged that, for one commission a tenant might be able to give a valuer, a landlord could probably give a dozen, and it was argued that, in such a state of affairs, the interest of the valuers was rather on the landlord's side. In several parts of the district I was told that tenants are chary of putting the Act into operation, because they fear the landlord's counterclaim.

Freedom of sale.

55. At the same time it was argued that if freedom of sale were granted, tenants would be forthcoming for poor land, which they would cultivate and improve, on the understanding that they would be free to sell the improvements.

Suggested amendment.

56. As to suggested modifications in the Act it was most usually urged that all its clauses should be made compulsory, and that, in the first schedule, the whole of Part I. (improvements to which consent of landlord is required) should be transferred to Part II. (improvements to which consent of landlord is not required).

XXI.—The Hop-growing Industry.

57. The Maidstone District, especially that part of it lying west of Maidstone, is famous for its hops. The land around Maidstone is perhaps, per acre, the wealthiest part of agricultural England. Saving in certain specially favoured localities hop land is "not worth much" after 10 or 12 years of the crop, but is very valuable if broken up for other crops. In other parts of the district the land becomes "hop sick" about once in eight years.

Wiring.

58. Within the last eight or ten years important changes have been effected in the system of cultivation, the most noteworthy being the use of wire on the one hand and the more extensive employment of insecticides on the other. The installation in hop gardens of wire, along which the bine may be trained, is a costly process, the outlay being stated in one case as 30*l.* per acre, and in another case as from 20*l.* to 50*l.* per acre. The setting up of wire employs winter labour, and as the system permits of a freer access of air and sunshine the result is a better crop, and one also which is more cheaply picked than where hops are grown on the old system. It is asserted, too, that wired hops stand the wind better. A grower of some of the best samples of hops says that now he feels bound to have wire, but that it will "last a life-time." If occasion should arise, his landlord would take over the wire at a valuation "within limits." Another grower said he would require a long lease, and land that would carry hops for many years, before going to the expense of wiring.

59. Previous to 1882 washing of the bines was not general, but it has now come to be regarded as an essential part of hop cultivation. One large grower who has washed regularly, since the year named, for suppression of aphis and red spider, says that in 1893 the cost of washing was excessive, but that the fine quality of the produce justified the outlay. Washing can be repeated almost up to the time of picking. On one hop-farm which I visited a permanent system of pipes has been laid down, and the insecticidal liquid is driven along these by means of a force-pump. Washing.

60. During the last six or seven years wages have increased, and so has the total cost of manures. The adoption of the best systems of growing and drying is asserted to have increased the cost of production by 25 or 30 per cent. An estimate of the cost of growing hops is given in Appendix III. Cost of production.

A hop-grower of long experience showed me his figures relating to the picking of 200 acres of hops this season. For this area, covered by a crop of moderate yield, he employed from August 23 to September 13—a period of three weeks—

900 adult pickers,
90 pole pullers (1 to each 10 pickers),
9 measurers,
9 bookers,

and paid to them a total sum of 1,930*l.* 2*s.* 11*d.*, all in silver. This works out to within a fraction of 10*l.* per acre. This gentleman remarked that it would be a pity to annihilate an industry employing so much labour as this, and, he added, "If any article deserves Protection, hops do."

Another grower of upwards of 40 years' experience said it cost him, on the average, 1,500*l.* a year to pick and pocket 132 acres of hops. He estimated wiring and poling to cost 45*l.* per acre, and added that there was 25 per cent. extra expense incurred in carrying this year's crop through, the attack of insect pests having been exceptionally troublesome. His experience is that a long succession of artificial fertilisers, used exclusively, produces as good crops as farmyard manure.

61. As regards the extent of a hop garden, a highly successful grower stated that he considered from 100 to 150 acres to be quite enough for one man, and he inclined to the former figure rather than the latter. He added that if, in good times, farmers had simply invested in sound securities the profits of hop-growing, instead of—as was too commonly the case—putting additional land under hops, many would have been in a better position than they at present occupy. Size of hop gardens.

62. Last spring difficulty was experienced in some localities in getting sufficient labour for tying the bines. Girls deserted the hop gardens for the fruit plantations directly the fruit-picking season commenced. Labour.

63. This year's crop of hops is described as moderate in size but excellent in quality, the latter circumstance being due to the brilliant sunshine of the recent summer. The importation of foreign hops has for the time dwindled down almost to the vanishing point. Indeed, despite foreign protective imposts, England is to some extent exporting hops, Germany especially being in need of a supply. Nevertheless, the price which Kentish growers are this year receiving is universally complained of as disappointing. A reason given me for this is that merchants have formed a "ring," and it is added that "they lost money last year and are more cautious this." The usual course of procedure in marketing is that the "growers" sell to the "factors," the "factors" to the "merchants," and the "merchants" to the brewers. The risks, both of factors and growers, are alleged to be very great, and it is also stated that considerable sums of factors' money are out on loan amongst growers, the result necessarily being that the latter are to a great extent in the hands of the former when the time for marketing the produce approaches. At the best, the hop market is very narrow and centralised, and as the big buyers know that many of the growers are in want of money it has been to their interest to combine against any substantial advance in quotations. On the other hand, it is admitted that it is almost impossible to get hop growers to combine for the promotion of their mutual interests, and I was assured that many growers were in the habit of selling surreptitiously, some of them direct to the brewers. The hop market.

64. Hop-growing, I was told, "is not really farming at all." The grass land attached to or associated with hop gardens "does not pay," but is a mere adjunct to facilitate the keeping of bullocks, in order that their manure may be used upon the hop lands. In one case, in connexion with grass land, a hop grower maintains a breeding Hop growing and cattle feeding.

flock of over 500 Kent ewes, besides breeding his own Sussex cattle. In another case about 100 bullocks are regularly wintered. An instructive instance was that of a farmer who, with a large area of hops and fruit necessitating the use of much farm-yard dung, told me that he found the latter was more profitably produced by the high feeding of dairy cows than by the fatting of bullocks, and accordingly he has from 90 to 120 cows in milk. By the system pursued he finds he is improving his grass land. Formerly he used the milk for butter-making, but it is now sent into the town and retailed.

Underwood industry.

65. The underwood industry is of considerable importance in a hop country, where there is a steady demand for hop poles. As cost of carriage would be a heavy item the woods are commonly in the vicinity of the hop lands. The underwood trade is described as good last summer, and it also affords employment in the winter, though it is regarded as merely a "catch" trade. Sweet chestnut, ash, and larch, in the order named, are preferred as hop poles. They are seasoned for a year after felling, and are dipped in creosote before use; driven two feet into the ground they will last 10 or 12 years. In ordinary poling a depth of 12 to 14 inches is employed.

Areas under hops.

66. The subjoined table shows the areas under hops in Kent and in the other parts of England for each of the last five years:—

AREAS UNDER HOPS.

Year.	Kent.	All other parts of England.	Total.
	Acres.	Acres.	Acres.
1889 - -	35,487	22,237	57,724
1890 - -	33,525	20,436	53,961
1891 - -	34,266	21,876	56,142
1892 - -	34,058	22,201	56,259
1893 - -	34,815	22,749	57,564

XXII.—THE FRUIT-GROWING INDUSTRY.

Over-production.

67. Whilst there are complaints as to over-production of fruit and especially as to the glutting of the market in the recent summer, I was assured in several quarters that the growers of the best fruit had enjoyed a good season, and that it is the indifferent qualities of fruit from neglected orchards that overstock the market. A large grower said that his experience is that a medium crop of fruit all round pays the best. The circumstance that many fruit-growers are continuing their planting is regarded as demonstrating that the business is a remunerative one. Side by side with the increase in the fruit area there is to be noted the more general adoption of the practice of washing and greasing apple, plum, and damson trees, with a view to checking especially the ravages of aphis and winter moth. It is stated that there is seldom a farm to let which has a good proportion of fruit upon it, that fruit farms have in the past let at as much as 7*l.* per acre, and that the competition for fruit farms has been the cause of high rents. Where the fruit trees are in really fine condition it is quite possible, however, for the highest-rented farm to turn out to be the cheapest.

Over-production manifests itself in different directions in different seasons. Thus, it is said that last year damsons, and this year gooseberries, were not worth the picking. One grower said emphatically, "Bush fruit won't pay—soft fruit is done," and he added that orchard fruit and pastures pay best. The lazy and slovenly way in which fruit is packed, thereby becoming bruised, battered, and otherwise depreciated, is said to lead to a great diminution in value. Old trees, again, are not sufficiently pruned, nor are those trees thinned out which produce inferior samples. What is said to be needed in many cases is practical cultural knowledge and familiarity with pruning. The growers who have young trees appear to be doing best, but grafting has much improved the the old orchards.

Fruit markets.

68. London is the great market for the fruit grown in Kent, but I was told that the railway companies are doing all they can to facilitate access to the northern markets. Apples, plums, and damsons are sent from Kent to Scotland, the first part of the journey being by rail to London, and thence by steamer. More than half the total cost of freight is incurred between the orchards and London.

69. Dissatisfaction was expressed both with London salesmen and with London markets. For example, the salesman's commission is charged per sieve or per half-sieve, the sieve of soft fruit being a bushel, at 48 lb. per bushel. At the opening of the season red currants may be worth as much as 5*s*. 6*d*. the half-sieve, a price which as the season progresses may fall to 2*s*., yet the same amount for commission is levied on both. It is asked why the commission should not be charged as a per-centage on the selling price. Salesmen's commission.

The chartered markets, or those possessing special privileges—especially the provision against the establishment of other markets within stated distances—were also complained of, and the markets at Spitalfields and Covent Garden were adduced as instances. An independent market has been opened in the west of London.

70. Continental fruit has the advantage of home-grown fruit in Kent, in that the former reaches the London market before the latter is ready, and it is with mingled feelings that the Kentish growers see the continental produce whirled past their orchards and conveyed to London at cheaper rates than they can command themselves. As an example of the preference which Continental growers enjoy, in virtue of the earlier ripening of their fruit, it was mentioned that a large jam manufacturer had last season bought 300 tons of foreign apricots and converted them into jam before English apricots were ready for the market. Foreign fruit.

XXIII.—Suggestions or Recommendations.

71. There is in the district a widespread, though by no means universal, feeling in favour of Protection. Many persons who would not go so far as to advocate an import duty on wheat declared in favour of such a duty on flour. It was argued that flour, being a manufactured article (one farmer maintained, with considerable skill, that wheat also comes within this category), its importation in large quantities lessens the home demand for labour, besides diminishing the local value of home-grown wheat. Many millers in the district use more imported than home-made flour, hence it was contended that a duty on flour would help the labourers. I was informed that it is a common practice for local millers to buy foreign flour in marked bags, mix it with some of their own grinding, and sell all as English flour. Protection.

The abolition of the import duty on tea and its transfer to imported hops was advocated, as was also a sliding duty on the latter product.

72. On the other hand, I met tenant farmers who maintained that a return to Protection was impossible. One of them said that a tax on imported ho s, cattle and sheep, would help him immensely, but that a duty on corn would be injurious to him, for he annually spends twice or three times the amount of his rent in foreign corn, which he uses for stock-feeding. Another said that if wheat were protected he would probably grub some of his hop land and put it into wheat, thereby displacing a considerable amount of the labour which he now employs. A third farmer asked, If hops pay now without any duty, would not the imposition of a duty have the effect of bringing into hops land unsuited to the crop? A fourth was more positive, for he expressed his belief that a duty would not help hops in the long run,—"everybody would be planting."

73. A well-informed agriculturist outside the hop area remarked, "We must grow "corn and sheep here, and only higher prices can help us. The present crisis has "simply brought matters to an issue a little sooner than might otherwise have been "the case." He advocated "a sufficient duty on imports of agricultural produce to "cover our rates and taxes."

At a meeting, which I attended, one of the speakers said, "Any charge on the land "is equal to a charge on food, and if the land is charged, say, 1*l*. an acre, there is a "corresponding charge on whatever that land produces. The foreigner should be "called upon to pay something towards the relief of taxation so long as he is "allowed to send his produce into the British markets. Let them be put on an equal "footing in this respect. It has been ascertained that every bullock a farmer fattens "pays 2*l*. to the rates of the country, yet what would be said of the man who proposed "that a duty of 2*l*. should be put upon every bullock imported?"

74. Railway rates were complained of, especially by fruit-growers. Some state that foreign fruit is brought into the country at unfair railway rates, but they attribute this partly to the action of middlemen. On the other hand, it was pointed out that foreign fruit arrives in large parcels, and is thus more easily handled, whilst it was argued that one reason why railway rates are high is that railway companies have Railway rates.

had to pay exorbitant prices for land. There is a general desire that railway companies should convey home-grown produce at the same rates as they charge for similar produce imported.

Merchandise Marks Act.

75. Hop growers, generally, are in favour of the Bill which has been introduced into the House of Commons [Bill 55, 1893] "for better securing the purity of beer." The extension of the Merchandise Marks Acts, 1887 and 1891, so as to apply to all imported produce as well as to manufactured articles, was advocated.

Contagious diseases.

76. The total exclusion of hay and milk as articles of importation was demanded on the ground that otherwise these products might be the means of introducing contagious diseases and epidemics. It was also suggested that tuberculosis should be scheduled under the Contagious Diseases (Animals) Acts.

Tobacco culture.

77. In a few cases the cultivation of tobacco was recommended, such cultivation to be hampered by no licence, and the product to be free of duty. It is maintained that tobacco growing did not get a fair trial some years ago, because the licence of 25*l*., together with the duty, placed it beyond the scope of ordinary cultivators. The advocates of tobacco culture are hop-growers who say they could utilise the oast-houses for drying tobacco.

Other suggested remedies.

78. Additional remedies which were suggested include the throwing of police, sanitary, and other rates upon the Imperial Exchequer; a readjustment of rates and tithe rent-charges; personalty to contribute its fair share to the rates; and sound workable agreements between landlords and tenants. Other suggestions are recorded under paragraphs xiii., xiv., xvi., xvii., and xix.

79. My best thanks are due, and are hereby tendered, to all who have kindly favoured me with their assistance in the course of this inquiry. In recording the facts and opinions that have been communicated to me, I have in no case deemed it expedient to enunciate any views of my own.

I have, &c.
(Signed) W. FREAM,
Assistant Commissioner.

APPENDIX I.

(*See* paragraph 5.)

Balance Sheets of a Kentish Farm for the Six Years, 1888–1893, together with Summaries for the 20 Years ending 1893.

1888.

APPENDICES.

Appendix A.—Schedule of questions circulated in the district, with summary of replies, page 15.

Appendix B.—Inquiries sent to, and replies received from, cheese buyers in the district, page 18.

Appendix C.—Summary of expressions of opinion by agriculturists as to the causes of depression and suggested remedies, page 19.

THE FROME DISTRICT OF SOMERSET.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

Sir, 23, Great George Street, Westminster.

1. In obedience to instructions I have the honour to present my Report on the evidence I have collected in the Frome district of Somerset.

I.—*Introduction.*

Mode of inquiry.

2. Having received my appointment and general instructions on October 6th I arrived in Frome the same evening, and have since then, as far as the time at my disposal has permitted, made a careful examination into the general condition of agriculture, within a radius of about ten miles from Frome, and have obtained information from various sources. I have had interviews with landowners, land agents, tenant farmers, cheese and dairy factors, and others interested in agriculture, and have attended markets and met farmers there, and at their own homes. I have received valuable opinions from the Somerset Chamber of Agriculture, a committee meeting of which I attended by invitation, as I considered the Chamber represented the collective opinions of those interested in cultivation. I had to refuse to receive deputations from the Dorchester Farmers' Club and the Wiltshire Technical Education Committee, and to decline visiting Taunton and Crewkerne, thinking these places beyond the limits of the district. I find that much dissatisfaction has been expressed in these centres when the scope and area of my investigation were explained.

Finding it impossible satisfactorily to take verbally the great quantity of evidence offered, I arranged from my instructions a schedule of questions (*see* Appendix A (1)), of which I circulated about 50 copies in the immediate neighbourhood, and in order that I might obtain opinions as to the causes of depression, and suggestions for its amelioration, I enclosed with the schedules a loose sheet with additional queries adapted, as far as I could judge, to the circumstances of the different kinds of farming prevalent. In most instances I received replies dealing very fully with the points upon which I invited information. I would have formulated more precise and minute inquiries, but the time allowed rendered immediate and somewhat hurried action necessary.

Description of soils.

3. The soils and systems of agriculture pursued in the county of Somerset have been so ably and exhaustively described by Mr. W. C. Little, Assistant Commissioner to the Royal Commission on Agriculture, which reported to Parliament in 1882, that I shall not attempt to enter into details dealing with the scientific part of the subject, but will confine myself to the practical result which my investigation has enabled me to gather.

The district I have visited contains many and various kinds of land, from the richest grass to hungry blue lias clay, from dry corn-brash to fine alluvial loam, from peat and moor-land to ranges of chalk downs 900 feet above sea level. These varieties necessitate entirely different systems of management, and the statements I have received of course vary according to the class of land from which they are sent.

Population.

4. My first inquiry was as to the population of the district. I gather from the census returns that the population of the county of Somerset has increased since 1881 by 4,046, and of this increase the Frome division is answerable for 3,729. As my inquiry indicates that the agricultural population has decreased in all cases, this increase must be attributed to the mining districts, factory employment, &c.

5. From the clerk to the Frome Board of Guardians I learnt that the population of the rural district of the Union shows a decrease of 547; this, although not large when the area is considered, is confined entirely to the agricultural parishes, and would have appeared much greater, but that the increase in villages in which coal mines are situated counterbalances in some degree the exodus of the farm labourers.

Agricultural statistics.

6. I now proceed to consider the agricultural statistics of the entire county of Somerset, not being able to obtain official returns for the immediate district. These returns when placed in comparison with those prepared by Mr. Little in 1882 present the following results:—

PER-CENTAGE of CULTIVATED AREA under each kind of CROP.

County of Somerset, 1882.		County of Somerset, 1892.	
Crop.		*Crop.*	
Wheat	7·09	Wheat	4·68
Barley	4·17	Barley	3·03
Oats	2·62	Oats	3·12
Rye, beans, and peas	1·76	Rye, &c.	1·1
Total corn crops	15·64	Total corn crops	11·93
Green crops.		*Green crops.*	
Potatoes	·98	Potatoes	·64
Turnips and swedes	3·73	Turnips and swedes	3·33
Mangolds	1·22	Mangolds	1·3
Cabbages, &c.	·39	Cabbages, &c.	·39
Vetches	1·06	Vetches	·6
Total green crops	7·41	Total green crops	6·26
Clovers and grasses in rotation	7·02	Clovers and grasses in rotation	6·18
Permanent pasture	68·62	Permanent pasture	75·03
Fallows	1·24	Fallows	·46
	76·88		81·67

This increase in permanent pasture of 6 per cent. over the cultivated area shows that about 52,000 acres have been laid to grass since 1882.

7. I now give the per-centage of the total area of the various corn crops.

——	Wheat.	Barley.	Oats.	Rye.	Beans.	Peas.
1880–1	45·31	26·28	16·78	·11	9·02	2·10
1892	39·23	25·38	26·1	·2	7·86	1·24

This shows a great decrease in the cultivation of wheat since 1881, and when the previous decrease noted by Mr. Little as having taken place since 1871 is added, the result shows a total decrease in the 21 years of 8·30 per cent., and the decline in the last 11 years accounts for a diminution over the County of Somerset of about 6,200 acres annually; nearly as much barley and more oats are grown than in 1881, but a less proportion of rye, beans, and peas is noticeable.

8. Turning to live stock the comparative statistics give the following results:—

PROPORTIONATE NUMBER of LIVE STOCK to every Hundred Acres of Cultivated Area.

Horses used for Agriculture. 1881.		*Horses used for Agriculture.* 1892.	
	2·67		2·89
Unbroken horses and brood mares	1·37	Unbroken horses and brood mares	1·45
Total	4·04	Total	4·34
Cattle.		*Cattle.*	
Cows and heifers	11·27	Cows and heifers	12·72
Other cattle two years and above	5·43	Other cattle two years and above	6·23
Under two years	7·61	Under two years	8·67
Total	24·31	Total	27·62
Sheep.		*Sheep.*	
One year and above	46·92	One year and above	46·99
Under one year	22·1	Under one year	25·25
Total	69·02	Total	71·94
Pigs	10·15	Pigs	12·32

The result appears that three more cattle and about three sheep per hundred acres, are now kept in the county than was the case before so large a proportion of the cultivated area was turned into pasture.

II.—General Condition of Agriculture.

9. The neighbourhood of Frome presenting such various systems of farming I thought it best to sub-divide it into four divisions, viz.: The dairy district immediately near and to the south-west of Frome; the mixed district to the north-west; the more distant part on the stone-brash, which is more suitable for arable farming; and the mixed or hill district into Wiltshire. I also visited the fertile neighbourhoods of Yeovil and Bridgwater, but on account of distance did not attempt to collect much evidence there. In all cases I was most kindly and courteously received, replies to my questions were freely given, and much interest taken in the inquiry by all classes connected with agriculture.

Sub-District No. 1.

Dairy farms.

10. I first visited several farms in the dairy district south-west of Frome, and being fresh from the arid plains of East Anglia, was much surprised at the flourishing appearance of the pastures. On inquiry, I found that this verdure had only existed for a few weeks, the weather throughout the summer having been abnormally dry, and grass very deficient. The season is too far advanced to enable me to judge of the crops of corn except by the appearance of the stubbles and rickyards. The arable land here is in very small proportion, and in most cases well managed, advantage being taken this season to sow large breadths of rye for spring feeding. Straw is very scarce and valuable, and root crops scanty, owing to the drought. Farms vary from 50 to 200 acres, the latter being considered a large occupation. Some small farms have no arable land, and have to collect litter for the cattle from leaves, hedge sides, &c. On one farm I visited the occupier is practising a somewhat unusual system of stock feeding; his farm of 200 acres, with about 25 arable, is now stocked with 70 cows and 25 or 30 young stock. This large number is kept chiefly on foreign produce; hay, barley, and oilcake, principally from America, maintain the cattle in excellent condition, and the farm is much benefited by the liberal allowance to each animal. The buildings on this farm are well adapted for the necessary processes, cheese making in summer, and the sale of milk in winter, and the whole management appears very practical and economical; yet with all these advantages the occupier assured me that notwithstanding his continual supervision and assistance and an expenditure of 500*l.* per annum for artificial food, the two last years had resulted in loss to himself, and expressed his opinion that the next spring will crush many small farmers.

11. Another farm I visited was one of 190 acres, none of which was arable; the premises are convenient, 56 cows being milked. The occupier stated that the gross returns for 1892–3 are 25 per cent. below the average, and that cheese, now making 60*s.* to 70*s.* per cwt., would have made 10*s.* per cwt. more 10 years ago. A large quantity of artificial food is used on this occupation; the land is good loam on clay sub-soil. Another farm of 175 acres, 35 of which are arable, gives a gross return 30 per cent. below average, although an outlay of about 2*l.* per acre is incurred for artificial food, and a good quality of cheese is made. I visited other farms in this district, but the outcry of loss comes from all. Much of the necessary labour is performed by the farmers and their families, and it appears to me that the lot of these occupiers is peculiarly hard, the capital outlay being considerable, the work of the farm continuous and monotonous, amid unpleasant surroundings, and the return even in good seasons not specially remunerative owing to the decreased price obtainable for any but the very best cheese, whilst from the climatic conditions of the last two years actual loss has resulted, as testified by the examples given.

Summary of Replies to Schedule of Questions (*Appendix A* (2)).

System of farming.

12. From the answers to the schedule of questions circulated in this district (*see* Appendix A.) it would appear that from 25 per cent. to 30 per cent. of the arable land returned in 1882 has since been converted into pasture with varied results. Dairying has increased, but fruit farming and poultry rearing are about stationary. The small quantity of arable produce grown in the district is mostly consumed by stock, so that the price of grain is not of much consequence to occupiers. The hay crop this season is from 70 per cent. to 90 per cent. below average, and the results next spring, should the weather prove unfavourable, will be very disastrous.

Labour.

13. In consequence of this conversion of arable land to pasture, much less labour is employed. Good labourers are said to be scarce, as the young men migrate into the towns.

Changes of tenancy.

14. It is stated that there have not been many changes of tenancy on good farms, except in cases of death or from other unavoidable causes, and very few farms are in the hands of the owners.

Farmers from other counties.

15. Some farmers from other counties have taken farms in the district, but they do not appear to have been successful.

Reduction in rent.

16. Reductions in rent are universal, and landlords usually pay the tithe rentcharge. But in farms of medium size and of poorer character, it is stated that the reductions in rent did not take place soon enough to save the original tenants.

No difficulty in finding tenants.

17. There is no difficulty in finding tenants at fair rents, as the land is of high quality. Farms of all sizes up to 250 acres are advocated, but difficulty is experienced in providing buildings where new ones are required. The landlords, however, execute repairs quite as readily as heretofore in order to retain their tenants.

Farmers' losses.

18. Farmers in this district do not as a rule keep accounts accurately, but there can be little doubt that they have suffered a loss during the past two years. Large farms are said to have suffered most.

Subdivision of farms.

19. There is not much tendency to alter the size of farms, but in favourable circumstances some have been sub-divided for the encouragement of small holders.

Highway rate.

20. Much dissatisfaction is expressed respecting the incidence of the Highway Rate, on the ground that those who use the roads most, contribute little towards their repair. Local rates generally have increased.

Agricultural Holdings Act.

21. Farms are usually let subject to the conditions of the Agricultural Holdings Act, or under agreements containing similar conditions. There are many complaints as to the operation of the clause respecting the landlord's claim for waste, etc. In almost all cases it is contended that the time allowed to the landlord in which to make his counter-claim, should be shortened so as to approach as nearly as possible to the time allowed to the tenant to prefer his claim for compensation. Restrictions are not as a rule enforced until the last year of the tenancy.

Sub-District No. 2.

Dairy farms and cheese making.

22. North-west of Frome and the immediate neighbourhood comprises a picturesque country of mixed character, farmed by very intelligent occupiers. I gathered some interesting information from an experienced farmer holding a dairy farm near Frome. He considers a farm of 200 acres, which is here calculated to keep 40 cows, the most profitable size; this in ordinary years from cheese alone would produce a profit of about 250*l.*, but this depends much upon the quality of the cheese made, prices now varying from 52*s.* to 72*s.* per cwt. A good yield from one cow is from 3 cwt. to 4 cwt. per annum; this year it averages only 2 cwt., being the worst year since 1879. Cows, he said, could formerly be let at 13*l.* to 14*l.* each per annum, now 10*l.* or 11*l.* and the hay crop is the worst ever experienced, many meadows having had to be stocked in the spring. His labourers have mostly been with him from boyhood; they now receive 14*s.* or 15*s.* per week instead of 12*s.*, or 13*s.*, and the ordinary labour is not of good quality. As to technical education, he is of opinion that in cheese making the results are never better than when the mistress of the house is an experienced practical maker, but he admitted that it was possible for even the most experienced person to err when conducting cheese making without the now usual scientific appliances, by the use of which he thinks the cheese of the district is of more uniform quality than formerly.

Arable farms.

23. The universal opinion expressed by farmers in this neighbourhood is that farms of 200 acres are most beneficial, and that the management of such farms is most economical, that more cattle and a smaller number of sheep are kept, and that, in spite of remissions and abatements of rent, the next spring will try occupiers very severely.

24. Further north I found land much more adapted to arable farming, but a large proportion of this is being rapidly turned into pasture of medium quality, in most cases proper methods being employed. In a large village I was furnished with accurate information by a resident landowner. Amongst other items is one of considerable interest; the actual owners of property resident in the parish are 64, owning property rated at 1,941*l.*, the non-resident owners being 69, rated at 6,271*l.*

Labour.

25. The labour employed here is much less than was formerly the case. On an area of 4,400 acres, 63 men and 16 boys are employed, being at the rate of 1½ men and one-third of a boy to 100 acres. There is no distress amongst the working population, many

finding employment on railways, factories and coal-mines, but in a neighbouring parish, which is purely agricultural, there are 27 vacant cottages, the tenants having migrated to the towns or larger villages.

26. There is not much diminution in the quantity of sheep kept, although a slight decrease is noted. I saw here some excellent specimens of Hampshire Down lambs preparing for sale, some of them approaching 100 lbs. in weight, they were expected to make about 50*s*. per head, and were much the best sheep I saw during my inspection, being from a flock noted at provincial and metropolitan shows. These hills on stone-brash are very suitable for the growth of roots, and the valleys produce grass of nice quality. Sheep.

Summary of Replies to Schedule of Questions (*Appendix A* (3)).

27. As this district differs considerably from that I first visited, a difference is observable in the nature of the replies to the schedule of questions.

28. Dairying, fruit farming and poultry rearing are said to have increased with favourable results, but dairy-farming is not carried on so extensively in this district as in other parts of the county. There has been a large increase of the grass area, and wheat growing has declined 25 to 30 per cent. System of Farming.

29. A difference of opinion is noted as to the supply of sheep. Some farmers think that the present season will affect it injuriously, and it is evident that the increase of pasture land is tending to decrease the quantity of sheep kept. Sheep.

30. Fewer labourers are reported to be employed and wages have increased. Labour.

31. Many farms are stated to have changed hands, but only a few are unlet. Changes of tenancy.

32. Reductions in rent from 25 per cent. to 40 per cent. are general, and the landlords usually pay the tithe rent-charge. It is difficult to let a farm in this district except at a low rent, and permanent improvements are not made so freely as formerly in consequence of the decreased rentals. The present size of farms is considered the most satisfactory. Reductions in rent. Improvements.

33. In a few instances farmers have kept accurate accounts, and could produce them if required. A loss is said to have been incurred in all cases during the last two years. On one farm of 200 acres the loss amounted to 400*l*., and on a smaller holding of 50 acres there was a loss of 34*l*. I received a letter on this subject of which the following is an extract:— Farmers' losses.

"I have looked through my accounts and taking ten years ending September 30th, 1893. I find that after paying tithe, taxes, interest, and also allowing 1*l*. per acre rent, there is no other profit. Area of farm 212 acres (105 arable, 107 grass)."

34. Highway rates have increased greatly owing to the vicinity of the coal-mines, and much loss is said to have been experienced by farmers as the result. Highway rate.

35. It is generally contended that the Agricultural Holdings Act requires amendment in respect of the time allowed to the landlord in which to put in his counter-claim. There are few restrictions on tenants in this district, and these are rarely enforced. Agricultural Holdings Act.

Sub-District No. 3. (*See Appendix A* (4)).

36. This district extends south-east from Frome and over the Wiltshire border. I saw no sheep until I reached Warminster. I went on to Kingston Deverill and obtained much information, and had an opportunity of observing the systems of farming now pursued on the downs. Of this high range a large proportion was formerly cultivated, but thousands of acres are now being laid, or left, down for sheep-walks, and even many of the valleys, which are apparently good corn-growing land, are now converted into pasturage of fair quality. The decreased price of corn, however, has been accompanied by a corresponding drop in the price of stock. I was favoured with a statement showing the price of 500 cross-bred lambs yearly since 1888, from which year they have realised as under:— Down land. Price of sheep.

	£
1888	1,075
1889	1,100
1890	1,100
1891	853
1892	715
1893	675

37. Wool in 1882 was 14½*d*. per pound, in 1892 10*d*. per pound, with a short clip, in 1893 9*d*. per pound, with somewhat heavier fleeces. These figures, when taken in Wool.

connection with the low price of store cattle, show that the depression is felt equally by stock breeders and arable farmers.

Price of cattle.

38. I heard from various sources of the great loss caused by forced sales of cattle, dairy stock having been sold at an average of 4*l*. 10*s*. per cow. A gentleman of great experience gave as his opinion that the hay crop is so deficient that provision is not made for wintering more than one-fourth of the usual amount of stock on the dairy farms. Cattle must therefore be sold for what they will fetch, and probably from want of means in the spring will not be replaced. At present the supply of cattle is considerably increased since 1882, but a slight decrease of sheep-stock is noted.

Price of grain and sheep.

39. The price of wheat was 44*s*. per quarter in 1882, it was 26*s*. in 1892. Barley has fallen 1*s*. per quarter. Oats remain at the same price. A great fall in the price of older sheep is also noted. Off-going ewes made 60*s*. per head in 1882, in 1892 28*s*. per head, and this season 22*s*. per head.

Summary of Replies to Schedule of Questions (*Appendix A* (5)).

System of farming.

40. Dairying has made a slight progress in this district, and there is an increase of about 30 per cent. in the land under pasture, with the result that much less labour is required.

Changes of tenancy.

41. There have been only a few changes of tenancy, and few farms remain in their owners' hands.

Reductions in rent.

42. Very considerable reductions in rent have been made in arable farms. In one case a farm of 1,300 acres, formerly rented at 800*l*., has been reduced to 650*l*.; and another of 1,600 acres, which formerly let at 1,000*l*., is now offered at 450*l*. On good pasture farms there have also been slight reductions. The landlords as a rule pay the tithe.

Farmers' losses.

43. Some farmers in this district can produce accurate accounts. The depression appears to have been felt equally by large and small farmers.

Subdivision of farms.

44. It is considered inadvisable to divide large farms in this district except to provide small holdings for cottagers where buildings are already available. Large holdings are regarded as the most economical. The hill farms are usually enlarged wherever an opportunity offers.

Sub-District No. 4.

Yeovil.

45. In consequence of an invitation I received from the Somerset Chamber of Agriculture, I attended Yeovil market and met several farmers, receiving from them in all cases corroborative testimony as to the disastrous effects of the last two seasons, even in this fertile district. One farmer summarised the hay crop thus: "In 1890 and "previously I grew 150 tons annually, in 1892 I made 50 tons, and this year I shall "hardly make 10 tons." This I found to be about the proportion of the hay-crop wherever I made inquiry, except where irrigation is practised.

Hay crop.

Summary of Replies to Schedule of Questions (*Appendix A* (6)).

Reductions in rent.

46. In this district rents are reported to have been lowered in about the same proportion as in the northern parts of the county, and abatements are still made. The landlords pay the tithe in all cases.

Farmers' losses.

47. Farmers were able to produce accurate accounts, and in every instance there had been a loss during the last two years, more especially on large farms, where the occupiers have been unable to curtail expenses in proportion to their losses. A detailed account from a farm of 201 acres, showing heavy loss on three years, can be produced if required.

Large and small farms.

48. Holdings now exist of from 50 to 500 acres in extent. Small farms are considered to answer best. Landlords are gradually providing buildings.

Rates.

49. A great increase is reported in the county rates, and rates generally are stated to have increased considerably.

Agricultural Holdings Act.

50. The Agricultural Holdings Act is considered unsatisfactory, and it is contended that home grown produce consumed on the farm should be included in the schedule for compensation.

Sub-District No. 5.

Glastonbury and Bridgwater.

51. Land of a different class has now to be considered. In the neighbourhood of Glastonbury I gained the following information. A reduction in rent of from 25 to 30 per

cent. has taken place, but much difficulty is experienced in finding tenants for the poorer arable soils, which are here on blue lias and require liberal assistance. Some of this land is in the hands of owners. The four-course system of cropping is usual. Pasture farms let readily at the decreased rental, but loss is established in these since 1891.

52. The corn harvest last year was very deficient, quite 70 per cent. below the average, consequently stock are not bought to consume fodder and coarse grass. Fruit farming is discouraged by the want of a market, great difficulty being experienced by growers of exceptionally fine fruit, and medium sorts being absolutely unsaleable. Fruit-farming.

53. A gentleman who has been accustomed to have an annual sale favoured me with the statistics for seven years. During that time his sales of sheep, cattle, and pigs show an annual average of 1,464*l.*, this year he has neither hay nor straw to spare, so no stock will be bought and no extra manure made. Decrease of live stock.

54. I heard from a tenant farmer that he is 50 head of cattle short on a farm of 400 acres, half being pasture, that he has kept up his sheep-stock at the expense of his hay crop, of which he has cut none this year. Hay crop.

55. I have communications of the same character from the neighbourhood of Wells, complaining of heavy loss on every kind of farming—in one instance a loss of 1,000*l.* since 1882 is stated as having occurred on a farm of 250 acres—20 per cent. increase of pasture has taken place, and much less labour is employed, especially on the smaller occupations. Losses.

56. The Agricultural Holdings Act is stated to be too much inclined to the landlords' interest, especially in the matter of his counter-claim for waste.

57. I now proceeded to Bridgwater, being desirous of comparing the actual rental received for the fine grazing lands of Pawlett Hams with the figures given by Mr. Little in 1882. By the courtesy of the agent, Mr. Smith-Spark, I am enabled to present the following table of rentals. The land is of the richest grazing quality, is let by auction yearly, and the owner pays all outgoings, the sums quoted being the exact amount paid by the purchasers. Bridgwater. Comparison of rents between 1879 and 1893.

Mr. Little's Report.	£	Rentals for 5 Years to 1893.	£
1879	6,248	1889	5,651
1880	5,686	1890	4,840
1881	5,180	1891	4,948
		1892	5,402
		1893	6,150

The average from Mr. Little's Report and that at present stands as under :—

	£
Annual average of 8 years to 1878	8,556
„ „ 3 to 1881	5,681
„ „ 5 to 1893	5,400

The increased rent this season may be taken as indicating the necessities of stock owners in the spring of the present year.

58. At Pawlett I observed a peculiar instance of the effects of the season—a large field of barley unharvested, and by no means a small crop. Although the soil here is of rich loam, this corn, which was sown at the usual time, never germinated until the ground was moistened by rain in July. At Bridgwater I received returns from some representative men but I made but few inquiries, thinking the district somewhat beyond the limit assigned to me. In the immediate neighbourhood the grass land is very rich, with herbage of luxuriant growth, the cattle and sheep I saw at the market here were in good condition and made full prices, contrasting very strongly with what are obtainable for lean stock, and the grazier, who can now stock his land for 25 to 30 per cent. less than formerly, does not suffer in the same degree as the breeder of cattle and sheep. Corn growers are, however, not in such good case and must be heavy losers. In one instance I was told of crops of wheat producing only 12 bushels per acre and of hay 80 per cent. below average. Condition of agriculture.

59. The clerk to the Bridgwater Board of Guardians supplied statistics of population showing a decrease in the agricultural parishes of 919 since 1881, some slight difference may have been caused by the operation of the Divided Parishes Act, but the statement confirms that given at Frome, viz., that the agricultural population is steadily diminishing. Population.

III.—Technical Education.

Technical education.

60. I instituted inquiry as to the working of the classes under the Technical Education Act, in every case the replies are favourable. According to the statement of two factors who deal extensively in cheese, &c., there is still room for improvement, although both quality and quantity have benefited by the instruction given (*see* Appendix B.) Lectures on subjects connected with geology, chemistry, &c., are spoken of as failures owing to want of appreciation by the classes for which they were instituted.

IV.—Small Holdings and Allotments.

Small holdings and allotments.

61. The Royal Commission on Labour being more particularly interested in this subject I did not make minute inquiries concerning it, except so far as it affects the ownership of land. I learn that there is no demand for allotments beyond what are voluntarily supplied by the owners, and I have heard no complaint as to the want of small holdings. The analysis of the estate of a typical landowner may be taken to illustrate this statement. The estate comprises 34,000 acres divided as under:—

House and Land.	Tenants.
From 1 acre to 30 acres	506
Farms between 30 and 50 acres	50
„ 50 „ 100 „	50
„ 100 „ 200 „	60
„ 200 „ 300 „	26
„ 300 „ 400 „	8
„ 400 „ 500 „	4
„ 500 „ 2,000 acres	12

There are on this estate 500 allotments, and the tenants number 1,000.

Farmers who have done well as compared with others.

Successful farmers.

62. Throughout the whole of the district I had no prominent example of a farmer who had succeeded in a much greater degree than his neighbours, the dairying industry, demanding so much of the time of those practising it, prevents their paying attention to other branches of business connected with farming, as cattle dealing, &c.; in the neighbourhood of the towns market gardening is carried on to some extent, but apparently by small occupiers.

V.—Farms taken by Strangers.

Immigrant farmers.

63. Not many farms have been taken by strangers, but some Devonshire men have been fairly successful, being accustomed to the work necessary for cheese making, &c. Men from other counties fail to give the continuous attention required to obtain a high class of goods, and become tired of the occupation in consequence.

VI.—Tithe Act, 1891.

Tithes.

64. As the tithe is now paid in almost every instance by the landlord, it is not considered a special grievance by the tenants, and there is a good reason why the owner is somewhat reconciled to the impost. In making arrangements for new tenancies, either in spring or autumn, the tithe is now included in the rent payable by the tenant; if not, the tithe not becoming due until after the tenancy expires, it becomes chargeable on the land, and is recoverable from the owner, but if the tenant fail to meet the demands for rent, the owner has his remedy by distraint, &c.

Corn returns.

65. Tithepayers consider the corn returns as at present collected fallacious, and calculated unduly to enhance the sum payable, as they now include, in many instances, profits made on re-sales, and railway charges. It is also urged that inferior corn consumed on the farm is not taken into account, and that the returns should be taken from the grower and not from the merchant, as at present.

VII.—Agricultural Holdings Act, 1883.

Claims and counter-claims.

66. Many farms are held under agreements which are taken as containing provisions equal to the Act. In cases where the Act is in force I learn that tenants are

dissatisfied with the time allowed to the landlord in which to make his counter-claim; they urge that it should be made within a much shorter time of the period allowed to the tenant to claim compensation.

67. I was told that farmers under the Act seldom obtained compensation, and had, therefore, ceased to claim what they were convinced they should lose by the counter-claim. This feeling must be opposed to all principles of good farming, as a tenant under these circumstances will naturally take all he can from the farm he is quitting, and leave the next tenant to restore the fertility of which he has robbed it. It is also considered a grievance that the consumption of home-grown corn should not be scheduled for compensation, especially as so much is used for cattle food at the present time.

VIII.—Causes of the Depression and suggested Remedies.

68. I now arrive at the final stage of my inquiry and to the queries I sent out, and at various interviews I obtained replies, some of them very lengthy, which I have endeavoured to condense and summarise as under. (*See* Appendix C.)

Live stock supply.

69. Throughout the whole district the variation in the live-stock supply is about equal to that shown by the agricultural statistics for the county.

Causes of depression.

70. In almost every reply I received, the chief causes of depression are attributed to low prices resulting from foreign competition and bad seasons, with consequent failure of corn and hay crops. For the latter no remedy but patience can be found, but the former is considered removable by a change in the fiscal system which would force the foreigner to pay a corresponding tax to that borne by the producer of home-grown corn and hay, by the makers of cheese, butter, &c., and by those engaged in every agricultural industry, which is now severely handicapped by the preference given to the foreigner. This, it is urged, should take the form of a duty on all foreign manufactured articles, which would include flour, articles which cannot be produced in the United Kingdom being admitted free of duty. A duty on foreign barley, not an article of necessity, but of luxury, would, it is stated, promote temperance and encourage agriculture.

Protection

71. It is pointed out that the imposition of a tax on foreign flour would enable farmers to procure bran and offal at a much cheaper rate than at present, would give much employment to artizans, and help to reinstate the milling industry in England, where it is now practically ruined. At the same time it is argued that the price of bread would be increased infinitesimally by the proposed tax.

Tax on home production.

72. The exemption of the foreigner from any tax for import is calculated to give him an advantage of 3*s.* per quarter on wheat, and of 5*s.* per cwt. on cheese, these sums being stated as the amount paid by the home producer in rates and taxes before he can market his goods. As an alternative to the duty proposed one gentleman claims that the Englishman should be relieved of rates and taxes to the extent mentioned.

Local taxation.

73. There is an almost unanimous complaint against the injustice of local taxes as at present imposed. Highway rates are pointed out as being paid by the farmer to maintain roads for the use of traders who pay but a very inadequate rate for their repair, a tax is advocated which should force those who use the roads most, to pay proportionally to their repair. Income derived from personal property should be assessed to rates for public burdens. National objects should be paid for from national resources. I had an interesting illustration as to the inequality of local burdens. The case of a factory is recited, rated for local purposes at 400*l.*; it employs 2,000 hands, sends 500 children to the Board school, has its waggons daily on the roads, and pays rates only on the assessment of the building (*i.e.*, 400*l.*). A farm of 200 acres in the same parish is assessed at 460*l.*, and sending five children to the school, and having this year realised no profit, pays more to the public burdens than the factory mentioned.

Steam and electricity.

74. Steam and electricity are stated to be the great cause of the present low prices, information and transit being so much more rapid than formerly.

Town sewage

75. Waste of town sewage is mentioned, and measures advocated which would secure its proper application to the soil.

Beer duty.

76. The action of the beer duty is alleged to be very injurious to the sale of home grown barley, and a return to the malt tax is recommended.

Game laws.

77. In one reply the abolition of the game laws is advocated, and there are two complaints of the partial nature of the Ground Game Act.

Existence of feeling of insecurity.

78. The opinion of an extensive landowner is that a sense of insecurity prevents rich men buying land and improving it; and that the same cause renders capitalists unwilling to invest money on loan where land is the security offered.

Co-operative farming.

79. One reply recommends that owners of small estates should farm them, and one advocates co-operative farming.

Fixity of tenure.

80. Fixity of tenure in a modified form is advocated by one farmer.

Merchandise Marks Acts.

81. The following illustration will show the necessity for insisting that the Merchandise Marks Act should be strictly enforced in the case of all foreign produce. A farmer states that a tradesman sent to his dairyman, requesting the loan of his stamp to impress a quantity of Italian butter with it. Most of my correspondents point out the necessity for all articles of foreign production being labelled as such.

Conclusion.

82. In concluding this hastily written Report, I beg to record my conviction that a very serious depression now exists even in the most fertile districts; that the owners of land are, with scarcely an exception, doing their utmost to enable the tenants to continue their occupations; that but few farms are in the hands of landlords, and that there are no uncultivated farms. A great and important change is evidently taking place in the agriculture of the district by the conversion of arable to pasture. In the statement of remedies suggested I have treated them, as far as possible, according to the number of replies I received bearing upon each particular question. Should further details be required I shall be happy to furnish them from my memoranda.

It now remains for me to offer my best thanks for the uniform kindness and courtesy I have received during my investigation in this beautiful county. Personally I am indebted to the Marquess of Bath and his agent, Mr. Jones, to the agent of the Earl of Cork, to the Rev. Canon Duckworth and the Rev. Le G. G. Horton, to Messrs. Neville Grenville and Wm. Stratton for the valuable information afforded me. I also beg most heartily to thank the many other gentlemen who have so ably and willingly assisted me in the work of the Commission.

I have, &c.

(Signed) JABEZ TURNER,

Assistant Commissioner.

APPENDIX.

APPENDIX A.

ROYAL COMMISSION ON AGRICULTURAL DEPRESSION.

(*See* para. 2.)

FROME DISTRICT OF SOMERSET.

DEAR SIR,

THE answers to these questions will be treated as *strictly private and confidential;* in no case will names be published. If you see no objection, and will enclose me your replies, I shall be much obliged.

I am, Sir,
Your obedient servant,

Assistant Commissioner.

To _____

ROYAL COMMISSION ON AGRICULTURAL DEPRESSION.

APPENDIX A (1).

FROME DISTRICT OF SOMERSET.

QUESTIONS.

No. 1.—(*a.*) Have many changes of tenancy taken place in the district since 1882?
(*b.*) Have any farms been taken in hand by landlords for want of tenants?
(*c.*) Where farms have been relet, has there been permanent reduction, or temporary abatement of rent, or any alteration in the system of payment of local rates, or of tithe rent-charge, or by withdrawal of restrictions?
(*d.*) Have local rates increased or diminished since 1882?

No. 2.—(*a.*) Have occupiers of large or small farms suffered most from the depression?
(*b.*) Is there a tendency to divide or enlarge occupations?
(*c.*) Is any difficulty experienced in finding suitable tenants for vacant farms?
(*d.*) Is it your opinion that the agriculture of the district would be benefited by larger or smaller farms? If by smaller, would landlords incur the necessary outlay for buildings, &c.?
(*e.*) Are permanent improvements by landlords, buildings, fences, &c., made as freely as heretofore?
(*f.*) Do you consider the tenant sufficiently secured for the necessary outlay of his capital?

No. 3.—(*a.*) Do you keep accurate accounts, and if so, would you object to give the Commission returns of profit and loss over a term of years, say 1890, 1891 and 1892?

No. 4.—(*a.*) Have any material changes taken place in the system of cultivation since 1882; such as alteration in course of cropping, sale of produce, &c.?
(*b.*) Is there an increase or decrease of pasture, and in what proportion?
(*c.*) If any change have taken place, how has the employment of labour been affected by it?
(*d.*) Have dairying, fruit, and poultry farming increased, and with what result?

No. 5.—(*a.*) Are farms in the district let subject to the provisions of the Agricultural Holdings Act, and are tenants satisfied with those provisions?

No. 6.—(*a.*) Have any farms been taken by farmers from other parts of the country, and are they generally successful?

SUMMARY of ANSWERS RECEIVED to SCHEDULE OF INQUIRY.

County of Somerset, Frome District.

APPENDIX A (2.) (*See* para. 2 *et seq.*)

CHEESE DAIRY FARMS in the immediate neighbourhood of Frome.

Questions.	Answers.	
No. 1 (*a*)	4	Not many.
	1	Rather more than average
	2	Only by death.
	1	Several. Rents not reduced soon enough.
	1	Yes; principally on small estates.
	1	Yes; and more would, but for tenants' private means.
	1	Yes; poor land and small farms.
	11	
(*b*)	1	Yes.
	3	Very few.
	2	Not within the last five years.
	3	No.
	2	One referring to the same farm.
	11	
(*c*)	11	Yes, and tithe rentcharge paid by landlord.
(*d*)	5	About the same.
	6	Increased. Highway rate very objectionable on the ground that those who now use the roads most pay nothing for their repair.
	11	
No. 2 (*a*)	5	Large.
	1	Medium sized.
	3	Small.
	2	Equally.
	11	
(*b*)	4	No.
	1	Small holdings inquired for.
	3	To divide where practicable.
	1	To enlarge.
	9	
(*c*)	6	No; rent being fair.
	2	Somewhat.
	3	Difficult to find good men.
	11	
(*d*)	2	No change desirable.
	4	Large holdings preferable.
	1	Farms of all sizes desirable, but buildings necessary.
	1	Land should be rearranged. Landlords object to expensive buildings.
	1	Small farms, if near towns.
	9	
(*e*)	10	Yes, certainly.
	1	Not so freely, rents having fallen.
	11	
(*f*)	2	Yes.
	1	Not always, as the outlay is sometimes injudicious.
	5	No. The landlord's claim for waste should be made at the same time as the tenant's for compensation; home grown corn should be allowed.
	2	Yes, by agreement.
	10	

Questions.	Answers.	
No. 3 - -	9	No; but loss assured in the last two years.
	1	No profit after rent and expenses for 10 years.
	10	
No. 4 (*a*, *b*)	11	25 to 30 per cent of arable converted to pasture.
(*c*) -	7	Less labour in consequence; good men scarce.
	1	Young men migrate.
	3	Not much difference.
	11	
(*d*) -	2	No.
	1	Butter and cheese factories have increased, to the detriment of good cheese.
	2	Dairying and poultry farming have increased.
	2	Dairying slightly.
	3	Dairying largely.
	1	Milk selling increased.
	11	
No. 5 - -	5	Yes; but Act not satisfactory, especially with regard to the time allowed for making the landlords' claim for waste.
	5	By agreement.
	10	
No. 6 - -	5	No.
	4	Yes; but not specially successful.
	1	Yes, from the north.
	1	Yes; some from Dorset.
	11	

Appendix A (3). (*See* para. 27 *et seq.*)

Farms of Mixed Character, with greater proportion of Arable Land.

Bath Union.

Questions.	Answers.	
No. 1 (*a*) -	6	Undoubtedly; much in excess of average.
	2	A few.
	8	
(*b*) -	4	Some.
	1	Four.
	3	None.
	8	
(*c*) -	5	Reduction of 20 to 40 per cent. less restrictions, and landlords pay tithe rentcharge.
	2	Small reductions; hay and straw not to be sold.
	1	No reduction.
	8	
(*d*) -	8	Yes; much increased, especially highway rates, owing to the neighbourhood of coal mines.
No. 2 (*a*) -	4	About equally.
	3	Large.
	1	Small.
	8	
(*b*) -	3	Neither.
	3	To divide.
	1	To enlarge.
	7	
(*c*) -	5	Yes; except at low rents.
	2	Yes.
	7	
(*d*) -	3	No advantage in change.
	2	Larger farms.
	3	Smaller; but there might be difficulty as to buildings.
	8	
(*e*) -	5	No; owing to decreased rent-roll.
	1	More attention needed to fences.
	2	Yes.
	8	
(*f*) -	5	No; reform of Agricultural Holdings Act needed.
	1	Yes; if careful.
	2	Yes.
	8	
No. 3 - -	4	No accurate accounts.
	3	Yes; loss shown of 400*l.* on 200 acres, half arable. Small farm shows a loss of 34*l.* in 1891 and 1892.
	1	Yes; would not object to produce them.
	8	
No. 4 (*a*, *b*)	8	Large increase of pasture, but of medium quality. Wheat growing decreased 25 per cent.
(*c*) -	8	Fewer labourers at higher wages; many pass to collieries.
(*d*) -	4	Dairying increased.
	1	Poultry increased.
	1	Fruit and poultry farming increased.
	1	No.
	7	
No. 5 - -	4	Under the Act, which requires reform by the removal of restrictions.
	3	Under agreement.
	7	
No. 6 - -	5	None.
	2	Yes, but not specially successful.
	7	

Appendix A (4). (*See* para. 36 *et seq.*)

Mixed Farms in Somerset and Down Lands adjacent in Wiltshire.

Questions.	Answers.	
No. 1 (*a*) -	3	Few, except by death.
	1	Several.
	4	
(*b*) -	1	No.
	3	Some.
	4	
(*c*) -	4	Not more reduction to new than to old tenants; arable farms largely reduced, good pasture slightly reduced, landlords pay tithe.
(*d*) -	1	No change.
	1	Increased.
	2	Decreased.
	4	

Questions.	Answers.	——
No. 2 (*a*) -	1	Large farms formerly, now both large and small.
	1	Small.
	2	Both large and small.
	4	
(*b*) -	1	Not to enlarge.
	2	Hill occupations enlarged.
	1	To divide.
	4	
(*c*) -	4	Some difficulty especially with arable farms.
(*d*) -	2	It is unadvisable to divide large farms, except in the case of cottage holdings which have some buildings available.
	1	Large holdings most economical.
	3	
(*e*) -	3	Yes, when necessary.
(*f*) -	3	Yes.
No. 3 - -	2	Yes; but find a difficulty on account of the fluctuation in the price of stock.
	1	Yes, would produce, if required.
	3	
No. 4 (*a*, *b*)	4	An increase of 30 per cent. in pasture.
(*c*) -	4	Less labour required; young men have migrated.
(*d*) -	3	Dairying has somewhat increased.
No. 5 - -	3	Some under the Act; some under agreement, equal to the provisions of the Act.
No. 6 - -	3	Some, who have not been more successful than their predecessors.

APPENDIX A (5). (*See* para. 40 *et seq.*)

FERTILE FARMS of MIXED HUSBANDRY where dairying is largely followed.—YEOVIL UNION.

Questions.	Answers.	——
No. 1 (*a*) -	6	Not more than average.
(*b*) -	3	A few.
	3	No.
	6	
(*c*) -	2	Reduction and tithe rentcharge allowed.
	2	25 per cent. reduction and subsequent abatement.
	1	Landlords pay tithe and part of new rates.
	1	Rents reduced 25 per cent. and farms let tithe free.
	6	
(*d*) -	2	Increased, especially county rates.
	2	Increased considerably.
	1	No diminution.
	5	
No. 2 (*a*) -	4	Large.
	1	Equally.
	1	Small.
	6	
(*b*) -	3	To divide.
	3	No change.
	6	
(*c*) -	5	No, if the rent is fair.
	1	Not if tenant has capital.
	6	
(*d*) -	1	Holdings now exist of from 50 to 500 acres. Small ones answer best. Landlords are gradually increasing buildings.
	3	No greater outlay possible. Narrow farms.
	1	No alteration required.
	1	Large dairy farms most profitable.
	6	
(*e*) -	5	Yes.
(*f*) -	5	Yes.
No. 3 - -	1	Receipts 200*l.* per annum less, outgoing stationary.
	2	No; but undoubted loss established.
	1	Yes; but not inclined to show them.
	1	Yes, an absolute loss clearly shown.
	1	Accounts can be produced, if required.
	6	
No. 4 (*a*, *b*)	5	Increase of pasture 20 to 25 per cent. and seeds are allowed to remain down longer.
(*c*) -	4	Less labour employed and that not so efficient as formerly.
(*d*) -	1	More butter and less cheese made.
	3	Dairying has increased.
	2	Fruit farming unprofitable, but more are trying it.
	6	
No. 5 - -	2	Under the Act, but not satisfactory. Home-grown produce should be paid for.
	3	Under the Act, satisfactory.
	1	Under agreement with schedules for compensation.
	6	
No. 6 -	5	No.
	1	Yes.
	6	

APPENDIX A (6). (*See* para. 43 *et seq.*)

GLASTONBURY to BRIDGWATER. Farming of various descriptions, stock raising and feeding, dairying, &c.

Questions.	Answers.	——
No. 1 (*a*) -	3	Yes, several.
	1	Not on grazing farms.
	4	
(*b*) -	2	No.
	1	Arable farms.
	1	A few.
	4	
(*c*) -	3	Reductions, sales of produce restricted in last year of tenancy.
	1	25 per cent. reduction and subsequent abatement.
	4	
(*d*) -	3	Increased.
	1	Decreased.
	4	

Questions.	Answers.	—
No. 2 (*a*) -	1	All; small occupiers are ruined.
	3	Large.
	4	
(*b*) -	1	To enlarge.
	2	To divide.
	1	No alteration.
	4	
(*c*) -	2	No.
	2	Not for pasture farms.
	4	
(*d*) -	1	Smaller farms.
	2	Larger farms, being more economical.
	1	200 to 400 acre farms.
	4	
(*e*) -	4	Yes.
(*f*) -	2	Yes.
	2	No, restrictions should be abolished.
	4	
No. 3 - -	3	No, but loss established.
	1	1,000*l.* lost since 1882; farm 250 acres.
	4	

Questions.	Answers.	—
No. 4 (*a*, *b*)	3	20 per cent. increase of pasture, medium quality.
	1	Slight increase of pasture.
	4	
(*c*) -	3	Less labour employed on large farms and still less in proportion on small.
	1	Increased cost of labour 25 per cent.
	4	
(*d*) -	2	Dairying has increased.
	2	In some cases; but profit prevented by railway rates and foreign competition.
	4	
No. 5 - -	2	Under the Act, satisfied.
	2	Under the Act, dissatisfied, the Act being in the landlords' interest. Landlord's notice of counter-claim should be given at the same time as the tenants for compensation.
	4	
No. 6 - -	3	No.
	1	A few.
	4	

APPENDIX B.

Technical Education.—Cheese and Butter.

(*See* para. 57.)

Form sent to large Buyers of Cheese, &c.

Dear Sir,

I shall be glad to receive your answers to the questions following before the 21st instant.

I am,
Yours faithfully,
Jabez Turner,
Assistant Commissioner.

Royal Commission on
Agricultural Depression.

No. 1.—Has the quality of cheese purchased by you, being made in the vicinity, improved or deteriorated during the last 10 years?

Answer 1. Improved, especially in some dairies.
2. Decidedly improved.

No. 2.—How does the quantity now made in the district compare with the supply available 8 or 10 years since?

Answer 1. A decline of 20 to 25 per cent. in the last two years, owing to the drought and the increased sale of milk.
2. Not much decline, but more milk is sold, especially in winter.

No. 3.—Is the making of butter and its production improved or otherwise, and is the quantity increased?

Answer 1. No improvement noted, and the quantity less.
2. Quality of butter very much improved, quantity about the same.

No. 4.—What is the variation in the price of cheese between ordinary and best?

Answer 1. From 16*s.* to 18*s.* per cwt.
2. From 60*s.* to 80*s.* per cwt. according to the quality of the cheese (price paid) = 1*l.* per cwt. variation.

No. 5.—Do you attribute the improvement (if any) in the production of cheese and butter to the working of the Technical Education Act?

Answer 1. Yes. I know several farmers whose cheese has been improved 18*l.* per ton during the last two or three years, mainly from the attendance of their cheesemakers at the schools.
2. Decidedly, and we are of opinion that the more the schools can be extended the better. The best pupils are those with no previous knowledge of the subject. High class cheese is in great demand, and good prices are willingly paid for it.

APPENDIX C.

(*See* para. 65.)

Causes of Depression and Remedies Suggested.

Private.

In addition to information dealing directly with the questions, expressions of opinion are invited upon any and all subjects connected with agricultural depression, and such measures or changes as are calculated to lead to its dissipation and removal.

1. Live stock supply. Increased or diminished, and in what proportion?

Prices:

2. Local taxation.

3. Technical Education. Successful or otherwise.

Causes of Depression.	Remedies Suggested.
1. Foreign competition in every kind of agricultural produce.	1. Small tax on all manufactured imports, which can be produced in the United Kingdom, the money received to be devoted to the relief of local burdens.
2. Two consecutive bad seasons, and consequent failure of corn and hay crops.	2. No remedy.
3. Low price of produce -	3. Better general trade throughout the country. A tax on the importation of foreign barley, not an article of food, but of luxury; this would promote temperance and encourage agriculture. Universal free trade or protection.
4. Heavy charges on land -	4. Highway and other rates press heavily on the farmer, especially the first mentioned. A tax should be imposed, by which those who use the roads should pay for their repair, a charge from which traders are now practically exempt.
5. High price of labour, and scarcity of good practical labourers.	5. No remedy.
6. Local taxation (almost unanimous).	6. Income derived from personal property should be assessed to local rates (*see* illustration). National objects should be paid for from national resources.
7. Exemption of foreign produce from local burdens, *i.e.*, 3*s.* per quarter on wheat and 5*s.* per cwt. on cheese, this representing the sum paid by the home producer in rates and taxes before he can market his produce.	7. The foreigner should be taxed, or the Englishman relieved to the extent mentioned opposite.
8. Steam and electricity -	8. No remedy.
9. Action of bankers - -	9. No remedy.
10. The silver question, which has enabled the Indian producer to undersell home-grown produce.	10. No remedy.
11. Insecurity of tenant in case of death of landlord, or sale of estate.	11. Amendment of the Agricultural Holdings Act.
	11A. Many answers show dissatisfaction with this Act, especially in the matter of the time allowed for the landlord to send in his claim for waste; it is contended that this should be sent in at the same date as the tenant's for compensation.
12. Waste of town sewage -	12. Proper means to be taken for the application of this to the soil.

ROYAL COMMISSION ON AGRICULTURE.

ENGLAND.

REPORT

BY

MR. JABEZ TURNER
(ASSISTANT COMMISSIONER),

UPON

THE STRATFORD-ON-AVON DISTRICT OF WARWICKSHIRE.

APPENDICES.

APPENDIX A.—Return of yields and prices of different kinds of grain harvested in 1893, per acre, page 33.

APPENDIX B.—Statements of payments and receipts in respect of occupation of land, 215 acres for 3 years ending 29th September 1893, page 33.

APPENDIX C.—Difference in value of live-stock, corn and roots on a farm of 500 acres, 1882–1893, page 34.

APPENDIX D.—Comparison of rents now paid on farms with amounts payable in previous years, page 34.

APPENDIX E.—Extract from a letter received from a gentleman formerly resident in the county, page 34.

APPENDIX F.—Schedule of questions circulated in the district, page 35.

THE STRATFORD-ON-AVON DISTRICT OF WARWICKSHIRE.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

Stratford-on-Avon,
December 11, 1893.

Sir,

1. As instructed, I have now the honour to present the report of the result of my inquiries into the state of agriculture generally in the Stratford-on-Avon District of Warwickshire, where I arrived from Somerset on the 6th November ultimo.

I have since that time been employed in procuring evidence from farmers, land agents, owners, merchants, and others connected with the management of lands, and in making personal inspection of various farms, in order to arrive at conclusions as correct as possible under the circumstances.

The weather has been, during a considerable part of my stay, unfavourable for obtaining a just estimate of the capabilities of land and of the manner in which it is treated, some of my visits having taken place when the ground was under snow and others when frost has prevailed; heavy rain has also prevented my seeing as much of the neighbourhood as I desired.

Having passed through and inspected a considerable portion of the district extending about 10 miles in each direction from Stratford-on-Avon, I find circumstances prevailing which I now endeavour to set before you.

I.—General Description of the District.

2. Stratford-on-Avon, as an agricultural district, presents somewhat remarkable characteristics; especially noticeable is the great variation observable in the quality of the land within a small radius. A field will be found capable of growing any kind of roots and corn of high quality, immediately adjoining may be seen one of much inferior character, and a third near at hand will be almost worthless. The same peculiarity exists in the case of pasture; a field of feeding quality abutting on one producing only a scanty crop of coarse, rough grass, is by no means uncommon, but this may be accounted for in some measure by the system of management to which they have previously been subjected. However, the difference undoubtedly exists, and it is a curious feature that good land is sometimes on the hill side, whilst the valleys are stiff and heavy; in other cases the exact opposite appears. This difference of character must render the task of valuing a farm very difficult, as great variation sometimes occurs in the same field.

Soil.

3. The immediate neighbourhood of Stratford-on-Avon consists of land of fine farming character, a reddish loam on mixed sub-soil, capable of producing very heavy crops of grain of all kinds, and well suited to the growth of roots of every description. On leaving the town, in a short distance a great change is observable, the land becoming heavier in character and darker in colour, until stiff clay is arrived at, the remaining arable being ploughed at a very slow rate by a man and a boy with four "single" horses, and looking very hard working and unremunerative except for the growth of wheat and beans, both of which are at present prices unprofitable; again in a short distance the quality of the soil improves. Useful land, both arable and pasture, appears to be succeeded by barren hill sides and miserable, so-called, grass land. The sub-soil appears to vary almost as much as the surface, stone brash and strong clay, gravel and blue lias, occur in comparatively short distances. Much of the district is capable, under a proper system of management, of producing very heavy crops of wheat, instances having been given me of yields equal to any I have ever heard of from any part of the United Kingdom. The country is very picturesque, and many large houses, residences of landowners, are to be seen. Several are unoccupied, and others tenanted by gentlemen unconnected with the ownership of the soil of the county.

II.—Population.

4. I find it difficult to arrive at an exact estimate of the population of the district, as it takes in parts of other unions and crosses the borders of different counties.

The county of Warwick in 1881 contained 191,091 inhabitants, and in 1891 202,981, an increase for the whole county of 11,950. The Stratford-on-Avon Division shows a decrease on the decade of 627. The statistics furnished me by the clerk to the Board of Guardians of the Stratford-on-Avon Union, which consists of 29 parishes wholly in Warwickshire, two partly in Warwickshire and partly in Gloucestershire, four in Gloucestershire, and one in Worcestershire, show a decrease in the 10 years of 603, thus accounting for the majority of those missing. As this district does not contain any large manufacturing centre, it may be fairly calculated that the loss is principally composed of agricultural labourers, who have passed to the larger cities and towns beyond the district. The Union of Alcester shows an increase of 548 and that of Warwick of 1,492. These figures furnish additional evidence that the decrease in Stratford-on-Avon is mainly attributable to its connexion with agriculture.

Pauperism. 5. A decrease in pauperism is observable, the proportion of paupers to population being now one in 28, against one in 24 in 1881. There is a slight increase of indoor pauperism, and some decrease in outdoor relief in the same period.

III.—Acreage under Corn and Grass.

Corn crops. 6. In 1892, 44,729 acres of wheat are returned as having been harvested in the county of Warwick, a decrease of 2,307 acres from the previous year. Barley shows an increase of 297 and oats of 1,755 acres, rye, beans, and peas have all decreased, and the total decrease of corn crops in the county amounts to 1,433 acres. When the official returns for 1893 are completed the decrease in wheat growing will be further augmented, as a very great diminution of that crop is noted by the returns already published for the United Kingdom, and will doubtless extend to the wheat growing land of this locality.

IV.—Comparison with last Report, in 1882.

7. Mr. Doyle, Assistant Commissioner for the County of Warwick in 1882, gives an account showing that depression existed here in a somewhat greater degree than in the neighbouring counties which he visited; that depression was seriously felt then is certain, the loss of the sheep-stock from liver-fluke in the miserable year of 1879 was then being felt in all its intensity.

resent pression. 8. The great amount of personal information I have received, and the replies to the Schedule of Questions which I have circulated here (*see* Appendix F.), as in Somerset, all bear witness to the fact that the distress which then existed is not to be compared with the depression now, and that, in spite of what landlords have been compelled to concede, in all cases to new tenants, and in many in order to retain old ones, the farmers are at a loss to make sufficient from all sources to meet their expenses, and land is consequently going out of cultivation and becoming comparatively worthless pasture. I have had to wait longer for my replies than I had in Somerset, and some are not yet to hand. An accurate account of the general condition of the district is only to be arrived at by personal inspection, and, as before stated, circumstances have been somewhat unfavourable. I have endeavoured to see as much as possible, and find that, when the immediate neighbourhood of the town is departed from, the alteration in the system of husbandry becomes more marked, and both causes and effects of depression are painfully evident. Tillage is being supplanted by bad pasture, simply because the yields and prices obtainable from arable land do not pay the expense of cultivation.

V.—Yield and Price of Crops, 1893.

ield. 9. In nearly all the returns sent me it is stated that the yields of all kinds of grain have been very much below average; some few, however, reach rather high figures, but very considerable difference is noted. The lowest yield of wheat mentioned is 9 bushels per acre, the highest is 15 bags=45 bushels, a very large yield even in prosperous seasons. Barley is stated to yield from 15 bushels to 44 bushels, and oats from 16 to 44 bushels per acre; the oat crop having been the most uniform and wheat the most variable.

10. The year's results as to the harvest are expressed by one correspondent thus, "The worst harvest ever experienced and the worst prices ever known," 3*s*. 4*d*. per bushel for wheat of excellent quality being the extreme price obtainable. Barley, where good, is quoted up to 34*s*. per quarter, but much is stated to have been sold at from 22*s*. to 28*s*. per quarter. Prices.

11. Oats made a fair price, being on the average worth about 21*s*. 6*d*. per quarter, some being sold as high as 24*s*. (*see* Appendix A.). When the price of wheat is compared with that prevailing at the time of the previous report (from 45*s*. to 50*s*. per quarter, or 5*s*. 7½*d*. to 6*s*. 3*d*. per bushel), and the miserable yield of this season is taken into consideration, the reason of agricultural depression stands revealed. In addition to the meagre returns from the wheat crops, beans, which used to be extensively grown, are returned as a complete failure, and the loss of the hay crop appears to be universal, the highest estimate being only 10 cwt. per acre, and in many cases none has been grown this season. This state of affairs, until the autumn rains, acted very injuriously on the price of store stock, which at one time were almost unsaleable. The price for these, however, has improved in some degree, and should the winter not prove very severe, a further advance will probably take place in the spring of next year. The high price which hay realized in October has been somewhat checked, mainly by the importation of foreign hay, which has been sold at from 5*l*. to 6*l*. per ton, being from 2*l*. to 2*l*. 10*s*. cheaper than the highest price reached by the home grown crop. This abnormal price of hay must be considered as prejudicial to the stock owner and general farmer, who, having cattle to keep alive, has been forced to purchase fodder from speculators or to sacrifice his stock at such prices as he could obtain. Hay.

VI.—Changes of Tenancy and Farms in Hand.

12. Many changes have taken place in the last few years; one owner states that 30 out of 40 farms have changed hands, some of them two or three times, during the last 17 years; another statement is that 25 per cent. have changed since 1882, and again I was told that farmers strive, with but little hope, against bad times until all their capital is gone. An opinion is expressed that the year 1879, which was so disastrous to farmers generally, caused many changes which took place before 1882, and the new tenants having taken the farms at lower rental, have, in a few instances, remained until now. Changes of tenancy.

13. Several farms are in the hands of owners and it cannot be said that the agriculture of the district is benefited thereby, there being in many cases an evident disinclination to spend money on necessary operations; this must arise from want of either confidence or capital. Farms in hand on the larger estates, of which there are a few, present good examples of practical, if not profitable, cultivation, but in the majority of instances the strong arable land has been seeded down, or, what is worse, has been allowed to "tumble down" to grass of less than medium quality, only capable of keeping a very small head of stock, and obtaining for the owner, when let by auction, as is frequently the case, a rental which hardly suffices to clear the usual charges. One estate in this condition I passed through, and its appearance was very miserable. Farm houses and buildings unoccupied and falling into ruins, deserted cottages used for other purposes than dwellings, land, with the exception of a few fields of arable, uncultivated and bearing very poor grass. The proprietor of this estate having been unable to let his farms at what he considered a fair rental, has them now nearly all in hand—hence the depopulation of the village mentioned. The owner alleges that the low price of produce brought about by excessive foreign competition, the incidence of local taxation and its tendency to increase, with the sense of insecurity in investments in landed property, are the chief causes of the depression. The question, however, arises, whether land of this quality, being for the most part only adapted for the growth of wheat and beans, and requiring summer fallowing, will, even in seasons much more propitious than the two last, produce sufficient to pay the expense of cultivation. My own opinion is shared by many of my correspondents, that at present prices the cultivation of all such land is carried on at considerable loss, and that it must of necessity be abandoned. It is certain that the vast increase of late years of the so-called "permanent pasture" is due in a great measure to the falling out of cultivation of an enormous quantity of wheat growing land, and its conversion into bad, or at best medium, pasture. Land in hand.

14. In all cases the change from arable to pasture is noted, some stating it to be from 50 to 60 per cent. of arable converted; in one instance 70 acres remain under plough out of 1,700 formerly half arable. One farm which I inspected carefully, 365 acres in

extent, was purchased a few years since by an enterprising farmer from a distant county; he has converted the whole into pasture by seeding in a proper in a businesslike manner, has put up additional buildings, and is occupying the whole as a dairy and stock-raising farm. Where sufficient capital exists, and the soil and situation are suitable, it seems possible that a fair per-centage may be realized by incessant personal supervision and assistance, without which no dairy farmer can hope to succeed.

VII.—Reductions or Abatements of Rent.

15. In every case under my notice permanent reduction has taken place, and in many instances abatements on the reduced sum have been conceded (*see* Appendix D.).

One large farmer states that further reduction is required. It is found that a farm of 350 acres, which in 1882 let for 510*l.* yearly, is now rented at 170*l.* Another farm now at 580*l.* was formerly 1,015*l.* The total reduction on a previous rental of 2,295*l.* amounts to 1,075*l.* per annum, and even this very considerable sum does not enable the tenant to present farm accounts showing profit for the last two years. Many other cases can be cited, and it is found that the permanent reductions range from 25 to 60 per cent. of the sum paid before 1879. In the case of the smaller reduction, abatements are from time to time made on the amount now payable.

VIII.—Incidence of Local Rates.

Local rates.

16. Much complaint on this head is noted from all parties interested in real property. It is pointed out that the exemption of income derived from personal property is manifestly unjust, becoming more so as the value of real estate diminishes, whilst the purchasing power of fixed incomes has materially increased. It is urged that although payment of rates becomes finally a charge on the owner, yet the imposition of new rates for sanitary, educational, and County Council purposes, falls heavily upon the occupier.

Sanitary.

17. Sanitary rate being charged on land is especially objected to, being for objects of distinctly urban character, and occupiers of land, as such, receiving no benefit whatever from the expenditure or from the processes for which it is incurred. It is evident that no commensurate benefit is received, and this rate ought certainly to be confined to the assessment on dwelling-houses alone.

Poor rate and highway rate.

18. Payments to the poor rate are said to have increased, but when the difference in the assessment is considered this increase is probably overstated in all cases, except in the highway rate, which is much complained of; it is felt to be grievously unjust that traders, brewers, butchers, bakers, and other dwellers in towns, who use the roads continuously, pay little or nothing for their repair, and the imposition of a tax to force those who use the roads most, to contribute to their maintenance is recommended.

School board rate.

19. The school rate is not considered specially objectionable, but the scarcity of juvenile labour and the desertion of the land by the most intelligent lads are noticed.

20. The action of the County Council, and its extravagant expenditure, are both condemned, and the salaries of officials are stated to be much in excess of the value of the duties they perform. No value is attached to any proposal to divide rates between landlord and tenant, and the total charge for rates is shown to be about 2*s.* 6d. in the pound, which may perhaps represent about the same sum per acre. It is evident that relief from even the payment of the whole, would in no way recoup the occupier for his loss from the prices at which he is forced to dispose of his produce, and that no substantial benefit is to be expected from this source.

IX.—Large *versus* Small Farms.

21. The depression is felt severely by all classes, as the larger occupiers have lost money in proportion to the amount of arable land they hold. Small farms in this district are not as a rule of good quality, and it is stated that the occupier "having neither capital nor credit, must go to the wall." At the same time it is to be noted that small farms situate near a town where there is a market available for minor products as poultry, eggs, vegetables, &c., seem to be fairly managed, and enable the occupiers, by dint of strict attention, to meet their payments.

22. A step in the right direction for the elimination of the "middle man" has been taken at Stratford-on-Avon by the establishment, about 15 years ago, of a market in which all kinds of small farm produce, game, &c., are sold by auction, and appear to realize satisfactory prices. This district is not much used for dairy purposes, being more

adapted for the rearing, grazing, and stall fattening of cattle, yet there is more butter made, and the sale of milk is more general, than was the case in 1882. This is decidedly disadvantageous to the land where it is carried on, and a liberal supply of manure becomes necessary to retain fertility. Fruit and poultry farming are about stationary, fruit growing being said to be unprofitable.

23. I inspected one farm of about 100 acres, well farmed as to the arable portion, and likely to produce a favourable balance sheet, fruit of the best quality being grown and good stock fattened, but this must be considered exceptional, the occupier, being also the owner, residing elsewhere, and possessing means irrespective of farming.

X.—Allotments.

24. On inquiry, I find that the Corporation let some allotments of about $\frac{1}{7}$ of an acre each to 56 tenants at a rental of 12*s.* per allotment, and 36 at Shottery of $\frac{1}{4}$ acre at 15*s.* each; these last were reduced from a rental of 1*l.* per rood some years since, and the tenants now appear satisfied. There is no demand for new allotments, but no difficulty is experienced in finding tenants for any becoming vacant. Some garden ground close to the town is let by private owners at the high rental of from 15*s.* to 20*s.* per square chain, or from 7*l.* 10*s.* to 10*l.* per acre. This land is held chiefly by artizans and others having employment in the town during the day, and is doubtless used as affording a change of work and a somewhat agreeable occupation, as many of the small houses in the town have little or no garden ground attached; these plots seem to be fairly cultivated, but one occupier complained much of the high rental as compared with that of neighbouring farm land.

25. In some agricultural parishes allotments are provided, and the cultivation does not strike the observer as being of good class. This is especially noticeable in neighbourhoods where the land is of somewhat strong character. In one parish I was shown a field of 14 acres, which is let to a company of the villagers. Some of the plots here were unoccupied, and the generality by no means better cultivated than the surrounding land.

26. It appears that the successful cultivation by agricultural labourers of these plots of ground, in addition to their cottage gardens, depends entirely on the character of the soil, any except cultivation by spade labour meaning loss and disaster, and land in any way approaching clay soil being quite unsuitable. A land agent gives as his experience, that he has offered some plots of $\frac{1}{4}$ acre of good land for 15*s.* each annually, free of all charges, and properly arranged, but that he has at present no applications for tenancy. I did not make many inquiries into the working of the system in the villages, thinking that this subject comes more appropriately under the notice of the Royal Commission on Labour.

XI.—Tendency to divide or enlarge Farms.

27. It is stated that a certain per-centage of small farms, say, of 100 acres each, would be beneficial. Farms of less area are considered too small for the district, but it is pointed out that the erection of the necessary houses and buildings, the sub-division of existing large enclosures, with the drainage and conversion of some of the land into tillage, would be very costly experiments, and landowners would be very ill advised to lay out capital in this direction under existing conditions. Much outlay has been incurred by owners for buildings suitable to the present occupations, and if these are divided the large buildings become useless, and a source of unnecessary expense.

28. Many causes unite to discourage the experiment of sub-division, and it is doubtful if any great number of tenants would be found. A hundred years ago holdings were much smaller than at present, economic reasons having caused their absorption into larger occupations, which are manageable at less proportionate expense.

29. Inquiry has been held in a village in Warwickshire with the idea of establishing holdings of from one to 10 acres, but tenants are not forthcoming. The cost of a farm-house and buildings suitable for a 100 acres occupation is at least 900*l.*, and if money be borrowed for the purpose of their erection calculation will show that either the rental must be too high for the occupation to be profitable, or the proprietor must be content to receive no rent for his lands or no interest for his outlay. Very decided opinions are expressed against the establishment of small holdings, one correspondent writing of them as "a curse instead of a benefit." It is also pointed out that "neither landlord "nor tenants are likely to embark capital in a ruinous speculation." Small holdings.

Landlords' outlay.

30. With regard to the outlay of the landlords on permanent improvements, difference of opinion exists. Some interested in the ownership of land, &c., state that it is fully kept up, as tenants will not take or retain farms where the buildings, &c. are insufficient or out of repair; other owners give their opinion that the outlay is not made so freely as heretofore, as no money remains available for improvements. Tenants are almost unanimous in stating that repairs, &c. are not performed as readily as formerly. Some state that the owner is obliged to keep up the outlay in order to retain the tenant; it is pointed out that "landlords do as few repairs as possible, and tenants none." On the other hand, on farms I have personally inspected, I find buildings quite equal to the requirements of the occupation, and, generally speaking, in good condition.

Buildings.

31. A most perfect set of farm buildings, with covered home-stall, engine-house, and every convenience, is situate on a farm a short distance from Stratford, the cost of which, on an occupation of 350 acres, must have been very considerable. The use of Dutch barns for the storage of corn and hay, &c. is very general; in some cases these are put up by the tenants, but more frequently by the landlords. It is sad to observe how meagrely they are filled this season.

XII.—Farmers' Accounts.

32. Of those who answered my schedule of inquiries, 11 state that accurate accounts are kept, and can be produced if desired, but the majority show that they are not general (*see* Appendices B., C.). Many farmers are engaged in cattle dealing, milling, and the letting out of steam machinery in addition to their ordinary occupation, and the accounts are too mixed to present a truthful balance sheet relating to the farm alone; one tenant states that "he has given up keeping them as he did not like their looks," and another "because he is disgusted with them." Although it is occasionally admitted that a profit has been made in previous years, in all cases loss is alleged to have resulted from the low price of all kinds of farm stock and produce in 1891–2 and 1892–3.

Loss.

One return gives:—1890, loss 100*l.*; 1891, loss 130*l.*; 1892, loss 400*l.* These accounts are made to Lady Day 1893, on a farm of 300 acres. According to another statement, present rents being considered, a loss over 15 years has been established.

Accounts showing the great depreciation in the value of farm stock and produce are given in Appendix C., and a balance sheet is there shown.

XIII.—Changes in System of Cultivation.

33. The great increase of so-called permanent pasture has already been noticed; the only change in cultivation is that the seed crop is left down much longer than was formerly the case.

Restrictions.

34. Restrictions in cultivation, although they exist in present agreements, are seldom enforced, except in the last year of tenancy, freedom of sale of produce being the rule instead of, as formerly, the exception. It is also stated that farmers crop more severely than they used to, and that, as they now brook no interference with privileges conceded, when hay and straw are sold, they are not always replaced by an equivalent of manure or purchased food.

XIV.—Labour.

Quality of labour.

35. In every case under review labour is said to have deteriorated in quality, and in the quantity of work performed for the wages now paid; it is asserted that depression has affected labour much more than changes in cultivation. One tenant writes: "Labour "not half wanted through the winter months, as farmers have not the money to "pay for it." A very significant reply is: "The old men remain, but their sons leave "the village." The general opinion is to the effect that much less labour is employed, as so much less corn is grown; that the supply, although of inferior quality, is equal to the demand, and that the succession of young men to fill the places of their elders is becoming less yearly. The tendency of the labourer of the present day is to get as near the town as he can, to participate in its distractions and amusements, and to avoid, if possible, the continuous toil of agriculture, preferring the higher wages paid occasionally on potato and pea land to the more regular, yet somewhat lower paid for, labour of the ordinary farm. Cowmen and carters who are in regular work receive 15*s.* to 16*s.* a week, ordinary or casual labourers now only get 9*s.*, but of course have much more in spring and summer.

Wages.

XV.—Changes in Farm Stock.

36. In the county of Warwick the supply of both cattle and sheep increased between 1891 and 1892, the former by 4,443, and the latter by 7,380, the increase of cattle being much in proportionate excess. In this district I am inclined to think that a few more cattle are kept and some less quantity of sheep; it is pointed out that the cattle are not of the same value as formerly, and that stall feeding is by no means so general. Sheep and cattle have both suffered severely from the long-continued drought, and some time must elapse before the previous condition can be regained.

XVI.—Farmers who have done well compared with Others.

37. It is a somewhat difficult task to select successful men in a district avowedly suffering from agricultural depression, and it will be found in each case where success can be noted, that there are certain conditions of soil and situation which conduce to its attainment. In many instances other occupations are followed in addition, and the farm receives the benefit from the shop or counting house, and it is evident that ample capital is necessary to provide for the employment of an excessive amount of labour at given times, and to enable a farmer, who is also a successful speculator, to take advantage of the state of trade which affords an opportunity to market products which have perhaps been long on hand.

Successful farming.

38. On one farm near Stratford-on-Avon the cultivation of potatoes is carried on very extensively, and the condition of the land denotes successful enterprise; not a weed is to be seen in the large enclosures, all inside hedges and fences are removed, and every agricultural operation appears to be carried on rapidly and judiciously. The fields appear to be fortified with potato pits, the haulm being all dried and stacked for litter or cover as required. Some of these fields are now planted with wheat, which is just appearing, others have been sown with turnip or other green crop to plough in for manure. This farm is of 516 acres extent, 160 being meadow and pasture; 200 acres have been this year devoted to potatoes, the stronger land producing the best crops. Hay is grown on 80, and sometimes on 120 acres. The meadow land is now being manured with basic slag. The pastures beside the Avon are of good quality for feeding bullocks with the aid of cake and corn; no sheep nor breeding cattle are kept, 100 pigs and 24 working horses forming the present farm stock. In the autumn of 1892 a quantity of Hereford steers were purchased with the idea of selling them the following spring; they were then practically unsaleable, and their owner had several hundreds of tons of potatoes of which he could not profitably dispose; by feeding the bullocks with the potatoes and a judicious mixture of corn and meal satisfactory profits were realised. The hay from this farm is sold or consumed as the tenant thinks best, and the condition is maintained by a liberal allowance of purchased manure to be applied to both the pasture and arable land. I have instanced this farm as practically successful, but it will be noticed that the system pursued is exceptional, and by no means adapted to the district generally. Examples of this kind are rare, and it appears that those who are in any way successful are growers of vegetables to sell fresh, and are near to markets for them. Some who are growers of potatoes complain that the markets are becoming overstocked and that the crop is frequently unprofitable. I hear of some successful milk farms in the district, but have not been favoured with a return from any of them. The prize farms of the R. A. S .E. Warwick meeting, 1892, are within the district; their condition has been so fully described by the judges in the competition that further allusion to them is unnecessary.

XVII.—Immigration of Farmers.

39. Several strangers have come into the district in the last few years, and do not appear to be regarded with feelings of admiration by the natives. One gentleman writes that "their farming is dreadful, that they employ little or no labour beyond that of their own families." They are stated by another to be anything but a desirable addition to the community. A gentleman of much experience writes, "Devon and Cornish men "have come here in numbers, and hold their own; Scotchmen cannot manage stiff land "at a profit, and Welshmen cannot, or will not, manage any land." Another remarks that strangers are as "unsuccessful" as the local men.

XVIII.—Tithe Act.

40. The tithe appears in many cases to be redeemed, and where not so, it is paid by the landlord, tenants taking advantage of the Act by declining payment. In all new tenancies the tithe is included in the amount payable as rent, and this produces some security for the landlords, as should tenancy expire before the tithe becomes due, payment is only recoverable from the land, whereas the tenant is liable to distress to enforce payment of rent. I have no instance furnished of the payment of tithe by the tenant, and as I find but few yeomen in the district, the law as at present altered seems to work satisfactorily.

Corn Returns Act.

41. This cannot be said to be the case with the "Corn Returns Act," which determines the amount payable to the tithe owner. Opinions are very strongly expressed that alteration in this Act is necessary in the direction of providing that returns should be taken from growers of corn only, and not from merchants, who include in their return profit on resale and railway charges, besides increasing the apparent quantity of corn disposed of by the returns of the same parcel twice or three times at the same market. It is also held that a shorter period for the striking of the tithe average should be substituted, three years being suggested instead of the term of seven years which the Act now provides.

XIX.—Agricultural Holdings Act.

42. Considerable difference of opinion exists with regard to this Act, the majority of replies being to the effect that tenants are not satisfied with its provisions; 18 are of this opinion, whilst only 3 state that the Act is satisfactory, 12 are under agreements which they prefer to the Act, one prefers the custom of the country, and states the Act to be useless, whilst another stigmatises it as a "curse." Amendment is advocated as being necessary in the claim for compensation by the outgoing tenant, and it is urged that home grown produce should be scheduled, but the greatest blot is held to be that the landlord, by his advantage in the time allowed for making his counter-claim for waste, practically prevents an outgoing tenant preferring his claim for compensation; landlords are stated still to possess the longest purse, and litigation is considered so serious an evil that injustice is frequently endured by the weaker party. An instance has fallen under my notice, A desirable tenant on leaving a farm did not prefer his claim within the time allowed by the Act. On the last permissible day the landlord claimed waste, and the tenant's claim for compensation being barred by time, he has had to submit to pay a small sum to his landlord instead of receiving a considerable one. Proceedings of this character are certain to bring the Act into contempt, and prevent farmers from having any trust in it, as they believe it to be in the highest degree prejudicial to their interests.

43. It is evident that the Act requires amendment. As originally drawn it was much fairer to the tenant than it became after being submitted to the judgment of the House of Commons. It was then overloaded with amendments, which have rendered it comparatively useless in every county. The farm agreements I have seen contain allowances, which are accepted as being equal to the provisions of the Act, but restrictions remain which should be removed, and a more liberal schedule of compensation is to be recommended.

44. The only argument in favour of the Act as it stands is, that, should the custom of the county, or the farm agreement, fail to give compensation equal to that provided, the agreement or custom will be overruled by the Act on appeal to the proper authorities. Cases are cited to me in which this has been done, thereby indicating the necessity for the adoption of more liberal agreements. It is necessary to state that although the agreements contain restrictive clauses, yet the generally expressed opinion points to the fact that they are not enforced until the notice for the determination of the tenancy is given by either party.

XX.—Ground Game Act.

45. I have seen but little game in this neighbourhood, and have but few complaints as to damage done by it. One letter from a farmer, now residing beyond the district, who formerly farmed within the radius, gives a sad account of loss in connexion with the over preservation of game, and consequent quarrels with the owner, resulting in his leaving the farm and sacrificing much capital, having to make a new home elsewhere.

This case appears as an isolated one. There is only one other reply which alludes to the over preservation of game as a cause of distress, but it is treated as of secondary

importance, so it must be stated that at present there is no great grievance as to the Game Laws. It almost seems that farmers have become apathetic with regard to small ills, under the pressure of the heavy ones of ruinous prices combined with small yields of produce.

XXI.—Technical Education.

46. In reply to my query on this subject I have 31 answers, and, with but two exceptions, it is stated to be "unsuccessful." Some set it down as a total failure, and say that the expense incurred is absolutely of no benefit except to the young men who have secured the posts of teachers or lecturers; they are said to be unpractical and inexperienced. One return admits success as to the dairy class, and also those for gardening, cooking, dressmaking, and shorthand, but describes all the rest as failures, as they are not attended by those for whose benefit they are supposed to be designed. It is suggested that encouragement to adult labourers to perform good farm work, and to instruct farm lads therein, would be much more beneficial to them and occupiers, than to attempt to teach chemistry, botany, and geology to those who have little taste or time for such studies. The conclusions arrived at are decidedly against the continuance of instruction in these higher subjects, and for the application of the money now expended on them to purposes of more practical utility.

XXII.—Suggestions and Recommendations.

47. The causes of the depression are stated by all farmers whom I have conversed with or heard from to be "low prices of farm produce, especially of wheat, caused by excessive foreign competition." Combined with this chief cause are named, unfair taxation, unfavourable seasons, taxes on the raw material of food manufacture, *i.e.*, the soil, preferential railway rates to the foreign producer, want of security for tenants' capital, one-sided free trade, gambling in grain, agitation amongst labourers, producing labour of worse quality at higher wages, steam, and electricity. A few place the rental as being still too high, and one states over preservation of game as a cause. Causes of depression.

48. In all but a few instances "Protection" in some form or other is advocated as the remedy, the majority indicating a tax on foreign manufactured articles, including flour. This, it is pointed out, would not interfere with the supply of food to any appreciable extent, and would benefit the nation at large by finding employment for workmen in mills, which are now being abandoned or destroyed. The fall in the value of this kind of property is stated to be at least 70 per cent. in 20 years. Suggested remedies.

49. The importation of flour, which continually increases, in addition to the injury inflicted on millers and artizans, acts most injuriously on agriculture by preventing the utilisation of the "offal" here for cattle feeding, thereby giving the foreigner additional chance to produce both meal and meat at a cheaper rate than can be accomplished in England. Some ask for a bounty on wheat grown at home, the money to be raised by a tax on foreign manufactured articles, but there is a general consensus of opinion that flour should be taxed on the grounds I have mentioned. It is pointed out that the foreigner has every natural advantage of soil, climate, &c., and, in addition, an artificial one is given him in the matter of cost of transit. Railway rates are stated to be arranged so as to give his goods actual preference in English markets, thus affording him an amount of protection against home growers. It is urged that when free trade in corn was enacted, the first promoters declared that "distance and freight would always form the natural protection of the home producer," and that both these factors have practically ceased to operate in his favour, owing to the continually increasing efficiency of electricity and steam. One gentleman gives as his opinion that, if home grown wheat continue to produce less money per acre than pays the cost of production, it must and will cease to be grown. He calls attention to the fact that 30 years ago the home grown crop, according to the official returns, reached 17,922,048 quarters, and 7,000,000 quarters were then imported. The last returns show a total of 22,263,000 quarters imported, and, according to Sir J. Lawes' estimate, less than 6,000,000 quarters are grown this year. The price of wheat in 1863–4 was 41*s.*, and is now 26*s.* 8*d.* per quarter. The actual consumption is stated as being 30,000,000 quarters, of which only one-fifth, instead of as formerly three-fifths, is now home grown. Whether the displacement of

such an amount of home produced food is beneficial to the nation at large is a question requiring grave consideration, especially as the purchase money for the extra 12,000,000 quarters which were formerly grown in the United Kingdom, is now paid over to the foreigner instead of the Englishman. A tax on foreign barley is recommended in the interest of temperance, and a return to the malt tax instead of the beer duty is advocated as being likely to benefit the grower of barley and to provide purer drink for the people, and it is strongly urged that the labelling of all foreign produce as such should be compulsory.

50. Fixity of tenure, and the establishment of a Land Court, have four advocates, and it is noticeable that the proposition is guarded by the words "and in some cases." These, I imagine, would be where the tenant is occupying a desirable farm at a low rental. I have previously reviewed the arguments advanced in favour of the reform of local taxation, and have now completed the list of remedies proposed for the relief of the depression which undoubtedly exists.

Conclusion.

51. I put them forward in the order indicated by the number of replies favouring each proposition, and beg leave to close this report, after thanking those who have so kindly assisted me with information, with the concluding sentence of a communication received from a practical farmer on a large occupation which I inspected: "Thousands of acres in this district do not now produce as many shillings as they "formerly produced sovereigns yearly, to the great loss of landlords, farmers, "labourers, tradesmen, and the country generally."

I have, &c.

(Signed) JABEZ TURNER,
Assistant Commissioner.

APPENDIX (A).

Stratford-on-Avon District.

Return of Yields of different kinds of Grain harvested in 1893 per Acre, with the Price of each kind. (*See* Para. 11.)

No.	Wheat.	Barley.	Oats.	Beans.	Hay.
1	7 bags	3½ quarters	4 quarters	—	6 cwt.

Total excess of payments over receipts in four years				£197

1892–3, not at present made up, will probably show a much increased deficiency of receipts.

APPENDIX (E.)

EXTRACT from a LETTER received from a GENTLEMAN formerly resident in the County.

"So far as I can see, the chief cause of agricultural depression is the low price of wool and corn. Take the instance of a farm with which I am well acquainted. The rent formerly for 611 acres was 1,222*l.* per annum; the annual produce was about 6,000 bushels of wheat, 3,000 bushels of beans, and 3,200 bushels of barley. One shilling per bushel on this quantity of produce amounts to 610*l.*, or half the rent; but when wheat is 3*s.* 6*d.* per bushel, instead of 6*s.* 6*d.*, as it was when the farm was taken, and barley and beans low in proportion, the tenant would be unable to make any rent."

APPENDIX (F).

ROYAL COMMISSION ON AGRICULTURAL DEPRESSION.

Schedule of Questions circulated in the District. (*See* Para. 8.)

STRATFORD-ON-AVON DISTRICT OF WARWICKSHIRE.

QUESTIONS.

No. 1.—(*a.*) Have many changes of tenancy taken place in the district since 1882?

(*b.*) Have any farms been taken in hand by landlords for want of tenants?

(*c.*) Where farms have been relet, has there been permanent reduction, or temporary abatement of rent, or any alteration in the system of payment of local rates, or of tithe rentcharge, or by withdrawal of restrictions?

(*d.*) Have local rates increased or diminished since 1882?

No. 2.—(*a.*) Have occupiers of large or small farms suffered most from the depression?

(*b.*) Is there a tendency to divide or enlarge occupations?

(*c.*) Is any difficulty experienced in finding suitable tenants for vacant farms?

(*d.*) Is it your opinion that the agriculture of the district would be benefited by larger or smaller farms? If by smaller, would landlords incur the necessary outlay for buildings, &c.?

(*e.*) Are permanent improvements by landlords, buildings, fences, &c., made as freely as heretofore?

(*f.*) Do you consider the tenant sufficiently secured for the necessary outlay of his capital?

No. 3.—(*a.*) Do you keep accurate accounts, and if so, would you object to give the Commission returns of profits and loss over a term of years, say, 1890, 1891, and 1892?

No. 4.—(*a.*) Have any material changes taken place in the system of cultivation since 1882; such as alteration in course of cropping, sale of produce, &c.?

(*b.*) Is there an increase or decrease of pasture, and in what proportion?

(*c.*) If any change have taken place, how has the employment of labour been affected by it?

(*d.*) Have dairying, fruit, and poultry farming increased, and with what result?

No. 5.—(*a.*) Are farms in the districts let subject to the provisions of the Agricultural Holdings Act, and are tenants satisfied with those provisions?

No. 6.—(*a.*) Have any farms been taken by farmers from other parts of the country, and are they generally successful?

Private.

In addition to information dealing directly with the questions, expressions of opinion are invited upon any and all subjects connected with agricultural depression, and such measures or changes as are calculated to lead to its dissipation and removal.

1. Live stock supply. Increased or diminished, and in what proportion?

Size of farm.

2. Yield of crops in 1893.

Wheat.	Barley.	Oats.	Hay.

Prices:

3. Local taxation.

4. Technical education. Successful or otherwise.

APPENDIX E.—Meetings.

THE GARSTANG DISTRICT OF LANCASHIRE.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

31, St. George's Square,
London, S.W.
December 13th, 1893.

I.—Introduction.

Sir,

Introduction.

1. I have the honour to present to you my report upon the Garstang District of Lancashire, which was assigned to me by the Royal Commission as the area in which I was to make inquiries.

Area of inquiry.

2. I endeavoured to confine my inquiries to the district between Preston and Lancaster, bounded on the east by the main line of the London and North-Western Railway Company, and on the west by the coast. However, the evidence I obtained does not come exclusively from the district indicated, and I interviewed several large associations and clubs, some of whose members came from parts of Lancashire at a considerable distance.

Method of obtaining information.

3. The information contained in this report was obtained in the following manner:—

I drove to many farmhouses in the Garstang and Fylde Unions, and took the evidence of farmers who had been recommended to me as men capable of giving practical opinions, or at whose houses I stopped by chance without obtaining any introduction.

I also held public meetings of farmers in the evenings at the following places, which were all well attended: St. Michael's-on-Wyre, Pilling, Calder Vale, Poulton-le-Fylde, and Hambleton, and, in addition, a meeting at Lytham of some of the leading farmers on Mr. Talbot Clifton's estate (Appendix E.).

The following associations, societies, and clubs also gave public evidence before me:—The Bolton and District Association of Dairy Farmers (100 members), the Lancashire Federation of Farmers' Associations, consisting of 700 members, representing the Blackburn, the Rossendale, the Fylde, the Bury, the Preston, and the Rochdale Farmers' Associations; the Lancashire Tenant Farmers' Association (300 members), chiefly from the Fylde district, and a few from South Lancashire; the Lancaster Tenant Farmers' Association (Lancaster Branch), about 75 members; the Chorley and District Farmers' Association (120 members); the Lancaster Agricultural Society; the Liverpool District Farmers' Club, (about 200 members). This deputation represented tenants on the estates of the Marquis of Salisbury, the Earl of Derby, the Earl of Lathom, the Earl of Sefton, Colonel Blackburne, Mr. Weld-Blundell, Mr. Webb, and Miss Watt.

I held two public inquiries open to all persons who desired to give evidence, one being in Garstang on a market day, and the other in the Town Hall, Lancaster, where there was a crowded attendance of landowners, agents, and farmers.

In addition, I publicly received a deputation of landowners and agents at Preston, which was largely attended, the principal estates in the district being represented.

On two market days I sat at Garstang, and sent word to farmers attending the market that I would be glad to see anyone who desired to see me.

Besides obtaining evidence in the way already indicated, I sent out a number of circulars containing questions to farmers in the Garstang and Fylde Unions.

Assistance rendered.

4. It may, perhaps, seem invidious to mention any particular names when all, whether landowners, agents, or farmers, gave me so much valuable assistance, but I should desire specially to acknowledge the help rendered to me by Mr. Hale, agent to the Earl of Derby; Mr. Drewry, agent to Mr. Victor Cavendish, M.P.; Colonel Wyatt, agent to the Earl of Sefton; Mr. Ford, agent to Sir Ughtred Kay-Shuttleworth, Bart., M.P.; Mr. Jacob Fair and Mr. Marcus Rea, agents to the Earl of Crawford, Earl Bective, Mr. Miller, and others; Mr. T. Fair, agent to the Lytham Estate; Mr. Fitzherbert-Brockholes, Claughton Hall; Mr. H. Phipps Hornby; Mr. Bates, lecturer on agriculture to the Harris Institute, Preston; and the Press of Lancashire.

No difficulty in obtaining evidence.

5. At the outset of my report it is perhaps but right that I should refer to suggestions that were occasionally made before me in public that some farmers would not give evidence for fear of offending their landlords or agents, as if there was any general feeling of this sort, whether justified or not, the value of my report would be lessened.

Any proof of such fear on the part of farmers is exceedingly slight. During my many visits to farmhouses I frequently heard the idea somewhat indignantly repudiated, and on none of these occasions was I refused evidence, though I came as a stranger. On the contrary, I was readily afforded all the information I sought.

At public meetings and inquiries there seemed no reluctance on the part of farmers to state their views, and, in fact, the difficulty which has presented itself to me has been how to deal adequately with the great mass of evidence I obtained.

Only nine witnesses asked me to suppress their names during the month I was in Lancashire. Of these, three were farmers' sons, not farming on their own account. Another was a farmer who criticised the way in which some of the farms were being farmed in his district, and he desired me not to mention his name because he did not wish to give any offence to his neighbours; another was a farmer who gave evidence at a public meeting; the four remaining ones were farmers brought to me by Mr. W. Smith, M.P. One of these complained of being sent away from his farm arbitrarily by the bailiff, who appeared to have the management of the property, the owner being a lady, but I had, of course, no opportunity of testing his story; two complained of the difficulties of obtaining compensation for improvements under the Agricultural Holdings Act, but as they were about to make claims they did not wish their cases to be made public, and the fourth objected to the number of rabbits kept on his landlord's estate.

Further, I have received 36 detailed replies in writing to the questions I sent to farmers in the Garstang and Fylde Unions, and of these only two are marked private.

When the Lancashire Federation of Tenant Farmers came before me, I asked them if there was really a feeling of fear among the farmers, and Mr. Kay, the president, assured me that as far as the evidence his Federation put before me went, it was given freely and frankly. He said that one black sheep did not make a flock, but there were land agents who would be only too ready to take advantage if anything detrimental to their character was stated. He added that the term agent was of a very wide description. Where a man was brought up to the business he understood what he was doing, but unfortunately a great many who got the collection of cottage rents, and then put together a little land agency, were not to be trusted, but he did not wish to state that as the general position of things. The Liverpool farmers representing estates of some of the largest landowners in Lancashire ridiculed the idea, and stated that their agents were only too anxious for them to come and give evidence before the Commission.

Further, no evidence was brought before me to prove that farmers have any grounds for the suggested fears.* Four cases of arbitrary dismissal from farms were mentioned to me. In one of these cases the witness preferred to offer to give evidence before the Royal Commission in London instead of before me. In another case, already referred to, the farmer refused to disclose the name of the owner of the property, though it is difficult to understand why he should have done so; in a third case the farmer alleged "he had been given notice to quit on account of his "attending and speaking at meetings of the Tenant Farmers' Association," whereas the agent to the property stated publicly that among the several reasons which prompted the landowner to give the notice was that the farmer had always been irregular in paying his rent; and the fourth case was alluded to by Mr. Kay, who stated that a farmer who drew up a requisition asking that fewer rabbits might be kept on the property was given notice.

At a public meeting at the Town Hall, Lancaster, on October 25th, Mr. W. Smith, M.P., who is of opinion that there are farmers who refrain from giving evidence for fear of offending their landlords or agents, stated, "I believe in most cases the "fear is groundless, but still there is timidity."

Before dismissing this subject I may point out that when I visited the Garstang district in the autumn of 1892 as Assistant Commissioner to the Royal Commission on Labour, I was told by certain persons that I should get no evidence in public from labourers, because they would be afraid of dismissal, if they said anything calculated to give offence to the farmers. I found, however, that the labourers freely expressed their opinions at

* For number of years farmers or their families remain on farms *see* paragraph 18.

public meetings and in private, and I venture to say there was no more evidence brought before me in 1893 to prove that the farmers have any grounds to fear unjust treatment at the hands of the landowners or agents, than there was in 1892 to prove that the labourers would suffer at the hands of the farmers, if they came forward to state their opinions.

Geological formations.

6. The chief geological formations in the district are the new red sandstone, millstone grit, and carboniferous limestone. The new red sandstone occupies, roughly speaking, a belt of some 10 to 15 miles in width from the coast of Fleetwood on the north to the River Ribble on the south.

The millstone grit occupies the whole of that portion of the country which stretches from a few miles north of Lancaster to Garstang on the south, and Settle on the east. The carboniferous limestone joins the millstone grit near Garstang, and runs in a straight line to a point some three miles east of Preston, and then stretches on a broad belt right into Yorkshire.

The soil of the new red sandstone in some cases, especially in the neighbourhood of Lytham and Pilling, does not exhibit the red colour or gravelly texture which is the common feature of this formation in the midland counties, but is here a black peat moss, resting on sand affording a deep free working soil of moderate fertility. The Fylde district, however, well maintains the excellent agricultural reputation of this fertile formation.

The millstone grit, too, belies its usual reputation for poor hungry soils, as there are medium clayey soils mixed with marl, producing excellent pasture land, especially in the neighbourhood of Cockerham, Scorton, and Thurnham.

The carboniferous limestone rises up into high hills in the neighbourhood of Longridge and Stoneyhurst, yielding a thin soil of naturally sweet herbage, on which sheep thrive well, also producing lime for agricultural purposes, especially in the neighbourhood of Clitheroe.

To the west of Lancaster is generally found the gravelly and blackish soil of Poulton-le-Sands and the marshy lands near the Lune.

Proceeding southward from Lancaster, after leaving Scotforth, are found the heavier soils resting upon clay, which may be traced with sufficient accuracy by proceeding towards the south-west of Holleth, Stalmine, Poulton-le-Fylde, Plumpton, and Kirkham, down to the River Ribble.

Proceeding again south from Lancaster, between the last-mentioned clay district and the sea, most of the soil consists of a sandy alluvial deposit, which extends as far as Liverpool and Warrington, except about Blackpool, where the marl which underlies much of the Fylde district, is found near the surface, and forms a protection against the sea.

Under these alluvial deposits is found in many parts a regular substratum of peat moss composed of vegetable matter, where trees are sometimes found remarkable for their length and cleanness of trunk, and also the remains of animals.

System of farming.

7. The black land is chiefly farmed on the four-course system, but some of the strong land, especially in the Fylde district, is farmed on a five- and six-course.

The rotation of crops are chiefly oats, wheat, potatoes, and clovers, together with occasional crops of turnips, mangel wurzel, and beans.

Since the late Mr. Coleman reported on this district in 1882 to the Duke of Richmond's Commission, a quantity of land has been laid away to grass, and the production of cheese and butter and the sale of milk has considerably increased. In the last year or two the selling of milk has become more and more common, and several large farmers in the neighbourhood of Garstang have embarked upon it instead of cheesemaking. The large towns in the neighbourhood appear to take an unlimited supply, and one of the advantages of this line of business to the farmer is that he is able to turn his money over quickly. No doubt those who are exclusively engaged in the sale of milk have felt the depression by far the least.

Between 1882 and 1892 rotation grasses and permanent grass increased in acreage by 4·7 in Lancashire, and by 5·6 in the Garstang Union. During the same period the number of cattle in the Garstang Union increased by 8·8 per cent., and sheep 51·7 per cent., while the acreage of corn crops decreased by 18·8 per cent.

In the neighbourhood of some of the large towns, such as Liverpool, Preston, and Blackpool, market gardening is on the increase, and those farming in such localities have the great advantage of an unlimited supply of manure without incurring railway charges for its carriage. Among some of the smaller farmers rearing poultry and growing fruit is becoming more common.

The cattle in the district are chiefly shorthorns, and the sheep are mostly half-bred Cheviots and Border Leicesters.

Sizes of farms.

8. Many of the farms are of a small size, numbers of them being occupied by men who either have been labourers themselves or who are the sons of labourers. In the Garstang Union, out of 918 holdings, 564 are under 50 acres, 78 are between 100 and 150 acres, 29 are between 150 and 200 acres, and 34 are 200 acres and upwards.*

In the Fylde Union, out of 599 holdings, 306 are under 50 acres, 78 are between 100 and 150 acres, 30 are between 150 and 200 acres, and 35 are 200 acres and upwards. (Appendix A. 1, 2.)

Markets.

9. The district is fortunate in having splendid markets easily accessible by road or rail, namely, Liverpool, Manchester, Preston, Wigan, Lancaster, Blackpool, Fleetwood, and Bolton, while other more distant manufacturing towns and mining centres create a demand for all kinds of agricultural produce.

A reference to Appendix A. 6 will show that there has been a considerable increase in the population of these towns since 1881.

II.—Buildings, Drainage, and Water Supply.

Farm buildings better on large than on small estates.

10. There was considerable dissatisfaction expressed as to farmhouse, shed, and dairy accommodation in some districts, but in others it appeared to be excellent, particularly on some of the large estates, though even there the dairy accommodation seems often insufficient (Appendix B. 7 (*d*)).

It would be very difficult to convey any accurate idea of the general state of the buildings in such a wide area without a minute examination and the opportunity of making a comparison with those in other districts or counties, but as far as I could judge, after visiting a good many farmhouses in the Garstang and Fylde Unions, I would endorse the opinions expressed to me on several occasions, namely, that the buildings on the large estates are usually in a more satisfactory condition than those on the small ones.

The members of the Liverpool Farmers' Club, who were tenants on the estates of some of the largest landowners in Lancashire, stated that in their district they were fairly well off for buildings, and that all they required were more corn sheds and loose boxes for the breeding of horses. They considered the large landowners the best landlords, because they were able to let their land cheaper and at the same time to keep the buildings in better repair than the small landowners.

Again, Dr. Winn, medical officer of health to the Fylde Union, stated at a meeting at Poulton-le-Fylde that he was making a thorough examination of all the farm buildings, and he could say that those on the large estates were good, but on some of the small ones they were bad, there being no air, space, or light in many of the sheds.

Farm house accommodation.

11. With reference to the state of the farmhouses, there certainly was far less adverse criticism than in the case of the sheds and dairies, and in many instances the addition of a dairy or a cheese-room would be sufficient to give all that was required.

On some of the large estates I visited, the farmhouses were most excellent and comfortable, containing everything that could be desired in the way of airy bedrooms, kitchens, and parlours.

Mr. Collinson, a large contractor at Garstang, who does most of the contract work for 10 miles round, is of opinion that the tendency now in building farmhouses is to spend money rather on luxuries than on necessities. He says: "The dairy accommo-
" dation is sadly lost sight of. The architects are too fond of putting sitting-rooms
" and parlours into the farmhouses. One parlour is plenty, and the extra expenditure
" had far better be put into a good dairy."

Mr. Kay, the president of the Lancashire Federation of Farmers' Associations, speaking for that important body, stated that the buildings, and especially dairies, are

* Lancashire.

——	1882.	1892.	——	1882.	1892.
Total acreage under crops, bare fallow and grass.	719,680	824,299	Permanent grass (exclusive of heath and mountain).	560,387	586,450
Corn crops - - -	104,973	104,085	Horses - - -	37,968	41,790
Green crops - -	56,149	55,908	Cattle - - - -	214,407	250,533
Clover, sainfoin, and rotation grasses.	66,743	74,393	Sheep - - -	266,561	348,654
			Pigs - - - -	47,864	37,371

generally inadequate, and in many instances insanitary, and similar evidence was given by the Lancashire Tenant Farmers' Association, the Bolton and District Association of Dairy Farmers, the Chorley and District Farmers' Association, and at several meetings of farmers I attended.

At Pilling a very bad state of things was shown to exist, but it is fortunately unique, and I do not put it forward as a specimen, or anything approaching to it, of the farmhouses in the district. Pilling is a township in which there are a number of small holdings, there being 85 under 75 acres out of a total of 105 holdings, and only three are 150 acres.*

At a public meeting held there on October 11, 1893, Dr. Day, who resides in the district, referring to the farmhouse accommodation, said:—

> "There is hardly a farmer who has got a fireplace in a bedroom, and some of them have to pack themselves and their children into one sleeping apartment, which certainly is not right. In fact, the buildings could not be worse. In my opinion, there are several of the farmhouses which ought to be condemned."

Sheds.

12. Complaints as to the insufficiency of the sheds provided, and also of the inadequacy of the accommodation in existing ones, were frequently made by members of the associations and clubs who gave evidence before me.

As to this point, Mr. Collinson, contractor, says: "In some districts there are not "enough sheds, and in others the present ones are not large enough. In some places "they are very bad indeed."

Mr. Redhead, the secretary of the Chorley and District Farmers' Club, stated that the inspector had told him that if the Dairy and Cowsheds Act was put into force in the Chorley district, seven-tenths of the buildings would have to come down.

But apart from the inconvenience caused to farmers by their not having enough sheds, or only ill-constructed ones, a more serious result is that, owing to the cattle having to be crowded together, the want of space and air fosters and spreads disease. Thus the dairy farmers are injuriously affected in their business, and the public suffer as consumers of milk, butter, and meat.

Many witnesses, including a veterinary surgeon, partly attributed the spread of the disease of tuberculosis, which is now so seriously affecting the pockets of the Lancashire farmers, to unhealthy sheds and to want of extra accommodation so necessary for purposes of isolation in the event of any suspicion of disease arising.

Dr. Winn, medical officer of health to the Fylde Union, stated at Poulton: "I should "be satisfied with 600 cubic feet of air space in the cow-sheds, but there are some in "the district with only 266 cubic feet. Want of air gives a cow tuberculosis, and the "milk from that cow would give consumption to human beings." And Mr. Bennett, of the Fylde District Farmers' Association, a farmer and cattle dealer, added: "I know "the district is very much affected by the disease of tuberculosis. The reason is that "the buildings have not been changed or increased with the change in the system of "farming, that is, from cereal growing to dairying."

Dairies.

13. I have already stated that the lack of dairy accommodation is more generally felt than that of sheds for cattle, and that this is the case both on large and smal farms.

A well-known farmer, a tenant of the Earl of Derby, who bad little to complain of except the want of a dairy, informed me that dairies in Lancashire were generally inferior to those provided in Cheshire and Leicestershire. This man's daughters turn out four tons of cheese in the year, and they were making it in the kitchen on the occasion of my visit.

Even on a property like the Winmarleigh Estate, on which large sums of money have been spent, and where the farm buildings and labourers' cottages are most excellent, Mr. Wilkinson, the bailiff, says:—"There is a want of dairy accommodation "here, notwithstanding our buildings are all well built, and in good condition."

Mr. Jacob Fair, the well-known land agent, at a meeting of landowners and agents, also stated that it was true that dairy farming had increased in the district, but that dairy accommodation had not.

---

* Dr. Fisher, Medical Officer of Health to the Garstang Union, writes:—"I have read with interest the "report of the meeting you held at Pilling. I feel there is still a good deal of sanitary and other work to "be done in that township, and yet, within the last few years, much good work has been done there in providing "better dwelling accommodation, &c. The farm buildings are generally poor, and also the dairy accommoda-"tion, the usual place for keeping cheese being a bedroom, which is generally slept in.

"For nearly 20 years I have been closely associated with farmers and their interests, and I can say that in "many instances their outbuildings are deficient."

But want of dairy accommodation is not only an inconvenience to the farmer, whose cheese has to be made in the kitchen, and stored with the butter and milk in the small larders, or even in some cases in the bedrooms, but it becomes a danger to the public who have to purchase produce coming from insanitary places.

It was stated by a delegate who attended the deputation of the Lancashire Federation of Farmers' Associations, that in his district the local authorities applied for tenders for the supply of milk, and that it was found on inspection of the premises of the applicants that only one out of the 12 had satisfactory premises. And Mr. Kay, the president, said, "If dairy farmers near towns have bad buildings, it has a bad "effect on their customers."

Again Dr. Day, referring to Pilling, says:

> "They make their butter in the kitchen, and keep it and also cheese in the sleeping-rooms. It is very unhealthy, not only for the tenants themselves, but for the country generally. There ought to be special buildings put up. Nothing conveys infection like milk. I have seen butter-making going on downstairs in a farm when there was a case of infectious disease being attended to upstairs.
>
> "I have attended a case of diphtheria at a house, when the woman has gone downstairs and gone on with butter-making. It is very hard on farmers when they have infectious diseases in the houses, for they have no accommodation for isolation, and if you stop the sale of their butter and cheese you practically ruin them."

Mr. Redhead, the secretary to the Chorley and District Farmers' Club, also informed me that he had seen milk standing in a farm kitchen and a little boy with measles by the side of it.

These illustrations are perhaps sufficient to show the great dangers which may arise from want of proper dairy accommodation, and in these days, when dairying is becoming more and more the sheet anchor of the Lancashire farmer, and when he has to compete with so much production of foreign butter and cheese, it would seem that he requires every possible assistance, whereas in many cases he appears to be actually placed at a disadvantage by the lack of proper accommodation, and other facilities.

Expenditure by landowners on buildings, &c.

14. It would be unjust if, when referring to the criticisms of the buildings, sheds, or dairies, I did not draw attention to the excellence of those on some of the estates I visited, which have often been erected regardless of pecuniary considerations, and in some cases have entailed considerable sacrifices on the part of the landowners.

Mr. Collinson, contractor, says: "In the last 20 years farm buildings and sheds "have considerably improved, but there is still room for any amount of improve- "ment. Since the depression landlords have not done so much."

A reference to Appendix B. 6 will show what large sums have been spent by certain landowners even since 1882, a date from which the depression in agriculture has been steadily progressing, and, although it is doubtless the case that many landowners have not been in a position to expend so much money since the bad times began, there are many who have not curtailed expenditure in that direction.

On some of the large properties, fortunes have been expended on improvements in the last 50 years. For instance, referring to the expenditure on Lord Sefton's estate of 18,000 acres, on which there are 207 farms, Colonel Wyatt, the agent, writes:—

> "During the 24 years I have been here, I have spent 286,950*l.* 1*s.* 9*d.* on tenants' repairs, improvements, drainage, &c., and of this a very infinitesimal part carries any interest."

Also on the Earl of Derby's south-west Lancashire estate, of 43,217 acres, 199,006*l.* 10*s.* has been spent since 1882 without charging tenants' interest. This sum does not include money spent on cottages let with farms and on road-making.

In the last 56 years the following sums have been spent on Mr. Talbot Clifton's agricultural property at Lytham (16,000 acres), no interest being charged:—

	£	*s.*	*d.*	
Buildings - - -	256,323	15	1	
Roads - - -	15,215	16	10	
Drainage - - -	40,205	12	8	
Estate improvements -	4,609	10	9	
	316,354	15	4	
Less - - -	20,000	0	0	Money spent on cottages, &c., in urban districts.
Total - -	£296,354	15	4	

On Mr. Rawstorne's estate (between 3,000 and 4,000 acres) 20,830*l.* has been spent in permanent improvements on farms since 1882, without charging tenants interest, and between 1852 and 1881 the sum of 50,694*l.* was expended, making a total of 71,794*l.* in 43 years.

On Mr. Fitzherbert-Brockholes' estate (3,800 acres) 21,216*l.* on improvements to buildings has been spent since 1882 without charging interest, besides which permanent reductions have been made in the rents and considerable abatements allowed as well. [Appendix B. 6.]

Moreover, it is only right to emphasize the fact, that from the time the depression in agriculture began to be felt in the district some 10 years ago, and the prices of corn, potatoes, &c. declined, the farmers have more and more gone in for the business which now pays them best, namely, the sale of cheese, butter, and milk in the neighbouring towns, and thus, at the time when landowners could least afford it, increased demands have been made upon them to expend money on dairy accommodation. It should also be borne in mind that in some cases farmers who are engaged in a milk business are requiring a large number of sheds in proportion to the size of their farms, and I understand that this is especially the case where the farms are near the towns.*

Borrowing money for improvements.

15. At the meeting of landowners and agents held at Preston, it was unanimously agreed that it would be a great advantage if money could be borrowed for the purpose of erecting and improving farm buildings at a more reasonable rate than it was possible to obtain from the Lands Improvement Companies. Mr. Fitzherbert-Brockholes stated that he had borrowed a considerable sum of money some years ago from a Land Improvement Company, for the purpose of generally improving his estate, and that since 1884 he had not only permanently reduced the rents on his estate, made considerable abatements, and wiped off arrears, but had also taken upon himself the payment of the whole of the interest at 6½ per cent. due to the Lands Improvement Company, which his tenants had originally agreed to pay. He expressed a strong opinion that in these times of agricultural depression, and at the present price of money, landowners should be able, for the purpose of making permanent improvements, to borrow money at a lower rate of interest.

Although the question of subdividing farms scarcely arises in this district, as small farms abound, Mr. T. Fair, agent to the Lytham estate, says: "We would split up "farms now if it was not for the expense of making buildings. I consider it would "be most beneficial if the Government would advance money for such purpose at a "cheaper rate than the Lands Improvements Companies."

Water supply.

16. Complaints of the sufficiency and purity of the water supply were made by witnesses, particularly dairy farmers, coming from several districts, and there seems to be ample grounds for such dissatisfaction in these localities.

In the Fylde Union there are but few complaints as to the quantity or quality of the water supply, though many farmers consider it too expensive.†

Dr. Winn, the Medical Officer of Health, stated that out of 21 townships, 17 had a very good water supply, but as regards the other townships it was insufficient and very impure, which was very bad for making butter and also for those who drink milk.

The water supply in the Garstang Union is by no means so good, and I heard a good many complaints from farmers in different localities of its impurity.

Pilling again is more unfortunate in its water than any other district I visited.

Dr. Day says: "The water is very bad. It is filthy. It is not fit to drink. The "ponds are contaminated with sewage, and the water is not fit for cattle to look at, "let alone to drink."

Mr. Rimmer stated, at a meeting of the Lancashire Tenant Farmers' Association, that some of the farmers who are "milk kitters" have such bad water at home, that they fill their empty milk cans in Preston with the Corporation water and take it back with them.

Several of the delegates belonging to the Lancashire Federation of Farmers' Associations, who came from various districts, complained of the want of pure water, and Mr. Barlow, the vice-president, strongly urged more stringent supervision by the Local Government Board of local authorities, whom he asserted were by no means active enough in their supervision of buildings, drainage, and water.

---

* Mr. Ford, agent to Sir Ughtred Kay-Shuttleworth, Bart., M.P., informs me that last year on Sir Ughtred's property he put up buildings on a 20 acre farm, on which a man was keeping 15 head of cattle, at a cost of 700*l.*

† Mr. T. Fair, agent to the Lytham estate, is strongly of opinion that water should be able to be obtained from the Fylde Water Company cheaper than is at present the case.

Drainage.

17. In some districts the drainage of the farm premises appears to be far from satisfactory, and this state of things was again the subject of complaint on the part of dairy farmers.

The Chorley farmers, who sell a good deal of milk, said: "We are badly in want of "drainage, and there are not two men out of 10 who have manure tanks."

At Calder Vale and Pilling, and other places, complaints were made of ponds becoming contaminated with sewage. Dr. Fisher, Medical Officer of Health to the Garstang Union, in his annual report to the sanitary authority, says: "One of the "most frequent sources of contaminated water supply is the proximity of a badly "puddled cesspool."

I learn from doctors in the Garstang and Fylde Unions that the question of drainage is being much more attended to than formerly, and that in their opinion this is the more necessary since dairying operations have become more common.

The land appears to be fairly well drained (Appendix B 7 (*d*)), but some districts suffer considerably from floods. Landlords usually find tiles for draining, and tenants the labour.

III.—Tenure.

Nature of tenancies.

18. In the great majority of cases, the tenancies are yearly, commencing on February 2nd, the agreement being sometimes in writing, but frequently not. In the latter case, the tenants farm according to the custom of the country, being thus allowed comparative freedom as to growth and sale of crops.

The outgoing tenant pays 1*s*. a yard for hay he takes off and sells. The incoming tenant pays for clover seeds sown the previous year if the outgoing tenant has not pastured them.*

Notwithstanding the greater feeling of insecurity which must exist when farming as yearly tenants, instead of under leases, the majority of farmers appear to prefer the former tenancy, as it makes it easier for them to obtain reductions of rent, and leaves them free to go if they find farming unremunerative. Only in a few cases did farmers say they would prefer leases, and, as far as the landowners are concerned, most of them appear to be quite ready to grant them if desired.

At the meeting of the Lancashire Federation of Farmers' Associations, Mr. Barlow, the vice-president, thus expressed himself:—

> "Tenants prefer annual agreements. They do not believe in fixity of tenure. Where the place does not pay they have already too much fixity. They want to be free to go, but to be paid for their improvements when they leave."

Considering the fact that yearly tenancies are so generally the custom, it seems remarkable that there are so few changes in the occupancy of farms as a reference to the evidence of both landowners and farmers will show. (Appendix B. 5 and B. 7.)

Taking the average length of occupation of 35 farmers, whose evidence is tabulated in Appendix B. 7 (*a*), it comes to 41 years to each man or his family. On some of the large properties the average must be a very high one. Some tenants are quite unable to say how long they and their ancestors have occupied their farms.

Restrictions as to growth and sale of crops.

19. At the many meetings I held during the progress of my inquiry, the question of freedom of cultivation was frequently discussed, and on the whole it seems that farmers have a very fairly free hand, particularly in the Garstang and Fylde Unions, as to growth and sale of crops. As I have already pointed out, there are many who are farming without agreements, and they appear to be but little interfered with as long as they keep their farms in fairly good order.

In addition to the evidence given at public meetings, 22 witnesses state, in answer to written inquiries, that they have no restrictions whatever as to sale or growth of crops; four state they have to consume on the premises.

On the following estates there are practically no restrictions except as to the breaking up of grass:—The Winmarleigh estate, Mr. Talbot Clifton's, Mr. Fitzherbert-Brockholes', the Earl of Sefton's, Mr. Wilson-ffrance's, Mr. Norris Bretherton's, Mr. Bashall's, and the Earl of Derby's.

---

* Mr. T. Fair informs me that the following really embrace the waygoing conditions usual in Lancashire:—The landlord to pay the outgoing tenant on expiration of tenancy (receiving the same again from incoming tenant)—

1. For half crop of wheat sown in course on potato or turnip ground, and two-thirds of crop sown on summer fallowed lands properly manured and prepared for the same, on a valuation to be made in the month of July, the valuer or valuers to be appointed by landlord and tenant before the wheat is sown. Provided that if more than the specified quantity of land shall have been sown with wheat, the excess shall belong to the landlord, and no portion thereof to the tenant.

2. For the cost of seeds (vouchers being produced) and labour in sowing the same, provided such seeds have not been pastured, and at least acres of the arable land is left in grass and seeds.

The only restrictions on the estates of the Earl of Crawford, Mr. T. H. Miller, Mr. W. P. Miller, Captain Chichester, Mr. Joy, and Mr. Rawstorne, are that meadows are not to be mown twice or grass land broken up.

In cases where restrictions existed, dissatisfaction was sometimes expressed that this should be so, although it was usually admitted that they were not enforced. Thus the Bolton Dairy Farmers' Association said that there were restrictions in their districts: that in the case of good tenants they were never acted on, but that all the same they were hanging over a man's head, and could be made to injure him seriously at the time he leaves.

The Lancashire Federation of Farmers' Associations took the same view, and urged that as far as possible there should be no restrictions. Mr. Kay, the president, quoted several cases of what appeared to be absurd restrictions, one being where a farmer paying 315*l.* rent for 165 acres was not allowed to keep more than 12 head of poultry at a time.

Although, as Mr. Kay pointed out, such restrictions as these were never enforced, still he might be held responsible for breach of covenant. Mr. Kay summed up the views of the Federation as follows :—

> "The Association agrees that landlords should be protected from bad tenants by putting certain restrictive clauses in agreements, as they have no sympathy with bad farming, but that, if a tenant is expected to keep his farm up to a certain standard, he should farm as he likes."

Certainly the most successful farmers I met were in favour of farming with as few restrictions as possible, although it was generally agreed that some must exist to protect landlords against bad tenants.

The Liverpool Farmers' Club stated that in the neighbourhood of Liverpool they had had freedom both as regards cultivation and sale for many years on the properties of the Marquis of Salisbury, the Earl of Derby, the Earl of Lathom, the Earl of Sefton, Colonel Blackburne, and other large landowners, and the delegates expressed the opinion that they owed much of their success in farming to the freedom they enjoyed. They all farm high, and are able to get any amount of manure from the city.

The chairman, Mr. R. Webster, gave the following evidence :—

> "On the estates we represent we have entire freedom of cultivation and sale. The tenant can sell if he chooses all produce and manure. I think that science has done away with the necessity for a good many restrictions which formerly existed. At one time there was no guano, nitrate of soda, &c., and I think in those days it was well there should have been some restrictions.
>
> "If landlords could see their way, especially in districts where manure was easily obtained, it would be a good thing to remove the restrictions which may still exist, for then the land will be farmed better."

It was frequently urged by other witnesses that there was less reason in Lancashire than in many other counties for landlords to place restrictions on tenants, because manure was so easily obtainable, at a comparatively cheap rate, from the large manufacturing towns.

I endeavoured to ascertain from those who advocated free cultivation what restrictions they considered should be placed upon tenants, as it was generally admitted that it was only right and just, both in the interests of the landowners and the country generally, that there should be some protection against bad tenants. Opinion generally appeared to favour almost entire freedom of cultivation, with reservations as to ploughing up grass land, but it differed considerably as to how far freedom of sale should be allowed, without some definite stipulations as to putting on manure.*

Mr. James Pearson (farmer), St. Michaels-on-Wyre, says :—

> "If I were a landowner I certainly would not let a farm with no restrictions."

Mr. Brian Dodgson (farmer), Catteral, says :—

> "I consider that there should be certain restrictions in agreements and leases as to sale and growth of hay, straw, and manure, in order that the landlord may be properly protected against bad tenants who might ruin his land."

---

* The late Mr. John Coleman, in his report on Lancashire to the Duke of Richmond's Commission in 1882, says :—"As regards town farms, freedom of cultivation and sale exists, either entirely or with a stipulation as to "the return of manure. It is very seldom that the necessity for putting such a clause in force exists, very much "more manure, as a rule, being bought than the prescribed quantity. The expenses on such farms are so "great that big crops are a necessity."

IV.—Evidence of Agricultural Depression.

Agricultural depression.

20. Although agricultural depression has existed since 1880 to some extent in North Lancashire, and has been more particularly felt during the last three or four years, the evidence of its existence is perhaps not so marked as in many other counties, partly because it has been of longer duration elsewhere, though I venture to think that it is more acutely felt than appears at first sight. Rents are very fairly well paid. No farms are unlet, and there is not the slightest difficulty in letting them: in fact, men are usually forthcoming who will eagerly bid against each other, and in many districts the land appears to be as well farmed as formerly, and in some even better, although in others this is certainly not the case.* (*See* Appendix B. 5 (*g*).)

As to the question of competition for farms, it is generally admitted by the farmers that they have only themselves to blame for bidding more rent than they can afford to pay. Probably the fact of the farms being comparatively small throughout the district, and thus requiring a moderate amount of capital, is one reason for this, the proximity of excellent markets another, and also the fact that the sons of the farmers have been brought up practically as labourers on their fathers' farms, and hence are unfit to follow any other occupation.

Again, with reference to the condition of the land being taken as a test of agricultural depression, it must be remembered that the Lancashire farmer is a working farmer. He and his wife, sons, and daughters, work from early dawn to late at night, with an industry that can but excite the admiration of those who witness it. In many cases where the employment of less outdoor labour has been a necessity, the land has not suffered, because the farmer and his sons have made increased exertions, and, if an indoor servant has had to be sent away, the wife and the daughters have undertaken the additional dairy work and household duties.

Thus at the present time in some districts it is the farmers' sons and daughters who have suffered rather than the land, for they have been and are giving their best energies towards its cultivation, receiving no reward in the present, and with but little prospect of any in the future. How far they will consent in the future to stop with their parents under such conditions remains to be seen.†

Further, it is frequently stated that in these days of competition only high farming pays, and that as long as a farmer can afford to buy manure, cake, provender, &c. he must do it. A reference to Appendices A. 3, C., and D. will show what large sums some farmers in the district spend on manure and provender.

Again, as to the question of payment of rent, the farmers in Lancashire, and I believe generally throughout the north, will always try and meet their rent, no matter what sacrifice they have to make, and hence the punctual payment of it is by no means a proof of the farmer's position being a satisfactory one.

But, apart from these considerations, there is plenty of evidence that farmers are feeling the depression very acutely, and indeed it must be so in a country which is largely grass, and where the prices of stock have dropped 30 or 40 per cent. in the last few years.

---

* I have asked many landowners and agents if they could give me instances of recent sales of land where prices have fallen, and I have not been able to procure one. Mr. Jacob Fair, the well-known estate agent, whose experience of the value of land is very large, says:—

"I am unable at present to give instances of this kind, though there are many, and it is a fact which owners and occupiers must alike admit, that land has very generally deteriorated in productive capabilities from (*a*) bad seasons, and (*b*) deficiency of capital for expenditure in fertilisers. The land on the Barnacre estate is 15 or 20 per cent. below the standard of 1882.

"At the same time, land has maintained its value for sale and purchase better in Lancashire than in most parts of England."

† A few farmers told me that they give their sons and daughters wages, but that this is quite the exception, and I believe, in the great majority of cases, they are simply working for their food and clothes. The fact of men having grown-up sons and daughters, who are thus ready to work, tends to keep up rents on the small farms, for such a farmer, when making his bargain, has to make no allowance for cost of labour.

A farmer on about 250 acres in the hill district gave me the following account of his own experience:—

"Every farmer should put his children's wages by or else give up the farm. I have to pay for labour, and others ought to do so, and not let their children suffer.

"When I was a lad I lived with my parents, and worked for them. I got courting a young woman, who was a servant in a farmhouse, and one day I said to her: 'Will you marry me, lass?' and she said 'Yes.' I went home to my mother and said, 'I'm bound to be wed.' Mother looked at me as if I had done some wrong, and was quite upset with me. My father and mother told me they had no money to give me, as they saved nothing. I told mother I was bound to be wed, and that I must wed the lass. Well, I told the lass I had no money, and what did she do but pull out a bank book and showed me she had saved 200*l.* out of her wages. My mother was fairly capped when she heard this, for then the lass was too good for me; but we were wed. Now, if my parents had saved my wages, I should have had 300*l.*"

Mr. Wilkinson of Winmarleigh says:—

"Most of the farmers are nearly ruined, and many are farming on borrowed capital."

It is impossible to definitely ascertain the actual financial position of the farmers, as practically none of them keep any accounts, and though I have asked in all quarters if there are any who could provide me with figures, I have only been successful in two or three cases. But some large farmers, whose evidence is perfectly trustworthy, have told me that after feeding and clothing themselves and their families, and paying no wages to their sons and daughters, they have made nothing for the last year or two, while several have told me they have had to draw on capital.*

The small farmers generally say that they work far harder than the labourers, and are not really in so good a financial position.† (Appendix D.)

But there is plenty of other evidence to show how hard pressed farmers are, and, if the present low prices continue, there seems but little doubt that the land will soon show far greater signs of the depression than at present.

I give the evidence of several independent witnesses on this point. Mr. Caruthers, the largest cake and artificial manure merchant in Lancaster, says:—

"My regular customers have fallen off in buying and paying. The farmers in difficulties can't feed their animals properly, and they spend nothing on manure. Hence their cattle go very cheap and their land deteriorates."‡

Mr. Thomas Armistead, auctioneer for the Lancaster Auction Mart Company, and agent for a manure company, says:—

"Up to three years ago nine out of ten of the sales by auction of farmers' stock were on three months' credit. Last autumn I set myself entirely against credit sales, as we had so much difficulty in getting the money in.

. . . . . .

"I also find, that as agent for a manure company, that the farmers are buying much less manure, quite 25 per cent. less, and we have the greatest difficulty in getting paid.

. . . . . .

"It is all hand-to-mouth farming now, just what will show the quickest return. Inferior breeds of cattle and sheep are now being bought."

Mr. Sanderson, cattle dealer, says:—

"I find that farmers are not buying so much stock as they did a year or two ago, as they can't afford it."

Many farmers state that the present year is the worst they have had, owing to the want of grass in the spring, which necessitated them buying provender.

Comparative effect of depression on large and small farms.

21. The evidence as to which sized farms have suffered most by the agricultural depression is very contradictory. It is said by some that the larger farms have stood the depression best, because they are usually held by men of more capital, and also because the rent per acre is cheaper. Others say that the smaller farms have suffered least, because they are generally worked by the farmer and his family, and so there is no labour bill to pay. Mr. James Stuart, a farmer, at St. Michael's-on-Wyre, is of opinion that the small farmers with no families have suffered most, as they have the additional expense of paying for labour, and have little or no capital.

Mr. T. Fair's evidence, at any rate, goes far to prove that in part of the Fylde district the depression has been most felt by the larger farms, for he says:—

"The permanent reductions have been made on the big farms and not on the small ones. Reductions on the big farms have been from 25 to 30 per cent. The smaller farms have certainly felt the depression least."

But, on the contrary, Mr. Thomas Armistead, auctioneer to the Lancaster Auction Mart Company, says:—

"Around Thurnham the farms up to 50 acres have felt the depression most, because the rent is higher and they are frequently farmed by men who have previously been labourers and who have but little capital."

The Lancashire Federation of Farmers' Associations states that "the depression has "hit the big men most, as there are more expenses. The heavy producing farms "have suffered most."

---

* One large farmer, chiefly engaged in making cheese, says:—"I have four grown up sons and three daughters "working with me. If I had had to employ labour I could not have done, and should have had to stop four "years ago. I have 2,000*l.* of capital in the land, and we have only been feeding and clothing ourselves."

† Mr. Rowe, 85 acres, says:—"My wife and I work from 5 a.m. to 9 p.m., and people in towns grumble at "working 10 hours."

‡ Mr. T. Pearson, farmer and agent, says:—"In these hard times many farmers do not feed their cattle properly, so they get bad prices, and also, in consequence, do not get good manure."

The Lancashire Tenant Farmers' Association could come to no agreement on the point, opinion appearing to be about evenly divided.

Mr. T. Pearson, of Nateby, a very successful farmer, says:—

"I think the 150-acre farms have stood the depression better than the 60 to 100 acres ones, and I think this is because the tenants of the former have more capital."

Again, the Liverpool Farmers' Club say:—

"We do not think the farms of 150 acres and upwards have gone back, but the smaller ones have."

There seems to be a consensus of opinion that the milk farms situated within an easy distance of a town have felt the depression least, no matter what the size.

At Hambleton there are a number of small farms occupied by men who either rent them or who have bought them. Many of these men have risen from the ranks of labourers. They expressed the opinion that no man could make a living out of less than 50 or 60 acres without seeking additional employment. Some of the smaller holdings are occupied by men who thus have to look to other means of money-making besides their holdings. Thus some are hucksters, some get employment in works, or some as labourers on farms. One man on 26 acres of grass land kept cows and sheep, and was employed on a farm as a day labourer, his wife and family looking after the stock in his absence. At the meeting held at Hambleton the men stated, "there are some "large farmers here who began with one or two beasts and a few acres, but then "times were better."

There are scores of such cases in North Lancashire, and in Appendix D., I have given, as typical instances, the evidence of three small farmers who formerly were labourers.*

Some of the labourers on Mr. Fitzherbert-Brockholes' estate have every facility for thus rising to a better position. Five of them rent land from their employer varying in amount from 5 to 30 acres.

They sell butter in Preston and Garstang, and their wives and children do the necessary work. Their wages vary between 15*s.* and 18*s.* a week, and they can have regular employment all the year round, but they may stop away whenever they want to in order to work on their own land.

Instances of successful farming during the depression.

22. In Appendix C. I have given the evidence of three farmers who are still able to make farming pay.

One of these men farms 281 acres, another 245, and the third 63.

The two larger farmers attribute their success chiefly to high farming, and the results are certainly remarkable.

In the case of the 63-acre farm, which belongs to a man with 11 children, eight of whom are under 15 years of age, the tenant gives the following reason for his success:—

"All through the depression I have held my own and kept the farm, and it has been done by altogether altering the course of my farming to meet the times."

. . . . . .

"Throughout all this agricultural depression I have farmed on lines which have proved successful. I am one of those who are in favour of high farming. It is far better to have a small farm and farm it really well than have a big one and farm it indifferently."

These three men all keep accounts, which is most unusual. The one on 63 acres says: "Once a year I have valued all my stock, crops, &c., deducted my debts and "liabilities, and made out my yearly balance sheet." This custom has enabled him to discover which branches of his business pay and which do not. He says: "During "the past 12 years I have laid down 28 acres of my land to grass. Before doing so, "I found the cost of production was more than the crop realised, so I naturally "drifted into and enlarged the paying branches."

Another of these witnesses says:—

"At the beginning of the year I estimate my expenditure on every head, and I try to keep to it all the year."

* Mr. Albert Greg, chairman of the Lancaster Agricultural Society, writes:—"The low prices of livestock "now ruling in the market are in favour of a man starting farming as a business, for it requires less capital. "There are always plenty of people ready to take a farm of moderate size at present rents, or even at higher "figures."

The Rev. L. C. Wood, chairman of the Agricultural Committee of the Harris Institute, Preston, writes:—"One great fault of the Lancashire farmer is that he takes far more land than he has capital for, and the "consequence is he starves both the land and himself."

V.—Causes of Agricultural Depression.

Causes of agricultural depression.

23. The chief cause of agricultural depression in North Lancashire is said to be foreign competition in all farm produce, especially cattle, which has greatly reduced the prices of all classes of stock.

Mr. Thomas Armistead, auctioneer to the Lancaster Auction Mart Company, bears witness to the great fall in price of cattle in the last few years.

"Since the importation of Canadian live cattle the price of young Lancashire bullocks has dropped very much. Two-year-old bullocks, that were worth 15*l.* to 16*l.* eight years ago, are now worth from 10*l.* to 11*l.*

"Now that there are restrictions on the live Canadian cattle, the Lancashire trade would have been much better with Scotland this year had it not been for the dearth of fodder in the South, which has compelled farmers there to send cattle of all descriptions to Scotland at very low prices.

"This autumn cattle have sold 40 per cent. less than five years ago. A spring calving cow sells for 14*l.* now which would have made 19*l.* four years ago, and a two-year-old heifer sells for 6*l.* which would have sold for 13*l.* four years ago."

To bad seasons in recent years some witnesses attribute much of the farmers' loss.*

Labour.

24. Apart from the question of foreign competition, there are other circumstances which have affected the farmer's pecuniary position, namely, a rise in rates in the urban districts to which I hereafter refer, and increased cost of labour.

On the whole it may be said that the actual cost of labour has increased since 1880, but this is not the case in all districts. (Appendix B. 7 (*h*).)

The Lancashire Tenant Farmers' Association seemed divided on this point, the majority of them said that the cost of labour had not much increased since 1880.

But on many farms in districts where the actual wages are higher the farmers are not paying a higher labour bill, as they have curtailed the number of their labourers for one or all of the following reasons:—

(1.) The conversion of arable land to grass.
(2.) On grounds of economy.†
(3.) The use of machinery, particularly the self-binder and potato digger.

Any increase in the cost of labour has but little affected the smaller farms up to about 100 acres, where the farmers have grown-up families to help them, unless the land is largely arable, which is unusual, although they have now to pay up to 1*l.* more for a labourer for a month's harvest than they did some 12 years ago.

The majority of labourers are hired by the year and live and board in the farm-houses, these being unmarried men. Their cash wages vary from 18*l.* to 26*l.* a year, and they get lodging, board, and washing in addition. It is said that a good man is paid 3*l.* or 4*l.* more now than in 1880.

The wages of day men, regularly attached to the staff of a farm, usually vary from 18*s.* to 1*l.* a week, but if they are supplied with food a deduction of 6*s.* to 7*s.* a week is made. Their harvest wages usually vary from 3*l.* 10*s.* to 4*l.* 10*s.* a month, and they get food in addition.

Oddmen receive 24*s.* to 25*s.* a week at hay and harvest, and have to find their own food.

Irishmen are largly employed at hay and harvest, and also for potato lifting. They are paid about the same as the oddmen at harvest, with the exception that they are given a barn or some building to sleep in, and some farmers give them milk, and occasionally a little food as well.

---

* Sixty witnesses attribute the depression to foreign competition, 18 to bad seasons, 10 to the higher price of labour, 8 to high rents, and 7 to high railway rates. Colonel Wyatt, agent to the Earl of Sefton, writes:—

"1. The agricultural interest is ignored by every Government, the members, being returned (as all are) by the votes of the masses, dare not hold out a hand to relieve it of its burdens in the shape of taxation, or to protect it from unfair competition.

"2. Agitators and talkers in the ranks of agriculture seek to set tenants against landlords, and labourers against both, and draw a hard and fast line between them, whereas their interests are identical, and mutual confidence is their greatest security. The more legislation the less confidence.

"3. Facilities for travel, the press, emigration circulars, &c., all lead away the sons of farmers who used to fill up the gap, and so the supply of young tenants is not equal to the demand. Hence incompetent persons get hold of the land, and want rents reduced to the level of their incompetency."

† One large farmer told me that he knew of cases where farmers were getting rid of their married men, and keeping hired men in the house instead, because they preferred to pay a smaller sum in cash and provide them with food. Mr. T. Pearson, farmer and agent, says:—"Some farmers have curtailed their labour bill with a "view to economy. It is false economy; they could have made it pay to employ labour."

The increase in the cost of the daymen's wages since 1880 does not appear to have been general in the district. Thus on five large estates in four cases no rise has taken place between 1880 and 1892, while on the fifth the wages rose from 18*s.* a week in 1880 to 19*s.* and 20*s.* in 1892.

Many farmers say that though their labour bill has not increased much, if at all, their labourers do considerably less work than formerly. Some attribute this to the best men seeking employment on railways, in docks and in towns, while others assert that the labourers care less for agricultural employment, and consequently are less zealous in the performance of their duties.

On this latter point I found farmers strangely divided when making inquiries for the Royal Commission on Labour on the condition of the agricultural labourers, in 1892 and 1893, in the eastern and northern counties of England, and in various parts of Ireland.

Thus on the same day in October 1893, I called on two brothers, both most successful farmers living a few miles apart in the Garstang Union, Mr. T. Pearson and Mr. J. Pearson, and one of them was strongly of opinion that the labourers do less work than they did 10 years ago, while the other was equally confident that this was not the case.

Some members of the Farmers' Club at Liverpool complained of a want of good cottages on the farms, saying that if they had these, it might stop the labourers going into the towns.

One witness stated that a labourer had left his service and gone into the town, because his cottage was bad, though he was receiving the following rate of wages:—

21*s.* a week, extra money allowances of 2*s.* a week, a cottage and vegetables free, and coals carted.

In the Garstang and Fylde Unions there are but few labourers' cottages on the farms, because many of the farmers employ no labour, and those who do so usually have hired men, who live and board in the farmhouses.

On some estates there are excellent labourers' cottages, but in some of the villages they are indifferent.

Rates

25. Rates have decreased in the last ten years in the Garstang and Fylde Unions (Appendix A. 1, A. 2), but in some other districts in the neighbourhood of towns, they are said to have increased in some cases considerably.

The Liverpool Farmers' Club, complained greatly of their rates. Mr. Webster, the chairman, stated that on his farm of 171 statute acres, the Local Board and Poor Rates amounted to 43*l.* a year, his Imperial taxes to 4*l.* 15*s.* 4*d.*, and the tithe to 25*l.* 13*s.**

Very considerable dissatisfaction is expressed as to the present system of rating, and the mode of assessment, to which I have referred in paragraph 42.

VI.—Rent.

Rent.

26. It is difficult to give any correct idea of the rents in such a large district, as they vary considerably according to the nature of the soil, the situation and the size of farms.

In Appendix B. 7 I have given a number of examples of rents with the sizes of the farms, the system of farming adopted, and other particulars.

The following are some examples of rents in the district:—

In the neighbourhood of Liverpool the Farmers' Club stated that the rents within 6 or 7 miles of the city ran from 1*l.* 10*s.* to 2*l.* 10*s.* an acre on the larger farms, and up to 3*l.* an acre on the smaller ones, of 40 to 50 acres, which were chiefly market garden farms.

Colonel Wyatt, agent to the Earl of Sefton, informs me that the rents on that property, which is close to Liverpool, average 42*s.* an acre.

On Mr. Talbot Clifton's property at Lytham, which is within easy reach of Blackpool, Lytham, and Kirkham, the rents (including tithe) on 11 farms, varying in size from 105 acres to 400 acres, range from 22*s.* 6*d.* an acre to 43*s.* an acre.

---

* The Liverpool Farmers' Club also complained of the heavy tolls they had to pay in the Liverpool market One witness calculated that in selling potatoes the tolls cost him 10*s.* an acre.

The following are some examples of rents on certain properties in the Garstang and Fylde Unions:—

Name of Estate.	Farms under 100 Acres, average Rent per Acre.	Farms over 100 Acres, average Rent per Acre.
	s. *d.*	*s.* *d.*
Thistleton Estate	38 6*	31 6*
Singleton Estate	42 0*	30 0*
Barnacre Estate	29 0*	19 0*
Lytham Estate	38 9	34 4
Inskip Estate	34 0	—

The question of rent is very much discussed throughout North Lancashire, and perhaps the most common expression to hear used by farmers is "rent must come down." Another expression frequently made use of is "prices have dropped 30 to 40 per cent., and rents 5 or 10 per cent.: how are we to get along?"

Reference has already been made to the keen competition for farms and to the unbusinesslike character of the bidding; and this curious state of things exists, that, although at the present time there is an almost universal demand for reduction of rent, there are plenty of men forthcoming who will agree to take farms at the same rents as those which it is said are impossible to pay. Thus, while some are urging that rent should be adjusted with reference to the prices of produce, the farmers are themselves continually engaged in fixing a far higher standard.

At the meeting of the Lancashire Tenant Farmers' Association, the chairman, Mr. Rimmer, stated that "the rents are out of proportion *to the value of the produce.* "Rent should be paid according to the *price of produce.*" Though he and the Association agreed that farmers were themselves to blame for raising the market price of the rent to what they considered a fictitious value.

In fact, in all directions farmers are very candid in admitting that they make a great mistake in thus competing against each other.

At Hambleton they said at a meeting:—

> "It is the tenants' fault that rents are high and not the landlords', because tenants will bid against each other."

Colonel Wyatt, agent to the Earl of Sefton, gives the following remarkable evidence to show what keen competition there is to get on that estate:—

> "I had seven candidates for a good farm last year. Two men offered to give the outgoing tenant 500*l.* if he could get the farm for them. I did not appoint either of them, but promoted one of our own tenants."

But notwithstanding that rents will fetch as much in the market, and in many cases more than, is being paid, it seems to be almost the universal opinion among the farmers that, if prices continue as they are, and rents are not further reduced, farmers cannot keep their heads above water. The only body of men who made no grievance about rent were the members of the Liverpool Farmers' Club, who came from all the large estates in that district.

The Lancashire Federation of Farmers' Associations and the Lancashire Tenant Farmers' Association stated that, in order to meet the present necessities of the farmers, rents should be immediately reduced by 25 to 30 per cent. But both these Associations agreed that, assuming a general reduction of 25 per cent. took place on a property, it would be inequitable to make equal reductions, but that the case of every farm should be considered separately.†

It is also frequently urged that permanent reductions are required, and not temporary abatements, because farmers do not know their real position unless the reduction is permanent, neither do they get any remission in their rates.

Many farmers assert that, when reductions have taken place, the bad farmers have received more assistance than the good ones, which is said to be a great discouragement to the latter. It is also frequently said that new tenants get far more consideration than sitting tenants.

* Including tithe.

† Mr. Jacob Fair, estate agent, says: "There are many instances where farmers would be more entitled to "20 or 25 per cent. than others would be to 5 per cent."

Apart from the question as to how far rents can be reduced to meet the fall in prices, I am informed by experienced agents that rents in North Lancashire are not high when compared with that of other counties, especially when the splendid markets for dairy produce, the increasing population in the big towns, and the good land are taken into consideration.

Mr. James Stuart, who farms 150 acres at St. Michael's-on-Wyre, referring to this subject, says :—

"You cannot compare our rents with south country rents, unless you bear in mind our advantages.

"Some Lancashire farmers have gone south to get land at nominal rents and they have come back because they can do better here even with the higher wages."*

A reference to Appendix B. 6 will show the permanent reductions and abatements which have been made on certain properties since 1882. It seems that most of the reductions and abatements began to be made about 1885, though some took place as far back as 1880.

At the meeting of landowners and agents held at Preston, Mr. Jacob Fair made the following statement as to the reductions made on three large properties with which he is connected :—

"Reductions from 1882 were made of $9\frac{1}{3}$, $8\frac{3}{4}$, and 7 per cent. respectively. Six years ago, when the depression became more acute, the reductions were 16, 15, and 9 per cent. Again the expenditure on buildings on these estates, taking the average of 11 years, came to 30, $11\frac{1}{4}$, and $18\frac{1}{2}$ per cent. This is irrespective of remissions of rental, and I have no hesitation in saying that these owners put nothing like 2 per cent. in their pockets on the present valuation of their properties."

Mr. Singleton of Kirkland also stated :—

"The net income of farms I am interested in, which have been bought in the last 30 years, only represents 2 per cent."

With reference to the assertion that landowners give preference to the highest bidders, it is said both by landowners and agents to be contrary to fact. On the large estates, if a farm falls vacant, either the relatives of the late tenant, or some other tenant on the property, is usually given the opportunity of taking the farm, and the acquisition of a substantial tenant and a good farmer is said to be always the foremost consideration in the landowner's mind.†

Mr. Hale, agent to the Earl of Derby, referring to this subject, says :—

"On our estate, character and conduct are the first considerations."

Mr. Jacob Fair, speaking at the meeting of landowners and agents, said :—

"There is not a man in this room who would let a farm to anyone but a practical man."

Giving bones and manure in lieu of reductions in rent.

27. Some landowners and agents are in favour of giving bones and manure in lieu of reduction in rent, because they consider this course is best for them and also for the tenants.

---

* Mr. Fitzherbert-Brockholes, of Claughton Hall, writes :—"During the present century the number of "large towns, and the town and factory population in Lancashire, continued to increase rapidly. This naturally "afforded a rapidly improving and convenient market for all farm produce. The introduction of railway "communication also facilitated the transport of perishable produce. Obviously, therefore, the value of farming "land steadily increased, mainly through these causes, until it reached its culminating point between (I should "say) 1865 and 1875. Since then, the quickening and cheapening of ocean transit, combined with the daily "improving methods of conveying perishable goods from one part of the world to another, have steadily told "against the English farmer. Of course, everyone must bend to the times, but it is absurd to say in sweeping "terms that all rents should be dropped by 25 per cent., as some persons say. In my experience, farms that "have been re-let, say between 1865 and 1875, are probably much too high rented, possibly to the extent of "the 25 or 30 per cent.; but, on the other hand, not only have the rents of many of such farms been already "substantially reduced, but there are numbers of farmers who hold their farms on the same terms as they or "their predecessors did 40 or 50 years ago, and who are not overrented even at the present time. It is clear, "therefore, that an all-round reduction would not act fairly or equitably."

† Colonel Wyatt, agent to Lord Sefton, says :—"During the 24 years I have been here, I think I have only "taken 13 tenants not born on the property."

Mr. T. Fair, agent to Mr. Talbot Clifton, says :—"If no member of the family requires the farm, we offer it "to a deserving tenant on a smaller farm, or else advertise."

Mr. Logan, agent to Mr. Fitzherbert-Brockholes :—"If there is no son to take on the farm, we advertise."

Colonel Cross Ormrod :—"If there is a vacant farm, we let it be known among the tenants."

Mr. White, agent to the Winmarleigh estate :—"We have never had to advertise a farm on this estate. "Generally a relative of the existing tenant, or a neighbouring farmer, is always forthcoming."

Mr. Lawrence Rawstorne, Hutton Hall, Preston :—"I have come to the conclusion that it is useless to let a "farm to any but those born and bred on the place or belonging to the locality. Outsiders do not come to stop, but to make what they can out of the land and the landlord, and then go to repeat the process elsewhere."

Mr. Ford, agent to Sir Ughtred Kay-Shuttleworth, M.P. :—"There are always good applicants. Usually "plenty of them. These hear of the vacant farm through the tenants of the estate."

Several farmers took the same view. A farmer in the Fylde District (Appendix C. 1) says :—

"If I was a landlord I would not in many instances reduce rents in cash, but I would give a generous allowance of manure to put on the land."

Also Mr. Eccles of Myerscough, a landowner, says :—

"I believe in giving bones and manure to farmers. They get cheated so. Last year I bought bones at 2*l.* a ton less than neighbouring farmers were paying at the same place."

Tithes.

28. Since the Tithe Act the landowners generally pay the tithe, and recover it from the tenant, separate receipts being given for rent and tithe, but in many cases of re-letting the rent is re-adjusted, the tenant no longer paying rent and tithe to the landlord as separate items, but as one sum under the name of rent.

In a few cases where the landowners have paid the tithe since the Act they are only taking a proportion of the sum from the tenants, thus practically giving them a reduction in their rental.

Colonel Wyatt, agent to the Earl of Sefton, says :—

"The effect of the Tithe Act has been to merge tithe in rent."

VII.—The Agricultural Holdings Act.

The Agricultural Holdings Act.

29. The subject of the Agricultural Holdings Act was much discussed by the members of deputations who gave evidence before me and at meetings I attended.

The almost universal opinion of the farmers appears to be that the Act is of little use to them, because they consider the procedure too expensive and the terms too indefinite.

It is a common expression to hear used that "if tenants claim for unexhausted improvements the landlords counterclaim for dilapidations" and, though no one suggests that the landlords have not a just right to do so, still the tenants say they think it cheaper to avoid a contest. Mr. Jacob Fair's view, expressed at the landowners' meeting at Preston, was that, if tenants are afraid of counter-claims, there must be some ground for the fear, but however this may be, there is not the slightest doubt that the opinion of the farmers is that the terms of the Act are too indefinite, and the procedure too costly, to enable them to try conclusions with their landlords.

In the Garstang and Fylde Unions, where yearly tenancies without any agreements in writing are so prevalent, landlords and tenants seem to leave the Act entirely alone.

Mr. Jacob Fair whose experience in estate management in North Lancashire is very extensive, says :

"I believe the Act is practically inoperative in Lancashire, chiefly on account of "the expense of procedure, but very generally because tenants are afraid of "dilapidations." (See also Appendix B. 2. (*b*).)

It must be remembered, in discussing this subject, that throughout the district of my inquiry, and I understand throughout North Lancashire, it is the custom for the landowners to do all the building and other permanent improvements and the substantial repairs. Sometimes the tenants do the carting and sometimes not. In the case of draining the landowners supply the tiles and the tenants usually do the labour, though this is not invariably the case.

But with reference to claims for unexhausted improvements to the soil, it is apparent that there exists in the minds of a large number of farmers the feeling that tenants leave farms with capital sunk there, which by right they ought to be able to recover, and it is also frequently asserted that unless a tenant has great confidence in his landlord, he does not farm as high as he would do if he felt more secure of being able to obtain compensation.

As to the first point, many of the landowners and agents say that they are usually the losers by a change of tenant.

Mr. T. Fair, Lytham estate, says :

"I dread a change of tenancy. Whenever a change takes place we make no charge against the tenant for dilapidations, and it always involves considerable outlay to put the farm in proper tenantable order."

Similar evidence was given by the landowners and agents at the meeting at Preston. (See also Appendix B. 2. (*b*).)

Thus if both tenants and landowners are under the impression that each are the losers by a change in tenancy, it is apparent that unless they can amicably settle their

differences between themselves, a counterclaim is always sure to be put forward in answer to a claim, if the matter goes to arbitration.

But if it is the case that there are a considerable number of tenants who do not farm as high as they would do for want of greater security, the defects complained of in the Act would seem to have serious results. And this seems so especially at the present time, for when tenants are in favour of yearly tenancies, and high farming is said to be more necessary, the feeling of a want of security is the more injurious.

There are plenty of witnesses who say that under their present landlords they farm as high as if under the longest leases, because they put implicit confidence in them, but there are many of these who say that under other landlords this would not be so, because they would not then have the certainty that all questions of unexhausted improvements would be settled without dispute.

Although, as I have stated, it is usual for landowners and tenants to make no special agreement, on some of the large estates definite ones are drawn up between the parties setting out the amount of compensation to be paid. I venture to say that if this was more generally done by landowners and tenants in spite of the Act, it would go far to do away with the feeling of uneasiness which prevails among tenants at the present time.

Mr. Webster, chairman of the Liverpool Farmers' Club and a tenant of the Earl of Sefton, stated that he, with other tenant farmers, assisted Mr. Hale, agent to the Earl of Derby, Colonel Wyatt, agent to the Earl of Sefton, and several other well-known estate agents, in drawing out the agreement in use on these estates for giving compensation for unexhausted improvements, and that he thought the terms and the scale perfectly fair, reasonable, and explicit.

In Appendix B 2 (*b.*) is set out Schedule No. 1 to this agreement ("Permanent Improvements") and Schedule No. 2 ("Improvements in the cultivation of the soil").

It is, however, somewhat remarkable that the tenants on the Earl of Sefton's property do not take advantage of this agreement. Colonel Wyatt, the agent, writes:—

> "Permanent improvements in buildings are rarely done by the tenant. If done, I offer to spread cost over from 15 to 20 years (Agricultural Holdings Act), or they to pay 5 per cent. on outlay, or the old custom of the estate for landlord and tenant to pay half and half, and then the work does not stand as an unexhausted improvement. This latter course they most foolishly, and against my advice, usually choose."

However, the tenants themselves appear satisfied, for Mr. Webster, chairman of the Liverpool Farmers' Club, and a tenant of Lord Sefton's, said, when a deputation from the club gave evidence before me, "In our part of the country we settle these things "amicably."

In the agreement on the Holker Estate, kindly sent me by Mr. Drewry the agent, the following proviso would, I venture to think, if generally adopted, remove some of the difficulties of farmers who wish to make claims. "*And that the tenant shall on the "first rent day in each year give an account in writing of his outlay during the preceding "twelve months.*"

I sometimes found farmers unable to tell me how much they had spent on provender and manure in the last year or two, and in such cases the difficulties of formulating claims for unexhausted improvements are apparent.

Mr. Kay, President of the Lancashire Federation of Farmers' Associations, is of opinion that landowners and agents should keep tenants more up to the mark about dilapidations, not let them run on for years, and then set them off against claims for unexhausted improvements. Mr. T. Pearson, a practical farmer, who also acts as agent to three properties, and Mr. Wilkinson, bailiff to the Winmarleigh estate, said the same. Mr. Barlow, vice-chairman of the Lancashire Federation of Farmers' Association, suggests in his Tenant Right Bill, that the landlord should only be allowed to claim for dilapidations which have taken place within two years. This would have the effect that tenants would be made to attend better to the repairs, which would put them in a more satisfactory position, when claiming for unexhausted improvements.

There is one reason why it is important that farmers in the Northern counties should have every facility for claiming for unexhausted improvements, and that is because in the North there are so many cases where men have become successful farmers after having been labourers. This they have accomplished by commencing on a small farm and going on to another when they saw their way clear to do so, and it would seem essential that such men should not be deterred in their progress by feeling that a move would entail their leaving capital behind them.

30. The Lancashire Federation of Farmers' Associations, a large and important body, very strongly advocate an amendment of the Agricultural Holdings Act, for, in their opinion, the giving of absolute security for obtaining compensation for unexhausted improvements, without expense and litigation, would go far to settle many of the questions which are now troubling the farmers' minds.

Views of the Lancashire Federation of Farmers' Associations.

Mr. Kay, the president, and Mr. Barlow, the vice-president, thus expressed the views of the Federation:—

"The general feeling is the farmers do not want leases, but security for good farming, a feeling that they could reap the benefit of their improvements, and that any capital they put in the land would be as safe as if it were put in the bank. They want that they and their relatives should feel secure in that respect. A feeling of insecurity prevails which prevents their putting capital into the land.

"If absolute security were given by Act of Parliament for compensation for unexhausted improvements, without expense and litigation, fixity of tenure would be a thing unasked for. The very fact of a landlord having to pay compensation for a greatly improved farm would deter him from giving a tenant notice. It would ensure all the fixity of tenure that tenants really desire. Tenants prefer yearly tenancies. They want to be free to go, and to be paid in full for their improvements when they leave."

"The Association considers it absolutely necessary to have an improved Agricultural Holdings Act, as the present Act is no use to farmers. They consider it too expensive; that it is not sufficiently definite; that the landlord has an unfair advantage, by having time to consider the tenants' claims before making his counterclaim for dilapidations, and that the clause relating to improvements due to the inherent capabilities of the soil is fatal to justice being obtained."

Mr. Barlow, the vice-president, has framed a Bill dealing with these and other points.

It provides that county councils shall appoint a number of practical valuers, from whose ranks the parties to an arbitration can each choose a representative to adjudicate upon claims not exceeding 250*l.*, and whose decision shall be final. In the case of disagreement, the county court judge of the district shall consider the case with the arbitrators, and then the majority of the court so constituted shall make a final award. If the amount claimed exceeds 250*l.*, the two valuers and the county court judge shall constitute the court, and the decision of the majority of the court shall be final.

Another clause provides that, in the event of the landlords refusal to make any of the first-class improvements mentioned in Schedule I. Part I, which include the erection, enlargement, and repairing of buildings, the draining of land, the laying down of permanent pasture, &c. [*see* Appendix B. 2 (*b*)], then the tenant can call in the arbitrators, who shall decide whether the alterations or additions desired by the tenant are necessary for the purpose of carrying on his business, and in the event of their deciding that they are so necessary, then the tenant shall be at liberty to carry out the improvements, and shall be entitled to obtain compensation for the same at the termination of the tenancy, according to the scale fixed in the Schedule.

Another clause provides that the landlord and tenant shall both give notice in writing of any intended claim a month before the termination of the tenancy.

For every sum claimed, not exceeding 50*l.*, the maximum charge shall not exceed 20 per cent. of the award; for every sum claimed, not exceeding 75*l.*, the maximum charge shall not exceed 15 per cent. of the award, and for every sum claimed, exceeding 75*l.*, the maximum charge shall not exceed 10 per cent. of the award.*

---

* The late Mr. Coleman, in his report on Lancashire to the Richmond Commission in 1882, says:—"With "the exception of a few men of extreme views, the general feeling on the part of the farming community in "reference to legislation is that they should have security for the unexhausted portion of their outlay to the "extent that the incomer is benefited, and that such compensation should apply only to what is properly "tenants' outlay. Works of a permanent character, such as buildings, making roads, &c., which should be "done by the landlord, are only fit subjects for compensation when done by the tenant with the consent of the "landlord under a special agreement. There will be practical difficulties in any scheme that can be devised; "but, inasmuch as the great object is to encourage the judicious outlay of capital, and prevent that waste "which too generally occurs on change of land, the benefit to the incomer is an ascertainable value, which must "be determined by arbitration. The nature of the compensation may differ according to the district, and will "have to be defined accordingly. And it will be absolutely necessary that the umpires, to whom matters that "cannot be settled between outgoer and incomer in the ordinary method of arbitration must be referred, should "be men of capacity, judgment, and impartiality. It would be very desirable that Government referees should "be appointed for different districts, to whom matters in dispute should be referred, who would hear evidence "and decide without appeal. Some scheme of this kind will, as far as I can judge, satisfy the farmers of "Lancashire."

The landowners who gave evidence before me stated that they had no objection to an amendment of the Act in the direction of making it more explicit and of simplifying and cheapening the procedure, and some were as anxious to see a reform of the Act as the farmers. At the meeting of landowners held at Preston, it was stated, with the approval of the meeting, that "no doubt an amendment of the Act was required," and Mr. J. Fair said that, although he could not pledge himself to details, he agreed with some of Mr. Kay's and Mr. Barlow's views on the subject. He was not inclined to agree to the proposal that a county court judge should be called in to arbitrate, in the event of the arbitrators being unable to agree, because he considered that only practical agriculturists could arrive at any just decision in such matters, but he did not think injustice would be done, if all right of appeal was abolished, provided an impartial tribunal could be obtained. Further, Mr. Fair thought that the arbitrators, even selected from among those chosen by the county council, as proposed by Mr. Barlow, would still be partisans to some extent.

Mr. Fitzherbert Brockholes also considered that the working of the Act was too expensive. He saw no objection to landlords and tenants sending in the details of their claims on the same day, provided ample notice was given by both parties that claims would be made.

Mr. Albert Greg, president of the Lancaster Agricultural Society, thought it worthy of consideration whether an impartial court could not be formed in certain centres to decide questions of unexhausted improvements and dilapidations.

Some landowners and agents were of opinion that the Act was unnecessary, though they in no way opposed any reform in the direction of enabling tenants to claim in the simplest and cheapest way, because they considered that the most satisfactory way of settling the question was for landlords and tenants to arrange matters without recourse to arbitration under the Act.

VIII.—The Ground Game Act.

The Ground Game Act.

31. A great many complaints were made by farmers as to the number of hares and rabbits kept on certain properties, and it was not infrequent to hear them say "the Ground Game Act is a dead letter." No doubt this present year has been an unusual one for the increase of both hares and rabbits, but the grievance is by no means confined to the state of things as they are this year.

A reference to the evidence, Appendix B. 4 (*a*), will show that the farmers are generally very fair in dealing with this question. All they ask is that a reasonable amount of hares and rabbits should be kept. Mr. Wilding, a farmer near Garstang, expresses the view of most of the farmers by saying: "It is the unreasonable men who do the harm."

Again, a farmer's son says: "There is a written law to give us the hares and "rabbits, and an unwritten law that we may not take them. This year, I believe, "we have suffered 15*l.* damage, and in many years 10*l.* I believe no farmers object "to landlords killing game. In fact, I like to see our landlord shoot, but I object to "the hares and rabbits."

In those cases where hares and rabbits are kept down within reasonable limits, and where landowners treat tenants generously by giving them presents of game, there seems to be no dissatisfaction.

The following is the evidence of a man who is treated well, Mr. R. Porter, a well-known farmer at Upper Rawcliffe:—

> "I have no complaint to make about hares, rabbits, and game. Mr. Hugh Hornby shoots over this property. He is worth keeping game for. I and my lads keep his game, and my daughters rear pheasants for him, and like to do so. We don't mind any damage hares and rabbits do, but if there is any it is our own fault, as no one minds at all if we shoot them. The game is just as good as if it were our own. Last year Mr. Hornby gave us 25 hares, seven partridges, and eight or nine pheasants. This year up to October 6th we have had 17 partridges and three hares.
>
> "The fault lies in landlords who let game to shooting tenants at a big rent, who try to make money out of it.
>
> "On some estates it is the case that if the tenant took advantage of the Ground Game Act he would have to go."

Now, there are plenty of others who corroborate Mr. Porter, who is essentially a fair-minded witness, that if tenants killed hares or rabbits on certain properties they

would get notice to quit their farms, and I venture to say that this is a very regrettable state of things, and one which certainly ought not to exist. No instances of men getting notice to quit for killing hares and rabbits were brought to my notice, except a case referred to by Mr. Kay (paragraph 5), but there is not the slightest doubt that some farmers do not kill them when they would like to for the protection of their crops, because they are afraid that notice will be given if they do so. Under such circumstances as these the landowners are having all the sport and the tenants all the expense.

I venture to think that, though there is this fear in the minds of some farmers, there is not as much ground for it in some cases as they appear to think. Thus out of five witnesses from Lord Bective's estate, three were farmers' sons and two were farmers.

One farmer's son said—

"Father does not kill hares and rabbits because he would get notice to quit."

Another said—

"We don't kill hares and rabbits because we think we had better not."

And a third said—

"We cannot take advantage of the Ground Game Act."

Whereas one farmer said (170 acres)—

"Hares and rabbits don't bother me. I am far more bothered by sparrows and small birds."

And another said (400 acres)—

"Now I have been worried very much by rabbits this summer. I communicated with the shooting tenant, who communicated with the agent, and he came over and looked at the damage, and sent men over to kill them at once. I don't think it would make any difference to the tenant if he killed hares and rabbits. I don't believe landlords would get rid of them if they took advantage of the Act. It is very silly for these farmers to say they dare not kill hares and rabbits. I have no fear myself on Lord Bective's estate."

Far be it from me to say that there are not many landowners who treat their tenants with every consideration in the matter of game preserving. The Liverpool farmers, who came from estates where much game is preserved, thought that they were fairly treated and generally had no cause of complaint. The chairman stated that the farms with game on were let at a lower rent, and that they took them with a full knowledge of what to expect.

But there is one system which all farmers strongly condemn, and that is the sub-letting of shooting. Men who will welcome the presence of the landowners, even if game does do some damage, look upon a shooting tenant in a very different light.

Mr. James Pearson, a farmer of St. Michael's-on-Wyre, who has no personal complaint to make, says:—

"I think shooting tenants cause more ill-feeling than loss, and I entirely disagree with the principle of sub-letting the shooting."

I have already indicated that, as a rule, tenants do not object to keeping game or hares and rabbits provided they get some compensation either in cash or kind. In the cases where tenants have the game on their farms, it is not uncommon to find that they let it themselves, and one agent said that complaints had been made by tenants on his property of the excessive preservation of hares and rabbits on certain farms on a neighbouring estate where the farmers had the game, and sub-let it to shooting tenants of their own.

Mr. Kay, the President of the Lancashire Federation of Farmers' Associations, who was strongly of opinion that most tenants could not take advantage of the Ground Game Act, thought, in common with some other farmers I met, that the mistake in the Ground Game Act is the inability of the landlord to contract out of it. Mr. Kay says, "In the case of the ground game, the tenant should be the landlord's landlord." Another farmer puts the matter thus: "We don't object to hares and rabbits if we "are fairly paid for any damage, but the difficulty is in assessing damages. The "landlord is the person who wants to shoot the hares and rabbits, but the Act takes "away from him the right to go to the tenant and buy from him the right which the "Act gives him, namely, to kill ground game."

The Federation approached the game question in a spirit of moderation and fairness. Mr. Kay stated: "The farmers don't want to stop sport. It is only the rabbits they object to."

IX.—Suggested Remedies.

The land court.

32. Apart from the question of reduction of rent, and of alterations in the Agricultural Holdings Act, many suggestions were made by witnesses for remedying agricultural depression, or for benefitting the farmers. Among these proposals were those of the Lancashire Tenant Farmers' Association, who advocate the establishment of a land court, and the adoption of the principles called "The three F's," which were stated to be fair rent, fixity of tenure, and free sale of improvements.

Mr. W. Smith, M.P., stated at Lancaster that he should also add free cultivation.

I found it difficult to get any agreement of opinion as to what were to be the functions of the land court. Some thought it should fix the rent if landlord and tenant could not agree; others thought it should be a sort of large estate agency to generally supervise all contracts made between landlord and tenant, to notice the condition of buildings, the supply of water and the state of drainage, to examine the condition of farms at the commencement of tenancies, so that it could hereafter say if the land was being badly farmed, or come to a conclusion what improvements had been made. Again, some advocated that the land court should have power to compel a landlord to keep a tenant as long as the latter chose to stay, unless good cause was shown by the landlord for giving notice to quit.

Mr. W. Smith, M.P., President of the Federation of Tenant Farmers' Associations, makes the following suggestions as to the constitution of the land court:—

That it shall consist of the county court judge, and two assessors who must be practical agriculturists. A certain number of such assessors shall be selected by the county council from time to time. The registrar of the county court is to select the assessors to sit in each case, and the assessors are to receive their remuneration out of the county rate.

The powers of the land court, as suggested by Mr. W. Smith, M.P., would be wide in their character. He says: "Either party to a contract of tenancy, present or future, "may apply to a land court to fix reasonable conditions of tenancy and a fair rent."

Mr. Smith is of opinion that the existence of such a court will not prove expensive, but the Lancashire Federation of Farmers' Associations hold a contrary view.

It will be seen on reference to Appendix B. 1, that many farmers are much opposed to the constitution of a land court, some saying that they prefer entire freedom of contract, and others that its creation would destroy all friendly relations between landlord and tenant.

Fair rents.

33. I have already indicated that some persons suggest the fixing of rent by arbitration, or a land court, according to the price of produce. Many witnesses point out how difficult it would be in practice to fix rent according to the price of produce, however reasonable such a proposition may appear to be in theory.

Mr. Rimmer, the chairman of the Lancashire Tenant Farmers' Association, stated that rent should be fixed on a sliding scale in proportion to the market value of produce, but at the same meeting some said they did not agree to this, and Mr. Hubbersty stated that rents should be fixed according to the circumstances and conditions of the time. Mr. W. Smith, M.P., is of opinion that the land court should fix what they consider to be a fair and reasonable rent, which might be subject to alteration by the court at the end of a period of five years.

On the other hand, many farmers are much opposed to any interference as regards the fixing of rent. Mr. Kay, speaking on behalf of the Lancashire Federation of Farmers' Associations, said they believed in free trade in land. The Liverpool farmers said, "We are in favour of freedom of contract," The Hambleton farmers, who are chiefly small ones, said "all matters should be settled between landlord and tenant," and it was also stated as the general opinion of the meeting that "if a man is not fit to "make his own bargain he is not fit to farm."

Fixity of tenure.

34. I was unable to get any general definition as to what the term "fixity of tenure" meant, but I believe that the majority of farmers endorse the views of Mr. Kay and Mr. Barlow, the president and the vice-president of the Lancashire Federation of Farmers' Associations, that "if absolute security were given by Act of Parliament for compensa-"tion for unexhausted improvements without expense and litigation, fixity of tenure "would be a thing unasked for. . . . It would ensure all the fixity of tenure that "tenants really desire. Tenants prefer yearly tenancies." (*See* par. 30.)

Some witnesses urged that though a farmer took a farm on a yearly tenancy, or a lease, the landlord should not be entitled to give the ordinary legal notice unless he could give sufficiently good reason for so doing.*

At the meeting of the Lancashire Tenant Farmers' Association, who adopt the "three F's" as part of their programme, I asked them to define what they meant by fixity of tenure, and I ventured to put this proposition to them:

"Assuming that tenants were able by some simple and inexpensive procedure to get compensation for unexhausted improvements, would you advocate that the law should compel a landowner to take on the same tenant at the end of a lease, whether he "wanted to or not,"? The answer was: "No, that would not be fair on the "landlord."

I therefore venture to think that in reality the views of the Lancashire Tenant Farmers' Association are not very different from those of the Lancashire Federation of Farmers' Associations on this subject, namely that they desire greater security for capital invested in the land, more than any legislation tending to fix them upon the soil.†

Free sale of improvements.

35. The Lancashire Tenant Farmers' Association, the Bolton and District Dairy Farmers' Association, and various witnesses, advocated the free sale of improvements. The latter Association considered that a tenant should be allowed to sell the improvements to any person he thought fit, though the landlord was to have the right to re-enter if he paid as much as the bidder.

The Secretary of the Association did not think the case would arise of a relation or friend of a tenant offering a very high price for the improvements, with the object of making the landlord bid high, but he thought if such a case arose the matter could be referred to the land court, who would decide if the bid was a *bonâ fide* one, and if this was done, and the landlord refused to bid as much, then the farm must go to the man who offered the money whether the landlord wanted him as a tenant or not.

I ventured to suggest to some gentlemen who were in favour of the free sale of improvements, whether they were not advocating the creation of the very evil as regards the sale of improvements that they complain of in the present system of fixing rent, namely, the opportunity for intending tenants to bid against each other. Thus while the land court was to protect farmers from bidding higher rents than they could afford to pay, it would offer no protection to them when bidding against each other in the matter of improvements.

The Lancashire Federation of Farmers' Associations do not believe in "the three F's," and as regards compensation for improvements, they consider the landlord is the proper person to pay, and that the amount of compensation to be paid should be settled according to a definite scale clearly and simply set out by Act of Parliament.

The law of distress.

36. The majority of farmers in the districts I visited are in favour of the abolition of the law of distress. They give two reasons for this. First because if the law was abolished they would be able to get more credit from the tradesmen, and secondly because it would have the effect of making landlords look out for more substantial tenants, and thus the competition for farms would be diminished.

The Lancashire Federation of Farmers' Associations, the Lancashire Tenant Farmers' Association, at meetings held at Preston and Lancaster, the Bolton and District Dairy Farmers' Association, the Chorley and District Farmers' Association, the Blackburn and District Farmers' Association, and the Fylde District Farmers' Association, are all in favour of its abolition.

There were, however, some contrary opinions expressed by farmers. The Liverpool and District Farmers' Club are not in favour of entirely abolishing the landlords' right, as they do not think it would be fair, but they consider it should be limited to six months' arrears of rent.

---

* Mr. W. Smith, M.P., says: "It should not be in the power of any man, so long as a tenant paid a "fair judicial rent and cultivated his farm properly in every respect, to send him away for mere whim or "caprice."

† Mr. Albert Greg, chairman of the Lancaster Agricultural Society, writes: "I think that the system of "yearly tenancies is the best, provided full security can be legally got for both landlord and tenant. No land-"lord will disturb a good tenant, and a bad one should be disturbed in the public interest. Under this system "rents can be lowered in bad times and raised in good ones by mutual agreement, as has been shown in the "last 10 years, when reductions averaging 30 per cent. have been made in this Union." Mr. Kay, president of the Lancashire Federation of Farmers' Associations, says: "A good Agricultural Holdings Bill is better than "leases."

The farmers at Lytham said (Appendix E. 6) "A good farmer has got fixity of tenure as long as he wants to stay. A landlord must get rid of a bad tenant in the same way that a farmer must get rid of a bad labourer."

Mr. Brian Dodgson, a tenant on the Winmarleigh estate, said: "I think the law of "distress should stand as it is. A landlord runs far greater risks than any tradesmen, "as he has a lot of capital in his farm. A tradesman need not give long credit, but a "landlord can be fairly ruined by unfortunately getting a bad tenant. I say the "landlord is by far the greater loser, and he should be properly protected."

Again Mr. James Stuart, a large farmer at St. Michael's-on-Wyre says: "The "abolition of the law of distress would be a terrible calamity for farmers with no capital, "as landlords would not take them, but on the other hand there would be less "competition, and so good men would get farms cheaper."

At a meeting at Hambleton the men there, who were mostly small farmers on 40 or 50 acre farms, gave their opinion from the standpoint of those who had risen from the ranks, and they considered the law should not be altered, one farmer stating "its abolition will prevent small men rising."

The question for the farmers to decide would seem to be whether they prefer additional credit from the tradesmen or credit from the landlord for rent. I put this view to a good many farmers who advocate a change in the present law. Many of them seemed to have scarcely realised that a change in the law might entail the result indicated.

Still the desire for a change in the present law is a widely spread one, and advocated by the Associations I have alluded to, who represent a very large body of farmers throughout North Lancashire.

The landowners point of view, as expressed at Preston, was that they did not think an alteration in the law would affect them much, but that they would either want rent paid in advance, or some security before a tenant went on to a farm. This in their opinion would be greatly to the disadvantage of many a struggling farmer who wanted to rise, and Mr. Jacob Fair stated that an alteration in the law would mean that tenants would have to be put on a strictly commercial footing instead of being given credit for rent, as was now the case, and that the effect would be to knock out the small men.*

Mr. W. Fitzherbert-Brockholes was of opinion that a tenant was more likely to get consideration from his landlord if he became insolvent than from a lot of creditors who scarcely knew him.

At Lancaster Mr. Dawson and Mr. Greg, chairman of the Lancaster Agricultural Society, agreed with the views the landowners and agents expressed at Preston, namely, that a change in the law would entail the payment of rent in advance. Thus, instead of the first payment being made in November, the tenant entering in February, rent would either have to be paid on entering or security given.

Fair trade.

37. A good many witnesses advocated that a duty should be put on live cattle and all manufactured articles coming into the country, and numbers said that all cattle should be killed on landing. Some advocated a small duty on corn, stating that this would make no difference to the consumer.

On this point Colonel Wyatt, agent to the Earl of Sefton, says:—

> "Although remission of taxation (not transferring it from tenant to landlord) and lower railway rates may help, it will not save the agricultural interest. I think the only thing to be of any real use is some small protective tariff on a sliding-scale, say sufficient to keep wheat to 40*s.* a quarter. This, I suppose, we shall never get: it is taxing the food of the people; but I ask why tax the home-grown food of the people higher than anything else and let in foreign produce free? Often since free trade came in wheat has been over 40*s.* a quarter and no one complained. Why cry out if it was kept at that price?" (Appendix B. 3 (*b*).)

The chairman of the Liverpool Farmers' Club advocated putting a duty on imported flour and manufactured articles as long as other nations put duties on English exports, adding: "If this country is right, all the rest of the world must be wrong; for every "other country has a tariff."

Another member of the deputation stated that the real remedy for the depression does not consist in the reduction of rents. He said: "There are some things the "landlords might do, but they are trifling. This year I had 40 statute acres of wheat "and oats, and the variation in prices between 1873 and 1893 made a difference to me "of 80*l.* in wheat and 63*l.* in oats, or equal to 3*l.* 10*s.* per statute acre. But we cannot "ask our landlords to reduce our rent by 3*l.* 10*s.* a statute acre."

---

* Mr. Jacob Fair, who is agent to several large properties in Lancashire, stated that he had only distrained once in 27 years.

Other gentlemen hold quite contrary opinions, but as the arguments on this question are so well known, I will only give the opinion of one farmer who is about the most successful man I met in the district.

"I am a free trader; I say we buy our feeding stuffs cheaper, and we all live cheaper in consequence of free trade."

Compensation for tuberculosis.

38. It was most earnestly pressed upon me by dairy farmers that compensation should be given for animals which have been killed on account of tuberculosis. This may be described as a burning question among dairy farmers, for in many cases their losses have been severe, and it is said the disease is increasing.

At the meeting of the Lancashire Federation of Farmers' Associations, Mr. Kay, the president, gave a striking instance of its prevalence. In 1892, 451 cattle in a district were slaughtered because they were suffering from pleuro-pneumonia, or had been infected by those which had the disease. Of these cattle, 85, or 1 in 5, were found to have tuberculosis also.

Several farmers in the district I visited told me of heavy losses they had suffered by cattle dying of the disease. At the meeting of the Chorley and District Farmers' Association one witness stated that he had lost six or seven cows in the last two years, another that he had lost four this year and five last, another that he had lost five this autumn, and another stated he knew a small farmer who lost three last year.

One of Mr. Clifton's tenants at Lytham, whom I called on, had lost seven cows last year, and another had recently lost one, and stated he lost five the year before last.

Some urged that the Government should give compensation for tuberculosis, not only because it would be beneficial to the farmers, but beneficial to the public, because there was now a great temptation, directly suspicion arose of an animal being in the early stages of the disease, to sell it to the butcher.

To show how serious a matter this is to dairy farmers, Mr. Kay stated that if compensation were given, it would be worth from 10 to 20 per cent. reduction of rent in the county.

Labelling of foreign meat.

39. There is one suggestion upon which all are agreed, whether landlords or tenants, and that is that all foreign dead meat should be marked and sold as such, and some also advocated that those who sold foreign meat should be compelled to take out a license to do so.

Mr. Kay, the president of the Lancashire Federation of Farmers' Association, gave remarkable evidence at a meeting at Preston, showing how foreign meat is sold as English meat in shops. He said: "When I went up to the Agricultural Conference "in St. James's Hall, I went into a butcher's shop in the Strand, and charged the "butcher that all his meat which was labelled 'Welsh mutton' was foreign, and he "admitted it."

The farmers generally state that a great deal of foreign meat is bought in the large towns as English, and that they consider the public ought to be made aware what they are buying.

The Margarine Act.

40. Again, there is a unanimity of opinion that the Margarine Act has not stopped margarine being sold as butter, and it is suggested that to effect this purpose margarine should be sold in its natural colour. This question is regarded as a very important one by the farmers in the district. (*See* Appendix A. 4 and B. 3 (*a*).)

Railway rates.

41. Great complaints are made about the charges of railway companies for farm produce, and it is stated that in some cases the rates have been lately increased.

It is considered very unfair that foreign produce should be taken cheaper than English on English lines on account of getting a cheap through rate.

Several cases were mentioned of goods sent from a small station costing more than if they had been sent from a larger town on the same line further away from their point of destination.

The charges for cattle trucks in some instances appear to have recently increased, and it is constantly spoken of as a grievance that the free passes for men in charge of them have been discontinued. The Lancaster Agricultural Society and other Associations spoke strongly on this subject.

Another great complaint was that the high railway rates prevented the farmers getting manure from the large towns, where it can be bought comparatively cheap. Thus the farmers at Lytham said: "Cow manure from Preston to Wray Green ($9\frac{1}{2}$ "miles) is 2*s.* 3*d.* a ton; more manure would be bought at Preston if it were not for "the railway rates; also the carriage of artificial manure from Liverpool to Lytham is "6*s.* 8*d.* a ton."

Again, Mr. Willacy, a farmer at Nateby, says: "If we could get a reasonable "railway rate for stable manure we should do far better. We buy it in Blackburn for "3*s.* a ton, and it costs us 9*s.* a ton by the time it gets here."

The Lancashire Federation of Farmers' Associations also complained of the way in which cattle were sometimes treated by railway companies, being shunted into sidings and left there for a long time. Mr. Kay quoted two instances of cows calving in the trucks in consequence of the treatment they received.*

System of rating.

42. There was a very general feeling expressed that land is unfairly rated and taxed, and that personal property should share equally in the burdens.

Mr. Webster, chairman of the Liverpool Farmers' Club, said: "The houses of the "farmers should pay poor rates, but not the land, which is their raw material. It is "not able to pay the rate at present levied. The towns make the paupers, and the land "is called upon to pay for them."

Some suggested that the landowners should pay all or half the rates, but others said that if this were so the landowners would only re-adjust the rents. It was moreover urged that it would not be right for landowners to have to pay all the rates, because those who paid none would have no interest in trying to keep them down. The more general opinion was that the real remedy is to throw part of the burden on personal property.

Further, it was suggested that actual rental value should be the basis of rating, the present system of making unequal deductions to arrive at the rateable value being unfair to the land.†

Assessment of income tax.

43. Landowners generally consider that income tax should be assessed upon the net and not upon the gross income.

I heard a good many complaints from farmers that they had to pay income tax though they were losing money, but that it was impossible for them to appeal, as they kept no books. They also considered the mode of assessment unfair, in that the tithe and land tax were added to the estimated rent. At Lytham the farmers said: "Income tax is very unfair. We pay it on half the rack rent when we are making "nothing, and when we and our families are all working hard for nothing. Farmers "keep no books, and so cannot appeal. Again, inhabited house duty is levied on the "larger farmhouses. This is most unfair, as the farmhouses have no lettable value "apart from the farm, and we already pay income-tax on half the rack rent of the "house, buildings, and land.

Absence of farmers' accounts.

Mr. Dawson stated at Lancaster that he knew very well as an Income Tax Commissioner that if farmers kept books it would be greatly to their advantage.

Mr. James Pearson, a farmer at St. Michael's-on-Wyre, who is an income tax collector, says: "Many a thousand farmers are paying income tax under Schedule B. "who need not. There are many paying who are insolvent."‡

Uniformity in weights and measures.

44. Many farmers thought that the want of uniformity in weights and measures is a serious drawback, and that there should be the same standard throughout the country.

Thus at Lancaster 14 lbs. of potatoes go to the stone; at Preston, 20 miles distant, they are sold by the load (240 lbs.), and at Manchester they are also sold by the load (252 lbs.).§

Again a hundredweight of cheese in Lancaster = 120 lbs., and in Liverpool = 112 lbs.

---

* Mr. Kay writes: "Calving cows are trucked at 12.30 p.m. at Skipton, and are often shunted for five hours "at Accrington, arriving at Blackburn at 10.30 p.m. It is five miles from Accrington to Blackburn, and it "often takes as many hours for them to come."

Mr. Eccles, of Myerscough, sends the following information:—"For 4 tons of bones from Liverpool to "Garstang (38 miles), 6*s.* 8*d.* per ton; for 4 tons of bones from Liverpool to Blackburn (38 miles) 4*s.* 8*d.* "per ton."

In the latter case there is competition between the London and North-Western Railway Company and the Lancashire and Yorkshire Railway Company; while, in the former case, the only line is the London and North-Western Railway, who also own the canal.

† Scale of deductions made from gross estimated rental to arrive at rateable value in the Garstang and Fylde Unions:—Land, 5 per cent.; buildings and land, 7½ per cent.; houses, 15 per cent.; mills, 25 per cent.; cottages (Garstang Union), 25 per cent.; cottages (Fylde Union), 20 per cent. (if under 8*l.* a year).

‡ Colonal Wyatt, agent to the Earl of Sefton, writes:—"As long as collectors are paid by a percentage, they "keep up the assessments in hopes there will be no appeal. In this they are probably right, as farmers "won't take the trouble, or do not understand how to appeal. This applies more particularly to income tax. "Thousands of men are assessed a little above their income. They don't think it worth while to appeal. "Result, an increase to the coffers of the State and also to the pockets of the collectors."

Note.—It is also stated that if farmers kept accounts, and could show their actual position to their landlord they might, in some cases, be successful in getting a reduction of rent.

§ Mr. Tunstill, a tenant of Lord Derby's, says: "If farmers buy corn from a dealer, he gives them 40 lbs. to "the bushel, but if the dealer buys from the farmers, he demands 45 lbs. to the bushel."

45. It is the opinion of a good many witnesses, including farmers, that by selling cattle without having them weighed, the farmers are the losers and the butchers the gainers, because the latter, by constant practice in buying, have far more experience than the former, and also because they are able to test their judgment by weighing the animals after they have killed them. Selling cattle by weight.

46. The selling of cattle at auction marts, instead of selling them privately to buyers who come round, is said to be prejudicial to farmers, because the system is more expensive, it causes the farmers to waste more of their time, and it is asserted that butchers make rings and do not bid against each other. Auction marts.

Mr. Dawson stated at a meeting at Lancaster: "The butchers who attend these "auctions go in for buying as low as they can. They do not, as was formerly the "case, go round to the farms and get the stock, but they buy at the lowest price by "auction, and many farmers have to take their stock away again or sacrifice them at "ruinous prices."

A farmer thereupon asked what they were to do, as the buyers no longer came round to their farms, and Mr. W. Smith, M.P., replied:—

"You must combine together and say you will not bring your stock to the mart."

47. Another suggestion not infrequently made was that the malt tax should be re-instated in place of the beer tax, the present system being regarded as disadvantageous to the agricultural interest. The malt tax.

48. The question of floods is considered a very important one by those in the districts where floods occur, and it is suggested that the Legislature should empower the county councils to deal with this subject.* Floods.

Several farmers made great complaints of the damage they had suffered by floods. A tenant of Lord Derby's informed me that he calculated his losses at 1,500*l.* in 30 years, others gave instances of land which was under water in wet seasons producing excellent crops in dry ones.†

49. Some farmers who lived near towns strongly complained of the taking of mushrooms. They considered that they were as much their property as the grass grown on the farm, and that it should be made a criminal offence to take them. The farmers at Poulton pressed this matter, and pointed out that very considerable profits can be made by farmers by the sale of mushrooms, and that it is an injustice that they should not be able to reap the advantage of everything grown on their land, besides which the fact of having trespassers over their farms, breaking their fences, is a great annoyance. The taking of mushrooms.

Also several farmers near Garstang made the same complaint; one of them said, "The law should make the taking of mushrooms larceny. They have a good market "value, and farmers ought to have all their land produces. We are over-run with "loafers taking them, and we can do nothing. We have suffered this year from "drought, and we ought to be able to reap the benefit of anything that does grow on "our land. Mushrooms are as much ours as our vegetables."

50. The taxation of ground rents is advocated by the Lancashire Federation of Farmers' Associations, and by some farmers living in urban districts. Taxation of ground rents.

* I have been supplied with the draft of a Bill "To make provision for the Prevention of Floods and other "damage arising from Rivers and Water-courses," which I understand has been issued from the offices of the County Councils Association.

This provides that, where it appears to the county council that the health or convenience of the inhabitants of any place within their county is prejudiced by the want of proper works for the prevention of floods, the county council may make a Provisional Order (which shall not take effect until it has been submitted to the Local Government Board and confirmed by Parliament in manner required by the Act) authorising the execution of all or any of the following works: The construction of water-courses or outfalls for water, or weirs, dams, banks, or defences against water, or the removal of mills, weirs, dams, banks, or defences against water, or the execution of any other work which, in the opinion of the county council, is expedient for the purpose of the prevention of floods.

Section 4, subsection (2) provides that a local inquiry shall be held by the Local Government Board if they shall deem such advisable, at which all persons interested shall be permitted to attend and give evidence.

Section 3 provides for payment of expenses by the owner of land permanently benefitted by such works, and section 7 provides for payment of expenses by sanitary districts or parishes specially benefitted.

† Mr. Edmund Birley, J.P., and Mr. Jacob Fair both write, pointing out the great desirability of some legislation under which the regular cleansing out and maintenance of fall in ditches and watercourses, in which various owners and occupiers are interested, can be ensured. The latter gentleman says "At present some "awkward individual in a line of some miles of watercourse may be the means of heavy damage being done "to a very extensive area, and although I believe an owner or occupier may be compelled at present to "prevent 'fall,' being held up, it is always a difficult matter to bring about amendment. Further, with regard "to boundary fences, an owner cannot be compelled to keep up a boundary fence belonging to him, so that it is "a reasonably sufficient protection for turning out ordinary stock. The hardship in many cases to adjacent "owners is considerable."

Sanitary supervision.

51. The Federation of Farmers' Associations also advocate the more efficient supervision of buildings, drainage, and water supply.

Wild Birds Protection Act.

52. Some suggested that certain birds should be excluded from the operation of the Wild Birds Protection Act, as of late years their crops have greatly suffered owing to their depredations.

Technical education.

53. The opinion is frequently expressed that technical education in many branches of farming would be a great benefit to the farmers, particularly the smaller ones. Now that the business of dairying is on the increase, it seems that technical education in butter and cheese making would be a great advantage.

The county council have been active in promoting technical education in agriculture by providing efficient lecturers and granting considerable sums of money towards that object.

Their report quotes numerous instances which show how beneficial such instruction has been to those engaged in cheese and butter making.

The instruction is given, free of charge, in farmhouses as well as in the County Dairy School.

It is stated that dealers often prefer foreign butter to English, on account of the lack of uniformity in the latter. When visiting a large dairy belonging to a landowner in North Lancashire, who sells about 300 lbs. of butter a week in summer and about 150 lbs. a week in winter, I was told that this butter could be sold for a penny a pound more than that sold by neighbouring farmers, because the buyers could count on its uniformity. This seems to point to the advantage of the instruction classes now being undertaken by the county council.

In connection with this work undertaken by the county council, Mr. A. M. Bates, of the Harris Institute, Preston, delivers three or four lectures a week in different parts of the district on the principles of farming.

His subjects include "Artificial Manures," "Feeding Stuffs," "Grasses," "Insect Pests," "Prevention of Potato Disease," "Smut in Wheat, &c." "Milk Fever and Abortion in Cows, Quarter Ill, Liver Rot in Sheep, &c." "Feeding, Milking, and Management of the Dairy Cow," "Ensilage."

Mr. Bates informs me that last winter the average attendance at these lectures was between 30 and 40, besides which about 30 farmers' sons attend his lectures five days a week at the Harris Institute, Preston.

He considers that such lectures are of the very greatest advantage to the farmers. He believes that many use artificial manures and feeding stuffs, which are of but little value and for which they pay an exorbitant price. The County Council Technical Institute Committee have samples of manures and feeding stuffs sent to them by farmers, which they analyze at a moderate charge.

The Rev. L. C. Wood, chairman of the Agricultural Committee of the Harris Institute, is strongly in favour of some agricultural education being given to boys in the schools, as he is of opinion that the younger they commence to learn something of the principles of agriculture the better.

Mr. Wood writes that there is difficulty in getting some farmers to believe that they have anything to learn.* He is hoping to induce the county council to rent a farm, to which the students at the Harris Institute may be taken in the afternoons to be taught the selection, management, and feeding of dairy stock, &c., and also where dairy maids may be trained in butter and cheese making.

X.—Conclusion.

Conclusion.

54. In concluding this report, I desire to express my gratitude to all those who so kindly supplied me with information, often at inconvenience and trouble to themselves. Whilst engaged in this inquiry, I was brought into contact with those representing all classes of the agricultural interest, many differing from each other very widely in the opinions they held, and it has been my endeavour, in writing this report, to impartially give expression to the views of all who gave evidence before me.

Yours, &c.

(Signed) ARTHUR WILSON FOX.

---

* Extract from a letter addressed by Mr. Wood to the farmers of Lancashire: "It must be clear to all "intelligent minds that the only hope of the English farmer meeting the ever-increasing tide of foreign compe- "tition, which is forced upon him on every side, lies in his acquiring a further knowledge of the *principles* "which govern, and, when properly understood, lead to the successful practice of his calling."

A. 4.

The Margarine Act. (*See* paragraph 40.)

Dr. Campbell Brown, writing from the Chemical Laboratories, University College, Liverpool, says: "The fraudulent sale of margarine as butter, whole-"sale, is stopped. The fraudulent sale by retail is "very greatly checked by the Sale of Food and Drugs "Act, 1875, and by the more recent Margarine Act, "but it still goes on to a considerable extent. Perhaps "25 per cent. of the samples purchased by inspectors "are fraudulent, but that does not necessarily mean "that 25 per cent. of the butter bought by the public "is fraudulent.

"This fact is known to me by the devices which the "inspectors under the Acts meet with to avoid the "disclosure to the public of the fact that margarine "tubs are not butter. These devices are very various, "and often successful, as is proved by the fact that "prosecutions still take place with regularity, although "in greatly diminished proportion to the number "of butter samples purchased by the inspector. It is "also known, although it is exceedingly difficult to "prove, that some farmers buy margarine in the "towns, take it home, and mix a small quantity with "their own butter. It is impossible to tell to what "extent this practice is carried on.

"Omitting the large towns and cities, and taking "the country districts of Lancashire, and the smaller "towns and villages, the following figures will show "the approximate proportions of offences amongst the "butter samples purchased by the county police:—

"In the year—

1877–78	there were 2	offences out of	10	purchases

Note.—With reference to the decline in the population of the borough of Liverpool between 1881 and 1891, (A.6), Vol. IV., page 13, of the General Report of the Census 1891, says:—

It must not be supposed that a falling off in the rate of increase, or even an actual decline, of the population of a great town necessarily implies any corresponding decline in its prosperity. It may, indeed, imply the very opposite. For it may be that the limited area within the official boundary of the town has become too valuable for ordinary residence, and that warehouses and business premises have taken the place of dwelling-houses; the displaced inhabitants, as well as the new-comers, settling themselves outside the recognised town limits. This process, as is well known, has long been going on in the central districts of London, where the resident population has diminished with each successive enumeration; and doubtlessly it has been going on, if in a less conspicuous degree, in other cities. Thus the real growth of a great town can oftentimes only be properly estimated if the official or administrative boundaries are ignored, and the ring of suburbs be included in its area. The case of Manchester illustrates this. In 1881 it was found that of the 20 great towns, which at that date had a place in the Registrar-General's Weekly Returns, Manchester was the only one in which the population had declined in the preceding decennium, the falling-off being 2·8 per cent. But in the interval between the enumerations of 1881 and 1891, the municipal area of Manchester was extended so as to include its former suburbs, and the population of this wider area, so far from having fallen off in 1871–81 by 2·8 per cent., had in reality increased, so nearly as can be estimated, by some 8 or 9 per cent., and in 1881–91 had further increased by another 9·3 per cent. A similar change would occur in the figures for Liverpool, if the excessively restricted municipal area of that city were extended so as to include the suburbs; for, while the municipal population was declining, the population in these extra-municipal suburbs increased by somewhat more than 61 per cent., and the population of the whole area, municipal and suburban together, was 5·83 per cent. greater in 1891 than it had been in 1881.‡

* In 1891 there were 457 persons temporarily engaged in the union at the Thirlmere Waterworks, and thus the population at the time the census was taken was considerably augmented. If these persons are deducted, the population decreased by 243 or 1·99 per cent.

† This increase is largely due to the increase in the towns of Kirkham Lytham, Blackpool, and Fleetwood.

‡ In making the above calculation, the following areas have been taken as approximately representing the suburbs: The sub-districts of Crosby and Litherland, with the parishes of Bootle, Walton-on-the-Hill, and Wavertree, and the extra-municipal parts of West Derby and Toxteth Park.

   (*h.*) Is labour bill higher since 1882?
   (*i.*) Has labour been curtailed since 1882.

B. 1.

Contracts between Landlord and Tenant. (*See* paragraph 32.)

Name.	District.	Evidence.
Mr. Harrison, farmer, 150 acres. Winmarleigh estate.	Winmarleigh	The best system is to leave the rent question to be settled by landlord and tenant. An Englishman prefers freedom of contract between man and man.
Mr. Tunstall, farmer, 150 acres. The Earl of Derby's estate.	St. Michael's-on-Wyre.	I do not believe in a land court. Landlords and tenants should settle things themselves. Under the late Lord Derby a yearly tenancy was good enough for me. I felt as secure as if I had the longest lease, and I did not care what money I laid out.
Mr. James Stuart, farmer, 190 acres. Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	I have a yearly agreement and no lease. Except under Archdeacon Hornby I should insist on a lease, as I farm high. A man who is qualified to make his way is better with a lease, and, notwithstanding the bad times, there are men of this stamp who will always be at the top. A land court is a terribly wild idea. It would destroy good relations between landlord and tenant, and would do no end of harm in every sort of way. As to restrictions in growth and sale of crops, it is only fair and just that the landlord should have a weapon in his hand if he has a bad tenant, for such a man might strip the farm under a lease and render it valueless.
Mr. Melling, farmer, 150 acres. Winmarleigh estate.	Winmarleigh	I think there should be no restrictions as to cropping. Farmers should farm as they choose, and landlords and agents must look out to get good farmers.
Mr. T. Pearson, farmer, 300 acres. Mr. Norris Bretherton's estate. Agent for three properties.	Nateby	There are no restrictions as to growth or sale of crops on the estates of Mr. Norris Bretherton, Mrs. Bashall, or Mr. R. W. Bashall. In 1873, when the tenants took the farms, agreements were made that if hay and straw were taken off, manure was to be brought on, but these have never been acted on. No question has been raised about dilapidations, but only two tenants have left on the three properties (46 tenants) since 1877. Compensations for permanent improvements to buildings would be settled by arbitration. Compensation for improvements to the soil and outgoing crops settled according to the custom of the country. The outgoing tenant pays 1*s.* a yard for the hay he takes and sells, and the incoming tenant pays for clover seeds sown the previous year. When a farm is vacant on Mr. Norris Bretherton's property we do not let to the highest bidder, but try to let at a reasonable rent to a good man with capital. If I had a bad landlord and wanted to put capital into the land I would insist on a 14 years' lease.
Mr. James Pearson, farmer, 190 acres, Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	I have a yearly agreement, and I would rather have it as things are. It does not matter with a good landlord whether you have a lease or a yearly agreement, but, if I were a landowner, I should have a lease with a tenant unless I had every confidence in him. There are no restrictions as to growth or sale of crops, but, if I were a landowner, I certainly would not let a farm with no restrictions. Incoming tenants pay for clover seeds if outgoing tenant has not pastured them. The bare fallow the outgoing tenant takes two-thirds, and a fallow crop half and half. I believe landlords generally charge 5 per cent. for permanent improvements. Though I am a yearly tenant I feel quite secure in sinking capital with no lease. I certainly am not in favour of a land court; I believe in perfect freedom. If a land court existed and fixed the rent, in my opinion they ought to be responsible for it and see the rent they fixed was paid.
Mr. Wilding, farmer, 128 acres. Mr. Eccles' estate.	Claughton	I would rather have a lease than a yearly agreement, as I feel more secure, but all the property round here is let from year to year. At present, under yearly agreements, farmers certainly have not sufficient security, but, of course, it all depends on the landlord you get under. There are plenty of landlords in this country whose word is as good as the longest lease.
Mr. Brian Dodgson, farmer, 128 acres. Winmarleigh estate.	Catteral	When I first came here I had a lease for seven years, and when it ran out we put nothing in writing, but the agent said you can stay here all your life if you like. I have always had great confidence in my landlord, and it is all the same to me whether I have a lease or a yearly agreement. I feel perfectly secure about putting money into the land. I do not agree to a land court. If I had property I should want to manage it. When a tenant takes a farm he can make half the bargain. Its effect would be to destroy the good relations between landlords and farmers, and would make the landlords take no interest in their property. I consider that there should be certain restrictions in agreements and leases as to growth and sale of hay, straw, and manure, in order that the landlord may be properly protected against bad tenants who might ruin his land.
Mr. R. Porter, farmer, 192 acres. Lord Derby's estate.	Upper Rawcliffe.	I do not see how a land court is to work. You must leave matters of contract to landlord and tenant. Yon Irish job has done no good.

Name.	District.	Evidence.
Mr. Rowe, farmer, 85 acres. Duchy of Lancaster estate.	Catteral -	I am a Liberal, but I am not in favour of a land court. If I myself bought a farm I should expect to let it at a reasonable rent, and I should not like a land court to step in and interfere and say I was not to have as much rent as I thought it was really worth. I am in favour of paying rent on a sliding scale. I am a yearly tenant, and there are strict conditions in writing as to the growth and sale of crops, but they are never enforced except in case of a bad tenant. We are allowed to farm to the best advantage as long as we keep the place in good order. Under my yearly agreement I have confidence in my landlords, and I would just as soon have it as a lease. In fact, under a good landlord, it is better, as you can go when you like.
Mr. Mason, farmer, 214 acres. Myerscough estate.	Myerscough	I cannot sell hay and straw. I think it better to have a free hand. I have a lease of 21 years, with eight years to expire As times go I would rather be a yearly tenant. I have a good honest landlord and I would do just the same in the way of improving my land and building sheds as a yearly tenant.
Mr. Hall, farmer's son, 128 acres. Mr. R. W. Bashall's estate.	Nateby -	I am in favour of a land court to fix the rent, to have power to prevent the landlord sending away a tenant except for some definite reason satisfactory to the court, and with power to prevent rents being raised at the end of a lease on account of the improvements made by tenant, as that discourages good farming. There should be no restrictions as to growth and sale of crops.
Mr. R. Thornton, farmer, 125 acres. Winmarleigh estate.	Winmarleigh	I am a yearly tenant, and I would not farm under a lease under the best landlord in the world, as I like to be free to go where I like. Under the present estate I feel as secure as under the Bank of England. I grow and sell what I like.
The Bolton Dairy Farmers' Association.	Bolton -	In the district of Bolton there are very great restrictions on farming. In the case of good tenants they are not acted on. All the same they are hanging over a man's head, and they could be made to injure him seriously at the time he leaves. A man should have no restrictions. A land court should exist, to which landlords could appeal and point out a tenant was not farming properly, and the land court could then mulct the tenant in damages if the landlord proved his case, but if otherwise the landlord must pay all costs of proceedings. Under the present condition of land tenure it is impossible to do justice to both sides, and the Association have no suggestions to make, other than the creation of a land court, as to how the landlords should be properly protected against bad tenants.
Mr. Sanderson, farmer and cattle dealer, 147 acres. Mr. Fitzherbert—Brockholes' estate.	Claughton -	I am under a yearly tenancy. As long as I am under Squire Brockholes, I feel quite safe in putting money into the land. I do not think a land court would be a bad thing in order to say what is a fair rent. We do not want it here, because our landlord is a gentleman whom we can trust, and he has spent no end of money on his property.
Mr. Dewhurst, farmer, 266 acres. Mr. Fitzherbert—Brockholes' estate.	Claughton -	I advocate freedom of contract between landlord and tenant. I say to folk, go and see your landlord yourself. I did, and got the reduction I asked for without bother. A lot of folk are that stupid they won't go to their landlords.
Mr. Willacy, farmer, 112 acres. Mr. Norris Bretherton's estate.	Nateby -	I dare sink as much capital as I want under my yearly agreement as if I had the longest lease, for I have every confidence in my landlord. I am against a land court. You must leave people free to make a bargain.
Mr. Fenton, farmer. Major Hornby's estate.	Pilling - -	I feel quite as confident in putting money into my farm as if I had a lease. I am not in favour of a land court. It is putting a landlord out of his proper place. It would be very hard on those who bought farms.
Mr. Kelsall, farmer. The Earl of Bective's estate.	Barnacre -	We really have no restrictions, and we can farm with a free hand. I am not in favour of a land court, I say there should be freedom of contract.
Mr. Wilkinson, farmer, 300 acres. Bailiff to Winmarleigh estate.	Winmarleigh	I think a farmer should have quite a free hand to farm as he likes, and I do as I like. But I think that landlords should have agents who can stop bad farming. All the tenants have a free hand on the Winmarleigh estate. A land court is not needed; I scorn the idea. Landlords and tenants can quite well make their own bargain.
Mr. W. Jackson, farmer, 142 acres. Mr. W. Miller's estate.	Thistleton -	I do not believe in a land court. Every man should be able to manage his own business. I shall never vote for a land court, they are not wanted in England. You can keep on good terms with landlords if you choose. It is only odd men want land courts. Nine out of ten farmers do not want them, I believe.
Mr. John Cowell, farmer, 116 acres. Mr. W. Miller's estate.	Thistleton -	I do not think land courts would do any good. If the landlord is good to the tenant, and the tenant to the landlord, there is a chance for agriculture yet. I do not think it is any use trying to make people do things. People do not like it. If you prick a snail he curls up, and that is what people do if you use compulsion. If we are to have a land court, we are all fools in a lump, if we cannot make a bargain. We farmers surely know how much a farm is worth when we take it; if not we must be fools.
Mr. Robert James, farmer, 206 acres. Mr. T. Miller's estate.	Singleton -	I would rather deal with a landlord than a land court. If a tenant cannot get on with his landlord he is one of those who get on with nobody.
Mr. Gillett, farmer, 75 acres. Mr. Clifton's estate.	Lytham -	I farm just as well under a yearly agreement as I would under a lease, for I have every confidence in the landlord behaving well to me.
Mr. Robert Warley, farmer, 75 acres. Mr. Clifton's estate.	Lytham -	I farm just as high under a yearly agreement as under a lease, as I put trust in my landlord. It all depends on what landlord you are under. I do not believe in a land court. When folk have land of their own, they should let it as they can. In the same way, when I take my stock into market, I prefer to sell it for what it is worth; if not I bring it back again. This land court business is all like the boycotting business. Let folk be free.
Mr. Fisher, farmer, 134 acres. Mr. Clifton's estate.	Wrea Green	I am perfectly secure here, as my family has been here 160 years or so; but I think in some cases there is ground for a feeling of insecurity as regards putting money into the land. A land court would not do at all. If I were a landlord I should wish to dictate my own terms as to rent, and also I should wish to have full power to get rid of a bad tenant.
Mr. Butler, farmer, 118 acres. Mr. Clifton's estate.	Near Lytham	I should not care to see a land court. The present system is better for landlord and tenant to be free to make their own bargain. It is quite fair as it is. I am quite satisfied with the restrictions in my agreement. I may not plough up old meadow, which is quite right. There are a lot of bad tenants who might plough up meadow land their last year.
Mr. W. Collinson, 120 acres.	Garstang -	I am in favour of a court of arbitration to settle disputes without appeal, such as that proposed by Mr. Kay, President of the Lancashire Federation, but I am not in favour of a land court to interfere with rent. I prefer a yearly tenancy, as I can leave when I like. A yearly tenancy with security is the best one. I have no restrictions and farm with a free hand.
Mr. Whittaker, farmer, 155 acres, Kirkland estate.	Kirkland -	I would rather deal direct with a landlord than a land court as regards rent. It is a lot better for landowners and tenants to work together. I have unnecessary restrictions in my lease, and I think farmers should have a free hand. If you broke some clause in your agreement the landlord would have the power to make it impossible for you to successfully claim for unexhausted improvements. I am not allowed to plough or sell any produce without a written permission from the landlord.

APPENDIX B. 2.

The Agricultural Holdings Act.

(*a.*) Evidence of Farmers.

(*b.*) Evidence of Landowners and Agents.

(*c.*) Extracts from the proposed Tenant Right Bill of the Lancashire Federation of Farmers' Associations.

B. 2 (*a*).

Evidence of Farmers.

The Agricultural Holdings Act. (*See* paragraph 29.)

Name.	District.	Evidence.
Mr. Rowe, farmer, 85 acres, Duchy of Lancaster Estate.	Catteral -	As to claims for improvements in the cultivation of the soil, if tenants claimed anything, the landlord would counter-claim for dilapidations. We think the Agricultural Holdings Act should be amended. Farmers ought to be as sure of getting reasonable compensation for unexhausted improvements, and the method should be as easy as getting money out of an insurance company after a fire. At present farmers dare not try to get it, because of expense. Landlords do not take much notice of dilapidations unless tenants claim for improvements.
Mr. Hall (senior), farmer, 128 acres. Mr. R. W. Bashall's estate.	Nateby -	I know of no cases of landlords claiming for dilapidations. On the other hand, if tenants have improved their land they make no claim, for fear of the question of dilapidations being raised.
Mr. Wilding, farmer, 128 acres. Mr. Eccles' estate.	Claughton -	The question of dilapidations is seldom raised in this country. I never knew but one case in the district in my time. I do not think tenants have ever taken any notice of the Agricultural Holdings Act. If they have improved the soil, they go out and leave it. On the other hand, there are plenty of the sort of tenants who go out having done harm to the land, and the landlords never claim anything, as far as I know.
Mr. Brian Dodgson, farmer, 128 acres. Winmarleigh estate.	Catteral -	I never heard of any question raised about dilapidations. I do not think tenants expect anything for unexhausted improvements, and if a tenant lets down the land, I do not think anything would be said. No doubt some tenants have left the land in a very poor state, but I never heard of landlords making any claims. Probably some tenants do not claim at the end of a tenancy for unexhausted improvements, because they are afraid of claims for dilapidations.
Mr. Sanderson, farmer and cattle dealer. 147 acres. Mr. Fitzherbert Brockholes' estate.	Claughton -	I do not think the Agricultural Holdings Act is any use to farmers. They generally go out without saying anything about improvements. They think it is cheaper to let it alone.
A farmer, under 100 acres.	Barnacre -	Before the case came to arbitration under the Agricultural Holdings Act I should withdraw my claim if the landlord did not meet me, for I would rather take nothing than fight.
Mr. Dewhurst, farmer, 266 acres. Mr. Fitzherbert Brockholes' estate.	Claughton -	A man should leave the farm as he found it, but if he leaves it better, he should be paid for it. There is a deal of folk in this part who do not farm well, and so do not claim for fear of claim for dilapidations.
Mr. Willacy, farmer, 112 acres. Mr. Norris Bretherton's estate.	Nateby -	If I left this farm, I would not claim for unexhausted improvements, as I would not risk the expense.
Mr. W. Jackson, 142 acres. Mr. Miller's estate.	Thistleton -	I am a yearly tenant. I am not afraid to put money into the land. No landlord who is not silly would turn a good farmer off. It makes no difference to me whether I have a lease or an agreement. I farm just the same, that is, as well as I can, and it will bear inspection. Any honest English farmer will farm his best. If I made any improvements, it would be a very easy matter to settle it with my landlord. My opinion is there are lots of farmers doing no improvements, but the reverse.
Mr. William Collinson, farmer, 120 acres.	Garstang -	I am a yearly tenant, and I farm as high as if I had a lease, as I trust my landlord, but I think the law should be so altered as to enable a tenant to get compensation for unexhausted improvements by a cheaper method than he can at present. A man should feel safe about getting compensation, no matter what landlord he is under.
A farmer, 190 acres.	North of Lancaster.	I do not feel any security under the Agricultural Holdings Act. I have drained 50 acres, and supplied 4,000 out of 6,000 tiles, and did all the labour. I have farmed well, and the land would let for more now than when I came on. I would farm high if I had more certainty.
Mr. Baynes, farmer and agent.	Lune Valley -	The Agricultural Holdings Act requires amendment. We want some easier and cheaper way of obtaining compensation for improvements. In many cases a landlord has a perfectly just claim for dilapidations when a tenant leaves him, as very few tenants keep everything up to the mark.
Mr. William Thompson, chairman. Mr. Richard Dutton, secretary.	The Fylde District Farmers' Association.	Farmers have not sufficient security to induce them to sink capital on their farms. An amendment of the Agricultural Holdings Act would meet the case.
Mr. Stephen Harris, farmer.	Lunesde -	The Agricultural Holdings Act is a farce. I had an experience in one case. I would rather forego any claim, unless I had a very clear case, than go through the weary and unsatisfactory round a disputed claim involves.
Mr. R. Webster, farmer Lord Sefton's estate.	Chairman of Liverpool District Farmers' Club.	I think the claims of the tenant and the landlord for compensation for unexhausted improvements and dilapidations should both be sent in on the same day. Tenants in our district feel secure, though they are yearly tenants. It pays them to farm high almost to the end of their term. As a rule, matters are settled amicably between landlord and tenant. The manure and produce are sold by the tenant who owns them.
Mr. John Cowell, farmer, 106 acres. Mr. W. Miller's estate.	Thistleton -	I am a yearly tenant. I farm as I like, and am not afraid to farm as high as under a long lease. Last year I put on 42 cwts. of bones, and bought a lot of other stuff. Bless me, my landlord would give me all the compensation I asked for!
Mr. Robert James, farmer, 206 acres. Mr. T. Miller's estate.	Singleton -	Round about here, landlords and tenants make no agreement as to compensation for unexhausted improvements. At the end of a tenancy the question of unexhausted improvements and dilapidations are let alone. When I left my last farm in Westmoreland, I was paid for unexhausted improvements according to schedule under my agreement, which the incoming tenant paid for.
Mr. R. Porter, farmer, 192 acres. The Earl of Derby's estate.	Upper Rawcliffe.	In my position, as I farm high, I ought to have compensation for unexhausted improvements if I left. I am not afraid of counter claims for dilapidations, as I have kept the place in good order. I am a yearly tenant, with nothing in writing. I put a lot of money into the land, and I feel quite secure under my landlord. If I could not get what I wanted from an agent, I should say: "This is "a matter between me and Lord "Derby, and I shall settle it with "him."

Name.	District.	Evidence.
A farmer, 280 acres. Lord Derby's estate.	Weston -	The landlord put up some buildings to balance my bringing 40 or 50 acres of bog into cultivation 20 years ago.
Mr. J. Jackson, farmer, 124 acres. Mrs. Dickenson's estate.	Stalmine -	I have done all the repairs myself till last year. I have had to pay 7 per cent. for some bones put down on the land.
Mr. John Crook, farmer, 200 acres. Lord Chesham's estate.	Inskip - -	The son, as a rule, succeeds the father in a tenancy. We have to pay 5 per cent. on draining.
Mr. R. Thornton, farmer, 126 acres. Mr. Edmondson's estate.	Caton with Littledale.	The landlord and tenant generally mutually agree. Failing that, arbitration.
The Bolton Dairy Farmers' Association.	Bolton District.	The Agricultural Holdings Act is a perfect dead letter. It will never act under the present conditions of tenure. If a farmer tried to compel the landlord to compensate him for improvements, the landlord would put in a counterclaim. The Association have no suggestions as to how the Act could be made to work except by the establishment of a Land Court, to which all question of compensation would be referred. The value of unexhausted improvements would be a question between the outgoing and incoming tenant. The landlord should not be compelled to pay for anything that has not a marketable value. The Agricultural Holdings Act does not give the farmer encouragement or security to put money into the land. The farmers in the neighbourhood of Bolton are chiefly "milk-kitters," who sell their milk direct to customers in the town. They thus have a goodwill to dispose of when they leave their farms, and it is usually the custom for them to procure a purchaser to succeed them therein, the landowners generally being agreeable to such arrangement.
The Lancashire Tenant Farmers' Association.	Consists of 300 members, chiefly from the Fylde district, and a few from South Lancashire.	The Association has considered the matter, and discussed remedies, but has come to the conclusion it is impossible to make the Act work without a land court.
The Lancashire Federation of Farmers' Associations.	Consists of 700 members representing the Blackburn, the Rossendale, the Fylde, the Burnley, and the Preston Farmers' Associations.	Compensation for unexhausted improvements is not asked for in one case out of ten. The general feeling is the farmers do not want leases, but security for good farming, a feeling that they could reap the benefit of their improvements, and that any capital they put in the land would be as safe as if it were put in the bank. They want that they and their relatives should feel secure in that respect. A feeling of insecurity prevails, which prevents men putting capital into the land. The Association considers it absolutely necessary to have an improved Agricultural Holdings Act, as the present Act is no use to the farmers. They consider it too expensive; that it is not sufficiently definite; that the landlord has an unfair advantage, by having time to consider the tenant's claim before making his counterclaim for dilapidations, and that the clause relating to improvements due to the inherent capabilities of the soil is fatal to justice being obtained. Mr. Barlow, the vice-president, has framed a Bill dealing with these and other points. It suggests that the county council should be empowered to select a certain number of practical agriculturists as arbitrators, and that landlord and tenant shall each select one for the purposes of arbitration, and in case of dispute a reference should be made to the County Court Judge. The mode of procedure under the present Act is too expensive, and besides there is great uncertainty as to whether there would be any compensation in the end, in consequence of the ambiguity of the Act. If tenants were sure of full compensation for their improvements, there would be an end of the insecurity which is now felt. The Act of Parliament should be made so clear that the landlord or tenant should be able to "tot up" without hesitation the amount of compensation the tenant was entitled to. If absolute security were given by Act of Parliament for compensation for unexhausted improvements without expense and litigation, fixity of tenure would be a thing unasked for. The very fact of a landlord having to pay compensation for a greatly improved farm would deter him from giving a tenant notice. It would ensure all the fixity of tenure that tenants really desired. Tenants prefer yearly tenancies. They want to be free to go, but to be paid in full for their improvements when they leave.

B. 2 (*b*).

Evidence of Landowners and Agents. (*See* paragraph 29.)

Name.	District.	Evidence.
Mr. Sykes, agent to Mr. Wilson-ffrance.	Rawcliffe Hall Estate.	The landlord keeps the premises in repair, though this is contrary to the lease. For unexhausted improvements, *see* Lease, clauses 36–41:— 36. For all linseed cotton, or rape cake, or Indian corn, or linseed consumed by cattle or sheep (but not horses) on either arable or pasture land during the last year of the tenancy one-half the cost shall be paid. 37. For all guano or purchased animal manure used for land under tillage during the last year of the tenancy one-half of the actual cost of the same shall be paid. 38. For all raw or boiled bones applied in the last year of the said term to land afterwards mown, two-thirds of the cost of such material, and if applied in the preceding year, one-third of the cost of such material. 39. For all land whether grass or tillage clayed, marled, or limed during the last year of the said term, two-thirds of the cost of the labour, and for similar work done in the last year but one of the said term, one-third of the cost of such work.
Mr. Sykes—*cont.*	- - -	40. For all ground boiled bones applied to pasture land and not afterwards ploughed or mowed the following allowances shall be made. If applied in the last year of the term, four-fifths of the cost of the material, if in the last year but one, three-fifths of the cost, if in the last year but two, two-fifths of the cost, and if in the last year but three, one-fifth of the cost. 41. For all ground raw bones applied to pasture land and not afterwards ploughed or mowed the following allowances shall be made. If applied in the last year of the term, seven-eighths of the cost of the material, if in the last year but one, six-eighths, if in the last year but two, five-eighths, if in the last year but three, four-eighths, if in the last year but four, three-eighths, if in the last year but five, two-eighths, and in the last year but six, one-eighth. The Agricultural Holdings Act is practically a dead letter, and in some cases, in my opinion, has done more harm than good, by estranging the landlord and tenant, and interfering with the freedom of agreements and contracts.

Name.	District.	Evidence.
Mr. Laurence Rawstorne.	Hutton Hall, Preston.	I have never received a farthing for dilapidations, but have to make them good, and frequently to take a farm in hand to put it in order for letting. Two tenants of mine who went to farm in Essex, did not leave a fence on their farms. TERMS OF AGREEMENT. The landlord hereby agrees to give and the tenant to take compensation for outlay and improvements on the following scale :— SCHEDULE 1. In respect of outlay during the last two years of occupancy, but outlay in the last year not to exceed the average of three preceding years. Items of Outlay: Cotton, Linseed or other Cakes. How applied: Consumed on farm by cattle or sheep. Last Year of Tenancy: One-third of cost. Last but one: One-sixth of cost. Exclusive of carriage. The tenant must produce satisfactory vouchers to the landlord for all compensation claimed under Schedule 1, and send his claim in writing with such vouchers to the landlord or shall not be entitled to any allowance. SCHEDULE 2. In respect of the following unexhausted improvements. Items of Outlay. Scale of Compensation. Exclusive of carriage. New buildings erected and delivered up in good repair. On a 20 years scale. New quick-set fences - - - do. do do. Eradicating old fences - - - do. 10 years do. Half or quarter inch bones applied to pasture land. do. do. do. Bone dust applied to do., do. - - do. 7 years do. Draining—not less than 3½ feet deep—the landlord finding and laying the tiles. do. 10 years do. Draining—not less than 3½ feet deep—the landlord laying the tiles only. do. 15 years do. Liming for grass land - - - do. 7 years do. Marling - - - - - do. 7 years do. Bought stable or farmyard manure for meadows. do. 2 years do. Bought stable or farmyard manure for pastures. do. 6 years do. Phosphate manures applied to pastures do. 3 years do. No allowance will be made by the landlord in respect of Schedule 2 unless the *written consent* of the landlord to the outlay being made was first obtained, and unless all documents with satisfactory vouchers have been produced to the landlord within three months after the completion of the work or outlay, and the tenant shall have received a certificate from the landlord stating the amount upon which the allowance is to be calculated. If the tenancy continues for 10 years, at the end thereof either the landlord or the tenant may require a readjustment of the rent and after such readjustment the tenancy shall in other respects continue upon the terms of this Agreement, and the tenants claims to compensation under Schedules 1 and 2 shall be in no way prejudiced.

Name.	District.	Evidence.
Mr. G. Garnett, Agent to Capt. Garnett, Wyreside.	Lancaster -	Nothing has been charged for dilapidations, as no claim for improvements has been made. Every effort is made to prevent dilapidations amounting to anything serious. There never has been a case in which the tenant would have a credit balance if dilapidations were charged. The Agricultural Holdings Act is nothing in this district.
Mr. John Allen, The Laurels.	Lancaster -	No case has arisen. The landlord does permanent improvements. There is no trouble about cultivation. The Agricultural Holdings Act has made no difference here.
Mr. H. G. Smith, Moor House.	Eller - -	I cannot get any compensation for dilapidations. I build all the buildings, and do all repairs myself. I do all the draining where required, the tenant carting the tiles. No interest charged. The Agricultural Holdings Act is seldom called into operation.
Mr. E. B. Dawson, Aldcliffe Hall.	Lancaster -	I never receive any compensation for dilapidations, but I am continually making repairs and improvements, for which I get no increased rent. I have had no experience of unexhausted improvements. The Agricultural Holdings Act has had no effect here.
Mr. A. Ford, agent for Sir U. Kay-Shuttleworth, Bt., M.P.	Gawthorpe Hall, Burnley.	The question of dilapidations by the tenant at the end of the tenancy has never arisen. In case of a change of tenancy, the question of compensation for improvements is settled between landlord and tenant without any difficulty, the landlord generally paying the tenant for any permanent improvements (outbuildings &c.), and any recent expenditure in manure, the benefit of which is not exhausted. No questions have arisen out of the Agricultural Holdings Act between landlord and tenant on this estate. The only effect of it has been that while the landlord is still willing to accept a six months' notice for the termination of a tenancy, no farmer would receive less than 12 months' notice from the landlord.
Messrs. J. W. McIvor and Co. (agents).	Winmarleigh Estate.	No claim on the part of the landlord for dilapidations has ever been made. Compensation for Improvements.—For draining or filling up ditches and watercourses, or planting new fences, if done with the permission in writing of the landlord or agent, and at the sole expense of the tenant, the actual cost, less $\frac{1}{14}$ for every year up to 14 since the work was done; if the labour only provided by the tenant, and the landlord provides all materials, then the tenant to be allowed the actual cost of the labour, less $\frac{1}{7}$ for every year up to seven since the work was done. For buildings erected at the sole cost of the tenant, the actual cost, less $\frac{1}{20}$ every year up to 20 since the erection; if the labour only supplied by the tenant, and the materials by landlord, then tenant is allowed actual cost of labour less $\frac{1}{10}$ every year up to 10 since erection. For other permanent and durable improvements, if done with permission in writing of landlord or agent, such proportion of cost as may be agreed upon in writing at the time the improvement is effected. For all raw bones of approved value applied to permanent grass lands, the actual cost, less $\frac{1}{8}$ for every year up to eight since the bones were so applied. For all boiled ground bones of approved value applied to permanent grass lands, the actual cost, less $\frac{1}{5}$ for every year up to five since the bones were applied. For all ground bones (whether boiled or raw) of approved value, applied to land in an arable state, half the cost if used during the last year of tenancy. For linseed cake, cotton cake, rape cake, or any other manufactured feeding stuffs of similar manurial value, which have been consumed on the farms during the last year of the tenancy, $\frac{1}{2}$ of the amount. For claying or marling, the whole of the cost for the first three years, and after that $\frac{1}{7}$ to be deducted yearly for seven years. For lime used on permanent grass land the actual cost to be allowed, less $\frac{1}{7}$ for every year up to seven since the lime was so applied. The effect of the Agricultural Holdings Act has been nil,

Name.	District.	Evidence.
Mr. George Drewry (agent.)	Holker Estate.	No compensation for dilapidations ever claimed by landlord. Compensation for improvements is all settled by terms of farm agreements. All permanent buildings and improvements are made by landlord.

EXTRACT FROM AGREEMENT ON HOLKER ESTATE.

It is mutually declared and agreed by the parties hereto and decided, that the following scale of allowances is a fair and reasonable one, and that such allowances shall be made by the landlord to the tenant on the termination of the tenancy in respect of those improvements mentioned in part 3 of schedule 1 of the "Agricultural Holdings (England) Act, 1883," viz. :—

1. One-third of the cost of linseed cake and cotton cake which has been used for feeding cattle and sheep since the 1st day of October then last, and one-sixth for that used during the twelve months preceding the said 1st day of October.
2. One-half of the cost of unboiled half-inch bones used with green crops after one crop, one-third after two crops, and one-fourth after three crops.
3. One-third of the cost of guano or superphosphate, used with green or grain crops during the last year of the tenancy, but the allowances under any of the foregoing heads, Nos. 1, 2, and 3, shall not exceed the average amount which has been expended during the three preceding years.
4. For lime used on arable land. The cost price at the kiln or railway station on a four years' principle, *i.e.*, the allowance to be reduced by one-fourth part every year until the four years have expired.
5. For lime used on permanent pasture land. The cost price at the kiln or railway station on a 12 years' principle, *i.e.*, the allowance to be reduced by one-twelfth part every year until the 12 years have expired.
6. For the cost of claying on an eight years' principle the whole of the cost being allowed for the first three years, and after that period one-fifth part to be deducted yearly for the remaining five years.
7. For the cost of bones used on permanent pasture land as follows :—For unboiled half-inch bones on a ten years' principle. For dissolved bones on a five years' principle, *i.e.*, the allowance to be reduced by one-tenth or fifth each year until the ten or five years, as the case may be, are expired.
8. One-half of the cost of guano or superphosphate used on permanent pasture land during the last year of the tenancy, and one-fourth of the cost of such manures used during the preceding year.

And that the said Act shall apply to the tenancy when not rendered inapplicable or unnecessary by the adoption of such scale.

And that the tenant shall on the first rent day in each year give an account in writing of his outlay during the preceding 12 months.

Should any claim or dispute arise under this agreement the same shall be ascertained and settled (if necessary) by a reference in the manner provided by the "Agricultural Holdings (England) Act, 1883," and any question relating to distress shall be decided by a court of summary jurisdiction as provided by section 46 of the said Act.

Mr. Drewry writes: "I consider our compensation "clauses are all that any tenant can have a just claim "for. I have never had any complaint from any "tenant on that score. I believe they are perfectly "satisfied with them. All the manure made on the "farm belongs to the landlord. On leaving, the only "claim a tenant has is for compensation for purchased "food and manure, and for the grass seeds sown the "preceding spring. Our tenants are able to enter "upon their farms with much less capital than many "tenants can when the manure does not belong to the "landlord. On all property which has been purchased "the manure has been purchased for the tenant by the "landlord. I have been agent for this property for 48 "years, and have only had one case of disagreement "with a tenant."

Name.	District.	Evidence.
Mr. Albert Greg, President of Lancaster Agricultural Society.	Caton, Lancaster.	The tenant has to compensate the landlord at the end of his tenancy for any want of reparation. The landlord does all necessary buildings and permanent improvements, and has power to charge 5 per cent. interest, though I have never done so. Improvements in cultivation are paid for by a scale of compensation agreed on taking the farm. I feel that the Agricultural Holdings Act has scarcely been wanted in this part of Lancashire, as the arrangements for generations have gone amicably on, and that the landlord, as a rule, is not hard with his tenants. I should say, personally, the Act is not perfect. The means at the disposal of landlord and tenant to get what is their due are much too costly, and I should welcome some amendment on this point. It is of the utmost importance to both that they should feel secure about the land and what is put into it, and the public, too, have a right in this matter, for good and bad farming affect them as well.
Colonel Ormrod, Wyresdale Park.	Garstang	Compensation for dilapidations and improvements is all settled by the terms of the agreement. The Agricultural Holdings Act is scarcely ever used.
Messrs. Fair and Rea (agents to the Earl of Bective, Earl of Crawford, T. H. Miller, Esq., W. P. Miller, Esq., Captain Chichester, A. Joy, Esq.).	Lancashire estates.	The landlord never receives any compensation for dilapidations unless the Agricultural Holdings Act is put in force (in Lancashire very few claims are made under it, mainly, it may be reasonably supposed, because a counterclaim may then be expected, and be very generally maintained); recent decisions all over England where the Act has been resorted to, go to prove this. In most cases, in our practice, compensation for improvements has been made the subject of previous arrangement, and either given effect to by letter, or an endorsement on the agreement. This is specially so as regards application of lime, bones, and grass seeds, &c. The Agricultural Holdings Act is practically inoperative in Lancashire for the reasons given above. The fact that tenants are afraid of counterclaims, however, goes far to prove that in fairness to the owner there is necessity for some enactment of the kind.
Mr. W. Wrennall (agent to late T. B. Cole's estate).	North Lancashire.	No dilapidations are charged to out-going tenants usually. Permanent improvements, buildings, &c. are done by the landlord, never by the tenant. Provision is made for allowance to out-going tenant for unexhausted value of feeding stuffs, bones, and other manures. The Agricultural Holdings Act seems to be almost a dead letter.
Mr. Jacob Fair, estate agent.	Preston	In my experience on one large estate there has never been one case under the Agricultural Holdings Act. It is practically inoperative in Lancashire, chiefly on account of the expense of procedure, but very generally because tenants are afraid of counterclaims. The latter reason goes far to prove that in all fairness to the owners, there is some necessity for some enactment of the kind. If tenants are afraid of counterclaims, it shows there is some cause for that fear. There are many instances where farms are very much let down at the end of a tenancy. There is no doubt that amendment of the Act is required. I have not the very slightest objection to see the Act simplified, and the procedure cheapened.
Mr. W. Fitzherbert-Brockholes, landowner.	Claughton Hall.	I think both landlord and tenant should receive notice on a certain day that a claim is to be made, and then both should send in the details of their claim on the same day.
Mr. T. Fair, agent to Mr. Clifton.	Lytham Estate.	No charge has ever been made against tenants for dilapidations when they leave. I always dread a change of tenancy, as it always involves considerable outlay to put the farm in proper tenantable order. In the few cases where buildings have been erected by the tenant, the full cost has been returned to him by the landlord, by half-yearly payments. In other cases, the whole of the materials have been found at the cost of the landlord, the tenant paying for the labour, but, as a rule, all permanent buildings have been erected by the landlord without percentage being charged to the

Name.	District.	Evidence.
Mr. T. Fair—*cont.*	- - -	tenant. Where Dutch barns have been erected by the tenant, he has been allowed to remove them, or to claim their value from the incoming tenant. Compensation for improvements in cultivation is settled by the agreement. On this estate the Agricultural Holdings Act has not in a single instance been put into force. There has only been one arbitration with an outgoing tenant, within my recollection.
Mr. W. Smith, M.P.	Lancaster -	There is no doubt at all that the cost of getting an award is so great that tenants do not avail themselves of the privileges of claiming under the Act. The result is a feeling of insecurity, and hence there is slovenly farming, and less production. To get high class farming there must be an absolute certainty that a man will reap the reward of his energy, and of what he puts in the land. If you give him absolute security for what he puts in the land, he will farm better, and be more contented.
Mr. J. H. Logan, agent to Mr. Fitzherbert, Brockholes.	Claughton -	The Agricultural Holdings Act is no good whatever. It only raises class against class.
Colonel Wyatt (agent to Earl of Sefton), Croxteth estate.	- - -	The tenants, though excellent on the land, are not good at doing their inside repairs, and I have no doubt that *legally* dilapidation could be claimed, but in the case of a tenant who has come to the end of his tether, he has nothing to pay them with; in the case of a farm going from father to son, I put the place straight for him, in fact, do his dilapidations, and he pays sometimes a little increased rent—this avoids friction. Permanent improvements in buildings are rarely done by the tenant; if done, it is by arrangement beforehand. I offer to spread cost over from 15 to 20 years (Agricultural Holdings Act), or they to pay 5 per cent. on outlay—or the old custom of the estate, they to pay half, and the landlord half, and *not* to stand as an improvement. This they most foolishly, and against my advice, usually choose. *Draining.*—Landlord gives tiles for draining, tenant does labour, and it does not stand as an unexhausted improvement, but if a tenant died or left just after doing the work, I should probably make an allowance. but am not bound to do so. *Levelling fences*—I give tiles for the ditches (sometimes 9 or 12 inch), thorns for fences, and sometimes rails for protection (if up to a road). Tenant's cost for levelling, of course, varies, say, 3*s.* per rood (eight yards), preparing and planting thorns, 6*d.* per rood. Landlord's vary still more. In fact, we divide the cost between us. I have, in my agreement schedule, to put down all these acts, and am willing to do so, but *I have never yet had a tenant* who has taken the trouble to come to me to make any arrangement, and not one single act of improvement is entered. *Improvements in cultivation* (manure, &c.) by the "incoming custom," the incoming tenant compensates the outgoing tenant for any unexhausted manure, and pays for any in the yards. No extra rent is ever charged for land gained by levelling fences, &c. There is a great outcry for better and simpler security for unexhausted improvements than is given under the Agricultural Holdings Act. I believe that actually there are but few acts of *definite* improvement done by tenants; if there are, they either live on their farms long enough to recoup themselves, or, if they leave before that time, the landlord is willing enough to pay them whatever is due. But tenants, I think, are *really* asking to be paid for what I will call "betterment." A tenant takes a farm, and farms it highly to benefit himself, and it pays him to do so; of course after some years of this the farm must be improved. The tenant has made no special outlay for this, he has only done his duty and what is best for the farm, and having really repaid himself, he wants to be repaid a certain sum by the landlord as well, which it is almost impossible to define, or put a price on. It is like a man who fills a cask with sherry, and having sold all the wine, wants to be paid for the smell of the sherry, which he cannot help leaving in the cask. But tenants generally settle the "betterment" question for themselves by farming the place out, and they sometimes overdo it, and make a loss for themselves in the last year. The Agricultural Holdings Act is a dead letter in this district.

Extracts from Conditions for Letting a Farm on the Estate of the Right Hon. the Earl of Sefton, K.G.

Outgoing Conditions.

Fixtures &c.

All grates, boilers, and mantel-pieces to be kept in repair and renewed by the tenant, when necessary. On leaving, any that have been put in by the tenant may be removed by him, the landlord being first given the option of taking them at a valuation.

Garden

The tenant on quitting, not to remove or sell any trees, shrubs, or plants, excepting young fruit trees not having borne fruit, and which have not been planted with a view of replacing others in orchard or garden.

Unexhausted improvements.

In accordance with the "Agricultural Holdings Act, 1883."

1st Class.—The landlord will allow the outgoing tenant for permanent improvements described in Part 1, Schedule 1 of the Act, or for other works of a like nature done by the tenant, provided that, in accordance with the provisions of the Act, such improvements have been sanctioned by the landlord.

Memorandum.

Lord Sefton will not give his sanction to any improvement unless the time over which the compensation is to extend is settled in writing BEFORE *execution of the improvement, and unless it is passed and approved on completion, and the cost and terms of compensation then entered in Schedule* 1 *attached to this Agreement.*

In accordance with the "Agricultural Holdings Act, 1883."

2nd Class.—The landlord will allow the outgoing tenant compensation for drainage, Part 2, Schedule 1 of the Act, due notice of the same having been given by the tenant in writing.

Memorandum.

On any tenant giving due notice of drainage, Lord Sefton is prepared to make reasonable terms for compensation for the same, such terms and the cost being entered in No. 1 *Schedule attached to this Agreement. Failing any terms being arrived at, Lord Sefton will, in accordance with the terms of the Act, do the drainage himself, charging the tenant* 5 *per cent. on the cost.*

In accordance with the "Agricultural Holdings Act, 1883."

3rd class.—The landlord will allow the outgoing tenant fair and reasonable compensation for unexhausted improvements in the cultivation of the soil, as described in Part 3, Schedule 1 of the Act.

Memorandum.

These acts of improvement may be performed without any reference to the landlord, and the terms of compensation settled by arbitration, on quitting—but it is strongly advised, in order to avoid the expense and difficulties of arbitration, that the tenant should settle terms at the Croxteth Office beforehand, and have the cost of the manures then entered in No. 2 *Schedule attached to this Agreement.*

Deterioration.

The landlord shall be paid by tenant for all deterioration or delapidation in the premises, buildings, land, roads, drains, plats, soughs, watercourses, fences, &c., caused by default of the tenant, whether proceeding from the non-observance of the clauses in this agreement or otherwise; and the amount of such deterioration or dilapidation, if not agreed on between the tenant and landlord (or his agent), to be decided by arbitration, and to be recoverable by action or distress as rent in arrear.

The landlord to pay the outgoing tenant on expiration of tenancy (receiving the same again from the incoming tenant previously to his entering upon the farm).

Wheat.

1. For half crop of wheat sown in course on land properly manured and prepared for the same, on a valuation to be made before the 2nd February (the day of tenant's leaving), the valuer or valuers to be appointed by landlord and tenant before the wheat is sown.

Seeds.

2. For the cost of seeds (vouchers being produced), and labour in sowing the same, provided such seeds are not pastured after the 12th October, and at least one-third of his land is left in grass and seeds.

Ploughing.

3. For any ploughing and preparation of land done on the farm, with permission of the landlord or his agent.

Manure.

4. No manure shall be removed from the premises after a notice to quit has been given, but all manure which has been made or been brought and left on the premises after the 1st of May, in last year of tenancy, *shall be paid for by the landlord at a valuation, but shall not be sold by auction.* In case of disagreement the matter to be settled by arbitration. The arbitrators and their umpire to be furnished by the outgoing tenant, with vouchers for manures purchased and feeding stuff used during the previous year, to assist them in arriving at a valuation.

SCHEDULE No. 1.

PERMANENT IMPROVEMENTS carried out by JOHN JONES.

Description of Improvements.	Date of Sanction.	No. of Years allowed.	Approved Cost.	Column showing Amount to be allowed in any Year the Tenancy may cease.							
				1893.	1894.	1895.	1896.	1897.	1898.	1899.	&c.

SCHEDULE 2. (To be appended to Agreement.)

COMPENSATION FOR THIRD CLASS IMPROVEMENTS.

Agricultural Holdings Act, 1883.

Boning with undissolved bones on pasture land, on the seven years' principle.

Boning with undissolved bones, when the pasture has been since mown or ploughed on the five years' principle.

Chalking, Clayburning, Claying, Marling } The whole cost for the first three years after outlay, and then one-sixth to be deducted annually (as usually calculated on the nine years' principle).

Liming.—The same as boning with undissolved bones.

Purchased artificial or other purchased manure of good quality, applied in last year of tenancy to clover or grass seeds, and mown once only, one-half of the full cost.

B. 2 (c). [*See* paragraph 30.]

EXTRACTS FROM MR. BARLOW'S TENANT RIGHT BILL.

First Schedule.

Part I.

First class improvements.

1. Draining of land.
2. Erection, enlargement, or repairing of buildings.
3. Laying down of permanent pastures.
4. Making of osier beds.
5. Making of water meadows.
6. Making of gardens.
7. Making or improving of roads or bridges.
8. Making or improving of water-courses, ponds, wells, reservoirs, or of works for supply of water for agricultural or domestic purposes.
9. Making or enlarging of silos.
10. Making of fences or improving same.
11. Planting of hops.
12. Planting of orchards.
13. Reclaiming of waste lands.
14. Warping of land.

Any of the aforesaid improvements shall be deemed for the purposes of this Act not to become exhausted improvements until the end of 25 years from the year in which the outlay was made, and for the unexpired portion of years from the date of the outlay, the landlord shall compensate him proportionately at the determination of the tenancy.

Part II.

Improvements which can be executed without giving notice to the landlord.

That after the passing of this Act, the boning of land with undissolved bones and the liming of land and fertilizers shall hereafter be considered to last 14 years before becoming exhausted manures, to date from the time the outlay was made upon the holding, and if the termination of the tenancy takes place before the end of the aforesaid term of 14 years, compensation shall be paid by the landlord proportionately for the remaining years unexpired.

Part III.

That on and after the passing of this Act it shall be lawful for the tenant at the determination of a tenancy to claim compensation for purchased feeding stuffs not produced on the holding, consisting of cotton cake and oil cake of which manurial properties contained therein shall not become exhausted before the end of four years, and that in ascertaining the amount of compensation, the authority empowered for that purpose to take into consideration the amount consumed during the last four years of the tenancy, and the rate of compensation allowed, shall be for the first year 25 per cent. of the cost price, for the second year 17 per cent., for the third year 12 per cent., and for the fourth year 8 per cent.

And for other feeding stuffs, compensation shall be allowed to the tenant for the last two years of the tenancy at the following rate:—10 per cent. of the prime cost for the first year, and 5 per cent. for the last or second year. Purchased manures, hay, straw not produced on the holding to which this Act applies, shall be allowed as compensation to the outgoing tenant at the rate of one-fifth of their prime cost, and such allowance shall extend to the last two years of the tenancy.

APPENDIX B. 3.

Suggested Remedies for Agricultural Depression.

(*a*) Evidence of Farmers;
(*b*) Evidence of Landowners and Agents.

B. 3. (*a*). [*See* paragraphs 32 to 53.]

Farmers' Evidence.

Suggested Remedies for Agricultural Depression.

Name.	District.	Evidence.
Mr. Harrison, farmer, 150 acres. Winmarleigh estate.	Winmarleigh	There should be protection on all manufactured articles that come into the country, also on live cattle, and slightly on corn. I do not believe a small duty on corn would hurt the consumer. Permanent reductions in rent are wanted in this district. We farmers have to take the market price for our produce, and the landlords should reduce their rent accordingly.
Mr. Melling, farmer, 170 acres. Winmarleigh estate.	Winmarleigh	Landlords have not lowered the rents sufficiently, considering the depression.
Mr. Tunstull, farmer, 150 acres. The Earl of Derby's estate.	St. Michael's-on-Wyre.	All foreign meat and all foreign produce should be marked.
Mr. James Stuart, farmer, 150 acres. Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	Reduction in rent is not the only cure for agricultural depression. Rents are high in Lancashire because we have good markets for dairy produce, good land, and an increasing population in the big towns. Some Lancashire farmers have gone south to get land at nominal rents, and they have come back because they can do better here even with the higher wages. You cannot compare our rents with south country rents, unless you bear in mind our advantages. The farmer who is farming high and trying to keep his land up to the old standard, should have more consideration as to reduction of rent than the man who is taking all he can out of the land to help his own pocket. One reason why Lancashire, Westmoreland, and Cumberland farmers have held their own is because they are working farmers. You saw me milking my cows to-night, and we all do work. Foreign meat should be labelled as such.
A farmer's son	Barnacre	I think there should be a system of land purchase, as existent in Ireland. Farmers should be able to take a farm and acquire it as a freehold in time. That would be a stimulus to them.
Mr. T. Pearson, farmer, 300 acres. Mr. Norris Bretherton's estate, and agent to three estates, also lets a freehold farm of his own.	Nateby	High farming pays. What we have to do is to produce. If farming cannot pay in Lancashire with our markets, it can pay nowhere. Some farmers have curtailed their labour bill with a view to economy. It is false economy, and they could have made it pay to employ labour. I ride about the country and see lots of things that would pay if there was the money. Some people have recently gone in for market gardening, such as growing celery and peas, which they send to Blackpool for sale. I believe this pays them, and this class of business is on the increase. Since the depression there has been more dairying. If a man is near a town, I believe it pays better to sell milk than cheese. A good deal of butter is made, and a very good quality of cheese. I am all in favour of marking foreign meat. I am now feeding 36 bullocks, but when they are killed the purchasers will not know if they are buying my bullocks or American meat.
Mr. James Pearson, farmer, 190 acres. Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	The remedy for agricultural depression does not consist alone in the lowering of rents. For instance, my farm for 30 years, when rented at 350*l.*, was clearing 400*l.* net profit, hard cash in the bank, without counting what was spent which never reached there, and the cost of our living out of the farm. Now, at a rental of 323*l.* it has made no profit for three or four years, and I farm considerably higher than my father, and spare no expense.
Mr. Caruthers, cake and artificial manure merchant.	Lancaster	I think the railway rates want reducing. We find them high, especially for short distances.
Mr. Sanderson, farmer and cattle dealer, 147 acres. Mr. Fitzherbert Brockholes' estate.	Claughton	I think the importation of foreign store stock should be stopped altogether. Let them send it as beef, and let it be marked as such in the shops. I think a farmer should have compensation for tuberculosis. I keep 50 cows, and it is an important question to me.
Mr. Willacy, farmer, 112 acres. Mr. Norris Bretherton's estate.	Nateby	I consider all foreign meat should be labelled, and the Margarine Act strengthened. As to rent, my landlord has met me as far as is reasonable. I advocate Fair Trade.
Mr. Kelsall, farmer, 170 acres. The Earl of Bective's estate.	Barnacre	Label foreign meat, and put a duty on it. I should tax all foreign produce. The foreigner uses our markets, and contributes nothing towards our taxes.
Mr. W. Jackson, farmer, 142 acres. Mr. W. Miller's estate.	Thistleton	You must have Fair Trade. If foreigners tax us then tax them. We have too much Free Trade. It is Free Trade all on one side.
Mr. John Cowell, farmer, 106 acres. Mr. W. Miller's estate.	Thistleton	Put a tax on the goods of these foreign nations who tax us.
Mr. Robert James, farmer, 142 acres. Mr. T. Miller's estate.	Singleton	Rents must come down lower. Foreign meat must be marked.
Mr. Rowe, farmer, 83 acres. Duchy of Lancaster estate.	Catterall	I am not in favour of putting duty on grain, for I do not think that would benefit the farmer, but I am in favour of having foreign meat marked. Rents will have to come down.
Mr. Mason, farmer, 214 acres. Myerscough estate.	Myerscough	Remedies for agricultural depression are reductions of rents and fine weather.
Mr. Hall (senior), farmer, 128 acres. Mr. R. W. Bashall's estate.	Nateby	Give farmers greater security, and lower the rents.
Mr. R. Warley, farmer, 75 acres. Mr. Clifton's estate.	Lytham	A good deal of land wants draining, and in some places folk are short of buildings. Foreign meat and butter should be marked. There should be compensation for tuberculosis. A month ago I lost a good cow through it, and three years ago I lost five cows in one spring.
Mr. T. Snape, farmer, 207 acres.	Lytham	Rents must be dropped. The sale of margarine should be stopped, and foreign meat should be marked. The Government should give compensation for tuberculosis. I lost seven cows last year from it.
Mr. W. Collinson, farmer, 120 acres. and Mr. Whittaker, 155 acres.	Garstang and Kirkland.	The law should make the taking of mushrooms larceny. They have a good market value, and farmers ought to have all their land produces. We are overrun with loafers taking them, and we can do nothing. We have suffered much this year from drought, and we ought to be able to reap the benefit of anything that does happen to grow on our land. They are as much ours as our vegetables.
Mr. Wilding, farmer, 128 acres. Mr. Eccles' estate.	Claughton	Rents must be lowered. Most certainly foreign meat should be marked as such.

Name.	District.	Evidence.
Mr. Jackson, 400 acres, and cattle dealer. Lord Bective's estate.	Bilsborough	Tax foreign cattle and meat. Rent must be reduced to suit the times.
Mr. R. Porter, farmer, 142 acres. The Earl of Derby's estate.	Upper Rawcliffe.	I am in favour of Protection in so far that I would say to a foreign country "If you will let our goods in free we "will let yours in." I am also in favour of marking meat. Reduction of rent is not a real or permanent remedy for the depression, the real remedy is in raising the price. You must have Protection, or England will be a barren island.
Mr. Garnett, farmer, 144 acres. Colonel Hornby's estate.	Cleveley -	I have come to tell you that I do not think there is any fault in the landlords of England. I am here to blame the middlemen far more than the landlords. Now, at an auction mart where we sell our cattle the middlemen take so much out of us. I also blame the rates and taxes. In my opinion, pleuro-pneumonia, rinderpest, and anthrax all come from these foreign cattle, and that should be stopped entirely. I would not allow store cattle to come to this country. They must be slaughtered within 10 days of landing, and I would also mark all foreign meat in shops.
Mr. W. Dunderdale, farmer, 388 acres. Messrs. W. Milner and N. Bretherton's estate.	Upper Rawcliffe.	There would be much better farming, in my opinion, if the tenant could stay three years after notice to quit. He would lay out money much more freely, as he would feel satisfied he would then get back his capital.
Mr. Thomas Wilson, farmer, 100 acres. Mr. R. T. Gillow's estate.	Silverdale -	Protection to a certain extent.
Mr. William Cottam, farmer, 103 acres. Mr. Charles Walker's estate.	Heaton - -	Market price must be improved for almost everything a farmer grows, before agriculture will be in a healthy way again. Before it can be improved the glut must be removed in every department.
Mr. Joseph Towers, farmer, 171 acres. Court of Chancery.	Nether Kellet	Better security. Taking the burdens from the land, and laying them more equally on tradesmen, &c. I agree with the three F's, and the land court business. There is a penalty put on good farming. Until this is altered we cannot lay what we would like out on the land.
Mr. W. Houghton, small holder, 4¼ acres.	Hambleton -	By the so-called Free Trade, the British have to pay heavy taxes to support our own Government and foreign ones by the foreigner imposing heavy duties on their imports, so I would levy a small duty to relieve our own taxes.
Mr. William Bradley, farmer, 209 acres, Messrs. Hornby's estate.	Ribby Kirkham.	Land got put up in price after the French and German war, when all kinds of farm produce were selling at a good price, and now the rents want bringing to the same level again, if not done already.
Mr. Thomas Banks, farmer, 33 acres. Executors T. B. Cole's estate.	Bilsborough near Garstang.	We want a re-adjustment of rents and rates, and to do away with a one-sided Free Trade, with a Government always in power raising the confidence of the country.
Mr. James Threlfall, farmer, 63½ acres. Mr. Garlick's estate.	Greenhalgh with Thistleton.	Reduction of rents, Fair Trade, and the abolition of preferential rates by railway companies.
Mr. John Crook, farmer, 200 acres. Lord Chesham's estate.	Inskip -	Rents must be adjusted or lowered to meet produce from cheap land in other countries, especially Ireland. More cottages ought to be built in the country districts with about 3 acres of land added, to cheapen labour. So long as there is a scarcity of labour, it will get dearer. A great many old cottages have been pulled down here but very few new ones built. If we had more families we could employ more boys and girls, which is cheaper than men and women.
Mr. T. J. Woodhouse, farmer, 95 acres. Executors of late Mr. T. Gaskell's estate.	Stalmine -	A duty on all foreign manufactured articles including flour. Marking foreign meat, and licensing shops where it is sold, the money derived from licenses to pay for inspection.
Mr. James Jenkinson, farmer, 84 acres. Major Hornby's estate.	Pilling - -	Fair Trade.
Mr. Thomas Bownass, farmer, 68¾ acres. Executors of late Mr. T. B. Cole's estate.	Kirkland -	Let the landlord meet his tenant in a reasonable way, and take a fair rent according to the price of stock and farm produce. Then the farmer would be in better spirits, and have more money to improve his farm.
Mr. Joseph Shepherd, farmer, 100 acres. Executors of late George Ormrod's estate.	Poulton-le-Fylde.	Labelling of foreign meat. Division of rates between landlord and tenant. Compensation for improvements. The income-tax to be collected from the landlord to save the expense and inconvenience to the tenant. The abolition of the income-tax under Schedule B., which is very unfair to farmers, who, because they pay so much rent, must pay income-tax, when they are losing money.
Mr. Thomas A. Crook, farmer, 200 acres. Lord Chesham's estate.	Inskip -	Reducing rents where necessary, labelling all foreign meat, grain, and produce of every description, slaughtering all cattle imported at port, with the understanding that it is sold as *foreign*, and not as home-fed meat. Selling all artificial manures, guaranteed pure and unadulterated.
Mr. Joseph Shepherd, farmer, 156 acres. Executors of late Mr. T. B. Cole's estate.	Kirkland -	Reduction of rents 20 to 25 per cent. Fixity of tenure, and security for capital invested in permanent improvements, and the appointment of *practical* men as agents. Let each landlord or his agent compare the market value of farm produce with the present high rents and price of labour, then place the rents at such a figure to leave an enterprising farmer a fair living profit. The agent would then have no difficulty in obtaining a good tenant. The land would be better farmed and the country richer.
Mr. G. Seed, farmer, 350 acres. Mr. R. T. Gillow's estate.	Zealand Conyers.	By dropping the rents in proportion to the decrease in prices of stock and crops, and giving farmers better security for their outlay.
Mr. William Gorst, farmer 105 acres. Mr. Norris Bretherton's estate.	Nateby -	Fair Trade.
Mr. William Garnett, farmer, 144 acres. Col. Ormrod's estate.	Cleveley -	Having all foreign cattle slaughtered and marked foreign.
Mr. James Jackson, farmer, 124 acres. Mrs. Dickenson's estate.	Stalmine -	A good substantial drop in rents would do as much as anything I can suggest.
Mr. William Porter, farmer, 77 acres. Lord Chesham's estate.	Great Eccleston.	Reducing rents, and erecting better farmsteads.
Mr. George Whitaker, farmer, 155 acres. Executors of late Mr. T. B. Cole's estate.	Kirkland -	1st, a permanent reduction of rents; 2nd, Reform in the land laws, giving more security for outlay of capital, and tenancy; 3rd, landlords paying equal of rates.
The Lancashire Federation of Farmers' Associations.	Consists of 700 members, representing the Blackburn, the Rossendale, the Fylde, the Burnley and the Preston Farmers' Associations.	The Federation submit the following remedies for agricultural depression:— (1.) A Bill amending the Agricultural Holdings Act and altering the law of distress. (2.) Compensation for tuberculosis. (3.) Compulsory labelling of foreign meat. (4.) Margarine to be sold in its natural colour. (5.) Reduction in all taxation of land, and an equal division of rates and taxes between owner and occupier. (6.) Taxation of ground rents.
Bolton Dairy Farmers' Association.	Bolton -	We are in favour of the creation of a land court on the lines of that existing in Ireland, and we advocate the principal of the "three F's." We say farmers want more security. We, as dairy farmers, are very seriously affected by the question as to compensation for tuberculosis. Formerly we were allowed to sell

Name.	District.	Evidence.
Bolton Dairy Farmers' Association—*cont.*	- - -	those cattle for beef, and now we are not. We propose that when a farmer sells a cow to a butcher, and there is no appearance of its being affected, and the authorities prevent its sale, there should be compensation. Tuberculosis should be scheduled as an infectious disease. Foreign meat should be labelled. We hold strong opinions about the sale of margarine. We believe large quantities are sold as butter, especially to children. There should be a better system of supervision, and it should be sold in its natural colour.
The Chorley and District Farmers' Club.	Chorley -	The club are of opinion that the most effective remedy for agricultural depression is reduction of rent.
The Liverpool and District Farmers' Club.	Liverpool -	The club is in favour of putting a tax upon imported manufactured goods and produce. The present system is not Free Trade, but lopsided Free Trade, which is unfair and unjust. One of our local grievances is that the tolls in the Liverpool Market are too high. People come from Scotland and other places with samples in their pockets, sell their stuff, and pay no tolls at all.
Blackburn and District Farmer's Association.	Blackburn District.	(1.) Tenant Right Bill (Mr. Kay's and Mr. Barlow's). (2.) A reasonable reduction in rent. (3.) The removal of vexatious restrictions in agreements for tenancy. (4.) The removal of oppressive taxation and rates on land, and substitution of taxation on ground rents. (5.) Compulsory labelling of foreign meat. (6.) Compensation for all animals condemned for tuberculosis.
Mr. Bennett, cattle dealer.	Poulton-le-Fylde.	(1.) Tenant Right Bill (Mr. Kay's and Mr. Barlow's). (2.) Compulsory labelling of foreign meat. (3.) Compensation for tuberculosis. (4.) Abolition of law of distress. (5.) Margarine sold in natural colour. (6.) Reduction of taxation on land. (7.) Taxation of ground rents. (8.) Repeal of Wild Birds Protection Act in the case of certain birds. (9.) Taking of mushrooms to be made a criminal offence. (10.) Reducing size of farms in Midlands to prevent so much competition in the north.
Fylde District Farmers' Association.	Fylde	(1.) The proposed "Tenant Right Bill" would, if made law, secure many advantages for farmers. (2.) The labelling of foreign meat should be compulsory. (3.) Compensation should be allowed for animals slaughtered suffering from tuberculosis. (4.) Margarine should be sold in its natural colour. (5.) Taxes on land should be reduced. (6.) Ground rents should be taxed. (7.) A uniform system of weights and measures should be adopted. (8.) All farm tenancies should terminate at one period of the year, both for the house and the land, say on 2nd of February. (9.) In every township there should be an authority vested with power to enjoin the cleaning out of water courses.

Appendix B. 3. (*b*).

Evidence of Landowners and Agents.

Name.	District.	Evidence.
Mr. Sykes, agent to Mr. R. Wilson-France, Rawcliffe Hall.	Garstang -	I think the land is burdened by overtaxation, and has more to pay than its fair share and more than it is able to bear. If the taxes were reduced on the land and all sources of revenue taxed, and slightly increased, all taxes on luxuries increased, this would benefit both landowners and farmers.
Mr. A. Ford, agent to Sir U. Kay-Shuttleworth, Bart., M.P., Gawthorpe Hall, Burnley.	Inskip and other estates.	The prices which farmers obtain could, in the landlord's opinion be improved if they would co-operate in selling and buying, so as to buy and sell more directly without the intervention of middlemen, and thus secure for themselves the profits of this intermediate class. The landlord is in favour of an alteration of the law which would divide the incidence of rates between landlord and tenant.
Mr. Laurence Rawstorne, Hutton Hall.	Preston -	Personal property should certainly be put on the same footing as land for rating purposes. When rates were started, there was no property but land. This is very different now. When land was protected, there might be some reason for rating it, but protection being done away with, there is no reason why rates should not be levied on personal, as well as landed property. I think it would be a great help if the sale of foreign meat, as English, could be stopped. Though the farmer has to sell his beef so cheap, the consumer is practically getting no benefit. Foreign meat selling would be a business of itself. If a butcher is allowed to sell both English and foreign meat, you have no check on him. Also, I think, Government dairy inspectors should be appointed to look after the adulteration of milk and butter. No doubt this is largely carried on. Milk is adulterated with separated milk, and butter with margarine. I think a standard for milk should be fixed. At present quantity, not quality, is the only object. On account of the adulteration, there is no chance for honesty. If adulteration was stopped, the price of good milk and butter would rise. Margarine should not be allowed to be sold at all, or in any case should not be permitted to imitate butter in colour or otherwise.
Colonel Wyatt (agent to Earl of Sefton).	Croxteth, Liverpool.	To endeavour to interest the Government— To suppress agitators, clubs, and talking assemblies. To promote education in agriculture. Although remission of taxation (not transferring it from tenant to landlord) and lower railway rates may help, it will not save the agricultural interest. I think the only thing to be of any real use is some small protective tariff on a sliding scale, say sufficient to keep wheat to 40*s.* a quarter; this, I suppose, we shall never get; it is taxing the food of the people; but, I ask, why tax the home-grown food of the people higher than anything else, and let in foreign produce free? Often since Free Trade came in wheat has been *over* 40*s.* a quarter and no one complained. Why cry out if it was kept at that price? There is, however, a far more serious reason why the Government should take steps for keeping the price of produce up. The land of Great Britain is the nation's estate; the Government are the agents; on the security of this National estate, once worth many millions, they have raised the National Debt, but the security has already dwindled to at least one-third less than it was, and Fundholders will begin to cry out. On an ordinary estate, if its value is lessened, the mortgagees foreclose without delay. They say the commercial world is so prosperous—that will furnish security; but commerce may be paralysed (it is now to a certain extent by the coal strike). Commercial speculation is not considered good enough security for trust money; then why is the trust money of the nation to depend upon it. If rents are allowed to drop, the assessments must drop, but the taxes and rates to be collected on those assessments will not drop, so the smaller assessment will have to bear a heavier burden. It is not the actual amount of rent a tenant minds, it is the margin for profit. We want something to enable landlords, tenants, and labourers to live, and something to keep up, for the Nation's sake, the value of land, and higher prices, higher rents, and a better margin.

Name.	District.	Evidence.
Messrs. Fair and Rea, agents to Earl of Sefton, Earl of Crawford, Mr. T. Miller, Mr. W. Miller, Captain Chichester, and Mr. A. Joy.	Preston	Suggest the following remedies:— 1. The labelling of all foreign produce. 2. More favourable seasons. 3. Adequate security for outlay of tenant's capital. 4. More attention to scientific farming. 5. A reduction of rates by spreading taxation over other than landed property. 6. More legislation to prevent floods.
Mr. Gerald Garnett (agent to Captain Garnett, Wyreside Hall).	Lancaster	In regard to "auction marts." One of my tenants took some nice young heifers that he had been caking for two months to the market (seven miles). Cattle were worth 6½*d.* per lb. A very wet, cold day, and a good many cattle at market. The best offer he could get was 5*d.*, so he had to bring them back. They had caught cold, and it took him a month to get them in the same condition again. I believe in any scheme for the practical education of farmers' sons. Experimental farms under the county council, instead of boy lecturers. Rents have been, and are, too high on some estates. I should not object to rents being fixed by honest, practical men, if such a scheme could be worked, but believe farmers have this in their own hands by combining not to take farms under such circumstances. I also think that farm buildings should be inspected and passed every five or six years.
Mr. E. B. Dawson, Aldclyffe Hall.	Lancaster	Making personal property bear a more equitable proportion of the public burdens of the country, which now to a very great extent falls upon the land.
Mr. Albert Greg, Caton, President of the Lancaster Agricultural Society.	Lancaster	Both landowners and farmers should have the greatest security possible for money spent in improvements as far as the law can provide it. Possibly *well-chosen* courts of arbitration in cases of disputes might help in some instances. *Fixity* of *tenure* would do more harm than good, as the landlord would cease to spend on improvements.
Mr. John Allen, The Laurels.	Lancaster	An import duty on corn, on a sliding scale. All sanitary rates should be levied on the property benefited only. Deductions should be made for maintenance of roads and buildings.
Mr. J. H. Logan (agent to Mr. W. F. Brockholes).	Claughton Hall, Claughton.	I consider the income tax should be assessed upon the net income of the owner, instead of upon the gross income.
Mr. Fitzherbert Brockholes. Claughton Hall.	Claughton	More effective steps should be taken to prevent the fraudulent sale of margarine. Foreign meat should be labelled. If it is impossible to place a tax on imported foods, proportionate to the taxes our home producers have to pay in producing the foods they grow, surely it is only fair that our home producers should be protected to the fullest possible extent against foreign imported goods being fraudulently palmed off and sold as of home production. The question of railway rates calls for legislation. Why should English produce be conveyed at a higher rate then foreign? Railway companies try and make their profits on the short lengths of local railways, where they enjoy monopolies. It is very hard that profits on local traffic should be such as to make up for the loss of railway companies on other traffic. There should be compensation for tuberculosis.
Mr. T. Fair, agent to Mr. Clifton.	Lytham	Compensation for tuberculosis. Compulsory marking of foreign meat and margarine. Abolition of income tax under Schedule B., and a small sliding scale duty on corn. Farmers should not be assessed under Schedule B., as comparatively few have been making anything beyond a bare living during the last few years.

APPENDIX B. 4.

THE GROUND GAME ACT. [*See* paragraph 30.]

(*a.*) Evidence of Farmers.
(*b.*) Evidence of Landowners and Agents.

(*a.*) FARMERS' EVIDENCE.

Name.	District.	Evidence.
A farmer, 150 acres, Winmarleigh estate.	Winmarleigh	The Hares and Rabbits Bill makes no difference to us. We do not dare kill them. I believe the agent sometimes gave compensation. Lord Winmarleigh formerly used to leave a lot of game at every farm. We never grumbled at the game under those conditions. The shooting is now let to a tenant, who up to the present has given us no game.
Mr. Melling, farmer, 170 acres. Winmarleigh estate.	Winmarleigh	When the Ground Game Bill passed, Lord Winmarleigh met his tenants, and asked if he could shoot the hares and rabbits and give them to the farmers, and this was done. We did not find fault then. This year there is a shooting tenant, and we have not had a brace of partridges. We do not like to see strangers. The hares and rabbits do harm but we get no compensation. There are more rabbits this year than last. We tenants ought to kill them, but we do not.
Mr. James Stuart, farmer, 190 acres, Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	I do not think there is any grumbling about game round here. Mr. Hornby has brought us 14 partridges besides hares already this year (October 2nd). Nineteen men out of every twenty round here are, I believe, quite willing to keep game for the landlord, and they like to see him shoot. It is a sympathetic tie between landlord and tenant. Farmers very much dislike shooting tenants.
Mr. T. Pearson, tenant farmer, 300 acres. Mr. Norris Bretherton's estate. Agent for three properties.	Nateby	All round this neighbourhood hares and rabbits are seldom killed by the tenants. I, as agent, advise them to shoot them.
Mr. James Pearson, farmer, 190 acres. Archdeacon Hornby's estate.	St. Michael's-on-Wyre.	Our landlord often says we keep too many hares, and that we are to shoot them just as we please. He gives us the game he shoots, and so who would not keep game under such circumstances? We are all gamekeepers here, but in other parts things are quite different. I think shooting tenants cause more ill-feeling than loss, and I entirely disagree with the principle of sub-letting the shooting.

Name.	District.	Evidence.
Mr. Wilding, farmer, 128 acres. Mr. Eccles' estate.	Claughton -	The law as to hares and rabbits is nearly a dead letter. A good deal of game is kept here. It would not do for many farmers to take advantage of the Act, if they did the landlord would reject them next time. Partridges do not do harm, but I think pheasants do. A hare and two pheasants is the outside we get in 12 months. I do not think the game laws should be abolished. I like to see the owner of the soil having his bit of sport in a reasonable manner. It is the unreasonable men who do the harm.
Mr. Brian Dodgson, farmer, 128 acres. Winmarleigh es ate.	Catteral -	As to hares and rabbits, Mr. Eccles and Mr. Hornby have the shooting, and they are very good to us about giving game, both partridges and pheasants. I shoot hares and rabbits if I want them, though I never dream of shooting to sell. I like to see the game about, and I like to see them have something to shoot at, for they are two good hearty men.
Mr. Jackson, farmer, 400 acres, and cattle dealer. Lord Bective's estate.	Bilsborough -	I do not mind reasonable preservation of game. Now I have been worried very much with rabbits this summer. I communicated with the shooting tenant, who communicated with the agent, and he came and looked at the damage and sent men over to kill them at once. I do not think, except in a very few cases, that it would make any difference to the tenant if he killed hares and rabbits. I do not believe landlords would get rid of them if they took advantage of the Act. It is very silly for these farmers to say they dare not kill hares and rabbits. I have no fear myself on Lord Bective's estate.
Mr. R. Porter, farmer, 142 acres. The Earl of Derby's estate.	Upper Rawcliffe.	I have no complaint to make about hares, rabbits, and game. Mr. Hugh Hornby shoots over this property. He is worth keeping game for. I and my lads keep his game, and my daughters rear pheasants for him, and like to do so. We do not mind any damage hares and rabbits do, but if there is any, it is our own fault, for we can shoot them, and no one minds at all if we do. The game is just as good as if it was our own. Last year Mr. Hornby gave us 25 hares, seven partridges, and eight or nine pheasants. This year up to October 6th we have had 17 partridges and three hares. The fault lies in landlords who let game to shooting tenants at a big rent, who try to make money out of it. On some estates it is the case that if the tenant took advantage of the Ground Game Act he would have to go.
Mr. Rowe, farmer, 85 acres. Duchy of Lancaster estate.	Catteral -	I think on the whole the Hares and Rabbits Bill has been a considerable advantage to tenants. We have the game on this property and we let it. I am a Liberal, and I say the landlord should have the right to winged game, and the tenant a co-equal right to shoot hares and rabbits. I am not one of those who hold that a landlord should have no rights or control over his own property. Five years ago the Duchy leased the property, and the man to whom they leased it always paid us compensation. Hence we have never suffered from game. I let the game now, so I am a game preserver myself.
Mr. Garnett, farmer, 144 acres. Colonel Hornby's estate.	Cleveley -	I do not find any fault with game. I like to see it about, and I like to see the landlord shoot it.
Son of a farmer. Works for father.	Nateby - -	Hares and Rabbits Bill is a dead letter. There is a written law to give us the hares and rabbits, and an unwritten law that we may not take them. This year I believe we have suffered 15*l.* damage, and many years 10*l.* I believe no farmers object to landlords killing game. In fact, I like to see ours shoot at it, but I object to the hares and rabbits.
Mr. R. Thornton, farmer, 100 acres. Winmarleigh estate.	Winmarleigh	Lord Winmarleigh in his lifetime distributed the game among his tenants. I never minded his shooting. In fact, we were his keepers, and glad to be so. I like to see plenty of game for the landlord. Now it is let to a shooting tenant, and I kill hares and rabbits for our own use, but not for sale.
George Taylor, farmer's son, 90 acres. Lord Bective's estate.	Barnacre -	Hares and rabbits do damage to clover, grass, oats, wheat, and turnips. Pheasants do not do as much harm, and partridges none. Father does not kill hares and rabbits, because he would get notice to quit. He does not trap or shoot them. We are not against keeping a reasonable quantity, but we object to the excess. There is a very great excess.
Thomas Salisbury, farmer's son, 215 acres. Lord Bective's estate.	Barnacre -	We have no objection to game preserving if there is proper compensation. Pheasants do damage, trampling down grass. Partridges do no harm. There is a man employed to kill hares and rabbits. We do not kill hares and rabbits, because we think we had better not.
Mr. Sanderson, farmer and cattle dealer, 147 acres. Mr. Fitzherbert Brockholes' estate.	Claughton -	A great many men cannot take advantage of the Hares and Rabbits Bill, but I have no fault to find about that here.
Mr. Dewhurst, farmer, 266 acres. Mr. Fitzherbert Brockholes' estate.	Claughton -	I do not take hurt with game. Reasonable preserving the farmers do not object to.
Mr. Kelsall, farmer, 170 acres. The Earl of Bective's estate.	Barnacre -	Hares and rabbits do not bother me. I am far more bothered by sparrows and small birds.
Mr. W. Jackson, farmer, 142 acres. Mr. W. Miller's estate.	Thistleton -	When I want some rabbits I ask the keeper for them. I like to see hares and game about. I would rather the landlord had the game than I had. All I ask is that only a reasonable amount of rabbits should be kept.
Mr. John Cowell, farmer, 106 acres. Mr. W. Miller's estate.	Thistleton -	I do not mind a reasonable lot of game. Farmers should put down their rabbits, as they are a regular nuisance. As to the rest, let the landlords have it with the greatest of pleasure. I like them to have it, and I like to see after the nests. Little birds do more harm than game. I am not afraid to kill a rabbit, for I have no reason to be afraid of my landlord.
Mr. Gillet, farmer, 75 acres. Mr. Clifton's estate.	Lytham - -	If I want a hare or a rabbit, I have only to ask for it.
The Bolton Dairy Farmers' Association.	Bolton -	Our particular district is very little affected by game. Farmers are disinclined to take advantage of the Hares and Rabbits Bill, because they would get out of favour with their landlord. There are plenty of men who are seriously injured by hares and rabbits, and who dare not get rid of them, because they know the consequences. Our association is in favour of the abolition of the Game Laws.
A farmer's son, Lord Bective's estate.	Barnacre -	I have no objection to landlords preserving game if they will pay for the damage. We cannot take advantage of the Ground Game Act. If we ask for permission to kill hares and rabbits, we are told the landlord keeps men to do that. Sometimes we get a few rabbits and hares given to us. We do not object to a reasonable quantity of hares. It is only when there is an excess, and that when crops are injured that we complain. We should like to catch hares if it was only safe to do so.
Mr. Fisher, farmer, 134 acres. Mr. Clifton's estate.	Lytham - -	I do not believe in the Hares and Rabbits Bill. I like to let the landlord have them. I would rather keep game for the landlord. The difficulty arises when there is a shooting tenant. If I know what game there is on a farm when I take it, I make a bargain, knowing my position. But if the game increases, it is then right that I should have compensation. The farmers about here all kill the rabbits. If I shoot I always let the keeper know, so that he may know what guns are going off.

Name.	District.	Evidence.
Mr. Butler, farmer, 118 acres. Mr. Clifton's estate.	Near Lytham	We can kill the rabbits here, but we have too many hares, and they do the damage. I think a landlord should have the winged game and not the ground game. I think that in many cases tenants cannot take advantage of the Act.
A farmer, 190 acres -	North of Lancaster.	I am a yearly tenant and cannot get a lease. There are too many rabbits on my farm. It is well understood by me that if I touched hares and rabbits I should have to go. The tenants presented a written petition to the landlord last year to be allowed to kill ground game if it was damaging crops. The reply was that during the landlord's lifetime he would allow no alteration in the existing state of things. The landlord traps rabbits from October to March, and sells them. The tenants would be satisfied if they would go on killing them up to the middle of May to prevent damage to young crops.
Mr. W. Collinson, farmer, 120 acres.	Garstang -	I have the hares, rabbits, and game on my farm, except on a small portion which belongs to Mr. Bashall. I let the winged game to a neighbouring landowner on condition he prosecutes all trespassers, and I reserve the hares and rabbits for my own shooting.
Mr. Whitaker, farmer, 155 acres.	Kirkland -	In some places the Ground Game Act has done good, but in a lot of places the tenants do not like to take advantage of it.
Mr. Hulme, farmer. The Marquis of Salisbury's estate.	Near Liverpool	On Lord Salisbury's estate we take hares and rabbits. I am not one of those who are afraid to shoot them.
Mr. R. Webster, farmer, Lord Sefton's property.	Chairman of the Liverpool and District Farmer's Club.	There are game farms on Lord Derby's and Lord Sefton's properties, and these are let to men who know all the circumstances. Claims for damage have been made and paid.
Mr. T. Bownass, farmer, 68½ acres. Court of Chancery.	Kirkland -	I do not suffer from hares and rabbits myself, but in many cases if the tenant shot a rabbit he would get notice to quit at once.
Mr. T. J. Woodhouse, farmer, 95 acres. Executors of Mr. T. Gaskell's estate.	Stalmine -	The effect of the Hares and Rabbits Bill has been beneficial to farmers in this district.
Mr. John Crook, farmer, 200 acres. Lord Chesham's estate.	Inskip - -	I consider the Bill has done good. Farmers have had more consideration shown them. We have our own game here. Farmers ought to have the privilege of killing ground game.
Mr. James Threlfall, farmer, 63¾ acres. Mr. E. Garlick's estate.	Greenhalgh with Thistleton.	It has created much mischief, and is very difficult to change for the farmer's benefit.
Mr. Joseph Thompson, farmer, 94 acres. Mr. E. Wilson's estate.	Kirkham -	We have no cause for complaint. Hares and rabbits are well kept down.
Mr. Joseph Shepherd, farmer, 156 acres. Executors of late Mr. T. B. Cole's estate.	Kirkland -	The Bill is all right if the tenant is allowed to exercise his rights; but in too many instances if he shoots a rabbit or hare he knows he must leave his farm. In this case the Bill becomes a farce.
Mr. R. Rawcliffe, farmer, 180 acres. Duchy of Lancaster.	Myerscough, near Preston.	I have the game.
Mr. T. A. Crook, farmer, 194 acres. Lord Chesham.	Inskip -	Where a large amount of game is preserved, I think it ought to be considered by the tenant in entering on his farm, and all crops damaged by game should be compensated for.
Mr. Joseph Shepherd, farmer, 100 acres. Executors of the late George Ormrod's estate.	Poulton - le - Fylde.	The Hares and Rabbits Bill is a dead letter. The preservation of game is very serious for the farmer on some estates, and one drawback to good farming, as no one can tell the amount of damage done to some farmers' crops by game.
Mr. Robert Winder, farmer, 38 acres. Mr. George Singleton's estate.	Hambleton -	The Act is no use where the landlord desires to have the game.
Mr. W. Houghton, small holder, 4½ acres.	Hambleton -	The Bill has no effect in this parish. A hare is seldom seen, and there are not many rabbits.
Mr. W. Porter, farmer, 77 acres. Lord Chesham's estate.	Great Eccleston.	I think game preserving is very much against good farming.
Mr. James Jackson, farmer, 124 acres. Mrs. Dickenson's estate.	Stalmine -	We have permission to kill ground game, and I think all farmers ought to have the same.
Mr. W. Garnett, farmer, 144 acres. Colonel Ormrod's estate.	Cleveley -	Allow the landlord to preserve game and you have the pleasure of seeing him and welcoming him to a day's sport.
Mr. Richard Dodgson, farmer, 96 acres. Mr. W. Garnett's estate.	Bleasdale -	Those farming the land ought to have the ground game. Mr. Garnett allows his tenants to kill rabbits on his estate.
Mr. George Seed, farmer, 350 acres. Mr. R. T. Gillow's estate.	Zealand Conyers.	Our landlord reserves all right as to rabbits and other game, paying compensation for crops and swedes, but none for grass or clover. All the tenants signed a petition in June to be allowed to share in the ground game. We have not had a favourable reply as yet.
Mr. W. Cottam, farmer, 103 acres. Mr. C. Walker's estate.	Heaton -	We are not plagued about here with game of any kind. Still, I cannot see how the Bill has done much good, because when a landlord wishes to preserve rabbits he can still do so by getting a tenant who will sign an agreement not to molest them.
Mr. R. Thornton, farmer, 126 acres. Mr. T. G. Edmondson's estate.	Cafon with Littledale.	I share the rabbits with my landlord. I think every landlord has a perfect right to a reasonable amount of game being kept on the farm, it being so understood at the time of letting.
The Lancashire Federation of Farmers' Associations.	Consists of 700 members, representing the Blackburn, the Rossendale, the Fylde, the Burnley, and the Preston Farmers' Associations.	Mr. Kay, the president:—"Generally the landlords put "it to the tenants in this way: "'We know the Act of Parlia- "'ment says these are your "'property, but notwithstand- "'ing what the Act says, you "'are not to touch them. If "'you do, we shall take our "'course.' In the case of "ground game the tenant "should be the landlord's "landlord."
The Lancashire Tenant Farmers' Association.	Consists of 300 members, chiefly from the Fylde district, and a few from South Lancashire.	The Hares and Rabbits Bill is a dead letter.

EVIDENCE of LANDOWNERS and AGENTS.

APPENDIX B. 4. (*b*).

Name.	District.	Evidence.
Mr. A. Ford, agent to Sir U. Kay-Shuttleworth, Bart., M.P.	Inskip estate	On this estate it has practically had no effect, as the rabbits have always been kept down, and the tenants have always taken a pride in helping to preserve a reasonable quantity of hares for the landlord's sport.
Mr. John Allen, the Laurels.	Lancaster -	The Hares and Rabbits Bill has made the tenants very disagreeable with their landlords, and in some cases encouraged them to cultivate rabbits to the detriment of the land.
Mr. G. Garnett, agent to Captain Garnett, Wyreside.	Lancaster -	I think it has made landlords recognise the fact that compensation is due when there is an excess of game, but I should like to see landlords compelled to provide wire netting to prevent damage to arable land and meadows.
Mr. H. G. Smith, Moor House.	Eller - -	It has at least stopped agitation.
Mr. E. B. Dawson, Aldcliffe Hall.	Lancaster -	The Hares and Rabbits Bill has had the effect that they are nearly extinct. This, however, is partly caused by the proximity of a poaching town population.
Mr. Sykes, agent to Mr. R. B. Wilson-ffrance, Rawcliffe Hall.	Out Rawcliffe	The Bill has made hares almost extinct, and in my opinion has done more harm than good.
Mr. L. Rawstorne, Hutton Hall.	Preston -	The Ground Game Act has depreciated the value of land by 20 per cent. to 25 per cent. This Bill was the beginning of the downfall of land. It has driven hundreds of owners to Scotland and abroad. One spiteful tenant can now upset all arrangements and destroy all pleasure in owning land.
Mr. Albert Greg, Caton.	Lancaster -	I doubt if the Act has had much effect hereabouts except perhaps to almost exterminate the hares.
Colonel J. C. Ormrod, Wyersdale Park.	Garstang -	The Act has caused in many cases a bad feeling between landlord and tenant which did not exist before.
Mr. T. Fair, agent to J. T. Clifton, Esq.	Lytham Hall Lytham.	The tenants kill rabbits on their holdings, and many were allowed to do so in February and March prior to the passing of the Ground Game Act. The farmers as a rule assist in preserving the hares, as this is a coursing country, and a very good feeling exists between landlord and tenant.
Mr. George Drewry, agent to Mr. V. Cavendish, M.P.	Holker estate	In Furness and Kirkland the game is given to the tenants. Hitherto no complaints from Cartmel tenants.
Mr. W. Wrennall (agent to late Mr. T. B. Cole's estate).	- - -	Tenants in some cases exercise their right, and kill hares and rabbits.
Colonel Wyatt (agent to Lord Sefton).	Croxteth -	Tenants all take their farms knowing that Lord Sefton preserves highly, and rents are set accordingly. In two instances, out of spite, I have known tenants deliberately kill hares. Rabbits certainly have been decreased by the Bill, but virtually it is a dead letter on the estate.
Messrs. Fair and Rea (agents to Earl of Bective, Earl of Crawford, T. H. Miller, Esq., W. P. Miller, Esq., Captain Chichester, A. Joy, Esq.).	Lancashire estates.	The Ground Game Act has not affected Lancashire to any great extent. Where game is denied by owners, it is usual to state this when letting farms, and generally tenants are very willing to allow a fair quantity of hares. Rabbits are never preserved. I think, and I always kill them down when desired to do so by tenants.

APPENDIX B. 5.

TABULATED EVIDENCE OF LANDOWNERS AND AGENTS.

(*a.*) Size of property.
(*b.*) Number of tenants.
(*c.*) Nature of tenancies.
(*d.*) Land turned to grass since 1882.
(*e.*) Number of farms on hand.
(*f.*) Which sized farms easiest to let.
(*g.*) Is land worse farmed than 10 years ago?
(*h.*) Number of tenants, and sizes of their farms.
(*i.*) Changes in tenants in last 10 years.

Name and Address.	(a.) Size of Property.	(b.) Number of Tenants.	(c.) Nature of Tenancies.	(d.) Land turned to Grass since 1882.	(e.) Number of Farms on Hand.	(f.) Which sized Farms let the easiest?	(g.) Is the Land worse farmed than 10 years ago?
Mr. Gerald Garnett (agent to Capt. C. H. Garnett), Wyreside, Lancaster.	About 800 acres	6	Yearly agreements - -	But little change, with a tendency of late to increase the average of arable.	None. No difficulty in letting	Small ones fetch the biggest rental, but about 80 acres is a good handy farm.	Owing to pressure on tenants, and money spent by landlord, farmers are doing their work better.
Mr. John Allen, The Laurels, Lancaster.	About 1,500 acres.	11	Chiefly yearly, only one under lease.	Not more than 50 acres -	One, through late tenant's bad farming, now being improved. No difficulty in letting.	From 30 to 50 acres - -	No.
Mr. Henry G. Smith, Moor House, Eller.	Four farms of from 40 to 75 acres.	4	Three are yearly, one a five years' term.	Very little alteration - -	None; no difficulty in letting -	From 40 to 100 acres - -	A great deal worse.
Messrs. John White McIvor (agents to the Winmarleigh estate).	2,500 acres exclusive of raw moss.	22	Yearly (with printed agreement).	The quantity, if any, is very small.	None; no difficulty in letting -	50 to 100 acres - -	We do not consider the land is worse managed, but there is little improvement except in isolated cases.
Mr. J. H. Logan, agent to W. F. Brockholes, Esq., and other properties.	9,000 acres -	136	Some are for terms of 11, some 7, and some 1 year.	No change in the acreage of arable land.	None; no difficulty in letting -	From 40 to 60 acres - -	I consider on an average that tenants have farmed well.
Col. James Cross Ormrod, Wyresdale Park, Garstang.	About 6,000 acres.	61	Yearly - - -	- - - - - -	One at present; this is let from next February. No difficulty in letting at rather reduced rents.	The smaller ones.	
Mr. Edward B. Dawson, Aldcliffe Hall, Lancaster.	1,800 acres -	12	Principally nine year leases, or tenants continuing on expiration of leases on old terms.	None - - - -	None; no difficulty in letting -	- - - -	Rather. Fences are not so well maintained. Less labour is employed.
Mr. Sykes, agent to Mr. Robert J. B. Wilson-ffrance, Rawcliffe Hall, Out Rawcliffe.	2,192 acres -	35	All farms on leases of seven years, small moss plots on yearly tenancies.	32 acres, and seed paid for by landlord.	None; no difficulty in letting	From 20 to 50 acres - -	Yes. The farmers spend less in artificial manure and feeding stuffs.
Col. Wyatt, agent to the Earl of Sefton, Croxteth, Liverpool.	18,000 acres -	207	Yearly, 12 months' notice given before 2nd February. Many old tenants have no agreements, but I let on an agreement, which I framed with the help of some four tenants, based as regards compensation on the Agricultural Holdings Act, with the difference that the amount of compensation and the number of years it is to extend over, is settled and *entered* when the act is performed and not left to arbitration afterwards.	None - - - -	None - - - -	We have farms of all sizes, the smaller ones as nurseries for the larger. I consider them a great advantage to any estate. *All* let easily.	They farm better now, as a rule, than 10 years ago, and the value of the property has improved, I could not say how much per cent. We never raise rents when once set, but when a tenancy falls in, say after 15 or 20 years, I let it at an increased rent to the son, or whoever takes to it.

Name and Address.	(*a.*) Size of Property.	(*b.*) Number of Tenants.	(*c.*) Nature of Tenancies.	(*d.*) Land turned to Grass since 1882.	(*e.*) Number of Farms on Hand.	(*f.*) Which sized Farms let the easiest?	(*g.*) Is the Land worse farmed than 10 years ago?*
Messrs. J. W. Fair and Ren, Preston (agents for the Lancashire estate of the Earl of Beetive).	The Barnacre estate comprises 3,808½ acres.	38	Yearly - - -	Certainly not more than 10 per cent. on the six or seven estates that we represent.	None - - - -	Under 100 acres, but holdings from 20 to 50 acres, if with suitable buildings, will command more applicants than those of a larger area.	I do; I am satisfied there is a great falling off in the general condition of the land, attributed chiefly to deficiency of tenants' capital, and the necessity, in these bad times, of restricting outlay. I am convinced many farms have decreased in value from this cause alone, 10 to 20 per cent.
Mr. William Wrennall (agent for the late T. B. Coles' estate).	3,785 acres	37	Leases for terms of 11 and 14 years.	Little, if any - - -	None on hand; no difficulty in letting, except with large farms of about 200 acres.	50 to 100 acres - -	Cannot say; have only been agent since June.
Mr. Albert Greg, Caton, Lancaster.	210 acres -	2	Yearly, with six months' notice prior to August 12th to quit in May.	None - - - -	None; no difficulty in letting -	Small farms under 100 acres -	I see no change in farming, save the greater use of bought provender, and less growth of winter keep. I consider my land less valuable in proportion to the fall in rents.
Mr. T. Fair, agent to Mr. John Talbot Clifton, Lytham Hall, Lytham.	About 16,000 acres.	190	Mostly year to year, a few on lease. In 1877 (after passing of the Agricultural Holdings Act, 1875) the late Colonel Clifton signed agreements for every farm tenant on his estate, securing them compensation for improvements, but most of the agreements are still in the estate offices, the tenants not caring to take them up.	Comparatively little, but a large area had previously been laid down to grass. On an average two-thirds to each farm.	None; there is more difficulty in letting large farms during last 10 years, but there is still a good demand for smaller farms.	From 20 to 100 acres, or up to 150 acres.	I do not think the land is being farmed worse, but farmers have not done as much generally, in keeping fences, gates, and other things, adding to the neatness of the farm, as formerly, and all repairs are now thrown upon the landlord. Land generally is not worth as much as formerly by from 7 to 10 years' purchase.
Mr. Laurence Rawstorne, Hutton Hall, Preston.	Between 3,000 and 4,000 acres.	273	From year to year - -	Perhaps 200 acres. All land not specially adapted for ploughing was laid down before this (permanent seeds provided by the landlord).	One. It gets more difficult to find a tenant worth letting a farm to.	Perhaps 50 acres - -	Bad farmers farm worse. Property not decreased in value, owing to landlord's expenditure.
Sir Ughtred Kay-Shuttleworth, Bart., M.P., Gawthorpe Hall, Burnley, Lancashire.	471 acres -	11	Yearly. Used to be leases of 11 years. Tenants prefer yearly tenancies. Could have leases if they liked.	Practically the proportion of arable land and grass, is the the same as in 1882.	None, nor has any farm ever been on hand for 40 years or more.	From 50 to 100 acres are all easy to let on this estate.	On the whole tenants are farming the land better. The property has not depreciated in value.
Mr. George Drewry (agent to Mr. Victor Cavendish, M.P.), Holker.	14,000 acres -	69	Yearly agreements - -	- - - - -	None; no difficulty in letting, often more rent offered than is accepted.	From 50 to 200 acres - -	No.
Mr. Hale, agent to the Earl of Derby, Knowsley, Liverpool.	43,217 acres, S.W. Lancashire property.	484	Yearly. Parole. 12 months' notice. Always accepts a shorter notice if given.	Practically none turned to permanent pasture.	No farms on hand. No difficulty in letting.	No difficulty in letting any sized farms.	No, except in a very few cases.

* Note.—Some farmers from Nateby, St. Michaels-on-Wyre, Claughton, Myerscough, Thistleton, Kirkland, Thurnham, and Lancaster, say that the condition of the land has gone back since 1880, while others from Nateby, Winmarleigh, Lytham, and Claughton, say that their experience is to the contrary.

Name and Address.	(h.) Number of Tenants occupying Farms.							(i.) Changes in Tenants in the last 10 Years.
	Under 50 Acres.	From 50 to 75 Acres.	From 75 to 100 Acres.	From 100 to 150 Acres.	From 150 to 200 Acres.	Over 200 Acres.	Total.	
Mr. Gerald Garnett (agent to Capt. C. H. Garnett), Wyreside, Lancaster.	—	—	5	1	—	—	6	2 or 3.
Mr. John Allen, The Laurels, Lancaster.	5	4	1	—	—	1	11	Very few.
Mr. Henry Smith, Moor House, Eller.	2	1	1	—	—	—	4	2.
Messrs. John White McIvor & Co. (agents to Winmarleigh estate).	3 exclusive of small holdings.	8	4	—	3	4	22	2.
Mr. J. H. Logan, agent to Mr. W. F. Brockholes, Claughton Hall.	23	8	5	7	5	3	51	17. Of these 6 occurred through death, and in 4 cases relatives succeeded.
Col. James Cross Ormrod, Wyresdale Park, Garstang.	30	4	6	14	2	5	61	24, including deaths.
Mr. Edward B. Dawson, Aldcliffe Hall, Lancaster.	3	2	—	4	—	3	12	2.
Mr. Sykes, agent to Mr. R. J. B. Wilson ffrance, Rawcliffe Hall, Out Rawcliffe.	19	6	4	2	1	3	35	Practically none, except by deaths.
Mr. Albert Greg, Caton, Lancashire.	—	1	—	1	—	—	2	One from death.
Mr. T. Fair, agent to Mr. John Talbot Clifton, Lytham Hall, Lytham.	106	19	18	30	6	11	190	Not many, and, as a rule, members of the same family succeed each other.
Mr. Laurence Rawstorne, Hutton Hall, Preston.	81	—	93	—	98	1	273	Few for size, 2 left last year to farm in Essex.
Right Hon. Sir U. K. Shuttleworth, Bart., M.P.	7	2	2	—	—	—	11	4; 2 through deaths.
Mr. George Drewry, agent to Mr. Victor Cavendish, M.P., Holker.	19	4	4	7	14	21	69	12; 2 through deaths.
Col. Wyatt, agent to the Earl of Sefton, Croxteth, Liverpool.	80	—	68	39	10	10	207	Changes rarely occur, except through death, and I always prefer a son or some relative to succeed. I have only had to *turn out* 2 tenants in 24 years.
Messrs. Fair and Rea (agents to Earl of Bective), Barnacre estate.	15	4	5	8	4	2	38	11 changes. 3 by death. 2 by retirement from farming.
Mr. William Wrennall (agent to late Mr. T. B. Cole's estate).	14	4	—	7	8	4	37	Very few changes.
Mr. Hale, agent to the Earl of Derby, S.W. Lancashire estate.	214	95	66	63	24	22	484	None, except from father deceased, or resigned to son or relation.

B. 6.

Evidence of Landowners and Agents as to Reductions and Abatements in Rent, and Money spent on Permanent Improvements. [*See* paragraph 14.]

Name, with Address and Size of Property.	Year.	Percentage of Permanent Reductions in Rent made on Total Rental.	Percentage of Abatements in Rent made on Total Rental.	Money spent on Permanent Improvements on Farms without charging Tenant Interest. If Interest charged, state Rate.
				£ s. d.

In addition to above, from 1852 to 1881, there was spent on permanent improvements				50,694
Total spent from 1852 to 1893				£71,794

Name and Address, with Size of Property.	Year.	Percentage of Permanent Reductions in Rent made on Total Rental.	Percentage of Abatements in Rent made on Total Rental.	Money spent on Permanent Improvements on Farms without charging Tenant Interest. If Interest charged, state Rate.
Mr. John W. McIvor (agent to the Winmarleigh Estate), Warrington. Acreage, about 2,500 acres, exclusive of raw moss.		It is impossible to give this information generally, as each tenancy has been dealt with individually. Roughly speaking, during the past 12 years the rents have been reduced by about 10 per cent., in addition to the landlord paying the tithes. As the rents in 1882 varied from 16*s.* to 40*s.* an acre, they could not all be dealt with in the same way. During the period named, and before permanent reductions were made in January last, 10 per cent. allowances were made at intervals. As regards expenditure on permanent improvements it has averaged 10 per cent. on the gross rental, and the ordinary repairs have averaged another 10 per cent. In a few instances a percentage was charged for draining, but all these percentages are merged in the revised rents.		

Name and Size of Property.	Year.	Percentage of Permanent Reductions in Rent made on Total Rental.	Percentage of Abatements in Rent made on Total Rental.	Money spent on Permanent Improvements on Farms without charging Tenant Interest. If Interest charged, state Rate.
Mr. T. Fair, agent to Mr. John Talbot Clifton, Lytham Hall, Lytham. Acreage, about 16,000 acres.	1882	·65	2·06	Expenditure from 1836 to 1892 (56 years).
	1883	—	·32	£ s. d.

	1885	—	1·41	Roads - 15,215 16 10
	1886	·03	1·82	Drainage - 40,205 12 8
	1887	1·77	3·8	Estate Improvements 4,609 10 9
	1888	·18	3·22	
	1889	·84	3·14	£316,354 15 4
	1890	·87	3·24	Less 20,000*l.* spent on cottages, &c. in urban district.
	1891	2·6	1·71	
	1892	—	1·33	
	1893	·67	3·5	Total, 296,354*l.* 15*s.* 4*d.*

Note.—Very large sums of money have been expended by the owner in cutting main watercourses for many miles, providing tidal flood-gates, and underdraining the land. The farmhouses, buildings, and cottages have been practically rebuilt over all the estate during last 60 years, and, as a rule, no percentage has been charged upon farmhouse and buildings, the same being treated as easements to the land.

From 1885 many farm rents have been permanently reduced, one 50 per cent., buildings and drainage executed free of interest, and many arrears written off.

The per-centage of the gross rental spent annually on maintenance and repairs is 18 per cent.

NOTE.—The property was valued in 1826, and no revaluation has been made since. The large farms are still paying rent on the old valuation. In a few cases their rents have been reduced.

No additions have been made to the rents, except for interest on building and draining, and in these cases the interest charged is at a low rate.

B. 7.

TABULATED EVIDENCE OF FARMERS.

Name.	District.	Landlord.	(a.) Length of Occupation of Farm by Tenant or his Family.	(b.) Size of Farm and Proportion of Arable Land.	(c.) System of Farming.	(d.) (1.) Buildings. (2.) Drainage. (3.) Water Supply.	(e.) Nature of Tenancy.	(f.) (1.) Rent. (2.) Rates. (3.) Taxes.	(g.) Reductions or Abatements since 1882.	(h.) Is Labour Bill higher since 1882?	(i.) Since 1882 has Labour on your Farm been curtailed by— (a.) Conversion of Arable Land to Grass. (b.) Use of Machinery. (c.) Desire to economise in Labour Bill.
Mr. Thomas Banks-	Bilsboro' near Garstang.	High Court of Chancery (late T. B. Cole, Esq.).	7 years -	33 acres, all pasture or meadow land.	Keeping a dairy stock for cheese making. Rearing about five heifers.	(1.) Buildings not sufficient. (2.) Good. (3.) Good.	A lease of 14 years.	(1.) 69*l.* - - - (2.) 3*l.* 5*s.* (3.) Tithe, 2*l.* 17*s.* 4*d.*	5 per cent. upon the year in 1891 and 1892.	25 per cent. higher.	—
Mr. Thomas Bownass	Kirkland near Garstang.	Executors of the late T. B. Cole, Esq.	18 years -	68½ acres, all pasture -	Grazing only - -	(1.) Buildings not sufficient. (2.) 20 acres want draining. (3.) Water supply not sufficient.	11 years lease.	(1.) 166*l.* - - - (2) 9*l.* 6*s.* 8*d.* (3.) Paid under Schedule B.	Abatements of 10 per cent. in 1887, 10 per cent. in 1891, 5 per cent. in 1892.	10 per cent. higher -	No.
Mr. J. Jenkinson -	Pilling - -	E. G. S. Hornby, Esq., Dalton Hall.	21 years -	84 acres -	Four course - -	(1.) Buildings enough (2.) Requires draining every seven years. (3.) Water supply moderate.	Yearly -	(1.) 120*l.* - - - (2.) About 7*d.* in £. (3.) None.	Permanent reductions 11*l.*	About 20 per cent. -	Not very much.
Mr. W. Wilkinson, Hunter's Farm.	Pilling - -	Major Hornby owns two-thirds, undivided. The other third, owner myself.	Nearly 200 years.	66 acres, about half pasture and half arable.	I like to grow a little of nearly everything, vegetables, clover, hay, wheat, oats, rye, &c.	(1.) Buildings not sufficient. (2.) Suffer severely through salt water flooding. (3.) Water supply not good.	Yearly -	(1.) 84*l.* - - - (2.) 7*l.* to 8*l.* (3.)	No permanent reductions. 10 per cent. abatement the two last half years.	—	—
A farmer - -	- - -	Earl Derby - -	23 years -	280 acres, 110 arable, the remainder pasture.	30 cows, milking, and cheese-making, 100 ewes breeding. Rearing young cows and horses. Arable land under four course.	(1.) Buildings sufficient. (2.) Drainage sufficient. (3.) Water supply not always good.	Yearly -	£ s. (1.) Rent 410 10 - Tithes 44 0 (2.) 20*l.* 10*s.* (3.) Land tax, 2*l.* 14*s.*	No permanent reductions. 10 per cent. abatement in 1890 and 1892.	About the same practically. Labour gets dearer, owing to railways and public works. Best men go there.	No.
Mr. T. Woodhouse -	Stalmine -	Executors of the late T. G. Gaskell, Brick House, Stalmine.	12 years -	95 acres, all meadow and pasture.	Grazing cattle and sheep.	All sufficient - -	Yearly -	(1.) 158*l.* - - - (2.) 1*s.* 3*d.* in £. (3.) Land tax, 10*s.*	Reduction of 20*l.* in 1888. Abatement of 10 per cent. for one half year in 1887.	Less, owing to land being laid down to grass.	(a.) Yes. (b.) Yes. (c.) Yes.
Mr. John Crook -	Inskip - -	Lord Chesham - -	Over 200 years.	200 acres, about 20 acres more pasture than arable.	Mixed husbandry. Principally dairying.	(1.) Buildings not enough. (2.) Some wants re-draining. (3.) Water supply very poor.	Yearly -	(1.) 324*l.* - - - (2.) About 18*l.* (3.) Nearly 4*l.*	10 per cent. was allowed in 1884. In 1892 that reduction was made permanent, and a further 10 per cent. was allowed for three years.	About the same for men, but more for women or dairy-maids.	No, the opposite, as I keep more milk cows.

Name.	District.	Landlord.	(a.) Length of Occupation of Farm by Tenant or his Family.	(b.) Size of Farm and Proportion of Arable Land.	(c.) System of Farming.	(d.) (1.) Buildings. (2.) Drainage. (3.) Water Supply.	(e.) Nature of Tenancy.	(f.) (1.) Rent. (2.) Rates. (3.) Taxes.	(g.) Reductions or Abatements since 1882.	(h.) Is Labour Bill higher since 1882?	(i.) Since 1882 has Labour on your Farm been curtailed by— (a.) Conversion of Arable Land to Grass. (b.) Use of Machinery. (c.) Desire to economise in Labour Bill.
Mr. James Threlfall	Greenhalgh with Thistleton.	E. Garlick, Esq., J.P.	16 years	63½ acres, 12 acres arable, 57½ acres pasture.	The four course system.	(1.) Sufficient. (2.) Very little required. (3.) Good.	Yearly	(1.) 160*l*. (2.) 8*l*. 12*s* (3.) 16*s*.	No permanent reductions. Abatements of 10 per cent. 1885, 10 per cent 1886, 10 per cent. 1887, 10 per cent. 1889, 5 per cent. 1890, 10 per cent. 1891-2.	Yes, about 15*l*. per year.	(a.) No. (b.) Yes. (c.) Yes.
Mr. Lawrence Wilding.	Claughton	J. Eccles, Esq.	11 years	128 acres, 25 arable	Mixed farming	(1.) Sufficient (2.) (3.) Good.	Yearly	(1.) 270*l*. (2.) (3.) 14*l*.	None	About the same	(a.) Not much change. (b.) (c.)
Mr. Joseph Thompson.	Elswick, Kirkham.	E. Wilson, Esq.	About 75 years.	A. R. P. 93 3 32 9 1 36 is arable.	Four course system on arable land. Dairy, cheese, and butter making on rest. Raise a good number of heifers and pigs for whey and churn milk.	(1.) Sufficient (2.) Good. (3.) Good.	Yearly	(1.) 180*l*., tithe and land tax free. (2.) } About 10*l*. (3.) }	None	Not much difference	(a.) No. (b.) No. (c.) No.
Mr. J. Shepherd	Kirkland, Garstang.	Executors of the late T. B. Cole, Esq.	31 years on same estate.	156 acres, all grass	Grazing only	(1.) Not enough sheds (2.) About 12 acres floods in a wet season. (3.) Good.	14 years lease from 1887.	(1.) 2*l*. 9*s*. per statute acre. (2.) 23*l*. (3.) Paid under Schedule B.	No permanent reduction. Abatements of 10 per cent. 1887, 10 per cent. 1891, 5 per cent. in 1892.	10 per cent. or more higher.	—
Mr. Richard Rawcliffe, Myerscough.	Near Preston	Duchy of Lancaster	30 years	180 acres, 100 arable, 80 pasture.	Four course system	(1.) Sufficient (2.) Good. (3.) Not good.	Yearly	(1.) 50*l*. (2.) 31*l*. (3.)	11*l*. permanent reduction in 1887.	About the same	No.
Mr. H. Roper	Claughton	W. F. Brockholes, Esq.	37 years	69 acres, all pasture	Stock rearing and dairy farming.	(1.) Sufficient (2.) Good. (3.) Good.	Yearly	(1.) 9*l*. (2.) 4*d*. 19*s*. 6*d*.	No permanent reduction. Abatements of 5 per cent. in 1886, 7½ per cent. 1888, 10 per cent. 1891, 10 per cent. 1892.	No	No.
Mr. W. Dunderdale	Upper Rawcliffe.	W. Milner, Esq., and N. Bretherton, Esq.	About 36 years.	388 acres, nearly equal, arable and pasture.	Stock rearing and dairy farming.	(1.) Sufficient (2.) Well drained. (3.) Good.	Yearly (could have lease if desired).	(1.) About 30*s*. per acre. (2.) Over 30*l*. (3.) About 5*l*.	No permanent reductions, or abatements, except the tithe.	Considerably, but more land.	Somewhat.
Mr. T. A. Crook	Inskip with Sowerby.	Lord Chesham	Over 200 years.	194 acres, one-third arable, and two-thirds grass.	Four course system for arable land. Breeding horses, cattle, sheep, and pigs, and potato growing.	(1.) Sufficient (2.) Well drained. (3.) Good.	Yearly	(1.) 30*l*. (2.) About 1*s*. 2*d*. in £. (3.) Land tax, 2*l*. 7*s*.	10 per cent. remission for three years.	No, it is less by 50*l*. a year.	(a.) Yes. (b.) Yes. (c.) Yes.
Mr. Joseph Shepherd	Hardthorn, near Poulton-le-Fylde.	Executors of the late Geo. Ormrod.	18 years	About 100 acres, 15 arable.	Four course on arable land. Retail milk to Blackpool.	(1.) Good (2.) Part requires draining. (3.) Moderate.	Yearly	(1.) Rents range from 2*l*. to 4*l*. per acre in the parish. (2.) From 15*l*. to 20*l*.	Reduction of 8 per cent. seven years ago.	Yes, by 3 per cent.	No.

Name.	District.	Landlord.	(a.) Length of Occupation of Farm by Tenant or his Family.	(b.) Size of Farm and Proportion of Arable Land.	(c.) System of Farming.	(d.) (1.) Buildings, (2.) Drainage, and (3.) Water Supply.	(e.) Nature of Tenancy.	(f.) (1.) Rent. (2.) Rates. (3.) Taxes.	(g.) Reductions or Abatements since 1882.	(h.) Is Labour Bill higher since 1882?	(i.) Since 1882 has Labour on your Farm been curtailed by— (a.) Conversion of Arable Land to Grass. (b.) Use of Machinery. (c.) Desire to economise in Labour Bill.
Mr. John Parkinson	Gt. Eccleston	Lord Chesham	10 years	62 acres, 14½ arable	Grazing	(1.) Sufficient (2.) Some parts require draining. (3.) Good.	Yearly	(1.) 125*l.* 8*s.* (2.) } (3.) } 12*l.*	No reductions. 10 per cent. abatement for three years.	1*s.* per day more	Yes.
A farmer	Claughton	W. F. Brockholes, Esq.	51 years	88 acres, about 10 arable.	Dairying, and rearing young stock.	(1.) Sufficient (2.) Do not suffer much from floods. (3.) Fairly good.	Yearly	(1.) 140*l.* (2.) 8*l.* (3.) 1*l.* 5*s.*	Reduction of about 10*l.* seven years ago.	Family of my own	About the same.
Mr. G. Whitaker	Kirkland	Executors of the late T. B. Cole, Esq.	17 years	155 acres, all pasture	Cheesing, grazing, and rearing stock.	(1.) Sufficient (2.) Drainage good. (3.) Not satisfactory.	Lease, 14 years.	(1.) 305*l.* 19*s.* 10*d.* (2.) 12*l.* 15*s.* 6*d.* (3.)	Reduction of 25*l.* in 1887. Abatement of 10 per cent. 1891, 5 per cent. 1892, and 10 per cent, one previous year.	Similar	No.
Mr. Brian Dodgson	Catterall	Hon. Mrs. Lumley	28 years	232 acres, 24 arable	Four course system	(1.) Sufficient (2.) We suffer often from floods and some land wants re-draining. (3.) Good.	Yearly	(1.) 340*l.* (2.) About 24*l.*	An abatement last year of 60*l.*	20*l.* a year higher	(a.) Yes. (b.) Yes. (c.) Yes.
Mr. W. Porter	Gt. Eccleston	Lord Chesham	9 years	77 acres, 26 arable	Four course system	(1.) Not sufficient (2.) Drainage good. (3.) Good.	Yearly	(1.) 153*l.* 12*s.* (2.) 8*l.* 16*s.* 10*d.* (3.) 1*l.* 8*s.* 8*d.*	An abatement of 10 per cent. last year.	No	It has not changed.
Mr. James Jackson	Stalmine	Mrs. Dickinson, North Devon.	37 years	124 acres, 38 arable	Four course system	(1.) Short (2.) Not much required. (3.) Very short indeed.		(1.) 190*l.* (2.) } (3.) } 17*l.* or 18*l.*	Reduction of 35*l.* about five years ago.	About 5*l.* a year. We are near the salt mines, and labour is very dear.	By about one man.
Mr W. Garnett	Cleveley	Col. Ormrod	4 years	144 acres	Mixed, four and five years course.	(1.) (2.) Drainage good. (3.) Good.	Yearly	(1.) 200*l.* (2.) } (3.) } 15*l.*	20 per cent. abatement in 1892 and 1893.	About 5 per cent.	Yes.
Mr. W. Gorst	Nateby	Norris Bretherton, Esq.	16 years	105 acres, all meadow and pasture.	Making good cheese and rearing good stock.	(1.) Sufficient (2.) (3.) Not good.		(1.) 180*l.* (2.) 4*l.* 10*s.* 5*d.* (3.)	Reduction last year	No	—
Mr. Richard Dodgson.	Bleasdale	W. Garnett, Esq., Quernmore Park.	31 years	About 90 acres, all meadow and pasture.	Stock rearing	(1.) Not sufficient (2.) (3.) Good, except in long droughts.	Yearly	(1.) 80*l.* (2.) 1*s.* 2*d.* in £. (3.) 15*s.*	Reductions of 10 per cent. in 1885 and 10 per cent. in 1892.	No	No.
Mr. George Seed	Zealand-Conyers.	R. T. Gillow, Esq.	39 years	About 350 acres, 110 arable.	Four course system on arable land. Dairying and rearing young stock.	(1.) Sufficient, but some out of repair. (2.) Good, except 7 or 8 acres. (3.) Short in dry weather.	Yearly	(1.) 255*l.* (2.) 16*s.* 16*s.* (3.) 5*s.* 2*d.*	Permanent reduction of 15 per cent. in 1889, an abatement of 5 per cent. for two years before then.	Not much different	Not curtailed, but I certainly desire to economise in the labour bill.

Name.	District.	Landlord.	(a.) Length of Occupation of Farm by Tenant or his Family.	(b.) Size of Farm and Proportion of Arable Land.	(c.) System of Farming.	(d.) (1.) Buildings, (2.) Drainage, and (3.) Water Supply.	(e.) Nature of Tenancy.	(f.) (1.) Rent. (2.) Rates. (3.) Taxes.	(g.) Reductions or Abatements since 1882.	(h.) Is Labour Bill higher since 1882?	(i.) Since 1882 has Labour on your Farm been curtailed by—(a.) Conversion of Arable Land to Grass. (b.) Use of Machinery. (c.) Desire to economise in Labour Bill.
Mr. R. Winder	Hambleton	G. Singleton, Esq., Kirkland Hall.	Going on three years.	38 acres, all pasture	Grazing	(1.) Sufficient (2.) Satisfactory. (3.) Good.	Yearly	(1.) 13*l.* (2.) 9*l.* (3.) 5*l.* 10*s.* 6*d.*	None.	—	—
Mr. W. Bradley, Hill Farm.	Ribby Kirkham.	Mr. Hornby	Two years and eight months.	269 acres, 102 arable	Four course system on arable land. Dairying and rearing young stock.	(1.) Not enough, but enlarging piggeries. (2.) About ⅓ want draining. (3.) Fairly good.	Lease	(1.) 300*l.* (2.) 17*l.* 1*s.* 3½*d.* (3.)	—	About the same	The labour about the same.
Mr. William Houghton, small holder.	Hambleton	Owns his farm	13 years	4a. 3 r. 8 p., all meadow and pasture, except small orchard and vegetable garden.	Dairying and fowls	(1.) Sufficient (2.) Small part will flood. (3.) Good, except in drought.	—	(1.) (2.) Rates have increased from 1*l.* 10*s.* 4*d.* to 2*l.* 1*s.* 4*d.* (3.)	—	Do my own work	—
Mr. Joseph Towers	Nether Kellet	Messrs. Clarke and Thornton (in Court of Chancery).	31 years	171 acres, 25 arable	Dairy and cheese making. Rear young calves and bullocks, fatten lambs, and shearlings. Keep three breeding mares and six young horses.	(1.) (2.) (3.) Sufficient	Lease	—	—	—	(a.) Yes. (b.) (c.) No.
Mr. William Cottam	Heaton	C. Walker, Esq., near Kendal.	Probably over 100 years.	103 acres, 50 arable	Four course system	(1.) Oldfashioned and mainly inconvenient. (2.) Occasional floods do much damage. Drainage fair. (3.) Good.	Seven year lease.	(1.) 26*0l.* (2.) 20*l.* (3.) 7*l.*	Reduction of 30*l.* lately. 5 per cent. abatement twice since 1882. 15 per cent. last July.	About 40*l.*, but have more cows to milk, and milk to send to asylum at Lancaster.	(a.) No. (b.) No. (c.) No.
Mr. Henry Cock	Dalton	Mr. Alfred Atkinson and Miss Anne Burrow.	49 years	About 154 acres, 54 arable.	Four course system	(1.) Enough for cattle but not for implements. (2.) Good. (3.) Good.	Yearly	(1.) 334*l.* (2.) About 1*s.* 3*d.* in £. (3.) 9*l.*	No reductions. 10 per cent. was abated one half year.	No	(a.) Not very much. (b.) (c.)

APPENDIX C.

EVIDENCE OF THREE SUCCESSFUL FARMERS.

1. Evidence of a Farmer in the Fylde District.
2. Evidence of Mr. T. Pearson, Nateby.
3. Evidence of Mr. Thomas Shendly, Pilling.

C. 1.

EVIDENCE of a FARMER in the Fylde District.

[See paragraph 22.]

I have been a yearly tenant on a farm of 245 acres, of which three-fourths is under plough, since 1890. I succeeded my father who had it from 1865. I farm on the four-course system.

The soil is very varied, subsoil being gravel, sand, clay, and moss or peat in almost every field, and consequently very unpleasant and difficult to work.

My buildings are good, and I have plenty of them. There is also good water in abundance.

My usual stock is in summer 80 head, and in winter 130. I keep additional stock in winter in order to make plenty of farmyard manure of good quality for ploughing land.

My capital employed is between 2,600*l.* and 3,000*l.*

Since I have had the farm this last three years, I have made farming pay well, and do still, and I say success in farming depends entirely on the man. Before my father took this farm in 1865, a man had it with plenty of capital, and he left it with practically nothing. My father then followed him at an increased rent. He had no capital at all, and he retired on what he had made. I believe if he had farmed as I farm he might have made double.

It is my belief we can beat the foreigner yet; if we have not the price we must have the quantity. This is my motto: "Do not spare the manure and do not spare the food." If this was generally followed out there would be no depression.

The fact is that many men have neither the capital or the ability to farm as you must farm now to make it pay. 10*l.* an acre is the least a man should have. Again he must practically understand his work and then he must go at it fearing nothing.

Another point to be considered is good labour. When I came here I at once increased the labourers' wages 30 per cent. and I have not changed a man. I say that if you want men to work hard you must pay them well.

Eight months ago I showed a balance sheet which will stand criticism. After paying 5 per cent. on my capital engaged, I had a profit equal to my rent, or 1*l.* an acre.

I am absolutely satisfied with the money I am making. I left a salary of 300*l.* a year in order to farm, and I am sure I do not regret it. Landlord and agent have met me generously. I have absolute confidence though I am a yearly tenant. I say that I would take any farm in the district and make it pay.

The following is my expenditure:—

	£	*s.*	*d.*
Rent	355	12	0
Rates and taxes	20	0	0
Cake and provender	600	0	0
Manure	300	0	0
Wages	600	0	0
Insurance	6	0	0
	£1,881	12	0

=7*l.* 8*s.* 2*d.* per acre.

At the beginning of the year I estimate my expenditure on every head, and I try to keep to it all the year.

This year I grew 30 acres of wheat, and got 13 windles per acre (a windle = 2 cwt.).

Also 30 acres of oats, and got 12 sacks per acre (a sack = 2 cwt. 1 lb.).

Also 30 acres of clover, and got (first crop) 2½ tons per acre, (second crop) 1½ tons per acre.

Also 30 acres of potatoes and got 75 pecks per acre (a peck = 240 lbs.).

I maintain that I can make a profit out of corn at 11*s.* a windle.

If I was a landlord I would not in many cases reduce rent in cash, but I would give a generous allowance of manure to put on the land.

I will now give my experience on a small farm of 45 acres which I took from February 1887 to February 1890, until I came to my present farm.

When I went there it was in a bad state, and had been advertised some little time I was told that if I had eight cows on it I should have a big stock.

In the third year I was milking 22 cows, and fed 18 for the butchers, and when I left I sold over 100*l.* worth of hay to the incoming tenant. This convinced me that high farming would pay and pay well, and I said if a small farm can pay, a big one can, as you get it at half the rent per acre. Hence I am an advocate of large farms, for I came to my present farm, tried the experiment, and have been successful.

In my opinion the great cause of depression is the fall in prices of almost everything the farmer has to sell, while wages and rents are almost the same, for although rents may be rather lower, wages are considerably higher than formerly.

The remedy, I think, is in lowering rents in some cases, especially on small holdings; draining all undrained land; manuring *liberally* so as to produce at least twice the amount of crop as formerly, and I am sure that the land in this district could be easily made to produce at least twice the amount of crop.

The landlords should knock off restrictions as to cultivation of land and sale of crops, and give the tenants chance to swim. There should of course be a saving clause for the landlords, namely, that the tenants do not deteriorate the quality of the soil. I fear many farmers have not sufficient capital or pluck, and the land is in consequence neglected and unimproved.

The County Council is doing a great deal to help agriculture. Farmers should send up samples of feeding stuffs and manure to their agricultural department to be examined. They will then know what they are buying, for hundreds of pounds worth of useless stuff has been bought. Many buy now subject to the results of this analysis.

I am a free trader. I say we buy our feeding stuffs cheaper and we all live cheaper in consequence of free trade.

C. 2.

EVIDENCE of Mr. T. PEARSON, Farmer, Nateby.

I farm 161 acres under Mr. Norris Bretherton, called the Manor House Farm, and 120 acres under Mr. Baldwin which I took in 1892. I have also a freehold farm of 120 acres which I let to a tenant.

On the Manor House Farm I have 44 acres in grass and eight acres in meadow, the rest being under plough.

The soil is a black peaty one.

I have 36 three-year-old bullocks stall feeding; 30 spring calving heifers; three milch cows, and two calves. Formerly I exported Shire horses to America, but dropped it after it ceased to pay.

Of late, I chiefly sell oats and clover hay, though potatoes used formerly to be my chief article of production.

My buildings are good and convenient, and I have plenty of pure water.

I have a lease for 21 years which expires February 2nd, 1895.

When I took this farm in 1865 it was a wilderness without a fence and with no drainage.

I came into the farm with 500*l.* and borrowed 300*l.*, which I paid off in three years, and I have sailed away ever since.

I did all the drainage, made roads, put up buildings, and spent 400*l.* on the house without ever asking my landlord, as I had every confidence in him.

In the first 17 years I spent 2,700*l.* on the farm, which I proved to the Manchester, Liverpool, and North Lancashire Society when I took the prize for the best managed farm of mixed husbandry in the Northern Division.

Up to a certain point I put everything back into the land. I never furnished a single room in my house until the land was drained. My wife went to market in a farm cart, and she did not altogether like it when her neighbours were passing her in good traps, but I said "Wait a bit and you shall have a better horse and "trap than any of them," and it was not long before she had it. I have lost the five hundred pounds I began with over and over again in bad debts, but I can say I have made farming pay well every year, except last year, which was exceptionally bad. I have made an independence for myself out of farming, practically from nothing, on which I could retire to-morrow, and I am thoroughly proud of it.

High farming pays. What we have to do is to produce. I farm on the four-course system.

I estimate my expenditure on the Manor House Farm as follows:—

	£	*s.*	*d.*
Rent	285	0	0
Tithe	16	0	0
Rates and taxes	25	0	0
Labour	320	0	0
Cake and provender	250	0	0
Manure	240	0	0
Insurance	4	10	0
	£1,140	10	0

= 7*l.* 1*s.* 8*d.* per acre.

This year I produced the following crops on my land, including the Manor House Farm and the one of 120 acres.

Wheat (about) 18 acres, and got 13 windles per acre (a windle = 220 lbs.).

Straw two tons per acre.

Oats, 100 acres, and got about 14 sacks per acre* (a sack = 202½ lbs.).

Straw, about 35 cwt. per acre.

Clover (first cut) 28 acres and got 2 tons 10 cwt. per acre.

Clover (second cut), 2 tons 10 cwt. per acre.

Potatoes 73 acres, and got about 70 sacks per acre (a sack = 240 lbs.).

There are restrictions in my lease as to sale and growth of crops, but they are never acted on, and I farm with a free hand, which I consider the best thing for a good farmer.

In August 1892, I bought the 120-acre farm I now rent. It was bogland, and I paid 22*l.* an acre. It had grown good crops 20 years ago, but it had gone to ruin. The land was water-logged, the drains and ditches blocked up, and the wooden buildings wrecked. No one would take it though hundreds of people saw it. I sold it almost at once for 200*l.* more than I gave for it, and took a lease for 14 years on the following terms:

The first three years rent free, and afterwards 14*s.* an acre, tithe free. It is all plough land.

I have spent 1,200*l.* on improvements this year, which includes draining, marling, making a road for ¾ of a mile, and expenditure on 1,200 tons of horse manure, and 20 tons of guano and phosphate manure. I have now marled 80 acres out of the 120, and intend to finish the remainder this season.

On this land this year I have grown 72 tons of potatoes, over 4,000 loads, and 20 acres of corn and clover. I expect to recoup myself on my outlay in two years.

When I took that farm two years ago, a horse with pattens (made of leather and wood) could hardly walk across it, and two weeks ago a horse could take a load of 15 cwt. off with nothing on his feet.

This is an instance of what energy and capital can do.

* Oats are sold by the bushel. Mr. Pearson puts 4½ bushels in a sack.

C. 3.

Evidence of Thomas Shendly, Farmer, of Pilling.

I farm 63 acres, of which I plough 5 acres; I shall soon only be farming 45 acres with 5 acres ploughed. The soil is a sandy loam.

My landlord is the Rev. J. C. Gordon.

My agreement is a yearly one.

I have 11 children, and the farm is worked by myself, my wife, my son, aged 18 years, and two daughters, aged 17 and 15. I employ no hired labour.

I and my father before me have been on the farm 36 years.

Throughout all this agricultural depression, I have farmed on lines which have proved successful. I am one of those men who are in favour of high farming. It is far better to have a small farm and farm it really well than a big one, and farm it indifferently. It is a great mistake now that stock and feeding stuff is so cheap not to keep more stock, but it is often a forced policy through want of funds, and in some cases through lack of sufficient buildings.

I feed a lot of sheep, buying them from the hills, and selling them to butchers at Blackpool, and I also sell butter and eggs at Fleetwood. I also fatten a few cattle.

During the last year we have expended 28*l.* on our hens, and the credit side shows a net profit of 60*l.* I mean to increase my poultry business.

In October last I bought 100 sheep at 11*s.* 3*d.* = 56*l.* 5*s.* In August this year I sold them for 32*s.* each, including wool = 160*l.* Their keep cost me about 15*s.* each = 75*l.* Hence, I made a profit of 28*l.* 15*s.*

I believe growing fruit for the market would pay me, and I think I shall try it, but I should first get my landlord's consent to plant trees, or I might get no compensation.

I also propose to increase my dairy farming.

All through the depression I have held my own and kept the farm, and it has been done by altogether altering the course of my farming to meet the times.

During the past 12 years I have laid down 28 acres of my land to grass. Before doing so, I found the cost of production was more than the crop realised, so I naturally drifted into and enlarged the paying branches.

The following is my expenditure:—

	£	*s.*	*d.*
Rent	140	8	6
Rates and taxes	8	12	0
Tithe	9	13	6
Labour (extra)	8	0	0
Cake and provender	127	0	0
Manure	11	10	0
	£305	4	0

= 4*l.* 16*s.* 9*d.* per acre.

Once a year I have valued all my stock, crops, &c., deducted my debts and liabilities, and made out my yearly balance. In addition to keeping myself, my wife, and my family of 11 children on personal expenses, clothing, medical attendance, food, &c., I had a net surplus in 1886 of 37*l.*, in 1887, 33*l.*, in 1888, 70*l.*, in 1889, 16*l.*, in 1890, 14*l.*, and in 1891 about 20*l.*

Since then I have not taken the annual valuation, but the progress made has been steady, though not rapid. The slower movement in 1889 and 1890 was due to the lower value per head at which my stock was valued, on account of the low prices ruling in the market.

In my position, I prefer a yearly agreement, but if I was taking a large farm which was run out I should want a lease. I do not think farmers have sufficient security for putting capital into their farms. Now I consume all my own produce, and have spent 1,000*l.* in seven years in manure and feeding stuffs. I might get some compensation, but should have to fight for it in a court of law. For laying down land to grass I should get nothing, because I did not get my landlord's written consent. If I had farmed on the lines practised 12 years ago up to now, the probability is the farm would have been worth 50 per cent. less at the

present time. Who has a moral right to the increased value? Ought it not at least to be divided with the tenant?

I believe in freedom of contract between landlord and tenant, but I believe it would be judicious in certain cases to apply to arbitration as regards rent and compensation. I believe a land court would cause friction and dissatisfaction. I must say I should like to see landlords properly protected against bad tenants.

In Pilling, we have a deal of freedom as regards sale and growth of crops.

Landlords frequently do not reduce the rent of the hard-working men who do well, and often reduce the rent of those who do nothing. Here in our neighbourhood a lot of farmers have gone back, and a lot of farmers have gone forward, but the ones who go back get more consideration than the ones who go forward; hence the real deserving ones get no help or encouragement.

I believe the farms of 40 to 50 acres in our locality have stood the depression best. It must be remembered that in this part of Lancashire we have good markets.

On the whole, I do not think the land round Pilling has gone back, though I believe the market value of the goods sold from the district has gone back 40 per cent. in the last few years.

I and my family work from 6 a.m. to 6 p.m., and besides that often have a good deal of night work among cattle. The girls and boys are simply working for their meat and clothes. Sometimes I put a sheep away for them so that they may be their own managers in buying clothes.

APPENDIX D.

EVIDENCE of THREE FARMERS [illegible] have been LABOURERS.

1. Evidence of Mr. Dobson, Upper Rawcliffe.
2. Evidence of Mr. [illegible]underdale, Upper Rawcliffe.
3. Evidence of Mr. [illegible]aughton.

D. 1.

EVIDENCE of Mr. DOBSON, Farmer, Upper Rawcliffe.

[See paragraph 21.]

My farm is 57½ acres. It is all grass. The soil is black and light hazel. I have been here eight years. I had a lease the first seven years, and I took it on again for 10 years.

I was a labourer up to 22 years ago. I worked very hard when a labourer and so did my wife, who was a servant at the farm where I was employed. We married while in service, 40 years ago. We had not a sixpence when we married, but we then began to save a bit.

We first took a farm of seven acres, and kept four cows. We sold milk and butter and also brought calves up.

At the end of four years we took a farm of 15 acres close by and kept 10 cows. We were there nine years, and then took this farm (57½ acres).

I and my wife and two daughters work the farm, and we employ extra labour at haytime.

I now have 15 cows, 9 heifers in calf, 7 calves, a bull, and a horse.

We make cheese, which we sell in Preston, and butter, which we sell in Blackpool. I also keep hens. I believe last year I cleared 30*l.* by them.

I believe in high farming, and I put a lot of money into the land, but it pays you back by giving you good milk and butter.

I estimate my outlay as follows:—

	£	s.	d.	
Rent - - -	125	0	0	
Tithe - - -	3	16	0	
Rates and taxes -	20	0	0	
Cake and provender -	240	0	0	
Manure - -	12	0	0	
	£400	16	0	= 7*l.* an acre.

Eight years ago the rent was 150*l.*, and a year later it was reduced by 10*l.*, and when that lease ran out a year or so ago, when we renewed the lease, it was let at a further reduction of 15*l.*

My buildings, house and dairy are good, and I have nothing to complain of as regards that.

In my first lease I was not allowed to sell hay, and I was to leave one-third when I left. When I went for my second lease I refused to have this condition, and it was crossed out.

In a great many cases tenants never ask for compensation for unexhausted improvements when leaving for fear of a counterclaim for dilapidations.

I think what the farmers most want is some protection by law to stop their rents being raised on their improvements. Under a bad landlord the feeling of insecurity stops a man properly farming his land. There are plenty who would farm the land better if they dared.

Now, when I left my first farm at the end of four years, which was rented at 17*l.*, we had improved it a lot, and it was worth double when we left. The first year we got one cartload of hay off it, and at the end of the fourth year nine cartloads. The landlord, who was a farmer, asked 5*l.* more rent, and I shifted because it was a shame to pay on our own improvements. I consider the farm I am now on is worth 40*l.* a year more than when I came on to it.

We have all the game on the farm. Mr. Hornby gives the farmers all his game. He has not shot much this year, but has already given us four partridges (October 6th). He gives us many a one. Under these conditions, I certainly do not mind game. Mr. Hornby has a wood near my land with hares and rabbits in it. He says: "My hares and rabbits feed on your land, "and, therefore, you shall have them," so he sends his keeper, and tells us to take our friends out and shoot them, and we sometimes kill 35, and keep them all.

The small farms are dearer than the big ones, and so, I believe, us small farmers have felt the depression most.

It was not until three years ago that I began to feel the depression, and I am not feeling it so terrible bad yet. It is hard work, but I have always managed to pay my way. If I was a man with a lot of little children, and had to employ, labour I know I could not do it. I can say we have not lost money, and we are better off than when we came, but this year we are only just feeding and clothing ourselves.

I have very little hay this year, and I trust it will not be a hard winter, for I have a good deal of stock and big cows which take a lot of feeding.

I work a lot harder here than ever I did as a labourer. It is from light to dark, seven days a week. I know well that a labouring man is a lot better off by a deal than a small farmer.

(*Mrs. Dobson:* It is much harder work now than when I was a servant. I have sometimes gone out to shear sheep all day, and then come in and do the housework and baking in the evening.)

D. 2.

Evidence of William Dunderdale, Farmer, Upper Rawcliffe.

My farm is 24 acres, of which I plough 2 acres. The rent is 58*l.*

I work the farm with the help of my wife and my daughter aged 23 years, and we employ an extra man at haytime and harvest.

Up to 10 years ago I was a hind, and my wife was a servant there too.

We both worked very hard, and saved a bit of money, and then took this farm.

We milk nine cows, and we have two heifers, six or seven calves, and a horse.

The buildings are in a very wretched state, and are nearly tumbling down. They are really dangerous, and the house lets in water. The landlords up to now will do nothing, though I have asked them to. The lease says they are to keep the buildings in repair, and they have broken it by not doing so. Also we have no dairy accommodation, and the water is bad. What is the use of giving us technical education in making butter if they do not give us the means to make it at home?*

When I took the farm it was simply a wilderness, and grew rushes, moss, watercress, and furze. There were only three cows and a horse on it. I have drained every bit of the land, and made the farm good. The landlords gave the tiles, and I did all the work. It was rather hard that the agricultural depression should come just as I was hoping to make it do.

I have a lease for 14 years.

After I had been here a year or two, I got an abatement of 10 per cent. for eight years because I could not pay my way.

I estimate my expenses as follows:—

	£	*s.*	*d.*
Rent - -	58	0	0
Tithe - - -	2	0	0
Rates and taxes -	3	17	5
Cake and provender	100	0	0
Manure - -	7	0	0
Extra labour - -	5	0	0
	£175	17	5 = 7*l.* 6*s.* 6*d.* per acre.

The men who spoil farming are those who know nothing about it, such as retired tradesmen, who bid high for farms because they have a little capital. Until farmers educate themselves, they won't get on. They must contrive, like dealers, not to bid against each other for farms. Until land is put down to a living price it is but little use. Rents certainly must come down.

I consider it a very great wrong to a farmer—a bigger wrong could not be committed—than to let him improve his land, and raise the rent at the end of his time because he has improved it. It is putting a tax on industry and hindering a man from farming. Now nothing improves land so much as feeding cattle with meal, and I think towards the end of my lease that it would be a foolish thing for me to go on doing it, for why should I do so for some one else to reap the benefit?

Under my lease if I was to plough more land than 3½ acres I should have to pay 10*l.* an acre. This is a monstrous thing, but times have got worse since leases were made. I am also not allowed to sell my hay.

As a rule, tenants are afraid to claim compensation for unexhausted improvements for fear of landlords claiming for dilapidations.

We have nothing to grumble at about hares and rabbits. Mr. Hugh Hornby rents flying game from the landlords, and we can kill the hares and rabbits, and certainly I am not afraid to do so. Mr. Hornby gives away all the game he kills.

I believe there are cases where a man would have to leave his farm if he shot a hare.

I think the law of distress should be abolished. A farmer will pay his landlord the rent before anyone else. I know as a fact that farmers sometimes borrow money to pay their rents. I think it a very hard case for a landlord to be paid in full and the tradesmen to get little or nothing. If the landlord could not distrain, he would be more careful in choosing his tenants, and then there would be less competition for farms, which would pull down the price a bit.

They missed the main point out of the Margarine Act. They should have stopped people colouring it the same as butter. It is only coloured to deceive.

Foreign meat should be labelled, to let people know what they pay for. Butchers have made a fortune out of selling foreign meat as English.

As a farmer I work harder and I have longer hours than when I was a farm servant.

(*Mrs. Dunderdale:* I work harder now than when I was a farm servant. The work is far rougher, for I and my daughter go out and help in the fields, to save expense in labour. My daughter was lifting potatoes all yesterday.)

* I inspected the buildings, which are in a ruinous condition. The only place there is to keep butter is in the pantry, opening out of the kitchen, which is 15 feet by 5 feet and 7 feet high.

D. 3.

Evidence of Mr. Bleasdale, Farmer, Claughton.

I farm 100 acres which is all grass, except what is wood and rough land.

I work the farm with the help of my wife, son, and daughter.

My landlord is Mr. Fitzherbert Brockholes.

Twenty-eight years ago I was a cowman, and my wife was a servant in the same place.

We saved a bit of money, and took a farm of 17 acres. We had three cows to milk, and "two of an edge" (raising two three-year-old heifers every year).

We stayed 10 years on that farm as yearly tenants. Times were very good then, and we made more money there than we have ever done on this 100-acre farm.

On our present farm we have 10 cows to milk, and "six of an edge," also 30 wool sheep and a horse.

We make cheese and sell it in Lancaster. We make under a ton a year.

I am quite satisfied with the buildings, as I chose them when my landlord offered them. We might have rather a better dairy. Our landlord put us up a new manure tank, and sheds for 18 beasts within the last 10 years. We have a plentiful supply of good water.

My capital employed is 450*l.*

I estimate my expenses as follows:—

	£	*s.*	*d.*	
Rent -	81	0	0	
Rates and taxes -	9	0	0	
Extra labour for harvest	12	0	0	and food in addition.
Tithe - - -	2	10	0	
Cake and provender -	80	0	0	
Manure - -	5	0	0	
	£189	10	0 = 1*l.* 16*s.* 10*d.* per acre.	

Two years ago my rent was reduced 10 per cent.

We are only just feeding and clothing ourselves, and we are not paying our son and daughter for their work. That is our present position, although we have the best landlord in the country.

Rents must be dropped. Seasons have been very bad, and some good seasons would make a lot of difference to us.

Hares and rabbits do not do us harm. My landlord says, "tell the keepers if the rabbits bother you, and if "they do not kill them, come and see me, and I'll see "they are killed."

I have no restrictions placed upon me, and I farm as I like. I would as soon spend 1,000*l.* upon my farm as 50*l.*, though I am a yearly tenant, for I have not the very slightest fear that my landlord would ever take any advantage of me.

A farmer on 100 acres works harder and a deal longer hours than a labourer. They work 14 or 15 hours a day, and never give over, week days or Sundays.

(*Mrs. Bleasdale:* I say let me be a servant again, and then I should know when my work was done.)

APPENDIX E.

MEETINGS.

1. St. Michael's-on-Wyre.
2. Pilling.
3. Calder Vale.
4. Poulton-le-Fylde.
5. Hambleton.
6. Lytham.

E. (1.)

MEETING at ST. MICHAELS-ON-WYRE, October 6, 1893.

Present: about 30 farmers.

The principal estates in the district are the Earl of Derby's, Archdeacon Hornby's, the Duchy of Lancaster, and White Hall.

Some of the soil is strong hazel and some peaty.

Not much land has been laid to grass in the last 10 years.

The chief produce sold from the district is cheese, butter, and hay.

The principal market is Garstang, though some farmers sell cheese and butter in Preston and Blackpool.

The district stands very well for farm buildings, but in some cases the sheds are too old, and improvements are wanted in dairy accommodation.

There have been in many cases temporary remissions in rent since 1890, but no permanent reductions. In a few cases remissions have been made as far back as 1880.

The rents are certainly too high here, considering the fall in prices.

(A farmer: There is a good deal of competition for farms, and that has had a lot to do with raising rents in the last 15 years.)

(A farmer: In many cases farms are taken hurriedly for the sake of a home for the wife and family, and without duly considering the business part of it. It is a very awkward position indeed for a man with a wife and family, and many a time afterwards have men rued the taking of farms at the rent they did. Farmers ought not to run up the rent of farms against each other. The middlemen do not run up the rent of prices, as they have some combination.)

Rates have not increased since 1882.

As to tithes, in most instances the landlords are paying them, and the amount has been added to the rent.

(A farmer: In one case here, on a farm of 104 acres rented at 109*l.*, since the Tithe Act, the landlord has paid the tithe of 9*l.*, and thus the tenant has practically had a reduction in his rent.)

Railway rates do not directly affect this district, as the farmers chiefly drive their stuff into Garstang market, and sell there to the middlemen, who put it on the railway; but if railway rates were cheaper, the middlemen could afford to give the farmers a better price.

Most of the farmers are under yearly agreements. Yearly tenancies are better in these bad times than leases.

Under a yearly tenancy a farmer would not put capital into the land unless he had a good landlord.

(A farmer: I am rather afraid that the mischief is that there is no capital left to be put into the land. The farmers have been going back too long. I speak of the majority.)

No instances can be quoted in this neighbourhood where rents have been raised unfairly during the past 10 years on the improvements made to the farm by the farmer.

On the Earl of Derby's property they have a pretty free hand as regards cultivation. People generally say if they live under Lord Derby they are right, and that can be said of Archdeacon Hornby and the other landlords here.

(A farmer: There are many leases with restrictions, but they are not generally acted on.)

(A farmer: In my lease the restrictions are not that tight.)

The questions of dilapidations and unexhausted improvements seldom arise, because there are so few cases of tenants leaving.

(A farmer: "I know of a case where the landlord put in a claim for dilapidations, and got 70*l.* when I myself thought there was no depreciation. It was settled by a gentleman agreed upon by both sides.)

Landlords generally charge five per cent. for all permanent improvements. A tenant farmer would not put up any buildings other than wooden structures, without speaking to the landlord.

If a tenant laid down land to grass without speaking to his landlord, and after several years elapsed he wished to leave, he would generally not give up his tenancy without asking the landlord for some payment for his outlay.

In the last 10 years cheese and butter have kept their price more than anything else. A good price can be obtained for both now and also for clover hay.

(A farmer: Foreign competition has recently affected the price of hay, and not the fact of there being a second crop. Six weeks ago hay in the Preston market was 10½*d.* a stone, and now it is 8*d.*, and under.)

Taking things all round, the prices of farm produce has dropped 20 to 30 per cent. in the last ten years. Some years the decrease has been 40 per cent.

(A farmer: I know of yearling cows sold at 4*l.* to 6*l.* lower than was the case three or four years ago. The price of store stock is still worse, and has decreased 40 per cent. in 10 years.)

The price of sheep is better this year than last, but it varies much more than that of cattle.

(A farmer: The price of sheep has decreased considerably of late years. Four years ago I bought sheep at 54*s.*, and this year I got 32*s.* 6*d.* for them. The price of lambs has decreased in the same proportion.)

The farmers here began to feel the depression eight or ten years ago, and since then things have gradually got worse. The depression in the last two years has been much on a par. Farmers had no grass at the beginning of this year, and incurred heavy expenditure by buying fodder for stock.

St. Michael's is a hay-selling district, but this year there will not be the same quantity of hay to sell, though there will be a sufficient quantity for the stock in our own neighbourhood. Higher up in the district nearer the hills there will be a scarcity of fodder, and there the farmer will feel the pinch more.

(A farmer: There is only one cure for agricultural depression. It is the change in our fiscal policy. I mean doing away with one-sided free trade, both as regards farm produce and manufactures. Foreign competition is no doubt the cause of agricultural depression, but there is not a farmer in this room, or in the county, who is afraid of foreign competition if it were on a level basis. Foreigners have a great pull over us as regards tariff, and they are more favourably situated as regards rent and tithe.)

(A farmer: The middleman is generally more anxious to sell foreign produce than home-grown, because as a rule he can make a bigger profit out of it.)

(A farmer: There are only two alternatives. Those are Fair Trade or abolition of rent.)

(A farmer: There are many farms in this county, though perhaps not in this immediate district, where they could not make much profit if they had no rent to pay.)

The landlord's right to distrain for rent should be taken away, and he should be a common creditor.

(A farmer: That would be a disastrous thing for men with no capital, because the landlord would then first ask what capital a man had, and he would not take one without.)

(A farmer: The landlord would then have to be more careful what kind of tenant he got, and that would do away with some competition. A tradesman generally inquires into the probable solvency of a customer, and the landlord would have to do the same before he let a farm.)

In a lot of places, but not round here, the farmers are afraid to take advantage of the Ground Game Act. Shooting tenants are objected to. Tenants will keep game for the landlord, and not for the shooting tenant.

(A farmer: I believe a good deal of margarine is still sold as butter.)

(A farmer: Margarine should be sold in its proper colour, and not coloured to look like butter. The question of the colour is more important than that of the name.)

Foreign meat should be labelled as such.

(A farmer: One great difficulty the farmers have is lack of drainage. About 30 or 40 years ago there was a mania for draining. The landlord found the tiles, and the tenant did the work. The district then was pretty well drained, but now the drains have silted up, and the water does not flow. The district needs not the old drains mending, but re-draining altogether. The old drains are getting practically useless.)

E. 2.

MEETING at PILLING, October 11th, 1893.

Present: Dr. Day and about 30 farmers.

The principal landowners are Major Hornby, Miss Elletson, Mr. Thomas Corless, and Mr. W. B. Corless. There are several smaller landowners.

The soil is marsh, sandy loam, and black soil, but much land has been turned to grass in the last 10 years.

Three-fourths of the farms are from 30 to 50 acres, but there are some of 150 and 200 acres. Some of the small farmers employ labour and have servants living in the house.

The tenancies are chiefly yearly.

A large quantity of potatoes are grown in the district. Dairying is carried on to a considerable extent, but the produce is of an all-round description. Some of the farmers are market gardeners.

The principal markets for the district are Garstang, Fleetwood, Preston, Lancaster and Blackpool, but considerable quantities of potatoes, turnips, hay and straw are sold through middlemen which go to Liverpool, Manchester, Bury, Bolton and other manufacturing towns.

The dairy and sanitary arrangements are generally complained of.

(*Dr. Day:* They are thoroughly bad, the people are very badly off for dairy accommodation. They have to make the butter in the kitchen, and often keep butter and cheese in the sleeping room.)

(A farmer: Yes, the inconveniences are great.)

(*Dr. Day:* It is very unhealthy not only for the tenants but for people generally. There ought to be special buildings. I have seen butter making going on downstairs in a farm where there was a case of infectious disease being attended to upstairs. I have attended a case of diphtheria at a house where the woman has gone downstairs and gone on butter making. I could say a great deal more. It is very hard on farmers when they have infectious diseases in the houses for they have no accommodation for isolation, and if you stop the sale of butter and cheese you practically ruin them. Nothing conveys infection so much as milk.)

As to the water supply.

(*Dr. Day:* It is very bad. It is filthy. It is not fit to drink. Until a short time ago the place was hardly ever free from fever. Most of the diseases in Pilling are attributable to the water. It is also bad to wash out the milk cans with it. The water chiefly comes from wells and pits, but chiefly from wells and most of them are bad. There are more than there used to be for I believe the Sanitary Authority has compelled some of the landowners to sink more of them.

The water for animals is also filthy and not fit for them to look at, let alone to drink. The ponds are contaminated with sewage.

Good water no doubt could be got, but it would mean considerable expense. The Fylde Waterworks Company could supply the whole district either from St. Michael or Fleetwood, and it is the best water that could be got.)

As to sheds.

Farmers have not sufficient sheds and many of them are not fit for cattle to be in. They require about one-third more.

(A farmer: There is no ventilation, and we have to pack them too tightly to save room.)

Some men have to sell their cattle because they have not sufficient sheds for them.)

As to farmhouse accommodation.

(*Dr. Day:* Most certainly the accommodation is indifferent. There is hardly a farmer who has a fireplace in a bedroom, and some of them have to pack themselves and their children into one bedroom, which certainly is not right. In fact the buildings could not be worse, there are several farmhouses which in my opinion ought to be condemned. It is not the sort of thing I have been accustomed to see in the South of England.

There have been some improvements effected since Miss Elletson became proprietor.

(A farmer: Very little.)

As to drainage.

(*Dr. Day:* There is no drainage and no proper sanitary arrangements. I condemn them utterly. There is no attempt at any sanitary accommodation in any shape There is no system: it is as primitive as can be.)

As to rent.

There have been some remissions in the last two years which varied from 10 to 20 per cent. on the moor farms, which have suffered most from the frosts which had hurt potatoes.

About 25 years ago rents were raised all round, and since then there have been no reductions until two years ago.

Rents are too high, they want reducing 20 to 30 per cent.

(A farmer: These remissions do not affect our estates. We have to pay exactly the same amount.)

There is a great competition for farms. If a farm becomes vacant there are a great many competing for it, which keeps up rents. Although a farmer knows the last man has left through being unable to pay his way, he will still compete for it.

The competition is chiefly for small farms of 20 to 30 acres. People are brought up to farms in the district and do not wish to leave, and so they are obliged to push for farms. The competition is chiefly between Pilling men.

Rates are about the same in the last 10 years.

(*Dr. Day:* Our complaint is we get so little for our money. Our roads are very bad.)

Tithes are now paid by the landlords and then paid by the tenants to them. There have been no remissions given by landlords as regards tithes.

On the whole there are not many restrictions as to the growth of crops.

(A farmer: We should have to go down on our knees before we were allowed to plough up meadows.)

The fact of being yearly tenants does not stop farmers here putting capital into the land.

There have been but few changes in tenancies, so the Agricultural Holdings Act is little known of, but anyhow the expense would prevent farmers taking advantage of it.

(A farmer: Many would go in for fruit-growing, but they would get no compensation for the trees if they left.)

Railway rates are too high.

From Pilling to Preston (18 miles), 6*s.* 8*d.* a ton is charged for potatoes.

40 years ago wheat was 37*s.* to 2*l.* a windle, and now is 10*s.* to 12*s.*

Store cattle have fallen nearly 50 per cent in the last three years, and milking cows 20 per cent.

20 years ago potatoes were 1*l.* a load, and now they are 3*s.* or 4*s.*

Cheese, butter, and eggs are about an average price.

The depression has been felt for 10 years, but it has been at its worst the last two or three.

Farmers have not changed their system of farming much, but they have gone in a little more for poultry.

The law of distraint should be abolished.

Farmers cannot take take advantage of Ground Game Act.

(*Dr. Day:* The majority of them dare not shoot anything.)

(A farmer: They do not do quite so much game preserving as they used to.)

(*Dr. Day:* On one estate there are two gamekeepers where there used to be one. I think it is a very sensible suggestion that landlords should be allowed to contract out of the Act and then they could pay the tenant for the exclusive right to kill them.)

(*Dr. Day:* Men are never sent away from farms for holding political opinions one way or another. I entirely deny that that ever is the case.)

Farmers in the locality are very much injured by cows suffering from tuberculosis.

The disease is on the increase and it ought to be scheduled with the other diseases.

(*Dr. Day:* All animals ought to be slaughtered as soon as the disease is detected. The flesh is not fit for human food.)

The accommodation in the way of buildings is so limited that there is no means of isolating the animals affected.

(A farmer: We are drinking milk every day from consumptive cattle. We are drinking microbes.)

(*Dr Day:* Yes, that is so. In the present state of things no one ought to drink milk that has not been boiled.)

Some are in favour of the "three F's."

E. 3.

Meeting at Calder Vale, October 12, 1893.

Present, about 15 farmers.

The principal landowner is the Earl of Bective. Mr. W. Fitzherbert Brockholes and Mr. Garnett own land in the district.

Most of the tenancies are yearly.

The soil is mixed. It is mostly black, and peaty on the top, but there is also some clay.

Farms are usually between 80 to 100 acres, but there are a few over 200 acres.

The chief produce is butter and cheese, and the principal market is Garstang.

The farm buildings, including the farmhouses, vary as regards condition and convenience. A few are very good, but generally speaking they are in a bad state and inadequate for requirements. Many are old thatched buildings, very low and out of repair.

Dairy accommodation is very inadequate. The only farm where it is satisfactory belongs to Mr. Fitzherbert Brockholes.

As regards water, the district is fairly well off, as there are plenty of springs in the fell side, though in case of one farm water for household purposes has to be fetched nearly two miles. The water is good enough for making butter and cheese. The water for cattle about the farms is sometimes bad, owing to lack of drainage.

About three years ago, 10 per cent. was temporarily knocked off the rents on Lord Bective's property, and last year some got an extra 5 per cent. taken off in addition to the 10 per cent. One tenant states that his tithe (6*l.*) was not collected last year.

The reductions in rent have been inadequate.

Rates have not increased in 10 years. Railway rates do not affect the farmers in this district directly, as they do not use the railway.

Under present circumstances, the tenants prefer yearly agreements, but if they were going to put much capital in the land, they would prefer leases, so as to give them time to reap the benefits. There is not much done in the way of improvements now, as there is no money to put into the land.

Farmers are unwilling to take advantage of the Agricultural Holdings Act, on account of the expense. They are also afraid of claims for dilapidations. If they could get compensation for unexhausted improvements cheaply, they would prefer yearly tenancies to leases.

Some cannot grow what they like, but are under an agreement to grow rotation crops. If they want to plough up grass land, they must ask leave to do it, and that is right.

The depression began to be most severely felt about three years ago.

Mountain sheep had fallen 10*s.* a head, and young stock 50 per cent.

Dairy stock had fallen about 20 per cent.

About four years ago the depression began to be serious.

(A farmer: Five years ago I sold shearlings at 37*s.* 6*d.* each; last year similar ones fetched 22*s.* 9*d.*, and this year 25*s.* to 26*s.*)

(A farmer: Last autumn I bought some heifers at 11*l.* 5*s.* each, and kept them all the winter, and sold them for the same price in the spring.)

Formerly dealers were always at the farms looking out for stock, but now they never come.

This winter there will be a scarcity of hay, and the price will be severely felt.

The Ground Game Act has done a lot of good in keeping rabbits down. There is not a tithe of the rabbits there used to be on the Barnacre estate, the Claughton estate, and Mr. Garnett's estate.

The agricultural depression is caused by foreign competition.

Small farmers have felt the depression most.

(Mr. King: The depression affects other interests besides those of agriculture, and in a great measure it is due to the depreciation in the value of money. Land has kept up well in Lancashire, owing to the splendid markets.)

The land is not in such good condition as it was a few years ago.

Bad seasons have made the land go back; also we do not give our cattle cake now, so it is worse for the land.

Landlords and tenants should be left free to make their own bargains.

(A farmer: If I had a cow to sell, I should like to fix the price myself.)

There should be a reduction in rent to meet the times. Landlords and tenants want to work together more. Fathers, mothers, sons and daughters are all working their hardest to make both ends meet. The sons and daughters prefer to stay at home.

Landlords ought to pay the taxes.

Foreign meat should be marked.

Agricultural Holdings Act should be altered.

E. 4.

Meeting at Poulton-le-Fylde, October 13, 1893.

Present, about 25 farmers, some of whom belong to the Fylde District Farmers' Club, who endorse the programme of the Lancashire Federation of Farmers' Associations, which mainly consists of a radical change in the Agricultural Holdings Act, and others belong to the Lancashire Tenant Farmers' Association, who advocate a land court.

The principal landowners are Mr. T. H. Miller, Mr. W. P. Miller, Mr. T. Clifton, Lord Derby, the Fleetwood Estate Company, Mr. C. H. Atkinson, and the executors of the late W. H. Hornby.

The average farm of the district is about 80 acres, but there are some larger.

The soil is partly black loam, and partly marsh land.

Not much land has been turned to grass within the last 10 years, but between 1870 and 1880 a great deal of land was.

Of late farmers have taken more to dairying, though there is a good deal of mixed farming. The chief product of the district is cheese.

The district was formerly noted for its wheat-growing, but, owing to the fall in prices, but little is now grown.

The tenancies are chiefly yearly.

As regards buildings:—

(Dr. Winn, medical officer for health: On the Singleton estate the buildings are far above the average, and on Lord Derby's and other large estates they are very

good, but on the small holdings they are very bad. In these cases there is no ventilation, no air, no light. As medical officer, I am making an examination of the cow-sheds in the district. I should be satisfied with 600 cubic feet of air in such sheds, but there were some in the district with only 266. It gives a cow tuberculosis, and the milk would give consumption to human beings.)

(Mr. Bennett, farmer and cattle dealer: The district is very much affected by the disease. The reason is, I believe, that the buildings have not been changed or increased with the change in the system of farming, that is from cereal growing to dairying. Tuberculosis should be scheduled as an infectious disease, and compensation given.)

(Mr. Crookall: We lack accommodation for making butter and cheese.)

(Mr. Bennett: At many of the farms there is no dairy accommodation at all.)

As to the water supply:—

(Dr. Winn: As medical officer of health for 21 townships, I can say that 17 out of the 21 have a very good supply of water. A large number of them are supplied by the Fylde Waterworks Company. At Warton, Marston, and one or two other places, the water is very impure, and the supply is insufficient. This is very bad for butter-making and bad for those who drink the milk.)

(Mr. Walsh: Hard times prevent the outlay of money on land.)

(Mr. Crookall: The tenant generally pays interest on improvements effected.)

(A farmer: Yes, and sometimes has to do the carting.)

(Mr. Bennett: I have been charged 4½ per cent., and I did no carting.)

There have been but few cases of permanent reductions in rent. Lord Derby and Mr. Miller have remitted 10 per cent. for a year or two, and in one case 20 per cent.

As to prices, Mr. Lucas gives the following particulars:—

	1882.			1893.	
	s.	*d.*		*s.*	*d.*
Wheat	19	0	a windle	11	6
Oats	3	6	a bushel	2	6
Barley	19	0	a pack	14	0
Beans	17	0	a windle	12	0
Potatoes	8	0	a load	4	0
Cheese	70	0	a cwt.	55	0

Taking a farm of 100 acres, which was about the average in the district, with 30 acres of arable land and 30 acres of pasture, all clover, hay, &c., being consumed on the farm, in 1882 such a farm would make 461*l.* 14*s.*, and in 1893, 325*l.* 12*s.*, or a loss to the farmer of 139*l.* 2*s.* Notwithstanding that loss, rents were much the same.

(Mr. Bennett: There has been a general reduction in the price of cattle from 30 to 50 per cent.)

The price of labour has increased 3*l.* or 4*l.* a year a head for hired servants since 1882, and harvesters 1*l.* a month.

Railway rates from Poulton to Preston have increased from 1*s.* 6*d.* to 3*s.* a waggon. Also the free pass for men who go with cattle has been discontinued.

The poor rates, county rates, and School Board rates have increased.

(Mr. Crookall: The School Board rate is much felt at Thornton.)

(Mr. Bennett: The Fylde District Farmers' Club are in favour of the Tenant Right Bill, supported by Mr. Kay, the president of the Lancashire Federation of Farmers' Associations. They are not in favour of a land court.)

E. 5.

Meeting at Hambleton, October 19th, 1893.

Present, about 40 farmers.

There are very few large landowners in the district.

Only six farms in the township, which comprises 1,300 acres, are rented up to 100*l.* a year.

A number of men own their holdings, and many of these are hucksters, or get employment at the cake works or on farms as day men.

A 50-acre holding lets at about 2*l.* to 2*l.* 10*s.* an acre.

The soil is black and light hazel.

Only about 70 acres in the township is under plough.

The farmers chiefly graze cattle and sell butter and cheese.

The principal markets are Blackpool and Fleetwood.

The tenancies are yearly. Men prefer them, as they are then free to go.

A great improvement has taken place in the last 30 years as regards houses, buildings, and drainage, and the improvement continues year by year. There is, however, still more to be done. In the smaller farms better dairy accommodation is required.

Also a great improvement has taken place as regards water. Many wells have been sunk, and there is hardly a pasture field without a pit in it.

Competition for farms runs the rents up. There is plenty of competition for farms of 50 acres.

It is the tenant's fault that rents are high and not the landlord's, because tenants will bid up against each other.

All matters should be settled between landlord and tenant.

(A farmer: If a man is not fit to make his own bargain, he is not fit to farm.)

(A farmer: That is the general opinion of this meeting.)

(A farmer: We do not want Irish laws here. We are an intelligent nation, and want to keep in the front.)

(A farmer: We are not moonlighters here.)

Rents have been reduced 10 per cent. on Mr. Gaskell's estate the last year or two.

There are no cases in this district, during the past 10 years, of rents being raised on account of improvements made by the tenants. We are 7½ miles from Blackpool. The land has risen in value since Blackpool got bigger.

All men farm well in the district and keep on improving the land.

A deal of land has been drained by the landlords who charge the tenants 5 per cent. on the outlay.

We have no restrictions here. Of course, we may not plough up old meadows, which is only just.

In the cases where men have leases, the landlords pay the tithe and the tenants pay him back. Where land is relet, tithe is merged in rent.

The highway rate, the poor rate, and county rate have all gone up in 10 years.

The turning of land to grass has done away with labour. Labourers chiefly live in the farmhouses here.

As to railway rates:—

From Poulton to Bolton, 35 miles, the charge for carrying potatoes and corn is 1*s.* 6*d.* a 2-ton lot more than formerly.

The charge for carrying cheese between the same stations is now 3*s.* to 4*s.* a ton higher.

From Poulton to Preston (15 miles) a 2-ton lot of corn was 6*s.* 8*d.*, and now it is 7*s.* 4*d.*

Between Poulton and Bolton cattle trucks are 2*s.* higher, and the free pass for the man has been done away with.

The rate for store cattle from Belfast to Fleetwood has been raised 2*s.* a head. The boats are owned by the railway company.

5*s.* a ton is charged for manure from Preston to Poulton.

If the law of distraint were abolished it would prevent small men rising. In this district a small man can rise. He can begin on an acre or two and keep a cow. The wife and children can look after the cattle, and the man can go out and get work.

There are some large farmers here who began with one or two beasts on a few acres, but then times were better. As prices are, a man cannot rise now. There has been plenty of money saved here when potatoes were 16*s.* to 1*l.* a load, 13 years ago. Now they are 4*s.* 6*d.* a load at Preston and Blackpool.

(A farmer: If the law of distress was abolished in the country it must be abolished in the towns.)

The law of distraint should stand as it is.

(A farmer: The law should be as it is. There are men who would go in and hurt a farm and pay nothing at all.)

(A farmer: Its abolition would prevent small men rising.)

50 acres is the very least a man could make a living out of without seeking work elsewhere.

(A farmer: I have 26 acres, and keep cows and sheep. I go out and get day work and my family look after the land when I am working out.)

Dairy cattle have dropped 3*l.* a head in the last three years.

Three years ago a two-year-old fetched from 9*l.* to 11*l.*, and now fetches 4*l.* 10*s.* to 5*l.* The cattle here are good cattle and well kept.

Cheese and butter have kept their price.

A lot of land has been turned to grass in the last 10 years, and buttermaking and feeding calves has increased.

Also more sheep are kept.

Market gardening is gone in for more and more. Fruit growing has increased in recent years. Growing cucumbers, &c. under frames is becoming more general.

The sale of eggs, and the rearing of chickens and ducks is increasing considerably. Hen farming pays as well as keeping cows.

There are very few farms without pigs.

(A farmer: The Blackpool people are terrible folk for eating greens. These people from the town say it helps their digestions.)

There are no hares and rabbits here.

(A farmer: I have not seen a hare for three years.)

As to remedies:—

1. Rent should be dropped.
2. Landlord and tenant should share the rates.
3. Railway rates should be lowered.
4. Margarine should be sold in its natural colour.
5. Foreign meat should be labelled, and butchers should take out a license to sell it.
6. The toll over our bridge should be abolished and the cost thrown on the water. In order to get to our market towns, Blackpool and Poulton, we have to pay 4½*d.* (return journey) for one horse.
7. Some public body should attend to floods. This year a field of four acres, which has been under water for three years, produced 600 loads of potatoes, because the season was a very dry one.
8. As to Free Trade:

(A farmer: I think if foreigners will tax us, we should tax them.)

(A farmer: That is a selfish view. There are a lot of Englishmen who have sons abroad, and we must not put obstacles in their way.)

(A farmer: It is not right that they should have the use of our markets without paying taxation.)

(A farmer: It is no use arguing about it. We shall never have anything but Free Trade. Our own produce would not keep us three months.)

(A farmer: I would tax all manufactured goods.)

(A farmer: We must have Free Trade.)

The American tax on horses and the restriction as to importation without proof of six pure crosses has struck a great blow at Shire horse-breeding throughout the Fylde district.

(A farmer: The Government are always attending to Irish farmers, who are never satisfied. Why do they not do something for us?)

E. 6.

Meeting at Lytham, October 20, 1893.

The following farmers were present, all tenants of Mr. Talbot Clifton. Mr. T. Fair, agent to the estate, also attended the meeting at the request of the tenants.

Name.	Address.	Acreage.	Rent, including Tithe.
			s. *d.*
Mr. James Parkinson	Moss Hall, Lytham	300 acres	29 3 per acre
Mr. Edward Thompson	Mere Farm, Westby	346 „	30 0 „
Mr. William Langtry	Westby Hall, Westby	359 „	29 3 „
Mr. Robert Whiteside	Westby	400 „	43 0 „
Mr. Robert Chandler	Plumpton Hall, Westby	413 „	29 6 „
Mr. Henry Fisher	Westby	133 „	35 9 „
Mr. Matthew Kirkham	Westby	135 „	34 0 „
Mr. James Waring	Westby and Little Martin	241 „	42 0 „
Mr. Henry Kirkham	Westby and Little Martin	175 „	38 0 „
Mr. Matthew Fox	Little Martin	400 „	22 6 „
Mr. George Cartwell	Lytham	105 „	31 6 „

There has been a general tendency to turn land to grass in the last 10 years, but the black land has been kept under the same rotation as usual.

(Mr. Thompson: In the last 10 years I have turned 40 acres to grass out of 320. This has not in my case dispensed with any labour on the farm.)

Labour here costs a third more than it did 13 years ago.

Independently of price, labour is very difficult to get as the labourers will go to the towns. There is not much to grumble at as regards the supply of labourer's cottages.

(Mr. Fair: A pair costs us 450*l.*)

As compared with many other districts the buildings, sheds, and dairies are far superior.

There is plenty of good water to be got from the Fylde Waterworks Company, but it is too dear. The charge is at the rate of 6*d.* an acre, whether the farm is grass or arable, for one ball tap supplying one or more troughs in the yard and the house.

This charge is most certainly too high.

A yearly tenancy is the best if some agreement is made with the landlord as to getting compensation for unexhausted improvements without expense.

(Mr. Fair: In 1875 an agreement was drawn up which was intended to be used on this estate, setting out the scale of compensation for unexhausted improvements. The scale was settled at a meeting of six leading land agents and six representative tenant farmers. So little did the tenants care to take advantage of this agreement that all the agreements are in the office now unsigned.

We have only had one arbitration with an outgoing tenant.)

(A farmer: I am a yearly tenant and have held my farm 50 years. I feel quite safe.)

(A farmer: I am on a 20 years' lease.)

(Mr. Fair: No, I am sure yours is an annual tenancy.)

(A farmer: A yearly tenancy is certainly the best if there is no difficulty as to claiming for unexhausted improvements.)

(A farmer: We take yearly tenancies by choice.)

(A farmer: It depends what landlord you get under.)

We are all against a Land Court. A man must do for himself and make his own bargain.

Plenty of men go and bid for farms and run up and ask for an abatement before they have paid their first rent.

As to fixity of tenure it would never do to compel a landlord to keep a man on at the end of a lease. A good farmer has got fixity of tenure as long as he wants to stay. A landlord must get rid of a bad tenant in the same way that a farmer must get rid of a bad labourer. A land court won't do in this country.

Rates have not gone up much in the last 10 years except in the urban districts.

As to railway rates:

Grain from Lytham to Preston (13 miles) is 9*s.* 4*d.* for two tons.

Potatoes from Lytham to Preston (13 miles) is 3*s.* 4*d.* a ton.

Artificial manure from Liverpool to Lytham, 6*s.* 8*d.* a ton.

Cow manure, Preston to Wrea Green (9½ miles), 2*s*. 3*d*. a ton.

(A farmer: More manure would be bought at Preston if it was not for the railway rates.)

(A farmer: The railway charge me considerably more than they do the dealers for carriage of potatoes, as they can get a special rate.)

If a man farms fairly, he can farm with a free hand. A good farmer is let alone. Restrictions are only put in force in case of bad farmers. Of course a man may not plough up old meadow, and it is quite right he should not be able to do so.

(A farmer: Mr. Fair has often given leave to plough meadow up if the tenants go to him and show reasonable cause for so doing.)

(A farmer: I want to plough up a bit of meadow now, and I have no doubt I shall be allowed to do so.)

(A farmer: Landlord and tenant should come together about these things. I do not believe in third parties interfering.)

(A farmer: Rabbits are a confounded nuisance. They should shoot the rabbits and hares more. They do not shoot enough here.)

(A farmer: We do not like seeing the game dying of old age.)

(A farmer: It would not please our landlord if we started shooting hares.)

Tenants can trap rabbits as they please, and rabbits do much damage.

(A farmer: My land is in the middle of covers, and the rabbits come out of them on to my land and I cannot trap them.)

(Mr. Fair: I think in justice to the estate that I ought to state that in 1885 I wrote to the Coursing Club saying that hares would no longer be preserved, and immediately a large petition was at once presented, signed by all the farmers in the neighbourhood, asking that the preservation of hares should be continued.)

The depression has been felt the most severely the last three years.

Foreign competition in cattle has been the cause of it.

Butchers charge no less; they are making all the profits.

Calving cows also have been imported into Liverpool, and that has also affected their price very much.

Since the depression, more milk has been taken to Blackpool for sale, and smaller farms have taken to grow vegetables.

In consequence of the depression, the land in some parts is not so well farmed, and some men are buying inferior stock.

The law of distress should be abolished. It would give the farmer greater credit. Many a time when the farmer gets poor, he wants credit and could get it easier.

(Mr. Fair: The law operates to his advantage thus. Rents are collected the first week in November, instead of on August 2nd, and hence the landlord gives credit in order that the crops may be realised. Again on some estates rents are not collected for a year, which is a great advantage to a small man.)

As to remedies:

1. Landlords should meet us a bit in these bad times. We do not ask for a permanent reduction, but just for a little help now times are so bad.

2. Foreign meat should be marked.

3. Margarine should be sold in its natural colour.

4. Compensation should be given for tuberculosis.

5. Income tax is very unfair. We pay it on half the rack rent when we are making nothing, and when we and our families are all working hard for nothing. Farmers keep no books, and so cannot appeal.

6. Inhabited house duty is also levied on the larger farmhouses. This is most unfair, as the farmhouse has no lettable value apart from the farm and we already pay income tax on half the rack rent of the house, buildings, and land.

7. The County Council should drain a lot of the land in the Fylde Country.

NOTE.—Extract from a letter, dated October 14, 1885, addressed to the secretary of the Coursing Club by Mr. T. Fair, agent to the Lytham estates.

"I have a communication to make to you, as president of the club, which occasions deep regret to Mr. Clifton and myself, and which will, I fear, occasion much disappointment to the members of the club.

"The agricultural depression, which has been hanging over the country so long, has made itself felt in this county much more severely this season than in any previous year.

"Matters have become so serious that it is every landowner's duty to see how he can help his tenants.

"On this estate we have tried hard to meet the difficulty by making many costly improvements for the benefit of the tenant, but I fear that we shall be compelled by force of circumstances to discontinue after the end of the present year the preservation of ground game.

"This, I regret to add, must mean that after January next it will be impossible to offer to the Ridgway Club the sport over the Lytham estates which it has been for so many years the pleasure and privilege of the Clifton family to afford."

APPENDIX B.—Evidence.

NORTHUMBERLAND.

To HERBERT LYON, Esq., Secretary,
Royal Commission on Agriculture.

I.—INTRODUCTION.

31, St. George's Square, London.
25th November 1893.

SIR,

1. I HAVE the honour to present to you my Report upon the condition of agriculture in the Glendale district of Northumberland. **Introduction.**

2. I chiefly confined my visits to farmhouses situated in the Glendale Union, which averages about 12 miles long by about 14 miles broad, and comprises 147,000 acres. It is purely an agricultural district. **Area of inquiry.**

It is bounded on the north by the Berwick-on-Tweed Union, on the north-west by Roxburghshire, on the east and south-east by the Belford and Alnwick Unions, and on the south by the Rothbury Union.

I also visited the Berwick-on-Tweed, the Belford, and the Alnwick Unions, and took the evidence of witnesses there.

3. The information contained in this Report was obtained in the following way:—I held a representative meeting of the Glendale Agricultural Society and thus had the opportunity of hearing the views of many of the farmers in the neighbourhood and those of several well-known land agents. It was a matter of great regret to all present that Mr. Rea, of Middleton, whose great knowledge of, and keen interest in, agricultural matters is so well known, was unable to take the chair, owing to severe illness, but Mr. George Grey, of Milfield, kindly took his place. **Method of obtaining information.**

I also held a meeting of some farmers in the neighbourhood of Hedgeley. Tenants from the estates of the following owners were present:—The Earl of Tankerville, Lord Ravensworth, Sir John Swinburne, Major Browne, Mr. Parson and Major Burrell.

In addition I visited many farmhouses in the localities already indicated, and everywhere I was most readily afforded all the information I sought.

Of those to whom I am especially indebted for assistance, I would mention the Earl of Tankerville; Mr. Bolam, agent to the Earl of Tankerville and other proprietors; Mr. George Grey, landowner and agent to the Hon. F. W. Lambton, Mr. Albert Grey, Mr. F. D. Blake and others; Mr. Stephen Sanderson, agent to the Marquis of Waterford and other proprietors; Mr. E. G. Wheeler, agent to the Duke of Northumberland; Mr. Roddam, of Roddam; the Rev. Canon Wilsden, Mr. G. P. Hughes, of Middleton; Mr. H. H. Scott, Alnham; Mr. Clark, Belford; Mr. Forster, of Budle, Mr. J. Bolam, Alnmouth; Mr. W. Hindmarsh, Ilderton; Mr. Chartres, Akeld; Mr. Black, Chairman of the Berwick Union; Mr. Fergusson, Vice-chairman of the Belford Union; Mr. Tait, of Cornhill; Mr. George Rea, Doddington; Mr. George Laing, late of Wark.

4. With reference to the geological features of the district, I cannot do better than quote the late Mr. John Coleman, who reported on the condition of agriculture in Northumberland to the Duke of Richmond's Commission in 1882. **Geological description of the district.**

"Commencing on the coast line on the east, we find a generally flat country occupied by the coal measures, which extend in a gradually narrowing track to the River Coquet. Between Morpeth and Newcastle the Blyth and Tyne Railway traverses a district rich in mineral, and consequently densely populated. The quality of the surface varies considerably, according as grit or clay predominates, but a large proportion is strong and undesirable for agricultural purposes.

"Adjoining the coal measures along its western border is a narrow band of millstone grit, which is here never more than seven or eight miles wide, but spreads out towards the south-west, where, with a narrow band of coal and occasional tracts of upper mountain limestone, it occupies all the country south of Hexham and Haltwhistle.

"The coast line north of the Coquet is occupied by the limestone shales and sandstones of the upper mountain limestone series, relieved by certain beds of basaltic whinstone, which appear north-east of Alnwick, Howick being on this rock, and again in the neighbourhood of Belford. The soils on the whinstone are generally fertile. The upper beds of the mountain limestone and sandstone occupy a very large portion of the county; the surface being to a large extent derived from freestone is therefore deficient in lime, which was formerly, and is still, to some extent applied, but the loss of money during the last four or five years has seriously checked this outlay, which is also in many cases restricted from the absence of suitable compensation for unexhausted value. The only exception to the presence of freestone near the surface is a narrow band of lower limestone shales, which borders the Tweed and forms some of the finest land, and also runs down in a strip past Wooler to Whittingham, forming a fringe, as it were, to the large area of greenstone and basalt, and to a small tract of old red sandstone, the former comprising the Cheviot Hills, whilst the latter, not so greatly elevated, is an exceedingly fertile district. Indeed all the best land of the country is found on the upper and lower beds of mountain limestone and old red sandstone, but the area is limited. To the west of Wark near the Tweed, beds of magnesian limestone come to the surface to a very limited extent.

"All the Western portions of the county comprise mountain ranges separated by fertile valleys and the country is almost entirely pastoral."

System of farming.

5. The land is generally cultivated on the four-course or five-course system, but since the agricultural depression many of the farmers are adopting a six or seven-course, particularly on their inferior land, that is, letting it lie three or four years in grass.

The principal crops are oats, barley, and turnips, with clover and grasses in rotation between the barley and the oats.

More potatoes are now grown for sale than formerly, but even yet they are grown only to a limited extent.

Taking the Glendale Union, a purely agricultural district, the proportion of cultivated area to the total area is 52·3 per cent., the proportion of permanent pasture to the cultivated area is 33·7 per cent., and the proportion of arable land to the cultivated area is 66·3 per cent.

Between 1883 and 1893, the acreage of corn crops in the county of Northumberland decreased by 22·2 per cent. Green crops decreased by 10·8 per cent. Clover, sanfoin, and grasses under rotation increased by 5·8 per cent. Permanent pasture or grass not broken up in rotation (exclusive of heath and mountain land) increased by 8·6 per cent.

The sheep on the hills are the Cheviot and Black-faced, and in the lowlands the Border Leicester and its crosses. The cattle are mostly shorthorns, though in some of the more exposed districts there are Kyloes or West Highland cattle.

Between 1883 and 1893 the total number of cattle in Northumberland increased by 16·7 per cent., and the number of cows in milk or calf increased by 15·7 per cent. The number of sheep increased by 15·2 per cent.

In the vicinity of Newcastle a good deal of dairy farming is carried on. In the neighbourhood of Alnwick dairy farming was started to some extent about 1878, but died out in about seven years, as the land and climate were not suitable, and also because it was found that the railway rates made it difficult for the country dairies to compete with those near the centres of consumption.

North Northumberland is famous for the quantity and quality of the turnip crops. The late Mr. John Grey, of Dilston, in an article in the Journal of the Royal Agricultural Society in 1841, wrote:—

"The superior feeding quality of the turnips in this and the countries north of the Tweed has excited the surprise of agriculturists from Cambridge and other counties where good turnips are produced, but which they say will not bring stock to maturity without adventitious aid."

The lowland farms in the Glendale Union are mostly mixed grass and tillage, and the majority of them vary in size between 300 acres and 1,000 acres. The hill farms are much larger, and often reach several thousands of acres. Mr. George Rea, of Middleton, farms 15,000 or 16,000 acres, and regularly employs 32 shepherds. [Appendix A. 2].

A number of these farms are, and have long been, in the hands of gentlemen of position and culture, who, by possessing education and capital combined with industry, have contributed greatly towards bringing the land into as high a state as can probably be found in England.

In recent years, however, a good many farmers of this class have been succeeded by others who cannot claim the same social standing. It is not uncommon to find some of the smaller farms in the hands of those who have been shepherds or stewards, and these men, as Mr. Sanderson says, "from their experience, and their proved steadiness and probity, are most desirable tenants."

The principal corn market of the northern part of the county is Berwick, while Newcastle and Morpeth are markets of the southern part. Cattle and sheep are now chiefly sold at auction marts.* In the Glendale District they are held at Wooler, Cornhill and Rothbury. There is also a good cattle market at Berwick where store cattle are bought and sold without the intervention of an auctioneer.

A feature of Northumberland farming is the compact arrangement of the farmhouses, the buildings, and the hinds' cottages, which form as it were a miniature village. The farmer has thus the whole of his staff, who are hired by the year, almost within call of his house.

The late Mr. John Coleman, referring to this system, said:—"This concentration of "labour is not only economical as allowing of the whole physical energy being "devoted to productive effort, and not wasted in walking to and from the village; "but the workpeople are more or less under the influence and direct supervision of "the employer."

Classes of labourers employed.

6. As stated in the previous paragraph, the farm servants are hired by the year. The hirings take place the first week in March, and the term of service commences on May 12th.

It is the custom to hire families of grown-up sons and daughters, and this system proves economical to all parties. The landlords are saved in cottage building, the farmers get the advantage of the women's work, which is almost as efficient as that of men's, at a cheap rate, and the farm servants are better off by the addition of their families' wages.

The women are nominally not hired by the farmer, though to all practical purposes they are. The hind agrees with his employer to find so many women workers, and the farmer agrees to pay so much a day whenever they come to work.

The men's wages are called "upstanding," that is, payable during sickness and wet weather; but as the women are only paid on the days they come to work, they consequently lose money if absent through illness, or any other cause.

The women are invariably the daughters of the hinds, and the objectionable custom, known as the bondage system, of hinds hiring strange women into their houses, when they either had no daughters of their own or none old enough to work, has disappeared.

The farm servants have all distinct spheres of work. The most numerous class are the hinds or ploughmen. Each of these is put in charge of a pair of horses. There are also a few spademen employed, principally on the larger farms. Byre men, or byre women, are employed to look after the cattle, when they are in the folds in the winter feeding, and shepherds for the sheep.

On a farm of 300 acres and upwards a working steward is employed, and under him is a ploughman steward, who is in charge of the horsemen. On some of the large farms, one head steward and two under stewards are sometimes employed, one to take charge of, and work with, the ploughmen, and the other to take charge of, and work with the women.

At hay and corn harvest Irishmen are extensively employed, who chiefly come from Donegal. The last year or two the introduction of the "self-binder" has much reduced the necessity for their labour.

Except at these seasons, the ordinary staff of the farm do all the work, and thus there are very few odd men, or "datal" men, as they are called in the district.

II.—Tenure.

Tenure.

7. The tenancies are now chiefly yearly ones, commencing on May 12th, though there are some tenants who are still farming under leases. Formerly, leases of 12, 15, or 21 years were general in North Northumberland, with the exception of the Duke of Northumberland's property, where yearly tenancies have long existed.

To the long leases is attributed much of the high state of cultivation to which the land in North Northumberland was brought, which has operated with equal advantage to landlord and tenant. Since 1879, when the agricultural depression began to be felt, tenants have been unwilling to run the risk of taking leases with prices falling. At the meeting of the Glendale Agricultural Society it was stated that under present

* Some farmers, who do not approve of this method of selling, sell at home direct to dealers, who take the animals direct to Newcastle market, while others get dealers to sell their stock on commission.

circumstances the farmers like yearly tenancies, because they can leave if they desire, but that if times were better they would prefer leases, as they would then have greater security for making improvements. Mr. George Grey, speaking at the same meeting, said that, as an agent, he could say that 9 out of 10 men choose yearly agreements. Some farmers say that yearly tenancies would be preferable to leases, provided some system could be devised for ensuring them compensation for improvements without litigation and expense.

Mr. Bolam, agent to the Earl of Tankerville, considers that the introduction of yearly tenancies has already had a bad effect. He observes that all incentive for making improvements is wanting, and that in consequence agriculture in North Northumberland is reduced nearly to one common level, good farming being the exception rather than the rule, as formerly.

On the Marquis of Waterford's estate at Ford, tenants have the opportunity of taking long leases, with the option of terminating them by giving a two years' notice. Mr. Sanderson, the agent, believes that this is a satisfactory arrangement for the tenants, and one which is calculated to give them all the security they can reasonably desire.

Writing on the subject he says :—

"I think the Ford conditions are not only fair to both landlord and tenant (and I know that in drawing them up I tried to make them so), but I think the power to the tenant who takes a farm on lease for years to determine his tenancy by two years' notice is valuable as a sort of touchstone of his sincerity if he says his rent is too high, for where there is a lease I decline to entertain an application involving a reduction of rent, unless and until the tenant has given his notice, so that landlord and tenant may stand on a footing of equal freedom in any negotiations that may follow."

Out of 17 agricultural tenants on the Ford estate, 11 hold under leases or agreements for a term of years, protected so far as they are concerned by the power referred to. The others had the offer of leases, but preferred yearly tenancies.

Restrictions as to sale and growth of crops.

8. Certain restrictions as to sale and growth of crops exist in many agreements, but generally speaking the farmers do not consider that these are in any sense oppressive. In some cases, farming on a fourth or fifth course is obligatory, and hay, straw, and roots must not be sold off. Also two white crops must not be taken off in succession.

Restrictions, of course, vary on different properties. For instance, one man may only sell corn off, while another is only restricted from selling hay and straw. In many cases tenants can sell off what they like if they put on a certain quantity of manure, and often where restrictions exist, leave to disregard them appears to be readily given.

At the meeting of the Glendale Agricultural Society, at which a large number of farmers were present, no dissatisfaction was expressed, and at the meeting at Hedgeley it was stated that "no one here is restricted much. On Lord Ravensworth's estate "there are no restrictions. Let a man sell what he likes, but stipulate that he shall "put manure on."

Mr. Tait, of Cornhill (535 acres), says :—

"There is no feeling in the district that there are unfair restrictions placed upon us as to sale or growth of crops."

Mr. Fergusson (400 acres), Vice-Chairman of the Belford Union, says :—

"As to restrictions we have no difficulty in getting leave from the agent to do anything we want to."

Mr. W. Hindmarsh, of Ilderton (1,300 acres), says :—

"Landlords restrict farmers very little in this country. I have practically a free hand. Free cultivation would not be a sufficient protection to a landlord in case of a bad tenant."

Mr. Black, Chairman of the Berwick Board of Guardians, corroborates Mr. Hindmarsh's view. He says :—

"You must have some restrictions. Of course, where a farm is near a big town and manure is easily obtained, it is a different matter."

Mr. Sanderson, agent to the Marquis of Waterford, says :—

"My experience is that where a tenant is, on the whole, managing a farm fairly, neither landlord nor agent is 'extreme to mark what is done amiss.' For my own part I think a tenant is more immediately interested in farming well than the landlord, and beyond providing against such things as two white crops in succession, and for the farm being left in a fair condition, I rarely interfere. It is very rare for a landlord in Northumberland to make a claim on a tenant for mis-cropping, but, of course, there are tenants and tenants, and sometimes a protest has to be made against bad

management. Still, in Northumberland farm tenants, if managing fairly, are left very much to themselves."

There were, however, some complaints made about restrictions. Several farmers considered that a man who meant to do his duty by the land should be allowed to grow and sell what he likes, especially in these times of depression. They thought he should be in a position to reap the advantage when hay and straw were fetching a good price, provided he bought a sufficient quantity of manure to put on the land.

On two large properties the following arrangement is made, which enables the tenants to sell off what they like at a profit :—

No particular course of farming is insisted on, though two white crops must not be grown in succession. Mowing twice is not restricted. The tenant may sell hay if he puts on 30*s.* of manure for every ton sold, and usually he would get from 3*l.* to 4*l.* 10*s.* a ton for hay. If he sells potatoes he must manure to the extent of 6*s.* a ton. He gets about 7 tons per acre, and at present makes 35*s.* to 40*s.* per ton. If he sells turnips off the farm he must manure to the extent of 3*s.* a ton, but in this particular district there is no sale for them. Of course there is no restriction upon a man selling turnips, or anything else, for consumption on the farm.

Several agents informed me that during the last 10 years restrictions as to growth and sale of crops have been less insisted on, and in some cases of reletting none have been imposed.

Rents.

9. It is a difficult matter to give a general impression of the rents paid in a wide area as they vary considerably, according to the nature of the soil, and the position and size of the farm. A land agent in the Glendale Union informs me that, generally speaking, a mixed farm of 200 acres lets for about 33*s.* an acre, and a mixed farm of between 500 and 1,000 acres for about 27*s.* an acre. In Appendix B. 4 I have given instances of the rents of farms in several unions.

Competition for farms, and changes of tenancy.

10. Notwithstanding the depression there is a competition for all sized farms, but particularly the smaller ones. There are no farms unlet in the Glendale or the adjoining unions, and agents state there is no difficulty in letting at present rents. Some agents say there have been more changes since 1880 than previously, while others have had a contrary experience.

A gentleman who is agent to several properties tells me that on the estates with which he is connected landlords have not cared to risk parting with good tenants, and have therefore granted reductions of rent rather than have a change, while, on the other hand, tenants have often preferred to remain than sell off their stock at the reduced prices.

On six properties containing 62 farms, 47 of which are over 300 acres, between 1879 and 1893, 21 did not change hands at all, 29 changed once, 11 changed twice, and one changed three times.

Farms up to about 300 acres are said to be the easiest to let, because shepherds and stewards who have saved money enter into competition for them.

Referring to the competition for farms, Mr. Hindmarsh, of Ilderton, says :—

"It may be said we are to blame, but it is quite true that we bid against each other. The competition arises because tradesmen's sons from towns want to take farms in Glendale, because they like the social position."

The farmers at the meeting at Hedgeley said :—"The same rent is bid for a farm "when a man leaves, even though it is well known he has not made it pay."

Tithe.

11. The landlord always pays the tithe, and on a good many estates this was done before the Act. Since the depression some landlords have paid the tithe and not collected it again from the tenants, and thus they have practically given a reduction in their rents.

III.—Buildings.

Buildings.

12. On the whole the buildings and sheds in North Northumberland seem to be good. There are of course instances where this is not so, and some farmers complained of the insufficiency, inconvenience, and want of repair of their buildings. Several complained that their cattle suffered from not having properly covered yards. But taking them as a whole it can be said that they compare very favourably with those of other districts, and it is unanimously agreed that they have very greatly improved in the last 15 years.

At the meeting of the Glendale Agricultural Society I asked the farmers present if they were satisfied with their buildings, and Mr. Finney, of Belford, replied :—"If you are not you are hard to please." Mr. Thompson remarked that the landlords had

behaved well in that respect, and that it was an extraordinary thing that buildings had been so improved in these hard times.*

Mr. H. H. Scott says:—"On the whole the buildings in North Northumberland "are much better than in other districts."

Mr. Rand says:—"The buildings are fairly good in Northumberland."

Mr. Laidler says:—"There has been a most decided improvement in buildings in "the last 20 years and a great deal done in drainage."

Mr. Edward Tait says:—"The buildings are very fairly good."

The farmers at the meeting at Hedgeley said:—

"Buildings are much better than they were 20 years ago. We have no complaints to make."

Mr. George Grey, who is both a landowner and agent, says:—

"I consider that during the bad times, in the majority of cases, tenants have been liberally met by their landlords, and actually more has been expended on buildings than formerly in the hope that increased facilities for feeding stock, &c., would assist the tenant in farming the land. As a rule farm buildings and cottages are very good and are far in advance of 20 years ago."

Mr. G. P. Hughes, of Middleton, says:—

"Farm buildings have been vastly improved in the county of Northumberland within the last 15 years, and very little more seems to be required to put them into an average good condition for the tenant farmer. In many instances the accommodation is first class and well adapted for breeding and feeding cattle upon the best principles."

Expenditure by landlords.

13. On the Earl of Tankerville's property (20,000 acres) the money spent on repairs and buildings since 1887 has been 17 or 18 per cent. of the gross rental, excluding tithe.

On the Marquis of Waterford's property (6,000 acres) about 14 per cent. of the gross rental, excluding tithe, is spent on repairs and maintenance, and between 1865 and 1885 a sum of 52,000*l.* was spent on new buildings and drainage.

On six properties, whose aggregate rental is 16,000*l.* a year, the expenditure on buildings and repairs averages over 16 per cent. of the gross rental, excluding tithe.

Mr. Roddam, of Roddam, has spent 10,000*l.* on his property (6,000 acres) on new farmhouses, cottages and other improvements since 1881, in addition to which his rental is reduced by 33 per cent.

Cost of cartage.

14. One or two members present at the meeting of the Glendale Agricultural Society suggested that it was rather hard on the tenant to have to do the leading. To this Mr. Bolam replied that the cost of leading only came to about one-twentieth of the outlay, and that no interest was charged on money spent on permanent improvements.

The question of cost of course much depends on the proximity of the farms to quarries or railways. Assuming that a farm is favourably situated in this respect, Mr. George Grey considers that it would cost the farmer to pay some contractor to do the work about a twentieth of the outlay, but that if the farm was three or four miles from quarry and station it would cost one-fifth. Mr. Grey, however, points out that if the farmer does the carting himself, which is generally the case, he is very little out of pocket by it, as he employs no more men or horses, and the work is either done at odd times or by making increased exertions. [Appendix B. 2.]

It appears to be generally the custom for tenants to undertake the leading when repairs are executed, but in the case of new buildings it becomes a matter of arrangement. It frequently is better for the tenant in the long run to undertake the leading, notwithstanding the extra trouble, because he can do it much cheaper than the landlord can get it done, and hence if a landlord is prepared to spend a certain sum in improving the house, buildings, sheds, &c., the less that is spent on cartage the more there is spent on bricks and mortar.

Some farmers expressed the opinion that it was unfair that tenants, who agreed to do the leading, should get no compensation for it if they left their farms before they had enjoyed the advantage of the buildings.

Since the decline of leases Mr. George Grey says that tenants are more chary of entering into any agreement to perform cartage.

Mr. Sanderson, who is a solicitor as well as a large land agent, says:—"In the "absence of a contract, falling within the saving clause of the Agricultural Holdings "Act, I suppose a tenant might claim compensation in respect of the carting materials "of any buildings put up for him by the landlord, but a claim of that kind is seldom "heard of in this district.

* Mr. Dryden, a builder, says:—"More money has been spent annually on buildings since 1850 than before."

"It is of importance to bear in mind that the landlord's expenditure on improve-
"ments is more often than not voluntary on his part. Where it is incurred in
"pursuance of a contract, then of course he, as well as the tenant, should be bound
"by the terms of that contract, and if the tenant has not undertaken to do the
"cartage, he might properly enough decline to do it unless on proper conditions as to
"compensation."

Cottage accommodation.

15. Cottage accommodation has also received great attention from landowners, and though, in some cases, there are still bad cottages, and a good deal remains to be done in the way of rebuilding, yet there has been extensive and steady improvement in the last 20 years.

The cottages are usually built of stone with slate roofs. Those built exclusively on the ground floor, and there are many of these both new and old, as the people prefer them, are called "two-end houses." A new cottage costs between 170*l.* and 220*l.*

Drainage and water supply.

16. The land in the Glendale district is, generally speaking, well drained, and but little dissatisfaction was expressed on this score.

One large farmer informed me that in many cases it has been found the drains are too far apart, and that in these cases intermediate drains would make the land more productive.

The draining was mostly done by landlords with money borrowed, at first from Government at 6½ per cent., repayable in 21 years, and afterwards from Improvement Companies at from 6½ to 7 per cent., repayable in 25 years, the tenants usually paying 5 per cent. during their tenancy, and the landlords the remainder.

Since the depression landlords have more frequently undertaken draining without charging interest, and in some cases where it was being paid it has been written off.

Frequently where draining is required, landlords find the pipes and the tenants the labour, and this is often the case when the drains have to be repaired.

The water supply on the farms, in the great majority of cases, appears to be both pure and plentiful.

IV.—Evidence of Agricultural Depression.

Evidence of agricultural depression.

17. The first year that farmers generally state they began to feel the depression was in 1879, when the price of corn began to seriously decline, but for several years after this prices of stock were good, and, although there was much dissatisfaction among farmers, the price for sheep in a measure made up for the deficiency in corn value.* It was not long, however, before stock also began to fall in price, and that, together with the heavy fall in wool, gradually reduced the farming industry to the state in which it now is.

Probably the depression in agriculture has been less felt in North Northumberland than in some southern counties, but when comparing the present state of agriculture with that of the years previous to 1879, there is no doubt the agricultural interest has suffered severely.

Certainly when comparing the position of North Northumberland with that of southern counties the following facts seem to point to the more favourable position of the former:—

1. That there is no difficulty in letting farms at present rents, and in many instances there is keen competition for them.
2. That rents are being well paid.
3. That the land in many cases is not being worse farmed.
4. That farm buildings have been steadily improved.
5. That the quality of stock and sheep has not deteriorated.

But that depression does exist to a very considerable extent is an incontrovertible fact when the fall in prices of farm produce is taken into consideration.

At a meeting of farmers held at Hedgeley it was agreed that the following estimate of the fall in prices since 1881 was a very moderate one. Keeping sheep 30 per cent.,

* Mr. Rea, of Middleton, writes:—"The absolute beginning of the depression was when the Corn Laws "were repealed. From 1848 to 1851 were the most depressed years I ever remember. I had better barley "then than I ever saw, and I sold it at 1*l.* a quarter (now it is 30*s.* a quarter). All the rises since have been "due to particular circumstances. For instance, the Irish famine made corn rise in England as the Government "bought it very largely. Again, the finding and working of Californian gold caused a rise in the price of "everything. Afterwards when the output decreased, prices went down. Then the cotton famine came and "increased the price of wool, which sent farming up. Then the rinderpest came and destroyed cattle and "increased their price, and also stopped the import of foreign cattle. Then the Australian gold boom came "and made money plentiful again and sent up prices until 1874. From 1872 to 1874 wages went up to 1*l.* a week "in cash besides extras. This was much felt by farmers, because they suddenly rose to this high price in cash "from payment in kind. All the little rises which have taken place since then are owing to inflations in the "coal and iron trade. Since 1874 the depression has been getting gradually worse, but particularly since 1879. "The best thing to do now is to send out the unemployed to dig for gold."

fat and lean cattle between 20 and 30 per cent., corn crops 33 per cent. It was stated that since then the growing of wheat has almost entirely been given up.

Mr. Laidler informed me that when last he grew wheat, about six years ago, he estimated his loss at 3*l.* an acre.

A large farmer on the Marquis of Waterford's estate put his loss in wool now, as compared with 12 years ago, at 50 per cent., that is a drop from 1,200*l.* a year on his sales to 600*l.*

A well-known farmer on 1,800 acres, a tenant of the Earl of Tankerville, told me that the produce on his farm sold for 1,650*l.* less in 1892 than in 1874.

Mr. Black, Chairman of the Berwick Union, informed me that he sold 100 sheep in 1892 for 100*l.* less than in 1882, that is a drop of 1*l.* a head.

Mr. John Forster, of Budle, thus puts the position of a farmer in 1893 as compared with that of 1875.

Farm of 500 acres of which 100 acres is grass.

Land is fair quality.

Expenses in 1875.

	£	*s.*	*d.*
Labour. Six pairs of horses at 110*l.* the pair -	660	0	0
Manure for 100 acres of turnips at 40*s.* per acre -	200	0	0
Artificial foods - - - - -	200	0	0
Rates 1*s.* 6*d.* in the £ - - - -	56	0	0
Seeds - - - - - -	80	0	0
Coal, oil, insurances and sundries - - -	60	0	0
Blacksmith, wheelwright, joiner, saddler and mole-catcher - - - - - -	50	0	0
Rent at 30*s.* per acre - - - -	750	0	0
	2,056	0	0

"In 1875 produce to the above amount had to be sold to meet expenses. But since then produce has fallen in price 30 per cent. It follows, then, that the value of the same amount of produce would now be 1,439*l.*, or 617*l.* less than in 1875."

Saving effected in working the farm in 1893.

	£	*s.*	*d.*
10 per cent. off labour bills - - - -	66	0	0
25 per cent. off manure - - - -	50	0	0
20 per cent. off foods - - - - -	40	0	0
30 per cent. off rent - - - - -	225	0	0
	381	0	0

"But value of produce has fallen by 617*l.* The farm is, therefore, dearer now, at the reduced rent, by the difference between 617*l.* and 381*l.* or 236*l.* A reduction of 61 per cent. would be required to recoup the farmer for the loss he sustains through the fall in the price of produce."

The above facts are perhaps sufficient to show that, though the outward and visible signs of agricultural depression may not be so marked in this district as in some others, the farmers must have suffered severely.

It may be that among the reasons which have enabled the farmers to apparently hold their own fairly well, or at any rate better than in some of the southern counties, the following are most worthy of consideration; that the majority of them are farming on a large scale, and have had capital; that the land has for many years been exceedingly well farmed, and hence is more able to bear economies practised in labour, manure, and feeding stuffs; and that, when the depression just began to show itself, liberal permanent reductions were made in rents. (*See* next paragraph).

NOTE.—Mr. George Laing, late of Wark, writes:—

"My late farm of Wark was too good land and too high rented to breed cattle on, consequently I had fully 100 cattle to buy in every autumn. As no store cattle come from abroad we have only those to buy that are bred in Great Britain and Ireland, and the price of lean stock is always too high in proportion to that of beef, because after we have fattened the cattle bred in our own country their beef has to compete with that of the whole world nearly. Before so much meat came from abroad we made a good deal more money from feeding cattle. I bought cattle for 30 consecutive years from one man off the pastures they had been grazed on during the summer. I bought them in the autumn and sold them in the spring, generally keeping them from 20 to 24 weeks. The most per head I ever made off them for that keep was 16*l.* 2*s.* 6*d.* and the least 4*l.* 16*s.*, a great difference on from 35 to 45 cattle, always of about the same size and quality. These remarks apply to all 'feeding' farms."

V.—The Effects of Agricultural Depression.

Effect of agricultural depression upon landowners. Reductions in rent.

18. The landowners must have felt the depression since 1879 considerably, because large permanent reductions have been made in rent, which has not only reduced their incomes, but lowered the freehold value of their estates, while at the same time the expenditure on buildings and permanent improvements has been well maintained, and in some cases has been greater since 1880 than before.

Mr. Bolam states that the rental of land in Northumberland has generally decreased by 20 to 25 per cent. since 1879.

On the Duke of Northumberland's property, 150,000 acres, the permanent reductions made in rents since 1882 come to 25 per cent. of the rental.

A permanent reduction, amounting to 20 per cent. of the rental, has taken place on the Earl of Tankerville's property since 1879 (20,000 acres).

On the Marquis of Waterford's estate at Ford the permanent rental is lower by 24½ per cent. than it was in 1879.

On six properties, whose total rent roll amounts to 16,000*l.* a year, the aggregate permanent rental has been reduced by 22 per cent. since 1880.

Again, on two other properties, whose total area extends over 15,564 acres, the aggregate rental has decreased by 28 per cent. since 1879, besides which a considerable sum has been spent by the owners during that period in lime, manure, and cake for the tenants.

On the Roddam Estate the following reductions have been made since 1879 in addition to an expenditure of 10,000*l.* on permanent improvements during the same period :—

Farms.	Acreage.	Rent, 1878–9. £ s. d.	Rent, 1893. £ s. d.	Total Rent and Tithe 1878–9. £	Total Rent and Tithe 1893. £	Reduction per Cent.
Roddam Rigg - -	500	1,015 0 0	250 0 0	1,060	635	40·9
Home Farm - -		Tithe and Rates 45 0 0	235 0 0			
Calder - - -			150 0 0			
Ingram - -	2,000	1,650 0 0	900 0 0	1,730	980	43·4
		(Tithe) 80 0 0	(Strutage) 80 0 0			
North Earle - -	352	500 0 0	360 0 0	508	368	27·5
		(Tithe) 8 0 0	Tithe 8 0 0			
Thurston Burn (Moor) -	2,000	280 0 0	252 0 0	280	252	10·0
Earle Mill and Farm -	40	130 0 0	75 0 0	133	78	41·3
		(Tithe) 3 0 0	Tithe 3 0 0			
		3,711 0 0	2,313 0 0			
Add tithe from South Earle - - -		50 0 0	37 0 0			
		3,761 0 0	2,350 0 0			
Less paid for right of strutage* to rector of Ingram.		180 0 0				
		3,581 0 0	2,350 0 0	3,581	2,350	33·8

The following are instances of reductions made in six properties between 1879 and 1893 :—

Estate.	Acreage.	Per-centage of Reduction between 1879 and 1893
1	(Two farms) 600	46
2	(One farm) 300	40
3	(One farm) 1,100	35
4	(One farm) 151	16
5	(Two farms) 280	35
6	(One farm) 121	25

* Strutage is a right of grazing over a certain piece of land. A strut is five sheep, or one beast.

At the meeting of the Glendale Agricultural Society, Mr. Bolam, Mr. George Grey, and Mr. G. P. Hughes stated there were cases where reductions of 50 and 60 per cent. had been made, though they were agreed that the average had been about 25 per cent. in the district.

It was further stated at this meeting that the rents on large and small farms had been reduced alike, but at the meeting at Hedgeley the contrary was said to be the case. Also several agents informed me that rents on large farms have fallen in a greater ratio than those on small ones.

A well-known agent writes:—

"Reductions have been equally needed on all sized farms, but of course the large farmer can bring greater pressure and obtain a little undue attention."

The farmers at the meeting at Hedgeley put the permanent reductions in rent in that district since 1880 at about 20 per cent., there being present tenants from seven properties. It was stated that on one property of 3,000 acres the permanent reductions in rent had averaged 50 per cent., while on another property of 6,000 acres no reductions had been made since 1880.

Mr. George Grey, of Milfield, says:—

"It is not a just way of estimating the fall in land values, merely to take into consideration the permanent reductions in rent which have been made, as in many cases over and above these reductions hundreds of pounds have been expended by landlords in giving to tenants lime, manures, and feeding stuffs."

Mr Sanderson says:—

"The landlords' share of the depression is represented by diminished rental. The market value of land for the purpose of either selling or letting has fallen, and landlords must submit to the inevitable. They do not fix their own rents, but simply have to accept what tenants are willing to give. It is not, as in the poor and wild districts of Ireland, where the class from which tenants are drawn have little or no capital, and, for a livelihood, have nothing to look to but what by their own labour they can force out of the land. Under such circumstances the ownership of land being a monopoly of an article, which is in fact a necessary of life, a keen landlord has it in his power, if protection is not afforded to the people, to screw up the rents to an unreasonable figure, and I fear this has sometimes been the case.

"As between landlord and tenant in Northumberland, however, there is absolute freedom of contract, and of late years the conditions of competition have been affected favourably towards the tenants by the fact that a certain class of small capitalists who in former times were eager to rent farms as a retirement from commercial pursuits, and by their competition ran up the regular farmers, are now more chary of risking their means in agricultural pursuits."

Many of the farmers recognise that the reductions in rent were made on a liberal scale, and state that, apart from any question of generosity, it was wise policy on the part of landowners to make them when the depression just began to be felt, as it has both enabled farmers to meet the times better ever since, which has been good both for landlord and tenant, and has also enabled the landowners to let all their farms.

Mr. Hindmarsh, of Ilderton, says:—

"Rents have been reduced from 20 to 30 per cent. and up to two years ago the reductions were sufficient to meet the times, but I believe that further reductions will be necessary soon."

Mr. Bolam, agent to the Earl of Tankerville, referring to the wisdom of making permanent reductions, says:—

"We began in 1879 by giving abatements, but when the depression continued we came to the conclusion that a permanent reduction was the best policy, for we were paying income-tax on rents we were not receiving, and the farmers were paying rates on rents they were not paying."

Mr. Bolam thus sums up the landowner's position:—"reduced rents coupled with increased expenditure."

Mr. George Grey and Mr. Sanderson are of opinion that the system of giving abatements is a mistake, and that a fair rent should be agreed upon between the parties and paid punctually.

Although some farmers consider that greater reductions of rent will be necessary if the depression continues, there are others who say that, though the lowering of rents is no doubt an assistance, it is not the cure for agricultural depression, neither is it a more important question than that of the increasing price combined with the decreasing efficiency of labour.

A large farmer says:—

"Reduction of rent is not the remedy for depression. It may benefit one at the expense of another, but it does not benefit the public. Now I took my land at 15*s.* an acre, and when I have the steam plough it costs me an extra 1*l.* an acre. Hence what is the use of saying the rent is killing. If you reduced rent 50 per cent. it would not meet the times. You would have to reduce the cost of all the expenses."

Decrease in value of land.

19. The value of land has decreased partly on account of the feeling of insecurity on the part of the public, partly because the rentals have been permanently reduced, and partly because the land has, in some cases, deteriorated.

Mr. Bolam says:—

"The fee simple value of land has decreased by 30 per cent. for good average land since 1879, while inferior lands are scarcely saleable in the market. 15 years ago 35 years' purchase could be obtained upon the rental, whereas now for good land it is difficult to obtain 28 to 30 years' purchase upon the greatly reduced rental."

The following instances of depreciation in the price of property have been given to me:—

1. A property which 10 years ago yielded a rental of over 1,400*l.* now produces 850*l.* It was valued by the late Mr. Grey, of Milfield, for the Court of Chancery at 46,000*l.*, and at an auction a few years ago 17,000*l.* could not be got for it, so that the mortgagees for that amount had to take possession.
2. A property valued 20 years ago by Mr. Grey at 26,000*l.* was put up to auction a few years since, but 15,000*l.* could not be got for it, and the mortgagees had to take possession.
3. A property bought 20 years ago for 17,000*l.* has recently been offered by auction for 9,000*l.* with no bidders. The rent of this farm in 1874 was 740*l.*, and at present it is 380*l.*

Effects of agricultural depression upon farmers.

20. Opinions greatly vary as to whether the depression has been felt equally acutely by large and small farmers. By a large farm I refer to one of 500 acres and upwards. On one of that size the farmer usually has to delegate a good deal of the work of supervision to the steward and shepherd, whereas a man who is farming under 500 acres, looks personally into details, and is usually himself a working farmer.

Whether large or small farmers most affected.

For instance, Mr. Tait, of Way-to-Wooler, who farms 266 acres, and was himself a shepherd, employs three regular men and four women workers, but he does all the shepherd's work himself, and Mrs. Tait does the dairy work. He keeps 110 breeding ewes, and feeds the produce, and has also 36 feeding cattle, 6 young cattle, and 4 milch cows.

Glendale is not a district where small farmers are a numerous class, as it is largely a sheep country, and has not the advantage of the proximity of large towns which creates a trade in dairy produce and vegetables, which may prove a remunerative one for the small farmer who has enterprise.

There are, however, instances of stewards, shepherds, and hinds who are now apparently doing fairly well on small farms, and in some cases they have been so far successful that they have been able to take farms up to 800 acres.

Several small farmers, who had formerly worked as farm servants, said that being tenant of a small farm is not now more profitable, if as much so, as working for wages, and entails more arduous work, but that they prefer the freedom and the speculation which is attached to working their own land.*

It is generally stated that a man cannot make a living out of less than 80 to 100 acres, that is sufficient to keep a pair of horses employed.

Some state that the small farmers whose families work on the land have suffered less in proportion to the larger ones to the extent of the wages they thus save, though this

---

* Mr. Albert Grey, in an article in the Journal of the Royal Agricultural Society, 1892, says:—"In "Northumberland the material condition of the agricultural labourer is so far satisfactory that I cannot think "of the name of a single person of common sense who has ventured to say that the labourer's position would "be improved by being transferred from a hind into a peasant proprietor. His condition in all material "respects, when compared with that of the owners and occupiers of very small holdings, is distinctly good."

Mr. Sanderson writes:—"I have heard an opinion very frequently expressed that a farm of from 300 to 500 "acres is, in a general way, likely to be better managed than one of 1,000 acres, and further, that as in farms of "150 to 200 acres, the farmer himself generally exercises a personal supervision over the work of the farms, "if he does not himself share in it, there is then more watchful management than on larger holdings, though "from money not being over plentiful, perhaps not so liberal, and therefore possibly less profitable management "than on a 300 or 500 acre farm. Farms below 100 acres are rather working men's farms on which the "tenant drives his own plough, and stand in a category by themselves, not being large enough to attract a "man with capital, who is not prepared to labour with his own hands."

cannot be said to be at all a satisfactory arrangement for their sons and daughters, and again it is stated that the small farmers have been better able to weather the depression, because they are content with smaller profits and a simpler mode of existence.

On the other hand, many assert with confidence, that notwithstanding the saving of labour bills by the employment of his own labour and that of his family, the small farmer has been less able to stand the continued depression than the larger one, owing to want of capital, and also because in some cases the rent per acre is higher.

At the meeting of the Glendale Agricultural Society the opinion was expressed that large and small farmers had suffered alike, and 14 farmers in various districts held the same view.

It will be seen in paragraph 18 that on some properties reductions of equal magnitude have been made on large and small farms in proportion to their size, though on others the rents on the large farms have been the most reduced.

At the meeting at Hedgeley it was stated that "the small farmers were comparatively worse off than the large ones."

Mr. Laidler says:—

"Small farmers have suffered most, as they have no capital, and hence a bad season or two knocks them down, and Mr. Playfair says, 'I have always been dead against 'small farms. The men who take them want capital and are not business men.'"

Mr. H. H. Scott says:—

"The smaller farmers, who have taken farms since the depression, have suffered cruelly, and many of them have lost the savings of a lifetime, but those who rose to the position of small farmers between 1854 and 1873, and made some money before the depression began, have done fairly well since, not only because they had saved money, but because they have not lost the economical habits of their youth.

"You can work land better on the wholesale than on the retail principle if you have capital. Small farms pay where sons and daughters choose to sacrifice themselves and work for nothing."

The balance sheet I have given in Appendix A 8 is the only one I have been able to obtain. I am told that the small farmers and many of the larger ones keep no accounts whatever, and, though doubtless a number of the large farmers do so, there is a somewhat natural unwillingness on their part to give publicity to their private affairs.

The evidence of Mr. John Bolam, who does a very large business as a seed, provender, and manure merchant, goes to show how the spending power of the farmers has been affected. He says:—

"I have now to give much longer credit than I used to 10 years ago, and this applies to large and small farmers. I have had to drop a lot of people because they cannot pay. Farmers are buying a cheaper class of manure. They buy nitrate of soda or super-phosphates, and they get 20 tons of this for one of dissolved bones and bone meal.

"They are also driven to the necessity of catch cropping, and they now sell straw, hay, and turnips off."

Speaking of the general effect of the depression on the farmers, Mr. Sanderson says:—

"The depression in agriculture means that the old rate of profits is not now made from farming pursuits.

"No doubt there was a run of bad seasons, and exceptionally low markets, which for a time hit the farmers badly. But the seasons have resumed their normal course, although now, as ever, there are fluctuations. A farmer who knows his business makes his calculations on an average of years, and is not entitled, because of one or two bad seasons, to cry out as if the farming world had gone permanently "to the dogs." There is no reason to think that the climate or the seasons have changed permanently for the worse, and my trust in Providence is such that I look forward to a succession of seasons in years to come much the same as in years gone by. The experience through which our farmers have passed during the recent exceptionally adverse seasons has been very trying, but it has borne fruit in their favour in a universal reduction of rent."

Breeds of cattle and sheep not deteriorated.

21. It is satisfactory to be able to state that the breeds of cattle and sheep have not deteriorated, as was stated to be the case in some parts of Lancashire, owing to want of capital on the farmers' part to buy good ones.

Mr. Hindmarsh, of Ilderton, who keeps a large number of cattle and sheep, and has judged Cheviots at the shows of the Royal Agricultural Society, says: "Evidence of "agricultural depression is to be seen in badly tilled and kept fields, and in grub in "turnips, but not in deterioration of stock and sheep. I believe there has been a "distinct improvement in breeds of cattle and sheep, and I think farmers are buying "better stock than they did. This is due in a great measure to the auction marts "which create rivalry among us."

Effects of agricultural depression upon the land.

22. Witnesses differ as to whether or not the cultivation of the land has gone back since 1880, owing to the employment of less labour, and the purchase of less manure through want of capital. Labour has been considerably curtailed on many farms by the conversion of arable land to grass, but in a good many cases, where but little land has been so converted, it has been reduced with a view to economy, though no doubt a number of farmers have maintained their ordinary staff.

A general opinion seems to be that the introduction of machinery, except at harvest, has not had the effect of dispensing with labour.

Mr. Nichol, of Bamborough, says:—"I find the more machinery I have the more labour I require." Others, however, say that if it had not been for the increased use of machinery their labour bills would have been higher.

Mr. Bolam is of opinion that farms have generally deteriorated by 10 to 20 per cent. in the past 10 years owing to want of capital on the farmers' part. Mr. Black, Chairman of the Berwick Union; Mr. Fergusson, Vice-chairman of the Belford Union; Mr. Hindmarsh, of Ilderton; Mr. H. H. Scott, of Alnham; Mr. Nichol, of Bamborough; Mr. George Laing, late of Wark, and eighteen well-known farmers, all consider that the land has generally gone back since 1880, but some of them attribute this partly to bad seasons as well as to lack of capital. The Glendale Agricultural Society and the meeting of farmers at Hedgeley took the same view.

On the other hand Mr. Wheeler, agent to the Duke of Northumberland, Mr. Sanderson, agent to the Marquis of Waterford, do not think the land is being worse farmed except in certain cases. Mr. Sanderson says:—

"There are, of course, bad farmers and good farmers, but, according to my observation, the Ford Estate, on the whole, is now being as well 'done to' as at any previous period, and at any rate there is no falling off as compared with 10 years ago.

"No doubt during the worst of the late bad season some farmers lost heart, and under that influence, but partly also because of a sense of unrest and uncertainty as to their position and prospects, were unduly economical in their management, with the inevitable result of inferior crops. But this malign influence has in a great measure, if not altogether, passed away, and my opinion is that our farmers are now doing full justice to the land."

Also Mr. Barber, of Doddington; Mr. Laidler, of Fenton Demesne; Mr. Chartres, of Akeld; Mr. Richard Stawart, of Akeld; Mr. Howie, of Chatton; and others take the same view though they state there are exceptions.

Another gentleman is of opinion that the land is not being so well cared for, but that, owing to its having been so well farmed in the past, it has during the past 10 years suffered comparatively little in its capacity for production. He considers, however, that, if the present state of things continues, there will be a considerable difference in the yield of the land 10 years hence.

A great deal of land has been laid away to grass in the Glendale District since 1880, but I have not been able to get any figures to show the actual quantity. The late Mr. George Culley estimated it at over 20 per cent., and Mr. Hindmarsh, of Ilderton, put it at between 20 and 25 per cent. and as much as 30 per cent. in the heavy soils and clay along the coast line.

Mr. George Grey is of opinion that in some cases land unsuitable to the purpose has been laid away to grass, which has resulted in a loss to the farmers. He says:—

"A considerable amount of land has been laid away to permanent pasture with the view of lessening the labour bills. This has had two effects, it has lessened labour, but its utility to the farmer in many cases is very doubtful, as land not adapted to grass, or heavy land very difficult to get to grass, has been laid away, and that frequently without due preparation, the consequence being inferior herbage, which will take many years of careful and even expensive superintendence and aid to make into a good

pasture, and, in the meantime, the tenant is probably paying 20*s.* or 30*s.* per acre for land which is not producing more than 10*s.* per acre."*

VI.—Causes of Agricultural Depression.

Causes of agricultural depression.

23. Agricultural depression is generally said to exist owing to lowness of prices of all farm produce, but particularly those of corn crops, cattle and sheep, due to foreign competition. There are, however, other matters which are said to have operated greatly to the disadvantage of the agricultural interest, namely, the high price of labour, the substitution of the malt tax for the beer tax, the appreciation of gold in comparison with other articles, and bad seasons.

Referring to the causes of agricultural depression, Mr. H. H. Scott says :—"First in "magnitude is foreign competition. It may be said that steam, which has done so "much for the progress of the world, and which has been such a beneficent factor to "most industries, has almost ruined agriculture in the United Kingdom. It has "enabled the foreigner and colonist to send to our shores, at little cost of time or "money, food supplies from virgin soil requiring no manure, or grown in countries "where the climate is more favourable, or the cost of labour less than in our own "country. In the old times the British farmer was compensated, at least in part, for "a bad season, by getting a high price for a smaller quantity, but now there is no "balancing of money accounts in that way, for these food supplies are a world-wide "production, and there is always a supply beyond the seas ready to fill up any home "deficiency."

Mr. G. P. Hughes, of Middleton, says :—

"The vast tide of emigration from Germany and other European countries to North and South America and Australia, and the appropriation and cultivation of unreclaimed lands, has been a great factor in lowering the price of agricultural production all over the world."

It would be needless repetition to make further quotations from the evidence of farmers on this subject, and it is perhaps sufficient to indicate that foreign competition is generally said to be at the root of the farmer's difficulties.

The repeal of the Malt Tax disadvantageous to farmers.

24. There is a very general opinion among the North Northumberland farmers that the repeal of the malt tax has been a serious injury to them. The Glendale Agricultural Society unanimously took this view, as did many farmers who gave evidence.

Mr. George Grey, of Milfield, says :—

"The repeal of the malt tax was the primary cause of the decrease in the value of barley. This measure was brought about to a great extent by the agitation of farmers themselves (south country ones, I must admit), who imagined that the abolition would open up a new and cheap method of feeding cattle. The result, however, did not come up to their expectations. Since the repeal of the Act barley has steadily declined in price, and now, in face of the immense and ever-increasing import of foreign barley, and the utilisation of so many different substances in the production of malt liquors, there is little or no prospect of its recovery."†

---

* It takes six pair of horses to work a 400-acre farm, farmed on the four-course system, *i.e.*, 100 acres oats, 100 acres barley, 100 acres turnips, 100 acres grass. On the five-course system 4½ pair of horses is required, and on the six-course four pair of horses. Hence farming on the six and seven-course system means a considerable saving in men and horses.

† Mr. H. H. Scott, in a paper read by him before the British Association at Nottingham in 1893, said :—"The most severe and cruel blow, however, the home farmers received of late years was the change "in 1880 of the malt tax into a beer tax (porter or stout is included in the word beer.) Farmers asked for "the abolition of the malt tax; they got what they asked for in name only, for in its place they got an "increased tax, but instead of being levied on barley whilst being malted, it was levied on the beer when "brewed. The difference between the malt and beer tax is that the tax on home barley has been increased by "5*s.* per quarter; that was surely an extreme case of receiving a stone when bread was asked for.

"Now 5*s.* per quarter may not seem a big figure, but taken on four quarters (the average production of an "acre) the increased import is equal to 20*s.* per acre, or about the rent of the land on which the barley was "grown.

"The increase of the tax, however, was by no means the only injury inflicted on the home farmer by the "change. Home-grown barley is much heavier than foreign, the malt tax was calculated by measure not by "weight, therefore it paid the maltster best to use heavy barley, which would give most malt or beer to the "measure, the consequence was that British barley was used in preference to foreign, and there was quite an "advantage to the home grower.

"Further, there was the valuable protection that as the malt tax was arranged, only barley could be used "for the making of beer, whereas by the beer tax any other substance can be used, maize, rice, molasses, "sugar, &c. Some of these articles are used, so that as malt makes the best beer it is no longer so good or

25. The increased cost of labour has been a serious matter to the Northumberland farmers, and many of them say that this is one of their gravest difficulties at the present time.* Increased cost of labour.

Up to 1870 wages were chiefly paid in kind and came to about 15*s.* or 18*s.* a week. In 1872 wages in cash were universally substituted.† Thus the hinds, instead of sharing in the lowness of prices by receiving a fixed quantity of produce, now receive a fixed cash wage, irrespective of the price the farmer obtains for the produce he has to sell before he can pay it, and possibly he has sometimes to sell when prices are lowest, in order to meet his obligations.

The wages of women have increased by 3*s.* a week in the last 20 years.

The advantage to the hinds of having secured a cash wage, before the depression commenced, is obvious, as the following figures show that if they were now paid in kind they would be receiving 7*s.* 3*d.* a week less than in 1871.

Table A. gives the payment made in 1871, with *present values* attached.

Table B. shows the actual wages now paid.

A.	£	*s.*	*d.*
6 bolls oats at 15*s.*	4	10	0
4 „ barley at 22*s.*	4	8	0
2 „ peas at 24*s.*	2	8	0
1 „ wheat at 20*s.*	1	0	0
1 ton of hay at 100*s.*	5	0	0
1 cow's grass	4	0	0
1,000 yards potatoes	4	0	0
House and garden	5	0	0
Coals led	1	10	0
Cash	4	0	0
	£35	16	0=13*s.* 9*d.* a week.

B.	£	*s.*	*d.*
52 weeks at 17*s.*	44	4	0
1,000 yards of potatoes	4	0	0
House and garden	5	0	0
Coals led	1	10	0
	£54	14	0=1*l.* 1*s.* a week.

The sons or younger brothers of a hind, who live in the same house with him, get the same wage, less the cottage and coals led.

It will, therefore, be seen that the depression in agriculture has not injuriously affected the position of the labourers, and that they are better off now and in a more assured position than they were 20 years ago.

The women workers get 1*s.* 6*d.* a day, whenever they choose to work during the year, and 3*s.* a day for 20 days' harvest.

Where there are several sons and daughters living at home the family's annual earnings amount to a considerable sum. Farmers have told me that 200*l.* a year is not an uncommon sum for a family to make, which includes, of course, the value of the perquisites.

It may of course, be said that the depression in agriculture has affected the agricultural labourers, in that fewer are being employed on some farms on arable land through motives of economy, and also on account of the conversion of arable land to grass. But I venture to think that the migration of the labourers in the Glendale district has of recent years been as largely due to metaphysical and non-economic causes, such as the want of variety, as to material and economic causes, such as the want of employment.

Notwithstanding the pecuniary advantage to which I have alluded, to which must be added the enjoyment of shorter hours, than are customary in many of the lower wage counties, the attractions of the towns are greater both to the young men and young

" so pure, and in addition to all these things there is the disadvantage that the beer tax is much more costly to " collect.

" We import from five to six million quarters of foreign barley, but the home production is from 10 to 11 " million quarters, and if the price of that production is lowered 5*s.* per quarter by the change to the beer tax, " it is a loss of 2,550,000*l.* to the home producer."

* For cost of labour in Northumberland and Norfolk *see* App. B. 3 (b.)

† In a few cases the change in the mode of paying wages took place in 1870. It spread in 1871 and became general in 1872.

women, among which are more variety and excitement, greater freedom and social ambition.

I pointed out in my report to the Royal Commission on Labour in 1892 that the decrease in the population of the Glendale Union, a purely rural district, between 1881 and 1891, was 7·1 per cent., whereas during that period, in the Thingoe Union, Suffolk, and the Swaffham Union, Norfolk, where wages are lower, hours longer, work less constant, and cottages on an average not so good, the decrease in the population was respectively 4·0 and 3·6 per cent.*

Many farmers say that the yearly hiring system operates to their disadvantage, and that they feel this particularly in bad times, when the payment of a man during long periods of sickness, or the acquisition of an indifferent workman, becomes a matter of greater moment.

Again, the farmer is not able to economise in his labour bill, as a south country farmer is, by having a smaller regular staff and employing extra labour in busy times, but he has to pay all the year round, in sickness as in health, and in bad weather as in good, a staff sufficient to undertake the work at all seasons of the year, with the exception of the employment of Irishmen at hay and harvest.

Further, many farmers complain that both as regards quality and quantity the work of the labourer has deteriorated, though opinions frequently differ on this subject.

Various reasons are given by those who assert that the labourers do not do so good a day's work as formerly, among them being that the best young men go away to towns, that the labourers generally take less interest in agricultural work, and that the physical capacity of the labourers has decreased owing to the modern diet of tea and white bread instead of that of milk, porridge, and whole meal bread.

But, although many farmers draw this unfavourable comparison between the work of the present and the past, all admit that the Northumberland labourers compare very favourably with those in other counties as regards industry and conduct.

The appreciation of gold.

26. Several witnesses expressed a strong opinion that the depression was greatly due to the appreciation of gold, and that this subject was much overlooked by those who discussed the causes and remedies of agricultural depression.

Mr. H. H. Scott says :—

"There is another factor, however, which has not been generally taken into account, which is exercising an influence on prices, and that is the appreciation of gold in comparison with other articles. Gold was found some years ago in such quantity as to depreciate its value and raise prices. Now it is being found in smaller quantity than is required to replace its waste, and keep pace with the increasing population of the world, and consequently the value of gold compared with other things is increased; that is, less gold is required in exchange for the articles bought by it. If no new gold-field is found, this appreciation, or increase in the value of gold, must go on, and have a weighty tendency to keep prices at a lower level than in times past."

Mr. Forster, of Budle, writes :—

"I have not the least hesitation in saying that the chief, almost the entire, cause of these bad prices is the appreciation of gold, which has been becoming less in proportion to the need we have of it. Since 1870, when the demand overtook and exceeded the supply, the result has been, as soon as it had time to show its effects, a steady fall in prices up to the present time.

"Some people believe that in over-production and facilities of transit they recognise the root of the evil. These people forget that consumption has gone on increasing quite as fast as production has done, and they forget that during all past times people as foolish as themselves have always been raising the cry, and every time they have been proved before many years were over to have been mistaken.

"When I see legs of mutton and sirloins of beef floating down the Tyne after a bad cattle market in Newcastle, I shall then, and not till then, begin to believe in the correctness of their theory. But as long as I behold all the produce of the world consumed, I shall hold that the present state of things is brought about not by the fact that too much is produced, but by the fact that there is too little gold in the world to pay a fair price for it. In other words, the currency is year by year being made to cover a larger surface than it could before, and, covering a larger surface, it is bound to cover it more thinly than it formerly did.

"This means falling prices, a state of things bad for almost everyone, but especially bad for the producer, who is always compelled to bear the greatest share of the loss.

* The per-centage of decrease in the population of other rural unions in Northumberland between 1881 and 1891 was as follows :—Hexham, 4·8, Haltwhistle, 1·97, Bellingham, 10·8, Belford, 10·1, Berwick, 6·1, Rothbury, 9·3.

The reason of the fact contained in the last statement is not difficult to find out. A manufacturer practically buys and sells his goods in the same market, and if he cannot do so he will, as a rule, only work 'to order.' A farmer cannot do so. It is often several years before he gets out of the farm what he puts into it, and thus, with a steady fall in prices, he always finds himself buying in a dear market and selling in a cheaper one."

Also Mr. G. P. Hughes, of Middleton, referring to the causes of agricultural depression, says:—

"First is the influence upon the trade of the world of the mutation of bimetallism with monometallism, or solely gold currency by several of the States of Europe. That movement, following immediately upon the Franco-German War, caused a run for gold upon the Bank of England and a rise in discounts."

Bad seasons.

27. Although no one suggests that bad seasons have had anything to do with lowering prices, it is generally agreed that the seasons during the last 14 years, a time when the farmers could least bear any disadvantage, have been on the whole worse than during the preceding 14 years. Besides a run of wet and uncongenial seasons, with the exception of two which went to the other extreme, the farmers in North Northumberland suffered a good deal during the last three winters from the severe black frosts, which reduced to a pulp a large proportion of the produce of the turnip fields.

Rates.

28. The rates in the pound have not increased between 1882 and 1892 in the Alnwick, Glendale, and Berwick Unions, but they have slightly increased in the Belford Union, owing to special highway expenses in 1892. The rateable value of all these Unions has decreased since 1882. (*See* Appendix A. 3.)

VII.—The Agricultural Holdings Act.

The Agricultural Holdings Act.

29. A good deal of dissatisfaction was expressed with the Agricultural Holdings Act, but the complaints were neither so numerous nor so emphatic as those of the farmers in Lancashire, where I had recently been reporting.

The chief objections to the Act are the expense and the uncertainty of the result of a contested claim.

Some farmers say that the Act has done good by causing landlords to make more generous settlements.

Thus Mr. Hindmarsh, of Ilderton, says:—

"I believe the Agricultural holdings Act has had a good moral effect. You can make better terms with your landlord than formerly.

"Farmers are not farming high on account of bad times, and not because they feel afraid to farm high."

Mr. H. H. Scott says:—

"Notwithstanding, the Act has done much good*; most certainly men do not farm as high as they would if they had more security. At present their everlasting fear is that the landlords will reap the benefit of their expenditure. What we want to do is to prevent men feeling that others may reap what they sow.

"Landlords, or agents, not unfrequently through indulgence, or for want of information, do not see that farm agreements are strictly performed on the part of the tenant, in regard to cultivation, sale of produce, and other matters, but when a case of tenant's compensation arises, these transgressions may be called up and are often placed upon the counter claim.

"Landlords should only get compensation for special damage, and nothing in the nature of a penalty."

Mr. Sanderson has never had experience of such claims on the part of landlords, and does not think that if made they would be successful, neither does he think that compensation would be given except for damage actually sustained. (*See* Appendix B. 2.)

Mr. Sanderson is of opinion that the Act has worked fairly well. He says:—

"The procedure in relation to claims of this character might perhaps with advantage to both landlord and tenant be simplified, but the principle of compensation is fully recognised and, experience has shown, can be fully enforced, even under the existing system."

Many tenants say that they have not sufficient certainty of obtaining compensation, but this is perhaps a natural feeling now that they are farming under yearly agreements instead of under long leases as formerly. In those days a tenant was able to reap the benefit of what he put into the soil, and if he had any apprehension that

* Mr. H. H. Scott writes with reference to the Agricultural Holdings Act:—"I am persuaded that "the depression would have been more severe, and the tenants and landlords poorer, if there had been no "Agricultural Holdings Act."

he would not be fairly treated at the end of his lease, he did not farm so high the last year or two.

I venture to think that although undoubtedly this feeling of insecurity exists that many tenants farm none the less high in consequence, and that, under the landlords in the district, fixity of tenure is practically assured, unless a man happens to be seriously injuring the land by bad farming.

I think I may state with perfect accuracy that there is no feeling among farmers that they have suffered ill-treatment at the hands of landowners, and that the relations between landowners, agents, and farmers are harmonious.

The farmers at the meeting at Hedgeley stated: "We think that landlords have been "doing all they can and we have no complaints to make."

But considering that this feeling of insecurity now exists among tenants, and that hard times compel them to practise economy in expenditure on their farms, it would seem the more necessary that there should be secured to them the most inexpensive and least troublesome method of obtaining compensation for unexhausted improvements.

On all estates the landlords do the permanent improvements, the tenants sometimes doing the leading and sometimes not. It will be seen in paragraphs 12 and 13 that landowners have on the whole carried out permanent improvements at considerable expense to themselves notwithstanding the bad times.

On some properties agreements are entered into, and were before the Act, between landlord and tenant setting out a scale for compensation for unexhausted improvements to the soil. Some farmers consider this the most satisfactory course as it saves them expense and enables them to be certain of their position.*

Several suggestions were made as to how the present Agricultural Holdings Act could be amended to give greater satisfaction to farmers, the principal ones being:—

(*a.*) The drawing up of a fixed scale of compensation for a county or district.

(*b.*) The appointment of an arbitrator for the county or district, so that greater uniformity in decisions might exist.

(*c.*) The appointment of arbitrators for the county or district to examine the condition of farms when tenants enter, and again when they leave.

There are a considerable number of witnesses in favour of a fixed scale as being the best means of avoiding litigation and expense, among them being the Earl of Tankerville, Mr. Bolam, his agent, Mr. Fergusson, Vice-Chairman of the Belford Union, and Mr. Tait, of Cornhill. Also the meeting of farmers at Hedgeley were generally in favour of a fixed scale, with the exception of Mr. Laidler, who considered that landlords and tenants always ought to leave the Act alone and agree among themselves.

Mr. Edward Tait, of Way-to-Wooler, a successful farmer on 266 acres, who began life as a shepherd, says:—"If there was a fixed scale men would put capital into the "land even if they got less thereby than they were entitled to, because when they "spent their money they would know exactly how they stood."

The drawing up of a fixed scale of compensation was undertaken by a committee of the Newcastle Farmer's Club, consisting of agents and farmers, shortly after the Agricultural Holdings Act was passed. The committee, however, realised the difficulties of drawing up a fixed scale, not only on account of differences of soil, but because they considered it essential that attention would have to be directed to whether the improvements had been properly executed and whether by mismanagement the improvements made were of but little value to landlord or incoming tenant.

The committee thus reported to the club:—"It appears to your committee that, "fixing a scale, naming a hard-and-fast value for every 'improvement' named in the "Act, whether well or ill executed, whether in good or bad repair, and reducing the "price by a certain per-centage for each year used, would in effect and incidence be "unjust, resulting in the good farmer getting too little, and the bad farmer getting "too much. For instance, in regard to under drainage, it cannot be said that, if badly "planned and executed, and kept in bad repair, it would be of the same value to the "landlord or incoming tenant, as if it had been efficiently made and kept in good "repair; or that the application of purchased manures, or the consumption of "purchased foods, would leave the same manurial value in a holding full of weeds,

* Mr. Sanderson says:—"I think great harm is done by encouraging the idea that the 'agricultural depression' "can be cured by legislation. If landlords and farmers are left alone, they will soon shake down into a pleasant "relationship, such as is altogether inconsistent with mutual duties regulated by, and varying from time to "time under successive statutes. Farmers are no more slaves than merchants congregating on the Royal "Exchange, and I think it is not to their advantage that the sentiment of loyalty and oneness of interest, "which formerly in nine cases out of ten, controlled the dealings between landlord and tenant, should give "place to a disposition to spell out extreme claims under colour of an Act of Parliament."

" badly cultivated and managed, as on that clean, thoroughly cultivated, and well " managed. Therefore to obviate as much as possible the unequal operation of the " Act, your committee propose a basis on which 'improvements' may be estimated, " having a certain degree of elasticity; so that arbitrators may have a sufficient scope " to arrive at decisions which will not only tend to encourage tenants permanently to " improve their holdings, but also prevent the danger of landlords or incoming tenants " having to pay for that which has been so badly made, or treated, that it is exhausted, " and little more left in the shape of an improvement than a name.

" Your committee suggest that, in regard to each 'improvement' (with one " exception) there should be compensation of three degrees, viz.:—1st class, 2nd class, " and 3rd class. The 1st class to mean that when in regard to an 'improvement' " the effects were very beneficial, from the management generally having been good " and judicious; 2nd class, when these conditions had not been so meritorious; and " 3rd class, when the conditions had been bad.

" As the improvements scheduled in Part I. of the Schedule to the Act require the " consent of the landlord, and are therefore likely to be a matter of arrangement " between landlord and tenant as heretofore, your committee do not attempt to lay " down any basis on which to estimate their value.

* * * * * *

" In conclusion, your committee have to say that they are strongly impressed with " the conviction that the practical working and effect of compensation, so regulated " and scheduled as they have put it, would be a general and constant attempt on " the part of tenants to secure, by good farming, compensation of the 1st class. " The three classes would always be present in their mind, and whilst trying for the " higher or highest rate of compensation, pursuing their own interests, they would " necessarily be acting for the permanent good of the holding; and the probable (and " indeed reasonable) outcome would be a vast advance and improvement in the " agriculture of the country with advantage to the landowner, the tenant, and the " consumer." (*See* Appendix A. 5 for scale.)

Now the scale thus drawn up has been acted on in a good many instances, but in some cases the period over which compensation should be paid for some of the manures has been thought too short, and hence it has not been generally adopted.

Referring to the practical advantages of such a scale, Mr. H. H. Scott, who was a member of the committee, says:—

" I have come to the conclusion that it is quite impossible to fix an arbitrary scale for compensation. With the object of obtaining some elasticity I helped to frame the Newcastle rules, still I believe that claims generally go to arbitration.

" Taking lime as an example of the difficulty of fixing a scale. On one part of my farm it will last 20 years and on another part 10 years."

There are many who agree with Mr. Scott that a fixed scale is impracticable.

Mr. George Grey, of Milfield, says:—

" As to amounts awarded under the Act, they cannot well be fixed by any hard-and-fast line, but must be governed by the particular circumstances of each individual case."

Mr. Scott is still in favour of the scheme he advocated in 1881, and which is set out fully in Mr. Coleman's Report to the Duke of Richmond's Commission.

The principal features of the scheme are that arbitrators or commissioners shall be appointed for certain districts. Their duty shall be to examine the condition of farms and note whether they are in a normal or in a good or bad condition. Evidence is to be taken as to whether the condition of the farm is due to the good or bad management of the tenant and recorded.

If neither a landlord or tenant call upon the commissioners to examine a farm before the end of a tenancy, the condition of the farm at the commencement shall be taken to have been at a certain standard.

In no case shall the amount awarded at the termination of a tenancy exceed five years annual rental of the land.

Mr. Scott says:—

" The mere fact of a man spending some money at the end of his time does not of necessity do the land any good. The man who has farmed well all through under the Act gets no more than the man who has farmed badly and puts manure on at the end. This Agricultural Holdings Act is an Act for rogues.

" It ought to be present to the mind of every tenant that he would be paid for all he does to improve the letting value of the farm, but he should feel equally certain that he would have to pay for any decreased value of the farm due to his own action."

Mr. Black, who farms extensively in Northumberland and Scotland, and who is Chairman of the Berwick Union, says :—

"I am in favour of some authority being established to look over a farm when a tenant enters and again when he leaves. This would be fair both to landlord and tenant, because the spending of money by a tenant does not mean that the land has necessarily improved."

Mr. George Rea, of Doddington, dealing with the same subject, points out that now a tenant is given a direct incentive to sell off and then buy in order to have receipts to produce, because he gets no compensation for corn he gives as extra feeding to cattle and sheep.

Also Mr. Edward Tait, of Way-to-Wooler, says :—

"If I were to start and grind my own oats for the cattle I should get no compensation, as I should have no receipts to produce. I have water power and I grind barley and beans, which I mix with a few oats. If I were to think of giving up I should soon alter that."

Mr. Sanderson is also in favour of a scheme based on the same principle, and he submits the following suggestions for the constitution and powers of a County Agricultural Board :—

"Let the County Council and the Justices in Quarter Sessions each name six gentlemen to constitute a County Board of Agriculture.

"If either a landlord or tenant so require let a farm, when first let be inspected by two members of the Board (landlord and tenant each selecting one), and by a third gentleman, not a member of the County Board, who if not agreed on by the parties or by the two gentlemen first named, shall be nominated by the Central Board of Agriculture.

"On this inspection a report to be made on the farm, setting forth its condition in the various heads of building, drainage, &c., and a certificate to be given as to the category in which the farm is to be ranked, graduated according to excellence.

"A similar inspection, if so desired by either landlord or tenant, to be made at intervals of four or five years, or oftener if special occasion arises."

Some witnesses, both landowners, agents, and farmers, consider that landlords should be permitted to claim under the Act for dilapidations whether or not the tenant make a claim.

Mr. George Grey says :—

"The Act, which no doubt was beneficial and which was rendered necessary by the substitution of yearly tenancies for leases, might be amended with advantage, but in any such amendment the landlord's interest should have more attention paid to it than has been the case in the present Act. The inability of the landlord to claim for dilapidations, &c., unless the tenant claims, should be amended. It is presumed that the Act was intended to be a just Act between two parties, giving no advantage to one over the other, but in its working it is one sided. Again, I do not see why the landlord's claim for dilapidations, and produce sold off, should be restricted, the one to the two preceding years and the other to the four preceding years."

Mr. Bolam says :—

"Another point which would seem to require amendment is that, as the law now stands, the landlord cannot make any claim for dilapidation, unless the tenant first sets the Act in motion by sending in his notice of claim. An equal right should be given to the landlord who ought not to be left to seek his remedy at common law."

VIII.—The Ground Game Act.

The Ground Game Act.

30. The Ground Game Act appears, in a good many cases, to have resulted in a large increase in the rabbits, while hares have in many parts almost entirely disappeared.

This has been due to the preservation of rabbits by tenants for the purposes of sale, and in some cases the consequences have been a serious damage to fences, which has led to expostulations on the part of agents.

Some tenants let the right of trapping rabbits to a professional rabbit-catcher, and 100*l.* to 200*l.* a year is not infrequently given for the right.

On one farm of 1,500 acres, 800 acres of which was "links" and used as a rabbit warren, 5,000 couples of rabbits were killed a year or two ago. The professional rabbit-catcher is supposed to be responsible to some extent for the disappearance of hares, and sometimes for the disappearance of winged game.

Mr. Bolam says:—

"The Act has not affected us much in Northumberland, where we have no great over-preservation of game, and the tenants in many cases had the rabbits upon their farms before the Act came into operation. One effect of the Act has, however, been to greatly increase the number of rabbits and to create a number of professional rabbit-catchers and dealers, who make a trade of it and seem to flourish, paying the farm tenant often large sums for the right of killing rabbits upon their farms; another consequence has been the increased expense upon fencing destroyed by rabbits and the necessity of protecting all new fences and plantations by rabbit-proof wire netting."

Mr. Wheeler, agent to the Duke of Northumberland, says:—

"The effect of the Act is that there are no hares and far too many rabbits."

Mr. Sanderson, agent to the Marquis of Waterford, says:—

"The effect of the Act has been very nearly to exterminate hares, and to give an inducement to the tenants to encourage rabbits for the sake of the price they get for them, while the people employed to kill the rabbits too often avail themselves of their opportunities to take fur or feather of all sorts, as it comes in their way."

Mr. Gray, bailiff to the Marquis of Waterford, says:—

"There is not the slightest friction about game here, Lord Waterford never has a gun lifted to a rabbit, and the tenants have them all, and they keep some hares for him. Lord Waterford sends the hares shot to the tenants, and also some partridges and pheasants.

"Whenever a man lets the game to a shooting tenant there is discontent and no game. Farmers cannot endure a shooting tenant."

On another large estate the tenants had the rabbits before the Act, and if the landlord took any he paid for them, and now if the tenants keep them down reasonably, the landlord does not kill them.

In some cases, the tenants have winged as well as ground game, and this is the case on many of the Duke of Northumberland's farms.

At the meeting of farmers at Hedgeley, one or two expressed some dissatisfaction that they could not sufficiently keep down the rabbits as they came out of the coverts on to their land, and thus they were unable to trap them.

Several of those present stated that they had all the rabbits on their farms, with the exception of those the landlord killed if he was out shooting. One farmer present stated that on the estate he lived a man was kept to kill the rabbits, the tenants being given all the profits after expenses were deducted.

Several farmers expressed the opinion that keepers frequently made mischief between landlord and tenant, and the meeting generally stated that they were all quite ready and willing to preserve flying game for their landlords.

Speaking generally, the farmers in the district appear to think the Act is beneficial to them, and though there are a few cases where tenants grumble at the number of rabbits which come out of the coverts to feed on their land, there seems to be very little friction indeed throughout the district arising out of the game question. Several farmers expressed the opinion that when the landlord did not want the shooting himself, he ought to give the tenants the opportunity of taking it before he let it to a stranger.

IX.—Suggested Remedies.

31. Many farmers advocate fair trade, and say that a duty should be placed on imported manufactured goods as long as English exports are subject to duties in foreign countries. Fair trade.

It is represented as being grossly unfair that English goods should be subject to taxation abroad, while at the same time the foreigner pays no duties, and has the free use of English markets, contributing nothing to the taxation of the country, besides having better terms on the railways than Englishmen. With such advantages as these, the farmers say it is impossible to compete with the foreigners.

A number of farmers, who are opposed to putting a duty on manufactured articles as a whole, advocate a duty on foreign barley, which they urge would not result in raising the price of food, and not necessarily of drink, while it would greatly benefit the farmers.*

* Mr. H. H. Scott writes:—"Barley may be said to be no longer used as a food in the United Kingdom, "being used mainly in the making of beer and spirits. There need be no fear that the prices of these drinks "would be affected by any increase in the price of barley resulting from the tax, for when barley was double "the present price, beer was no dearer to buy. No doubt the charge might cause some diminution in the

On the other hand there are farmers who are opposed to protection in any form. Mr. Forster, of Budle, says:—

"I pass over the idea of protection as something quite too childish to trouble you with. As long as other nations send their produce here it is quite clear it is the best market for our own as well as for theirs."

And there are others who recognise that the cost of living is cheaper for the whole community in consequence of free trade; that probably it would be an impossibility to raise the cost of living of the community to assist the farming interest, and that remedies must be sought in other directions.

Marking of foreign meat.

32. A very general desire is that foreign dead meat should be labelled, and some also express the opinion that butchers who sell it should be compelled to take out a license. Some advocate that all live foreign beasts should be killed on landing.

The labelling of beer.

33. It is also suggested that if beer is brewed from any ingredients except malt and hops it should be so labelled.

Alteration in system of rating.

34. Everyone I met connected with the agricultural interest considered that the land bears an undue proportion of rates and taxes, and that mills, manufacturing properties, and personalty generally should bear a more equal proportion than at present.

Mr. G. P. Hughes, writing on this subject, says:—

"When we consider that the whole income of the country is, broadly speaking, 900,000,000*l.* a year, and is constantly increasing, and that the income derived from land and houses is 160,000,000*l.* and is constantly diminishing, it seems a crying injustice that upon this one-sixth part of the national income should be imposed nearly the whole burden of maintaining our poor, repairing the highways, paying public rates, and the education of the children of the labourers, while the other five-sixths escape altogether."

Some farmers consider that landlords and tenants should share equally the payment of rates.

Assessment of income tax.

35. There is a very general feeling on the part of farmers that the present method of the assessment of income tax is unfair, and that a third of the rental instead of a half should be taken as the basis. It is said that many farmers do not appeal because they do not keep books, or at any rate sufficiently accurate ones, to enable them to do so, while those who do keep them do not like to appeal for fear their credit should be thereby damaged.

Landowners consider that their income tax should be assessed on the net instead of the gross income.

Railway rates.

36. Farmers generally consider the railway rates charged for cattle and farm produce too high, and especially condemn the lower through rates allowed to foreigners. Mr. Clark, of Belford, and Mr. Temperley, of Newcastle, have supplied me with instances as regards both local and through traffic, of rates being higher in 1893 than in 1892, on cattle trucks, cattle, sheep, manure, grain, hay, and straw. (Appendix A. 7.)

Borrowing money for permanent improvements.

37. Landowners and agents state that it would be most beneficial to them if money could be borrowed at a low rate of interest to expend on farm buildings and other permanent improvements.

An agent to a large estate writes that it would be a great boon in cases where it has been desirable to split up large farms.

The law of distress.

38. There seems to be a considerable difference of opinion among farmers whether the landlord's right to distrain should be abolished. (App. B. 3.)

Those who advocate its abolition usually do so on three grounds. First, that the effect will be to make landlords more careful in choosing their tenants, and thus competition for farms will decrease; secondly, that the farmers will be able to get more credit from the tradesman and banker; and thirdly, that the abolition of the law would be more equitable.

As to the first point, landlords and agents unanimously say that they do all in their power to choose substantial and practical tenants, and that the question of rent is not

"brewer's profits, but they are great, as evidenced by one company having last year divided 800,000*l.*, whilst "the farmer's profits are nil. My suggestion may be regarded by some as savouring too much of protection, "but surely we have not rendered ourselves so hoarse or weak by shouting for free trade that we have no "voice left to advocate, or independence of mind to adopt, a change which might be for the good of the "country."

the primary consideration, and that this is the case especially in the letting of large farms. It is the custom on several of the large estates, when a farm is about to become vacant, to offer it to the family or relations of the old tenant, or some other tenant on the estate before taking other steps.

Some agents agree that, to some extent, the abolition of the law may have the effect of reducing the competition, but not necessarily the rents, particularly on the smaller farms, as some of the men who take them could not possibly afford to pay rent in advance in addition to all the heavy expenses of entering a farm.

They consider that this would be a very great disadvantage to the shepherds and stewards who have saved money and desire to take small farms, and who are now enabled to do so by having a long credit for rent, and they state that the law is very seldom acted on in the district, and that its existence is more valuable to the tenant than the landlord.

Mr. Sanderson writes :—

"Practically under the existing system prevailing in Northumberland a tenant pays no rent for a year after he enters the farm, and then pays only half a year's rent. This enables a farmer to work with a smaller capital than would be required had he to pay (as in the absence of the right of distraint he probably would be) either a whole year's rent or half a year's rent upon first entering the farm. Interest upon the money thus paid would practically contribute an addition to the rent. Another result would be largely to increase the difficulties in the way of such men as stewards and shepherds making their way into the position of farmers, and yet these men, from their experience and their proved steadiness and probity, are most desirable tenants and deserve help and encouragement. They have only their savings for their capital, and if they are excluded from competing for farms, the result must be to add to the advantages already possessed by those who enjoy the monopoly of ample pecuniary resources."

Mr. George Grey at the meeting of the Glendale Agricultural Society, at which a large number of farmers were present, said, and the statement was neither denied nor resented, "that if the law of distress were suddenly abolished it would break two-thirds of the farmers."

Technical education.

39. The County Council is active in promoting technical education in agriculture, and, though this is accompanied by considerable expense, the results appear to have been satisfactory, and to point to the advisability of further extending the work. The general scope of the instruction afforded is as follows :—

1. Pioneer and short courses of lectures in general agricultural science, and the minor industries of the farm, including veterinary science, farm crops, feeding stuffs, soils, plants, poultry keeping.
2. Butter-making at the migratory dairy school.
3. Manurial trials on local stations.

The dairy instruction particularly appears to have had satisfactory results. The Annual Report of the Technical Educational Committee of the County Council for 1892–93 says :—

"The migratory dairy school has proved a success at all the centres visited. The plan of arranging for the dairy teacher to visit a farmhouse to give practical instruction to four pupils in districts where the conditions were not favourable for a visit of the full school was found to be useful in several cases. While much may be done by means of technical instruction to improve the quality of butter produced, the committee feel that the real problem to be solved is of an economic as well as of an educational character."

Writing with reference to the value of technical education to lads and boys, Mr. Hindmarsh, a member of the committee, says :—

"I believe that technical education is capable of rendering great service to our agricultural community if properly applied. Our lads forced to leave school after passing the Fifth Standard unfortunately soon forget the little knowledge they have acquired. To these lads where they can be taught single book-keeping, mensuration, planning, and simple mechanics, with perhaps a little agricultural chemistry, must prove of immense advantage, as with such knowledge any lad is qualifying himself for the office of farm steward or bailiff."

Several witnesses urged that agricultural subjects should be taught in the elementary schools so as to give the boys a knowledge and interest in animal and plant life with which they are likely to be connected in after life.

No wish for amendment in the land laws.

40. Although some farmers are in favour of arbitrators being appointed to deal with claims for unexhausted improvements and counter-claims for dilapidation, very few are in favour of the question of rent being subject to arbitration. Neither is there any feeling that the existing land laws are detrimental to agriculture, though two witnesses advocate the abolition of the law of entail, as they consider that impoverished estates would thus sooner get into the market and richer people from the towns would buy them, which would be better for the tenants and the land generally.*

Mr. Hindmarsh, of Ilderton, thinks that a land purchase scheme would be beneficial and "would develop conservatism in its best sense."

Mr. Albert Grey's profit-sharing scheme.

41. In my report to the Royal Commission on Labour I dealt at considerable length with Mr. Albert Grey's profit-sharing scheme in operation on his farm at East Learmouth (821 acres, of which 122 acres are permanent pasture) since 1886, and consequently it appears unnecessary to discuss the subject at length on the present occasion.

It may, however, be convenient to repeat that Mr. Grey's method is shortly as follows:—After rent has been paid, and interest on capital at the rate of 4 per cent., 25 per cent. goes to a reserve fund, 25 per cent. for the reward of management, that is, as a bonus to the manager, the steward and the herd, 25 per cent. to capital, and 25 per cent. to labour.

The objects which Mr. Grey had in view in adopting this scheme were both of a commercial and social nature. Firstly, he thought that, by giving the labourers a share in the profits an incentive "to put brains and energy into work" would be created, which the yearly hiring system is said not to afford. Secondly, that co-operation would strengthen the bonds of sympathy and friendship between capital and labour, and thirdly, that the men would be deterred from continually changing their situations, which is now the case.

From 1886 to 1891 the experiment was attended by satisfactory results, which Mr. Grey summed up as follows:—

"The net result of my five years' occupation of East Learmouth (821 acres, 122 acres of which are permanent pasture, and the rest arable), from May 1886 to May 1891, a period which has experienced one very bad harvest (that, namely, of 1888), and during which the range of the average price of wheat has been lower than in any other similar period since 1790, are as follows:—The rent of 1,431*l.*, and interest on capital at the rate of 4 per cent., have been paid with unfailing regularity; 163*l.* 5*s.* 11*d.* has been given in bonuses to the employés on the farm; 148*l.* 2*s.* 7*d.* has been paid as additional interest on capital; and a reserve fund has been formed which at the present time amounts to 182*l.* 8*s.* 4½*d.*

* * * * * *

"'I have increased my income. I enjoy the rights of proprietorship far more fully than I should if the farm were leased to a tenant, and I feel secure against any possibilities which future legislation based upon the lines of the Irish Land Acts may have in store for English landowners.

"'The working of this experiment has been so satisfactory, that I have added to East Learmouth the adjoining farm of West Learmouth, with an area of 941 acres, and from May 12th, 1891, these combined farms have been worked as one undertaking.'"

But since this date, however, the financial result of farming East and West Learmouth, a total acreage of 1,762 acres, has been of a discouraging nature, owing to agricultural depression.

Mr. Grey thus puts the position in a letter addressed to his manager, Mr. Fox, on February 8th, 1894, to be read to the men:—

"I regret to state that, in consequence of the agricultural depression, the accounts of the farm do not show for either of the first two years ending 12th of May 1892 and 12th of May 1893 any balance of profit. There is consequently no bonus to divide.

"In both the years 1891–2 and 1892–93 there were losses; fortunately, however, small enough to allow of being almost completely covered by the reserve fund, which was established partly with a view of meeting deficiencies which might occur in bad years from time to time.

"The loss which stands against the farm, and which will have to be made good before anything remains out of which a bonus in future years can be paid, is 15*l.* 13*s.* 9*d.*

* Mr. Forster, of Budle, writes:—

"I hope the Commissioners will not be led away by any claptrap about the land laws. These laws were much worse than they are now during all the years of prosperity. How then can they be blamed for the depression?"

That is not a large sum, when the magnitude of our farming operations is considered, and, if prices maintain their present level, we may, I trust, look for a bonus at the end of the current year. What, then, has this united East and West Learmouth farm done? Subject always to the relief it has obtained from the reserve fund, and to the loss of 15*l.* 13*s.* 9*d.*, which stands a debit against the farm, the farm has paid its way. It has first of all paid away in cash to the employés in the shape of money wages for labour during the two years ending the 12th of May last the sum of 3,420*l.* 12*s.* 8*d.*, a sum which naturally stands as the first charge on the gross profits, and must necessarily be cleared before any other obligations can be met.

"The farm is further in a position to meet all its remaining obligations, which include, besides rent and interest, the sum of 308*l.* 7*s.* 5*d.*, which during the two years ending May 12th, 1893, have been levied off the farm in the shape of rates and taxes.

"I should wish to point out that, if it had not been for this levy of rates and taxes off the farm, there would now be on the books of the farm a credit of 292*l.* 13*s.* 8*d.*, instead of a debit of 15*l.* 13*s.* 9*d.*, and, if this sum of 292*l.* 13*s.* 8*d.* had been divided as bonus after a sum of 73*l.* 3*s.* 5*d.* had again been credited to the reserve fund, 73*l.* 3*s.* 5*d.* would have been added to the reward of management, and a similar sum would have been divided among the workers in the proportion of wages earned.

"In fact, that the enjoyment of this considerable bonus has been rendered impossible by the rates levied off the farm will be sufficient to convince every one how greatly our interests demand an effective and economical administration of local affairs. I trust this will be realised; and that all the householders of East and West Learmouth will use their influence in the Parish Councils, which the Legislature is about to establish, in such a way as will keep in check all extravagance and foolish expenditure of rates."

X.—Conclusion.

Conclusion.

42. In paragraph 29 I have alluded at length to the desire for alterations in the Agricultural Holdings Act, and in paragraph 24 to the general expression of opinion that the tax on beer instead of on malt is detrimental to the farmers' interests, and that the malt tax should be re-imposed. These and other suggestions contained in paragraphs 31–41 are put forward by the various witnesses representing all classes of the agricultural interest with whom I came in contact, and, though there is a very general feeling that there is little possibility of anything being done by legislation to raise the prices of produce, which is the chief want, still there are many other matters which require alteration and amendment, and it is to the early consideration of these that agriculturists look, not perhaps in the belief that they can be made as prosperous as they were, but in the hope that they may be put in the most secure and the least fettered and encumbered position when engaged in the great competition with others across the seas.

I have, &c.
(Signed) ARTHUR WILSON FOX,
(Assistant Commissioner).

APPENDIX A.

TABLE OF CONTENTS.

1. Population.
2. Size of farms.
3. Rates and rateable value.
4. Average prices of corn on Wark farm from 1874 to 1891.

APPENDIX A. 5.

(*See* Paragraph 29).

EXTRACTS from the Report of a Committee composed of Land Agents and Farmers of the "Newcastle Farmers' Club," appointed for the purpose of framing a basis on which to estimate Compensation as provided in the Agricultural Holdings Act, 1883.

As the improvements scheduled in Part I. of the Schedule to the Act require the consent of the landlord, and are therefore likely to be a matter of arrangement between landlord and tenant as heretofore, your Committee do not attempt to lay down any basis on which to estimate their value.

PART II. OF THE SCHEDULE TO THE ACT.

1. Under drainage:—

1st Class—Estimated to last 35 years as a maximum.
2nd Class ditto 25 ditto.
3rd Class ditto 15 ditto.
Exhaustion to be estimated in 1st Class at $\frac{1}{35}$ part of first cost in each year since made, 2nd Class at $\frac{1}{25}$, and 3rd Class at $\frac{1}{15}$ in each year.

2. Surface drains:—

That the out-going tenant be repaid the reasonable first cost of open drains minus the cost of putting the drains into efficient working order, provided the said drains have been executed in proper manner and method.

PART III. OF SCHEDULE TO THE ACT.

3. Boning of land with undissolved bones:—

——	Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	⅕	$\frac{1}{10}$
2nd Class—Exhaustion each crop	¼	⅛
3rd Class—Exhaustion each crop	⅓	⅙

4. Liming of land (magnesian limestone and gas lime excepted):—

——	Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	$\frac{1}{10}$	$\frac{1}{20}$
2nd Class—Exhaustion each crop	⅕	$\frac{1}{10}$
3rd Class—Exhaustion each crop	⅙	$\frac{1}{12}$

5. Dissolved bones and phosphates, phosphatic guanos, ground phosphates, kainit and fish guano:—

——	On Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	⅛	⅙
2nd Class—Exhaustion each crop	½	¼
3rd Class—Exhaustion each crop	All	½

6. Ammoniacal guanos:—

——	On Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	⅓	⅓
2nd Class—Exhaustion each crop	½	¼
3rd Class—Exhaustion each crop	All	½

7. Sulphate of ammonia and nitrate of soda. That no compensation be paid for these manures when applied to arable land.

8. When applied to grass land:—

1st Class—Exhaustion each crop - ⅓
2nd Class ditto - ½
3rd Class ditto - all

9. Farmyard manure:—

——	On Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	⅓	⅑
2nd Class—Exhaustion each crop	¼	⅐
3rd Class—Exhaustion each crop	⅓	⅙

10. Town manure (scavenger):—

1st Class—Exhaustion each crop, ¼ on arable and pasture.
2nd Class—Exhaustion each crop, ⅓ on arable and pasture.
3rd Class—Exhaustion each crop, ½ on arable and pasture.

Residuary manurial value left by the consumption of (purchased) Artificial and other Foods. For every ton used:—

—	Value of Residuum. £ s. d.
Decorticated Cotton Cake (containing about 6% nitrogen, 16% oil	3 0 0
Linseed and Rape Cake (4⅓% nitrogen, 11% oil)	2 10 0
Undecorticated Cotton Cake (3% nitrogen 6% oil)	2 0 0
Beans, Peas, Tares, Lentils, Linseed, Malt Dust	1 10 0
Wheat, Oats, Barley, Bran, Maize, Malt	1 2 0
Hay and Locust Beans	16 0
Straw of Beans, Oats, Wheat, Barley and Peas	11 0
Potatoes	4 0
Mangel Wurzel, Carrots and Turnips	3 0

Manurial residue from the foregoing Foods.

—	On Arable Land and Hay Meadow.	Pasture.
1st Class—Exhaustion each crop	¼	⅙
2nd Class—Exhaustion each crop	⅓	¼
3rd Class—Exhaustion each crop	¼	⅓

"Crop" in every case to mean the produce of one year.

It is not pretended that the manure foods enumerated are exhaustive of those in the market, but the Committee have dealt with those most commonly used in the district, others not mentioned can be estimated by comparing them to those mentioned of like character and quality.

APPENDIX A. 6 (*see* Paragraph 25).

STATEMENT showing Annual Saving in Labour by laying down 500 Acres of Arable Land to Grass.

[Extracted from Mr. Wilson Fox's Report to the Royal Commission on Labour. Vol. I. Part III.]

ANNUAL EXPENSES if 500 Acres laid to Grass.

	£ s. d.	£ s. d.
Shepherding, 1 man	59 12 0	
1 lad to assist for 30 weeks in summer and spring at 12s.	18 0 0	
		77 12 0

500 acres at 10s. 4d.		£259 11 0

ANNUAL EXPENSES connected with a 500 Acre Farm worked on the 5th Course, say, heavy land.

In 5th course there would be each year:—

100 acres turnips.
100 acres barley.
100 acres oats.
100 acres seeds.
100 acres 2nd year grass.

500 acres.

This would require:—

	£ s. d.	Weeks.	Present Wages.	£ s. d.
*House	4 0 0	1 ploughman	—	—
Coals, carting	1 15 0	steward	52 at 17s.	44 4 0
Potatoes	4 0 0	5 hinds, each	52 at 16s.	208 0 0
		Payments in kind:*		
	£9 15 0	Say 4 men have houses, &c., 9l. 15s.	£ s. d. = 39 0 0	
		while two of them have sons hinding, who have only potatoes, 4l.	= 8 0 0	
				47 0 0
1 odd boy, 52 weeks at 8s.				20 16 0
1 spademan, 52 weeks at 17s.			44 4 0	
House, coals carted, and potatoes			9 15 0	
				53 19 0
1 byreman, 52 weeks at 16s.			41 12 0	
House, coals carted, and potatoes			9 15 0	
				51 7 0
Steward, 52 weeks at 22s.			57 4 0	
House, coals carted, and potatoes			9 15 0	
				66 19 0
Shepherd, value of wages, house, &c.				59 12 0
6 women, 46 weeks at 9s. (1s. 6d. a day)				124 4 0
„ 20 harvest days, at 3s.				18 0 0
Extra labour during harvest				30 0 0
				724 1 0
Keep of horses, 6 pairs, at 45l. a pair				270 0 0
Manure for turnips, 100 acres at 24s.				120 0 0
Turnip seeds for do., 100 acres at 2s. 6d.				12 10 0
Grass seeds for 100 acres at 15s.				75 0 0
Up-keep of implements, shoeing, &c.				60 0 0
Rates and taxes				35 0 0
Sundries, including fencing requisites				50 0 0
500 acres at 2l. 13s. 10d. per acre				£1,346 11 0

	£ s. d.	£ s. d.
In tillage, annual expenses	1,346 11 0	= 2 13 10 per acre.
In grass, „	259 11 0	= 0 10 4 „

	£	s.	d.
Profits	1,716	14	1
Losses	450	3	3
	1,266	10	10

Average profit per annum - - - 126*l.* 13*s.* 1*d.*=4·03 per cent. on capital employed.

	£	s.	d.	
But if 4 per cent. interest on capital (3,058*l.* 13*s.* 8*d.*) =	122	7	0	is charged
And 2*s.* 6*d.* per acre for management =	61	15	0	is charged
	184	2	0	
Less actual profit	126	13	1	
Then loss is	57	8	11	or 1·8 per cent. on capital.

APPENDIX B.

TABLE OF CONTENTS.

1. Remedies for agricultural depression.
2. The Agricultural Holdings Act.
3. The Law of Distress.
   - B. 3. (*a*). Number of farmers, labourers, &c. in Northumberland from 1861 to 1891.
   - B. 3. (*b*). Cost of labour on Mr. G. Laing's farm, Northumberland, and Mr. Oldfield's farm, Norfolk.
4. Tabulated evidence of farmers.
   - (*a.*) Size of farm, and proportion of pasture and arable land.
   - (*b.*) Length of occupation.
   - (*c.*) Nature of tenancy.
   - (*d.*) Rent.
   - (*e.*) System of farming and land turned to grass since 1882.
   - (*f.*) Buildings, drainage, and water supply.
   - (*g.*) Permanent reductions or abatements in rent since 1882.
   - (*h.*) Has labour been curtailed since 1882, by turning arable land to grass, the use of machinery, or desire to economise in the labour bill?

APPENDIX B. 1.

Remedies for Agricultural Depression (*see* paragraphs 24, 29, 31–40.)

Name.	District.	Evidence.
Meeting of the Glendale Agricultural Society.	Glendale and district.	1. A more just and equitable system of rating of the property of the country. 2. To oblige all foreign cattle and manufactured goods coming to England to be marked as foreign. 3. To reinstate in the malt tax instead of the beer tax, which has been no benefit but a disadvantage to agriculture. 4. To impose a duty on all foreign imported manufactured goods.
Mr. E. G. Wheeler, agent to the Duke of Northumberland.	Alnwick - -	Re-imposition of the malt tax.

REMEDIES FOR AGRICULTURAL DEPRESSION—*continued.*

Name.	District.	Evidence.
Mr. George Grey, landowner and agent to the Hon. F. W. Lambton, Mr. Albert Grey, and Mr. F. D. Blake.	Milfield - -	(1.) The re-imposition of the malt tax. (2.) Abolition of preference rates for foreign produce, by rail. (3.) A more equitable system of rating. Personal property and income to bear their just share.
Mr. Sanderson, agent to the Marquis of Waterford and others.	Berwick-on-Tweed	(1.) Landowner and tenant should share the rates, as in Scotland. The adoption of this system in England would prevent what before County Councils were established used to be a standard grievance (and the sentiment embodied in which still remains), that the tenant paid the rates, but the squire spent them. A change such as that suggested would not in the long run impose on landlords any increased burden, for tenants when offering a rent for a farm, take into account by way of deduction the whole of the rates, while under the altered system they would only deduct half, and at the first introduction of the system provision could be made to prevent existing contracts being prejudiced either to landlord or tenant. (2.) Irregularities in the existing mode of assessment in different rating areas owing to the adoption of differing bases of allowances, might be in some measure mitigated if not removed, were the assessment made as in Scotland, or supervised by a qualified official.
Mr. H. H. Scott, farmer, 10,000 acres. On the properties of the Duke of Northumberland, Sir John Haggerston, Mr. Cresswell, Mr. Leyland, and the Alnwick Freemen.	Alnham - -	(1.) Put an import tax on barley. (2.) Put tax on malt instead of beer. (3.) Mark foreign meat. (4.) Abolish law of distress. (5.) Landlord and tenant should share rates. (6.) A more just apportionment of rates by making incomes liable to contribute towards them. (7.) An improved Agricultural Holdings Act. (8.) Reduction of rates of inland carriage. (9.) Agriculture should be taught at all rural elementary schools.
Mr. W. Hindmarsh, farmer, 1,300 acres. The Rev. C. T. Ilderton's property.	Ilderton - -	(1.) I believe in a land purchase scheme. It would develop conservatism in its best sense. (2.) Beer, if brewed from anything but malt and hops, should be marked as such. (3.) Foreign meat should be marked.
Mr. Tait, farmer, 500 acres. The Earl of Tankerville's property.	Cornhill - -	(1.) Tax malt instead of beer. (2.) Tax all imported manufactured articles.
Mr. Cleghorn, Mr. George Grey's estate office.	Milfield - -	Poor rate should be levied on incomes. Foreigners should not have through railway rates after their goods arrive at our ports.
Mr. John Turnbull, farmer, 350 acres. Lord Tankerville's property.	Hepburn Chillingham.	(1.) Reinstate malt tax. (2.) Equalisation of rates. (3.) Impose protection duty on manufactured food coming into the country.
Messrs. G. and R. Hood, farmers, 460 acres. Mrs. Sitwell's property.	Lowick - -	Reduction of rents.
Mr. W. Wood, farmer, 1,128 acres. Mr. Friar's property.	Duddo and Felkington.	All importations should pay their share of taxes, in correspondence with ours. I mean a fair field and no favour.
Mr. George Laing, farmer, 600 acres. Lord Waterford's property.	Flodden Ford -	Raising standard price of wheat to not less than 40*s.* a quarter.
Mr. Richard Stawart, farmer, 557 acres. Hon. F. W. Lambton's property.	Akeld - - -	Lower rents.
Mr. A. F. Nichol, farmer. One farm 520 acres and one 440 acres. Mr. A. Grey and Mr. R. Graham's properties.	Bamborough -	I would go in for protection to a certain extent, or rather reciprocity. The railway companies should not be allowed to carry foreign produce at a cheaper rate than home produce. Put the tax on malt again instead of beer. If the landlords would not take more than a fair rent for their farms it would be for everyone's benefit, but they can hardly be blamed when farmers bid against each other, for nearly every farm which is to let, and generally give far more rent than the land is worth.
Mr. William Pringle, farmer, 1,000 acres. Mr. C. J. Fawcett's property.	Eglingham, Branton, Alnwick.	I should like to see the malt tax put on instead of the beer tax. As this is a barley-growing district it would help us to some extent.
Mr. H. B. Howie, farmer, 772 acres. Mr. W. B. Langhorne's property.	Chatton - -	Repeal the beer duty and tax malt, also foreign barley. We are taxed to keep our poor and we do not feed them.
Mr. James Playfair, farmer, 821 acres. Mr. Burdon's property.	Ilderton - -	With permanent occupancy and good security for improvements one could make farming far more remunerative.
Mr. Edward Tait, farmer, 266½ acres. Lord Tankerville's property.	Wooler -	Reinstate the malt tax. Take the real income of the farmer as the basis of taxation, for in many cases he has not the income he is taxed on.
Mr. H. McCreath, farmer, 200 acres. Mr. Orde's property.	Norham-on-Tweed	Put on the malt tax again, and put a small tax on foreign barley, and manufactured stuff such as flour.

REMEDIES FOR AGRICULTURAL DEPRESSION—*continued.*

Name.	District.	Evidence.
Mr. Thomas Brown, farmer, 587 acres. Mr. Albert Grey's property.	Ancroft - -	We must have the malt tax put on again, all foreign beef and mutton labelled, the seller to have a license to sell such to let the people know what they are buying. The depression is simply due to low prices. If there was four times as much money put into land which was being well farmed it would make no difference.
Mr. Roddam, landowner, 1,000 acres.	Roddam Wooperton	(1.) Levy rates on personal property as well as on real when it has not already paid. (2.) Put a duty on flour and keep all our small mills going, and also a duty on manufactured goods, so that we may not have so many unemployed unable to buy. (3.) Do away with yearly agreements with farm servants, so as to get rid of worthless ones and make the population more fixed. (4.) Make the middleman disgorge part of the plunder, so that the farmer and consumer may both benefit and not the middleman only. (5.) It would be a benefit to landowners if the Government advanced money at a low rate of interest for the purpose of erecting buildings and making improvements. I pay on this estate over 400*l.* a year to the Lands Improvement Company for advances. This cripples me. What with reduced rentals, it is wonderful how properties are kept up.
Mr. George Laing - -	Kelso (late of Wark farm).	I think that the land pays too large a proportion of the rates of the country, and that the Agricultural Holdings Act is not favourable enough to the tenant, but, no doubt, the real and only remedy for agricultural depression is reduction of rents. Since it seems impossible to have even a very moderate protection.
Mr. R. G. Bolam, agent to the Earl of Tankerville and other properties.	Berwick - -	Real property is far too heavily taxed compared with personal property. The power to borrow money at a cheaper rate would enable many landlords to improve their estates and, when occasion arise, to divide large farms which it is sometimes desirable to do, but at present not always possible from the large outlay necessary without any corresponding increase of rents.
Mr. George Rea, 800 acres. Earl of Tankerville's property.	Doddington -	Reinstate the malt tax.
Mr. Black, chairman of the board of guardians, Berwick Union, farmer. Earl of Tankerville property.	Berwick - -	Personal property should bear its fair proportion of the rates.
Mr. Fergusson, vice-chairman of the board of guardians, Belford Union, 400 acres. The Earl of Tankerville's property.	Belford - -	Rents will have to come down still lower. I regard the labour question as a very serious one, as it is increasing in cost and decreasing in quality.

APPENDIX B. 2.

THE AGRICULTURAL HOLDINGS ACT (*see* paragraphs 14, 29).

Name.	District.	Evidence.
The Earl of Tankerville - -	Chillingham Castle	I believe that it would be more satisfactory in the long run to have a scale fixed for compensation. It is much better than having it so indefinite as it is now.
Mr. H. H. Scott, farmer. 10,000 acres on the properties of the Duke of Northumberland, Sir John Haggerston, Mr. Creswell, Mr. Leyland and the Alnwick Freemen.	Alnham - -	Most certainly men do not farm as high as they would if they had more security. At present, their everlasting fear is, the landlords will reap the benefit of their expenditure. What we want to do is to prevent men feeling that others may reap what they sow. The Agricultural Holdings Act has been rendered partly inoperative, because landlords counter-claim for breach of agreement, which they have winked at. Landlords should only get compensation for special damage, and nothing in the nature of a penalty. I have come to the conclusion that it is quite impossible to fix an arbitrary scale for compensation. With the object of obtaining some elasticity I helped to frame the Newcastle rules, still, I believe that claims generally go to arbitration. Taking lime as an example of the difficulty of fixing a scale, on one part of one of my farms it will last 20 years, and on another part ten years. I am in favour of permanent arbitrators being appointed for districts, to examine farms when they are taken, and again when the tenant leaves. There is no difficulty whatever for a practical man to come to the conclusion at once, if a farm is above or below its normal condition when he first examines it. The mere fact of a man spending some money at the end of his time does not of necessity do the land any good. The man who has farmed well all through under the Act gets no more than the man who has farmed badly and puts manure on at the end. This Agricultural Holdings Act is an Act for rogues. It ought to be present to the mind of every tenant that he would be paid for all he does to improve the letting value of the farm, but

THE AGRICULTURAL HOLDINGS ACT—*continued.*

Name.	District.	Evidence.
		he should feel equally certain that he would have to pay for any decreased value of the farm due to his own action. It is entirely wrong that a landlord cannot claim unless the tenant does. A bad tenant puts in no claims, then the landlord gets nothing.
Mr. Sanderson, agent to the Marquis of Waterford, and other owners.	Berwick - -	The Act has been advantageous to the tenant in a general way, but not conspicuously so. On the Ford Estate and on other properties in Northumberland and Berwickshire with which I have been concerned as agent, compensation for unexhausted manures was by their leases given to the tenants, before the Agricultural Holdings Act came into operation. I think great harm is done by encouraging the idea that the "agricultural depression" can be cured by legislation. If landlords and farmers are left alone, they will soon shake down into a pleasant relationship, such as is altogether inconsistent with mutual duties regulated by, and varying from time to time under successive statutes. Farmers are no more slaves than the merchants congregating on the Royal Exchange, and I think it is not to their advantage that the sentiment of loyalty and oneness of interest, which formerly in nine cases out of ten, controlled the dealings between landlord and tenant, should give place to a disposition to spell out extreme claims under colour of an Act of Parliament. I have never heard of landlords counterclaiming for breach of covenants, which they have winked at, and I am sure that if a claim were made, the arbitrators would know how to deal with it. But if an outgoing tenant strains every extreme point in support of an excessive claim for unexhausted improvements, he ought not to complain if the landlord follows suit. I quite agree that a landlord should not be allowed more than nominal damages for a merely technical breach of covenant, but I do not think either a jury or a board of arbitrators would give more, unless where actual loss was sustained. It used to be the fashion to put into leases a reservation of an additional rent for land managed contrary to covenant, but I question much whether in these days such a reservation would be held by the courts to constitute a liquidated rent incapable of reduction. I apprehend that a court of equity would construe the reservation as only entitling the landlord to compensation for damage actually sustained. Certainly claims of this description are quite exceptional. I have only once had experience of such a claim, and the action went to the assizes, but it was compromised before the jury were sworn. I was for the tenant, and was advised that the penal rent would not be upheld as mere rent. There may have been cases (few in number and exceptional in circumstances) in which a landlord by way of set-off to an extreme claim by a tenant may have claimed allowance for produce such as straw, hay, or turnips removed from the farm contrary to the lease. But the breach of such a covenant works to the disadvantage of the farm as well as to the pecuniary loss of the landlord. The farm loses the manure which the removed produce would have yielded, and for which artificial manure is no adequate equivalent, while if the tenant with the price got for the produce improperly removed buys fertilizing or feeding stuffs and claims compensation for their unexhausted value, the landlord suffers both in the impaired condition of the land, and by having also to pay cash value for a large proportion of what the tenant has bought merely in substitution for produce which he has sold, but which by his lease he undertook to consume on the farm. As to compensation for cartage, if it had to be supplied by the contractor, 10 per cent. would be added in respect of it to the contract price of the work and materials, but to the tenant of the farm the cost pecuniarily would not be so much. There is no doubt a saving to the landlord, and some sacrifice to the tenant, where the latter does the cartage, but it is a matter of bargain, and the contribution by the tenant of the cartage of the materials used in providing him with improved accommodation is not in itself unreasonable, and is hardly felt by the tenant in a pecuniary sense. In the absence of a contract falling within the saving clause of the Agricultural Holdings Act, I suppose a tenant might claim compensation in respect of the carting the materials of any buildings put up for him by the landlord, but a claim of that kind is seldom heard of in this district. It is of importance to bear in mind that the landlord's expenditure on improvements is more often than not voluntary on his part. Where it is incurred in pursuance of a contract, then of course he, as well as the tenant, should be bound by the terms of that contract, and if the tenant has not undertaken to do the cartage, he might properly enough decline to do it unless on proper conditions as to compensation. I am inclined to think that the machinery and procedure under the Agricultural Holdings Act might be simplified with results agreeable, if not substantially beneficial, to both landlord and tenant. The Act is somewhat difficult of comprehension by the agricultural mind. It occurs to me that instead of the existing provision as to notice of claim, the tenant should merely be required *six* months before the end of his tenancy to give the landlord notice of his intention to claim compensation under certain general heads, and that the par-

THE AGRICULTURAL HOLDINGS ACT—*continued*.

Name.	District.	Evidence.
		ticulars of the claim should be lodged within three months after the end of the tenancy. The landlord on his part should be required to give notice of his intention to counter-claim on certain general heads within one month after receiving the particulars of the tenant's claim, and to furnish particulars of his claim within two months thereafter. It hardly falls within the question of the existing depression of agriculture, but as the queries put to me deal with the claims competent to landlords and tenants by or upon each other, I venture to submit the following outline of a scheme for a County Agricultural Board:— Let the County Council and the Justices in Quarter Sessions each name six gentlemen to constitute a County Board of Agriculture. If either landlord or tenant so require, let a farm when first let be inspected by two members of the board (landlord and tenant each selecting one) and by a third gentleman not a member of the county board, who, if not agreed on by the parties or by the two gentlemen first-named, shall be nominated by the Central Board of Agriculture. On this inspection a report to be made on the farm setting forth its condition in the various heads of building, drainage, &c., &c., and a certificate to be given as to the category in which the farm is to be ranked, graduated according to excellence. A similar inspection, if so desired by either landlord or tenant, to be made at intervals of four or five years, or oftener if special occasion arises, and again at the end of the tenancy, and then if the farm shall have been, by the tenant's good management, so improved as to be raised from a lower to a higher standard, the tenant, but, if the reverse, the landlord, to be compensated to an amount to be fixed by the inspectors. There might thus, if either landlord or tenant wished, be a continuous inspection of a farm, and if even the inspection should not be continuous the materials would be provided in an authoritative form for comparison between the condition of a farm at the dates of entry and quittance respectively. Any question of compensation to an away-going tenant or of damages claimed from him might be dealt with by the county board on a similar footing.
Mr. George Grey, landowner, and agent to Hon. W. F. Lambton, Mr. Albert Grey, and others.	Milfield - -	The Act, which no doubt may be beneficial, and which was rendered necessary by the substitution of yearly tenancies for leases, might be amended with advantage, but in any such amendment the landlords' interest should have more attention paid to it than has been the case in the present Act. The inability of the landlord to claim for dilapidations, &c. unless the tenant claims should be amended; it is presumed that the Act was intended to be a just Act between two parties, giving no advantage to one over the other, but in its working it is one-sided. Again, I do not see why the landlord's claim for dilapidations and produce sold off should be restricted, the one to the two preceding years, and the other to the four preceding years; while the tenant's liability for the same is for an unlimited period. As to amounts awarded under the Act they cannot well be fixed by any hard-and-fast line, but must be governed by the particular circumstances of each individual case. With reference to the point raised of compensation for cartage, the question of the cost of cartage for buildings is rather a wide one when looked into, and no hard-and-fast rule can be laid down as to prices. All depends upon the distances from stations, quarries, or lime kilns. The nearer to the farm these are the less the cost of the leading. With all these things upon, or almost upon, the farm, one-twentieth will probably cover the cost, but in all likelihood, taking the average farm of three or four miles from quarry and station, the cost will reach one-fifth. It must be distinctly understood that this is a carter's price, or what a farmer would have to pay had he no time himself, and had to hire the leading. Actually it would not cost him so much if he led himself; carters charge from 10*s.* to 12*s.* a day for a pair of horses. It would cost a farmer about 7*s.* 6*d.* But again, seeing that the farmer keeps no more horses or men upon the farm in consequence of the extra leading, but contents himself with doing it at odd times, or making a greater effort, he is able to do the work at little or no expense to himself, and without materially hindering his farming operations. For ordinary repairs to buildings it is the rule on most estates that the tenant leads the materials, but in the case of new buildings it is entirely a matter of arrangement between landlord and tenant. Generally speaking, when a landlord agrees at the request of a tenant, who is already on the estate, to erect new buildings, the tenant agrees to do the carting free because thereby the landlord is enabled to spend more money in carrying out the tenant's wishes than he would if he had to pay the cost of carting. Farmers formerly used not to think of claiming compensation for leading, being satisfied that the improvements would more than recoup them during their lease for the cost. Now the Agricultural Holdings Act opens up demands for claims which were never thought of being put forward before the Act, and a tenant can here claim compensation for leading which it was understood he was to do free. With the decline of leases in favour of yearly tenancies, tenants are more chary of entering into any agreement to perform cartage.

THE AGRICULTURAL HOLDINGS ACT—*continued.*

Name.	District.	Evidence.
Mr. Roddam, landowner, 6,000 acres.	Roddam, Wooperton.	In my experience, and on this estate, the Act has been beneficial, my tenants knowing that if they leave they get compensation. I have never had any difficulty with a tenant over it. Tenants have sufficient security to induce them to sink capital in the land where both landlord and tenant are reasonable people.
Mr. R. G. Bolam, agent to the Earl of Tankerville.	Berwick - -	The claim is contingent upon the tenants in England giving notice to the landlord at least two months from the "determination of the tenancy" of their intention to make the claim, and giving particulars thereof. It is unfortunate that in some cases disputes have arisen upon the question of what is the date of the "determination of tenancy" under the Act, and the cases which have been decided do not make this clear, *i.e.*, when a tenant quits his farm at 12th May, he has by custom an away-going crop of corn from a certain portion of the tillage lands, with the use of the barns and stackyards for the purpose of storing and manufacturing such crop up to the 12th May following, and it has been contended that the actual quitting was at the latter date, though a new tenant had been in possession of the farm for 12 months, subject only to the out-going tenant's rights as before mentioned, and as the landlord has to send in his counter-claim, if any, within 14 days after the "determination of tenancy," he could not do this after a new tenant had been so long in possession, and when all dilapidations would have been either condoned or made good. This uncertainty also affects very seriously the question of a tenant or a landlord giving 6 or 12 months' notice to quit a farm, as to which date such a notice must date from. This point requires to be amended and made clear, showing when the determination of tenancy really takes place, which ought to be on the date when a lease expires, after which rent ceases to be paid. Another point would seem to require amendment. Under the Act as it stands, the landlord cannot make any claim for dilapidations unless the tenant first sets the Act in motion, by sending in his notice of claim. An equal right should be given to the landlord, who ought not to be left to seek his remedy at common law. Before this Act was passed, many properties in Northumberland made liberal allowances to their tenants for manures, &c. used during the latter years of their tenancy, the late John Grey, of Dilston, having been the first to introduce the practice upon the Greenwich Hospital estates, about the year 1850 and in the agreements a fixed scale of allowances was set out, and both landlord and tenants knew when the accounts were produced what one had to pay and the other to receive. The Act sets all this aside, and there is no doubt that the want of uniformity in the values and amount of compensation which is now left to the ideas of the different arbiters or umpires who may be appointed, adds very considerably to the expense, and largely affects the operation of the Act; and though it might not meet all cases, yet it would certainly be better and would do away with much litigation, if there was a fixed scale of allowances for each county or district. The farmers clubs in these various counties have formulated tables of values, and those, though generally favourable to the tenants, might be adopted as a basis of settlement. My experience under the Act has been considerable, on behalf of both tenants and landlords, and whenever it was possible to do so I have advised the adoption of the county scale, and out of 13 cases I have been able so to arrange seven without cost to the parties.
Mr. E. G. Wheeler, agent to the Duke of Northumberland.	Alnwick - -	The Act is very little taken advantage of.
A farmer, 500 acres - -	- - -	I am firmly of opinion that it would have been far better if Parliament had never interfered with it at all. Every Act that it has passed has been of no use, and has only imposed fresh burdens on the farmers in working it, and more than that, has transformed an industrious, peaceable set of men into a discontented, and sometimes mischievous class, men discontented at seeing their capital disappearing year by year, and then scheming all they can to rob, or boycott their landlord, by bolstering up claims under the Agricultural Holdings Act, and trying to prevent anyone coming to look over their farm to try to take it, so that the landlord may be beat or driven either to farm the place himself, or to let to them at whatever rent they may choose to offer for it. We have instances of this every year around here now. I am only a farmer, but I believe in fair play.
Mr. Black, Chairman of the Board of Guardians, Berwick Union, farmer, Earl of Tankerville's property.	Berwick - -	I am in favour of some authority being established to look over a farm when a tenant enters and again when he leaves. This would be fair both to landlord and tenant, because the spending of money by a tenant does not mean that the land has necessarily improved.
Mr. Fergusson, Vice-Chairman Belford Board of Guardians, farmer, 400 acres. Earl of Tankerville's property.	Belford - -	I think it would be best to have a definite scale fixed for compensation. It would be more satisfactory to know exactly how you stand when you spend money instead of having to wait to see what you get afterwards.

THE AGRICULTURAL HOLDINGS ACT—*continued.*

Name.	District.	Evidence.
Mr. W. Hindmarsh, farmer, 1,300 acres. The Rev. C. T. Ilderton's property.	Ilderton - -	I believe the Agricultural Holdings Act has had a good moral effect. You can make better terms with your landlord than formerly. I believe it is best to come to a definite agreement and put the Act on one side. I have left two farms since the Act was passed and on both occasions I settled the question of compensation according to a definite scale previously agreed on. I do not see how expenses can be cut down if you arbitrate. You will always have to pay good experts well and both sides always call a lot of witnesses. I do not think the fear of counter claim for dilapidations deters men here from claiming, for they usually keep things pretty well up to the mark. Farmers are not farming high on account of bad times and not because they feel afraid to farm high. I consider that a man with capital has a great pull under the Act because by farming high he stops the landlord putting him out.
Mr. T. C. Rand, farmer, 230 acres. Lord Tankerville's estate.	Carham - -	I do not think farmers have sufficient security to put capital into the land.
A farmer, 500 acres. The Duke of Northumberland's property.	Alnmouth -	The Agricultural Holdings Act is a downright imposition on the land lord. He is the person who is hit by it and it is unfair on him. Why should not the landlord be allowed to claim for dilapidations until the tenant claims? I believe the only satisfactory way is for landlord and tenant to leave the Act alone and agree on some scale in writing.
Mr. Wood, farmer, 500 acres -	Lowick - -	I should be frightened to fight my landlord for compensation on account of the expense.
Mr. Cleghorn. Mr. George Grey's Estate Office.	Milfield - -	The Act has, I think, had a good moral effect in the tenant's favour. I think, however, that in some of its provisions it is unfair to landlords. I do not think that a definite scale applicable to a whole county or district would be equitable to either party. Manures do not last for the same length of time in all classes of soil. It is also, I think, obviously fair that a man who has manured well systematically for a considerable number of years should be given more favourable terms than another who has only done so for, say, the last year or two, and, therefore, I think that each case should be decided on its own merits. I do not think that leases would have been productive of better farming than yearly tenancies. Whatever deterioration in farming may have taken place is, I think, more in consequence of farmers having less money at command than formerly, through the depressed state of agriculture, than of the different nature of the tenures under which farms are held.
Mr. Barber, farmer, 800 acres. Lord Tankerville's estate.	Doddington -	I would not put much into the land before I left, for fear the landlord and not I should get the benefit. There should be sufficient security to enable a man to farm well up to the last.
Mr. Edward Tait, farmer, 200 acres. Lord Tankerville's estate.	Way-to-Wooler -	If there was a fixed scale men would put capital into the land, even if got less thereby than they were entitled to, because when they spent their money they would know exactly how they stood.
Mr. John Turnbull, farmer, 350 acres. Lord Tankerville's estate.	Hepburn, Chillingham.	Naturally the farmer has not the same security to risk capital under a yearly agreement as compared with a lease for a term of years, but the changed times and falling markets render the latter undesirable.
Mr. W. Wood, farmer, 1,128 acres. Mr. Friar's property.	Duddo, Felkington.	I have no agreement with my landlord as regards compensation for dilapidations or improvements. I do not think farmers have sufficient security. If all improvements were secured to the tenant he could put his farm in a more productive state to meet the requirements of the land.
Mr. R. Stawart, farmer, 557 acres. Hon. F. W. Lambton's property.	Akeld - -	I have no agreement, but dilapidations have to be paid for if the place is not left in tenantable repair. I do not think farmers have sufficient security of tenure.
Mr. A. F. Nichol, farmer, two farms, (1) 520 acres, Mr. Albert Grey's Estate; (2) 440 acres, Mr. R. Graham's Estate.	Bamborough -	The tenant is supposed to leave the place in tenantable repair. On Bradford the landlord (Mr. Grey) does the repairs and the tenant pays half the cost, so there ought not to be any dilapidations at the end of the tenancy. I have no agreement as to permanent improvements. We have a schedule of allowances for manures, lime, &c., applied, and to cakes, &c., used on the farm, which extends over different periods from the last year to four years for lime, and to eight years for bones applied to grass land. I do not think farmers have sufficient security. A yearly tenant does not know when he may have to leave his farm, or have his rent raised on his improvements, the only security he has is "faith" in his landlord.
Mr. H. B. Howie, farmer, 772 acres. Mr. W. B. Langhorne's property.	Chatton - -	I have an agreement for compensation of improvements of the soil, as follows:—One-third to be paid for linseed and cotton cakes consumed during the last year, and one-third for dissolved bones and guano. Bone meal goes back for four years, and also lime, which is far too little. Lime should go back for three rotations.
Mr. James Playfair, farmer, 821 acres. Mr. Burdon's property.	Ilderton - -	Farmers have no security for money expended. I have spent many thousands of pounds on other people's land and never got any compensation for it.

THE AGRICULTURAL HOLDINGS ACT—*continued.*

Name.	District.	Evidence.
Mr. Edward Tait, farmer, 266½ acres. Lord Tankerville's property.	Way-to-Wooler -	I do not think farmers have sufficient security for expending capital on the land. If a farmer improve his farm, ten to one at the end of his tenancy he will get his rent raised for doing so.
Mr. H. G. McCreath, farmer, 200 acres. Mr. Orde's property.	Norham on Tweed	I have no agreement further than leaving the farm in tenantable repair, and that I am precluded from claiming for more on the last year for unexhausted manure than had been used for an average of three previous years. I do not think farmers have sufficient security. The Compensation Act is too expensive, it suits the lawyer, but is not the advantage to farmers that it ought to be.
Mr. Thomas Brown, farmer, 587 acres. Mr. Albert Grey's property.	Ancroft - -	The tenant on entering the farm has all the farm buildings put in tenantable repair, and has to leave them in the same condition. Farmers have not enough security. The Agricultural Holdings Act is too complicated. We want schedules drawn up of the different kinds of manures and cakes, and so much allowed on each.
Mr. Chartres, farmer, 1,800 acres. The Earl of Tankerville's property.	Akeld - - -	The Agricultural Holdings Act requires radical amendment.
Mr. George Laing - -	Kelso (late of Wark).	The Agricultural Holdings Act is not favourable enough to the tenant.
Mr. George Rea, farmer. The Earl of Tankerville's property.	Doddington -	The Act gives the tenant a direct incentive to sell off and then buy, in order to have receipts to produce, because he gets no compensation for corn he gives as extra feeding to cattle and sheep.

EXTRACT FROM AGREEMENT OF THE FORD ESTATE (*see* paragraph 7).

To satisfy the claims of the out-going tenant (if any) in respect of unexhausted manures, in accordance with the conditions of his tenancy, and, in consideration of such payment, to be entitled to the following allowances at the termination of his occupancy, viz.:—

The prime cost, at nearest lime kiln or railway station, of lime applied during the seven years preceding the end of the occupancy, deducting one-seventh part of such cost for each year or part of a year elapsed subsequently to the purchase, provided that one month's previous written notice of the intention to apply lime, and specifying the land proposed to be limed and the quantity proposed to be applied, shall have been given to the proprietor, and that the proprietor shall not have made written objection thereto.

One-half of prime cost of that applied during last year, and one-fourth of that applied during last year but one of the tenancy.

If, and so far as approved of by proprietor previous to application, one-fourth of prime cost of that applied during last year of tenancy, or such other proportion as may at the time have been in writing specially agreed.

Two pounds for each ton consumed by cattle in the curtains during the last nine months, and one pound for each ton consumed by cattle or sheep in the fields during the last year of occupancy.

If approved by the proprietor previously to consumption, as may have been at the time specially agreed in writing.

NOTE.—The foregoing allowances to apply only to the tenant's own expenditure in excess of stipulations or of allowances by proprietor, and to be exclusive of cartage or labour. The same also to be conditional on vouchers being produced to the proprietor at each rent day, showing the expenditure during the previous six months for which it is intended to claim allowance, and to be foregone, if occupancy determined voluntarily by tenant within five years from its commencement.

Away going crop, &c.

If so required, to take at a valuation, and, in due season, to harvest and market the away-going crop of the out-going tenant, giving security, satisfactory to the proprietor or to such out-going tenant, for payment of such valuation, by three instalments, on the 11th November, 2nd February, and 12th May following, or in such other instalments and at such other times as the valuers may direct, and to be entitled at the end of his occupancy to an away-going crop corresponding in acreage to that taken by his predecessor, and to have the same taken off his hands at valuation, in like manner; the proprietor's liability in respect thereof being satisfied by finding a succeeding tenant, of fair credit, willing to take, and give reasonable security for, such last-mentioned crop as aforesaid. If the away-going crop, either at the commencement or end of the tenancy, be not taken at valuation, accommodation to be allowed, as customary in the district, for the harvesting, stacking, and marketing the same.

To sow down a due proportion of the wheat or barley break of the last crop but one, in proper season, with a sufficient quantity of clover and rye grass seeds of the best quality, and to hain and leave uneaten for the next succeeding tenant, one-half of the land so sown down, being entitled to payment, from such succeeding tenant, of the cost of the seeds sown on the land thus hained. To plough and sow in due season the break coming in rotation for his away-going crop, and to harrow and roll in gratis the grass seeds to be sown by his successor with such away-going crop.

APPENDIX B. 3.

THE LAW OF DISTRESS (*see* paragraph 38).

Name.	District.	Evidence.
Mr. George Grey, landowner and agent.	Milfield - -	As regards the Law of Distress, this measure if abolished would, at any rate for the time being, rather hurt the farmer than otherwise. At present on most estates a half year's credit is allowed, *i.e.*, a tenant entering a farm in May 1893 does not pay the first half year's rent till May 1894. The landlord is enabled to do this safely because in case of anything going wrong with the tenant, he can if he wishes, distrain for the amount. Were his right to do so abolished, he would naturally refuse to grant this privilege. In that case the first half year's rent would have to be paid at the end of the first half year of tenancy, and a tenant would under these circumstances require so much the more capital than at present. The landlord might go further and require the payment of the rent in advance, which would mean that the tenant would need the amount of a year's rent more as capital, than he does at present. I am of course aware that the power of the landlord to enforce these requirements as to payment of rent, would be controlled by the demand which existed for farms. But so far as Glendale is concerned there is, and probably always will be, a demand for land. It seems to me that one immediate and direct effect which would follow the abolition of the Law of Distress would be that many farm stewards and shepherds—a class from which very many of our best and most successful farmers have sprung—who are now able to take farms, would be shut out from the competition, and consequently that a monopoly, or something very much like it, would exist for the men with a large amount of capital. It may be said that smaller holdings would get over this difficulty, but that opens up the very difficult and distinct question of how these are to be provided with the necessary buildings, &c. at a rent which would prevent any loss to the landlord or which would enable the tenant to make a fair living for himself.
Mr. Sanderson, agent and solicitor	Berwick - -	As general remarks are invited I venture, as the subject was mooted at the meeting held at Wooler, to allude to the subject of distraint for rent. No doubt it affords the landowner a security, which is not enjoyed by the merchant, banker, or tradesman; but a tradesman can at his pleasure cease supplying goods to the farmer, while under the law as it stands the landlord has not that option as regards his land. If the landlord is not to have a right of resource for his rent against the produce which arises from his land, he ought in common fairness to have the right to resume the land itself, if his tenant makes default in his stipulated return. The consequences of such a state of matters would, however, not be advantageous either to landlord or tenant or to the community at large. Practically, under the system prevailing in north Northumberland, a tenant pays no rent for a year after he enters to the farm, and then pays only half a year's rent. This enables a farmer to work with a smaller capital than would be required had he to pay (as in the absence of the right of distraint he probably would be) either a whole year's or half a year's rent upon first entering the farm. Interest upon the money thus paid would practically constitute an addition to the rent. Another result would be largely to increase the difficulties in the way of such men as stewards and shepherds working their way into the position of farmers, and yet these men, from their experience, and their proved steadiness and probity, are most desirable tenants, and deserve help and encouragement. They have only their savings for their capital, and if they are excluded from competing for farms the result must be to add to the advantages already possessed by those who enjoy the monopoly of ample pecuniary resources. It has been urged that the competition of men of large farming experience, but small capital, raises the rent of land, to the benefit of the landlords, and therefore that the law of distraint in this way gives a benefit to those who own land at the expense of those who own money, but it seems to me that the argument is rather forced and far fetched, and that, as under the existing practice the man with ample capital has the advantage of spreading it over a wider field, while the man of small capital has opened to him an opportunity of advancement which otherwise he might not enjoy, there is, in the interests of neither class, no great reason for changing the law, and with it the existing system. As regards outsiders more might be said, but every one dealing with a farmer knows that rent has to be paid, and is a preferable charge, and regulates his action accordingly. Were the right of distraint abolished, and the landlord at liberty to resume possession on his tenant making default, the *direct* consequences would often be calamitous to the whole body of creditors. It is not easy to formulate what would be the *indirect* consequences of such a change upon the relationship between landlord and tenant, but it may be pointed out that a distraint for rent on an agricultural holding is at present a thing of very rare occurrence.
Mr. H. H. Scott, farmer, 10,000 acres. On the properties of the Duke of Northumberland, Sir John Haggerston, Mr. Creswell, Mr. Leyland, and the Alnwick Freemen.	Alnham - -	The law of distress enables the landlord to get more than the true rent of the land as it assists a man of straw to take land in competition with a man who has sufficient capital. Again, by getting in a man of straw his land is farmed badly. Neither is the law equitable. I consider it unjust to the manure merchant and the implement maker. I call it a Jewish way of getting money out of people.

THE LAW OF DISTRESS—*continued.*

Name.	District.	Evidence.
Mr. Cleghorn, Mr. George Grey's estate office.	Milfield - -	Speaking from a strictly equitable point of view it perhaps ought to be discontinued, provided the landlord is allowed to claim his rent from day to day, but its abolition would do no good to the farmers, but in my opinion, the reverse. Landlords would then give no half-year's credit; and most farmers would be obliged to take smaller farms on the same footing as they now hold the larger ones.
Mr. Fergusson, farmer, 400 acres. Vice-chairman of the Belford Union Board of Guardians. The Earl of Tankerville's property.	Belford - -	If the law of distress was abolished, men would have to take smaller farms, and it would knock out the men of straw.
Mr. Tait, farmer, 535 acres. The Earl of Tankerville's property.	Cornhill - -	As a rule landlords very seldom take advantage of the law of distress.
Mr. J. Turnbull, farmer, 350 acres. The Earl of Tankerville's property.	Hepburn, Chillingham.	I am quite satisfied with the law of distress as it is.
Mr. George Laing, farmer, 600 acres. Marquis of Waterford's property.	Flodden Ford -	I am content with the law as it is.
Mr. R. Stawart, farmer, 557 acres. Hon. F. W. Lambton's property.	Akeld - -	I consider the law of distress is unfair.
Mr. A. F. Nichol, farmer, two farms, one of 520, and one of 440 acres. Mr. A. Grey and Mr. R. Graham's properties.	Bamborough -	I think it should be done away with, as then landlords would have to be more particular in their selection of tenants. No doubt it would do away with a great number of the present tenants, but it would be better for the ones that were left, and would put the whole thing on a sounder basis.
Mr. H. B. Howie, farmer, 772 acres. Mr. W. B. Langhorne's property.	Chatton - -	The landlord should have no prior claim, as if the farm is backrented by six months, he does not get entry to all the land at the same time, but after the separation of that part in corn crop from the ground, which is on the average about five months after entry.
Mr. T. C. Rand, farmer, 230 acres. Earl of Tankerville's property.	Carham - -	I would do away with the law of distress.
Mr. Edward Tait, farmer, 266½ acres. Lord Tankerville's property.	Wooler - -	The law of distress should remain as it is.
Mr. John Forster, farmer -	Budle - -	The law of distress should be abolished altogether, at the same time let the landlord claim up to the day, the same as any other creditor.
Mr. Thomas Chartres, farmer, 1,800 acres. Earl of Tankerville's property.	Akeld - -	I think the law of distress ought to be abolished.
Mr. Thomas Brown, farmer, 587 acres. Mr. Albert Grey's property.	Ancroft - -	I think it is better as it is. It could not be altered to benefit tenant farmers.

B. 3 (*a*).

NUMBER OF FARMERS, LABOURERS, &C. IN NORTHUMBERLAND, FROM 1861 TO 1891.

APPENDIX B. 4.

Tabulated Evidence of Farmers.

—	Landlord.	(a.) Size of Farm and Proportion of Pasture and Arable Land.	(b.) Length of Occupation by Self or Family.	(c.) Nature of Tenancy.	(d.) Rent.	(e.) System of Farming, and Land turned to grass since 1882.	(f.) (1.) Buildings. (2.) Drainage. (3.) Water Supply.	(g.) Permanent Reductions or Abatements in Rent since 1882.	(h.) Has labour been curtailed on your farm since 1882 by— (1.) Turning arable land to grass. (2.) Use of machinery. (3.) Desire to economise in the labour bill.
No. 1	The Earl of Tankerville.	275 arable 75 pasture 350 acres	20 years	Yearly agreement.	350*l.*	Fifth-course system. No land turned to grass since 1882.	(1.) Not sufficient (2.) The land requires draining. (3.) Very good.	In 1886 a permanent reduction of 150*l.*	It has not been curtailed. My labour bill has increased.
No. 2	The Duke of Northumberland.	155 arable 128 pasture 283 acres	80 years	Yearly	400*l.*	Four-course system. 8 acres turned to grass since 1882.	(1.) Scarcely enough and inconvenient (2.) We suffer from floods. Land drained. (3.) Not sufficient.	A permanent reduction of 10 per cent. in 1886, and another of 10 per cent. in 1892. 10 per cent. abatement since 1886.	—
No. 3	Mrs. Sitwell	120 arable 340 pasture 460 acres	42 years	Yearly	180*l.*	Four-course system on 120 acres arable. Pasture, sheep, cattle, and horses. 100 acres turned to grass since 1882.	(1.) Not sufficient or convenient (2.) Most of the land requires draining as it was done 30 years ago. (3.) Good supply, but not pure.	No reductions or abatements	(1.) Yes. My labour bill is not so high.
No. 4	Mr. J. E. Friar	704 arable 424 pasture 1,128 acres	11½ years	21 years' lease	900*l.*	Fifth-course system. 80 acres have dropped from cultivation.	(1.) Not convenient; very cold and exposed. (2.) Partly requires draining. (3.) Sufficient and pure.	No reductions or abatements	(1.) Yes. All the labourers have a rise of 1*s.* 6*d.* a week. The blacksmith's work has risen 40 per cent. and the joiner's 25 per cent.
No. 5	The Marquis of Waterford.	450 arable 150 pasture 600 acres	4½ years	Yearly	775*l.*	Four-course system. 30 acres turned to grass and more to follow.	(1.) Sufficient. (2.) Greatly requires draining. (3.) Sufficient and pure.	No reductions have been given on this estate.	Labour has not been curtailed. My labour bill has increased by 17*l.*
No. 6	The Hon. F. W. Lambton.	440 arable 115 pasture 555 acres	2½ years	Lease	700*l.*	Fifth-course system. No land turned to grass since 1882.	(1.) Fairly good. (2.) Parts require draining. (3.) Water-supply good.	—	—
No. 7	Mr. W. B. Langborne	404 arable 368 pasture & moor 772 acres	17½ years	21 years' lease	790*l.*	Fifth-course rotation mostly. 42 acres have been turned to grass since 1882.	(1.) Sufficient (2.) Good. (3.) Good for servants' cottages, but bad for farmhouse.	In 1882 I paid 955*l.* in rent. Drainage, interest, and tithe. In November 1889 this was reduced to 790*l.* An abatement of 141*l.* in 1885 previous to permanent reduction of 210*l.*	(1.) Yes, by turning 42 acres to grass. My labour bill is about 100*l.*, or 20 per cent. higher than in 1882.

TABULATED EVIDENCE OF FARMERS—*continued*.

—	Landlord.	(*a.*) Size of Farm and Proportion of Pasture and Arable Land.	(*b.*) Length of Occupation by Self or Family.	(*c.*) Nature of Tenancy.	(*d.*) Rent.	(*e.*) System of Farming, and Land turned to Grass since 1882.	(*f.*) (1.) Buildings. (2.) Drainage. (3.) Water Supply.	(*g.*) Permanent Reductions or Abatements in Rent since 1882.	(*h.*) Has labour been curtailed on your farm since 1882 by— (1.) Turning arable land to grass. (2.) Use of machinery. (3.) Desire to economise in the labour bill.
No. 8	Mr. C. J. Fawcett -	460 arable 540 grass 1,000 acres	15 years	Yearly - -	966*l.*	Four-course. 120 acres turned to grass since 1882.	(1.) Sufficient - - - - (2.) Good. (3.) Good.	A permanent reduction of 200*l.* in 1887. An abatement of 10 per cent. from 1883 to 1887. 10 per cent. allowed for manure in 1893.	Labour has been curtailed for all three reasons, and also by having a railway station within one mile of the farm, instead of 12. My labour bill is 200*l.* higher than in 1882.
No. 9	The Earl of Tankerville.	230 acres. All arable land but 6 acres.	12 years	Yearly - -	330*l.*	Five-course shift. 6 acres turned to grass since 1882.	(1.) Not sufficient - - - (2.) Good. (3.) Good.	A permanent reduction of 70*l.* since 1882.	Labour has not been curtailed. My bill is 40*l.* higher.
No. 10	Mr. Burdon - -	670 arable 141 pasture 811 acres	5 years	2 years' notice from landlord and one from me.	950*l.*	Mixed farming. I only cultivate 400 acres now, expenses are so heavy.	(1.) Fairly good - - - - (2.) Not much wanted. (3.) Very fair in ordinary seasons.	An abatement of 45*l.* one year - -	(1.) Labour has been curtailed. I pay higher wages, and working expenses are greater.
No. 11	The Earl of Tankerville.	195½ arable 71 pasture 266½ acres	3 years	Yearly - -	470*l.*	Four-course system. None turned to grass.	(1.) Sufficient - - - - (2.) Requires draining. (3.) Sufficient.	No reductions or abatements - -	Labour has not been curtailed. My labour bill is 22*l.* higher.
No. 12	Mr. W. Orde - -	160 arable 40 pasture 200 acres	8 years	15 years' lease	400*l.*	Four-course system. None turned to grass.	(1.) Sufficient - - - - (2.) Part requires draining. (3.) Sufficient usually.	No reductions or abatements - -	Labour has not been curtailed. My labour bill is higher; all my hands get 1*s.* a week more.
No. 13	Mr. A. Grey and Mr. R. Graham.	One farm of 520 acres, 252 arable, 264 pasture, and one farm of 440 acres, 265 arable, 169 pasture.	One farm for 12 years and one for 5 years, where my wife's family had lived for over 100 years.	Yearly - -	(1.) 580*l.* (2.) 550*l.*	Mixed farming. Have turned 182 acres to grass on the two farms.	(1.) Sufficient - - - - (2.) Not absolutely required. (3.) Sufficient.	Permanent reduction of 170*l.* on one farm in 1885. Abatement of 10 per cent. on the same farm for one half year in 1892.	Labour has not been curtailed. I employ more men on the land I have left, and find the more machinery I have the more men I require. My labour bill is much higher according to the amount of land cultivated.
No. 14	Mr. A. Grey - -	471 arable 116 pasture 587 acres	6 years	Yearly - -	700*l.*	Four and five-course system. 47 acres turned to grass.	(1.) Sufficient - - - - (2.) Needs draining. (3.) Fair.	There have been no reductions since entry (six years ago).	Labour has been curtailed for all three reasons, but my labour bill is higher by 60*l.* per annum.

BY

MR. R. HUNTER PRINGLE
(ASSISTANT COMMISSIONER),

ON

THE ISLE OF AXHOLME
(A PART OF LINCOLNSHIRE).

TABLE OF CONTENTS.

I.—Introduction.

Paragraph. Page.

2. Collection of evidence - - - 5
3. Description of the district - - 5
4. Description of soils found in the district - 6
5. Peculiarities in levels - - 6
6. Warping and warp land - - 6
7. Timber and woods - - 6
8. Drains and ditches - - - 6
9. The open fields - - - 6
10. Distribution of the inhabitants - 7
11. Condition of the farm buildings - - 7
12. Character of the houses and cottages - 7
13. Changes in the population since 1871 - 7

II.—Remarks upon the Small Holdings of the Isle of Axholme.

15. Number of holdings in Epworth parish in 1881, 1885, and 1893 - - - 7
16. Proportion of holdings under 20 acres - 9
17. Changes amongst owners and tenants, and mortgagees on devised property - 10
18. Custom in the district - - - 10
19. Cost of land transfer - - 10
20. Instance of rash purchase of land - 10
21. Money borrowed for purchase of land - 11
22. How farms were put together - - 11
24. First mortgages cleared off, and the land re-mortgaged - - - - - 12
25. Mr. Druce's report as to the position of freeholders corroborated - - - 12
26. The present position and prospects of the small farmers - - - - 12

III.—Agriculture since 1880.

28. Gradual and continual depression 14
29. Character of the seasons - - 14
30. Estimated yields and fair rents for the land 14

IV.—Consequences and Effects of the Depression.

31. Extent of the depression - - 14
32. The landlord's position - - 15
33. The tenant's condition - - - 15

Paragraph. Page

34. Market gardening - - - 15
35. Acreage under special crops - - - 16
36. Comparison of acreage under wheat, oats, and potatoes for 1882, 1887, and 1892 - 16
37. Decrease of bare fallows - - 16
38. Increase of pasture and number of sheep and cattle - - - - - 16
39. Want of capital seriously felt - - 16
40. Farms under 20 acres - - 17
41. The loss inflicted by the bursting of the banks of the Trent, and the impending danger from their present condition - 17
45. Suggested remedy - - - - 18

V.—Changes of Tenancy.

46. Frequent changes of tenancy - - 18
47. Small holdings easily let - - 18
48. VI.—Sub-Division of Holdings - 18
49. VII.—The Effect of the Depression on various Classes - - - 19

VIII.—The Cost of Working Land in the Isle.

APPENDIX B.

Yearly Balance Sheets made out from Books kept by a Farmer of 73 acres from 1881–1893 25

THE ISLE OF AXHOLME.

To HERBERT LYON, Esq., Secretary,
the Royal Commission on Agriculture.

Epworth, Lincolnshire,
9th October 1893.

SIR,

1. I HAVE the honour to present my Report on the general condition of agriculture in that portion of Lincoln county known as the Isle of Axholme.

The district was included in the reports made by Mr. S. B. Druce to the Royal Commission presided over by his Grace the Duke of Richmond and Gordon, under date 1st January 1881; but as the field of his inquiry extended generally over the county of Lincoln, of which the Isle forms but a small part, there are many points with respect to which a purely local investigation and report, such as mine, may hardly offer a fair opportunity for comparison.

I.—INTRODUCTION.

Collection of evidence.

2. I reached Epworth, which is central for the Isle of Axholme, on the evening of Tuesday, September 26th, and from the following day till Saturday, October 7th, was constantly on the move amongst farmers both large and small, landed proprietors, land agents, and others who were interested in, and familiar with the circumstances of, agriculturists in this remarkable district. On all sides a hearty interest in my work was evinced, and it surprised me beyond measure how persons could so readily and without a moment's hesitation confide to a stranger's ears the sad and sorrowful tales with which much of this report must be occupied. During the daytime I called upon individual farmers of the smaller class, many of whom were freeholders, and examined their fields, crops, houses, and buildings; the evenings were generally spent in taking evidence at meetings of the more extensive farmers and persons interested, but not always engaged, in agriculture.

Description of the district.

3. The Isle of Axholme is quite properly named. It is a piece of land completely surrounded by water. It is bounded on the east by the river Trent. On the south, west, and north it is encompassed by the rivers Idle, Torne, and Don. It occupies the north-west corner of Lincoln county, and touches both Yorkshire and Nottinghamshire. Within the Isle there are 11 parishes, by name Althorpe, Amcotts, Belton, Butterwick West, Crowle, Epworth, Haxey, Keadby, Luddington, Owston, and Wroot. The district measures 19 miles long by 9 broad, but the northern portion is very narrow, and tapers away to a point. The acreage, rateable value, and population of the Isle as given in the last census are as follows :—

Parish.	Acreage.	Rateable Value.	Population, 1891.
		£	
Althorpe	1,227	2,232	467
Amcotts	2,024	3,666	332
Belton	8,530	10,584	1,421
Butterwick W.	2,287	3,379	663
Crowle	7,350	15,827	2,641
Epworth	5,741	6,996	1,903
Haxey	8,305	10,592	1,855
Keadby	1,454	4,212	592
Luddington	3,674	2,430	993
Owston	4,734	6,520	1,294
Wroot	3,235	2,653	333
Total	47,561	69,091	12,494

B 81440. Wt. 11544.

Description of soils found in the district.

4. In the Isle of Axholme we have an unusual variety of soils. Along the Trent side and for one and half or two miles inland there is splendidly fertile warp of great depth and high value. In the very north the warp soil is perhaps the finest land in England, but about Wroot and Sandtoft, and along the western boundary known as Hatfield Chase, the land is light and poor. Along the south-west, and in many places away from the Trent side, peat moss abounds. At High Burnham the highest land is strong impervious clay, while at Low Burnham we find a fine deposit of gypsum or sulphate of lime underlying a nice useful sandy loam. Near Epworth there is a large area of blackish sandy loam. Much of the finest warp land rests on a peat sub-soil. The depth of warp varies from 1 to 10 feet, and then peat of considerable depth is reached. Walking through some warp land at Belton I found the mole earths to be pure peat, and was informed that the alluvial clay was not over 18 inches deep at that particular spot.

Peculiarities in levels.

5. The highest spot in the district is High Burnham, about 200 feet above sea level. By far the larger portion, however, is low-lying and flat. At high tide the water of the Trent is from 8 to 12 feet over the level of the adjacent lands. From Epworth the roads descend until a great flat plain is reached, cut up into numerous small holdings to a remarkable extent.

Warping and warp land.

6. The warped land is chiefly confined to the eastern side, but some land is at present under water in the neighbourhood of Haxey and Westwoodside. This is flooded by means of a large warping drain which enters the Trent immediately to the south of Owston Ferry. It requires from three to five years to warp land well and the cost is from 20*l.* to 25*l.* per acre. Considering that during the process all rent is lost and that after the removal of the water thorough draining is required, the profits arising from soil which has been rendered fertile by this expensive method have become very doubtful, especially in times of depression.

Timber and woods.

7. The Isle of Axholme is not heavily wooded. To the north of Belton there are a few large residences situated in well-wooded parks, but elsewhere the soil is too valuable for planting, and on small freeholds trees are not desirable. Orchards, however, are numerous in the village plots and large quantities of apples are grown for sale. These, in a year like the present, are so cheap that they represent very little money. The fruit of an orchard beside Owston over two acres in size was sold for 20*l.* this year; in better times the same trees had made as much as 50*l.*

Drains and ditches.

8. The whole country is cut into sections by dykes and ditches, and in wet seasons I am told the water stands up to the very level of the land and is only kept from overflowing by the little banks thrown up when the ditches were made and by the action of pumping engines. Many of the ditches require scouring and cleaning out at present, but I noticed that a good deal had been done in that way during the past unusually dry summer.

The open fields.

9. Between Belton and Haxey Station a large proportion of the land is in open fields, cut up into scores of narrow strips or "lands," and owned or occupied by numerous individuals. This gives the country a very strange appearance. In one field of 44 acres I counted 98 different plots varying from 6 to 30 yards in width, the majority being from 8 to 12 yards wide, and measuring from one-third to an acre in extent. These "selions" as they are locally called, are cropped in all sorts of ways. Wheat, barley, oats, turnips, mangel, carrots, cabbages, potatoes, clover, first year's hay or second year's seeds, following one another. Potatoes occupy about half the land, and at the time of my visit these little plots were being cleared of their crops, it being potato harvest. In Owston parish there are a great number of small holders, but the open field system does not prevail. A person owning or renting, or owning and renting, 30 acres, will have fields to the north, south, and west of the village, and often two miles distant the one from the other. But the state of affairs in Owston gives but a faint idea of what goes on in Epworth or Haxey, where most of the fields are open. A large farmer resident in Haxey holds 90 acres 1 rood in 23 lots. Another in West Butterwick has 72 acres 1 rood 23 poles in 48 lots. But hundreds of cases could be named of men occupying from 8 to 12 acres, where the lots would not average one acre each, and where the "selions" were scattered about the parish.

Another strange feature of these open fields and small "lands" or "selions" is that they do not always run in the same direction. Sometimes nine or ten lands run north and south, others run at right angles to them, then a large occupier comes in

with a square or nearly square piece. The boundaries between each lot are not fenced, there is not even a line of grass left to act as a guide. Under these circumstances it is a matter of surprise that disputes about landmarks are almost unknown.

The open-field system is not confined to one description of soil. In Epworth, for instance, a great deal of the black sand is taken up by open fields, whereas half a mile further on we find old warp land still cut up into narrow stretches. In Haxey parish the same disregard to quality of soil may be observed. Near the warping drains the open fields are prime land; to the north, by the side of Epworth road, the soil is lighter, though well suited for turnip, potato, and barley growing; to the west, however, we find poor hungry sand. Butterwick is much sub-divided, but I think the great proportion of the open fields there belong to the warp old and new. Around Westgate, in Belton parish, the soil is decidedly weak towards Hatfield Chase, but improves nearer the Trent.

Distribution of the inhabitants.

10. The small farmers, whether freeholders, copyholders, or tenants, are congregated together in long straggling hamlets or villages. The houses are built of red brick, and are surrounded by small gardens, having a few farm buildings to the side or near, and very often an orchard or grass paddock or croft attached.

Condition of the farm buildings.

11. The homesteads appeared to be in many cases in disrepair. The old-fashioned and foolish system of having very large and very wet open yards with mere apologies for sheds, seems universal; and the system of making manure in these sloughs is equivalent to a profligate waste of good straw and loss of valuable fertilizing agencies.

Character of the houses and cottages.

12. Most of the houses (one could hardly call them cottages) are good. In one, occupied by a farmer of 50 acres, I found a kitchen, a parlour, a sitting-room, five bedrooms, milk-house, bacon-house, and store-closets. This house had been built by its owner in the days when farming was more prosperous, and when, as in many other cases, large sums of money were expended in buildings and domestic comforts. The labourers' cottages, on the contrary, are inferior.

Changes in the population since 1871.

13. Between the years 1871 and 1891 a great change has taken place in the population, number of inhabited houses, and number of families or separate occupiers. At Appendix A. a table of details will be found taken from the Census Returns for 1871, 1881, and 1891. The figures show that there was a decrease of population :—

1881 with 1871 of 1,347, or 9 per cent.
1891 „ 1871 „ 2,596, „ 17·2 „
1891 „ 1881 „ 1,249, „ 9·0 „

Decrease of inhabited houses :—

1881 with 1871 of 180, or 5·5 per cent.
1891 „ 1871 „ 349, „ 10·7 „
1891 „ 1881 „ 169, „ 5·4 „

Decrease of families :—

1881 with 1871 „ 272, or 8·0 per cent.
1891 „ 1871 „ 446, „ 13·2 „
1891 „ 1881 „ 174, „ 5·5 „

II.—Remarks upon the Small Holdings of the Isle of Axholme.

14. In the foregoing paragraphs a description has been given of the open fields and "selions" held by the small farmers, either as freehold property or on tenure. The parishes of Epworth, Haxey, and West Butterwick are chiefly occupied by small holders.

Number of holdings in Epworth parish in 1881, 1885, 1893.

15. In his report to the Richmond Commission, Mr. Druce states that "in Epworth, "a parish of about 5,500 acres, there would appear to be 145 persons who own and "occupy plots of land of 20 acres and under, and 153 who occupy similarly sized "plots."

Mr. Druce's table for 1880, 1881, is as follows:—

EPWORTH PARISH.

Size of Holdings.	Owner and Occupier.	Occupier only.	—
Under 1 acre -	45	40	Mr. Druce was informed that of the 5,500 acres in the parish "Some 3,400 are held by these small farmers." This leaves 2,100 for holders over 20 acres. I think Mr. Druce was misinformed. The probability is that some 1,300 acres were held by small men and 4,200 by larger farmers.
From 1 to 3 acres -	46	41	
„ 3 to 5 „ -	21	21	
„ 5 to 7 „ -	11	19	
„ 7 to 10 „ -	8	8	
„ 10 to 15 „ -	12	18	
„ 15 to 20 „ -	2	6	
	145	153	Total number of holders under 20 acres, 298.

In October 1885 Mr. Newborn, of Epworth, found the numbers to be—

Size of Holding.	Occupiers of Land whether Owners or not.	—	A.	R.	P.
Under ½ acre - - -	10	Over 20 acres, 59 holding -	4,510	1	27
½ to 3 acres - - -	111	Under 20 acres, 260 holding -	1,226	2	13
3 to 20 acres - - -	139				
		Total 319 holding -	5,737	0	0
	260	Percentage of holdings under 20 acres 81·1.			

Shortly after Mr. Newborn's figures were prepared, a considerable extent of charity and was let in small pieces to townsmen and labourers; hence I found from an inspection of the rate books, that an increase in the number of small holders under one acre has ensued.

The figures as shown by the rate book, 1893, are—

Size of Holding.	Owner and Occupier.	Occupier only.	Agricultural Holdings (i.e., exclusive of Town Holdings without Land other than a Garden). No.	Per Cent.
Under 1 acre - - -	107	157	105	24·9
From 1 to 3 acres - - -	48	50	98	23·3
„ 3 to 5 „ - -	21	22	43	10·2
„ 5 to 7 „ - - -	19	25	44	10·4
„ 7 to 10 „ - -	9	15	24	5·8
„ 10 to 15 „ - - -	6	23	29	6·9
„ 15 to 20 „ - -	1	12	13	3·1
„ 20 to 50 „ - - -	6	29	35	8·3
„ 50 to 100 „ - -	2	13	15	3·6
„100 to 200 „ - - -	2	10	12	2·8
Over 200 acres - - -	0	3	3	0·7
Totals - - - -	221	359	421	100·0
Under 20 acres - - -	211	304	356	84·6
Over 20 acres - - -	10	55	65	15·4
	221	359	421	100·0

Acreage of parish 5,741a. 3r. 3p. Rateable value 6,996*l.* 7*s.* 2*d.*

The 1893 rate-books for Haxey were carefully examined and show—

Size of Holding.	Owner and Occupier.	Occupier only.	Agricultural Holdings (*i.e.*, exclusive of Town Holdings without Land other than a Garden).	
			No.	Per Cent.
Under 1 acre - - -	52	133	105	18·3
From 1 to 3 acres - -	63	84	147	25·6
„ 3 to 5 „ - - -	40	40	80	14·0
„ 5 to 7 „ - -	26	26	52	9·0
„ 7 to 10 „ - - -	18	21	39	6·8
„ 10 to 15 „ - -	11	14	25	4·4
„ 15 to 20 „ - - -	6	21	27	4·7
„ 20 to 50 „ - -	17	38	55	9·6
„ 50 to 100 „ - - -	9	18	27	4·7
„ 100 to 200 „ - -	3	12	15	2·6
Over 200 acres - - - -	1	1	2	0·3
	246	408	574	100·0
Under 20 acres - - -	216	339	475	82·8
Over 20 acres - - -	30	69	99	17·2
	246	408	574	100·0

Acreage of parish, 8,305a. Rateable value, 10,592*l.*

For West Butterwick the figures are—

Size of Holding.	Owner and Occupier.	Occupier only.	Agricultural Holdings (*i.e.*, exclusive of Town Holdings without Land other than a Garden).	
			No.	Per Cent.
Under 1 acre - - -	8	54	34	25·8
From 1 to 3 acres - - -	15	17	32	24·2
„ 3 to 5 „ - -	9	8	17	12·9
„ 5 to 7 „ -	3	4	7	5·3
„ 7 to 10 „ - -	4	4	8	6·1
„ 10 to 15 „ - - -	—	4	4	3·0
„ 15 to 20 „ - -	1	6	7	5·3
„ 20 to 50 „ - - -	4	6	10	7·5
„ 50 to 100 „ - -	—	7	7	5·3
„ 100 to 200 „ - - -	1	3	4	3·0
Over 200 acres - - -	0	2	2	1·6
	45	115	132	100·0
Under 20 acres - -	40	97	109	82·6
Over 20 acres - -	5	18	23	17·4
	45	115	132	100·0

Acreage of parish, 2,287a. 0r. 12p. Rateable value, 3,379*l.*(?)

16. From these figures it appears that in the parishes of Epworth, Haxey, and West Butterwick 82·79 of the total number of agricultural holdings are at the present time under 20 acres in size. Proportion of holdings under 20 acres.

In Epworth there has evidently been a certain decrease in the average size of holdings, and an increase in the number of holders of small areas since Mr. Druce's visit, for, whereas he found 298 farms or plots of land worked as farms, and under 20 acres, this year's rate-books show 356, an increase of 58, or as near as may be 20 per cent. since 1880. This increase I am told is due to, and very closely corresponds

with, the number of small allotments granted to townspeople and labourers out of the "charity lands" (already referred to) close to the town within the last six or seven years.

Taking all things into account, and remembering the addition of the "charity lands" to the old area under occupation, I do not see that since the date of Mr. Druce's report, there is any significant change in the size or number of holdings. Mr. Newborn, in the autumn of 1885, tells us that of 319 holdings, 260 or 81·1 per cent. were under 20 acres, and in 1893 I find that, of 421 agricultural holdings, 356 or 84·5 are under 20 acres.

Changes amongst owners and tenants, and mortgagees on devised property.

17. Land, however, is constantly changing hands, largely due during the past 10 or 12 years to sales on the death of an owner, in accordance with his testamentary directions. A father having a family of children either leaves his property to the eldest son charged with legacies to his brothers or sisters, or he directs the land to be sold and the proceeds equally divided. In the first case, unless funds as well as land are left (and this appears to have seldom occurred of recent years) the property is put up for sale forthwith, and in keeping with the custom of the district, it is disposed of in smaller portions, varying from 1 rood to 3 acres, according to the size of its lots and lands. Prior to the beginning of this agricultural depression, it was quite a common thing for an eldest son, after the father's death, to borrow the money required to pay off the legacies, giving a mortgage over the estate, and undertaking to pay interest at the rate of 4½ to 5 per cent. per annum. In this way a large number of small properties or freeholds were fatally burdened between 1870 and 1880, but since 1880 loans have not been so readily obtained, and the majority of the holdings have, after the death of the testator, been sold right out.

It may safely be said that in 90 per cent. of the property mortgaged from 15 to 25 years ago, in order to pay off family legacies, the borrower has either been completely ruined and sold up, or he is struggling on in a hopeless condition and at the mercy of the mortgagee.

Custom in the district.

18. Primogeniture is recognized in so far that the eldest son is frequently left the property, burdened with legacies, but in the generality of cases, the legacies exceed the value of the estate. I am informed that since Mr. Druce reported on the Isle, the greater portion of the lots sold in open fields have been purchased by town shopkeepers and small tradesmen, and by them either cultivated or let to labourers or small holders from year to year.

A curious practice of the Isle freeholders is related to me by Mr. Taylor, whose long and extensive experience as a solicitor in Epworth gives great weight to his evidence. Mr. Taylor says, "In the case of clear property, *i.e.*, property free from mortgage, the "estate is frequently left to grandchildren, the next occupier being merely a tenant "for life. The common saying is, 'I'll take care my children have bread and cheese,' "but the real object is to protect it from the sons and preserve it intact for the "grandchildren. 'Life and lives in being' is a common practice, and parents are "often suspicious of their own children. Settled estates are rare; I can only recollect "of two estates being settled in my long experience as a solicitor in Epworth."

Cost of land transfer.

19. The cost of land or estate transfer or conveyance is small in the Isle of Axholme. Local solicitors make their charges as easy as possible, and purchasers leave themselves entirely in their hands. Within the past 50 years fully three-quarters of the freehold land is believed to have changed hands. Persons were in the habit of adding to their farms by purchasing field after field, mostly with borrowed money, working them during their lifetime, and leaving them to be sold in parcels after death. In many cases of late years the mortgage charges were so much over the real value of the land, that the mortgagees, seeing no prospects of getting back their advances, foreclosed, and either sold the land for what it would fetch, or took it up and let it to yearly tenants. Within the past 12 or 13 years purchasing has largely given place to renting, and those who have land from year to year are stated to be far more favourably situated than those who speculated on borrowed money in the good times, and are now paying heavy interest on mortgage.

Instance of rash purchase of land.

20. Examples of rash and reckless purchases of land made between 15 and 25 years ago are common. Some of these will be related further on, but in the meantime I give the following instance of how a man, rather than part with land, burdened himself for the remainder of his life.

A farmer, of 14 acres freehold (free of charges) and 25 acres rented land, died in 1873, leaving his estate to be divided between two sons. The 14 acres originally cost 750*l.*, and as times were good and land had risen in value, there was no difficulty in borrowing that sum on mortgage at 5 per cent. The younger son took the 750*l.*, the elder took over both freehold and rented land, with all stock and crops then upon them. The 14 acres are now valued at 420*l.*, and the owner is still paying 5 per cent on 750*l.*, equal to 37*l.* 10*s.* per annum, or 2*l.* 13*s.* 7*d.* per acre. The field next to this was let six years ago at 30*s.* per acre, and the rent has been reduced to 26*s.* for the past three years. In the event of the mortgagee foreclosing on the 14 acres, the unfortunate owner must make up the difference between the amounts due and realised by the sale from the stock and crop of his rented land.

Money borrowed for purchase of land.

21. About 20 years ago, when the price of agricultural produce was high and trade of all sorts very brisk, the value of land went up by leaps and bounds. In a similar degree the desire of small freeholders to add to their possessions and extend their farming operations increased. A regular struggle for land ensued, and unreasonable prices were realised for lots and fields. About seven years before Mr. Druce's visit, the selling value of land in the Isle of Axholme ranged between 120*l.* per acre, for the primest samples, to 60*l.* for inferior soil. The small farmers grew reckless and would have land, cost what it might. A person who had succeeded in saving 100*l.* would never hesitate about bidding 1,000*l.* for 10 acres of good land. So long as the deposit of 10 per cent. was paid down the balance was easily procured from solicitors or trustees, who advanced the money, receiving as security the title deeds of the land. I heard of many cases where the purchaser, having clear (uncharged) property of his own, and being unable to pay the deposit receipt, borrowed everything, giving to the lender not only all the title deeds of the new but entire security over the old property. As estates came into the market in large numbers fields were sold up one by one, and were bought in the above manner, purchasers apparently taking it for granted that agricultural soil was good value at any price and mortgages things of no moment.

How farms were put together.

22. The manner in which some of the farms visited by me within the past ten days were put together is most extraordinary. The following will serve as a good example.

In the year 1850 a man, formerly a labourer or farm servant, purchased a thatched house with a grass croft and orchard attached for 100*l.* He had saved the price, and it was paid down at the time of purchase. In 1856 his wife inherited some money. In 1857 the old house was pulled down, and 600*l.* was expended on a new house and farm buildings.

The fields now (1893) held were put together in this way—

Field on Map.	Size. A.	Size. R.	Year of Purchase.	Price. £	Paid up. £	Borrowed and still due. £	Per cent. Interest on Mortgage.	Annual Payment to Mortgagee. £	s.	d.	Remarks.
D	3	2	1851	210	10	200	4½	9	0	0	By changing mortgagee, interest was reduced from 5 per cent.
E	3	0	1852	165	Nothing	165	4½	7	8	6	
A	4	0	1860	320	170	150	4	6	0	0	Interest reduced from 4½ per cent.
B & C	12	0	1862	900	Nothing	900	4	36	0	0	Interest reduced from 4½ per cent.
—	1	2	1850 & 1857	700	700	—	—	—			House, buildings, and grass.
	24	0		2,295	880	1,415		58	8	6	

Notes.—1. The house, buildings, and grass croft were given as security to the person who advanced 900*l.* on fields B and C.

2. Of the total purchase price 38·2 per cent. was paid up.
" " " 61·6 " " borrowed.

3. Estimated present values—
Fair rent, 24 acres at 25*s.* =30*l.*
Selling value of property =975*l.*

23. An examination of the above figures shows plainly that the occupier of these lands is practically insolvent, and that the charges on the estate are 45 per cent. over its present selling value. Rather than mislead the Commissioners by exaggerated

figures, I have laid my calculations before several gentlemen whose opinion upon land questions in this locality are derived from close intimacy with such matters, and by them I am assured that my figures are quite fair and reasonable.

The natural question arises why land should have been taken under such onerous conditions, to which it must be answered, that the only way to obtain land in the Isle is by purchase, and farmers consequently had grown accustomed to look upon interest on mortgage in the same way as a tenant looked upon rent. Nobody ever thought that farming would go to the bad, and so long as the interest on borrowed money was paid both parties were satisfied. Any savings which accrued were laid by for the purchase of more land, and if one mortgagee pressed for a settlement, either in part or in whole, there was no difficulty in transferring the mortgage to somebody else, and often saving $\frac{1}{2}$ per cent. by so doing. In fact, no thought was given to the risks or dangers of the situation. The family had been well educated and started in life, and a good deal of money was saved until the bad times began about 15 years ago. Since then, I was told that the old savings had melted away, and the son and daughters who help at home are now not nearly so well off as ordinary labourers, for they get nothing beyond their food and clothing and, perhaps, 3*d*. per week pocket money.

First mortgages cleared off, and the land re-mortgaged.

24. It must, however, be observed that many of those who purchased so long ago as 25 to 40 years did, by dint of hard work and frugal living, succeed in clearing off the first mortgage. Unfortunately, they kept buying more land, and as they cleared off the debt on one lot, it was only to become involved in a further venture. One man I met who had purchased and paid for 20 acres in the good times, supplemented by an additional 10 acres clear of charge through his wife, increased his holding in 1876 by a further purchase of $22\frac{1}{2}$ acres at a price of 1,500*l*. Of this he paid 500*l*. from his savings, and borrowed 1,000*l*. at $4\frac{1}{2}$ per cent. By 1880 he had paid off 200*l*., thereby reducing the debt to 800*l*. In 1888, the mortgagee called up 200*l*., and this he scraped together. "If," said he to me, "any further call is made I would need "to borrow from some other place. Above all things, I must not part with the land." This witness is generally supposed to be one of the most prosperous men in his village.

With respect to those who purchased with borrowed money between 1875 and 1880, I have every reason to believe that whereas exceptional cases do exist where the debt has been considerably reduced, such cases "might be counted on one's fingers in every parish." The others are as deeply involved as ever.

Mr. Druce's report as to the position of freeholders corroborated.

25. Mr. Druce describes the small holders as deeply involved and seriously situated in his day, and from all that I have been told, Mr. Druce was absolutely correct in his opinion. Since the date of his report, 13 years of continued agricultural depression and falling prices have elapsed. With respect to the present condition of those who at the period of Mr. Druce's visit were in a struggling position, I found that many have been ruined; some, however, remain, and I cannot better describe their position than by quoting their own words.

The present position and prospects of the small farmers.

26. I may preface by saying that in my interviews with the people of the Isle I was met with the utmost candour and confidence. Any statements made were verified by the production of letters or papers, and I have every reason to believe that farmers told the whole truth, neither making their position better nor worse than it really was.

(*a*.) A farmer owning $52\frac{1}{2}$ acres in one parish (30 acres clear of charges) says, "I am thankful to say I can live. Many others hardly can. Until 15 years ago "I was saving 100*l*. a year, but those days are gone. There are small men in "Owston who can't pay rent and live at all. My labouring man is as well off "as I am, and far better than my son, who gets no wages, but only his food and "clothes."

(*b*.) A farmer of 30 acres, owner of part, says, "Before the depression, small "farmers were doing really well, and making money. They gave enormous "prices and rents for their land, and now they are down the hill. Most of the "freeholds have passed from the owner to the lawyers. There have been many "cases where men have recently bought extra land on credit, and have ultimately "been ruined and lost everything. Others who had lots of good clear property "have lost all by borrowing to buy more, and are now labourers living in rented

" houses. Only for odd hiring jobs taken at slack times farming with me would " be a very bad job."

(*c.*) " A labouring man bought three 5 rood pieces of warp land for 225*l.* He " paid 125*l.* in cash and borrowed 100*l.* Quite lately the mortgagee called in " his money, and the place was sold for 90*l.* There have been many cases like " that within the last 14 years."

(*d.*) " Three-fourths of the farmers are in a sad plight. If the mortgagees " were to foreclose and sell up my land, the proceeds would not nearly square " the account. By pinching we manage to live, but the outlook is very bleak. " All my private money is gone. My son is married, and has a large family, but " he gets no regular wage. I pay him whenever I have anything to spare. He " is nothing like so well off as a common labourer. If things don't mend soon, " we'll all be in the union."

(*e.*) " The mortgaging has brought great poverty."

(*f.*) A large tenant farmer of 300 acres. " I have farmed at a loss ever since I " came. I did very well till prices began to fall, but now I can't make ends " meet at all."

(*g.*) A farmer of 90 acres, and an auctioneer. " The mortgaging system has " been the ruin of the Isle. If Haxey parish were sold up to-morrow it is not " solvent."

(*h.*) An old resident of West Butterwick. " The freeholders are heavily " mortgaged. If the mortgages were called up, the freeholders would be ruined " and the lawyers sorely hit. There have been several cases of late where fore- " closure took place, and the mortgagee lost nearly one half."

(*i.*) A hard-working owner and tenant says, " Farming has grown steadily " worse since 1882. Wherever there are mortgages the people are undoubtedly " very hard up. I am paying 5 per cent. on borrowed money. Both tenants " and freeholders are heavily in debt to manure merchants and all sorts of " tradesmen."

(*k.*) " Low prices and bad times have ruined us. I put 300*l.* into the farm. " It is all lost."

(*l.*) A farmer of 150 acres says, " Farming capital is gone. Very few small " men could start stock farming even if they wanted. Artificial manure is " mostly bought on credit. I am paying interest on a mortgage. I can't sell the " property, for it would not clear itself."

(*m.*) A large land agent and well-known solicitor:—" If mortgages were called " in, very few would stand. The tenant is better off than the freeholder. The " labourer best off of all."

(*n.*) An auctioneer and salesman:—" Land has fallen 25 per cent. since 1881 " and 33 per cent. since 1873. In many cases where run down the fall is 40 to " 50 per cent."

(*o.*) A large arable and stock farmer:—" Small freeholders are mostly " mortgaged up to the eyes."

(*p.*) Four large farmers agreed that—" The small freehold farmer works very " hard, but after all is not so well off as a common labourer."

(*q.*) A rate collector and small farmer, deeply interested in the welfare of the Isle of Axholme, says, " In the beginning the purchasing on borrowed money " was a speculation, and had times continued good, all would have been well. " As it is the present position is very critical."

27. The position into which it has been my duty to inquire is very peculiar and very painful.

It is peculiar, in that the mortgagees rarely foreclose so long as any interest is paid. They take what they can get and add the arrears to the outstanding account. The fact of a man remaining undisturbed, although he may only have paid 2 instead of $4\frac{1}{2}$ per cent. for each of the last five years, does not save him in the future. It only means a big bill of arrears to be presented on the first favourable opportunity. Should times mend and agriculture once more become a flourishing industry, many a year's hard-earned profits must be paid over before the back dues are written off.

It is painful, in that the rent now due in the shape of interest far exceeds what would be a "fair rent." The people realise the hopelessness of their position, and most of them are in utter despair. The weight attached to the neck of many a freeholder in the Isle of Axholme is heavier than he can bear, and it is the general opinion that without assistance their position is doomed.

III.—Agriculture since 1880.

Gradual and continued depression.

28. Since 1880–82 agricultural depression in the Isle of Axholme has continued without intermission. While the selling value of produce has greatly decreased, the cost of production, by reason of the rise in labourer's wages and the falling-off in their output of work, has remained about the same. Stock-farming, especially summer grazing, could not be practised by open-field farmers for want of fences and water. And even among such as had enclosed fields, want of capital prevented, and force of habit forbade, any change of system. To the small farmer of 15 to 20 acres permanent or even temporary pasture would have meant an idle life and no employment. The inhabitants of the Isle of Axholme must be cultivators of the soil or nothing at all.

Character of the seasons.

29. Within the past 13 years there have been good and bad seasons. The warp land in the north, east, and south requires a dry summer, and there have been three or four very suitable seasons since Mr. Druce visited the district. For the light lands in the west a damp year is most suitable, and they also have been at times favoured. Farmers agreed that on the whole the seasons had not been very much against them, and 1893 has proved an exceptionally fruitful year. But though the corn is a fine sample, and the potatoes are abundant, present prices are unprecedently low. Potatoes formerly worth 4*l.* per ton are now making from 30*s.* to 37*s.* 6*d.* Wheat worth 43*s.* to 44*s.* per quarter in 1881, now fetches 28*s.* to 29*s.* for a better sample. Barley has fallen 4*s.* to 5*s.*, and oats from 3*s.* 6*d.* to 4*s.* per quarter. Flax is no longer worth growing.

Estimated yields and fair rents for the land.

30. The soil, when properly treated, is reported to be as productive as ever it was. Three statements were made to me with reference to the average yields of warp land, good loam on a higher level, and strong dry clay loam:—

Crop.	Warp Land.	Good Loam.	Strong Clay Loam.
	Quarters.	Quarters.	Quarters.
Wheat	5	4½	4
Barley	6	5½	4
Oats	8	7 to 8	6
	Tons.	Tons.	Tons.
Potatoes	4 to 10	5 to 9	6
Turnips	15 to 18	15	12 to 15
Mangel	18 to 20	20	15 to 20
Hay or clover hay	1½ to 2	1½	1

A fair rent for the various classes of soil found in the Isle would be:—

Best warp	35*s.* to 40*s.* per acre.
Shallow warp	27*s.* „ 32*s.* „
Best loam	25*s.* „ 30*s.* „
Sandy loam	23*s.* „ 28*s.* „
Strong clay loam	15*s.* „ 20*s.* „
Stiff clay (dry)	7*s.* 6*d.* to 12*s.* 6*d.* per acre.
Light sands	6*s.* to 9*s.* per acre.

Tenants, although finding such rents hard to pay, could live, but if prices continue as they are farmers say the soil is hardly able to pay a rent at all.

IV.—Consequences and Effects of the Depression.

Extent of the depression.

31. The continuation of agricultural depression from about 1877 till the present time has had one unmistakable result in this district. All connected with the industry

are poorer, and their credit is gone. Farmers are loaded with debts to merchants, tradesmen, and banks, and their rents are heavily in arrear. Landlords are sorely hit by the great and numerous reductions in rent, and in some cases are almost ruined, indeed, estates burdened in the good times do not now bring in sufficient even to pay interest on mortgages.

The landlord's position.

32. From the account books of a large estate in the Isle of Axholme I derived the following information :—

In 1882 the total annual rental was 6,866*l.* 4*s.* 10*d.*

Amount of arrears, 2,068*l.* 2*s.* 8*d.*

In 1892 the reduced rental stood at 3,365*l.* 18*s.* 4*d.*

Amount of arrears, 6,700*l.* 7*d.*

Decrease of rental in 10 years equals 3,500*l.* 6*s.* 6*d.* or a fall of 51.3 per cent.

Increase of arrears in 10 years equals 4,631*l.* 17*s.* 11*d.* or a rise of 224 per cent.

The owner of this estate, which is 3,500 acres in extent, has been compelled to take what rent the tenants could pay. He says, "If we had been strict to mark iniquity "or insist upon payment of rent in full, hardly an old tenant would have been left on "the estate. Our 1893 accounts are worse than ever. Plenty of land has been put "up for sale of late, but can't be sold unless for a mere trifle. Persons won't lend "money now on landed security. Considering the bad payments of rents and the "fact that taxes and rates must be paid, there is almost nothing left over for the "estate owner."

In the above statement we have a clear description of the consequences of agricultural depression of long-standing upon the large proprietor.

The tenant's condition.

33. Upon the labour-employing tenant the burden falls equally heavy, and he can no longer do justice to his farm. His farming capital has gone, and he grudges the cost of thorough cultivation and adequate manuring. Consequently his crops are starved, and the weeds are not kept sufficiently under, while the headlands run wild, fences are overgrown, and gates are out of repair. Where 40 cattle were once yarded, 10 or 12 are now kept. Moderate and intelligent littering has been superseded by extravagant carting in of valuable straw. These "signs of the times" I discovered on some few large farms in the Isle. But I have been informed that since Mr. Druce's time, most of the shaky tenants of over 150 acres, that is men who originally started upon insufficient capital or who neglected their business, have collapsed, and their places have been taken at greatly reduced rents by others with more intelligence and larger capital. Of these new men, I may mention two who are worthy of note, for since their arrival something like an altered mode of farming has been inagurated in the Isle of Axholme. Both men were trained to commercial life, but engaged in agriculture with a view to growing what they could afterwards sell without the interference of a middle man, as well as to producing a description of farm crop other than the potatoes, wheat, barley, and turnips of the old rotation. These gentlemen hold large areas of land in various parts of the Isle, and they are nothing more nor less than immense market gardeners for the manufacturing towns of Yorkshire and Lancashire.

Market gardening.

34. They have introduced the growing of celery, cauliflower, table carrots, and brought their farms to a high state of productiveness by the purchase of town manure brought by railway, or river. Following in the wake of these leaders, the smaller farmers, such as were of a progressive turn of mind and had the required capital, have begun to grow celery rather extensively.

It is calculated that to produce an acre of celery costs from 20*l.* to 25*l.*, and that a good crop will realise as much as 40*l.* As high as 60*l.* has been got, but that was quite exceptional. Much of the expense of celery is due to the great amount of manual labour required in the planting, cleaning, moulding, and taking up the crop; but this should be no drawback to the small farmer whose family labour at home. I find from a complete list of figures supplied by the Board of Agriculture with reference to the various parishes of the Isle of Axholme, that, in the area under special crops suited for market gardening, there has been a remarkable increase since Mr Druce's report was made. The feature is confined to certain parishes.

Acreage under special crops.

35. Acreage under SPECIAL CROPS, such as beetroot, cauliflower, celery, Brussels sprouts, poppies, 1882, 1887, 1892 :—

Parish.	1882.	1887.	1892.	Increase in 10 Years.
	Acres.	Acres.	Acres.	Acres.
Epworth - - -	—	42	73¼	73¼
Owston - -	18¼	108¼	222¾	204½
Haxey - - -	34¼	71	190	155¾
Wroot - - -	3	40½	62¼	59¼
Luddington - - -	—	3½	10	10
Totals -	55½	265¼	558¼	502¾

It is difficult to say to what extent the cultivation of such crops might be profitably increased. The demand, although large, is nevertheless limited, and an over supply or flooded market might entail heavy losses, but, considering the suitability of the soil in the Isle to these vegetables and the exceptional quality of stuff produced, I think the produce of this district will always command the highest price in the market. The cauliflowers and celery grown in Owston parish excel anything I ever saw, and the early potatoes grown between the celery rows this year fetched 4*l.* 10*s.* to 4*l.* 16*s.* per ton in July and early August.

Comparison of acreage under wheat, oats, and potatoes, for 1882, 1887, 1892.

36. In consequence of the lamentable depreciation of wheat in our British markets, I find from the statistics, supplied specially by the Board of Agriculture, that the acreage under that cereal in this district has fallen considerably, while oats and potatoes have increased, barley having remained about the same.

ACREAGE under WHEAT, OATS, and POTATOES, showing changes in 10 years.

Crop.	1882.	1887.	1892.	Increase or Decrease.
	Acres.	Acres.	Acres.	Per Cent.
Wheat - - -	7,605	6,720¾	6,397	− 15·8
Oats - - - -	3,366	4,381¼	4,854½	+ 44·2
Potatoes - - -	5,858¾	6,676	6,667	+ 13·8

Decrease of bare fallows.

37. The great decrease of bare fallows or uncropped ploughed land from which a crop will not be taken this year, and amounting to 558 acres, or 49 per cent. in 10 years, is explained by the increase in oats, potatoes, and special crops including carrots.

Increase of pasture and number of sheep and cattle.

38. Since 1887, permanent pasture, not broken up in rotation, has increased by 1,134 acres, or 20 per cent. in five years, and is, as would be expected, accompanied by a corresponding increase in the number of sheep, cattle, and horses kept. Sheep over one year old have, since 1882, increased 47 per cent. Cows and heifers of all ages, in milk or in calf, were more numerous in 1892 than in 1882 by 43·2 per cent., and pigs have increased 11·5. But it is right to observe that the increase in permanent pasture and live stock has not been equally distributed. Farmers under 20 acres have no greater quantity (possibly not so much) than they had when Mr. Druce made his inquiry, and among them permanent pasture has remained in much the same quantities as in the days when corn was at its highest price. On large farms grass and stock have to a considerable extent taken the place of cultivated crop, and I was told by many witnesses that those who went in more for stock before they had begun to feel the effect of the low price of corn, have best weathered the storm.

Want of capital seriously felt.

39. Even in the short time available for personal inspection of farms, I had little difficulty in perceiving that the effect of the depression was, to a great degree, regulated by the nature and size of the holding, as well as by the resources of the occupier. On large farms, where the occupiers had capital, things were well done. The land is still clean and well tilled, the crops abundant, the stock of good quality, and the increased area under pasture in fair condition. On large farms, where capital had run short, everything looked worn-out and exhausted, land foul, root crops bad, the little stock on the fields inferior, the grass land impoverished, and the buildings and stackyard in disrepair and untidy. In the open fields the practical eye soon

detects the presence of farmers in straitened circumstances in the difference of the root crops and potatoes.

Farmers under 20 acres.

40. This I must say for the farmers under 20 acres, their root crops and corn stubble are remarkably clean and free from "plants out of place." Their work is well, neatly, and seasonably performed; but the system upon which they farm, including, as it does, heavy potatoeing, and much carting and selling off the land, demands very liberal returns in the shape of purchased manures, and of late years I fear the diminished prices received for corn and potatoes have prevented them from making these returns in full. Frequently it crossed my mind that the potato crop was getting its dues at the expense of the turnips and mangel, and that more "eating on" and less "selling off" would be advantageous.

It is a heavy drain on soil fertility when from six to eight tons of potatoes are sold away and no lasting manure brought back. Of course, among all classes of farmers I saw examples of land very badly treated as rgards manure, and some where labour had been unduly withheld, but, taking the Isle of Axholme all through, I was surprised to find such a high standard of agriculture. There can be no doubt that as a general rule the small men are very hard working, industrious, and thorough in their management, and I would add frugal and thrifty in their home life and habits. Those who were neither big nor little farmers struck me as suffering most, so far as the condition of their farms formed evidence. These men are above being labourers pure and simple, yet are not up to the standard of large business men. I saw a good many of them lounging about the doors, or hanging about the little village inns, and I observed that their turnips were neither so good nor clean as those above and below them in station. It was explained to me, and I daresay there is much truth in it, that these middle-class men were, as a rule, overwhelmed with mortgage and debt, and consequently had no heart in their work. Land agents and proprietors agree that the farmers of between 30 and 70 acres were those who were most in arrears with their rent, and I saw from rent rolls and estate accounts that this was so.

The loss inflicted by the bursting of the banks of the Trent, and the impending danger from their present condition.

41. There is a very important matter in connexion with the depressed affairs of farmers in this district, to which I must especially draw attention. There are certain causes for depression, such as bad seasons and bad prices, which cannot be remedied, but much loss and suffering has been inflicted on the farmers of this peculiarly situated locality by an evil which was and is quite preventible. I refer to the loss, amounting to disaster, caused by the bursting of the banks of the River Trent, and the terrible damage thereby inflicted on the occupiers of thousands of acres of low-lying land, about nine years ago.

On that occasion the whole of the low-lying land between Owston and Butterwick was submerged, and immense damage sustained. Corn stacks, hay ricks, potato pits, and growing turnips were destroyed. The loss was estimated at many thousands of pounds, and on the Sheffield estate, to which most of the submerged land belonged, many farmers were ruined.

42. The River Trent, although a valuable ally, is a dangerous enemy. The adjacent lands are protected from inundation at high tide by banks put up centuries ago, which until recent years were kept in repair either by the parties known as Participators or by Commissioners of Sewers appointed for the purpose. Each Commission had charge of a certain mileage of river, and a tax was levied on the lands liable to flood but protected by the embankments. Several of these Commissions have of late years collapsed and disappeared, the consequence being that the maintenance of the banks falls entirely upon the parties who own the land contiguous to the river. Farmers holding land within 100 yards of the banks have latterly refused to contribute, hence constant quarrels and disputes occur. Meanwhile, the banks are being neglected, and danger of their giving way is imminent.

43. Between Owston Ferry and West Butterwick I was shown a very dangerous spot. Between the ferry and the junction of Kelfield sewer to the Trent the river takes a curve and there the channel narrows and deepens. The rapid undercurrent cuts into the heel of the west embankment at low water, while at high tide it plays upon the upper portion, scooping it out and gradually washing it away. I examined the river side at this spot and found:—

First. That the heel of the bank was giving way before the action of the current.
Second. That large pieces had come away from the body of the bank and would soon either slip down or yield to the working of the water.
Third. That the width of the bank to a depth of 5 feet had been greatly reduced, and that there was now very little resistance to high tide water.

Fourth. That already the current had opened burrows and fissures, which were undermining the embankment.

Fifth. That over 40 perches, where the curve in the river occurred, were quite out of repair and not trustworthy.

44. It was pointed out that when the river is in flood, the current at high tide is very powerful, and that it is felt most of all at the point where the bank is weakest.

The Board of Trade has been in the habit of granting certificates for the raising of sand, gravel, and mud from the river bed, and at the time of my inspection a boat was engaged in loading off the mouth of Kelfield sewer. But I understand that the Board of Trade contributes nothing to the maintenance of the banks, although availing themselves of the waterway. In like manner, the Humber Conservancy, the Gainsborough Steam Packet Company, and other parties, sail their ships up at high tides, washing the side and top of the banks with their back waves, and this without in any way assisting in the preservation of the banks. The whole expense is thrown upon a few proprietors unfortunate enough to own the land alongside the river, and as they have suffered from the reduction of rents and other causes, the condition of the banks gets worse and worse for want of funds.

Suggested remedy.

45. Besides having the importance of this question submitted to me by many persons in the Isle of Axholme, several letters were received from gentlemen outside the Isle who were landowners or tenants along Trent side. It seems that the whole of the Trent embankments require looking to, and the general opinion is that the matter should be placed in the hands of a Government Commission or Department, whose duty it will be to protect the interests of all parties, to make and keep the banks good, and to levy such rates as are fair and equitable from those who benefit by the necessary expenditure.

V.—Changes of Tenancy.

Frequent changes of tenancy.

46. Since 1880—1882 there have been a considerable number of changes on the larger farms, and, as has been already pointed out, much selling of property among the small freeholders. On some estates, rather than get rid of old tenants, arrears of rent were allowed to accumulate, until there seemed to be no likelihood of tenants ever being able to mend matters, when notice to quit was served. Rents in all cases have been lowered from 25 to 50 per cent., but in several instances landlords have themselves been compelled to farm land which has been run down and neglected by failing tenants. At the present time there are no farms in hand that I could hear of, but I gathered in private conversation that next year some tenants were to be got rid of, who are quite incapable of carrying on.

Small holdings easily let.

47. From what I heard, the landlords who took farms into their own hands, lost heavily, but succeeded in bringing the places into lettable condition. With reference to small holdings, there never has been any difficulty in re-letting from year to year, for no sooner is it known that a small farm is to let, than numerous offers are made, and rents very much above what is the true letting value of the land are received. Mr. Standring, auctioneer and valuer, says: "Land fetches a fictitious value here, the "farmers being reckless in their offers."

VI.—Sub-division of Holdings.

48. Sub-division of holdings is constantly going on among small farms, let by mortgagees or sold on the death of the late owners; but large farms are not divided. This is not due to want of landlord's capital, but because there is already a full supply of small farms and open lands. In those parts of the Isle where small farms are wanted the supply is equal to the demand, while elsewhere the people look more to paid employment as constant servants and do not evince any desire for land of their own. I gathered from the evidence collected in those parishes where the land was in the hands of a few, that the labourers felt the advantage of certain incomes in contrast with the risks and liabilities of peasant farming. At the same time, there can be no doubt that in their present straitened circumstances proprietors could not embark on the cutting up of large farms if buildings were required for each small lot.

Farms of over 70 acres and held in tenancy have undergone very little change in acreage or constitution, except when they are situated near towns such as Epworth, Haxey, or Owston, and where the townspeople, either shopkeepers or labourers, are always willing to pay big rents for small lots.

Round about these towns it is difficult to conceive further sub-division possible, and it has already been stated that anybody wanting a little land can easily get it. Outside the suburban circle, or away from the long straggling hamlets, small holdings are less sought after.

VII.—The Effect of the Depression on Various Classes.

49. Judging from the evidence of the various grades of farmers, proprietors, agents, solicitors, rate collectors, and well-informed persons whom I visited, and from the results of my personal inspection of farms, I am of opinion that the following fairly represents the order in which agricultural depression has affected the Isle of Axholme:—

1. The heavily burdened freeholder has suffered most. His position is very bad, in many cases hopeless.
2. The large tenant who took land without adequate capital, has neglected it, cannot stock it, is heavily behind with his rent, and in debt to various tradesmen.
3. Farmers of 30 to 70 acres, who own part and rent part, and who have their freeholds either clear or nearly clear of debt.
4. The small holder, half a farmer and half a labourer. He lives on the produce of his land, supplemented by other earnings. Such men when possessed of a horse and cart, earn from 15*l.* to 20*l* a year for hiring and jobbing.
5. The large and good farmer, with useful land at a fair rent, sufficient capital, an expansive, intelligent, and enterprising mind, and good business habits. These men, although they may not be making money, are, I believe, holding their own.

50. Not many strangers have taken land in the Isle, but of those who have done so only a few have succeeded. "To succeed in the Isle," people say, "a man must be "bred and reared in it," and it would appear to be in these cases that this is so. I heard of some instances where new comers had proved signally unsuccessful, but more land was taken than there was capital to properly work, and insufficient attention was paid to business.

51. Those whom I have already described as introducers of market gardening, came as comparative strangers, and they are struggling manfully and, I believe, successfully against the times. Indeed, I question whether any farmers in the Isle are doing better.

52. This year promises to be much better than the average of the past few years for the farmers of the Isle. Hay and straw are dear, and they appear to have bulked up well. Hay during my visit was fetching 6*l.* per ton. Turnips, swedes, and mangels are very variable, mildew having greatly damaged swedes.

VIII.—The Cost of Working Land in the Isle.

53. The way in which the small farms, whether freehold or rented, are cut up and scattered about, renders cultivation unusually expensive.

Many farms of 20 acres are made up of fields, to reach which a loss of fully two hours per day with horses and labourers is unavoidable, and moreover, some of the fields are so small that it hardly seems worth while taking implements out to them. The labour bills paid by small farmers quite surprised me, for they were about double per acre what might be considered reasonable. Labour bills.

54. The labour bill on a farm of 52½ acres, 33¾ being arable and 18¾ permanent pasture, was as follows:—

	£	*s.*	*d.*
One labourer constantly employed at 15*s.* per week -	39	0	0
Extra wage for harvest - - - -	3	0	0
	42	0	0

	£	*s.*	*d.*
One boy for eight months at 8*s.* per week - -	12	16	0
Harvest, four weeks at 15*s.* - - - -	3	0	0
	15	16	0

equal to almost 3*l*. 14*s*. per acre over 52½ acres.

55. The cropping on this farm was, corn, 15 acres; beans, 5½ acres; potatoes, 5½ acres; turnips, 3½ acres; hay, 4¼ acres; grass and orchard, 18¾ acres. Total, 52½ acres. Omitting family labour, the bill is 2*l*. per acre. On rented farms over 200 acres the labour bill varies from 26*s*. to 40*s*. per acre, the larger figure referring to cases where celery is grown. On purely market garden farms such as that of Mr. T. J. Blaydes, near Kelfield, 3*l*. per acre at the lowest estimate is swallowed up by manual labour, but the value of sales from the quantity of celery, cauliflowers, and potatoes which he grows is very large.

56. It was stated that the cost of production on holdings below 20 acres, and scattered here and there, was one-fourth as much as on places where the land lay together, and within easy reach of the buildings. The matter was frequently referred to by small farmers themselves, who thought some kind of redistribution of fields would be of value. But they admitted that it would be difficult to institute a system of redistribution which would prove satisfactory to all parties.

IX.—Profits and Losses over a Term of Years.

Absence of accounts.

57. I could only hear of one farmer in the Isle who kept anything in the shape of accounts, and although his were apparently very elaborate, still no account or clear explanation could be given of the amount of money borrowed from time to time. This, however, I did find out, that in 1881–82 there was no debt on the farm, whereas in 1893 the debts are more than the value of the total stock and crop. From the books I have prepared a balance sheet for each year, and from there a summary for the whole term.

58. In Appendix B. the yearly balance sheets will be found, while the summary stands thus—

Summary of the Balance Sheets (1881–82 to 1892–93) of a farm of 73 acres.

Total Receipts.	£	s.	d.
Wheat	750	17	6
Oats	151	7	9
Barley	47	11	6
Beans	90	8	3
Potatoes	1,232	18	1½
Mangel	23	13	0
Lin (flax)	74	4	9
Hay	216	4	6
Turnips	2	16	0
Stock sold	381	6	2
Grazing let and cartage done	45	9	5
Sundries	100	7	8
	3,117	4	7½

Total Payments.	£	s.	d.
Rent	672	8	7
Rates	131	0	0½
Tithes	94	15	0
Wages	1,141	19	4
Stock bought	72	9	0
Feeding stuffs	63	9	10½
Tillages (artificial manure)	80	5	0
Coals	41	11	10
Tradesmen's repairs	79	2	10½
Housekeeping and sundries	904	0	4½
Borrowed money	305	11	0
Ale (one year)	1	7	0
	3,587	19	11

59. This shows a loss of 470*l.* 15*s.* 3½*d.* The reduced rent is 100*l.* per annum, and the arrears of rent due are 527*l.* 11*s.* 5*d.*, no rent having been paid since the spring of 1892. Three reductions have been made since 1876. In addition to the loss shown above, and the total disappearance of capital, a sum of 300*l.*, was put into the concern by the farmer's wife, has also been lost.

60. The difference in "household expenses" from year to year is explained by the fact that in some years labourers were boarded in the house, that the cost of their living is included, and that there are now four grown-up children, three of whom are employed on the farm, but draw no wage. I do not submit this as a typical case, nor do the balance sheets show the true state of affairs, for debts have been overlooked, and nothing in the nature of a valuation has been made at any time. I simply submit them as being the only approach to farming accounts that came under my notice.

61. From what was said to me, some of the farmers in the Isle kept a record of their receipts and expenditure before prices began to fall, but now "books would drive us crazy," they said. Even with reference to receipts and vouchers, no proper care appears to be taken by the smaller farmers. In some instances the last year's rent receipts could not be found nor the poor rates receipts. Indeed, anything on paper appears to be so much rubbish, and not one in two had any clear knowledge of the terms of their agreements. Many of the freeholders were unable to tell me to what extent they were in arrears to the mortgagees, but comforted themselves that "lawyer ———— knew all about it."

X.—Tenure of Land and Tenant Right.

62. Yearly tenancies are general, with six months' notice to quit. The forms of agreement used are those belonging to the different estates in the Isle, but many clauses have been struck out.

63. The tenant has now practically freedom of cultivation, and no restriction is placed upon the sale of hay and straw. Owing to the many landlords from whom even a 20 acre farmer holds, "steelbow," or the custom which prohibits the sale of hay and straw, could not be carried out.

64. The Isle of Axholme is altogether peculiar in its circumstances, and legislation which works smoothly elsewhere might be inoperative here. The general opinion was that certain provisions of the Agricultural Holdings Act could not be applied, and that the existing customs of tenant right and compensation were fair and equitable.

65. The Isle of Axholme tenant right—

Full Tillages.—One-fourth of the holding is allowed to be under green crop and eligible for "full tillages"; viz., per acre :—

	£	*s.*	*d.*	£	*s.*	*d.*
Five "dressings" or courses of tillages, sum allowed for each dressing, 11*s.*				2	15	0
Full value of all manures applied for green crops—						
Say 15 loads farmyard at 4*s.*	3	0	0			
Artificial, say	1	0	0			
				4	0	0
Hoeing and horse hoeings				0	9	0
Rent, average of				1	10	0
Total value of full tillages				8	14	0
When the root crop is carted off the land a deduction is made per acre				4	0	0
				£4	14	0

Allowances for purchased food—

Cotton and linseed cakes, ⅓ the cost price for the last, ⅙ for the last year but one.

Corn cake and lamb food, ⅙ and $\frac{1}{12}$.

Purchased corn, ⅙ and $\frac{1}{12}$.

Penalties.

66. If more than two corn crops are taken in succession, 1*l.* per acre for each successive crop is charged against the tenant. When hay or straw is sold off during the last year of tenancy a charge is made on an estimate of the cost of carting back a corresponding quantity of manure. Dilapidations are charged against the outgoing tenant. Only half cost of tillages (22*s.*) is allowed on some estates. The outgoing tenant is allowed for loose straw 10*d.* per cubic yard. For bundled or trussed straw 1*s.* per cubic yard. (26 cubic yards go to the ton.) For hay 5*s.* per cubic yard of about 16 stones, or 5*l.* per ton. The figure allowed for hay appears to be very high, taking an average of years. Possibly my witness, a well-known valuer, may have been thinking of the present value of hay. It is quite evident that, so far, as the green crop is concerned, the figures represent the absolute cost of producing a full crop on good soil, and the penalties are by no means exorbitant.

67. On one of the largest estates in the Isle the following conditions are observed :—

Tenants' claims for fixtures, &c.

All the stoves, ranges, steamers, ash pans, ash grates, ovens, boilers, coppers, pans, lids, grates doors, hearthstones, sink stones, chimney pieces, chimney boards, windows, shutters, shutter boxes, bolts, bars, and fasteners, window blinds (calico or wire), rollers, pulleys, weights, brackets and fasteners, bells, bell pulls, cranks and wires, closets, whether attached to the freehold or not, brass, iron, and wood pins, hooks or racks, locks, bolts and door fasteners, shelves, spouts and spout irons, and stone flags about the house and premises, the pumps and troughs in the yard, barn floor.

The allowances to out-going tenant.

The tenant to be allowed for all buildings of brick or stone erected by him at his sole expense and with the sanction of the landlord on a scale of twenty years, diminishing one twentieth for each year after erection.

The lime on a scale of six years, allowing five-sixths of the whole cost after a crop of turnips or rape has been grown.

For bones, guano, purchased dung, or artificial manures in general, if applied to the fallow crop, and such crop to be consumed on the farm, on a scale of four years thus:—After turnips three-fourths, after one white crop one-half, after seeds or a pulse crop one-fourth, after wheat or oats nothing.

No claim to be allowed on any part for or in respect of where the following crop is growing for that particular year for any tillages or allowances whatever.

For oil cake, one-half of the cost of that consumed during the previous year and one-sixth of the amount consumed of the year preceding that, provided it does not exceed the average consumption of the last three years, and excluding what may have been given to horses.

For under draining the allowance to extend over twelve years on the high land, and six years on the warp land, diminishing one-twelfth each year in case of the first, and one-sixth in that of the second. Provided always that the drains have been cut under the superintendence of the landlords or his agents and the tiles approved by them.

For claying, ten years allowed, reducing one-tenth for each year.

Tillages applied to potatoes to extend only to two years, allowing half after the potato crop and nothing after the next crop.

No cost of cartage is allowed in any case save in that of claying.

The clover seed, &c., bill for the last year in full. Provided the young seeds have not been depastured by sheep after October 11th and no cattle have been allowed on them.

In this form of agreement, I find this extraordinary clause :—

The tenant shall furnish a team or teams when required by the landlord or his agents, free of cost, provided it is not in the time of harvest, and in case the tenant shall neglect or refuse such services when called upon he shall pay to the landlord the sum of nine shillings in the case of a waggon and three horses and seven shillings in the case of a cart and two horses for each and every day he shall have neglected to render such services.

It is true that in no case has the landlord taken advantage of his rights as above described, but the right exists.

XI.—Summary of Complaints and Suggested Remedies.

68. I was not surprised to find that among the small farmers of this strange district very little importance was attached to conditions of farming apart from the simple questions of seasons, prices, and rents. In byegone years farmers prospered under very much the same laws as now prevail, and it appeared to me that hardly any of the small holders of the Isle of Axholme have ever considered how their affairs are affected by existing laws, or to what extent they might be benefited by alterations or modifications.

Complaints.

69. The freeholders complained of the excessive rate of interest they were expected to pay to mortgagees, and earnestly wished that some way of bringing them down to a "fair rent" level could be discovered. Everybody grumbled at the low prices and bad times; tithe, poor rates, highway rates, and all forms of taxation were described as being obstacles in the path, but no arguments were forthcoming to show how things might be altered or improved. Touching income tax, it was always said that the

farmer was paying more than his share; beyond this bare fact, nobody appeared to have any ideas.

"Protection."

70. On one point, however, they were unanimous—viz., that the free importation of corn and meat was one of the chief causes of the depression. To free trade they traced their present unfortunate position, and in support of their opinion the usual arguments were submitted. As to the consequences of protection to the nation at large, no consideration appears to have been paid. They complained of high railway rates, excessive charges by middlemen, losses in transit, unreasonable labourers, and many such matters, but no intelligent solution to any of these questions was forthcoming. They said, "we cannot afford to pay so heavy now," but they had no notion of how the position might be dealt with.

Agricultural co-operation.

71. Among large farmers I found a few who had evidently considered these questions. All agreed that agricultural co-operation was required; that a system of direct dealing both in buying and selling would be highly advantageous. But there was a strange feeling of helplessness exhibited in the way some men deprecated the suggestion of doing without middlemen, and described any such thing as "impracticable." Anything savouring of change, no matter how beneficial it might be, seemed to frighten them. "Put the prices up to what they were 20 years ago, and we will be quite contented." They agreed that it might pay better to grow less corn and keep more stock, also to devote more attention to dairy farming and poultry, they also acknowledged that celery and cauliflower fetched more money than anything else now, but as they said, "these "are new things and we do not understand them. At one meeting of farmers it was unwillingly admitted that agricultural jealousy prevents co-operation, hence the middleman lives and flourishes. In the Isle of Axholme there is no agricultural society, and farmers feel that if one existed, many matters respecting their affairs might be discussed, and some attempt made to bring their opinions forward.

Sale of cattle by live-weight.

72. I heard of no farmer possessed of a weighbridge for cattle, and some declared they could tell the value of a fat beast from practical experience without consulting weighing machines. One good farmer said "it would be a deplorable thing when "farmers had to take to weighing the animals they had reared and fed in order to "know what they were worth."

Suggestion as to mortgages.

73. It was generally agreed that when owing to the depreciation in the value of land, a property mortgaged to two-thirds of its original price, fails to realise its original price, the loss should be shared by both mortgagee and late owner, instead of the mortgagee having a claim for the deficiency upon other property still possessed by the late owner.

74. It was also agreed that at the following prices farming could still be carried on profitably:—

Profitable prices.

Wheat, 40*s*. per quarter.
Barley, 30*s*. „
Oats, 20*s*. „
Potatoes, 60*s*. per ton.

Taxation.

75. It was also urged that the Isle of Axholme is unduly taxed in contrast with neighbouring localities, and it was suggested that for purposes of taxation it should form a separate and distinct county.

Suggested remedies.

76. Haxey farmers strongly condemned the Agricultural Holdings Act, and described it as useless. The absence of compensation for home-grown food consumed on the premises was described as simply setting a premium on foreign cakes and corn.

77. The feeling among intelligent farmers is that tithes should be re-adjusted and re-distributed, that formerly tithes went for education, relief of the poor, and maintenance of clergy, but that now they are all given to the clergy. Among the small farmers the existence of *The Tithe Act*, 1891, was quite unknown, and taking the district generally I did not discover that any change had taken place in the method of payment since 1891. In some instances, the tenants still pay direct to the tithe-owner or his collector, entirely ignorant of the existence of any decree to the contrary. In the Isle there are no lands "rent free" or let at a nominal value, and sections 4 and 8 of the Act have therefore been inoperative.

78. Large farmers were generally agreed that the incidence of taxation was all wrong at present, that it should be in the hands of a common department, which would levy according to income, and not on rental, working capital, or land.

79. Some few complained of damage by game, both ground and flying, and held that the tenant should have power to protect himself from all vermin.

80. The general opinion was in favour of taxing foreign meat.

81. One very good point was brought forward at Haxey with reference to the improvement of live stock. At present a large proportion of our sheep and cattle are affected with hereditary, though not contagious or infectious, diseases, and to these the Contagious Diseases (Animals) Act does not apply.

82. Tuberculosis and cancer were specially named as existing in many flocks and herds, and as no compensation is offered to farmers for the destruction of animals so affected, the diseases are perpetuated, and unwholesome meat is sold for the public use. It was stated that if full compensation were given for animals slaughtered on account of hereditary and deepseated non-contagious diseases, farmers would gladly report such cases, and so by degrees the stock of the country would be freed from "wasters," "piners," and badly constitutioned consumptives.

83. Great complaints were made anent the labour question. The men will not work full hours, and are not diligent when labouring.

84. With reference to the Agricultural Holdings Act, it was submitted by large farmers in the West Butterwick and Owston districts that fuller details than are now required by the Act should be given by valuers in making their awards.

85. These gentlemen held that the present system of property tax requires amendment; that the land tax should be abolished; that Government should buy up tithes, and should take all our railways into their own management.

86. Here, as at Haxey, the system and incidence of taxation were vehemently denounced as unjust, and the proposal to vest everything relating to taxation in a special department was heartily supported.

87. The general feeling undoubtedly is that the farmer might be to a certain degree assisted by legislation, but that a rise of 33 per cent. on the price of agricultural produce would be more to the purpose.

88. The only complaints of rack-rents came from freeholders in the clutches of mortgagees. Tenants proper spoke gratefully of the reductions and remissions of rent given by their landlords, and no concealment was made of the fact that even the reduced rents were not always paid.

Large and small farms.

89. During the term of years which has elapsed since the date of Mr. Druce's report the condition of farmers in this district has considerably suffered, and from what I saw and heard I was led to conclude that farming on a small scale had not stood the test so well as large occupations.

I have, &c.
(Signed) R. HUNTER PRINGLE,
(Assistant Commissioner).

ROYAL COMMISSION ON AGRICULTURE.

ENGLAND.

REPORT

BY

MR. R. HUNTER PRINGLE

(ASSISTANT COMMISSIONER)

ON THE

ONGAR, CHELMSFORD, MALDON, AND BRAINTREE DISTRICTS OF ESSEX.

TABLE OF CONTENTS.

I.—Introduction.

Paragraph		Page
1.	Collection of evidence	35
2–4.	Ongar	35
5–6.	Chelmsford	35
7.	Maldon	36
8.	Braintree	36
9.	Distribution of depression	36
10–16.	Description of soils	36
17.	Peculiarities of mixed soils	37
18.	„ clay-bottomed soil	37
19.	Bare fallows	37
20–23.	Methods of draining—pipe draining, bush draining, and mole draining	38
24.	Mixed soils and stiff clay compared	38
25.	Climate—suitable to corn growing	38
26.	General features of the county	38
27.	Railway and market facilities	38
28.	Fences	39
29–32.	Houses and farm buildings	39
33.	Labourers cottages	39
34.	Water supply	39
35.	Land agents	39
36.	Farm labourers	39

II.—Agriculture since 1880.

37.	Condition of agriculture between 1875 and 1879	40
38–40.	Consequences of season 1879	40
41.	Extract from Mr. Druce's Report in 1880	40
42–43.	Condition of agriculture between 1880 and 1884	40
44.	Reductions of rent	41
45.	Reduction in selling value	41
46.	The season of 1887	41
47.	General character of the seasons 1880–1892	41
48–50.	How rough pasture originated	41
51.	Effect of the season 1893—(*a.*) on corn	42
52.	(*b.*) on hay and root crops	42
53.	Summary of results on an arable farm	42
54–55.	Effect of the drought upon stock and dairy	42
56.	Prospects for 1894	42
57.	Effect of the dry season on bare fallows	43
58.	Critical position	43

III.—The Scotch Settlers in Essex.

59.	The first Scotch settlers	43
60–62.	Advertising for Scotch farmers	43
63.	Ayrshire cows for dairy purposes	44
64.	Number of Scotch tenants, and size of their farms	44
65.	Report on Scotch tenants by a land agent	44
66.	Successful settlers	44
67.	Unsuccessful settlers	44
68.	Scotch farmers on heavy clay lands	45
69–73.	English and Scotch systems of farming contrasted	45
74–75.	The reported failure of the Scotch colonists	45
76.	Scotch opinion upon Essex farm labourers	46
77–78.	Conclusion	46

IV.—System of Tenure.

79.	Yearly agreements have taken the places of leases	46
80.	Notice to quit	46
81.	Conditions of letting, usual in Essex	46

V.—Changes of Tenancy.

82.	Numerous failures	47
83.	Changes in Ongar district	47
83.	„ Dengie Hundred	47
85.	„ Braintree district	47
86.	Number of notices to quit served in 1892 and 1893	47
87.	Collapse of agriculture in Essex	47

VI.—Unoccupied Farms and Farms in Hand.

Paragraph		Page
88.	Decrease in the number of unoccupied farms	48
89.	Increase in the extent of uncultivated land	48
90.	Nominal rents	48
91.	Cost of restoring exhausted clay land	48
92.	History of a farm practically abandoned	49
93–95.	Herbage growing thereon	49
96.	Land going out of cultivation in Suffolk and North Essex	49
97.	History of Great and Little Gubbins Farms	50
98.	Attempted sales of derelict land for building purposes	50
99.	The future of clay-bottomed localities	51
100.	Effects of the depression on the labouring classes	51

VII.—The Depression as it has affected different Classes.

102.	Reduced rentals	51
103–4.	Increased cost of repairs and buildings	52
105.	Farms managed by owners	52
106.	„ under paid management	53
107.	Dairy *v.* Corn-growing	53
108–9.	Farm accounts	53
110.	Summary of farm accounts	54
111.	Another set of balance-sheets	55
112.	Farming on the Scotch system	55
112.	High-pressure and low-pressure farming	55
113–4.	Large *v.* Small farming	56
115.	Farmers who have made a little headway	56
116.	Comparison between large, medium, and small farms	56
117.	Inferior farming	57
118.	Scarcity of live stock	57
119.	Less steam cultivation of recent years	57

VIII.—Division or Enlargement of Farms.

120.	Less drainage than formerly	57
121.	Average size of farms. Subdivision in the vicinity of towns	58

IX.—Permanent Improvements effected by Landlords.

122.	Bad condition of buildings and cottages on certain estates	58
123.	Examples of liberal expenditure on improvements	59
124.	Loans at a low rate of interest required for carrying out improvements	59

X.—Changes in the System of Farming.

125.	Changes in area under different crops	60
126.	Evidence from Braintree district	60
127.	„ „ Ongar „	60
128.	The Scotch system	60
129.	Grass and green crops	60
130.	Suitability of temporary pasture to Essex	61
131.	Prevailing ignorance about grasses and the management of pastures; and the desire for assistance and instruction among Essex farmers	61
132.	Sainfoin and lucerne	62
133.	Extension of dairy farming on mixed soil	62
134.	Changes in systems of cropping	62
135.	Not much change in number of farm horses or farm labourers on farms still in cultivation	62
136.	Poultry farming	63
137.	Market gardening	63
138.	Use of artificial foods and manures	63

XI.—Causes of the Depression.

139.	Low prices	63
140.	Foreign competition	63
141.	Low price of meat and wool	64
142.	Low price of milk	64
143.	Reduced value of store stock. Beef manufacture no longer profitable	65
144.	Character of the past 13 seasons, as shown by the yield of corn on mixed soil	65
145.	Damage by floods	66
146.	Other causes of depression	66
147.	Commercial gambling in agricultural produce	66

XII.—Subjects of Complaint and Remedies suggested.

148.	The Agricultural Holdings Act, 1883	66
149.	Essex covenants	67
150.	Mode of applying the Agricultural Holdings Act, as practised by Essex valuers	67
151.	The vagueness of awards complained of	68
152.	Consumption of home-grown produce should be a subject for compensation	68
153.	Time given for service of landlord's counter-notice	69

Paragraph		Page
154.	The Act not much esteemed in Essex	69
155.	An explanation of its unpopularity	69
156.	When counter-claims are sometimes oppressive	69
157.	Indirect value of the Act	69
158.	Desire for better security to the sitting tenant. Continued occupation at fair rents	69
159.	The marking of foreign meat	70
160.	Adulteration, and its prevention by Government supervision	70
161.	Suggested enlargement of the sphere of the Board of Agriculture	70
162.	The law of distress	71
163.	Railway rates and the conduct of the Great Eastern Railway	71
164.	Preferential rates given to foreigners	71
165.	Complaints with respect to the sampling of milk	71
166.	A better system of marketing farm produce required	72
167.	The Ground Game Act. Shooting tenants	72
168.	The city of London grain duty—a strange injustice.	72
169.	The system of buying and selling by live-weight	73

XIII.—The Working of the Tithe Act, 1891.

170.	The Act has in some cases deprived the tenant of remission from the tithe-owner	73
171.	Section 8 has proved inoperative	73
172.	Examples of failure to obtain adequate relief	74

XIV.—Burdens on Land.

Tithe Rentcharge.

173.	The inequality and injustice of tithes as apportioned in 1836, at the present day	74
174.	Corn-growing counties are unduly taxed	75
175.	In Essex tithe is in many cases greater than rent	75
176.	An example of tithe exceeding rent	75
177.	The feeling in Essex with regard to tithe—its imposition and effects	76
178.	Suggested remedies	77

The Land Tax.

179.	The land tax unequally distributed	77
180.	An increasing burden	78
181.	Suggestion to suspend redemption and revise incidence	78
182.	Suggestion to devote the tax to the reduction of local rates	78
183.	The establishment of a general rating authority recommended	78

Local Taxation.

184.	Rates in Essex as contrasted with the rest of England	78
185.	Causes which render taxation variable	78
186.	Poor and Highway rates paid on four farms, and their relation to rent	78
187.	Poor and Highway rates	79
188.	Why rates have increased under the County Council	79
189.	The heavy burdens on land	79
190.	Assessment committees and their system of assessment	80
191.	Difficulties which assessment committees experience	80
192.	General remarks upon the incidence and propriety of taxation	81

XV.—General Remarks and Conclusion.

194.	The chief causes of depression	82
195.	Contributory causes	82
196.	Prevailing ignorance with reference to the cost of growing wheat abroad	82
197.	Essex clay cannot be cultivated at present prices	82
198.	A change in system of farming offers the best hope for the future. Ensilage should be made for winter use	83
199.	Technical instruction	83
200.	Hopeless position of many of the present farmers	83
201.	Want of capital	83

THE ONGAR, CHELMSFORD, MALDON, AND BRAINTREE DISTRICTS OF ESSEX.

To Herbert Lyon, Esq., Secretary,
Royal Commission on Agriculture.

23, Great George Street, Westminster, S.W.,
November 22, 1893.

Sir,

I have now the honour to submit my report upon the Ongar, Chelmsford, Maldon, and Braintree Districts of Essex.

I.—Introduction.

Collection of evidence.

1. As previously arranged and announced, I arrived at Ongar on Monday, October 16th, but having two days' work to finish my report upon the Isle of Axholme, actual work in Essex did not commence until Thursday, the 19th. I remained in Ongar district until Friday, the 27th, when I moved to Chelmsford. From Chelmsford I went to Maldon on the evening of Friday, November 3rd. From Maldon I inspected both Maldon and Braintree districts, concluding my inquiry by attending a public meeting of farmers at Colchester on Saturday, the 11th. From Maldon one day was spent near Dunmow, with the view of obtaining information regarding the district known as the Roothings.

Ongar.

2. My inspections were arranged and conducted in the following manner. Before going to Essex the farmers of Ongar district volunteered to co-operate with and assist me in the prosecution of my duties, and at a meeting held in the Badworth Hall, Ongar, on Tuesday, October 17th, the order in which I subsequently made my visits was decided upon. Twelve typical farms were selected, three to the north, three to the south, three to the east, and three to the west of Chipping Ongar, and I undertook to spend one whole day in each direction. The absence of daylight prevented me from walking over the whole of these farms, but I was enabled to personally examine the fields and premises of eight out of the 12. With respect to four I took evidence in the evening.

3. Besides carrying out these pre-arranged visits, I succeeded in completing my Lincoln report a day earlier than was expected, and the time gained I spent in examining three farms over and above those on the list. Having two spare days before going to Chelmsford, I still further prosecuted my inspections by visiting five more farms. Thus, I obtained evidence from 20 farms in the neighbourhood of Ongar. It is well to state that four of the farms were occupied by Scotchmen, and one by a gentleman from Devonshire.

4. Before leaving Ongar a public meeting of farmers and persons interested in agriculture was held in the Badworth Hall. At this meeting the present condition of Agriculture was discussed, and various resolutions indicating the opinions of those present upon the remedies and changes required to relieve the depression were moved and passed.

Chelmsford.

5. The order of inspection and inquiry in Chelmsford district was arranged by the Eastern Counties Dairy Association. On Saturday, 28th October, accompanied by Mr. G. E. Hilliard, auctioneer and estate agent, Chelmsford, I visited various portions of Baddow County Council Division, walking over farms at Gibcracks, Southlands, Great Baddow, Little Baddow, Woodham Lodge, and Woodham Ferris. On Monday, the 30th, Mr. F. J. Coverdale, agent on Thorndon Hall estates, took me from Ingatestone *viâ* Bacon's Farm, Westlands, Mountnessing, Lawness Farm, Cowbridge Grange Parva, Great Cowbridge Grange, past Billericay to Great Burstead, Barley Lands, White's Farm, and Great Gubbins. We rode all over Great and Little Gubbins, and then continued due south past Laindon Station to Laindon Crown Inn, where a party of neighbouring farmers waited to give evidence. From Laindon we drove by Vange and Pitsea Road to Basildon. Thence to Wickford, and by Brockley Hill to Forest Lodge, Stock, continuing by Crondon Park Farm to Ingatestone.

6. On Tuesday I was met at Rayleigh Station by Mr. Lawrence Marriage, Mr. Offin and others, and driven by Hockley, South Fambridge, Canewdon, Doggit's Farm, through Rochford and west till Great Tarpots was reached. Turning back, Hadleigh was visited and an evening train caught at Rayleigh for Chelmsford. Newlands farm near Roxwell, the Warren farm near Writtle, and Hylands, the seat of Mr. Arthur Pryor, were also visited. My work in Chelmsford district was brought to a close by a well-attended meeting of the members of the Eastern Counties Dairy Association, at which several interesting and useful discussions took place upon the present condition of Agriculture and how to improve it. Many of the farms visited in this district are occupied by Scotch tenants, and a considerable number of the members of the Dairy Association are Scotch settlers in Essex.

Maldon.

7. My movements in Maldon district were arranged by a committee appointed for the purpose. On Saturday, 4th November, accompanied by Mr. E. A. Fitch, chairman of the Maldon Board of Guardians and an extensive farmer, Mr. Freeman, clerk to the Board, Mr. A. P. Clear, solicitor and land agent, and Mr. Solly, of Mundon Hall, I drove through and walked over a considerable part of the Dengie Hundred. A farm at Mundon was inspected, the tenant (a Scotchman) having laid several fields down. Purleigh Barns farm was next visited. A call was made upon Mr. Laver, manager of several farms in Latchingdon. Proceeding by Lawling Hill and Nipsill's farms, Steeple Hall and St. Lawrence Hall were reached. At Southminster a party of six neighbouring farmers met me to give evidence, preceding a visit to the Caidge farm, a portion of which I walked over. From thence to Stokes Hall farm and Chesnut Hill near Althorne, the occupiers in both cases being Scotchmen.

8. The return journey took me through Cold Norton. In order to see Hazeleigh, Purleigh, and Woodham district, I arranged to return from Braintree on Wednesday, the 8th. By making an early start I succeeded in walking over the Hazeleigh estate and Scott's and Baker's farms in Purleigh. We then drove to White Elm farm and Binacle Priory, round by Woodham Lodge, through Ilgars farm and Woodham Fen, to Champions farm. Meeting the mid-day train at Woodham, I reached Braintree in time for a public meeting held in the Public Hall. Starting from Braintree station on Monday, the 6th, and accompanied by Mr. Joseph Smith, junior, of Pattiswicke Hall, Mr. Fred. Smoothy, solicitor, land agent, and farmer, and Mr. J. G. Vaisey, of Bocking, I examined the northern portion of Braintree district, visiting farms in the parishes of Gosfield, Little Hedingham, Castle Hedingham, Topplesfield, Finchingfield, Great Bardfield, Great Saling, and Rayne. On Tuesday, the 7th, with Mr. Smith, Mr. Smoothy, and Mr. J. S. Surridge, land agent, of Coggeshall, I inspected farms in the parishes of Cressing, Kelvedon, Inworth, Feering, Birch, Easthorpe, Tiptree, Coggeshall, and Pattiswick. Thursday, the 9th, was spent at Easton Lodge, near Dunmow; Friday, the 10th, in revising evidence and notes. On Saturday, the 11th, a public meeting was held at Colchester, which I attended. Monday morning (13th) I spent at Chelmsford and Ingatestone collecting papers. On Tuesday, the 14th, I left Essex.

Braintree.

Distribution of depression.

9. It will be observed, by reference to the Index Map which accompanies this report, that with the exception of Ongar my inspections were not quite fairly distributed over the Chelmsford, Maldon, and Braintree districts. Although to the east of the London and Colchester Railway farmers are suffering severely from the present depression, still it is between the Great Eastern main line and the sea that things have assumed a very serious aspect. All over these four districts one sees land going out of cultivation or running wild; but away from Baddow, Billericay, Heybridge, Southminster, and Rochford divisions examples of uncultivated land are exceptional and isolated, whereas in these five divisions whole farms and tracts of country have been abandoned and given up to nature. I therefore thought it best to go into Ongar district very thoroughly and use the information and evidence there obtained as descriptive of and applicable to such portions of the remaining districts as resembled Ongar in character of soil.

Indeed, it is only too apparent that in describing the condition of agriculture in one part of Essex, so far as I saw it, as bad and in another part as very bad, almost everything will be found to depend on the class of soil and subsoil there prevailing.

Description of soils.

10. The soil of Essex, with the exception of two small patches, is geologically classed as the London clay. In Ongar district the prevailing subsoil is gravelly or in some places chalky gravel. Where this occurs the soil is fairly friable, suitable to the growth of root crops, and can be ploughed with two horses.

Between the Great Eastern Railway and the sea, much of the soil is stiff tenacious bluish-grey or brown clay for many feet down. To plough it three horses are

required. In the best of seasons it is expensive to work, and at all times it is "season land." It cannot be touched in wet weather, and if allowed to become sunburnt, the clods will yield to no implement of husbandry.

11. The following graphic description of the subsoil in Dengie Hundred I extract from a letter received from Althorne: "Our subsoil is stiff, tough, numb, dumb, and "impervious, so that during heavy rains the vegetable mould and manures are washed "off the surface on to the great mud beds in the Crouch and Blackwater rivers. The "plants are at once mud and water-logged and starved." One important difference between clay soil resting on gravel or chalky gravel and clay soil on clay subsoil, as seen in Dengie Hundred, was frequently brought before me by farmers. They stated that in a wet season young corn and even grass were literally "drowned," because the water could not percolate through the "dauby" subsoil, whereas a porous subsoil prevented waterlogging.

12. I myself observed that on Hazeleigh farm (three-horse land) the surface water, after a moderate rain, gathered into and remained in the horses' footmarks as if they were so many saucers. This retentive character pertains to a large proportion of the soil of Baddow, Billericay, Heybridge, Southminster, and Rochford. Now and then in driving through these divisions, I observed striking variations in soil texture. Gibcracks farm, near Chelmsford, is very stiff clay, and has gone out of cultivation, but within a mile from it the land becomes friable and root crops are successfully grown. This improvement, however, is of short duration, for the next farm visited was three-horse land in wretched condition, waterlogged, and smothered with weeds.

13. The occurrence of stiff clay and gravel subsoils cannot be attributed to the position of the land or its height above sea level. Some of the stiffest fields I found on the slopes and tops of low hills; indeed, taking the 10 miles between Rayleigh and Canewdon, or the Dengie Hundred as a whole, the existence of mixed soil of a non-retentive character would appear to be accidental and quite exceptional.

14. In Braintree district mixed soil predominates, but between Kelvedon, Tiptree, and Birch I found numerous instances of obdurate clays as well as blackish sand on Tiptree Heath.

15. To the west of Chelmsford and Witham there is a large extent of mixed soil on a good subsoil of gravel, but even there I observed an absence of uniformity. In describing and showing me over their land, mention was generally made by farmers of so many acres or so many fields very difficult of cultivation, and requiring judicious management in broken weather.

16. The same remarks apply to Ongar district. In the neighbourhood of Stanford Rivers to the south, and between Moreton and Abbess Roding to the north, I walked across many fields of very strong clay, hardly workable with two horses unless periodically steam dug or cultivated after harvest. In the immediate vicinity of Chipping Ongar I visited three farms, the half of which was too strong for profitable turnip cultivation on a large scale.

Peculiarities of mixed soils.

17. Although there can be no doubt that under liberal treatment and well-timed cultivation, the mixed soils of Ongar, Chelmsford, Maldon, and Braintree have hitherto produced admirable crops, still I wish it to be understood that in the most favourable seasons they are expensive to work, and that in the great majority of cases success or failure is decided by the character of the season. All over the mixed soils of Essex the same remark was made with reference to arable farming: "If we get the crops "away and have a good seed time, our soil grows a lot of corn." But these soils cannot cope with a wet winter followed by a cold rainy spring and sunless summer.

Clay-bottomed soil.

18. On clay-bottomed soil the character of the season is *everything*. To attempt tillage in wet weather is not only a sure way of destroying all chances of a fair crop, but a certain step towards causing the clay to "run together," and largely increasing the cost of subsequent cultivation.

Bare fallows.

19. The presence of bare fallows on portions of farms generally classed as mixed soil is strong evidence of the irregular character of the land. Near Ongar, and generally speaking all over the county, I visited places where bare fallows were found unavoidable over a certain number of fields. Farmers altogether opposed to the system of letting land lie idle for a year if anything better could be done with it, readily gave it as their experience that in dealing with clay-bottomed stiff soils a bare fallow at certain intervals is absolutely necessary. A Scotchman unaccustomed to bare fallows, and for a time strongly opposed to the principle, informed me that on his farm near Moreton certain fields had convinced him of the need for a long fallow now and then.

He attempted to grow turnips as practised on clay loams, but not only was the crop produced very poor, but the mechanical condition of the soil was injured by the removal of the roots. He said, "I have some fields which cannot be trifled with." Among the Scotch settlers I found many examples of the adoption of the bare-fallow system after repeated failures to work heavy clay-bottomed fields on the north country fashion of turnips after lea corn.

Methods of draining.

20. By far the larger proportion of the county of Essex is artificially drained. There is a very small area naturally dry. Even where a layer of gravel underlies the surface soil, it is not always of sufficient depth to rid the land of noxious gases, or the evils consequent upon stagnant subsoil water. Three methods of draining have been pursued: A. Pipe or tile draining; B. Bush draining; C. Mole draining.

Pipe draining.

21. A. *Pipe draining*, although more costly at the outset, lasts longer and is more efficient than the other modes. Pipe drains are made from 15 to 25 feet apart, according to the porosity of the subsoil. The usual depth is 3 feet, but examples of $3\frac{1}{4}$ and $2\frac{3}{4}$ feet are not uncommon. 2-inch tiles are used for the minors, 3-inch for the mains or leaders. The cost of draining was stated to be from 6*l*. to 7*l*. per acre, haulage included.

Bush draining.

22. B. *Bush drains* are made in a similar manner to pipe drains, but bushes or branches are used in place of pipes. Bush drains are chiefly esteemed upon level land where the fall is bad, and pipes liable to get choked with silt or ochrey sediment.

Mole draining.

23. C. *Mole drains* are suitable for pasture land and are made at narrow intervals by an implement called a mole plough, drawn by the winding drum of a steam engine. Mole drains perform their functions satisfactorily for at least seven years, but when executed on arable land, they are liable to fall in through the treading of heavy work horses.

Mixed soils and stiff clay soil compared.

24. An important difference between the mixed soils and three-horse clays of Essex exists with respect to the growth of barley and keeping of sheep. On the gravel or chalky gravel good crops of well-coloured barley are grown and sheep are folded on the root crops during moderately dry weather in winter. On the stiff clay-bottomed soil barley does not succeed and sheep cannot be profitably kept except for a limited period on pasture. On several Ongar farms I observed sheep folded on turnips, coleseed, and mangel leaves, and apparently thriving themselves without poaching or damaging the soil; but the farmers stated that great caution was required in broken weather and frequent removals from red to green land necessary. On three-horse land sheep-folding on the fallow break cannot be carried out at any time or in any season.

I have thought it right to go somewhat fully into these questions, in order to show that Essex soil cannot with impunity be treated or managed upon such systems as prevail in other counties, and that no matter how desirable and necessary an alteration in farm practice may be in the present condition of affairs, there are numerous obstacles in the way.

Climate, suitable to corn growing.

25. Essex as a whole is a corn-growing county. Not only is the soil adapted for this branch of husbandry, but the climate is suitable. It is a bright sunny district, and even among the sulky clays of Hockley or Canewdon, such crops as wheat and beans grow to great perfection in favourable seasons.

General features of the county.

26. Without possessing anything worthy of the name of a mountain or even hill, the surface of the central and eastern divisions of Essex is undulating. In the Dengie Hundred there is a considerable extent of flat land, and elsewhere the rise and fall is very gentle, but in driving or riding from place to place the scenery is varied rather than monotonous. Woods and plantations cover a considerable area in the mixed-soil districts, but between the Great Eastern Railway and the sea timber is not so plentiful. Hedge-row trees are numerous, and great complaints were made by farmers of the damage done to the growing crops by their roots and branches. On several farms which I examined, the evil effects of these trees were very apparent, the root crops being stunted and starved for as much as 30 yards by 7 into the field, while in the shade of the headland little or nothing had grown.

Railway and market facilities.

27. Although there are some farms and villages not conveniently situated for railway communication, the county as a whole is well supplied. At Colchester, Chelmsford, and Romford large weekly markets of corn and stock are held, while most of the smaller towns possess corn halls, and occasionally auction rings for live stock. London is within easy reach, and the service of trains between wayside stations and the metropolis leaves nothing to be desired.

28. The fences are chiefly hedges, raised on low banks and skirted by open ditches. In many parts of the county, insufficient care has been paid to trimming and winter cutting, with the result that the plants have run to timber and the fences become open below. On the other hand, one sees many farms where the fencing is in first-class order and well looked after. Fences.

29. The farmhouses as a general rule are good. Not so the farm buildings. In very many cases the barns, stables, cattle-yards, and waggon-sheds, are wretched in the extreme. Thatch roofs on boarded sides for walls, and earthen floors are hardly in keeping with economical management, and on some estates they are the rule rather than the exception. But on the other hand, there are estates where the farms are well supplied with first-class homesteads, recently built or re-modelled. I was much struck with the want of arrangement in Essex farm buildings, and the little regard that has been paid to facilities for tending cattle. The homesteads are scattered and straggling in their various parts. Instead of bringing the cattle-yards and food stores together, they have been put far apart, thereby entailing heavy expenses in labour. Covered cattle-yards are few in number, the accommodation for winter feeding generally consisting of large open yards with small sheds attached. Houses and farm buildings.

30. On dairy farms I found a different class of buildings. Within the last 12 years landlords have spent liberally in the construction of cowhouses and milk rooms. On the Thorndon, Ongar Park, and Terling estates I saw a large number of very nice cowhouses. They were all of recent construction, and even the Scotch tenants, accustomed to the best of farm steadings in the North, spoke highly of the alterations and additions made to suit their style of farming.

31. Complaints were made by some farmers of the loss suffered from bad farm buildings, and on more than one occasion it was stated that a landlord would think nothing of laying out 600*l.* for a new tenant, but would refuse to help an old one. There are undoubtedly good grounds for complaint, but on inquiry I found that in nine cases out of ten the outlay referred to was unavoidable, and made for the purpose of enabling an incoming tenant to prosecute cow-keeping in homesteads where previously that branch of farming had not been in practice.

32. It is patent to any person at all intimate with practical agriculture, that many of the farmers in the Ongar, Chelmsford, Maldon, and Braintree districts have not been well treated in the matter of farm buildings. In the more northern counties of England no tenant would offer for farms equipped with buildings such as I saw in Essex (*see para.* 29).

33. Labourers cottages are in much the same condition as farm buildings. Here and there new cottages have been put up, and they are commodious and comfortable, but lath and plaster or boarded walls are far more common. Labourers' cottages.

34. The water supply in Essex is a very difficult problem to solve. Pond water full of slime and filth is given to live stock, and some cowkeepers mentioned that not only had they good reason to attribute complaints of tainted milk to the bad water, but they had had cows poisoned in dry weather by drinking from these ponds. One person in particular stated that for want of proper water he had been compelled to sell the greater portion of his cows last summer. When speaking of the difficulty in finding a reliable water supply for cottages, Mr. Coverdale, agent on Lord Petre's estates, explained that on the London clay in Dengie Hundred wells had been sunk over 300 feet before any water was found, and the water then obtained was brackish and useless. Water supply.

35. In the four districts of Essex which I visited, there are several estates measuring between 5,000 and 10,000 acres, and a few between 3,000 and 5,000. These are generally under the management of resident agents, who are thoroughly practical men, and well acquainted with the peculiarities and necessities of Essex agriculture. I was fortunate in having a great deal to do with the agents of the principal estates between Epping and Colchester, and in every instance I found them to be warmly interested in the welfare of the tenants, and prepared to meet their demands in many ways. The kindly feeling is, I believe, reciprocated. When talking things over with me, farmers generally referred to agents as occupying a difficult and perplexing position, and discharging their duties in a spirit of fairplay between landlord and tenant. Agents.

36. On the subject of farm labour, it was the opinion of employers that their men were neither so industrious nor so efficient as before the commencement of depression. And they take this change to heart. Shortly before my visit, some meetings of labourers had been held in Essex, where speeches described as extravagant and in many respects untrue, had been delivered. From what I could gather, the Essex Farm labourers.

farmer is well disposed towards his labourers, and not in any way inimical to his happiness and well being. At Ongar, shortly after my arrival from Lincoln, reference was made by the farmers whom I met in the Badworth Hall to the difficulty of getting farm servants to remain where the cottages were bad, and from all accounts certain farms insufficiently or imperfectly supplied in that locality were shunned by the best class of labourers.

II.—Agriculture since 1880.

Condition between 1875–1879.

37. The depression of Agriculture in Essex appears to have commenced about 1875 when the price of wheat fell from say 55*s.* to 45*s.* per quarter. Between 1875 and 1879 barley and oats remained firm at paying prices, but with the exception of one year, 1877, wheat did not recover its value. The profits from barley and oats, which are not suited to the heavier classes of soils, were altogether insufficient to counterbalance the losses in wheat, and to make matters worse, a run of bad seasons set in, culminating in 1879. From the evidence received upon the subject, there seems to be no doubt that prior to 1875 corn growers in Essex were doing well and land commanding high rents. As generally happens, agricultural prosperity induced many farmers to hire more land than they had capital to properly cultivate, and holdings were let to persons who raised the necessary capital by the aid of cash credit bank accounts. The depreciation of wheat was expected to be of a temporary character and no one anticipated a series of bad seasons.

38. Between 1875 and 1879 many farmers failed or gave up, but new tenants were easily found at slightly reduced rents. On some estates the agents deemed it advisable to take vacant farms in hand for a year or two, in order to bring back the land to a good state of cultivation, and make improvements and additions to the farm buildings.

Consequences of season 1879.

39. Thus at the commencement of 1879 the corn-growing land of Essex might be described as being farmed by three classes—good tenants of long standing, new tenants with insufficient capital, and landlords. The consequences of 1879 were to severely cripple the old tenants, to ruin many of the new ones, and to inflict heavy losses upon landlords farming their own property.

40. In respect of the stiff clay soil, one point must be noted with reference to the indirect loss consequent upon this run of bad seasons. Not only were farmers unable to do justice to their land from want of means, but the summer-fallowing system failed to exert that beneficial influence which, under favourable circumstances, it generally produces. The strong soils, instead of being ameliorated by the repeated operations of tillage, instead of being cleaned, sweetened, and pulverized, got into a hopeless state of weeds and confusion.

Extract from Mr. Druce's Report in 1880.

41. Such was the position after 1879 and the sequel is described by Mr. Druce on page 31 of his report to the Richmond Commission. He writes: "In June 1880 I "reported at some length on the existence of agricultural depression in this county, and "I have now to add that I visited the county again in the autumn of 1880, and found "that the depression was in no way mitigated, but, on the contrary, that the state of "the county was worse than it was when I wrote my former report. There are a very "large number of farms in the landlords' hands, some of which are practically, though "not actually, uncultivated, and others cultivated by the landlords. As seen in several "parts of the county, *e.g.*, between Rochford and Chelmsford, between Chelmsford "and Maldon, and in the Roothings, the state of agriculture was deplorable. Some "land was altogether derelict and more was full of weeds and natural rough grasses, "upon which a few cattle were picking up a bare living, farmhouses were empty or "only occupied by overlookers or caretakers, in some cases the cottages were empty, "and the general aspect of the country was desolate in the extreme."

Condition between 1880–1884.

42. Between 1880 and 1884 the number of farms given up either in despair or for reasons over which the occupiers had no control, was stated to have been enormous. On estates belonging to gentlemen of means, the farms in hand were carried on for a few years; the losses thereby incurred were heavy, for not only did the seasons continue unfavourable and prices sink lower and lower, but the land was taken up in the worst of order.

43. On poor estates no attempt was made to bring the land round; it was left alone and gradually "tumbled down" to such coarse and inferior herbage as nature

produced. Except in a very few cases no reliable records of the number of farms in hand were given to me, but some idea of the deplorable straits to which agriculture in Essex was reduced between 1880 and 1884 may be gathered from the fact that on one Roothing estate 12 farms were in the owners' hands at one time, while on another near Billericay in 1884 seven, comprising an area of 2,000 acres, were under the management of the estate agent.

Reductions of rent.

44. To such tenants as were able and willing to continue in occupation, heavy reductions of rent were at this period given. Sometimes these reductions were temporary, sometimes permanent. A regular panic set in; some tenants who had hitherto weathered the storm, refused to renew their leases upon any terms, while others continued from year to year at large reductions. From figures given to me in Essex and stated at Appendices B. and H., it will be seen that rents were reduced between 1880 and 1886 from 25 to as much as 80 per cent. Many farms after lying derelict for a few years were let as grass runs for young stock at nominal rents. One extraordinary example may be quoted as descriptive of the depression in Dengie Hundred.

Shoats and Canny Farms, Steeple:—

	A.	R.	P.
Contents—Shoats	473	2	3
Canny	165	0	38
	638	3	1

Rent in 1873 - £760 per annum.
„ 1883 to 1886 - 460 „
„ 1886 to 1891 - 1 „
Tenant paying tithe, about 140*l.*

An adjoining farm, Steeple Grange:—

Extent	452	2	20

	£	*s.*	*d.*
Rent to 1887	455	5	0
„ 1887 to 1893	100	0	0

Reduction in selling value.

45. Sales of land were frequent, and, as may be expected, were disastrous to the sellers. Properties once let at from 1*l.* to 30*s.* per acre were disposed of at such figures as 6*l.* to 10*l.* per acre. The heavier the clay the worse the price. An island comprising 600 acres (half saltings) was purchased about 1875 for 8,000*l.* In 1885 it was sold for 420*l.*

The season of 1887.

46. It may safely be said that between 1879 and the present year there has been only one glimmer of light shed over the three-horse corn-growing lands of Essex. 1887 was a first-class year, the crops were heavy, the quality excellent, the season admirably adapted for working the fallows; but the year 1887 brought no better prices for corn, and all that heavy-land farmers would say in its favour was that in that year they made ends meet.

General character of the seasons.

47. I must confess that I thought the character of the seasons between 1880 and 1892 did not receive quite fair treatment in Essex. When a farmer lets his land run down it takes something more than a fair season to fill the stackyard. It is a matter of history that of the 12 years referred to, seven were under average, but it was repeatedly stated by the farmers of mixed soil that had it not been for the low prices, the heavy and increasing cost of labour, and the want of farming capital on the three-horse land, the general run of the seasons was not very far astray. (*See par.* 144.)

The fact was that many of the farmers were almost ruined by 1879, and they continued struggling along as best they could, paying rent in driblets, getting involved in various ways, and gradually allowing their stiffest fields to drift out of cultivation. So long as tithe and taxes were paid and a little rent got, landlords permitted them to continue in occupation, rather than accept the alternative of farming their own property.

How rough pasture originated.

48. As explanatory of the large area of land now to be seen in miserable rough pasture, and not yet entitled to be called old grass, it was stated that between 1880 and 1885 proprietors, after farming for a year or two at a dead loss, land which had been given up in bad condition, either seeded it down, or let the worst fields go to grass in their own way, and tilled only the lighter portions. By degrees, tenants were found at low rents, and these tenants have, as a rule, wisely refrained from breaking up anything that was out of cultivation on their arrival.

49. I saw a very large extent of land which might be described as "grass land aged from six to twelve years," and respecting which the foregoing is an exact history. Between Rayleigh and Canewdon, indeed all over the Chelmsford, Maldon and Rochford districts, large farms may be seen half or three-quarters of which have either been permitted to run wild or have been sown down in despair. Under the old system of management the corn produced did not nearly defray the cost of production, whereas in pasture if there be nothing gained there is nothing lost by cultivation.

50. Numerous examples of farms once renowned for the excellence of the corn produced, being let for a short term on condition that the tenants paid the tithe, rates and taxes, were quoted to me by the gentlemen who accompanied me through the heavy clay districts. Indeed the history of almost every farm we drove past, contained something or other painfully out of the ordinary. I myself visited Canewdon and Northpits in 1875, and was surprised by the fine crops of wheat, beans, and clover then growing. Now the whole place is lying in wretched pasture, next to useless.

Effect of the season of 1893: (*a*) On corn;

51. The year 1892 was a bad one for Essex, but of all the disastrous seasons that the county has experienced since 1840, the present must be described as the worst. The owner of a travelling thrashing machine informed me that in the Hanningfield and Baddow district wheat was not giving more than 2 quarters per acre, barley about the same. On the mixed soils 3 quarters is proving a fair average. On well-farmed lands in the Roothings 2½ quarters had been got from recent thrashings, and this from land always calculated at 4½ quarters. Barley and oats were described as no better than wheat; stackyards are almost empty; on one place there stood three stacks, in 1891 there were 21. It is the same everywhere.

(*b*.) On hay and root crops.

52. Hay was stated to have been either a total failure or so thin and short that on many fields it could with difficulty be gathered. Mangel and swedes were almost a failure on the heavier lands, and very poor on lighter soils. Late turnips, thousand-heads, and cabbage were quite up to the average, and benefiting from the open and mild autumn. Grass fields all through summer grew little or nothing; at the time of my visit they were covered with short green grass consequent upon the rains which fell after harvest, but that would succumb to a little frost.

(*d*.) Summary of results on an arable farm.

53. The results of 1893 upon an arable farm in Dengie Hundred were thus described by the occupier (a gentleman farming his own land):—

"My 1893 corn crop has been threshed and sold.

"15 acres wheat yielded 24 quarters, not 13 bushels per acre.
"20 „ peas „ 20 „ or 8 „ „
"44 „ barley „ 42 „ not 8 „ „

"I had to plough up 11 acres of barley and 32 acres of oats."

The same witness by reference to his books found that for the years 1890–91–92, his wheats had averaged only 2½ quarters per acre. He farms the worst variety of land, thin-skinned clay on a clay subsoil.

(*e*.) Effect of the drought upon stock and dairy.

54. Upon farms where cows are largely kept, the effects of the dry summer were equally severe, although they told in a different way. In the absence of grass, stock had either to be sold at miserable prices, or food to be bought to keep them in condition.

55. I heard of several dairymen who had parted with some of their cows, but the majority preferred the other course. From figures in my possession I find that to keep a dairy of small cows, numbering 75, during the summer months of 1893 an extra outlay of 4*l*. 10*s*. per head on artificial food was required. On a large farm of 950 acres, where grazing beasts in addition to a herd of 90 cows are kept, the artificial food bill for 1893 shows an increase of 675*l*. from that for 1892. Another large dairyman, whose farm I walked over, assessed the value of extra food at 5*l*. per cow. When it is remembered that in return for all this exceptional outlay, the price received for milk remained stationary, some idea may be formed of the terrible losses suffered, not only by corn farmers but by cowkeepers.

(*f*.) Prospects for 1894.

56. How rents are to be met next spring or the unavoidable expenses of farming defrayed by persons without either good credit or private means, is a question which no one in Essex could answer. There is very little corn to sell, and what is sold brings back a miserable price. Straw is very scarce; hay is even more scarce. Where 20 tons of mangel and swedes have usually been produced, there are not now three. Young layers in many cases totally failed and have been re-sown since harvest with *trifolium incarnatum*. Where anything like a plant of seeds was obtained, additional sowings were made after the removal of the corn crop, and these favoured by the weather have as a rule come above ground well.

57. But although the exceptional drought of 1893 wrought havoc among growing crops and on pasture land, it has in the highest degree favoured the conduct and management of bare fallows. Even the stiffest three-horse land has been cleaned and mellowed in a manner almost without parallel. The beneficial effects of such successful fallowings will doubtless be felt by the soil for many years, but the fear is that so ruinous will the losses of 1893 prove to the majority of heavy-land farmers, they cannot hold on to partake of the benefit. (g.) Effect of the dry season on bare fallows.

58. In Essex it is generally asserted that this year will prove the ruin of many farmers. Rents, it is said, cannot possibly be paid off the land. Putting rents aside, it appears to be a question of doubt where money is to come from to meet the manure and cake bills now due, or to defray the ordinary cost of labour for the next ten months. The position can only be described as most critical. Critical position.

III.—The Scotch Settlers in Essex.

59. Although during 1880 and 1881 every endeavour was made by proprietors and agents to let such of their farms as were in a lettable condition, the idea of inviting strangers to Essex does not appear to have taken definite form until a year or two later. The oldest Scotch settler that I met in Essex told me he came from Scotland in 1882, but he was not the first Scotchman to take land so far south. So far as his knowledge and recollection went, the Scotch settlement in Essex was founded in the autumn of 1880 by a Wigtownshire farmer who died recently. The incident of his hiring land so far from home was purely accidental. He happened to be visiting in Essex, and liking the country and thinking well of the prospects, he left Scotland. By several English gentlemen the highest possible character was given to the few Scotch farmers who between 1880 and 1883 took up their abode on Essex soil. They appear to have been men of energy, intelligence, and, what is equally to the point, substance. Although managing their land on principles not altogether in keeping with Essex ideas, they paid their rents with regularity and in every way proved themselves to be reliable and capable men of business. Naturally enough these strangers were for a year or two regarded with some suspicion, but from the very beginning the suspicion never assumed an objectionable form. It took the form of curiosity rather than animosity, and if the Essex man with his own prejudice in favour of corn and long fallows did occasionally look over the hedge and criticise the Scottish system, the Scotchman, with his preference for cows, grass, and turnips, was just as ready to question the wisdom of his nextdoor neighbour's proceedings. The first Scotch settlers.

60. The satisfactory results which followed the letting of Essex farms to Scotchmen being generally admitted, and the difficulty of finding local tenants for farms either surrendered by Essex men or in the hands of the proprietor, being keenly felt, estate agents about the year 1883 began to advertise Essex farms in the leading Scotch papers. Their advertisements attracted the attention of one particular class of Scotch farmer—the dairymen in Renfrew, Ayrshire, and Wigtown. At the time I am writing about, so keen had competition for Ayrshire land become, that rents had assumed almost prohibitive dimensions. Moreover, the restrictive clauses in Scotch leases, clauses which forbade tenants to sell hay and straw, but compelled them to farm on certain hard-and-fast rotations, had begun to stink in the nostrils of Ayrshire farmers. Taking all these things into account, the advertisements of "Essex farms within 25 "miles of London, at low rents and with freedom of cultivation," came at an opportune moment, and from the western counties a migration to Essex at once commenced. Advertising for Scotch farmers.

61. During an interview with one of the leading Scotch dairy farmers of Essex about a month ago, I put to him the plain question, "Have the results of your farming "here justified the change you made from Scotland ten years ago?" "Yes," he said, "it was a blessed day when I settled down here." That having been the experience of one of the earliest settlers, it is easy to conceive the effect it must have had with those who sought his advice with reference to taking land in Essex. And yet I would respectfully call attention to the fact that, although cases did occur of friends following friends and allowing themselves to be guided by the experience of those who had lived in the land for a few years, still the majority of the Scotchmen who came south within the past eight or nine years came not by reason of friendly recommendation, but in response to the advertisements which I have already referred to.

62. Much has been said, and more written, anent the Scotch colony in Essex—much that is in a manner true, more that is quite untrue. I think I shall be able to put the whole matter in plain words. I met about 30 Scotchmen during my sojourn in Essex, and I walked over 12 farms held by Scotch tenants.

Ayrshire cows for dairy purposes.

63. The earlier settlers belonged, I was informed, entirely to the dairy or, as it is called in Essex, the cow-keeping class. They brought their cows with them. These belonged to the Ayrshire breed. Small, thrifty, easily fed, but abundant milkers, these Ayrshires are; and in their native country such care has been bestowed on breeding only from milking strains, that to the man who knows his business and can afford to buy a good article, there is less difficulty in securing a satisfactory herd of Ayrshires for dairy purposes than perhaps could be said of any other breed of British cattle. It is interesting to observe that in spite of the objection to Ayrshires as beef cattle and the small value they represent when placed in the market as "draft milkers," the Scotch dairymen of Essex have found them the most profitable breed for Essex soil and climate. At this present day it is accordingly the general custom for Scotchmen running a milk trade in Essex to keep Ayrshire cows, and in many cases to import a waggon-load or two of heifers from Ayrshire every year to replace those which have to be drafted out.

Number of Scotch farmers and size of farms.

64. As to the number of Scotchmen in Essex I failed to get any definite evidence. The probability is that at the time of my visit they numbered between 120 and 130. They occupy farms of various sizes, from 120 to over 700 acres. The largest I inspected measured 716 acres, and carried with other stock 200 cows—the smallest, 120 acres. They are scattered all over the county, in the Roothings, on the stiffest clays of the Dengie Hundred, on the mixed soils of Ongar and Chelmsford; wherever farms were to let these men have settled down. From a valuable report on the consequences of agricultural depression upon the estate under his management, kindly supplied by a large land agent, I extract the following remarks with reference to his Scotch tenants:—

Report on Scotch tenants by a land agent.

65. "On the accession of ——— in 1884, the agency was placed entirely in my hands. I at once took up the question of the lands in hand, and by sending to Scotland and advertising freely in the Scotch papers, I succeeded in letting the farms which were in hand, and have altogether let farms to 14 Scotchmen, covering an acreage of about 3,840 acres, and to three Devonshire and two Northumberland men a further acreage of about 1,600 acres. I have within the last nine years re-let to tenants who have given notices, or to new tenants, no less than 5,000 acres. It is difficult to say what would have been the position of this estate if it had not been—

"(1.) For the influx of this considerable number of Scotch tenants;

"(2.) For the prestige which the ——— family held, not only as being good landlords, but of dealing in a liberal manner with the property in the way of expenditure . . . . . I find that for the years 1885–86 to 1891–92 the sum of 23,898*l.* was spent under the heading of farm buildings, cottages, and repairs, being an average of 3,414*l.* per annum, and this may be taken as a fair average of the last 30 or 40 years, and is exclusive of the D—— estate."

Successful settlers.

66. Four of these Scotch tenants I visited. I found them to be not only contented in the meantime, but hopeful for the future. They held useful land at fair rents, were farming well, and spoke most gratefully of the liberality displayed by the agent and landlord. Three were cowkeepers, and to suit their style of farming, the landlord had made great alterations in the farm buildings free of charge. In selecting his tenants the agent on this estate has exercised commendable caution, and I feel sure from what I saw that his choice will in no way disgrace him. The same story might be told of many of the Scotch tenants in Essex. Wherever they came to good estates, bringing sufficient capital with them, hiring fair land at fair rents, and not allowing themselves to be carried away with the conceited idea that a Scotchman may fatten where an Englishman would starve, I found that Scotchmen were turning out satisfactory tenants.

Unsuccessful settlers.

67. But, on the other hand, some had come south as mere adventurers, without capital, inexperienced in their business, slovenly in all their habits, bad farmers, unsuccessful at home, regardless of their duties to their landlords, and determined to serve themselves, let the consequences to others be ever so serious. This class of settler has not turned out well.

68. It must not be forgotten that many of the farms advertised in Scotch papers, and afterwards taken by Scotch tenants, were places wherein former tenants had been ruined, and that in many instances they were naturally bad farms, thoroughly impoverished by over-cropping, and allowed to become foul. It was in ignorance of the characteristic disadvantages of heavy clays, that such farms were taken by Scotchmen; and by Essex men themselves, I was repeatedly told that the Scotchmen had in many cases taken land which nobody else would have anything to do with, and had given such rents as 10*s.* per acre for what would have been dear at 2*s.* 6*d.* Many Scotch settlers, in offering for Essex land, insisted on having leases, and although some of these leases have expired and tenancies from year to year have been substituted, still I found that many are still in existence. Scotch farmers on heavy clay lands.

69. The main points of difference between the English and Scotch systems of farming as practised in Essex are these: The Englishman cultivates his land and tries to pay his way by corn-growing alone or by combining corn-growing with stock-feeding and cow-keeping. His expenses in labour, manures, seeds, and general farm management are heavy. The Scotchman carries out the temporary pasture system, keeping as small an acreage in cultivation as possible, and cutting expenses down to the lowest working figure. The Essex farmer is not afraid of a labour bill exceeding 2*l.* per acre; the Scotchman cannot endure the thought of any such expenditure in order to produce corn at low prices. The Englishman must and will farm his arable land well, he cannot bear to see it lying in grass which does not carry a heavy head of stock. The cautious Scot farms, not for show, but for profit, and so long as grass continues to pay something over and above rent he does not disturb it. On one of the best Scotch farms in the county I found the land apportioned as follows:— English and Scotch systems of farming contrasted.

Old grass, including permanent pastures laid down by tenant	318 acres.
Temporary pastures, one to six years old	247 „
Under the plough	71 „
	636 „

70. Fifteen years ago this farm was chiefly under the plough. Under present management it is paying well. The rotation pursued is—1, oats after grass; 2, mangel, swedes, or turnips; 3, wheat or oats with grass seeds. The mixture of seeds used is—Perennial ryegrass, 13 lbs.; Italian ryegrass, 5 lbs.; Timothy, 3 lbs.; Cocksfoot, 5 lbs.; Tall Fescue, 2 lbs.; Red clover, 3 lbs.; Cowgrass, 3 lbs.; White clover, 2 lbs.; Alsike, 2 lbs.; Trefoil, 2 lbs.; total for 1 acre, 40 lbs. Sometimes the pastures show symptoms of failure in their third year, and whenever this takes place they are broken up; but I walked over two fields of four and five years' old grass, both of which were good plants and full of the best natural grasses.

71. The generality of Scotch farmers, however, rely more upon perennial ryegrass than the natural varieties, and I found that where this was the case the land was broken up after three years' layer.

72. Again, oats take the place of wheat in the Scotchmen's system. They attach great value to oatstraw for feeding purposes, and, thanks to the good accommodation for cows which landlords have provided, they are enabled to exercise economy in litter, and use most of what is produced for food. Among Essex farmers, brought up to Essex farming, wheat is the favourite white crop.

73. Another pull that the Scotch settlers have, is to be found in the fact that not only do the farmers work hard themselves, but their wives and families take an active part in the ordinary everyday work of the farm. The wives and daughters superintend and assist in the dairy department, while the sons drive the horses or feed the cattle. A large proportion of these settlers have no pretensions, and make no pretensions, to be gentlemen farmers; they were brought up as "working farmers," and in Essex they are simply continuing in the manner of life to which they were accustomed. "The "Scotchmen live hard and work hard. They spend nothing, except on their cows," said a good Essex man to me; and I believe that the success which some of them have achieved is largely due to this fact.

74. Not many weeks ago it was stated in public print, that the Scotch colonists in Essex were sustaining such severe losses that many had failed, while more had made up their minds to return to the land of their nativity. This statement is not at all in accordance with the result of my investigations. I made most careful inquiries on all sides, and only heard of three cases of failure. With reference to an exodus The reported failure of Scotch colonists.

from Essex, the story is, in my opinion, without foundation. I have no hesitation in summarising the evidence received on this point. My brother countrymen in Essex feel the bad times and do not hesitate to say so, but they like the country; they entertain most friendly feelings towards their English neighbours; they are grateful for the kind hospitality extended to them on all sides; they go about their business in the way they think most likely to pay; and they unanimously expressed themselves as well pleased with the change from north to south, and altogether in favour of continuing where they are.

75. Of course, among so many one naturally expected to find some whose affairs were not flourishing, and it is true that several are extremely hard set to make ends meet; but even those, upon whom depression and want of capital weighed heaviest, stated their intention of remaining, for the simple reason that they believed they were better off and more likely to succeed in Essex than in Scotland.

Scotch opinion upon Essex farm labourers.

76. With reference to English labour, it was stated by Scotchmen that farm labourers, both male and female, were very inferior to what they had been used to up North; but that when the different wages of the two countries were taken into consideration, the Essex man was perhaps the cheaper of the two.

Conclusion.

77. I cannot but think that had agents as a body exercised more caution when accepting Scotch tenants, and had Scotch tenants known a little more about three-horse land, and not been carried away with the erroneous idea that land at 10*s*. an acre must be cheap, no matter how uninviting it looked, or how bad the character it bore, a good deal of disappointment would have been prevented on both sides.

78. But, taking everything into account, and remembering how farmers have suffered in all parts of the United Kingdom since 1879, I am clearly of opinion that the Scotch settlers in Essex have not proved the failures that some would have us believe; on the contrary, that the great majority have held, and are holding, their own. Without going beyond the evidence given to me by some of the best English farmers in Essex (and I am now referring to men whose names are well known and opinions everywhere respected), it is highly probable that before long the example set by the cautious and calculating cowkeeper and grass-farmer from Ayrshire will find many followers among the *élite* of Essex farmers—not because he gathers in more, but because he gives out less.

IV.—System of Tenure.

Yearly agreements have taken the place of leases.

79. Before 1879 leases of from 7 to 14 years were common in Essex, but now tenancies from year to year are preferred. As old leases expired, fresh agreements were made from year to year, and at the present day there are very few leaseholders.

In these depressed times, long leases are considered to be disadvantageous both for landlord and tenant. The agent on several large properties stated that he has granted no lease for 10 years. "No one asks for leases now."

Notice to quit.

80. The usual notice to quit is for one year, but I found a fair number of farms held from year to year with two years' notice to quit.

Conditions of letting usual in Essex.

81. The conditions under which Essex farms are usually let, are clearly shown by a copy of a yearly agreement, which will be found at Appendix A. Mines, minerals, and timber are reserved to the landlord. In some cases the game becomes the right of the tenant, but as a rule it is reserved. Assigning or under-letting must not take place without the consent in writing of the landlord.

The buildings and fences are to be kept in repair by the tenant, all necessary materials being found by the landlord.

The tenant is bound to farm in a good and husbandlike manner, but freedom of cropping is given until the last year of the term, when the land must be left in the same shift as when it was taken.

The meadow or grass lands must not be broken up or mown more than once in any one year. Penalties are imposed for any breach of this clause. Half the hay or straw may be sold off the farm, but the tenant must bring back an equivalent in the shape of dung, guano, or other artificial manure.

None of the last year's hay, straw, dung, or root crops are permitted to be sold off.

The tenant has to compensate the outgoing tenant for the fallows, muck, seeds and sowing, and unexhausted manures and improvements according to the usual custom of the country; and to thresh, dress, and cart out the last year's crop. He also pays for hay at a consuming price. He receives similar treatment on his quitting the farm.

The landlord has power to re-enter and re-possess if the rent be 28 days in arrear, or if a breach of covenants and conditions take place, or in the event of the tenant going into liquidation or becoming a bankrupt.

Any matters of dispute to be submitted to and settled by arbitration.

Although a lease and counterpart are frequently drawn up, I am informed that many farms are held on the strength of the agreement alone, and no instances of dispute arising from the absence of the more formal document were mentioned to me.

I observe that Mr. Druce, in 1881, found Essex farmers in favour of long leases. Within the last 12 years a decided change has taken place in the opinion of those persons, for although I met many farmers who wished their leases could be got rid of, I met none on yearly agreements who would prefer a lease.

V.—Changes of Tenancy.

Numerous failures.

82. The evidence given with reference to changes of tenancy in Essex was very remarkable. On the majority of estates, I might safely say that on all which lay in the course of my inquiries, there have been within the last ten years repeated and numerous changes of tenants both old and new.

Changes in Ongar district.

83. Of the 15 tenant farmers visited in Ongar district, nine had been in occupation for terms varying from two to ten years. One of the old tenants to the south of Ongar, stated as follows: "I have lost over 5,000*l.* in this farm of 400 acres. I have been "here for 41 years, but have given notice to quit in 1894. In the good times many "retired tradesmen or their sons came from London and ran up the price of land. "Many of them were ruined, and that class of competition has ceased. Three "neighbouring farmers on this estate have been sold up by creditors. The country "is full of similar cases, all because of agricultural depression and low prices. The "landlords have done all they could, and they must have suffered too. On corn land "two separate lots of farmers have been ruined since 1875, and the third lot can't "stand long. When capital is lost, of course the end is near."

Dengie Hundred.

84. In Dengie Hundred this was said, "Ever since 1879, things have gone down. "In this —— parish more than half of the land has gone out of cultivation. I am the "only old tenant left. On many farms tenants two or three deep have come and gone "within the last ten years, the greater part either completely ruined or nearly so. "It was solely because of the heavy losses they went. This year will break up a lot "more. Scores of farms have been taken on chance for a year and because of the "low rents, but they have been thrown up in a year or two, having been found "useless."

Braintree.

85. From Braintree district similar evidence comes. A gentleman of means and private property says, "During the last ten years the whole of the country seems to "have changed. Hardly an old tenant remains in some localities. People have been "ruined by the dozen, and this has been the worst year I ever knew, and I com- "menced to farm in 1832. Upon —— farm belonging to —— the rent stood at "666*l.* in 1876, since then it has been reduced to 230*l.* This farm has been in the "occupation of my ancestors and myself since about 1720. I have given notice to "vacate at Michaelmas 1894, in consequence of the low prices of produce and the "increased high price and value of labour."

A gentleman farming extensively writes with reference to one of his farms. "Have lived here for 28 years. Original rent for 450 acres was 760*l.* The farm "was lately increased to 900 acres, for which I now pay 675*l.* I have given notice "to leave, as I cannot make it pay."

Number of notices to quit served in 1892 and 1893.

86. An agent over about 18,000 acres in Braintree district received during the last summer months notices to quit to expire at Michaelmas 1894, from tenants of upwards of 7,560 acres. Last year by giving great reductions he succeeded in retaining tenants occupying over 4,500 acres, who had served him with notices to quit. It mattered not where I went, the same story was told about changes of tenancy.

Collapse of agriculture in Essex.

87. On very stiff land many of the farms are now held as sheep-runs at nominal rents, and the tenants, who are frequently large mixed-soil farmers, have agreed to carry them on, but all these uncultivated places tell of the consequences of agricultural depression upon former tenants who collapsed within the past few years.

On more friable soil, old tenants have gone and new ones come in large numbers. Many of them were ruined, or left after losing heavily.

There has been no ebb, the tide of changes has continued to flow steadily in the same direction ever since the days of Mr. Druce's visit to Essex. And all this took place in spite of repeated endeavours on the part of landlords to encourage and enable them to stay. Rents were reduced, arrears were permitted to accumulate, in many cases they were written off, improvements were made, drainage done; manure given,—yet all to no purpose; farming in Essex had ceased to pay, and capital was gone. Farmers whose fathers and grandfathers had lived in the same holdings, and who were regarded as personal friends by the proprietors, and accordingly treated with the utmost consideration, were compelled to give up, after having reduced themselves to poverty and the land to sterility.

Only those who kept a considerable head of stock, or took to cow-keeping, appear to have withstood the consequences of bad seasons and low prices, and still continue in occupation.

VI.—Unoccupied Farms and Farms in hand.

Decrease in the number of unoccupied farms.

88. In 1893 there are certainly fewer unoccupied farms in Essex than there were in 1886, and the same may be said of farms in the owner's hand. This is easily explained, indeed it has been partly explained in previous pages. Between 1882 and 1886 many of the abandoned farms were taken in hand by landlords who could afford to do so, and let in due time to Scotchmen or West of England men. On the other hand, many of the stiffest places were given up in such a state that no attempts were made to cultivate them. For a few years they lay derelict and tenantless. By degrees the surface became covered with coarse herbage, which was of some value to young cattle and sheep. When this had taken place, people were found to give small rents for the grass run.

Increase in the extent of uncultivated land.

89. The extent of land absolutely unoccupied, even in the Dengie Hundred, is very small, but the extent now uncultivated and bringing in a nominal rent as rough grazing is very large. No reliable record of the extent can be obtained from any source, but the question is of such importance and interest that I have arranged to get a map of the district through which I drove, marked in such a way that the number, acreage, and position of uncultivated fields may be pointed out to the Commissioners. Now, with reference to the fields shown on this map as uncultivated, I might state that it is only during a certain time of the year that they are even occupied. On what used to be a fine wheat-growing farm, but is now in wild pasture, I saw a flock of fully 200 ewes, but the tenant informed me that he would not leave them long there because they would starve.* At the very outside these places are stocked for six months of the year. An occasional farmer shuts up a field for hay, and this enables him to carry a few store beasts through the winter, but in many instances actual occupation merely takes place between June and November.

Nominal rents.

90. Landlords have lost so heavily since 1880 by farming their own places, that, as a rule, they will accept any rent rather than take exhausted land into their own hands. In many cases they have no capital to farm with. A common bargain in Essex has been, and is, "I'll let you have such and such a farm for 1*s.* an acre, you to pay tithe and "taxes, for three or four years, and then we can make another arrangement." I was told of a large number of run-out farms let on the above conditions, and what perhaps is stranger still, I heard of many good farmers who tried the experiment, but gave it up after losing heavily on the bare cost of cultivation.

Cost of restoring exhausted clay land.

91. The restoration to a good state of cultivation of such soil as the stiff worn-out clay of East Essex could not, public opinion said, be accomplished under at least 8*l.* per acre. Many said 10*l.* would not do it. At present, weeds of the worst kinds, quicken, or couch grass (*triticum repens*), thistles, docks, gorse, brambles, and even thorn bushes have taken possession, and it would require two consecutive years of bare fallowing and a very handsome coating of manure to put things right. I took care to get information with reference to the cost of making a bare fallow on Essex soil, and submitted the evidence obtained to several bodies of farmers in order that they might check the figures. The cost of a bare fallow on strong clay, allowed to tumble down

* This farm measures 760 acres, and includes 130 acres of good marsh land. Ten years ago the rent was 760*l.*, the tenant paying tithe and all rates, amounting to 6*s.* 6*d.* per acre. A former tenant paid 30*s.* per acre, and all tithe and taxes. The present rent is 300*l.*, landlord paying tithe amounting to 120*l.* (present value), rates 56*l.*, insurance 10*l.*, and doing all repairs, which cost 25*l.* a year. 100*l.* was spent on repairs in 1893.

to grass or sown down in bad order, was given to me by a large land agent and practical farmer from a note taken out of the books of a three-horse land farm, which had been thrown up in disorder a few years back:—

	Per Acre. £	*s.*	*d.*
Steam-ploughing and cultivating—double turn	1	7	0
Ploughing with 3 horses	0	12	0
4 spring and summer ploughings, 2 horses	2	0	0
1 crab-harrow with 6 horses	0	3	6
12 loads of manure and spreading	2	2	6
Water-furrowing	0	1	0
Rent 2*s.*, tithe 5*s.*, rates and taxes 5*s.*	0	12	0
Cost of first bare fallow	£6	18	0

To do the work properly a second year's fallow would be required:—

	Per Acre. £	*s.*	*d.*			
1 autumn and 4 spring and summer ploughings	2	10	0			
1 crab-harrow with 6 horses	0	3	6			
Water-furrowing	0	1	0			
Rent 2*s.*, tithe 5*s.*, rates and taxes 5*s.*	0	12	0			
				3	6	6
				£10	4	6

Now, this description of land is not worth more than 6*l.* per acre at present, and to bring it back to cultivation by bare fallowing would be almost buying it twice over. Neither has any consideration been paid to the fact that a very large proportion of the tumbled-down land needs draining, and is unmanageable without it. A good dressing of lime or chalk after thorough draining would be advisable, but to drain and lime would cost at least 8*l.* an acre more.

Twenty years ago an outlay such as would be necessary to reclaim a large part of Essex might have been profitably made, but at the present price of agricultural produce, I was informed that none but a madman would venture upon such a thing.

History of a farm practically abandoned.

92. Amid the numerous letters and papers with reference to uncultivated land and farms which I received, the following will be of service, applying as it does to a farm near Southminster, which is the centre of one of the very worst districts of Dengie Hundred.

"This farm has been out of cultivation 15 years. There are about 530 acres of it, which used to be considered a fine corn farm. The greater part of it has not been touched since it was ploughed last, 15 or 16 years ago. It is now grown over with a very inferior grass and other weeds, which in a dry summer like the last make absolutely nothing in the way of feed. For a few years it was practically abandoned, the tithe owner selling the growing weeds to get as much tithe as he could. Thirty-eight years ago, it was let on a lease at a rental of 1,000*l.* a year, tenant paying tithe and other outgoings.* The farm adjoining this on the Steeple side is in a similar state, and has been out of cultivation about the same number of years. Tithe on 530 acres was commuted at 6*s.* per acre."

Herbage growing thereon.

93. I walked across several fields of this 530-acre farm and examined the herbage growing thereon. A considerable area was wet and waterlogged, and there rushes in small clumps and fiorin (*Agrostis stolonifera*) commonly termed "watergrass" in Essex, prevailed. On the drier places, goosegrass, coltsfoot, Yorkshire fog and bent grass with an occasional stem of crested dogstail, and a carpetting of moss, formed the bulk of the food. If this variety of soil had been "inclined to grass" there would have been after 15 years time a show of cocksfoot, fescues, and white clover, and the grazing would have been of some appreciable value; but nothing of the kind has ensued, and what I walked over was not grass but weeds.

* This farm was taken in 1882, the rent being 220*l.* per annum. This was the exact amount of the tithe and rates, both of which the owners paid for the first year. In 1889 the rent became 300*l.* tithe free, the owners still doing all repairs. In October 1892, the farm was purchased by the present occupiers for 3,246*l.*, including timber valuation.

94. Looking back to what I saw on these uncultivated lands, I could not name to the Commissioners any farm or even field where grasses of any merit or value had come naturally. Even in cases where steps had been taken to sow seeds and promote the formation of good pasture, the character of the soil would seem to have defeated the endeavour. On Hazeleigh estate I saw a few very stiff fields which Mr. Fitch the tenant had sown over and over again with good grass seeds, the only result being that the plant died off prematurely. At the time of my visit the fields to which I refer were worth no rent at all for grazing purposes.

95. The evidence received from a gentleman of experience in Cold Norton Parish with reference to the value of the grass produced on these uncultivated lands is worth recording. He farms 650 acres. Under lease expiring about five years ago the rent was 400*l.*; it now stands at 100*l.* In 1780 the tithe charge was 35*l.* In 1836 it was commuted at 150*l.* He stated that this part of Essex is not a grazing country or climate; that the good grasses die out and their places are taken by weeds and rubbish. Also that on account of the impossibility of growing a sufficiency of green crops for winter, stock-farming is quite out of the question. He has started dairy cows as a last resource, but having had only one year of it, he could not express an opinion as to the probable results. But he could say that on clay land a cow will not give anything like as much milk as she would on mixed soil or gravel bottomed land.

Land going out of cultivation in Suffolk and N. Essex.

96. With reference to uncultivated fields, he said it looked as if before long all the three-horse land of East Essex would be lying idle, for every year land was being thrown up and no one dare farm it at present prices.

From information received when at Colchester, it would appear that on the borders of Suffolk and Essex, and in south-west Suffolk generally, things are gradually tending in the same direction.

A farm of 450 acres near Boxford is let at 5*l.* for one year. Landlord pays tithe.

Three farms near Bury St. Edmunds, comprising 876 acres, are in the landlord's hands. No tenants could be found.

A farm of 935 acres in the same district will be let at a very low rent. No tenant found.

A farm of 934 acres. About one-third has been sold at from 7*l.* to 10*l.* per acre (valuation included). Remainder lying idle, no tenant or buyer.

A farm of 197 acres. No tenant to be found. Landlord says it must lie idle. Good house and premises. To be sold at any fair offer.

A farm of 165 acres near Colne, Essex. No tenant.

Three little farms about 300 acres together, in North Essex. No tenant. Landlord takes them.

A farm near Henny, Essex—284 acres. Excellent farm. 1*l.* per acre refused in spring 1893. Now the only offer 200*l.* tithe free. Tithe is about 84*l.*

Two farms in Suffolk, 363 acres. No tenants to be found.

History of Great and Little Gubbins farms.

97. On the extreme south of Billericay District there are two farms, Great and Little Gubbins by name, the history of which is peculiar. The two farms are adjoining, only the highway road running between. Laindon Station, about 20 miles from London, is within five minutes' walk from the farmhouse. The property was subject to a mortgage of 9,000*l.*, and the former owner, being unable to find tenants, farmed the land until it failed to pay expenses. It gradually tumbled down to grass, and in course of time represented a certain value as a run for stock. Some few years ago the mortgagee foreclosed and took possession. The tithe-charge this year was 4*s.* per acre, and the grass lettings realised the same figure. Under section 8, Tithe Act, 1891, an attempt was made to get a remission of tithe, but the attempt was unsuccessful. The present owner is absolutely 40*l.* out of pocket, from having to pay rates, taxes, and wages to a caretaker. Great Gubbins was put up for sale in October 1893, but no bid was received.

Attempted sales of derelict land for building purposes.

98. Little Gubbins across the road, has been marked off in plots for budiling purposes. The conditions of sale include a free conveyance and a term of years is allowed to complete payments. Several auctions have been held, and a few plots with 20 feet frontage and 120 feet in length, were sold at 5*l.* per plot. But with the exception of the plots quite close to Laindon Station, the purchasers threw over their bargains, sacrificing the deposit of 10 per cent. I rode over this farm and discovered that no water fit for household purposes could be got.

Similar attempts to sell derelict land for building purposes were stated to have been made near Southminster, but the results have not proved satisfactory. In the Hadleigh district, I believe, the scheme has met with more success.

99. When interviewing farmers in the clay-bottomed localities, I was frequently impressed by the way in which they would refer to the future of certain fields on their farms. These were referred to as being "very strong" and "good for nothing but "wheat and beans," then they would add "we did not fallow this field last year and "ca'nt afford to do anything with it now." All this of course means a steady increase of uncultivated land and wretched pasture. The future of clay-bottomed localities.

Within the past three or four years many farmers have been unable to horse-cultivate or hire steam tackle to till their entire fallow breaks, and when once strong clay is let lie untended for 12 months, the probability is that it will pass out of cultivation altogether. It is more than likely that this disastrous year will be the means of immensely increasing the acreage of abandoned arable land.

100. The consequence of these changes,—and they are due to agricultural depression alone,—upon the labouring population of Essex have been very serious. Once upon a time, the corn lands of Essex gave employment to a large body of farm labourers; now in many parts there are few farm servants left. Between 1881 and 1891, the population of some of the purely agricultural districts of Maldon and Chelmsford Unions fell from 15 to 18 per cent., and if numbers were again taken a further decrease would be discovered. Wages, Mr. Aubrey Spencer tells us in his report to the Royal Commission on Labour, average from 14*s.* to 16*s.* per week, harvest and other piece-work included. Since he visited the Maldon division, I have reason to believe employment has grown scarcer, and in some places a slight reduction has been made in the rate of weekly wages. Employers stated their inability to pay the old wage in the present condition of their finances, and on all sides I was assured that with no hay, no roots, and very little corn and straw, there would be no need for labourers through the winter. Everything points to a winter and spring of exceptional hardship and privations for the labourers in the parts of Essex through which I passed. Effects of the depression on the labouring class.

VII.—The Depression as it has affected Different Classes.

Owners of Land.

101. I have been enabled, by the kindness of several large landlords and agents in Essex, to produce full and detailed information with respect to the consequences of agricultural depression upon eight properties. This information, with summaries and a few observations by myself, will be found in Appendix B. I.–VIII. It will be observed that rentals have been greatly reduced,* arrears blotted out, remissions given, large sums expended on buildings, and that in spite of it all, tenants are still unable to pay in full. At this present time agents are resigned to getting little or no rent next year, and the prospect of having to pay some tithe out of the funds of the estate.

Wherever annuitants have to be paid or heavy mortgage charges met, the owner has almost nothing left. The statement contained in Appendix B. IV. demonstrates fairly the position occupied by many an unhappy landowner. Persons who invested their money in land from 20 to 30 years age have suffered perhaps most of all. From a letter written by an Essex gentleman, I take the following lines:—

102. "My estate is 21 miles from London, and the soil is of good average quality. I give it as a good specimen of the condition of agriculture in Essex. I bought it in 1862 for 84,500*l.* It has since been doubled in size. The total cost comes to at least 200,000*l.* It would now possibly bring 50,000*l.* Before 1879 the gross rental was Reduced rentals.

* Table showing Deductions of Rent on Eight Estates during the last 14 years.

B. V.	14	55·5	
B. VI.	14	55·3	
B. VII.	11	46·0	If the letting of the home farm for, say, 170*l.* (reduced rental for 1893) be taken into consideration, the reduction of estate rental for 11 years is 60 per cent.
B. VIII.	14	43·0	
Averages -	13 years.	52·6	Reduction.

between 6,000*l.* and 7,000*l.*, it is now 4,000*l.*, with every probability of going 1,000*l.* lower unless matters soon mend. A little over a fourth of the property is grass. Before 1879, 500*l.* per annum kept the estate up, now it requires 1,500*l.* Although the tenants undertake to keep up their premises, the landlord finding rough materials, they simply refuse to do anything. The land does not produce nearly so much as it did, through the impoverishment of the tenants. Few bullocks or sheep are seen, nothing but cows. I get no rent at all for my land; I merely get about 4 per cent. on the cost of the buildings, drainage and fences. From the gross rental (4,000*l.*) must be deducted between 1,200*l.* and 1,500*l.* for repairs, leaving 2,500*l.* to 2,800*l.* for net rent as against 1,800*l.* for taxes and tithe."

Increased cost of repairs and buildings.

103. The inability of the tenant to do the necessary repairs, and keep up the buildings, gates, and fences, was frequently referred to by landlords and agents, and on several of the farms I inspected, dilapidations were conspicuous. One could not but see that where the farm steadings and cottages were chiefly constructed of wood and thatch, not only must maintenance be a serious item, but patch-work must be a very unsatisfactory substitute for a complete overhauling and putting up of brick walls and tile or slate roofing. On many farms it seemed to me almost ridiculous on the part of the landlord to look to the tenant to keep buildings in repair, for they were ricketty and rotten to the foundations. But even on such estates as those from which returns were obtained, where good brick walls prevailed, I observed a decided unwillingness on the part of the farmers to keep gates, fences, and floors in order, and when drawing attention to various forms of neglect, the explanation was always given in the same way—want of money.

104. Upon the estate, particulars of which you will find in Appendix B. III., the amount expended by the landlord on repairs and buildings has steadily increased from 2,020*l.* in 1881–82 to 4,690*l.* in 1892–93. Remembering that during the same period the rental has fallen considerably, it will, I think, be admitted that the impoverishment of the tenant hits the landlord in more ways than one.

Unfortunately, there are in those parts of Essex, cases of small estates heavily burdened, where the owner is unable to render any assistance towards renewing or repairing farm buildings and labourers' cottages. One remarkable instance of this came under my notice near Maldon. The steading was most dilapidated, the cattle yards were quite unfit for stock, in fact they were dangerous. On questioning the tenant as to the causes which led up to such a state of affairs, I was told that the landlord was supposed to maintain the premises and had undertaken in the first place to put them in repair, but he was too poor to do either, and had declined to assist. This farm was 248 acres, the rent about the year 1878 being 300*l.*, the tenant paying tithe. The present rent is 124*l.*, the landlord paying tithe (64*l.*).

Owners and Occupiers.

I pass on to consider the position of owners farming their own property.

Farms managed by owners.

105. The balance sheets found in Appendices C. III. and C. VII. both refer to farms which have been for years farmed by the owners, who are men of means, and practical experience.

In the first example, Appendix C. III., you will observe that a rent of 640*l.* is charged upon 575 acres, but nothing is put down for interest on capital or management. Suppose 4 per cent. be charged on 6,000*l.* capital invested, and 2*s.* 6*d.* per acre for management, the 88*l.* 6*s.* 7½*d.* annual profit shown at once becomes a loss of 223*l.* 10*s.* 10½*d.* This is a mixed soil farm, and in high condition and cultivation. Moreover, the balance sheets do not take in 1892 and 1893, both of them exceptionally bad years.

The balance sheets in Appendix C. VII. relate to strong clay soil. The rent charged was reduced 41 per cent. in 1884, to be in keeping with the times. No interest is charged on capital and no charge made for management, still the average loss from 1882 to 1887 was 92*l.* 15*s.* 6*d.* per annum. If we add 4 per cent. on 3,160*l.*, and 2*s.* 6*d.* per acre for management, this loss is increased by 174*l.* 3*s.* and forms a total of 266*l.* 18*s.* 6*d.* on 382 acres.

The addition of 807 acres between 1887 and 1891 made very little improvement, for the balance sheet for 1891–92, adding interest on 9,000*l.* capital and management as before, again shows a loss of 514*l.* 12*s.* 5*d.*

It will, I think, be perceived that in this instance there has been no rent got at all. Indeed, it is doubtful whether the farms have even paid their own tithe and rates.

The owner made the following statements to me. "I have been reducing the "acreage under the plough every year. I have now told my bailiff that my labourers "must go. We can't employ them any longer. As things are, we must come to the "Scotchman's system of spending as little as possible."

Under paid management.

106. There is still another variety of farm to which I would draw your attention, viz., farms in owners' hands, but under paid management.

The balance sheets in Appendix C. VIII. refer to a farm of this description, and they are of the greatest importance because the manager is acknowledged to be an exceptionally smart judge of stock, and a good all-round agriculturist. The sheets begin with 1888, at which time the land was taken in hand, and they go on to Michaelmas 1892. The average annual loss for these four years is 47*l.* 3*s.* 10*d.*, but no interest on capital is charged, neither is any rent entered in the books. If 4 per cent. on 2,500*l.* (the capital employed) be charged, the total annual loss becomes 147*l.* 3*s.* 10*d.* on 217 acres, or 13*s.* 6*d.* per acre on a rent-free farm.

Dairy *v.* corn growing.

107. But perhaps the most instructive balance sheets that I obtained will be found in Appendix C. X.

They refer to five farms all under the same management. Two are composed of mixed soil with a fair proportion of old pasture, and kept principally as dairy farms.

	Acres.		Acres.
Farm A. being	280	grass.	720 arable.
„ B. „	350	„	600 „
	630		1,320

32·3 per cent. grass to total area.

The other three are clays with very little old pasture.

	Acres.		Acres.
Farm C.	50	grass.	425 arable.
„ D.	40	„	310 „
„ E.	80	„	500 „
	170		1,235

12·1 per cent. grass.

Excluding interest on capital and cost of management, farms A. and B. return 10 $\frac{7}{10}$ per cent. on capital over and above rent. Whereas C., D., and E. only give 1$\frac{1}{5}$ per cent. over and above rent. Charging 4 per cent. on 22,000*l.* capital and 2*s.* 6*d.* per acre for management, A. and B. still show a profit over and above rent, of 5$\frac{2}{5}$ per cent. on capital. Whereas, submitted to the same test, C., D., and E. produce a loss of 4$\frac{1}{5}$ per cent. on capital.

Tenant Farmers.

Farm accounts.

108. Before asking your attention to the teaching of the balance sheets supplied by tenant farmers, I desire you to understand that the gentlemen from whom they were obtained, might safely be described as belonging to the best class of Essex agriculturists. Although rough estimates were sent in by smaller men, and books placed before me with full liberty to make use of their contents, I did not quite see how I could utilise the evidence, it not being altogether reliable. I did endeavour to make profit-and-loss accounts from cash-books, but was always defeated by the discovery of omissions which at once negatived the reliableness of the figures and entries. The accounts produced in Appendix C. have been regularly and carefully kept, and most of them were prepared in anticipation of my arrival, and handed to me as I went from place to place.

109. Dealing first with Appendix C. I. This is a splendidly managed farm, and the farmer has the reputation of being one of the best judges of stock in Essex. He does what few others can do,—he goes to a fat market, and, aided by accurate judgment, he buys half and three parts fat cattle and sheep at cheap rates, and after keeping them a short time, and, observing the fluctuations of trade, he places his animals in the best paying market. This witness was an adept rather than an ordinary farmer. Moreover, he is a very large cowkeeper. In drawing attention to his balance sheets, I wish to emphasise three points. First, a farmer of this class is a useful man in his district, for he is a great employer of labour and a great distributor of money. Second, the moment he commenced keeping cows and selling milk, his books began to show a profit in place of a loss. Third, much of what he made on milk he appears to have lost in other ways, inseparable from the cultivation of such a large area as he farms.

Charging nothing for interest on capital or management, his balance sheets show an average annual profit of 394*l.* 2*s.* 1*d.* (3 per cent. on capital) for 14 years' farming. But charging 4 per cent. interest on 12,831*l.* capital and 2*s.* 6*d.* per acre for management, he has been losing 236*l.* 12*s.* 8*d.* a year, or a little under 2 per cent. on capital.

Summary of farm accounts.

110. From these farm accounts I have prepared two tables for the information of the Commissioners. From them they will be enabled to see the changes which have taken place in expenditure and receipts between 1880 to 1885 and 1886 to 1892. In the hope that it might simplify the perusal of the figures, I have calculated the increases and decreases during the last six years to a yearly average. (See Column V.)

TABLE compiled from the Books of a large Mixed-Soil Farm in Essex.

Payments and Receipts for Two Periods of Six Years between 1880 and 1892; also Average Annual Increase or Decrease on each Branch of Farming.

PAYMENTS.

I.	II. Sums paid during Six Years, 1880–81 to 1885–86.	III. Sums paid during Six Years, 1886–87 to 1891–92.	IV. Decrease or Increase for Six Years, 1886–87 to 1891–92.	V. Average Decrease or Increase per annum, for the last Six Years.

Table of Comparison.

Showing Payments and Receipts during the Period of Six Years 1886–87 to 1891–92, in contrast with the preceding Period of Six Years 1880–81 to 1885–86. Figures taken from Column V. of foregoing Table.

Decrease in Payments.	£	s.	d.	Increase in Payments.	£	s.	d.
Corn bought	97	11	6	Cake bought	313	16	2
Threshing	26	7	9	Grains	64	16	7
Rents	372	11	9	Manures	19	14	3
Tithe	45	13	10	Stock	1,072	7	2
Rates	8	16	3	Railway charges	164	15	5
Taxes	14	18	0	Sundries	155	3	3
				Tradesmen	19	9	9
				Farm wages	18	3	4
Total Decrease	£565	19	1	Total increase	£1,828	5	11

Increase in Receipts.	£	s.	d.	Decrease in Receipts.	£	s.	d.
Stock sold	652	8	8	Corn sold	888	8	7
Milk	1,424	18	0	Hay	279	16	5
				Sundries	2	17	5
Total increase	£2,077	6	8	Total decrease	£1,171	2	5

Cr.	£	s.	d.	Dr.	£	s.	d.
Decrease in payments	565	19	1	Increase in payments	1,828	5	11
Increase in receipts	2,077	6	8	Decrease in receipts	1,171	2	5
Balance : Average annual deficit	356	2	7				
	£2,999	8	4		£2,999	8	4

From these tables it would appear that for the last six years this gentleman has been either losing about 1*l.* per day more or making 1*l.* per day less than he did during 1880–86.

Another set of balance sheets.

111. The balance sheets in Appendix C. XI., come from one of the largest and best farmers in Essex. He holds good mixed soil, and having been in possession for many years, the land is in excellent heart and clean. As the items of his accounts show, he grows seeds for sale, maintains a lot of stock of all sorts, has kept a dairy for several years, and does not overlook poultry farming. The result has been that on 3,470 acres. after charging 4 per cent. on capital, and nothing for management, he produces 234*l.* 15*s.* 4*d.* as the losses on nine years' farming. It is not therefore to be wondered that he has served a notice to quit his largest farm.

Farming on the Scotch system.

112. The accounts in Appendix C. II. relate to a 636-acre farm, managed on the Scotch system. A dairy of 75 cows is kept, 60 being in milk at the time of my visit. The acreage under the plough is restricted to the utmost, and the cows are fed largely on purchased food. The area under wheat seldom exceeds 10 acres, oats being chiefly grown. The small extent under the plough is well cultivated, most of the stubble land being subsoiled in autumn. In addition to furnishing five years' balance sheets this farmer was good enough to work out some calculations at my request. These I have considerably extended as descriptive of what I think may truly be called the "low-pressure" system of farming, and in order that the Commissioners may be enabled to contrast the system in its entirety and details with the "high-pressure" mode of farming once so common and successful in Essex, I have submitted the accounts referred to in paragraph 109 to a similar process. It will be seen that I have confined the comparison to the principal matters of produce, rent, labour, artificials, and stock purchased. And I would again observe that whereas the high-pressure farm, making no deductions for interest on capital or management, leaves a profit of 3 per cent, the low-pressure one leaves 12½ per cent.

High-pressure and low-pressure Farming.

Tables showing the different Receipts and Expenditure per Acre in High-Pressure Arable and Low-Pressure Grass Farming.

High-Pressure Arable Farming. 950 Acres.

Large *v.* small farming.

113. Although during the past decade, farming on a large scale does not appear to have succeeded, we are bound to admit that it has fared no worse than small farming. The accounts from a holding of 164 acres (see Appendix C. XII.) tell of a very heavy loss—a loss of 16 per cent. on capital, without taking into consideration management and the usual 4 per cent. interest.

114. During the three weeks of my sojourn in Essex I only saw two farms under 50 acres. Both were in wretched condition and the farmers in deep poverty and distress. From what was stated in evidence, it appears that although a few fields are of considerable service and value to a man with some other occupation, such as doing horse-work on hire, or taking occasional employment for which he receives wages, farming on a small scale has not withstood the depression.

Farmers who have made a little headway.

115. But there are a number of farms from 150 to 360 acres, occupied by working farmers with working families mostly of northern extraction, where headway seems to be made. Near Chelmsford I found a Lancashire man in occupation of 364 acres. This farm was formerly all under arable rotation. Under the present management 150 acres are kept under rotation, the rest having been seeded down. The present rent is 150*l*. the landlord paying tithe, 90*l*. 9*s*. 7*d*. The family work on the farm, and only two paid labourers are employed, their wages and earnings amounting to 85*l*. 17*s*. a year. Cheese is made and no difficulty has been experienced in getting a ready market in the neighbourhood at 60*s*. per cwt. of 120 lbs. In reply to a question put by me, this man admitted that if his boys and girls were drawing wages as hired servants, he might be hard set to find the rent, but as he only fed and clothed them and could do it for about 8*s*. a week per head, his position was better by far than it would have been if all labour had to be hired.

Comparison between large, medium, and small farms.

116. So far as I could see, the larger farmers have suffered no more than those in occupations which might be described as of medium size, and both have suffered less than the holder of small areas. The large farms of Essex, *i.e.*, those over 700 acres, are held as a rule by men of substance with something to fall back upon, and they have so far kept the land in first-class condition and cultivation. I had no reason to believe that such tenants had obtained larger reductions of rent than were given to occupiers of from 100 to 200 acres, but they certainly have succeeded in keeping up a prosperous appearance, whereas many of the small farms give one the idea of wreck and ruin. This is, I believe, pretty well explained by the fact of there having been a rush for small farms some years ago, when Essex farming was prospering and very little stock kept, and when less capital was deemed necessary.

117. In every part of Essex visited by me there are farms whereon great deterioration in the character and quality of cultivation is to be seen. On several farms held by Scotchmen the fallow lands were very foul and the old pastures decidedly impoverished. Hay-cutting and selling, one of the surest ways of destroying grass pastures, has been prosecuted to an unjustifiable extent. Some unscrupulous farmers, I found, had top-dressed meadow-land with nitrate of soda year after year and sold the hay to London contractors, and had then complained that the meadows were little better than useless for grazing purposes. I observed a great deal of this agricultural greed going on, but I am of opinion that Scotchmen are the chief culprits. Inferior farming.

If town manure were brought back and regularly dressed over the meadows, no damage would have been done, but to first nitre, then sell off the hay, and finish up by grazing the aftergrass with milch cows, which abstract the phosphates from all soils, is the worst of treatment and calculated to ruin the best pasture-land in the kingdom. This I think is the chief way in which Scotchmen are doing damage on mixed soils. In the three-horse districts one sees a great deal of half-hearted cultivation; a man "muddles his crop in," that is he does not prepare his land for seed in the proper manner. His horses are poor and half-fed, his ploughs are running without proper shares or the breast is worn off and does not turn the furrow as it should, his drags and harrows are worn down and do not bite sufficiently. This all results from want of money and loss of capital, and when approached in a kindly manner the truth is told even to a stranger.

118. Another sign of the times consists in the absence of cattle during winter. On farms where fifteen years ago from 40 to 50 bullocks were yarded and cake fed, a dozen poor Irish "stirks" are expected to make down the straw. Generally speaking there is too much selling off and too little bringing back, and although clay soils can stand depletive farming better than light loams, still they must not be denied good and timely cultivation if they are to continue growing fair crops. Scarcity of live stock.

A large cake and corn merchant with long experience among Essex farmers told me that his firm were now compelled to exercise great caution before allowing accounts to be run up by farmers. He said they had lost so much by bad debts that they would rather sell no cake than do so on trust, and this, he added, among men who ten years ago were good customers and thoroughly reliable. The same evidence was obtained from a commercial gentleman largely interested in the sale of a special artificial food for cattle.

Doubtless much of the present absence of live stock proceeds from inability to purchase on credit, and if there be any truth in the saying that in these days a man cannot farm profitably without plenty of stock, there seems to be little hope for many an Essex corn grower whose capital and credit have disappeared.

119. By those who can afford it, steam cultivation is largely used. After the removal of the corn crop, a steam tackle is hired to plough, dig, scarify or cultivate the stubble land. The prices charged in Ongar district are— Less steam cultivation of recent years.

For ploughing 10*s.* to 11*s.* per acre, according to depth.
„ digging 11*s.* to 12*s.* „ „ „
Cultivating, 2 turns, 10*s.* to 12*s.* „ „ „

the farmer finding coals and horses and man for the water-cart.

The owner of several tackles stated that of late years his business had greatly fallen off, farmers not being able to employ him. The use of steam machinery has always proved beneficial to the clay-land farmer, who watches his opportunity and does not plough too deep. By its help, the stiff land is well pulled about when dry, and after-cultivation much facilitated. Now, many a stubble field is left lying undisturbed when it should have been torn to pieces and knocked to and fro in preparation for future crops.

120. Still another branch of deterioration remains to be noticed. On these naturally wet and retentive clays drainage is all important. A farmer in Ongar district pointed out that many of his fields were waterlogged for want of new drains. "Thirty years "ago," said he, "we used to drain ten acres every year or two, now we cannot do any-"thing of that kind." At the time of my visit I noticed a large area in need of drains, and I doubt not that had not the summer been exceptionally dry I should have detected more. Of late years mole draining has been made to do the work of tiles, and as a cheap substitute it has proved useful on pasture land, but I was informed that at the best it was a makeshift and only owed its present popularity to the low cost at which it is done. Less drainage than formerly.

VIII.—Division or Enlargement of Farms.

Average size of farms.

121. The number and average size of farms on six of the estates visited by me in Essex, are—

Estate 1	-	-	19 farms, averaging	160	acres.
„ 2	-	-	99 „ „	130	„
„ 3	-	-	10 „ „	64	„
„ 4	-	-	24 „ „	253	„
„ 5	-	-	28 „ „	286	„
„ 6	-	-	12 „ „	448	„

Average size, over six estates, 223 acres.

But these farms are not all in the occupation of separate tenants. Frequently one farmer holds two or even three holdings from the same landlord. Within the past 12 years the tendency for farms to fall into the hands of those who already hold other lands has considerably increased. One witness, who said "farms are thrown at you," holds at this moment five separate farms, three of which he was asked to take. Besides which, the holding on which he resides was increased about five years ago by 450 acres which formerly constituted a separate farm. Division or cutting up of farms does not appear to have taken place in the rural localities. In the proximity of towns, fields have been separated or taken from farms and let to tradesmen at high accommodation rents, and I had evidence of several small properties being put up for sale and ultimately sold in portions; but taking Essex generally there has been no reduction of late years in the size of holdings. Not only do landowners and agents express themselves as distinctly averse to cutting up farms, and erecting new houses and buildings for which at present rents they would get no reasonable return, but among the agricultural classes, I failed to detect any desire for an increase in the number of holdings. Were things flourishing, it is not unlikely that a division of farms might be attended with good results, but at present farming in Essex is not in great repute as a business, and it is attended by too heavy loss to commend itself as a pastime. There are many Essex estates where the owner is not in a position to lay out capital on sub-division, while others are so heavily encumbered that it is difficult to see how they will ever find the money required to do the ordinary repairs of their estates as at present constituted. No one in Essex recommended the division of farms as likely to improve the position, and it is worthy of note that on the two estates where the average size of holdings was under 150 acres, rent was most in arrear and the landlords' prospects least hopeful. (*See evidence of a land agent, Appendix D.*)

Subdivision in the vicinity of towns.

IX.—Permanent Improvements effected by Landlords.

Bad condition of buildings and cottages on certain estates.

122. There are estates in the part of Essex visited by me where, within recent years, very little appears to have been done in the way of permanent improvements. As already stated (paras. 29-33) the farm-buildings and labourers' cottages on many holdings are wretched in the extreme, and in the prosecution of their business, farmers on these estates must be greatly hindered. Let alone the cost of keeping such ricketty steadings in repair (and this they are by contract bound to do), the impossibility of tenants so circumstanced competing with others in occupation of good premises, cannot escape detection.

Still one could not overlook the fact that less importance is attached by the corn-growing farmer of Essex to covered yards, slated roofs, and substantial walls, than is found among persons who prefer stock as a source of profit. Throughout a large portion of the county, stock appears to be regarded as something like a necessary evil, and corn growing the chief end of farming. Men whose opinions are so moulded are not very particular in the matter of cattle accommodation, and when visiting their farms and inspecting their buildings, I frequently noticed that the roofs and floors of the barns and granaries had been repaired and kept in fair order, when the cattle-sheds and stock-houses were much neglected. On one large farm near Ongar, where stock farming was carried out on a large scale, I observed several lots of fine bullocks in occupation of houses which looked as if they might collapse at any moment. On referring to the inferior quality of his buildings, the tenant admitted that they were bad, but he added that many Essex farmers never having known what it was to farm with good premises, did not

insist upon landlords' outlay to the same extent as north country men do. Perhaps then it is unfair to lay the blame entirely on landlords. In agriculture, fashions move very slowly, and although in Essex there are many progressive farmers who not only admit the advantages of well-arranged buildings and comfortable stockyards, but complain of the reluctance displayed by landlords in improving or remodelling existing premises, still others are contented to go on as they have hitherto done. It was pointed out with reference to cattle accommodation, that on many places so much straw is produced, the difficulty is to have it trampled down and converted into manure even with yards three-quarters open; if these yards were entirely roofed over, the farmers either could not buy sufficient stock to use up the straw, or litter would be trodden down in such a manner as to induce what is known as "firefanging," (an improper condition of farmyard manure, the result of superfluous littering).

But, admitting that the covering of yards might not suit the generality of Essex corn growers, I cannot but say that many landlords have been remiss in the performance of their duties in other respects. Cold, draughty stables, leaking roofs, impassable roadways, and other defects are too common.

Examples of liberal expenditure on improvements.

123. On the other hand, we have in Essex some splendid examples of liberal expenditure on permanent improvements by landlords. A few of these are referred to in the tables of Appendix B., and from the particulars there given some conception may be formed of the outlay within recent years. From one estate I have special evidence on the point, and from the agent's report I abstract the following lines :—

"I would mention that the amount actually insured on farm and other buildings (exclusive of any building estate) is upwards of 155,000*l*., and on a 6 per cent. table would give 9,300*l*. a year, which is more than the landlord receives at the present day from the rental (*i.e.*, apart from other sources of income) after deducting repairs, rates, taxes, and such charges and expenses as may fairly be attributable thereto. The expenditure on the estate in farmbuildings, cottages, and repairs has always been a heavy item. I find that for the years 1885–86 to 1891–92 the sum of 23,898*l*. was spent under this heading.

"In 1859 the list of arrears of rent did not amount to 25*l*., and this state of things went on for many years afterwards, in fact pretty much up to the seventies, whereas at the present time the arrears of rent for the half-year ending 25th March last amounted to nearly 1,600*l*., to say nothing of heavy sums which have from time to time been allowed or written off as bad debts and to per-centage allowances on rentals ranging annually for some years past from 5 to 20 per cent."

Having been over a considerable portion of this estate, I am enabled to say that on every farm visited there is evidence of landlord's outlay on permanent improvements. New farmhouses, additions to and alterations of old houses, covered yards, new sheds, substitution of tiles and slates for thatch, new cowhouses and milk rooms, new farm roads, gates, fences, water supplies, and such things, were pointed out wherever we stopped, and all had taken place while the letting value of the land was falling steadily. I know that what has been related with reference to this estate has transpired on many others.

Since 1880 there has been a much larger expenditure on buildings than in the preceding 13 years. This I write with reference to estates in a position to make improvements, while the reverse may be said of poor estates.

Loans at a low rate of interest required for carrying out improvements.

124. It was frequently represented to me that the unwillingness among certain landlords to carry out permanent improvements was owing to the difficulty in borrowing money for such purposes, and the high rate of interest payable for such sums as were borrowed. I had occasion to make a similar statement to the Royal Commission on Labour in connexion with labourers' cottages in Scotland. In Essex, improvements upon agricultural estates cannot, I was informed, be executed on money borrowed at the rate of interest now charged without a heavy loss descending upon the estate owner; but were some opportunity provided whereby loans could be got at a reduced per-centage, an incentive would at once be given to the landlord's expenditure.

It is a pity that in the good times, when Essex farms were paying large rents, so little was done towards the equipment of estates with substantial farm buildings. Whether it was that between 1860 and 1875 farmers expressed no wish for improved premises, or that landlords declined to comply with such wishes, I am unable to say, but it is evident that what cannot easily be done now, could and I think should, have been accomplished then.

X.—Changes in the System of Farming.

Changes in area under different crops.

125. In looking over the Abstract of Occupiers' Returns (Essex) for the years 1882, 1887, 1892, several points strike one as worthy of special remark. The acreage under wheat has decreased from 1882, about 15 per cent. in some parishes, and from 25 to 30 per cent. in others. On the whole the decrease in Essex differs but little from what has taken place in other counties. Barley is less grown than it used to be, but the reduction of acreage under this crop is less than has been narrated of wheat. Oats are evidently increasing in favour, for in nearly all the parishes in these four districts I find a substantial increase. In the cases of Hatfield Broadoak, Dunmow Great, Dunmow Little, Writtle, Ingatestone, Braintree, Witham, Maldon St. Mary, the acreage under this crop, from being insignificant in 1882, has become considerable. No great change seems to have taken place in beans and peas, but more land is devoted to green crops than formerly was the case. Bare fallows are less common than they were, while grass land for pasture and not for mowing has greatly increased

In answer to question 6 of my printed inquiry, "Your system of farming, and in "what way (if any) have you altered that system since 1882?" the following answers were received:—

Evidence from Braintree district.

126. From the occupier of a mixed soil farm in Braintree district: "Wheat and "barley are the chief crops; we also grow some agricultural seeds (turnips, cabbage, "mangold, &c.). We grow a fair amount of roots, with which, with cake and corn, "to fat cattle and produce manure for the corn. We send up to London about 3,000 "bags of green peas yearly. We both breed and feed. We have made but little "alteration, besides increasing the number of cows kept for milk from six to about "100, and therefore have had more calves. We have not made much use of silage, "but if we did not use our brains in getting catch crops, we should soon be swamped "entirely. We have laid some land down to permanent pasture, and it answers fairly, "but in this often very dry district it takes a generation to make a pasture. We "have generally used Webb's or Sutton's mixtures. On the heavy clays of our Essex "land bare fallows are an unavoidable necessity."

Another reply from Braintree states: "The four-course system generally (wheat, "oats, fallow, barley, clover, or peas). Since 1880 rather less long fallows and rather "more roots, also more oats after wheat. A few beasts are reared on the farm, but "we mostly buy Irish beasts in the autumn. These are fatted and sold about the "following May. We are seeding more of the red clover and also white, if we get "good strong plants; anything to make a little money to help the other crops in "value. We make no ensilage; a few catch crops are raised when the land is free "from couch grass. Land in this district is not good for putting down to grass; it "is too dry in the summer season, and will produce nothing after midsummer, and "too wet and heavy all the winter. It is impossible to work and keep the land fairly "clean without bare fallows. The main thing is to plough the land five times; then "scarify and manure it just before harvest with 12 loads per acre; lay it up on the "ridge until the spring, then if a dry season comes there is a prospect of a fair crop "of barley."

Ongar district.

127. From a strongish farm in Ongar district the following statement is made:—"I "do not keep so many sheep since 1884 after I had put the land in better condition, "and I have not grown barley the last three years; the land is not suitable. I have "laid about 25 acres of wet heavy poor land to grass for three years,—not much got "out of it yet."

Scotch system.

128. Under the management of Scotchmen the soil is treated in a manner very different to what took place before their arrival. It is not improbable that the increased area under grass and oats is largely due to the presence of Scotchmen. Except on some farms where the soil is heavy and subsoil retentive, these farmers pursue a system closely akin to the Scotch temporary pasture rotation, viz., oats, green crop, wheat, barley, or oats; seeds for two, three, four, or five years.

Grass and green crops.

129. Among the native farmers of Essex there is undoubtedly a disposition to leave grass or clover unploughed when the plant promises to hold for another season. There is also a marked liking for catch crops. Among green crops the acreage under thousand-headed cabbage, has, I was informed, considerably extended, and it is worthy of note that this useful plant has survived the intense drought of 1893, when mangolds and swedes have entirely failed.

130. All through the two-horse districts frequent attention was called to the attempts to pursue some new system of cropping the land, made by intelligent farmers, but

opinions were greatly at variance with respect to the results of these attempts. With reference to temporary pastures, Scotchmen and a few Essex men expressed themselves in favour of two, three, and four years layer, while others stated that after the first year the grass was very poor and left no profit. From what was told me I could not help thinking that by some the selection of seeds and management of the layers during the first year might have been better performed. It was pretty clearly proven to me that in Essex seeds heavily stocked or closely grazed during their first year's existence come to little good in subsequent years, and those witnesses who were successful with temporary pastures attributed the failures of their neighbours more to improper treatment than unsuitability of soil or climate. Not far from Maldon I walked over several fields of four and five years' old grass as good as anything I have seen in the border counties of Scotland, and on inquiry I found that great care had, in this instance, been taken to avoid over-stocking and too early feeding off. Another point struck me in connexion with the duration of pastures. Wherever the first year's layer had been close folded with sheep, the plant seems to have suffered, and either "mending" or breaking up was rendered necessary. The open system of grazing appears to have given better results, and this had happened without reference to the fact that on the folding system cake was used, and on the open system no extras were supplied.

Suitability of temporary pasture to Essex.

On the very stiff three-horse farms, I saw a good many acres under temporary pastures which prior to 1882 were constantly under the plough.

Although most of these pastures were managed by persons accustomed to that mode of farming, the results did not strike me favourably. Whether it was that the drought had killed the good grasses, or that the right sorts had never been sown, or that the soil did not favour the growth of the best varieties, I could not say, but certainly the fields of two or three years layer that I walked over were very wretched, and the farmers (Scotchmen) did not deny it. All they said was that they were worth the rent and carried stock enough to have a profit, whereas were the land ploughed up a heavy loss would be incurred.

131. It struck me as somewhat remarkable that many Essex farmers had little or no knowledge of the common varieties of grasses. When buying seeds for temporary or permanent pastures, it has been the fashion to send a description of the soil and climate to some seedsman of high standing, the selection of the seeds being left in his hands. This hardly commends itself as the best way of doing, and I think it could be improved upon. It is by no means improbable that of the mixture supplied, some seeds are unsuitable to the quality of soil, and accordingly come to nothing.

Prevailing ignorance about grasses and the management of pastures. And the desire for assistance and instruction among Essex farmers.

A large number of Essex farmers expressed the hope that the Board of Agriculture would interest itself in the question of what seeds and what system of management were most likely to make temporary pastures a success in Essex, and the matter seems to be one well worthy of immediate attention. Grass farming is something new to Essex men, and many of them are rather in the dark when dealing with the suitability of natural grasses to different classes of soil. But wherever I went there was a concensus of opinion that if by some means grass could be got to lie well for a few years, the position of the Essex farmer would be greatly improved.

If by the aid of an experimental farm, Essex farmers were instructed in the selection of grass seeds, and after-treatment of the young layers, there can be no doubt their prospects would be greatly improved. It is my duty to mention this matter to the Commissioners, and in doing so I would respectfully add my own hearty approval to the suggestion. I think much good would result from practical instruction and demonstration in this important branch of husbandry.

Experiments would be most interesting and useful on three-horse soil, for it looks as if the days for the old Essex clay-land rotation—wheat, beans, and barefallow—were past and gone, and if some way of growing fair pastures could be demonstrated, it would to a large extent dispel the darkness which broods over such localities as the Dengie Hundred.

132. Since 1880 such crops as lucerne and sainfoin have grown in favour, and on the dry class of mixed soils, both appear to occupy a considerably larger area to-day. It is the present custom to permit these forage crops to occupy the land for terms of years varying from five to eight; but it not unfrequently happens that weeds prematurely creep in to the detriment of the cultivated crop, in which case the land should once more be thrown into rotation. It was stated that in these depressed times many farmers wink at weeds more than they used to, and are averse to breaking up a sainfoin or lucerne layer until the plants are almost choked with couch.

Sainfoin and lucerne.

Writing with reference to three-horse land, a well-known authority on Essex farming says: "I never saw sainfoin do well on our heavy land, more particularly in wet "seasons. Lucerne succeeds fairly well if the subsoil is dry, but as soon as it gets "wet, it dies off directly, as it grows with a tap root going deep into the soil. If the "land remains dry it will hold for seven or eight years, but more often it gets grassed "over and choked in about four years."

Extension of dairy farming on mixed soil.

133. Along with the increase in grass land and green crops, the returns show a very considerable increase in the numbers of stock. This is especially true with respect to sheep and cows. In the Ongar, Chelmsford, Maldon, and Braintree districts cows in milk or in calf were more numerous in 1892 than in 1882 by 52 per cent. This of course is because of the extension of dairy farming for London, and it is no exaggeration to say that this change has been most beneficial to the farmers who made it. The presence of cows has enabled farmers to turn their second class corn to better account as food than selling it at market price, and I found that large quantities of home-grown produce were so consumed.

Among Essex dairymen, Shorthorns and Danish cattle, both large framed breeds, are in favour, while among Scotchmen the Ayrshire is preferred. The cost of keeping and liberally feeding a large Shorthorn cow was reckoned to be from 16*l.* to 18*l.* a year, an Ayrshire 15*l.* or 16*l.*, and in return for this outlay a profit of 5*l.* per head was expected. One of the advantages attending the keeping of cows in contrast with the old system of corn growing and stock fatting, was stated to be the self-supporting character thereby given to farms so managed, and the security from the importation of contagious and infectious diseases. On many large dairy farms the calves bred form the store cattle for the next two years, and instead of buying heifers or cows in the open market, home bred heifers from good parents are annually promoted to the byre in place of those cows which are drafted for sale.

Not so marked on three-horse land.

On the three-horse lands, the difficulty of growing grass and roots has prevented the spread of dairy farming, and the alteration of system which has accompanied the introduction of cows on many mixed farms, cannot therefore be related of this peculiar variety of soil. Nature has apparently decided that three-horse land shall be suitable for one style of farming and that one unfortunately the least suited to the present prices of agricultural produce.

Changes in systems of cropping.

134. Tenant farmers in Essex have now practically freedom of cropping and cultivation, so there is nothing to prevent them adopting any system. Although occasionally the old rotation has been modified and altered in the ways already described, I met with no example of an Essex farm in the occupation of an Essex man worked on a totally different system of cropping. On easily wrought soil the four course—corn, green crops, barley, hay, or one year's pasture still holds the sway; on strong land, (*a*) fallow, barley, clover, wheat, beans or peas, or seeds; or (*b*) wheat, fallow or green crops, barley, oats, seeds; or (*c*) wheat, beans, barley, fallow. With reference to the mixed soils between Maldon and Dunmow, I have the following evidence: "The four course used to be common. Now the sequence "of crops is not strictly adhered to. Generally speaking, wheat follows clover or "beans. Barley follows the root crop. Peas are now grown for London markets, "and are picked green." An extension of the four course specially devised for stock rearing was described to me at Sible Edingham,—wheat; winter oats, winter vetches and trifolium; peas, turnips, mangel, and cabbage; barley; seeds for one or two years. In describing his present system of farming, a large and experienced farmer said, "I farm entirely on business principles, and have no longer a fixed "rotation. I began to lay land to grass before 1882. I think much more must be "laid down. I try to work my land on a light land principle and find it answers. "Half pasture and half arable suits best. I find that with liberal treatment I can "get even strong land to come to a good sod in 12 years, but unless the right seeds are "sown and plenty stuff eaten on the land with stock, the results are disappointing."

Some of the recently established permanent grass on this farm was very good, but one field which had not been well treated could only be described as a failure.

Not much change in number of farm horses or farm labourers on farms still in cultivation.

135. There does not seem to be much decrease in the number of farm horses on the cultivated lands of Essex. This, I believe, may be explained by the fact of there being a larger acreage under quick-growing crops and roots, a great proportion of which are carted out and given to the cows. More work is also probably done by horse-power and less by steam. Nor have good arable farmers reduced the number of labourers regularly employed. This year, owing to the bad hay and corn crops and failure of roots, there has been a scarcity of employment felt, but this only applies to persons generally described as day-labourers. On holdings where grass has been

substituted for cultivated crops, and on three-horse farms, where land has gone out of cultivation, few labourers are employed on the land, probably not one for every two that used to be, but take the mixed soils not in the hands of Scotchmen, and there appears to be little or no change in the labour list. The presence of dairy cows always necessitates a number of attendants, for in a large measure they are house and hand fed. One man is expected to milk 15 or 16 cows, and this in a dairy of 200 cows means 13 or 14 milkers.

In connexion with the employment of labour as a part of Scotch farming in Essex, it is perfectly apparent that wherever arable farming has given place to temporary and permanent pastures, a great reduction in the number of hands employed has ensued. Where formerly three labourers earned a livelihood not more than one will now be found. Looking at it as a national question, this decrease in employment is to be regretted. So long as Scotchmen continue to hire Essex land, the substitution of pastoral for arable farming may be expected, and along with it a decrease in employment to the rural population. This accompaniment of Scotch farming was frequently referred to by Englishmen, not for the purpose of throwing obloquy on the settlers, but to show how the labouring population suffered by the change.

Poultry farming.

136. Since 1880 the extent to which poultry farming has increased was described as being well worthy of notice. The evidence I received showed that not only were poultry kept in larger numbers, but more attention is paid to breeding and crossing the best strains. Fattening for London market is now conducted on improved principles, and a large quantity of second-rate corn is consumed in this way. Portable poultry-houses are now general, and at the time of my visit might be seen on many farms. The houses are placed in the stubble-fields, over which the fowl wander in search of shaken corn or seeds. When undergoing the final process of fatting, meal made from home-grown corn or purchased stuffs and then boiled, forms their staple food. From the balance-sheets given in Appendix C. it will be seen that among Essex men the income derived from poultry farming is considerable, and I was informed that this special branch of farming had assumed its present importance mostly within the last 10 or 12 years.

Market gardening.

137. As to market gardening, except within a short distance of London, there can hardly be said to be any Essex land under systematic management. On the sewage farm at Chelmsford a small acreage is set apart for special crops, but elsewhere we are led by the agricultural returns to infer that the growing of such crops as rhubarb, parsnips, and onions has dwindled into insignificance. Small fruits on the contrary have increased their area, but the land occupied by bushes is too small to call for any further comment.

In consequence of the extreme drought of 1893 a few farmers lucky enough to have field cabbages planted were finding ready purchasers at the time of my visit. As much as 30*l.* an acre had been obtained for one lot that I saw, but I heard of much higher prices being given. It was pointed out that growing field cabbages for sale to greengrocers was not customary, and that sales were effected this year simply because of the exceptionally high figures realised.

Use of artificial foods and manures.

138. In the general management of stock and crop, the old rules of good husbandry are still followed. Perhaps some knowledge has been gained in connexion with the use of artificial foods and manures. Nitrate of soda, once looked upon as the farmer's enemy now ranks among his best friends, and as a top dressing for all crops it is in general use. Basic slag has in many instances taken the place of super-phosphates, and I met several large farmers who had greatly altered their views upon the suitability of bone manures and bone compounds as profitable sources of phosphates. Among stock farmers or those who combine stock with crop, there has been an increase of late years in the quantity of cake consumed, and from what I heard I believe more attention is now paid to analysis at the time of purchasing.

I might also add that farmers in Essex have as a rule recognised the difficulty of cultivating their worst land to a profit, and there was hardly a farm I visited upon which some bad fields had not been sown down and left in grass pending better times.

XI.—Causes of the Depression.

Low prices.

139. At a meeting of farmers held in Badworth Hall, Ongar, on October 25th, it was unanimously agreed that "the present depressed state of agriculture is caused by "the low prices, and anything that will raise prices will be in favour of agriculture."

140. At a meeting of the Eastern Counties Dairy Association, held in Chelmsford on November 3rd, the following resolution was unanimously agreed to—

Foreign competition.

"That this meeting feels that the present disastrous state of agriculture is due to the facilities given to foreign competition by the modern improvements in steam-

ships, railways, telegraphs, and means of transit, and that the farming of this country cannot be profitably carried on until the British farmer is placed on an equal footing with his foreign competitor, and the land of the country is relieved from its present heavy and onerous burdens; and begs the Government will take immediate steps to avert an imminent agricultural disaster."

These opinions were endorsed by the large meetings held at Braintree and Colchester and by individual farmers in every portion of the districts visited. Foreign competition and the constant influx of corn, flour, and meat were pronounced to be the chief causes of the present depression, and increased cost of labour and cultivation were said to have further assisted in damaging the farmer's affairs. Essex, being essentially a corn-producing county, peculiarly situated as regards the character of its soil and climate and not altogether adaptable to such changes in system as may be carried out on lighter soils and in more humid climates, has suffered from cheap corn and increased cost of production, to an extent which perhaps goes beyond anything to be found in any other part of the United Kingdom.

It is not necessary for me to repeat what is everywhere well known, viz., the very great reduction that has taken place in the value of our corn crops, but there is one important phase of the situation which was referred to time after time by the farmers whose evidence was sought. It was stated that prior to the time when foreign lands began to ship their produce in large quantities to British markets, bad seasons did not affect the home producer to such an extent as might be supposed, for when there was a short crop the price rose, and there was little perceptible deficiency in the total value of the year's crop. But now it was affirmed that a disastrous season, whether due to drought or wet, a bad seed time, or a stormy and wet harvest, has practically no effect upon market prices. Furthermore, it was stated that since foreign countries with ever recurring harvests, had begun to inundate our English markets with corn grown on virgin soil, and in bright and settled climates, home-grown wheat and barley could not be sold unless at give-away prices, if the least weather-beaten or high coloured. Many instances were quoted of barley and wheat being rejected as unsaleable in the local corn markets, which same samples would have been easily disposed of 20 years ago at fairly remunerative prices. Corn merchants corroborated this evidence, and assured me that they frequently experienced great difficulty in disposing of inferior grain although bought at a very low price. This they attributed to the large quantities of good barley and wheat shipped from abroad.

Low price of meat and wool.

141. Stock-keepers in Essex, whether breeders or feeders, complained of the great fall in the value of beef, mutton, and wool, and it seemed to be the general opinion that at present prices, stock could not be fattened to any profit. The depression has apparently affected this branch of farming only for the last three or four years, but it was described as very keenly felt among the men who had given special attention to stock.

Low price of milk.

142. Among dairy farmers the fall in the price of milk was described as being the chief cause of depression in their branch of trade, and the following figures were handed to me describing the depreciation of milk in the London market:—

PRICE of MILK per BARN GALLON.

—	Price per Barn Gallon.	Average for Year.	—	Price per Barn Gallon.	Average for Year.
	s. d.	*s. d.*		*s. d.*	*s. d.*
1882, 4 months	1 4		1887, 6 months	1 8	
„ 4 „	1 7	1 7	„ 6 „	1 3	1 5½
„ 4 „	1 10		1888, 6 „	1 7	
1883, 4 „	1 10		„ 6 „	1 2	1 4½
„ 3 „	1 4	1 7¼	1889, 6 „	1 7	
„ 5 „	1 7		„ 6 „	1 3	1 5
1884, 5 „	1 10		1890, 6 „	1 7

1885, 6 „	1 8		„ 6 „	1 3	1 5
„ 6 „	1 5	1 6½	1892, 6 „	1 7	
1886, 6 „	1 7½		„ 6 „	1 3	1 5
„ 6 „	1 3	1 5¼			

	s. d.
Average of 5 years, 1882 to 1886	1 6¾
„ 6 „ 1887 „ 1892	1 5
Fall in value of barn gallon	0 1¾

Over a dairy of fair milking cows giving an average of 600 imperial gallons of milk in the year, this means a decreased income of at least 1*l.* 15*s.* per head.

It was further explained that although cowkeepers whose contracts expired at Michaelmas 1893, had succeeded in renewing them at a considerable increase owing to the scarcity of winter food, those who were under yearly contracts expiring in spring had not, as a rule, benefited from the rise and were bound to supply the usual quantity at a low price although at increased cost of production.

Reduced value of store stock.

143. The reduced value of store stock does not to any very great extent affect those parts of Essex which I visited, because farmers there are not as a rule breeders or store farmers. It might rather be assumed that to men who buy largely of cattle and sheep for fatting purposes, the low prices at which beasts could be put in would be of assistance. But it was pointed out that this view of the matter was not altogether correct. The complaint was, that a farmer who bought an ox scaling in October, say 9 cwt. and turned him out to scale 13 cwt. prime fat, got so little for the 4 cwt. of additional weight he had put on in process of feeding, the extra price made did not cover the cost of food consumed and labour required. Both in corn growing and meat making the cost of production in Essex, and according to the system of farming prevalent in Essex, was stated to exceed the value of produce, and this it was said had been the case for the last few years. One large farmer engaged in corn growing, dairy farming, cattle feeding, and sheep breeding explained that he had tried his best by laying land down to grass and growing full crops at a minimum of expense, to keep things together and contend with the times, but he found it impossible to make a living when everything he had to sell made such low prices. Riding over his farm, he pointed out that very little saving could be effected in arable expenses, for the land was just as prone to grow weeds with wheat at 27*s.* a quarter as when it made 54*s.* He also desired me to recollect that on a corn-growing farm the reduction in the price of a quarter of wheat had to be multiplied by $4\frac{1}{2}$ in his case, in order to show the depreciation in value of an acre of that crop, and it became rather a serious question as to what could be done to bring back prices to a fair level.

Beef manufacture, no longer profitable.

Character of past 13 seasons as shown by the yield of corn on mixed soil.

144. With respect to the character of the seasons, some observations have already been made in a former paragraph. The past twelve seasons were stated by heavy land farmers to have been on the whole unfavourable, 1893 exceptionally so, but those on mixed soils did not think that they had suffered so very much, and the following particulars were handed to me as bearing directly upon the point at issue.

Table showing Quantities of Wheat and Barley grown on a Mixed Soil Farm in Essex. 366 acres of Arable Land.

	Wheat.		Per Acre.		Barley.		Per Acre.	
	Estimate.	Realization.			Estimate.	Realization.		
	Quarters.	Quarters.	Quarters.	Bushels.	Quarters.	Quarters.	Quarters.	Bushels.
1880 - -	574	563	4	6	242	265	5	3
1881 - -	538	518	4	1	347	350	5	0
1882 - -	485	480	4	1	321	324	6	0
1883 - -	493	478	4	6	295	313	5	2
1884 - -	568	533	4	7	234	281	5	4
1885 - -	588	578	5	5	754	720	6	1
1886 - -	475	428	4	4	440	439	5	0
1887 - -	529	482	5	2	357	333	5	1
1888 - -	540	541	5	0	335	290	4	6
1889 - -	515	477	4	0	303	224	3	6
1890 - -	458	428	4	0	340	343	5	0
1891 - -	650	674	5	7	500	502	5	0
1892 - -	334	380	4	4	320	341	5	2
Average for 13 years - -			4	$5\frac{10}{13}$	Average -		5	$1\frac{4}{13}$

It will be seen that with the exception of 1889, this class of land has since 1880 produced fair average crops, and the different yields per acre take one year with another, do not appear to contrast unfavourably with those of previous corresponding periods. From the evidence given to me, I believe there can be little doubt that between 1875 and 1880 the seasons were extremely bad. The strongest lands at that time got into a mass of weeds from which they have never recovered, and since 1880

the consequences of these wet seasons have never quite disappeared. In many parts of Essex, want of money both on the part of the landlord and tenant has prevented drainage being executed on naturally wet soils, and of course where subsoil water lurks in clay lands, it is useless to expect profitable crops. Farmers so situated, are apt to ascribe the scanty crops grown under such improper conditions, to the wetness of the season rather than to the waterlogged state of the land caused by effete drains. Farmers of experience in such matters, explained that most of the stiff land on clay subsoil required periodical draining, and they added that unless this were well attended to, all attempts to cultivate to a profit would be in vain. It was therefore a matter of no surprise that complaints came from three-horse farmers about the superabundance of water in the soil.

Damage by floods.

145. The rivers of Essex are liable to overflow their banks and flood the adjacent fields or meads, and there appears to have been some damage inflicted in this way during the past decade, but the area affected is very small, and so far as I could hear the injury sustained was confined to a loss of pasturage for a week or two, and did not take the form of sheep rot.

Other causes of depression.

146. Some allusion was made to the fact of there having been a good deal of damage done of late years by high winds during harvest. In exposed localities it was stated that the loss from "shake" had sometimes been equal to a full seeding or almost a bag per acre. I also heard of some farmers whose yards had been visited with attacks of anthrax. Foot-and-mouth disease was pretty general in 1884, and Essex suffered in common with other counties, but from no quarter did I hear of extraordinary agricultural distress proceeding from imported diseases or climatic influences. The depression was described as having been gradual and almost uninterrupted in its progress, and this present year is expected to ruin more men than any four that have passed since 1879.

No reference was made by the Essex farmers to *the currency question.* In private conversation it was stated that farmers knew nothing of the subject, and those who had tried to understand it and had read books and articles about it, confessed that they left off no wiser than when they began.

Commercial gambling.

147. *Commercial gambling in agricultural produce* formed the subject of a discussion among the Ongar farmers, and a resolution was submitted and unanimously passed "that gambling in produce be strictly forbidden, especially for future deliveries." Although "futures" and the clearing-house operations are matters with which Essex farmers are but little acquainted, they agreed that anything which created a fictitious quantity of produce in an already drugged market was calculated to keep down prices and militate against the farmer's interest. The custom of selling by paper contracts large parcels of wheat which in the majority of cases probably do not exist, and using these "futures" as a protection against actual produce, appeared to my Ongar friends to be a species of speculation which Government should put, if not an end to, at least a limit upon. It was contended that the effect of this mode of buying and selling must be to create a purely artificial supply, and to introduce opportunities whereby unscrupulous traders could overturn and upset the true value of any article as it would otherwise have been regulated by the natural laws of supply and demand. At no other meeting was this subject brought forward, and I could not therefore state it as my opinion that the Essex farmer attaches much importance to the operations of "bulls" and "bears."

XII.—Subjects of Complaints and Remedies suggested.

Although the depression was chiefly attributed to low prices and increased cost of labour and cultivation, a great many complaints were made respecting the present conditions under which agriculture is conducted in Essex, and numerous suggestions for their improvement.

At Ongar these subjects were separately dealt with under 11 distinct heads. One of these has already been disposed of, viz., the question of commercial gambling.

The Agricultural Holdings Act, 1883.

148. *The Agricultural Holdings, England, Act*, 1883, was described as a dead letter, and of no value to tenant farmers. At Ongar, the meeting unanimously agreed that it "requires amendment in many respects, and does not in any way meet the needs of "the tenant." The views expressed by landowners and agents materially differed from those of tenants. In Essex, compensation to the outgoing tenant is given for certain acts according to the custom of the country, and is fixed by local valuers, who agree among themselves as to the system upon which the various branches of compensation shall be calculated. But since the passing of the Agricultural Holdings,

England, Act, 1883, the tenant who feels that he is entitled to further compensation than may be obtained under the clauses of an estate lease, or agreement, can proceed under that Act. By lease or agreement the outgoing tenant is entitled to what are known as "covenants." These differ slightly according to the district in which the farm is situated, but a fair conception of Essex custom may be got from a description of the covenants on one estate.

149. COVENANTS.

Essex covenants.

1. The labour expended on the fallows and rent thereon.
2. Tillages.
3. Young seeds.
4. Hay at market price.
5. Manure, value of.
6. The threshing, dressing, and carrying out the corn according to the custom of the country, for which the landlord or incoming tenant is to receive or be entitled to the whole of the straw, chaff, and colder, arising from the last year's crops.

The probable present value of the above covenants, according to the custom of the country, was stated to be as follows:—

Tillages.—Ploughing 8*s.* to 9*s.* per acre according to soil.
Ditto 11*s.* to 12*s.* per acre on 3-horse land.
Harrowing and rolling 2*s.* 3*d.* per acre.
Value of "a dressing" from 11*s.* 3*d.* to 14*s.* 3*d.**
Farmyard manure 2*s.* to 4*s.* 6*d.* per load of 40 bushels according to age and quality.
Hay.—Consuming value, say two-thirds of market value on the spot.
Root crops.—Full cost of production according to details.

In order to assess and determine the value of these covenants, two valuers are appointed, one by the landlord, one by the tenant, and they on their part agree upon an umpire, who shall act in the event of a dispute.

150. Seeing that the outgoing tenant is by law entitled to compensation for acts not embraced in the covenants previously enumerated, it has been deemed advisable on the part of valuers to draw out for their own use a basis upon which to put in force the provisions of the 1883 Agricultural Holdings Act.

Mode of applying Agricultural Holdings Act, as practise by Essex valuers.

The basis arrived at I take from the report of the Committee of Essex valuers, as follows:—

As to Part 1, 1st Schedule (3rd paragraph). Provided that an unexhausted improvement is proved to exist at the termination of a tenancy, the value of newly laid down pasture depends mainly on the manner in which such laying down is performed.

1st. As to cleanness of the land, and its condition as regards drainage and level.

2nd. Whether laid down on naked fallow land or under a corn crop.

3rd. As to the quality, quantity, and selection of seed used.

Where laid down with proper seeds on clean fallowed land, properly levelled and drained, compensation shall be allowed the tenant, on a seven years' term of extinction, the cost of the fallowing, seed, and cultivation, as a maximum allowance, being the basis of calculation.

Where inoculated on land in a similar state, the total cost should be extinguished by a 12 years' scale of allowance.

When laid down in corn crop, without proper cleansing, little, if any, compensation should be allowed.

PART 2, SCHEDULE I.—DRAINAGE.

Draining with pipes or tiles, found by *landlord*, tenant performing all labour and cartage, on a scale of extinction covering 12 years.

Pipes or tiles found by *tenant*, in addition to labour and cartage, on a 16 years' scale of extinction.

But, on further consideration, the Committee reported that, in their opinion, the scale of allowance should extend over the same period of years in both cases alike, and that the period so fixed should be 12 years.

Steam or other *mole draining*, when the leaders are properly laid with pipes, and all drains left in working condition, on a scale of six years' extinction.

The necessity to avoid the passage of heavy machinery over mole drains was particularly referred to, and in this the Committee agreed.

Draining by *bushes or wood*, on eight years' scale of extinction.

---

* A "dressing" of land means the operations of ploughing, harrowing, and rolling, usually given to a fallow in order to thoroughly pulverise and aerate it. The "dressing" referred to above must not be confused with the dressing or winnowing of corn.

PART 3, SCHEDULE I.

16. *Boning of land*, with dry bones crushed, atwo years' term of compensation on *arable land*, and a four years' term on *pasture*.

Note.—In Devonshire and West Somerset a five years' principle is adopted for pasture; a hay crop, if taken, counting as two years' exhaustion. In the Northern Counties the scale is—

	Arable and Hay Meadow.	Pasture Land.
1st class (very beneficial effects)—exhaustion	$\frac{1}{5}$	$\frac{1}{10}$
2nd „ (not so meritorious) „	$\frac{1}{4}$	$\frac{1}{8}$
3rd „ (conditions bad) „	$\frac{1}{3}$	$\frac{1}{6}$

In Cheshire.	Pasture Land.
1st class—exhaustion	$\frac{1}{10}$
2nd „ „	$\frac{1}{8}$
3rd „ „	$\frac{1}{6}$

17. *Chalking of land.*—Allowance to extend to 12 years; no deduction for the first two years, subsequently a deduction of one-tenth each year for 10 years.

18. *Clay burning.*—One half the cost after one crop, and one-quarter after two crops, to be allowed.

19 and 21. *Claying and Marling.*—The same scale as applied to chalking.

20. *Liming.*—A four years' term of extinction.

Note.—In the Northern Counties the scale is—

	Arable.	Pasture.
1st class—exhaustion each crop	$\frac{1}{10}$	$\frac{1}{26}$
2nd „ „ „	$\frac{1}{8}$	$\frac{1}{16}$
3rd „ „ „	$\frac{1}{6}$	$\frac{1}{12}$

22. *Application of Artificial Manure.—Chemical Manures.*—No allowance after one crop.

Dressing with *fish*, without extra cropping, one-eighth of the cost to be allowed after one crop.

Town Manure or bought Dung.—An allowance of one-quarter after one crop, provided that no allowance be made after a second white straw crop, and that the purchase of manure is not in exchange for hay or straw sold from the farm.

23. *Consumption of Cake or other Feeding Stuffs.*—An estimated average manurial value of linseed and other cattle cakes and corn, in addition to the rough straw worth of manure upon which such feeding stuff has been used, shall be arrived at. The manurial value of every ton of—

	£	s.	d.	
Decorticated cotton cake consumed, fixed at	3	0	0	per ton.
Linseed cake	2	10	0	„
Cotton cake	2	0	0	„
Beans, peas, tares, lentils, linseed, and malt chives, consumed	1	10	0	„
Wheat, barley, maize, and oats	1	0	0	„

Corn used for horses not to be included.

Ordinary straw manure generally estimated at from 2*s.* to 3*s.* per load, the latter representing the maximum amount of value.

Folding with Sheep.—It is recommended that in future folding with sheep should be compensated for throughout the country.*

It was regarded as of importance that, while fairly allowing compensation to tenants under the Act of 1883, valuers should also exercise their powers under the same authority, in cases where breaches of covenant in regard to cultivation and general treatment of the land are shown to have been made.

The vagueness of awards complained of.

151. Valuers in making their awards, although they specify the various matters and improvements in respect whereof compensation is awarded, do not in Essex give information as to details of award, or the sums awarded for each act of improvement. The sum to be paid is generally stated to amount to so much, but in what way it is arrived at, both landlord and tenant remain ignorant. This formed a subject of considerable complaint from the tenant's side, and the administration of the Act was described as being not only cumbersome, complicated, and expensive, but too much enveloped in secrecy.

Consumption of home-grown produce should

152. Another complaint had reference to Schedule III., sub-section 23. Under this sub-section the outgoing tenant is compensated for "cake or other feeding stuffs "consumed but not produced on the holding." It was stated that now when the selling price of corn is low in the market, a large proportion of the wheat, barley,

* The allowance for sheep folding varies according to the number of sheep in given spaces, and the quantity of artificial food consumed. The allowance is from 10*s.* to 40*s.* per acre.

and oats grown on the premises, is consumed in the yard and sheep fold, but that under the Act no compensation is allowed for such food unless purchased and carted home. It was everywhere stated that this formed a grievous flaw in the Act, and was contrary to the spirit of fair play between man and man. be a subject for compensation.

153. Furthermore, objection was lodged to that portion of the Act which compels the outgoing tenant to give notice of his claim to the landlord two months at least before the determination of the tenancy, the landlord at the same time being allowed at least 2½ months to serve a counter-notice. Time given for service of landlord's counter-notice.

It was the general feeling of the tenantry in Essex that the term given to the landlord should not exceed at least three weeks. By some it was submitted that both claims should be served at the same time, but this opinion was not generally entertained.

154. I did not find among Essex farmers that, as a general rule, much importance is paid to the question of compensation for unexhausted improvements as provided by the 1883 Act. And I think anyone reading the former pages of this report may tell why this is so. The Act not much esteemed in Essex.

Since 1883 the agriculture of Essex has not been everywhere conducted in a manner likely to beget *boná fide* claims for improvements. On the contrary, the outgoing tenant has too often left dilapidations and deteriorated land after him. (See letter at Appendix F.) Even among the best of farmers I found much indisposition to rely on the compensation to be obtained in this way. It appears that several cases were decided since the passing of the Act, cases where the tenant's claim was met by a counter-claim from the landlord, and that, after fighting an expensive suit, the tenant found himself in the unpleasant position of having not only to defray his own costs, but to pay to the landlord a heavy indemnity for breach of covenant or dilapidations. These revelations have, I think, frightened the present race of farmers.

155. It does seem to be true that, in a great many cases, tenants sitting under lease have infringed and broken their covenants, particularly in the matter of cross cropping and the selling of hay and straw. As concerning the Agricultural Holdings Act and the connexion it has with the present condition of farming in Essex, I believe the following quotation from the evidence of an agent is not far from the truth. "I have not come across a real case of hardship against the tenant, but have "had to deal with a very vast number of cases in which the landlord has suffered "by the tenant. The objection to the present Agricultural Holdings Act is this, "and mainly this, that if the tenant gives notice to claim under the Act, it affords "the landlord the right to a counter-claim for dilapidations and for breaches of "covenant, for which the tenant may have been guilty." An explanation of its unpopularity.

156. Now, there is an important point with reference to breaches of covenant which was mentioned to me, and which I cannot pass over. It is not denied by tenants that the clauses with reference to cropping and sales are frequently broken, but it is affirmed that landlords and agents make no objection to the breach and take no notice of such things until the moment for a claim for improvements arrives, when they base their counter-claim upon that which they not only permitted but to which they tacitly consented. This conduct is felt to be unfair, and it was suggested that the landlord who, either personally or through his agent, winked at cross cropping, or allowed breaches of the lease to be committed without demur, should be treated as having constituted himself a consenting party to the breach, and thereby be deprived of his right to a counter-claim under that particular heading. There can be no manner of doubt that the penalties attached to cross cropping are capable of entirely annihilating any claim likely to be made for unexhausted improvements, and it is perfectly well known in Essex that many a farmer has been frightened off by the knowledge that he did break his lease and must be prepared for the consequences, even though the landlord's interest was in no way seriously affected by the breach itself. Where counter-claims are sometimes oppressive.

157. The evidence of a gentleman who farms a large extent of Essex soil struck me as being fair and just with respect to the indirect value of the 1883 Agricultural Holdings Act. He pointed out that "the Act has practically taken effect by causing valuers to "give compensation for improvements not formerly taken into consideration," and his experience was that it was only in cases where the outgoing tenant had ill-used his farm that his claim for unexhausted manures, &c. was contested. Indirect value of the Act.

158. Although I did not find that the mind of Essex farmers is sorely exercised upon the question of compensation for improvements as provided by Act of Parliament, I had continuous evidence of their desire for better security in the form of continued occupation at fair rents, no charge being put upon their own improvements. It was stated that on the expiry of a tenancy, the farmer who has treated his land with liberality and care, is liable either to have his rent raised on his own improvements Desire for better security to the sitting tenant. Continued occupation at fair rents.

or he must make room for some other person, and that any compensation which might be obtained by an outgoing tenant under an Agricultural Holdings Act is but a poor substitute for continued enjoyment at a fair rent. The principle of the Irish Land Act was generally approved of, and the system therein devised for ascertaining the fair rent was recognised as practical and equitable. It was suggested that courts of arbitration should be established, to which parties who failed to agree upon future rents could repair, and that the finding of the fair value of the land should be entrusted to local persons in the employment of the court. Nothing was said with reference to leases now running being made subject to a revision of rent, but as most of Essex is now held from year to year the number of cases which might come into court would be large. The opinions of Ongar farmers, with reference to this question, were embodied in a resolution and unanimously agreed to:—

"That the laws that have been passed and are so beneficial to Irish tenant farmers be immediately extended to the whole of Great Britain."

At Chelmsford "there was a strong feeling in favour of the establishment of "land courts with local valuers."

At Braintree it was moved and the resolution carried *nem. con.*:—

"That in view of the failure of the Agricultural Holdings Act, and the present insecurity to the sitting tenant, and the desire to attract fresh capital to the land, it is desirable that arbitration courts should be established by the Legislature as soon as possible."

Before consenting to the adoption of these resolutions, several farmers submitted that arbitration courts for the fixing of fair rents should be optional and not compulsory, and this opinion was shared by all present.

I find, on looking through the evidence given in the homes of farmers, that this want of security to the sitting tenant was believed to have the effect of preventing capital from being invested in Essex agriculture. One witness said he knew of cases where landlords were obstinate and had refused fair rents. Putting out good tenants, they had taken in bad ones. At present he thought the good tenant had no security on the expiry of a lease, and that some measure was required to protect him.

The marking of foreign meat.

159. *The marking of foreign meat* was strongly advocated by farmers both in public and private. It was said to be not only right and proper, but "common honesty" that anything, be it meat or other agricultural produce of foreign origin, should be sold under a title and description separate from what was produced in the home country. Among Essex men the opinion prevailed, that large quantities of American beef were passed off as English, and it was stated that the value of the prime home-grown article was depreciated on that account. A difficulty existed in some minds as to how this marking could be effected, but it was generally agreed that the step was necessary, and that the Board of Agriculture would have no difficulty in discovering a practical mode of carrying out the desired reform. It was felt that foreign stuffs, if marked "foreign," would not be confused with the home-grown article by those who were not familiar with the appearance of butcher's meat in a raw state, and that thereby the preference for English beef and mutton which is believed to exist among artisans and the labouring classes generally, would show itself to the benefit of British agriculture.

The production of the best quality of everything was regarded as one of the great hopes of the farmer, and anything which acted unfairly or damaged the sale of prime articles, was regarded as detrimental to our agricultural industry. Every possible means, it was said, should be taken to encourage good farming and good stock feeding, and this could not be the case so long as American beef hung alongside English, and was sold at the same rate per pound.

Adulteration and its prevention by Government supervision.

160. *The sale of adulterated products* was not specially referred to, but it was generally felt that the time had come when Government supervision should be brought to bear on the question of adulteration no matter what the article might be. Farmers, of themselves, have not the required technical or scientific knowledge to cope with unscrupulous manufacturers, and there was a feeling that the very existence of Government supervision in manures, cakes, or other artificial stuffs would have a salutary effect and secure to the farmer a genuine article at a fair price.

Suggested enlargement of the sphere of the Board of Agriculture.

161. I found in Essex a great wish that the operations of the Board of Agriculture should be extended till it resembled those of similar departments in foreign countries. (*See para. 131.*)

For example, it was suggested that the Board should have an experimental farm in Essex, where demonstration and instruction would be given in such matters as the best methods of laying land down to pasture, and the management of temporary grasses. The Essex farmer is not accustomed to, nor well versed in, pasture management, and it is I believe very apparent, that the great hope for a large portion of the

county lies in the substitution of good grass for unprofitable arable. It was stated that the Board could hire plenty of suitable land at 1*s.* per acre, and farmers would be greatly assisted by having practical instruction in what is, to them, quite a new branch of husbandry. From the expressions used with respect to the Board of Agriculture, Essex farmers feel that a great deal of good might result from its development, especially as a demonstrator or teacher in ordinary practical farming. Technical education is not believed in because it proves nothing except by word of mouth or on paper, and that to the general run of farmers is no proof at all.

The law of distress.

162. *The Law of Distress* was generally thought to have proved a protection to landlords, but considering the condition of agriculture in Essex, and the many instances where tenants have fallen into arrears and ultimately lost nearly everything, it was agreed that landlords had been lenient and merciful in not availing themselves of the powers they possessed.

Railway rates and the conduct of the G.E.R.

163. With regard to Railway Rates and the treatment of Essex farmers by the Great Eastern Company, which owns all the lines in the county, no serious grievances were submitted. On the contrary, it was stated that the Company had made more concessions than other Companies, and was both punctual and careful in the discharge of its functions.

Preferential rates given to foreigners.

164. But there were many complaints made against the *preferential rates* allowed on foreign produce upon English railways. These rates were considered to be unfair to the home grower, and the whole question was submitted as one requiring prompt and decisive treatment. It was stated that there was collusion between Shipping and Railway Companies, and the suggestion was made that the shipping freights and the railway charges on goods consigned to English markets should be quoted separately and not as one. Were this done, the general belief was that our Railway Companies would be seen to carry foreign produce at lower rates per mile than those charged against the English farmer.

By some it was proposed that all our railways should be taken over and managed by Government, and in support of the proposal it was argued that so long as railways remained the property of private individuals, as the shareholders virtually are, the charges on goods and passenger traffic would be kept to the highest possible figures. Were Government in charge, attention could be called to excesses, and such matters be righted by the representatives of the country assembled in Parliament.

Complaints with respect to the sampling of milk.

165. At Chelmsford, the Eastern Counties Dairy Farmers' Association called my attention to their present unfortunate position under the *Sale of Food and Drugs Amendment Act*, 1879, and submitted their grievance in the following terms:—

"Under section 3 of this Act samples are taken at the end of the railway journey where milk is actually delivered by the Railway Company to the purchaser, and the farmer has to run the risk of having his milk tampered with in transit. We submit that it would be only fair that samples should be taken at the place where the milk is delivered by the farmer or his servants to the Railway Company, and that the farmer should not be, as he is at present, criminally responsible for some act which may be done after the milk has passed beyond the control of himself and his servants.

"The Society is also advised that sections 14 and 15 of The Sale of Food and Drugs Act, 1875, have been held not to apply to proceedings taken under the 3rd section of the Amendment Act, which last-mentioned section enables a sample to be taken at the place of delivery of milk in the course of delivery to a purchaser in pursuance of a contract, the result of which is that it is not necessary to give any notice to the consignor that a sample has been taken, or to divide the sample, or keep any portion of it, and consequently the consignor has no opportunity of having an independent analysis.

"Several instances of this have recently come under the notice of the Society, and the hardship seems to be the greater from the fact that the analysis of milk is admittedly a very difficult and uncertain matter. We would, therefore, suggest that the consignor of milk from whom a sample is taken should be put in a similar position to that of a person from whom an article is purchased under the Principal Act for the purpose of analysis, and that the officer, &c. who, takes the sample should at once give notice to the consignor, and either deliver a sealed portion of the sample, or state where such portion can be obtained on application."

Several cases of summons under this Act have been tried, and the consignors have escaped conviction; but the Dairy Association described the amended Act as "very weak and faulty." I happened accidentally to be witness to a mishap which, in the present position of the law, might bring trouble to an Essex dairy farmer through no fault of his own. Waiting for an evening train at Chelmsford Station, I observed a railway porter wheeling a barrow with five tin vessels full of milk along the platform,

when one fell, and a considerable quantity of the liquid escaped. The fault was the porter's, but there was little to prevent him making up the deficiency with water. Supposing that he did not, the consignee in all probability would, finding that the vessel was not properly filled, hold the consignor responsible. Dairy farmers are, I think, entitled to lay their case before the Commissioners, and this affair on Chelmsford platform confirmed my private opinion as to the justice of their demands.

A better system of marketing farm produce required.

166. *The present system of marketing farm produce* was the subject of discussion at Braintree and elsewhere. A resolution was moved and passed—

"That the markets for farm and garden produce are unsatisfactory, and it is desirable that some better method for the disposing of dairy and green produce should be sought; also for the protection of British productions."

The question of introducing some better system of disposing of farm produce and doing away with the presence of the middle man, seems to have for several years engaged the attention of Essex farmers, but little progress has been made. It was said that many of the farmers are much beholden to middlemen who sometimes assist them by advances, and that in this way salesmen were felt to be in rather a strong position. But the general feeling, undoubtedly is, that at present any profits which would otherwise be the producer's do not go to him but to the middleman, and that a practical scheme to bring the producer and consumer into direct touch would be to the advantage of all classes of farmers. It was suggested, among other things, that each county should have its own market in London, and that a regular system of supply should be arranged in order to meet the demand, and prevent too heavy consignments of perishable articles at any particular time.

In view of the difficulty of starting and organizing county markets in London, it was thought that the matter might well be taken up by the Board of Agriculture. With it as a leader, Essex farmers would, I have reason to believe, readily follow. But it was feared that unless some Government department took an active part in this matter and continued to interest itself in its progress until fairly under way, the present condition of agriculturists in Essex would preclude many from taking part in such an enterprise.

The Ground Game Act.

167. *The working of the Ground Game Act*, 1880.—This Act was described as a great protection and boon to the tenant, and the only complaints with regard to damage by game whether "ground" or "winged," came from estates where the shooting was let to sporting tenants. It appears that occasionally shooting tenants breed and hand-rear pheasants in large numbers, and that these have inflicted serious damage on the corn crops of adjacent farms.

Shooting tenants.

Farmers who hold land subject to shooting tenants describe themselves as having suffered considerably from the introduction of gentlemen of large means but with no real interest in the affairs of farmers of the locality, and it was suggested that in future when a landlord desired to let away his sporting rights, the tenantry should have the first offer and the preference over all comers. On the part of the landlord it was stated that since the letting value of land in Essex had fallen to its present figure, it became necessary for them to let their mansions and retire to smaller houses, and that this could not be accomplished unless the attractions of shooting were added to the utility of the house.

So far as I saw Essex and met Essex farmers, I found very few complaints with respect to game, and there would appear to be a good deal of truth in the evidence given by an agent "My experience is that there are more rabbits at the present time "than before the Act was passed, and that the tenant farmers as a rule now preserve "them in a great measure for their own sport and benefit."

Summing up the evidence received on this point Essex landowners appear to have treated their tenants with great consideration during the past 13 years, not alone as regards game but in many other matters. The feeling that exists between the two parties is, I have cause to believe, most friendly.

A strange injustice.

168. *The City of London Grain Duty.*—A strange injustice to the corn-growing farmer of seaboard counties, such as Essex, was brought under my notice by some of the larger corn merchants who attend the local markets of the Eastern Counties.

From one firm I have received the following statement:—

"You are, no doubt, aware that nominally all grain coming into London is liable to the City of London grain duty; but, owing to a flaw in the Act, it has been decided in the law courts that grain imported by a miller or maltster for manufacture is exempt. In order to come under the definition 'imported' it must be sold on what are known as 'cost freight and insurance' terms. The foreign import trade being in the hands of comparatively few large firms, they have been able to impose these terms on buyers; but, owing to the small parcels in which English grain has to be sold, the number of sellers, and the want of combination which

seems inseparable from everything connected with agriculture, the exemption has been found utterly impossible in the case of home-grown grain. There is thus at present the glaring injustice that while a great part of the foreign grain imported is not liable for duty, the whole of the home-grown wheat, barley, oats, &c., reaching London by water pays a duty of three-sixteenths of a penny per cwt.

"We are staunch freetraders, but this seems to be an import bounty on foreign grain. By placing this and similar matters before the Royal Commission you will deserve the special thanks of all connected with agriculture, and more particularly those in the seaboard home counties, Essex, Suffolk, and Kent."

The point of injustice is that a London miller may buy a parcel of foreign wheat *on sample* and import it, no duty being charged on either merchant or miller, but if a Maldon merchant sell a parcel on sample (the wheat at the time being on his granary at Maldon) and then ships it to London to the buyer's mill, a tax of three-sixteenths of a penny per cwt. is levied. This is a tax on the English article and letting the foreigner go free.

When Essex wheat, barley, or oats is shipped to London *for sale*, the charge of three-sixteenths of a penny per cwt. is perfectly legitimate, and this is said to be "the only case in which the City of London ought to make the charge."

The system of buying and selling by live-weight.

169. *The use of the weighbridge* in auction rings or at markets does not appear to have many supporters in Essex. The machine erected in connexion with Chelmsford market was described as "a disgrace, and unfit for use." One gentleman stated in public "that he would back his judgment against any machine as to the weight of 20 "or 100 bullocks." It would, nevertheless, appear that the fact of the Chelmsford machine being out of order is due to neglect and misuse rather than any fault of the machine itself, and that it is not used because butchers refuse to buy by live-weight and farmers do not care to press for a change in the system of selling. The disposal of fat stock seems to be so much in the hands of salesmen that the introduction of live-weight sales and quotations can hardly be accomplished without their support. That support, I have reason to believe, Essex salesmen are not at present disposed to give, the reason again being that butchers and dealers oppose the substitution of a new for the old mode of selling. Some supporters of the system expressed their belief that the "farmers throughout the country were losing millions a year through not using "the weighbridge both for buying stores and selling fats." I heard of very few farms supplied with cattle weighbridges, and farmers are accustomed to value their animals from sight and touch alone. In this matter, I think prejudice plays rather a prominent part. It was submitted by an ardent disciple of the weighbridge that every salesman should be compelled by law to have a weighbridge in connexion with his ring, and to register the live weight of each beast in a conspicuous place, as it entered the ring. Reference was also made to the liability of the dial register to get out of order, and a preference was given to machines which worked with sliding weights. The general opinion was that if the Board of Agriculture took steps to demonstrate the advantages of the weighbridge, the opposition of butchers and dealers would soon be overcome, and that then a benefit might accrue to feeders, but that until this were done, the general adoption of the live-weight system need never be expected. Even among those who expressed themselves as perfectly competent to sell by eye and hand, it was agreed that the presence of correct weighbridges in sale rings would not be in any way detrimental, while as indications of the weight of each beast they might be of some service.

XIII.—The Working of the Tithe Act, 1891.

The Act has in some cases deprived the tenant of remission from the tithe-owner.

170. Prior to the passing of the Tithe Act, 1891, some of the tenant farmers in Essex were in the habit of receiving remissions from the tithe owner. Since 1891 these remissions have ceased, and the tenant now pays in full to the landlord. One exception was related, where the tithe owner informed the landlord of his intention to remit 10 per cent. and requested him to receive from the tenants at the same reduction. It was the general experience of Essex farmers that the Tithe Act, 1891, had not benefited the occupier in any instance, while at times it had absolutely damaged him by shutting him out from a possible remission.

Section 8 has proved to all purposes inoperative.

171. Section 8 of the Act provides for "remission of tithe rentcharge when it exceeds "two-thirds annual value of the land." The annual value is described as being "ascertained and entered in the assessment for the purpose of Schedule B. to the "Income Tax Act, 1853, or as certified as hereinafter mentioned."

Although numerous attempts have been made to obtain relief under this section of the Act, they have either totally failed or only proved successful to an insignificant extent. I heard of one case where the tithe-owner gave up his claim in toto for one year, in accordance with the offer made by a tenant proposing to hire a farm previously tenantless.

It would appear that the mode of assessing for income tax purposes under Schedule B., described in a circular issued by the Board of Agriculture (April 1893), viz., that "the income arising from lands used solely for husbandry should be deemed "to be one-half of the annual value, including tithe," does not apply to the assessment for tithe purposes, and therefore is not observed by the Local Commissioners when adjudicating upon tithe disputes. The custom pursued and stated by the Local Commissioners to be "proper" in relation to income tax is to assess for the full amount of annual value, including tithe, but to receive only half the tax. But they maintain, and rightly so, that they have no power to interfere with the "full annual value" as the assessment referred to in the Tithe Act, 1891.

Examples of failure to obtain adequate relief.

172. This mode of assessing *in full* has however rendered section 8 of the Tithe Act to all practical purposes inoperative, and several letters were addressed to me by parties who had sought relief, but found themselves defeated on account of the mode of assessing in full under Schedule B. to the income tax. Two of these letters will be found in Appendix E.

Here is a case of partial relief. A farm in Cold Norton parish was hired in 1889. Acreage, 268 acres. Old rent, 268*l.* and tithe. Present rent, 10*l.* Tenant pays tithe, present value, 60*l.* Assessment for local purposes, 80*l.* Rates, 14*l.* Landlord does repairs. The tenant applied for a remission of tithe under section 8 of the Act. The assessment under Schedule B. for income tax was 10*l.* + 60*l.* = 70*l.* full annual value, and accordingly the tithe (60*l.*) exceeded two-thirds of the full annual value by 13*l.* 6*s.* 8*d.*, which amount was remitted to the tenant. For 1893 the landlord accordingly gets 10*l.* as rent while the tithe-owner draws 46*l.* 13*s.* 4*d.*

Now take Mr. Bruty's case (see Appendix E. I.). His farm of 150 acres is let for 40*l.* (11*l.* 3*s.* 6*d.* rent and 28*l.* 16*s.* 6*d.* tithe). The tithe charge exceeds two-thirds of the full annual value (40*l.*) by 2*l.* 3*s.* 2*d.*, which paltry sum is remitted, the result being that the landlord gets 11*l.* 3*s.* 6*d.* as rent while the tithe-owner receives 26*l.* 13*s.* 4*d.*

The case submitted by Messrs. Hill, Son, and Richards (Appendix E. II.) is one where noremission was obtained. Their farm was let at 24*l.* 4*s.* 0*d.* annual rent, the tithe rentcharge amounting to 21*l.* 19*s.* 0*d.*

If 21*l.* 19*s.* 0*d.* had exceeded two-thirds of the full annual value (46*l.* 3*s.* 0*d.*) a remission would have been obtained, but 21*l.* 19*s.* 0*d.* being 8*l.* 16*s.* 4*d.* less than two-thirds of 46*l.* 3*s.* 0*d.*, Messrs. Hill, Son, and Richards had no case.

The complainants in Essex thoroughly recognise the good intentions of section 8 of the Act, but they feel, and I think have fairly demonstrated, that at present the section is practically worthless, and that until the mode of assessment for tithe purposes is either made subject to the same rules as are applied to income tax, or arranged on some entirely new system, the relief designed by section 8 will continue to be either inaccessible or not worth the seeking.

The parties who mentioned the subject to me, as well as the writers of the two letters given in Appendix E., have evidently failed to discriminate between the powers and duties of Local Commissioners in the two matters of income tax and tithe rent assessment, but they have nevertheless done good service in demonstrating by facts and figures the anomalous position of landlord, tenant, and tithe-owner in these depressed times and in districts where rents and farming profits have well-nigh disappeared. It is surely a strangely unfair state of things which entitles the tithe-owner to claim 60*l.* from a farm let at 10*l.* per annum, and the Act of Parliament which we believe was intended to remedy the injustice has surely fallen short of the mark when the most it can do is to leave the tithe charge four and a half times the rent.

XIV.—Burdens on Land.

Tithe-Rentcharge.

The inequality and injustice of tithe as apportioned in 1836, at the present day.

173. By reference to Table G, I. in the Appendix, it will be seen that the tithe charge varies very much over the counties of England. Strange though it may appear, the following figures show that the tithe commuted in 1836 upon Essex, was almost as much as that charged on the six counties of Lancashire, Northumberland, Cumberland, Durham, Westmoreland, and Rutland.

TABLES showing different AMOUNTS charged for TITHE on SEVEN ENGLISH COUNTIES.

County.	Total Area of County.	Population, 1891.	Commuted Tithe.
	Acres.		£
Essex	987,028	785,445	250,278
Lancashire	1,207,311	3,926,760	73,989
Cumberland	970,161	266,549	26,219
Northumberland	1,289,756	506,030	77,537
Durham	647,281	1,016,559	57,374
Westmoreland	500,906	66,098	7,680
Rutland	97,273	20,659	8,236
Totals for six counties	4,712,688	5,802,655	251,035

County.	Tithe. Per Acre of Total Area.	Tithe. Per Acre under all kinds of Crop, Bare Fallow, and Grass.	Tithe. Per Head of Population, 1891.
	s. *d.*	*s.* *d.*	*s.* *d.*
Essex	5 $0\frac{3}{4}$	6 0	6 $4\frac{1}{4}$
Lancashire	1 $2\frac{1}{2}$	1 $9\frac{1}{4}$	0 $4\frac{1}{2}$
Cumberland	0 $6\frac{1}{4}$	0 $9\frac{3}{4}$	1 $11\frac{1}{2}$
Northumberland	1 $2\frac{1}{2}$	2 $1\frac{1}{2}$	3 $0\frac{3}{4}$
Durham	1 $9\frac{1}{4}$	2 $7\frac{1}{2}$	1 $1\frac{1}{2}$
Westmoreland	0 $3\frac{1}{4}$	0 $6\frac{1}{4}$	2 $3\frac{3}{4}$
Rutland	1 $8\frac{1}{4}$	1 $10\frac{1}{2}$	7 $11\frac{1}{2}$

Corn-growing counties are unduly taxed.

174. From the large table, Appendix G. I., I have made out a list of the corn-growing and grazing counties with the amount of tithe payable under commutation on each acre and per head of population (see Appendix G. III.). It is not denied that at the time of apportionment, the corn-growing counties were entitled to bear a higher charge than those chiefly devoted to grass, but it was submitted by all classes interested in agriculture in Essex, that what was fair and equitable in the days of profitable corn growing, no longer applied to times when the cultivation of the soil produces little or no benefit to the arable farmer and a greatly reduced rent to the owner, and the general opinion is that immediate action is required to re-adjust (in the first place) the tithe rentcharge and make it in keeping with the altered conditions of British agriculture. "Why," it was said, "should grass counties like Leicester, Hereford, and Derby, "which have not suffered much from free trade and cheap corn and where grass of "good feeding quality can be easily grown, be only paying on the basis of a commuted "tithe of 1*s.* $9\frac{1}{2}$*d.* per acre, while Essex, ruined by foreign competition, is burdened to "the extent of 5*s.* per acre." And "how can it be called fair that in order to support the "National Church, the inhabitants of wealthy Lancashire should be taxed at the rate of "$4\frac{1}{2}$*d.* per head, when poverty-stricken Essex is answerable for 6*s.* $4\frac{1}{4}$*d.* per head ?"

In Essex tithe is in many cases greater than rent.

175. These arguments are, I think, well supported by the information contained in the particulars of rents and reductions given in Appendix B., but if further proof be necessary it will be found at Appendix H., where many farms will be seen to bring in rents considerably lower than the tithe charge. At Chelmsford, a witness said that he knew of cases where "the tithe was ten times as much as the rent," and it was agreed by the meeting held there, that the old system of valuing the tenth part of the gross produce of the soil without taking into account the cost of production, was altogether unfair and unsound.

An example of tithe exceeding rent

176. The case of Hazeleigh Hall estate (see Appendix K. I.) rented at 200*l.* but charged with a tithe commuted at 319*l.* 4*s.* (present value 239*l.* 8*s.*) will serve as a fair example of the way in which this burden falls on a large portion of Essex. By referring to the field to field apportionment,* particulars of which I received from Mr. Fitch the tenant, I find that on several fields, which could only be described as barren and worthless for any purposes of agriculture, and which I considered on inspection not

* A specimen of field apportionment will be found at Appendix K. II.

worth any rent, the commuted tithe charge amounts to 5*s.* per acre, while on the fields still in cultivation it varies from 6*s.* to 8*s.* per acre.

The feeling in Essex with regard to tithe,—its imposition and effects.

177. Much useful and pertinent evidence was given by Essex farmers and landowners on this subject of tithe injustice.

a. It was stated that under the old system of taking tithe in kind, the tithe-owner's share was less when the crops were poor, and that in districts where land may have gone out of cultivation, his share was even further reduced. Since tithe became a fixed money-charge on the land, the fact of farms becoming derelict or being allowed to lie uncultivated, does not affect the interest of the titheowner, whose claim continues irresistible. In this way, tithe has become a burden which not only swallows up any meagre profits that may arise from the cultivation of the soil and the growth of corn, but which has driven thousands of acres out of cultivation and helped to destroy an industry.

b. The value of English corn, it was said, cannot now be ascertained with any degree of trustworthiness from the returning markets selected up and down England. The quantity of corn sold in these markets is probably not more than one-third of the wheat, one-fourth of the barley, and one-twentieth of the oats grown in the country. Moreover, the greater portion returned as sold in these markets is top quality and accordingly no criterion of the quality or value of the whole crop, much of which is either consumed at home or sold to local buyers in small markets. It was submitted that were the true value of British corn (top and tail) ascertained, the quotations obtained by the present system of returns would be found to be quite 30 per cent. too high.

Again, it was said that frequently parcels of corn are sold twice or thrice in the same market, or perhaps bought at Colchester to-day and sold in Chelmsford to-morrow, and that for each sale a separate return is made. Moreover, as the grain passes from dealer to dealer its price increases, and before it ceases to be the subject of a return it has probably reached a figure 4*s.* or 5*s.* per quarter above that which the grower really obtained for it.

c. Mr. Joseph Smith, senior, brought an important feature of the tithe question before me in his written replies to my printed list of questions.

"As to the tithe rentcharge," writes Mr. Smith, "certainly in common honesty it "must be readjusted. When the Commutation Act was passed in 1835 we were "living under the protection of a very heavy protective duty. The figures then taken "as the basis of all the payments were as under, from the average of the previous "seven years:—

"Wheat	56*s.* 2*d.*	per quarter
"Barley	31*s.* 8*d.*	„
"Oats	22*s.* 0*d.*	„

"in equal proportions to make up the full 100*l.* Now and for several years past the "value of 100*l.* has been falling until it stands at about 75*l.* But at present a greater "quantity of produce is required to make up the 75*l.* than was in 1836 necessary for "the 100*l.*

"Thus in 1836:—

		£	*s.*	*d.*
"12 quarters wheat at 56*s.* 2*d.*	=	33	14	0
"21 „ barley at 31*s.* 8*d.*	=	33	5	0
"30 „ oats at 22*s.*	=	33	0	0
"63	£	99	19	0

"In 1892:—

		£	*s.*	*d.*
"20 quarters wheat at 26*s.*	=	26	0	0
"20 „ barley at 24*s.*	=	24	0	0
"26 „ oats at 19*s.*	=	24	14	0
"66	£	74	14	0

"Increased quantity required in 1892 3 quarters or 4·7 per cent. Surely these "facts clearly show that the tithe is a heavier charge to-day than was ever intended, "and needs readjusting so as to bring payments in touch with present prices."

In stating his case, the tithe-payer of Essex is of opinion that the machinery of the Commutation Act of 1835 has proved faulty, and that at the time of its construction, no provision whatsoever was made for such a collapse of the corn-growing industry of the United Kingdom as has taken place within the past 15 years. It was on several occasions observed that the localities which have suffered most from agricultural depression, the parishes where the soil is of the strongest description and where the greatest area has passed out of cultivation, are under the heaviest tithe of all; and I think that if the table relating to various parishes in Essex given at Appendix G. II. be compared with anything of a similar nature that may be procured from any other quarter, the truth of this observation will be seen.

178. The feeling in Essex is in favour of re-valuation in the first place, and then a nationalisation of the tax in order to support the National Church. Suggested remedies.

It was further advanced that the interests of the country at large would be served by "the redemption of tithe by State loans at 3 to 3½ per cent., a portion of this "to go in liquidation of the capital sum.

"The increasing population of this country being blessed with so much cheap food," writes a large farmer, "surely common justice demands that they should be called "upon to make some sacrifice for the sake of saving the food producer of this great "country."

The Land Tax.

179. The same complaints which were lodged against tithe rentcharge were submitted with reference to the land tax. It was stated "to press unduly on purely agri- "cultural parishes and counties," and to be unequally distributed over England. From Columns X., XI., XII. of Table, Appendix G. I., it appears that the land tax charged on land and tenements in Essex, according to Quota 1798, was as much as that charged on the seven counties of Lancashire, Northumberland, Cumberland, Durham, Westmoreland, Rutland, and Worcester, and a glance at the second of the following tables shows that at present the tax is considerable in Essex, but nominal in the northern counties. The land tax unequally distributed.

Table showing Land Tax in Essex and Seven other Counties, Quota 1798.

County.	Total Area.	Land Tax charged on Land and Tenements, Quota 1798.	Per Acre.
	Acres.	£ s. d.	s. d.
Essex - - -	987,028	88,647 8 1¾	1 9½

Totals for seven counties -	3,419,115	42,629 19 6	46,445 4 4	0 3¼

An increasing burden.

180. It was stated by several witnesses that since the parochial assessments had been reduced, the land tax is heavier in the pound than it was before the revision, and that in some districts of Essex it now amounts to as high as 4*s.* in the pound. Moreover, by reason of periodical reductions in assessments, land tax is described as an increasing burden. "This tax was put on land in order to raise money for war purposes and at "a time when England had no other means whereby to raise funds to carry on these "wars. It had all to come from the land, but doubtless it was not originally intended "to continue the tax in time of peace. Surely the time has come to relieve the land "of such burdens, and if war funds have to be raised the nation should be equally "taxed for the purpose."

Suggestion to suspend redemption and revise incidence.

181. In a letter received from Mr. Fred Smoothy, of Braintree, it is suggested that "the power of redemption of land tax should be at once suspended and its incidence "revised." Mr. Smoothy further states that "the rateable value of the property "originally liable to this tax is now 156,000,000*l.* and a reimposition of the tax "at 3*d.* in the pound would realise more than the tax originally fixed, and would "allow of a reduction or allowance from the new assessment of the amount of tax "redeemed." Mr. Smoothy supports the plan of suspending redemption in a subsequent letter. "This tax," says he, "amounts to 25 per cent. on the income derived "from land or cottages in many parts of our county, whereas elsewhere it is less "than 1 per cent. The power to redeem it should be at once abolished. As an "example, take the case of fields at Kensington assessed at 62*l.* per annum. The "land tax on this amount is redeemed, and the land being worth, say, 400,000*l.* with "ground rents probably amounting to 15,000*l.* or 16,000*l.* per annum is for ever "relieved."

Suggestion to devote the tax to the reduction of local rates.

182. At the public meeting held in Braintree a proposal which met with general approval was made with reference to land tax. In view of the heavy local burdens upon Essex land and the excessive share that owners and occupiers were called upon to contribute, it was submitted that the amount levied as land tax should be devoted to the reduction of local rates.

The establishment of a general rating authority recommended.

183. Tithe and land tax were frequently described as "remnants of the feudal days "when there was nothing to tax but land," and it is argued that within the last thirty years when trade and commerce have brought great riches to England nothing has been done to make income derived from such sources responsible for its share of our national taxes. It was everywhere agreed that the equalisation of taxation could only be carried out by the establishment of a general rating authority or board for the whole country, and there is every likelihood that were such a board in existence many of the difficulties which seem inseparable from taxation as at present conducted would disappear.

Local Taxation.

Rates in Essex as contrasted with the rest of England.

184. From Column 7, Appendix G. I., it will be seen that for the year 1890–91 "the poor and county and highway rates with rural sanitary and rural school board rates" were higher in Essex than in any other county in England. Next to Essex, with rates averaging 3*s.* 0·90*d.* in the £, comes Kent with 2*s.* 9·83*d.* The average for the five counties—Northumberland, Cumberland, Westmoreland, Durham, and Lancashire is 1*s.* 8*d.* in the £.

Causes which render taxation variable.

185. These local rates of course vary in different districts and from different causes. In the neighbourhood of towns, the adjacent agricultural lands are subject to special sewer or sanitary, lighting, or improvement rates of some description. Again, the existence or non-existence of a school board has an important bearing on the rate levied for educational purposes. Under a board the rate varies from 6*d.* to 1*s.* 3*d.* in the £, while in those parishes which subscribe by a voluntary collection it seldom exceeds 4*d.* in the £.*

Poor and Highway rates, and their relation to rent.

186. The relation which poor and highway rates bear to the letting value of the land will be seen from the following information supplied by a large farmer in Braintree district as referring to land in his occupation.

* For particulars of rates levied in Chelmsford and Braintree Unions during the years 1882, 1887, 1893, see Appendix L.

Acreage of Farm.	Present Rent.	Poor and Highway Rates. 1885.	Poor and Highway Rates. 1892.	Rent per Acre.	Poor and Highway Rates per Acre.
	£	£ s. d	£ s. d.	s. d.	s. d.
1— 900 acres - -	650	104 8 5	98 0 11	14 5½	2 2

Payments for 1885–86–87 = 710*l.* 5*s.* 8*d.*
Do. 1890–91–92 = 787*l.* 18*s.* 6*d.*
Increase for 1890–91–92 = 77*l.* 12*s.* 10*d.*
Do. per annum = 25*l.* 17*s.* 7⅓*d.*, or 16 per cent.

188. As explanatory of this increase during 1890–91–92, it is right to observe that the gentleman from whom the information was obtained, mentioned 1890 as the first year of County Council management and he believed a good deal of extraordinary work had been done under the new system since its creation. The outcome of this additional expenditure, he expects, will be a reduction of rates for the future. But he agreed with others that the County Council were not at all economical with regard to the management and maintenance of the roads and highways. From several quarters I was led to understand that there is insufficient supervision now, and that the roadmen have too much their own way in the matter of their daily work. Why rates have increased under the County Council.

189. From all quarters complaints of the heavy burdens laid upon agricultural land in the shape of local and county rates were received. A large land agent thus expresses himself :— The heavy burdens on land.

"The burdens on land in most districts in Essex are at the present time very onerous.

	s.	d.
"The tithes range from about 4s. to 7s. per acre on this property, and taking an average of 5s. would be worth at present prices - - - - - -	3	9
Land tax about - - - - - -	1	1
Poor, highway, and County rates - - - -	3	6
School-board and casual rates - - - -	0	9
Total per acre - - - - - -	9	1

"To the above, if within easy distance of a town, the tenant would be lucky if he escaped sewer, lighting, or improvement rates of some description.

"In many localities 5s. per acre would not cover the tithe payable in respect of a farm worth to rent in these days 18s. to 20s. per acre.

"Nothing is calculated in the above for inhabited house duty and income tax, as to which claims are made even under Schedule D. in many cases in a reckless and unjustifiable manner.

"In addition to the above burdens, there are those affecting the landlord, such as cottage accommodation, improvement charges, drainage rates, and constant drains for repairs, painting and tarring, the maintenance of existing buildings, the supply of new or alteration of old to meet the requirements of the Dairy Acts and Local Boards of Health, to say nothing of charges which are perpetually coming in, in the shape

of water supply, sewage, or other general improvements, erections of fever or cottage hospitals, and other charges which come upon the rates and are even recommended by the Local Government Board, which at times offers to advance loans chiefly for the purpose of finding labour for the unemployed. There are also subscriptions to charities, county and other shows, cricket clubs, reading-rooms, and such-like outgoings, to which a landlord is expected liberally to contribute."

Assessment committees and their system of assessment.

190. It is important to observe that even in those districts which have suffered most of all from the depression, there has been little or no reduction in local rates. The mode of assessment followed by assessment committees was frequently called into question both in public and private. The position of these committees is a peculiarly difficult one in present times, for they are face to face with the fact that while farms are going out of cultivation year after year, the requirements of the parishes for the relief of the poor, the maintenance of the roads and the education of the rural population, do not diminish and must be provided for. In arriving at their valuations, the members of these committees, although they take the actual value of land as determined by rent and tithe as a guide, do not by any means accept it as a basis for assessment, hence we have in the county of Essex numerous instances of farms assessed greatly above their annual value, and taxed accordingly. This is felt to be a gross injustice to the occupier, upon whom the rates fall. (*See letter and statement, Appendix M.*)

At the public meeting held at Braintree the subject was discussed and a member of Halstead Assessment Committee said that "he knew it was quite impossible to carry "out the assessment of arable land with any degree of fairness." His opinion was that at present "a large proportion of the heavy land of Essex should not be assessed at all."

At Colchester the same evidence was given, and the "untrue" character of assessments condemned.

The rateable value at Lady-day of Halstead Union for the past 20 years, and the rate of assessment on arable and grass land fixed in 1893 by the committee will be seen in the following table:—

HALSTEAD UNION.

Year.	Rateable Value.	Parish.	Re-assessment per Acre, 1893.	
			Grass.	Arable.
	£		s. d.	s. d.
1874	82,021	——	—	—
1875	82,302	Castle Hedingham - -	20 3	8 8
1876	82,996	Colne Engaine - -	20 3¾	6 8½
1877	83,813	Earls Colne - - -	25 0	7 4
1878	84,059	Gosfield - - -	18 9	6 6
1879	83,934	Halstead - - -	25 0	8 11
1880	83,017	Great Maplestead - -	22 6	7 8
1881	81,880	Little Maplestead - -	20 6¼	7 6
1882	80,751	Pebmarsh - - -	18 10¼	6 9
1883	79,262	Ridgewell - - -	18 1	8 7½
1884	78,400	Sible Hedingham - -	20 5	6 5½
1885	78,104	Stambourne - - -	15 0	6 6½
1886	68,794	Tilbury - - -	19 4	8 2
1887	64,045	Toppesfield - - -	18 3¾	6 8¼
1888	62,582	White Colne - - -	17 6	6 5
1889	60,806	Great Yeldham - -	19 8	8 6½
1890	60,708	Little Yeldham - -	12 6	7 7½
1891	60,862			
1892	60,801			
1893	55,922	Average - - -	19 5	7 5¼

The 1893 valuation is a reduction of 30·7 per cent. from that of 1882, but during that period rents have fallen from 50 to 55 per cent. in Halstead.

Difficulties which assessment committees experience.

191. Mr. Fitch, of Maldon, and Mr. Smith junior, of Braintree, explained to me why assessment committees do not accept the actual annual value of the land as the basis of assessment. The fact of a farm being held for 1*s.* per acre does not prevent the occupier from keeping farm horses which are constantly going back and forwards on the roads to market and station, nor from employing a band of ploughmen and

labourers, whose children must be educated and poor relieved. This reasoning is perfectly correct with respect to land let at nominal rents *and cultivated*, but it cannot, I think, be applicable to much of the "tumbled down" pasture which I saw.

There is, however, another aspect of the case which was submitted, and which can hardly be contradicted. There are certain parts of Essex where, if assessments were based upon actual annual value, the rates would be so increased upon occupiers of land still in fair condition and paying fair rents, that the burden would be almost ruinous to them.

The position is altogether most awkward, and so long as land remains the subject of such one-sided and heavy taxation, the duties of assessment committees in their endeavours to collect the necessary money without unfairly taxing any class of individuals, must be very difficult and ever open to unfavourable criticism.

General remarks upon the incidence and propriety of taxation.

192. The subject of local taxation and its incidence on the agricultural lands of Essex was so frequently brought before me as needing instant investigation that it becomes my duty to enter more fully into the evidence received than might have been necessary had the general condition of Essex been more hopeful.

It must be remembered that a large proportion of the landowners and tenant farmers of this country are nearly ruined from causes over which they have no control. Their incomes have either disappeared or been terribly reduced, and their business has become unprofitable. Rents have fallen to a point far below anything that could ever have been anticipated, while estate expenses have steadily increased. No wonder then that all eyes should be turned upon the burdens that press with greater weight than ever on the *raw material* which the proprietor owns and the farmer works, and that from all lips the demand to relieve the land of its unfair burden should come.

Although in Essex many are in favour of a protective tariff in the interests of the home producer and the country at large, I found both protectionist and anti-protectionist united in their condemnation of "the disgraceful way in which the land has "been saddled and loaded with taxes and charges." It was even stated, and I believe with truth, that since agricultural depression has affected the prosperity of the district and cheap corn driven large tracts of Essex soil out of cultivation, fresh taxes and increased rates have been imposed. This treatment was described as being "not only "unjust but insane." The mover of a resolution at Colchester said "the laws of this "country have acted to the detriment of the landed industries and for the last fifty years "legislation has tended to depopulate and impoverish the rural districts." In seconding the resolution a gentleman stated that "under the present conditions and without "relief from excessive taxation, it was hopeless to try and cultivate the land to a profit." It was very generally thought that "if the burdens on land were removed and we were "placed on an equal footing with the foreigner, we could compete with him." But time after time it was urged upon me that if the tithe, land tax, and local rates were not removed from the land or shared by persons in other occupations and trades, the state of Essex would get worse and worse.

The resolution submitted and unanimously passed at the Badworth Hall, Ongar, viz.:

> "That the land used in agriculture shall not be taxed for local or Imperial purposes, only the houses thereon, the land being the raw material which the farmer works, and many of the burdens such as poor rates, highway rates, elementary education, sanitary rate, and police rate, now placed on the rates, be transferred to the Imperial exchequer,"

found a re-echo at every meeting held in Essex. At Braintree it was stated that "the "Government had no more right to tax the land than to tax the goods in an ironmonger's "or a draper's shop."

The general opinion is that the whole system of taxation should be altered and fixed upon a new basis. "Personal property, in the shape of investments, ground rents, "ships, machinery, should be taxed and all persons made to contibute in proportion to their means."

These proposals are not made simply because the landowner and farmer are in distressed circumstances, but they are grounded on justice and fair play. With respect to the highway rates and general maintenance of the county and parish roads, it is no secret that the roads are made use of by others than those interested in land, therefore it is reasonably asked, "Why should not others be taxed?"

Again, with respect to the school board rate, I extract the following from the answers received to my questions.

"The school board rates amount from 6*d.* to 1*s.* 3*d.* in the pound, and from them the ratepayers derive but little benefit; for as soon as a clever lad passes the 4th or 5th standard he is too cultivated to make an agricultural labourer, but wants to get into trade or lighter employment, and the parishioners hear no more of him. The cost of board schools presses very heavily on the tenants, as landlords pay nothing towards the expenses. While education is a great boon to the people, it cannot be right that the expenses should so entirely fall upon the tenant, who in very few instances derives any benefit from the expenditure."

It does not seem to be unreasonable to suggest that the tradesmen and other persons to whose service the majority of our country-born lads go, and who ultimately benefit by the education imparted at rural schools, should be made to pay at least a share of the rate. I found that in connexion with all matters relating to the poor, whether it be education or relief, public opinion in Essex pronounced them to be national objects, and accordingly right and proper subjects for national support.

XV.—General Remarks, and Conclusion.

193. In the foregoing pages I have endeavoured to act in accordance with the instructions received at the outset of my labours, in so far that I have chiefly confined myself to a recapitulation of the evidence collected, without expressing my own opinions. In view, however, of the evidence laid before me, it appears to be my duty to bring specially under the notice of the Commissioners the following points, which I venture to think are worthy of consideration.

The chief causes of depression.

194. It is perfectly apparent that the present condition of agricultural affairs in Essex is due to three causes: 1. The low price of corn and the high cost of cultivation; 2. The peculiar nature of the soil and the difficulties to be encountered in introducing a new system of farming better suited to the present times than that which has up till now prevailed; 3. The loss of working capital resulting from a long series of unprofitable years.

Contributory causes.

195. It is equally certain that there are contributary causes in the shape of—

(*a.*) Heavy burdens on the land. (*b.*) Improper farm buildings. (*c.*) Want of land drainage. (*d.*) The very costly and roundabout system of marketing agricultural produce.

Prevailing ignorance with reference to the cost of growing wheat abroad.

196. With respect to the low price of corn and what might be done to remedy the misfortune, the only hope, so far as I can see, lies in the possibility of foreign growers finding that at present prices they cannot continue to compete. In this connexion I think we stand in great need of some reliable information upon what really is the cost of growing wheat in foreign countries, and at what price it can be sold in England to leave a profit to the foreign grower. I believe I am correct in saying that English farmers are at present completely in the dark upon this all-important question. Not many years ago it was stated by two competent authorities, who actually visited America for the purpose of inquiry, that below 40*s.* per quarter the American and Canadian farmer could hardly, with profit to himself, send wheat to our English markets. The events of recent years have proved contradictory to this statement, and at present witnesses are not wanting who are prepared to prove that even were the price of wheat to fall to 26*s.* per quarter, it will be grown in America and shipped to the British market.

Official information desirable.

196. I think this matter is well worthy of the best attention of the Commission. If wheat can be grown in foreign countries and sold at a profit in London at anything like present prices, the sooner the Essex farmer is so informed from an official source the better for him and everybody connected with him. It will not only be the greatest possible kindness to put him out of present pain and uncertainty, but it will be the most likely way of inducing him to forget the old and betake himself to a new system.

Essex clay cannot be cultivated at present prices.

197. There can be no doubt that the cultivation, according to the Essex rotation, of the London clay, cannot be successfully prosecuted unless the price of wheat rises at least 45 per cent., and it is doubtful if on the clay-bottomed soils corn growing could be profitably carried on even at that rise in value. In the present aspect of affairs it is highly probable that during the next few years, the area of land out of cultivation in the heaviest districts of Essex will greatly increase, for, as was frequently stated by witnesses, it is no longer a question of rent, but simply an example of the cost of cultivation exceeding the value of produce.

198. Concurring as I do with these opinions, it is by no means easy to see or recommend any speedy course of action. The main hope lies, I think, in the *possibility* of laying more of the land down to grass and farming it on some rotation where the extent under the plough is kept at the lowest economical area. It cannot be denied, and must not be forgotten, that many unsuccessful attempts have been already made in the direction of temporary and permanent pasture in Essex, and I cannot lose sight of the fact that a large proportion of the best practical English farmers in Essex were unfavourable to the results likely to follow any attempts to introduce grass farming on land not thought to be naturally suited to such plants. Nor am I oblivious to the many difficulties which would arise in fencing and water supply for such a branch of farming, but I am nevertheless of opinion that under a different system of management and with a little outlay, even the heaviest lands might be turned to some profit by the adoption of the temporary pasture rotation. While expressing my opinion as to the benefit likely to arise from an increase in the acreage under pasture, I would particularly guard myself against recommending any *palpable* expansion of the milk supply to London. I am convinced that this branch of dairy husbandry has in Essex already assumed dimensions sufficiently large for the welfare of those engaged in it, and I apprehend that to still further add to the output of fresh milk for London would be, not only to cripple the affairs of those already concerned therein, but ultimately to destroy the future prospects of milksellers in general. At the price which has prevailed during the past six years, the margin of profit to the cowkeeper has been very narrow; but if unhappily a marked increase in the supply of milk were to occur, the selling value of the commodity would at once fall to a point at which profit to the producer would altogether vanish.

A change in system of farming offers the best hope for the future.

My thoughts incline towards an increase of the grass area and the extension of stock breeding, rearing, and feeding, accompanied with a decrease in corn growing and farming expenses. The difficulty of raising root crops for stock food in winter does not present the insuperable obstacle to stock farming which many gentlemen tried to make me believe, for I think the use of silage made from such crops as vetches, clover, and ryegrass, all of which succeed on the heaviest land, is not only more simple but more certain and profitable than the growth of turnips.

199. A far greater difficulty will be found, I think, in the training and teaching of men who have always been tillage farmers, and whose knowledge of grasses and ideas of grass land management are not in accordance with the experience of successful graziers in other counties.

Technical Instruction.

I am, however, encouraged in submitting this possible remedy by the knowledge that in Essex, any prejudice in favour of the old system, or antipathy to the introduction of a new one, has quite died out. From the statements made by farmers and landowners, I plainly saw that both are prepared to betake themselves to any method of management which promises to substitute profit for loss. They ask for instruction and assistance. But that instruction must take a practical form, and it must be supported by demonstration and its wisdom proved by results. Nothing need be expected from what is called "technical instruction" unless it is accompanied by ocular demonstration. In no county that I have any knowledge of has the itinerant lecturer gained the confidence of the practical farmer. Our present race of agriculturists are guided more by what they see than by what they hear, and in any endeavour to place them on a firmer footing in the conduct of their business this must be borne in mind.

200. But the benefit that might follow from such a change of system as I have indicated can only be felt in future years, and can only be shared by those who are able to hold out in the meantime. It is a much more difficult thing to say what steps might be taken to remove the present depression. My own impression is that so bad were the affairs of many Essex farmers before the spring of 1893, and so disastrous has the drought of the past season proved, the ensuing year will witness a downfall more disastrous in its consequences than any stranger to Essex could possibly apprehend. If three-fourths of the farmers who have served notices to quit in 1894, act upon them, thousands of acres will be left tenantless, and it requires a stretch of imagination more than I can make to suppose that new tenants will be found. It is vain to talk of owners taking large areas of land in hand, for they have neither the wish nor the means to do so.

Hopeless position of many of the present farmers.

201. Nor is it at all likely that fresh capital will flow into a county where land is taxed and rated out of all proportion to its real value; and without fresh capital, Essex,

Want of capital.

so far as its agriculture is concerned, is lost. I have endeavoured to lay before the Commissioners in the body and appendix of this Report the case of the Essex agricultural ratepayer, and it would be superfluous were I again to refer to it at any length. But I do express the hope that they may be convinced of the injustice of the burdens now resting upon a class of land which was cheaper 20 years ago at 40*s.* per acre than it now is at 10*s.*

202. During the time of my visit to Essex I was received and treated by those interested in the subject of my inquiry, with the greatest kindness and courtesy. For that kindness and for the generous manner in which they assisted me in collecting evidence I cannot sufficiently thank them. During the past few years it has been my duty and privilege to collect evidence for reports upon agricultural matters in different parts of the United Kingdom, but never have I been engaged in work so painful in itself yet so pleasant in its associations, as that which kept me in the Ongar, Chelmsford, Maldon, and Braintree districts of Essex from the 16th of October to the 13th of November 1893.

I am your obedient Servant,

(Signed) R. HUNTER PRINGLE,
Assistant Commissioner.

NOTE.—See Supplementary Report "Essex in relation to the Grass Question" at page 128.

APPENDIX.

APPENDIX A.

(*See* Paragraph 81.)

OUTLINE of AGREEMENT for letting and hire of farm known as situate at in the county of and containing acres or thereabouts, upon the following terms and conditions; namely,—

The term to be years, commencing at

The rent to be £ per annum, payable quarterly on the usual quarter days in each year, the first quarterly payment to become due on the day of next, and an additional rent of 5*l.* an acre for the arable, 10*l.* an acre for the meadow or grass land not farmed or managed according to covenant, and 20*l.* per every timber tree cut and pruned without landlord's consent.

The rates, taxes, and outgoings of every description to be paid by the tenant, the land tax and landlords' property tax only excepted.

All mines and minerals, timber, and underwood to be reserved to the landlord, with usual right of entry.

The game (save as provided by the Ground Game Act, 1880), nests, and eggs of game, with the right of shooting and sporting, to be reserved to the landlord.

The tenant to reside in the farmhouse, and not to assign or underlet the premises or any part thereof, without the previous consent in writing of the landlord.

The farm house and all buildings, gates, and fences to be kept and left in good tenantable repair, including such painting and tarring as may be found necessary. The landlord providing all necessary rough timber, bricks, and tiles, or slates; and also paint and tar within miles of the farm; the carting of all materials to be done by the tenant free of charge.

The tenant to farm and cultivate the arable land in a good and husbandry-like manner, keeping the same in a clean state and in good heart and condition, but with liberty to grow such crops thereon as he may see fit; but during the last year the tenant shall be bound to farm the land according to the four-course shift, and shall leave the land so farmed on quitting the occupation.

None of the meadow or grass lands shall be broken up or mown more than once in any one year.

The hay and straw and all green or cattle crops to be consumed upon the premises, except that it shall be lawful for the tenant to sell not exceeding half of the hay or straw in each year, on bringing back within three months and spreading on some part of the farm such quantity of good rotten dung or guano, or other artificial manure as shall be equal in value to the hay or straw so sold or removed, for which he shall produce vouchers when required by the landlord or his agent. But none of the hay or straw grown in the last year of the tenancy, nor any of the muck or root crops is under any circumstances to be removed from the premises.

Half the corn grown in the last year to be threshed within three months, and the whole within six months after the end of the tenancy, and the use of the barn and stack yard to be allowed for that purpose only, until the 1st day of March following.

The tenant to compensate the outgoing tenant for the fallows, muck, seeds, and sowing, and for all such other matters, including unexhausted improvements, as he is entitled to be paid for according to a fair valuation thereof as is usual and customary, and for the hay and stover at a consuming price, and for the threshing and dressing the last year's crop, and carrying out the corn to market on having the straw and chaff arising therefrom.

The valuation on quitting to be paid by the landlord or his incoming tenant in like manner.

If and whenever the rent shall be in arrear for twenty-eight days, whether demanded or not, or if and whenever there shall be a breach by the tenant of any of the covenants and conditions herein contained, or if and whenever the tenant shall become bankrupt or a liquidating or compounding debtor or suffer his effects to be taken in execution, then the landlord may re-enter upon the farm and re-possess and hold the same as if this agreement had not been made.

Lastly,

It is further agreed that all matters arising under this agreement or otherwise in reference to the tenancy shall in case of dispute be settled by referees to be mutually appointed in writing, or an umpire to be chosen by such referees, but if either party shall after seven days' notice neglect to nominate such referee, the decision of the other referee alone shall be final.

A lease and counterpart to be prepared by the landlord's solicitor in accordance herewith, and the charges for the same and of this agreement to be paid one moiety by the landlord and the other moiety by the tenant. And we severally agree to execute such lease and counterpart whenever required so to do.

As witness our hands this day of 18 .

} *Landlord.*

} *Tenant.*

APPENDIX B. I. (*See* Paragraph 101.)

Particulars of Rents, Allowances, Reductions, and Arrears.
An Estate in Ongar District.

Farm.	Tenure.	Acreage.	Rent. 1882. Rent.	Rent. 1882. Allowance.	Rent. 1893. Rent.	Rent. 1893. Allowance.	Remarks.	Statement of Arrears prior to Michaelmas 1893.
		A. R. P.	£ s. d.	£ s. d.	£ s. d.	£ s. d.		£ s. d.
1	Yearly tenancy -	175 0 31	217 0 0	—	232 0 0	—	Tenant pays the tithe. This rent is not paid and is over three years in arrear.	827 13 8
1a	- - - -	—	15 0 0	—				
2	Partly by lease expiring in 1894.	78 0 33	148 10 0	—	148 10 0	—	Landlord pays the tithe. Satisfactory tenant. Does jobbing and carting.	34 5 0

The sanitary authority have given notice to declare about 20 cottages unfit for habitation for want of water which cannot be obtained.

Want of water is a very serious matter.

Covenants.

The labour expended on the fallows and rent thereon.

Tillages.

Young seeds.

Hay at market price.

Manure.

The threshing, dressing, and carrying out the corn according to the custom of the country, for which the landlord or incoming tenant is to receive or be entitled to the whole of the straw, chaff, and colder arising from the last year's crops.

Reductions of rent added to amount of tithe now paid by landlord, 1,279*l.* 8*s.* 4*d.*, equal to total reduction of 29 per cent. in 12 years. There are heavy arrears of rent, and large sums of money have during the period been spent on farmhouses, buildings, cottages, water, and general estate maintenance.

NOTES FROM ABOVE ESTATE.

Acreage—13,000 acres.
Character of soil—Strong clay. Corn-growing land.
Landlord's income from his estate—652*l.* 13*s.* 9*d.*, or 1*s.* per acre for year 1892–93.
Farms in hand.—During the last 12 years numerous farms have been taken in hand. The outlay upon buildings, drainage, fencing thereon, has exceeded 16,000*l.*

At present 1,376 acres are in hand. These were taken up from tenants who either failed or left, and they are being farmed at a loss.

A farm of 130 acres on this estate cost 28*l.* per acre in 1884. During 1891 and 1892, 700*l.* was spent by landlord in buildings and improvements. Present tenancy commenced in 1891, the rent being 17*s.* 10*d.* per acre.

Landlord's outgoings are:—

		s.	d.	
Outgoings	Tithe, present value	4	6	per acre.
	Land tax	2	0	„
	Interest on 700*l.*, say 5 per cent.	5	4½	„
	Estate management	1	6	„
	Net rent	4	5½	„
	Gross rent	17	10	

The present rent *when paid in full* represents 0·8 per cent. on the purchase money. But for 1892–93 there are arrears of 86*l.* 3*s.*

* The tenant on this farm has served notice to quit in 1894.

Reduction of rent on 20 farms comprising 5,150 acres, 4,303*l.*, or 55·5 per cent.

Notices to quit, to expire at Michaelmas 1894, received, applying to upwards of 7,560 acres out of about 18,000 acres.

In 1892 and 1893 arrangements were made with occupiers of over 4,500 acres, who had served notice to quit. The rents have been greatly reduced rather than have the farms on hand.

SUMMARY of REDUCTIONS of RENT.

Excluding farms 10, 12, 15, 16, 18, 19, which were let in 1879, but are now in hand, and notwithstanding the large outlay on repairs and improvements, the rental of this estate fell—

	£
From	9,057 in 1879
To	4,042 in 1892
being a reduction of	£5,015 per annum, equal to 55·3 per cent.

	£	s.	d.
At the Michaelmas valuation 1892 hay is charged 430*l.* Of this quantity 80*l.* was consumed, and owing to the great increase in value of that article the remainder was sold at 572*l.* Had hay remained at ordinary price the loss for 1892–1893, as shown above	106	10	0
would have been increased by	220	0	0
or, in other words, the loss would have been	£326	10	0

	£		£
Total profits - - -	16,458	Total losses - -	1,362
Deduct losses - -	1,362		
Six years' profit on five farms	£15,096		

Average annual profit, 2,516*l.*, or 7⅓ per cent. on 34,300*l.*

It is important to observe that on farms A. and B. dairy cows are kept in large numbers, and there the average annual profits are 2,365*l.* 10*s.*, equal to 10 7/10 per cent. on capital (22,000*l.*), whereas on Farms C., D., and E. no cows are kept, the land being unsuitable, and the average annual profits are only 150*l.* 10*s.*, equal to 1⅕ per cent. on capital (12,300*l.*).

SUMMARY.

PROFIT.	LOSS.	£	s.	d.
	1889–90	374	4	5
	1890–91	102	4	10
	1891–92	64	1	10
	Total loss	£540	11	1

Average loss per annum, 180*l.* 3*s.* 8*d.*
Capital employed, 1,700*l.*
Average annual loss represents almost 16 per cent. on capital. No charge is made in these accounts for interest on capital or management.

APPENDIX D. (See paragraph 121).

OPINION of an AGENT upon SUB-DIVISION and SMALL HOLDINGS.

"To my mind the question not only is not worth consi-
" deration, but could only present itself as such to the
" minds of faddists or to those who do not wish to realise
" the existing state of things, for at a time like the pre-
" sent, when the rentals of estates, which for years have
" been well tenanted and managed, have fallen from 40 to
" 50 per cent., a fall which it should be borne in mind does
" not represent the total loss of income to the owner,
" because his expenses on the other hand have not fallen,
" but have on the contrary increased. How can it be
" possible in the first place to expect that landlords will
" sink more capital in a wasteful source such as farm
" buildings or that they will seek for a class of tenant now
" most difficult to find and when found incapable of
" standing such strains as those to which the British
" farmer is now exposed?

"In your recent tour through the county you must have
" noticed that the only classes who are holding their own
" are:—

"(1.) Such by way of instance as Mr. —— and men of
" that stamp who were well tutored as young men, and
" being well backed up by capital have consequently for

" years been able to keep their farms up to a certain " standard.

" (2.) Scotchmen, who similarly tutored and with longer " heads and certainly as a rule with more energy than the " Essex farmer, not only work themselves but have brought " up their children and even servants both farm and " domestic to follow suit.

" Such at all events is my experience and the number of " small men who have already succumbed, or who are just " holding on from hand to mouth, and will year by year " continue to succumb unless a very marked change takes " place, is simply legion.

" To bring figures to bear upon the question, if you refer " to my report on this estate you will observe at folio 2 " that the buildings (exclusive of any building estate) are " actually insured for upwards of 155,000*l.*, and that the " net rental which the landlord receives does not realise " sufficient to give a 6 per cent. interest on that sum.

" It is idle to suppose that the sum insured represents " the outlay that has been incurred. Can anyone suppose " that the owner of such an estate would like, even if he " had the means, to increase his liability by the addition of " new farmhouses and the attendant buildings necessary " for the working of a greater number of farms. The " outlay would be invested in a very perishable article " exposed not only to wear and tear of weather but to the " usage of a class of tenant with by no means too much " money to manage his business, and with neither the " money nor the inclination to spend it upon what he con- " siders the landlord's property. Although in my young " days I recollect that tenants as a rule took a pride in " keeping up their buildings, I regret to add that such is " now the exception, and that applications are frequently " made even for so small a quantity of material as a tenant " in former times would far rather have purchased than " have asked for.

" Suppose a landlord decided to cut up a farm of " 500 acres by creating a new holding of, say, 200 acres. " To meet the requirements he would have to provide a " new house and offices, water-supply, drainage, garden " and planting, with road-making and fencing. To the " above he must add nag stable, chase and fowl houses, " carthorse stables, with chaff and harness accommodation, " barn or granary with dressing floor, cow or bullock house " with open shedding, and piggeries. The above with " fencing, gates, stackyard, road-making, foundations to " yards, draining and water-supply, with the addition of " one if not two extra cottages, could not be provided " under from 1,500*l.* to 1,700*l.* at the least, say, however " 1,500*l.*

	£	s.	d.
" Supposing that the capital be borrowed " of the Lands Improvement Company " to the 1,500*l.* must be added 100*l.* for " the company's commission and ex- " penses which at 6*l.* 14*s.* 0*d.* the rate " required to repay capital and interest " in 24 years would swallow up per " annum	107	4	0
" Insurance on, say, 1,200*l.* at 2*s.*	1	4	0
" Additional land tax on increased rating, " say	1	12	0
" Painting and repairs, wear, and tear, " say, an average per annum of	5	0	0
" Whence would come the extra per " annum to meet the above	115	0	0

" Apart from the foregoing reasons any practical man " must know that up to a certain point there is far greater " working economy in 500 acres than 200; moreover the " man capable of working 500 acres is more independent of " seasons and by power to concentrate a greater number of " horses and implements better able to compete with them. " Again the better the class of tenant the more he is in- " dependent of the markets, which in these days of steam " and telegraph form a most important feature, for the little " man has perhaps no greater difficulty to contend with " than having frequently to realise in the cheapest and buy " in the dearest market.

" My opinion is therefore adverse to small holdings as a " rule, and although I have on several occasions created and " found them to work satisfactorily it has nearly always been " done under exceptional circumstances."

APPENDIX E. I. (*See* paragraphs 171, 172.)

Letters with reference to Tithe Act, 1891, Sec. 8.

Copy of a Letter addressed to the Board of Agriculture.

40, New Broad Street. E.C.,
November 1st, 1893.

Sir,

I am the owner of a farm of 150 acres in Essex, which has for several years been out of cultivation in consequence of the depressed state of agriculture in that county, and this year I have succeeded in procuring a tenant at 40*l.* per annum, the tithes being paid by me. The tithes amount for the year ending October last to 28*l.* 16*s.* 6*d.*

My tenant has been assessed under Schedule B. at the full rent of 40*l.*, being, as the Surveyor of Taxes admits, 10*l.* for the annual value and 30*l.* for the tithes. I, as owner, and through the tenant, attended before the local Commissioners to appeal against the assessment under Schedule B., and on quoting from the circular issued by your Board as to the mode of assessing under Schedule B., that the income arising from lands used solely for husbandry should be deemed to be half the annual value including tithes, I was met with the statement that the proper mode of assessment was to assess for the full amount but to receive half the tax only.

My object in appealing was to obtain the reduction in the tithe provided for by section 8 of the Tithe Act, 1891, but the mode of assessment precludes the possibility of this, except to a very small amount, and the result is that the tithe-owner gets his tithe in full, while I, the owner, get nothing for my farm, the difference between the tithe paid and the rent received being more than exhausted by repairs and other expenses.

Why the assessment should be made in the manner described is quite unintelligible, and it is certainly unfair to the landowners. I am a large loser by the farm, surely it is but fair the tithe should bear some of the loss, and had the assessment been made upon the same principle as all other assessments, viz., at the amount upon which the income tax would be payable, I should have been content, as I should then pay $\frac{3}{4}$ of 20*l.* for tithe instead of $\frac{3}{4}$ of 40*l.*

I respectfully submit these facts for your consideration, and trust the mode of assessment will be taken into consideration and some steps taken to make it uniform with all other assessments to the income tax, instead of exceptional; no loss of revenue would be sustained, and the only result of the exceptional mode of assessment of which I complain is to benefit the tithe-owner at the expense of the landowner, and render the assistance intended to be given to the latter by the 8th section of the Tithe Act, 1891, practically inoperative.

It will be found also, on inquiry, that although the assessments under Schedule B. are regularly made in the exceptional form to which I have referred, the tax is, in 99 cases out of every 100, never collected nor intended to be, the object of the assessment being to keep up the large local burdens on the land.

I am, &c.
W. J. Bruty.

To the Right Hon. Herbert Gardner,
President of the Board of Agriculture.

APPENDIX E. II. (*See* paragraphs 171, 172.)

LETTER from MESSRS. HILL, SON, AND RICHARDS.

39, Old Broad Street London.
3rd November 1893.

DEAR SIR,

WE wish to draw your attention to the following circumstances having reference to the manner in which assessments for income tax are arrived at under Schedule B. the result of which being that section 8 of the Tithe Act, 1891, is rendered practically a dead letter. A client of ours is the owner of a farm in the parish of Hockley, in Essex, which is let to a tenant at a rent of 24*l.* 4*s.* 0*d.* per annum, the tithe rent charge amounting to 21*l.* 19*s.* 0*d.* (15*l.* 3*s.* 3*d.* rectorial and 6*l.* 15*s.* 9*d.* vicarial). In a pamphlet issued by the Board of Agriculture dated April 1893 it is stated on page 2 that "for income tax purposes "the income arising from the occupation of lands for "the purposes of husbandry is deemed to be, in England "and Wales, *one-half* of the full yearly rent or annual "value including tithe rentcharge, if any." The most reasonable construction of this statement would be in our opinion, that the assessment for income tax under Schedule B. should be one-half the amount of the annual rent and tithe, in our case one-half of 46*l.* 3*s.* 0*d.*, namely 23*l.* 1*s.* 6*d.*

The farm, however, was assessed under Schedule "B." at 50*l.*, and on attending before the assessment committee at Rochford on the 31st ultimo with a view of getting the assessment reduced in accordance with the before-mentioned circular of the Board of Agriculture, we were informed that the proper mode of assessment was to assess on the full amount of rent and tithes (in our case 46*l.* 3*s.* 0*d.*) but to only charge one-half, and we were therefore only able to obtain a reduction of the assessment from 50*l.* to 46*l.* Our object in appealing against the assessment was to obtain a reduction of the tithe rentcharge under section 8 of the Tithe Act, 1891, but owing to the manner in which the assessment under Schedule B. is arrived at it is impossible to do so, and consequently section 8 of the Tithe Act, 1891, is practically a dead letter. If however, lands, were assessed on half the full yearly rent and annual value, including tithe (which would not make the slightest difference to the Revenue as one only has to pay a half, although assessed on the full amount), it would be much more fair to the landowners and tenants, as they would in that case be able to take advantage of section 8 of the Tithe Act and obtain a reduction of tithe. We beg to draw your attention to these facts in the hope that you may be able to bring them before the proper authorities with a view of getting the mode of assessment amended so that the assessment should be upon one-half of the full yearly rent or annual value, including tithe, instead of on the full amount, which latter we submit is a more unfair mode of assessment, and works entirely for the benefit of the tithe.

We are, &c.
HILL, SON, & RICHARDS.

H. Pringle, Esq.,
Saracen's Head Hotel,
Chelmsford.

APPENDIX E. III. (*See* paragraph 171.)

EVIDENCE of Mr. T. W. OFFIN, Junior, at CHELMSFORD, MEETING of EASTERN COUNTIES DAIRY ASSOCIATION.

I WAS engaged in an inquiry with a view to getting a reduction in the tithe under Schedule B., on lands that we have referred to. There were two tithes—rectorial and vicarial. Wadham College were the rectorial tithe-owners. It was held that the Commissioners have power to hear only the individuals actually aggrieved. Three solicitors attended from London, but were not allowed to appear. Mr. Alfred Darby, who attended on behalf of Wells and Perry, in respect of a brewery, was served in exactly the same way. "Are you a member of the firm?" "No." "Then we cannot hear you." Mr. Bruty happened to be the first solicitor called upon, and I suppose he had a mortgage on one farm so that fortunately he was able to be heard. He said, "I also appear as a witness to corroborate "my tenant's statements as to rent and tithe," and so he gained a hearing. Then he dealt with those points which all the solicitors were going to fight. We discovered that the actual rent and the actual amount paid for tithe were different altogether for the purposes of assessment under Schedule B. Mr. Bruty said, "You cannot charge in full, "the Act says you shall only charge one-half." "Just so," the Commissioners said, "and if you refer to your tax-paper "you will see you only pay one-half. We assess you in "full, but only charge you one-half." But the fact of their assessing in full and the full figures appearing prevents us from getting Schedule B. reduced as against the tithe-owner. That is where we are beaten.

APPENDIX F. (*See* paragraph 154.)

THE AGRICULTURAL HOLDINGS ACT.

EXTRACT from a LETTER from a large LAND AGENT and VALUER.

"THE present Agricultural Holdings Act is a very useful "and fair one, and inexpensive if carried out in a business-"like way; but sometimes incompetent men are employed "and sometimes solicitors who suggest counsel should "be engaged and this of course is an expensive way of pro-"ceeding. The reason this Act is not now acted upon is "because farming produce is so low in price and that it "will not pay a farmer to improve the land. As a rule "large owners are very lenient to their tenants when quitting "and make no claim for breaches of covenant. At these "times a farmer consults his valuer as to unexhausted "manures perhaps in two or three fields; the valuer then "inquires about the rest of the farm and finds the breaches "far exceed what the tenant could claim and he advises not "to claim under the Act. When a tenant knows two years "before he gives up his farm, as a rule it pays him better "to fully crop the land, &c. rather than prepare a claim "under the Act.

"My opinion is that unless produce increases in value the "farmer cannot cultivate any land except the very best "quality, and slowly and by degrees it must go out of "cultivation and thousands of working men will starve.

"The popular cry now is small holdings. It is in very "few localities that small holdings will answer, and then "only to a limited extent. I have tried them on estates, "but without success.

"Free trade is desirable and sounds well in theory, "but if it continues farming in this country cannot go on. "The landlords cannot live in their mansions. Many are "closed and hundreds of labourers and servants dismissed.

"The tenant now can have everything his own way, and "therefore further legislation as to this is of no value "whatever to the farmer. You must have seen how very "much the land is impoverished in the country."

The rates in the two towns, Witham and Braintree, under Local Boards, have not been ascertained.

Fred. Smoothy,
Clerk to the Union.

APPENDIX M. (*See* paragraph 190.)

Copy of Letter and Statement with reference to Excessive Assessment in Essex.

Letter.

Dear Mr. Pringle, 26th January 1894.

I enclose you a Statement showing how the land is assessed for rates in some of the Essex Unions and how seriously the present method of assessment is injuring the occupiers and owners of land, as they are paying a great deal more than their proper share towards the rates of the county. I have in this Statement taken every farm which our firm has the management of in the Unions of Maldon, Dunmow, and Chelmsford, with the exception of one which is let on an old lease and so is not applicable to the present situation; so you will see that I have not chosen special cases to prove my contention, but have taken every farm which I have knowledge of in the Union, whether they helped or hindered my view. There are 15 of these farms and the assessment amounts to 984*l.* more than the rents or value at the present time. The total rents of these farms are 1,927*l.*, and the total assessment is 2,911*l.*, which makes the assessment over 50 per cent. beyond the rent.

You will observe that in some cases the actual rent paid is given, in others the farms being in the hands of landlords it is impossible to give this, but the rents put down are very full and the landlords would gladly accept these rents from responsible tenants. The farms are all in average condition, some of them of course being naturally very poor farms. In most of these cases an appeal has been made to the Assessment Committees but without effect, and in one case an appeal has been carried to Quarter Sessions with the result of landing the appellants in all the costs. As landlords are also charged under Schedule A. on the gross estimated rental, they are paying income tax far and above their proper amounts.

If you want any more information on this matter I shall be glad if you will let me know.

(Signature.)

R. Hunter Pringle, Esq.,
Royal Commission on Agriculture,
23, Great George Street,
Westminster, S.W.

Statement by Mr. R. Hunter Pringle, Supplementary to his Report.

ESSEX IN RELATION TO THE GRASS QUESTION.

To HERBERT LYON, Esq., Secretary,
The Royal Commission on Agriculture,
23, Great George Street, Westminster.

54, York Road, Kingstown,
19th March 1894.

SIR,

I HAVE the honour to submit the following paper, firstly, as explanatory of the map which by the direction of the Commissioners, I prepared in Essex; secondly, in further reply to numerous questions asked by the Commissioners with regard to the quantity of land out of arable cultivation in Essex, its present appearance and value; and, thirdly, as giving some faint idea of what in my opinion might be done to improve the position of agriculture in those parts of Essex referred to in my report and dealt with in my map. I do not propose in the following lines to touch upon any matters other than those connected with practical agriculture and the grass question.

Explanation of the map (see para. 89 and map at end of Report).

The portions of the map coloured black represent land which, within the last 15 years, or, in other words, since the commencement of the present depression of agriculture, has ceased to be cultivated as arable land and is now in pasture. In the preparation of the map the 6-inch Ordnance Survey sheets were used, and each field marked separately. Not only was the marking executed with great care by gentlemen specially qualified for such work, but the information was checked in those parishes where mistakes were most likely to occur. Instructions were issued to the effect that no land should be marked which had been put to grass before 1879; that no note should be taken of old sods, meadows, saltings, marsh grazings, or demesne lands or parks; and that seeds sown within the past two years should be treated as rotation land unless reliable evidence were forthcoming to the effect that the surface would on no account be broken or brought back to cropping at present prices.

With reference to Chelmsford and Billericay Unions, an attempt was, in the first instance, made to distinguish between land sown down and land which had gone to grass of its own accord and in its own way, but on further investigation it was found that many fields admittedly sown with good seeds had so deteriorated in pasture as to be to all intents and purposes no better than the average of those which had grassed themselves over. That a difference does exist in the appearance and value of the fields out of arable cultivation cannot be denied, and this fact renders it necessary for me to lay before you an account of the different circumstances and ways under and in which the present condition of the eastern central peninsula of Essex has arisen.

The soil between the Blackwater and the Thames, the Great Eastern main line, and the sea is exceptionally heavy. Much of it is naturally poor, and all of it is expensive to work. It is suitable for the growth of wheat and beans, but cannot be properly pulverized or tilled without periodical bare fallows. In a favourable season mangel wurzel may be grown, and cabbages, once they take root, succeed well, but for turnip culture the great proportion of the district is quite unsuited.

The decrease in cultivated area dates back as far as 1876, but the quantity of land seeded down between 1876 and 1879 appears to have been very trifling. Since 1879, between laying down with permanent seeds, not breaking up temporary grasses, and allowing land to grass itself, the extent out of arable cultivation has steadily increased, until in 1894 it has assumed the formidable proportions revealed by my map.

The grass land marked black on the map may be divided into the following classes :— Classification of land marked black on map.

A1.—Fields well laid down with permanent seeds, the soil being in good order at the time of sowing.

A2.—Fields badly laid down with permanent seeds.

B.—Fields laid down with perennial rye-grass and clovers or lucerne, but without natural grasses, and not since broken up.

C.—Fields sown with Italian or annual rye-grass and common clovers, and not since broken up.

D.—Fields on which no grass seeds were sown and which are generally termed "tumbled down" grass.

For all practical purposes Classes C. and D. might be bracketed and considered as one.

Class A.—The acreage well and properly laid down since 1879 appears to have been very small. Judging from present appearances and the evidence of witnesses, it would seem that not more than 5 per cent. of the land marked black can be put under the heading A1. Estimated proportion under each class.

Land laid down in bad order occupies a much larger area. There can be no doubt that between 1880 and 1885 many fields were sown out without any proper cleaning, manuring, or fallowing, in the hope that the grasses would overcome the weeds. I estimate that 20 per cent. of the marked land must have been so treated.

Class B.—In some districts perennial rye-grass was stated to have been the only grass used in the laying down of land, and the use of this seed increased rather than diminished, probably because of the example set by Scotchmen, who rely on it for temporary purposes. The proportion under Class B. I estimate at 15 per cent.

Classes C. and D. were either first year's layers grown from Italian or annual rye-grass and left alone, or land exhausted and overrun with weeds and allowed to clothe itself with grass. After three or four years it becomes impossible to distinguish between these two classes, for on the disappearance of the Italian, its place is taken by the self-same weeds which occupy the tumble-down land. The acreage under these two letters cannot be less than 60 per cent. of the whole. The large black places shown on the map are farms which have either wholly or largely gone out of cultivation, and they almost in every instance come under Classes C. and D. Wherever a large tract is seen to have become grassed over, it may be safely assumed that the land was held as a distinct farm by a tenant until both he and it were ruined, and as no immediate tenant could be found, nature stepped in and supplied the herbage now covering it. Frequently in the vicinity of woods, groves, or plantations (*see* the map) the soil is of the stiffest and worst description, and there clumps of fields have been abandoned to nature.

It is important to observe that for the first few years, tumble-down grass is worthless if rates and taxes are demanded; consequently, before a tenant can be found, twitch and water-grass have formed a dense coverlet, which renders profitable cultivation quite out of the question. The value of such pasture consists in the feeding properties of weeds and inferior varieties of grasses. Observations upon tumble-down land.

Futile attempts have from time to time been made to introduce better grasses among the twitch by heavy harrowing, sowing good seeds, and rolling. Top dressings have been tried, with the result that the twitch gave a larger quantity of feed. Inoculation has been attempted, and at first appeared to succeed, but before long the weeds smothered the importation.

After a certain lapse of time, the heaviest clay-lands of East Essex begin to run back to scrub or bushland, and on several of the tumbled down farms visited by me, the fields, after 10 or 12 years' rest from the plough, have thrown up a plant of thorns, briars, and brambles. In the Dengie Hundred the reversion to bush-land is very conspicuous, but it may be detected in other places.

With the exception of the small area under A1, none of the grass-land marked black on the map promises to come to any value within the next 10 years. The probability is that it will gradually get worse in the case of fields withdrawn from arable cultivation since 1888, but thicken at the bottom and produce a greater bulk of inferior food wherever the plant dates back to an earlier period. The value of the land out of arable cultivation.

As to the stock-carrying powers of these pastures, the fact of my visiting Essex in winter and before any spring growth had begun, precludes me from offering any estimate of my own on the subject. But, from the evidence of farmers, I conclude that the very best pastures (A1) carry one young bullock to, perhaps, every two acres in an average season, while on the worst fields from six to eight acres are required to keep one beast supplied with food. On farms entirely in tumble-down grass, the stock frequently roam at liberty from field to field, neither gates nor fences being stock proof.

Inferior quality of the prevailing grasses.

The prevalence of fiorin grass (agrostis stolonifera) over fields classed A2, B, C, D, and in certain portions of A1, gives rise to the impression that thorough drainage is generally required, but fiorin seems to be natural to these clay soils, and I observed it growing on land mole-drained within the last five years. That thorough drainage, either with pipes, bushes, stones, or mole plough would be beneficial in many instances is true, but it does not necessarily follow that the quality of the existing herbage would be much improved thereby, or the growth of better grasses encouraged. It may, I think, be safely concluded that before good pastures could be formed, 90 per cent. of the area marked black must needs be broken up, thoroughly cleaned, manured, and sown down with proper seeds. The cost of doing this would be very considerable (*see* Essex report, para. 91, page 14), and in the present condition of agricultural prices can only be pronounced prohibitive.

Absence of high ridges.

It is worthy of note that here on the strongest clay to be found in England the land, whether arable or in grass, lies almost on the flat. The stetches or ridges are narrow and separated by open or "gore" furrows, while here and there water furrows are made by plough or spade for the purpose of draining off surface water. No attempts have been made when sowing land down, to make high-backed ridges similar to those seen in other heavy-land districts. The water level is accordingly chiefly regulated by the depth of the open furrows, and as these, either from the natural crumbling down of the adjacent furrow-brows or the trampling of stock, gradually fill up, it follows that the level of subsoil water rises to within a few inches of the surface. This system of flat ridges appears to me to be *altogether in error* and needing alteration if grass is to be permanently or even temporarily grown on land with a retentive subsoil prone to hold water in stagnation. The strongest soils may to a certain extent be kept open below and dry above by the action of plough and cultivator, and for a corn growing rotation the system of having narrow stetches on the flat is advantageous and meritorious; but, when tillage is suspended and the artificial escape of water promoted by cultivation no longer provided, a substitute must be found or the land will become water-logged.

The advantages of high ridging for clay land pastures.

In other clay localities that substitute takes the form of high-backed ridges, and it is well known that the success which has attended the laying down of permanent pasture in many parts of England and Scotland is largely due to the system of high ridging and deep furrowing. I have in my own experience seen success and failure to establish good pasture on clay soil, lying side by side separated only by a wire fence and open ditch, and the only perceptible or intelligent reason for the difference was that in one case the land lay on the flat, whereas in the other it was ridged up.

It were too much to affirm that by the mere introduction of high ridges the difficulties of laying strong land well down would be *entirely* overcome, but it is my firm conviction that grass cannot be permanently or temporarily successfully grown upon soil such as we find in the part of Essex shown in my map without high ridges.

The liability of Essex clay to become water-logged has been specially referred to in my report, and in paragraphs 11 and 132 the fatal consequences of water-logging upon pastoral and forage plants are described in the language of reliable and experienced witnesses. I would respectfully submit that in this matter of water-logging Essex clay *does not stand alone*. In other counties preventative and counteractive measures are found necessary and have been adopted without hesitation; in Essex unfortunately no such counteractives have been adopted. I dwell upon these things because, firstly, the condition of Essex as I saw it owes much of its distressed and forlorn appearance to the large area of land once in a high state of cultivation, but now lying almost wild and waste—a distinct failure in pasture; and, secondly, because I firmly believe that things would never have assumed this shape had Essex farmers adopted different methods when laying the foundation of pastoral husbandry.

The sphere of the Royal Commission on Agriculture may not enable them to deal directly with such practical errors as I am endeavouring to point out and changes to recommend, but it is my duty to explain wherein I think Essex men have in a way contributed to their own discomfiture.

The effects of different management on temporary pastures.

During the first 10 days of my sojourn in Ongar district, I was brought in contact with two distinct classes of farmers. Some declared that grass could not profitably be grown for more than one year, others declared that it remained profitable for three or four years. There must be and is an explanation of this contradictory evidence. I saw excellent three years old grass on some farms, whereas close by even the second year's plant was bad. The explanation is perfectly simple. Farmer A. understood the art of grass farming; he knew what to sow and when to sow, how to stock and when to stock, when to give and when to withhold. Farmer B., although an excellent arable farmer, did not understand the system which looks to and depends upon grass and stock. And so it is all through these very distressed parts of Essex. There may be and probably are difficulties of soil and climate to contend with, but the main cause for the presence of so much wretched pasture and prevalence of agricultural distress, consequent upon the fall in the value of corn, lies in the fact that the principles of grass farming have never been understood, and that no steps have been taken to enlighten a race of naturally anti-grass farmers in matters pertaining to this (to them) new branch of agriculture.

Permanent pasture no panacea for the present depression.

I am not one of those who look to *permanent* pasture as a panacea for agricultural distress and cheap wheat. The formation of a really good old pasture is a long, tedious, laborious, costly, and uncertain operation, and it is generally accompanied by a commercial loss during the years of transition from a young to a middle aged sod. It is a landlord's job, and even in landlord's hands it is not always satisfactory.

Temporary pasture more to the purpose.

In my judgment it is to *temporary* pastures that Essex must look for a brighter future. Experience has taught us that by the use of certain seeds and the adoption of a system of depasturing which encourages and promotes the well-being of the good grasses, at the same time supplying a wholesome and abundant bite to a suitable number of stock for a limited number of years, even poor land can be made to pay a fair rent and leave a fair profit. No doubt the substitution of temporary pastures for constant cropping means a decrease in the number of labourers employed, but it is of importance to observe that in districts where the temporary pasture system is in practice, the condition of the land has been kept up and the labourers' wages have considerably increased during the past 15 years, whereas the reverse is told of districts where the prosperity of the farmer still depends on corn alone. It would surely be better for Essex that she should conform to the inevitable, and that instead of having her villages occupied by half-starving labourers employed only during certain months of the year, and ever forming the basis of a high poor rate and the fountain-head of crowded workhouses, she should adopt a system of farming whereby the labourers' employment is constant, regular, and secure.

An opening for butter and cheese farming.

I have in the concluding remarks of my report stated my opinion with reference to the undesirability of any palpable extension of the milk trade, and I adhere to that opinion. But I am convinced that there is a great opening for butter and cheese farming in Essex. It was a matter of great surprise that I heard of only one cheese-maker in Essex, and no one regularly engaged in the butter market. To the best of my knowledge there is not such a thing as a creamery or butter factory in the districts traversed by me. Surely butter and cheese are as capable of production in all the unions of Essex as in Midland Counties, and with London at hand, there should be no difficulty in disposal. The heavy soil of Essex, although not well suited for sheep, answers well for cows and cattle, and there is no reason why butter and cheese should not become staple products of the county. Anything to lift the farmers out of the old wheat, bean, and fallow groove will be of unspeakable value to Essex. Even at present there are many with only two conceptions of farming, the first being corn growing, hay cutting, and fallowing; and the second, the sole alternative, either to sow the land down or to let it sow itself down for ever and for ever. Both are equally wide of what I conceive to be the mark.

What might be done, *pro* and *con*.

As to help from outside, there are two phases of the crisis which almost haunted me during my stay in Essex. How they are to be overcome without special, and I fear unprecedented, legislation, I, for my part, am utterly at a loss to comprehend. I have thought and thought over them, and although sometimes I fancied I saw

through the gloom, the vision was so full of things that savoured of novelty and might be dubbed unconstitutional, I was ultimately constrained to look elsewhere for remedies.

1. I do not see how in these days three-horse land thrown out of cultivation and now lying in miserable and almost worthless pasture can under existing circumstances be brought back to a profitable condition by the present race of owners or occupiers. Nor do I see how land in this plight can continue to pay the burdens now levied upon it.

The present selling value for agricultural purposes of worn out three-horse clay ranges from 3*l*. to 5*l*. 10*s*. per acre; the same land after restoration to a fair state of cultivation is worth from 7*l*. to 10*l*. per acre. The increased value to be derived from reclamation, 4*l*. to 4*l*. 10*s*. per acre, would not at all cover the outlay required. The acreage abandoned in despair is steadily increasing, and in a few years, unless some change takes place, whole parishes will be entirely out of cultivation. Farmhouses, farm buildings, and labourers' cottages are becoming ruins, and all this in the midst of railways and within easy distance of London. The most congested district of Ireland affords no more alarming spectacle. The substitution of small for large holdings would do no good, for the same causes which affected the prosperity of the large would ruin the small occupier, and that in shorter time. If money could be advanced for the restoration of the land to a proper state of cultivation, the incidence of taxation (tithe and land tax included) revised and altered, good buildings and labourers' cottages erected, fair rents agreed upon, and some good security given to future tenants, I would take a hopeful view of the situation; but whether such measures are likely to meet with the approval of the Commission I am not qualified to say.

2. The farming capital throughout a large part of Essex, and especially in the part shown in my map, has been lost, and at present many tenants remain in occupation largely because of the leniency of landlords.

If pastoral and stock farming must be the system of the future, capital must needs be found to carry them on. As things are, many of the present race of Essex farmers must go to the wall. They may linger on and die a slow death; recover they cannot. The theory of land banks is good, and their presence would be beneficial at the present juncture, but I should be *very cautious* before advancing money on the security of crops grown on season land, as we know Essex to be, and I should want to know more about arrears of rent than would suit the needy portion of Essex farmers. Nevertheless, I believe that there are many men who, with the help of additional capital, would do better than they are now doing, and that advances might be made to them with every prospect of punctual repayment of interest and capital. I would not recommend a general attempt to bolster up by loans or advances an industry which has fallen to a very low point, but would encourage and assist such as were solvent in the meantime, but prevented from making the most of their business by loss or want of capital.

These appear to me to be the two most serious features of the present position, and I cannot help thinking that if Essex men had only looked ahead 10 or 15 years ago neither would have arisen. They stuck to the very system of farming, and persisted in growing the very crops which gave every indication of giving way before the weight of foreign competition, and in so doing they courted and invited their own ruin. This fatal attachment has not yet died out, but that I attribute more to ignorance of any other system than blind prejudice in favour of the dog that bit them.

If, then, there be some new system calculated to work well in Essex, what is it, and how might it be introduced into this county?

So far as I can see, and so far as I did hear, the three-horse clays cannot be cultivated to profit with wheat below 45*s*. per quarter; wheat growing at 25*s*. to 30*s*. need not therefore be trusted to.

Grow as small an area of unprofitable crop as possible. Reduce the acreage under the plough, and till what land must be tilled in the best possible manner. Cut losses, and run profits. Let stock, whether it be cows, cattle, sheep, horses, pigs, or poultry, become the sheet anchor, and fix attention more than ever upon grass farming in so far as it relates to temporary pastures.

If I am right in these recommendations, it is certain that Essex-born farmers stand in need of instruction, for it means a complete overturn of their native custom and ideas. In my report I referred to the field open to the Board of Agriculture for the establishment of experimental farms, where the treatment of grass lands might be demonstrated and taught. I have, however, lately been supplied with particulars respecting the sum placed at the disposal of the county council for purposes of technical education, and have had the opportunity of reading the reports on the subject. Essex County Council have over 16,000*l.* a year to devote to technical education, and even the half of such a sum would, if wisely devoted to demonstration and experiment, be sufficient not only to thoroughly test the best grasses and management of pastures for the prevailing soils of Essex, but also to conduct lectures and give practical instruction in the manufacture of butter and cheese.

The reports received last year from rural stations in Essex are unfavourable to the continuance of agricultural instruction by lectures alone. Few of the farmers attended, and such as did attend were not favourably impressed. This is merely a repetition of what has taken place in other counties. Agricultural instruction must be accompanied by demonstration, or it falls flat and finds no friends.

The county councillors of Essex have been compelled to acknowledge this, and at least one scheme has been submitted for the introduction of a new system of teaching farming. Whatever may be the result of their deliberations, there is no doubt that they realise the importance attaching to the subject in these altered times, and those who spoke to me expressed themselves as alive to the necessity for embarking on practical experiments rather than persevere with theoretical classes.

It is perfectly true that self-help with change of system and management must play a prominent part in any improvement in the affairs of Essex agriculture; it is equally certain that many Essex farmers are far beyond the possibility of resuscitation; it is more than probable that when the full consequences of the disaster of last year are known, things will be seen to be worse than was supposed.

I have told the worst and the best that I know. The difficulty is, in my estimation, largely of a practical nature, and the chief cause is the fall of the value of corn; but so serious are the complications involved, that it seems as if the district which appears on my map might well become the subject of special and distinct Government supervision and assistance.

I am your obedient Servant,

R. HUNTER PRINGLE,
Assistant Commissioner.

MAP OF THE DISTRICT BETWEEN

CHELMSFORD, MALDON, AND THE BLACKWATER ON THE NORTH AND THE LONDON, TILBURY AND SOUTHEND RAILWAY ON THE SOUTH.

The blackened portions represent fields and groups of fields which since 1880, have have passed out of arable cultivation and are now lying in coarse, weedy pasture.

(Further particulars respecting the history, distinctive features, and relative values of these pastures will be found in the Supplemental Report upon Essex.)

*The area covered by the Map is about 222,720 acres **
The area marked Black is 28,222 acres and 28 poles †
Railways are marked ▬
Railway Stations are marked ■ *and names affixed*

N. B. In collecting the information required for this Map the 6" Ordnance Survey Sheets were first made use of; these were subsequently reduced by Photography and reproduced as above.

Scale ——— 1½ inch to the mile

**Deducting the space for title and portion of sea, but including the rivers Crouch and Blackwater,*

†The area out of cultivation, viz: 28,222 acres. 0 r. 28 poles, represents 12·67 per cent of the total area shown on this Map.

The areas and measurements of the fields out of cultivation shewn on this Map have been calculated by the Staff of the Survey Branch of the Board of Agriculture.

ROYAL COMMISSION ON AGRICULTURE.

SCOTLAND.

REPORT

BY

MR. JAMES HOPE
(ASSISTANT COMMISSIONER),

ON

THE COUNTIES OF PERTH, FIFE, FORFAR, AND ABERDEEN.

Presented to both Houses of Parliament by Command of Her Majesty.

Schedule of Questions referred to in Report - - - - - page 22

APPENDIX II.

Selection of representative Answers made to Questions contained in Schedule - „ 22

THE COUNTIES OF PERTH, FIFE, FORFAR, AND ABERDEEN.

To HERBERT LYON, Esq., Secretary,
Royal Commission on Agriculture,
23, Great George Street, Westminster.

East Barns, Dunbar,
4th December 1893.

SIR,

I HAVE the honour to present to you an account of the work undertaken by me, and of the results of my inquiries since my appointment, upon 19th September last, as Sub-Commissioner for Scotland, under the Royal Commission on Agriculture.

I.—INTRODUCTION.

1. As I had the privilege to act as an Assistant-Commissioner under the Royal Commission, presided over by His Grace the Duke of Richmond and Gordon, in the years 1880–82, I have endeavoured, in the present case, as directed, to supplement the information contained in the Reports then presented to Parliament, and to pursue lines of inquiry similar to those adopted under that Commission.

Counties selected for reporting on.

2. On receiving my present appointment I considered carefully as to what districts would be most likely to furnish a fair index to the present condition of agriculture, and I determined that the counties most conveniently furnishing a fair representation of the various classes of farms were Perth, Fife, Forfar, and Aberdeen. These counties contain lands of varying quality, and farms varying from extensive holdings to small farms ranging from 20 to 100 acres.

Procedure.

3. With the view of collecting as accurately as possible the opinions of those interested in agriculture in the counties mentioned, I convened public meetings in Perth, Forfar, Cupar-Fife, and Aberdeen, and I also attended the markets in these towns, where I met with representatives of all classes, and gathered from them the opinions of the various districts on the leading questions affecting agricultural interests. The meetings called by me were well attended, and opinions were freely expressed upon the various questions affecting the agricultural industry. In addition to the inquiries made by me personally, and to the information presented to me at the public meetings, I considered that it would be a great aid to myself and to the Commission if I were to obtain from representative parties written opinions on the numerous topics affecting agriculture which have been agitating the public mind, and I accordingly framed a Schedule of Questions, a copy of which is hereto appended, which I issued to representative men in each of the counties named. (*See* Appendix I., page 22.) A large proportion—over 50 per cent.—of these schedules have been filled up and returned to me with very able and intelligent answers to the questions submitted. I have made a selection from those answers, and append the same hereto.

Personal interviews.

Schedule of Questions.

Statistics.

4. Dealing with the several counties upon which I am now to report, it may be convenient to lay before you the agricultural statistics for the past 11 years of each county. This will bring under review the system of cultivation followed in each county, and will show whether the methods of cultivation formerly pursued have been adhered to, or whether changes have been introduced for the purpose of battling with, and if possible overcoming, the serious depression which has borne heavily upon farmers during the past decade. These statistics are as follows, viz. :—

ACREAGE UNDER EACH KIND OF CROP, BARE, FALLOW, AND GRASS.

5. The area selected by me, as I mentioned at the outset, embraces lands of very varying qualities, and farms ranging from large holdings to small farms that just touch the border line between the farm and the croft. The farmers in these counties, as a class, are men of very superior intelligence, who have kept abreast of the times by adopting the most modern methods in the cultivation of the land, and by utilising the most recent inventions in labour-saving machinery.

Character of area and class of farmers in that area.

Existence of Depression.

6. On all hands, and in all quarters, I have ascertained that depression of a very acute kind has prevailed during the past ten years. As might naturally be expected where so wide a range of opinion has to be gathered and scrutinised, the ideas as to what has brought about the present agricultural distress are varied; but all agree that the struggles of the farmers in fighting against adverse circumstances have never been keener than they are at present.

7. Notwithstanding the present depression, however, I find that in no district of the area embraced in this Report has there been an abnormal number of changes of tenancy, nor has there been more than the usual number of unoccupied farms or farms taken into the hands of the owners. In the case of old leases, many proprietors granted abatements of rent, but in some cases proprietors were slow or unwilling to recognise the fight which their tenants were having against adverse times, and held them firmly to their obligations under the lease, and exacted payment of the rents contracted for without giving an allowance of any kind for the great alteration in the position of things which had taken place since the lease had been entered into. It is equally the case that in a good many instances the proprietors, with commendable alacrity, came forward and granted aid to deserving tenants in the way of deductions from rent, or of

Changes of tenancy; number of unoccupied farms.

Abatement of rent.

* Including ponies. † Exclusive of those kept in towns, and by cottars with less than a quarter of an acre of land.

allowances for manure which were equal to abatements of rent, and in this way the pinch of the bad times was warded off in many cases where otherwise the farmer would have been bound to have sought relief by handing over his assets to his creditors.

The result of this is that the landlords have been sufferers with the tenants, and it is, therefore, of the utmost importance to both that the reasons assigned for this state of matters should receive careful consideration.

Causes of the depression.

8. As to the causes of the agricultural depression, I shall endeavour to set forth the various views which were submitted to me by the gentlemen who attended my meetings as well as the opinions of those who have replied to my inquiries.

II.—Low Prices and Foreign Competition.

Low prices and foreign competition.

9. In all the centres where I conducted inquiries, and in all the schedules returned to me, the opinion was unanimously expressed that much of the present depression is directly traceable to the low prices which have for many years past been realised for almost all kinds of agricultural produce. There is no controverting the fact that there has been a gradual and continual shrinkage in the values of nearly all the kinds of produce that farmers sell off their farms. This fall is no doubt due to the large supplies of all kinds of agricultural products imported into this country. For many years past the capitalists and financial institutions of this country have been investing large sums of money in the Colonies and in America, which have been lent to agriculturists there, and have thus aided very greatly the prosecution of the agricultural industries of these countries. I think it is fairly to be expected that there will be no diminution in the food supplies which we receive from abroad, and that our farmers must make their calculations upon the probability that, for years to come, their foreign brethren will compete with them in our home markets as keenly as they have been doing for some years past.

Remedies proposed. (1) Import duty.

10. Some of those whom I interviewed suggested that an import duty should be imposed upon all foreign goods directly competing with the products of the British farmer; but it appears to me that, if this were done, the result would be very different from that which the parties, who advocated such procedure, anticipate. With a moderate duty prices would, to some extent, rise; but on the other hand the benefit of any such rise would not long be enjoyed by the farmer, as it undoubtedly would be the case that, on the expiry of the leases current at the date of the imposition of such a duty, the new rents would be based upon the increased prices, and thus the benefit of the rise would be transferred from the tenant to the landlord in the form of an increased rent. Possibly for a year or two the advantage would be enjoyed by the tenants holding under current leases; but the arguments which have been put forward to me in favour of Protection are so old that I do not think that they can be seriously pressed by any one who wishes permanently to benefit the position and the prospects of British farmers. The real solution of the difficulty created by low prices induced by foreign competition is to be found in a reasonable adjustment of rent of farms. The basis upon which all rents ought to be calculated is the revenue expected to be drawn from the farm after making due allowance for working expenses, interest on capital invested, and a fair return for the skill and labour of the farmer. The balance remaining over after meeting the cost of production represents the sum which the tenant can afford to pay in name of rent. The prosperity of the tenant will mainly depend upon whether or not this balance, offered by him in name of rent, be such as is warranted by the cost of production and the price of produce. I do not think, however, that legislative aid should be called in to help the farmer in transacting this portion of his business. The question of rent lies at the root of the whole matter, and is the main factor which ultimately determines the margin of profit; and so long as the letting of land continues to be dealt with on the footing of an ordinary commercial transaction, the natural laws of supply and demand will ultimately bring the question of rent to its natural and proper level. In making these observations I do not lose sight of the fact that where rents were fixed by contracts entered into ten or fifteen years ago, it was necessary, through the changed circumstances of the times, to reconsider the terms of the contract; but I have found that the good sense of the great majority of the Scotch landlords led them in such cases to give relief to deserving tenants where revision of rent was undoubtedly called for. By pursuing a policy of mutual consideration and concession, landlord and tenant ought to meet each other upon a fair footing; and in the case of older leases it is to be hoped that landlords will not hesitate, where that has not already been done, to give any needed relief before the

(2.) Proper adjustment of rents.

means of their tenants are so reduced as to place them under most serious disadvantages financially in carrying on their farms, and in managing the land in such a way as to enable them to produce the best results from it.

III.—Reciprocity.

Reciprocity.

11. Closely allied to foreign competition is the subject of Reciprocity. While foreign imports are all admitted free, and so allowed to compete in our home markets, on equal terms with home produce, that is, unfortunately, not the case with certain articles exported from this country. Potatoes are extensively grown in the counties of Perth, Forfar, and Fife, and a successful trade could be carried on in the exportation of potatoes to America were it not for the fact that there is a heavy import tariff of about 40*s.* per ton to be paid before the British producer can get admittance to the American market. That duty at the present time is so heavy that it practically has put a stop to the exportation of potatoes, and the loss thus entailed upon many Scotch farmers forms a considerable item in the present depression. In all quarters I have been strongly urged to give this fact a prominent place in my report. There can be no doubt that a hardship exists in the fact that American produce is allowed to be sold in our home markets on the same footing as if it were home produce ; while, on the other hand, British produce sent to America is heavily taxed before it can get admission to the American market.

IV.—Labelling of Foreign Meat.

Labelling of foreign meat.

12. This subject has been inquired into by a Committee of the House of Lords, and it is only necessary for me to convey to you the views of the Scotch farmers on the subject. In the area visited by me there is a universal opinion that imported meat should be so distinguished from home produce that there would be no possibility of its being sold to the consumer by unscrupulous middlemen as a British product. The mode of accomplishing this most frequently suggested to me was that the sellers of foreign meat should be licensed, and that such meat should only be exposed for sale in the shops of parties holding licences. A precaution of this kind it is thought would be sufficient to cause the purchaser to make inquiry as to whether or not he was being supplied with the home article when he asked for it; and that if some such remedy were adopted it would be a benefit both to the home producer and to the consumer, and would put an end to misrepresentations on the part of the seller, which are well known to prevail to a considerable extent at present.

V.—Railway Rates.

Railway rates.

13. I have also had laid before me many complaints that the rates charged by the railway companies for the conveyance of foreign produce from the port of landing to its destination are less than those charged for the carriage of home produce. This is an anomaly which should not be allowedto continue, and I believe there is no better excuse for its existence than the excessive competition between the various railway companies to secure the traffic of shipping companies trading between home and foreign ports. This complaint was also brought into prominence under the Commission presided over by His Grace the Duke of Richmond and Gordon, and it humbly appears to me that it is one calling for the intervention of Parliament. It ought to be made penal for railway companies to give a preference of the kind indicated to their traders, and they should be obliged to carry the home produce on precisely the same terms as those extended to the foreigner.

VI.—Increase in Working Expenses.

Working expense.

14. During the period embraced in this report the working expenses have, so far as I could ascertain in all the areas visited by me, increased from 10 to 15 per cent., traceable almost entirely to the increase in wages of the agricultural labourer, and to a slight extent in the tradesmen's accounts. No doubt this increase would have been greater had it not been for the fact that, during the period mentioned, great improvements have been introduced in labour-saving machinery, which have helped so far to prevent a further increase in the labour bill. I see no prospect of any diminution in the wage bill, and I think the British farmer must not expect to get any relief in that direction. The position of the labourer has doubtless improved ; but as that matter

has formed the subject of an independent inquiry, it may not fall within my province to deal with it here. So far as I can learn, the relations, generally speaking, between farmers and their servants are of a very cordial nature, and I do not think that any of the farmers with whom I came in contact in the least grudge the somewhat increased remuneration which their servants have obtained.

VII.—Taxation.

Taxation.

15. With the passing of the Local Government (Scotland) Act, and the introduction of the changes brought about by the County Council, the local rates have in some cases considerably increased. I had not presented to me, however, any specific complaint about the local rates, with the exception of the school and poor rates.

School rates.

16. Prior to the passing of the Education (Scotland) Act, 1872, the whole of the schoolmaster's salary was paid by the proprietor. The rates introduced by that Act were laid equally upon landlord and tenant, and for the first time in Scotland the tenant found himself saddled with the payment of a tax for education; while, on the other hand, the proprietors were practically relieved of payment of the sums which they had theretofore contributed towards the schoolmaster's salary. Many farmers felt that the imposition of this tax during the currency of their then existing leases was unjust to them, and that in doing so Parliament had applied a principle against tenants which was denied to them, for example, in the case of the Ground Game Act. Under the last-mentioned Act, the privileges conferred by the statute were not accorded to tenants under current leases. Strong opinions have also been expressed to me that the school rate is a tax which ought to be paid at least to the extent of two-thirds by the proprietor, and to the extent of one-third by the tenant. This as an argument doubtless had much force when the assessment was imposed; but as all leases then current have now expired, much of the force has been taken away from it. Like other rates, this is a tax which is doubtless taken into account by the tenant in fixing his rent, and his calculations ought to be based upon having it to pay. The result of all taxes on rent current at the date when the lease is entered upon is that, like working expenses, they go to diminish the net revenue from the farm, and so reduce the balance available for the payment of rent.

Poor rates.

17. Proprietors and tenants alike represent, however, that the present mode of taxation is unjust and ought to be reconsidered, and the tenants further strongly urge that their representation on the parochial board is very inadequate. These representations are made with special reference to the manner in which the poor rates are levied. The poor rates, they say, are imposed upon a wrong principle. It may, I think, be put forward as a generally admitted fact that there is no trade or calling in the country which has less to do with causing pauperism than agriculture. The maintenance of the pauper is no doubt a national responsibility which must be faced and met by the nation, and it follows that this responsibility ought to be met and discharged out of the collective wealth of the country. At present this is not the case. Under the Poor Law Acts, the rates for the relief of the poor form a first charge on the fruits of lands and heritages in Scotland. That burden should not fall upon lands and heritages only, but, in order that it might rest upon a fair basis, should be distributed over all material wealth. In short, it seems to me that there are convincingly strong arguments in favour of the proposition that the poor rates should become a national tax, and be imposed upon the income or "means and substance" of the individuals who own the nation's wealth. Agriculturists have, it seems to me, a just grievance on this head, and if a principle of rating were devised such as I have indicated, I think it would afford no small relief to all interested in agriculture in the present depressed state of that industry.

Income tax and inhabited house duty.

18. Another grievance which was prominently brought before me was the principle upon which the income-tax is assessed upon the supposed income of farmers and the charging of farmers' houses with inhabited house duty. According to the income-tax Act, the farmer in Scotland is assessed upon one-third of the rent paid by him for his farm, on the supposed principle that the farm yields a profit representing one-third of the gross rental. Whether farms yielded such a profit at the time the above system was instituted I am not in a position to say; but I have no hesitation in stating that, for many years past, few, if any, farmers have drawn profits out of their farms equal to one-third of the rents paid by them. The general opinion conveyed to me was that the tax was levied upon an erroneous principle, and it was strongly

urged that I should represent that farmers in the rating of income-tax should be placed upon the same footing, and dealt with in the same way as ordinary commercial and business men, and be asked annually to return to the assessor an exact note of their income. No doubt, according to the existing law farmers are afforded facilities for obtaining relief against an unfair assessment; but in the majority of cases, the farmers are rather content to bear the burden laid upon them by the statute than to go through the somewhat tedious and cumbrous process of getting exemption or abatement through the aid of the assessor or the Court of Appeal. It was strongly represented to me by many farmers and others that if the present principle is to be continued the assessment should be upon one-sixth of the rent.

19. It seems to me that the complaints of the farmers under this head have a great deal in them to recommend them for favourable consideration. Agriculture is an industry which ought to be pursued according to ordinary business lines, and there seems to be nothing in the calling of a farmer which ought to impose upon him a presumption that his net income is in any way gauged or fixed by the rent which he pays. It humbly appears to me that he ought to be asked to submit a return of his income in the same way as those engaged in professional or mercantile vocations are asked to do. If this principle were adopted, it would be a boon to farmers in the way of relieving many of them from paying a tax for which in no legal sense they are liable; while, at the same time, it would relieve them of what seems to be the unnecessary trouble of going through the process of proving to the satisfaction of the Assessor, or the Income-Tax Commissioners, that they have really no assessable income.

Taxation on fire insurance premiums.

20. Farmers also complained to me of the practice which has recently been adopted of taxing them on sums paid as fire insurance premiums. These sums certainly ought not to be taxed as income, and I consider the farmers' complaint on this head a most reasonable one.

Inhabited house duty.

21. Another matter to which my attention was specially drawn was the charging of inhabited house duty upon the assumed annual value of farm-houses. It is felt by those interested in agriculture that this is a tax which pressed unduly upon agriculture. The farmhouse is a necessary part of the farm, and, in the majority of cases, is as essential to the proper conduct and management of the lands as are the farmers' agricultural implements and the other buildings upon the farm. The farmers with whom I have been brought in contact in the areas now reported upon, strongly hold the view that farmers' houses ought to be exempted from this duty, and if this were done, and the income-tax assessed upon a proper basis, there is no doubt it would be a step in the right direction towards relieving the present depression from which all farmers more or less suffer.

VIII.—Malt Tax.

Malt tax.

22. At my meetings and interviews in the counties of Perth, Forfar, and Fife, the question of the effect which the repeal of the malt tax and the imposition of the tax on beer has had upon the returns from those farms that produce the better class of barley was very fully and particularly discussed. During the existence of the malt tax, as is well known, the law was that the tax was levied by measure upon the malt; and, in order that the brewer might get the greatest amount of extract from the smallest quantity of barley, it was manifestly in his interest to use the best quality of grain, so as to enable him to produce the greatest quantity of beer at the lowest rate of duty. Accordingly, it was the practice of brewers to use for their purposes barley of a high quality, and the demand for the finest samples of home barley was always good, while the prices obtained by the farmers were at the same time fairly remunerative. Since the malt tax was repealed and the beer duty substituted for it, the brewers have no longer had the same interest to minimise the quantity of malting material, as it is a matter of no moment to them, as far as duty is concerned, whether the bulk of the malted material be large or the reverse, the result to them, as regards revenue purposes, being the same in either case. Large quantities of foreign barley have, since the abolition of the malt tax, been used for brewing purposes, and correspondingly the demand for the better-class samples of the home article has fallen, with a consequent diminution in the price. Since the abolition of the malt tax there has undoubtedly been a considerable fall in the price of home-grown barley, and those who expressed opinions to me on the subject put the fall per quarter at from 5*s.* to 10*s.* Brewers nowadays, as is well known, not only have recourse to foreign-grown

grain in the brewing of beer, but they also extract malt from maize, rice, molasses, &c., and all this has undoubtedly the result, pointed out to me, that the home barley is neglected, and, in point of price, has gone down to the level of foreign-grown and other inferior grains.

23. I believe it is generally admitted that the loss which has thus been entailed to the farmer through the alteration of the law has not in any view benefited the consumer. I have no positive information as to whether the alteration has benefited the brewer or the retailer, but I do know that the brewer now largely draws upon foreign supplies for his raw material, instead of, as formerly, finding it to his interest to make his principal purchases from home producers.

24. In my own opinion, the repeal of the malt tax has operated adversely to the interests of many of the Scotch farmers, and I consider that it forms a considerable item in the list of causes which have brought about the present troubles of the farmers that hold farms capable of producing the finer classes of barley. I agree with the views expressed to me that, if the duty were assessed according to the old principle, and charged upon the malt instead of on the beer, it would help to increase, not at the expense of the consumer, the price of an article of farm produce upon which a great many farmers rely as forming one of their mainstays in the farm revenue.

IX.—Freedom of Sale and of Cropping.

Freedom of sale and cropping.

25. In many of the districts embraced within my present inquiry, it is a satisfaction to be able to report that in recent years there has been a greater tendency than was formerly noticeable in the way of relaxing those strict conditions which usually appear in leases binding down the tenants under heavy penalties to adhere to certain fixed systems of cropping, and also prohibiting them from selling various articles of produce which would find a ready market, and the sale of which would not unduly deteriorate the farm. At the same time many complaints and representations have been laid before me, to the effect that landlords in letting farms still impose conditions as to cropping and sale of produce, which materially hamper the farmer and prevent him from so cultivating the soil as to produce the best returns from it. At one of my meetings a gentleman present stated that it was not an unusual thing for a representative from the factor's office to go round annually with a book in his hand, made up in the form of a railway time-table, containing an abstract of the cropping clauses in the lease, so as to ascertain whether these had been thoroughly complied with. If the unfortunate farmer had deviated from the prescribed rotation of crops, then penal rents were claimed from him, even though it should be shown that the farm had suffered no deterioration from the unauthorised variation in the cropping. No doubt cases of this kind are not so common nowadays as they used to be; but there can be as little doubt that the hard-and-fast rules as to cropping and sale of produce which were framed before farming was conducted, as it now almost invariably is, upon scientific principles, form a great hindrance to the cultivation or the soil, and it seems to me that they very unnecessarily hamper tenants in the management of the land. If a concession were made in favour of farmers, practically giving them freedom of cropping and of sale of produce, it would at the same time be necessary and only fair that landlords should be protected against any abuse of such powers by unscrupulous or bad tenants, and some reasonable restrictions would have to be imposed, laying the tenant under obligation to clean and manure the farm properly, and to leave it in a specified rotation at the termination of the lease. All the gentlemen who have given me oral and written information on this subject would readily assent to such a condition, and it seems to me that such a proviso would give the proprietor ample security against the land being scourged, and the letting value reduced. I believe that it is the desire of every Scotch farmer to give to his proprietor as full a rent as can fairly be taken out of the land, and I consider that it would be one of the greatest advantages towards maintaining, if not increasing, the land rental, if proprietors would abolish the antiquated cropping clauses by which they have so long fettered and circumscribed the efforts of farmers to make the utmost possible out of the soil. With a free hand, the farmer could produce a greater bulk; he would feel himself at liberty to grow those crops only which found the best and readiest market in his particular district, and I think it not doubtful that more labour would be employed, and fresh life and vigour infused into the whole agricultural community.

26. In many of the answers returned to the questions submitted by me, the existence of the fettering conditions with which I have just been dealing are mainly ascribed to the fact that the great majority of estates are under the management of what are termed "Lawyer Factors," who adhere most tenaciously to the old forms of leases, and repeat clauses in new leases without having any practical knowledge of the hardship they are thereby imposing on the tenant. It may be that it is very difficult to alter the traditions of an estate in its management, but the true remedy of this grievance, which has been prominently brought before me, would be to wipe out the cropping clauses, and to give to the proprietors some such protection as I have indicated against the unfair treatment of their farms if this were done. I have no doubt that greater circumspection would be observed in the selection of tenants, and that the truly capable men would be selected when holdings came into the market. Possibly one of the best aids towards securing the object which the landlords have in view, would be for them to invariably make the criterion of preference between tenants the fact as to whether the one or the other was, or was not, thoroughly skilled in his business. Estate management.

X.—Cost of Sale of Farm Produce.

27. The cost of marketing the stock of farmers, according to the present mode of sale by auction and sale-rings, instead of by the old method of sale in open market, was also a subject to which my attention was invited. In former years the farmers attended free markets, and did their own buying and selling without expense. At the present time the stock is almost invariably consigned to auctioneers, who market them through their sale-rings, charging the consigner a commission for their services, and for guaranteeing the proceeds of the sale. This commission on large holdings means a very considerable annual sum, and many of the farmers who communicated their views to me considered that the intervention of the auctioneer as middleman necessitates an unnecessary expense in the management of the farms. The reply to this might be that farmers have themselves to blame for not availing themselves of the old method of disposing of their stock, but in point of fact the auction ring has come to be quite recognised as an established institution, and the old market system has dwindled down to such an extent that many of the markets have ceased to be held. So far as I can see the sale-ring system, which has been the creation of the farmers themselves, is one which affords a convenient enough means for both buying and selling, and if farmers desire to obtain some share of the commission, which now falls to the auctioneer, it is open to them, as has been done in many parts of the country, to establish sale-rings under the Companies Acts, with this limitation, that the shares in such concerns must be held either by farmers or by buyers at the auction. In other words, to introduce as far as possible the co-operative system in the buying and selling of stock. I have also had my attention specially drawn to the fact that while grain and most other articles of agricultural produce are sold by weight, this practice has not yet been extended to the sale of live stock. It is argued by many that if live stock, whether store or fat, were sold by weight, and if bids were taken at so much per cwt., it would lead to fewer anomalies than what now exist in the disposal of stock through the sale-ring. Sale of produce, (*a*) by auction (*b*) by live weight.

XI.—Bimetallism.

28. This was also brought before me as a cause of aggravation of the present depression. One gentleman read to me a very closely-reasoned paper on the subject, and I think this fact worthy of mention, as the paper evidently expressed the opinion of a considerable section of those who waited upon me. Bimetallism.

XII.—Restrictions on Importation of Canadian Store Cattle.

29. In regard to Canadian store cattle there can be no doubt that in the counties of Perth, Forfar, and Fife, the want of the usual supply of Canadian stores has tended to enhance the price of lean stock this autumn, and had it not been for the very regrettable agricultural distress in the south of England this year, which caused the farmers there to send their store stock northwards, and dispose of them in Scotland, the farmers, whose chief business is the feeding of cattle, would have been obliged to purchase their lean stock at prices so high that little or no margin would have been left for feeding. There was in the counties of Perth, Fife, and Forfar an almost unanimous expression of opinion that our home ports should again be opened for the Importation of Canadian store cattle.

introduction of cattle from Canada. The feeding of these stores has for some years back formed a considerable item of revenue with many farmers, and if their exclusion is to be continued, there can be no doubt that the position of those in this country interested in that industry will gradually get worse. For many years past the rearing of store cattle in this country has been so unremunerative that it has largely been discontinued—farmers preferring rather to buy in store cattle from Ireland or from Canada. Since the exclusion of Canadian stores, the farmers that must be supplied with stock for the consumption of their turnip crops have been obliged to buy stores brought from Ireland, so that the exclusion of Canadian cattle has not operated in favour of the Scotch, but of the Irish farmer.

The above enumerated subjects comprise the main matters which the farmers in the districts visited by me believe to have been the chief causes of the present depression in agriculture.

XIII.—Changes of Tenancy.

30. As instructed in the Heads of Inquiry communicated to me, I have also collected information as to the *changes of tenancy* which have taken place during the period embraced within this report; as to the number of farms taken by the proprietors into their own hands; and as to the reductions and abatements of rent. As I have mentioned in a previous part of this report, the number of changes in tenancy have not been abnormal, though undoubtedly there have been a number of cases where old tenants have been obliged to leave their farms owing to the total loss of capital through the hard times, but these are not numerous enough to call for special observation.

XIV.—Unoccupied Farms.

31. So far as I have learned, there are no *unoccupied farms* in the district covered by this report, and very few farms have been taken into the proprietor's hands in consequence of inability to find tenants at reasonable rents.

XV.—Reduced Rents.

Reductions in rents.

32. Reduced rents, I am informed, have almost invariably been accepted, but at these reduced rents tenants have always been obtained. I have also ascertained that numerous abatements of rent have been given which have not appeared in the valuation roll. These abatements were often in the shape of manures, lime, &c., which practically count as concessions on the rent, and they sometimes also took the form of arrears cancelled and of allowances made at will. According to the evidence furnished to me rents during the past ten years have fallen from 10 to 50 per cent., and the average fall may be stated at 30 per cent.

XVI.—Large and Small Farms.

33. In all the inquiries conducted by me, I have also made it a special point to give prominence to the question whether the *depression* has been *felt most by the large or by the small farmer.* I found that there was a consensus of opinion that the depression has been quite as much felt by small farmers as by large ones. It is a common practice, in the case of small farms, for the land to be worked by the farmer and his family; and it was argued to me that such a class of farms were very useful as a nursery for farm servants. In some cases small farmers have been more prosperous than large ones, but, from what I can learn, however, this prosperity has mainly, if not solely, been due to the fact that their children work for them without adequate remuneration, many indeed getting no stated wages. The result of the competition for small farms is that it takes the farmer all his time, even with the free labour of his children, to hold his own against the present times, and a pretty general belief was expressed to me that if those small farms had been managed in the ordinary way by hired labour, the position of their tenants would have been worse than that of the holder of the large farm. Aberdeenshire, however, it is right to state, forms, I may say, an exception to this statement. In that county it is thought that the small farmers have been better able to hold their own than the large farmers.

34. As a summary of the evidence collected by me, I think the fair conclusion to be arrived at is that certain of the counties may be as well adapted for small farms as for large ones, but as a matter of making profit from farming, it is generally conceded that large farmers are better able to develop to the utmost the resources of the soil than the small ones. It is also generally conceded that the large farms produce proportionately more food than the small ones, as they are usually more scientifically cultivated, grow more grain per acre, and feed more stock than the small ones.

XVII.—Sub-division of Farms.

35. There has not, so far as I could learn, been any tendency to divide large farms and create small holdings, or to wipe out the small holdings and add them to larger farms.

XVIII.—Demand for Farms.

36. As regards the letting of land I have ascertained that there was little inquiry for it during the first eight years of the past ten years. During the last two years, however, I am told that the demand for land has to some extent increased, and that there are now considerably more offers for farms when they come into the market than there were two or three years ago. It is a little difficult to find out what has led to this improved demand, but the prevailing opinion seems to be that prospective tenants are speculating upon the return of good times, and although the demand is somewhat keener still the rents have not appreciably increased.

XIX.—Profits and Losses of Farmers.

37. I invited farmers to give me a statement of their accounts, showing their yearly profits or losses during the past 10 years. I have been favoured with these returns, and I observe from them that, if the years 1890 and 1891 be excluded, the balance is almost invariably on the wrong side. The years 1890 and 1891 seem to have been a little more favourable; but one large farmer, who has a capital invested in farming of something like 25,000*l*., states that in no year has he obtained more than 2½ per cent. upon his invested capital. Others, who do not make any return, content themselves by stating that their losses have been so heavy that they prefer not to disclose them.

XX.—System of Cultivation.

38. With regard to the system of cultivation pursued during the past 10 years, I was informed, and the statistics which I have given show, that there is an increasing tendency to lay down land in grass. In Aberdeenshire, I was informed, a large area had been laid down in grass. This, I am led to believe, was done with the double object of saving expenses in connection with the working, and of giving the land a longer rest, so that the turnip crop might be free from the ravages of "finger and toe." The latter, I was told, was the main reason why the land had been allowed to rest longer in grass than was the case some years ago. In the other counties, however, this reason does not hold, and the chief ground for the change is to be found in the desire of the farmers to reduce their working expenses.

XXI.—Dairy, Fruit, and Poultry Farming.

39. Dairy, fruit, and poultry farming have made no material increase. In Perthshire there are certain small portions of land near to towns set apart for fruit growing, but the general view expressed to me was that, if fruit growing to any considerable extent were resorted to, the cost of labour would be so serious that the profits would be entirely swamped. Indeed, one of the chief difficulties in connection with the farm management is the scarcity of labourers, and especially female labourers. These are drawn into the towns, where they find ready employment more congenial to their tastes than out door work.

XXII.—Immigrant Farmers.

40. In the districts selected by me there are few farmers occupying farms who have come from other counties. One or two cases were mentioned to me in Fifeshire,

where natives of Ayrshire had taken farms in order to convert them into dairy farms. They have been so short a time in the district, however, that a sufficient period has not elapsed to enable me to say whether or not they will finally be a success. As in every other business or profession, I have ascertained that some farmers have devised means for better overcoming the present depression than others, but on inquiry into the cause, I have been told that that was due mainly to the individual ability of the farmer.

Landlords' questions.

41. In the conduct of my inquiry I did not confine myself solely to the interests of the farmers, but I endeavoured to ascertain the views of the proprietors or their representatives, so that I might be able to present a statement of their opinions on questions more directly affecting their interests. I shall, therefore, now deal with matters to which my attention was specially drawn, and which it seems to me have a more direct bearing upon the landlords' interests, and their ability to fully develop the resources of their estates.

XXIII.—The Law of Entail.

Law of entail.

42. The general opinion expressed to me was that the Law of Entail should be entirely abolished. This law has no doubt been greatly relaxed by modern legislation, and there are now greater facilities for acquiring the estates in fee-simple than formerly was the case. There is still, however, a large number of owners who hold under strict entail, and who, having been born before the dates of the entails, cannot, therefore, effect a compulsory dis-entail, except upon terms which to them are practically prohibitive. In the letting and management of their estates it was pointed out to me that they also labour under disadvantages which do not attach to fee-simple owners, and, being practically life-renters, their interest in the development of their properties are not nearly so strong as they would be if they had absolute control. In the matter also of making improvements they are put to trouble and expense in the charging of the expenditure upon the property, which operates much against improvements. In many cases entailed properties, I was informed, are so heavily charged with provisions to younger children of past owners, that if heirs in possession had the power it would be much better for them to dispose of the property altogether. No doubt certain facilities at present exist for the sale of entailed estates for the purpose of paying off debts; but even these it is often found are so expensive in their operation that they have not been largely taken advantage of. There can be no doubt that the restrictions imposed by entails form one of those impediments towards the free management of landed property which have operated adversely towards the full development of the resources of the soil. It is strongly felt that nowadays the age for entails has long since gone by, and that with the total abolition of the law of entail there would be a relief given to the present holders of entailed land which is very much needed indeed. If the abolition of the law of entail were accompanied by a measure simplifying the transference of land, it is also believed that it would lead to a greater distribution of the land, and to the breaking up of those large tracts of country which are held by single individuals.

XXIV.—Jointures to Widows or Husbands of Deceased Heirs or Heiresses of Entail.

Jointures to widows and husbands.

43. This is a matter upon which opinions were freely expressed, and I desire to set out the views placed before me. The Law of Entail was introduced into Scotland by an Act passed in the year 1685, and between that year and the year 1824 the right of an heir to settle any provision upon his widow did not stand upon a very clear footing. In some cases the deeds of entail authorised the granting of provisions, and at common law the heir in possession seems to have had power to settle upon his widow a jointure equal to her legal terce, unless the doing so was expressly prohibited by the entail. In the year 1824, however, an Act (5 George IV., chapter 87), usually called the Aberdeen Act, was passed, providing for the granting of permanent provisions where these were entirely excluded by law or by the entail, or when those permitted were of small amount. By the Aberdeen Act an heir of entail in possession is permitted to grant to his wife an annuity not exceeding one-third of the free rent or value, after deducting annual burdens, life-rents, interest on debt, &c.; and an heir female may grant to her husband an annuity not exceeding one-half of the rent or value ascertained in the same manner, and restrictable to one-third if the lands are burdened with a prior

existing annuity. Only two life-rents are allowed to subsist at once, but others may be granted to take effect prospectively. In practice, in estimating these annuities, game and coal rents are included, and income-tax is not deducted. The value of unlet shootings is also taken into account, as well as the rent of salmon fishings, but the rent of the mansion house, &c., is excluded.

44. Under the Aberdeen Act the heir in possession may also grant bonds of provision or obligations binding the succeeding heirs of entail to pay such of his children as shall not succeed to the estate, with interest from the grantor's death, a sum not exceeding for one child one year's free rent, after deducting annual payments; for two children two years' rents, and for three or more three years' rents. These provisions did not affect the fee of the lands, but only the rents or proceeds. They were enforced by power to require payment from the heir one year after the grantor's death, and to sue him if payment was not made within three months. The heir, however, was entitled to be discharged on assigning one-third of the rents to a trustee appointed by the Court of Session; and further, provision was made that the heir in possession should not by payments imposed upon him under the above-mentioned statute be deprived of more than two-thirds of the free rent.

45. The above provisions were all fixed upon the rental of the estate as at the date of the death of the grantor of the provisions. The providing of capital sums to the younger children of the family was found to be a heavy burden upon the heir succeeding, more especially when taken in conjunction with the duties which were payable to the Crown by the heir on his succession. Accordingly in the year 1848 an Act was passed (The Entail Amendment Act, 1848) enabling heirs to charge the capital sums provided to younger children upon the fee of the estate, except the mansion-house and policies. The heir, however, was put under obligation to pay annually the interest upon the debt thus created, and if that should be neglected the recourse of the creditor holding the bond was limited to the principal sum and two years' interest. As I have already noticed, however, the continual charging of family provisions upon entailed properties has so mounted up the estate debt, that on this account alone many entailed proprietors are now so heavily burdened that the margin remaining for the heir succeeding is totally inadequate to enable him to discharge the duties and maintain the position inseparably connected with the ownership of a large landed property.

46. The jointures payable to widows and husbands of deceased heirs and heiresses are, as I have just noticed, assessed upon the rental of the estate, as at the date of the death of the last heir or heiress; and in prosperous times, when the rentals were pretty evenly maintained, possibly no grievance existed as to the sum which the heir in possession was annually called upon to pay to the widow or husband of the deceased heir or heiress.

47. In cases, however, where these annual provisions were so fixed 20 years ago, in the height of the agricultural prosperity, it was represented to me that a hardship is imposed upon the present proprietor by being called upon to pay away yearly a sum which is supposed to represent one-third or one-half of the rents actually drawn by him. In many cases, during the past 20 years, rentals have fallen nearly one-half, and after taking out the allowance claimable for jointures, the balance remaining is sometimes barely sufficient to meet the annual cost of keeping the property in a fair state of repair. It is felt, therefore, that circumstances have arisen which, upon all equitable considerations, would justify the periodical readjustment of these charges, so as to make the parties drawing them share rateably in the diminution of revenue accruing from the estate. It is suggested therefore, that these jointures should be based upon the actual rental drawn from the estate in each year and paid accordingly. There does not appear to me to be any hardship involved in this proposed readjustment of matters, though it would, no doubt, carry along with it a certain amount of interference with vested interests. From the very nature of an entailed property, it is so bound up and protected by the fetters of the entail that it is regarded as the family fortune which must provide for the various branches of the family. In the cases of widows and husbands, the evident intention of the legislation in passing the Act of 1824 was to give to them a certain proportion of the free rental. That object was no doubt duly fulfilled so long as the rentals remained steady, but now from various causes the return from landed property has diminished so seriously that it is apparent that the widow or husband of the deceased heir or heiress is placed in a much more favourable position than could have been intended or anticipated by the framers of

Readjustment of jointures.

the statute. This crippling of the resources of an entailed property has a very direct bearing upon matters germane to the present agricultural depression. It deprives the heir in possession of an undue proportion of the revenue, and makes it impossible to give that encouragement to the tenantry in the way either of granting much needed abatements of rent or of spending money for the improvement of land. It will be obvious that in the case of abatements of rents necessitated by the adverse times, the heir in possession cannot disguise the fact that each sum he remits comes entirely out of his own pocket, and that the other party, who is sharing the fruits at a supposed proportionate rate, cannot be asked to contribute a penny.

Many entailed properties are burdened with two jointures, to the spouses of deceased heirs or heiresses, and in these cases, after meeting these annual charges, there is barely anything left at all for the heir in possession. I therefore commend this subject to the favourable consideration of the Commissioners.

XXV.—Improvements executed by Proprietors.

Improvements by proprietors.

48. The present reduced rental of landlords has so much encroached upon their available resources that for a considerable number of years past there has not been that continual and systematic execution of works for the improvement and development of their properties that characterised the period between 1850 and 1870. From information furnished to me, works upon several estates embraced within the area upon which I am now reporting, have been carried on pretty steadily, and large sums of money have been spent by proprietors on drainage, buildings, fencings, &c., but upon the great majority of estates these works have been discontinued mainly, if not solely, owing to the want of available capital to carry them out.

49. In the year 1846 Government voted a sum of 2,000,000*l.* to be lent to proprietors in Great Britain at 6½ per cent. for the purpose of enabling them to execute drainage works. This rate of interest included not only the annual payment of interest, but also repayment of the capital within a period of 22 years. At that time the rate was regarded as moderate, and the grant was received as a great boon to the agricultural community of Scotland. The money so provided was used in improving lands which had previously been well-nigh waste ground, and the capabilities of production were greatly increased, thus conferring a benefit not only on those more directly interested in agriculture, but on the whole community. Many of the improvements that were then undertaken require to be repeated, as the drains, from the lapse of time, have either become silted up or ceased properly to perform their functions. Everyone connected with agriculture knows how futile it is to expect satisfactory crops off wet soils, and if the bearing capabilities of the land are to be maintained and improved, it will be necessary in the near future to again undertake an extensive system of drainage. The resources of many proprietors have been so seriously crippled that they are unable to find money necessary for the purpose, and tenants have not the means to enable them to undertake the works themselves. In these circumstances it has been represented to me that a good case has been made out, or can be made out, for approaching Government and asking for a grant of money for the purpose of executing improvements upon landed property, repayment of the principal to be extended over a period of 50 years, and the interest to be calculated at the rate of 2½ per cent. It was suggested that such a grant should not be confined exclusively to drainage, but that it should be applicable to all permanent improvements. It appears to me that if a grant of the nature I have indicated could be obtained, it would be a long step in the right direction towards aiding both landlord and tenant. It would enable proprietors to at once undertake much called-for improvements, and it would give tenants the advantage of enabling them to cultivate the ground under much more favourable conditions.

State loans.

XXVI.—Agricultural Holdings Act, 1883.

Agricultural Holdings Act.

50. This Act, when it was passed, was regarded by the agricultural community as a measure which would confer upon tenants a much desired security for the capital invested by them in the improvement and development of their farms. I have made extensive inquiries in the various districts visited by me as to the practical working of the statute, and regret to find that there is a universal feeling that the measure has in a great degree failed to accomplish the object which it was intended to serve. In the working of the Act it has been found that the expenses incident to the procedure it enjoins have been so serious that the sums awarded as compensation for improve-

ments have in many cases not been sufficient to meet the attending costs. It is not an uncommon practice, as one of the gentlemen who favoured me with his views on the subject, says, to have the following parties professionally engaged in the ascertainment of the rights of parties, viz. :—two arbiters; an oversman; a solicitor as clerk to the reference, and two solicitors acting for the landlord and tenant respectively, with almost invariably a considerable number of skilled witnesses on both sides. It is obvious that procedure so expensive and cumbrous is sufficient to deter tenants, particularly the class of smaller farmers, that have a good claim for compensation for improvements executed by them from having it determined under the Act, and to make them rather discount their claims than have them settled by a process which is really as formidable and has as many attending risks as a lawsuit. One natural result of such a process is to engender a strong feeling of hostility between landlord and tenant, and to make each of them view the other's claim as an attempted fraud.

51. The principle of the Act is unanimously admitted to be a sound one, but it is equally considered that some simpler and less expensive method must be adopted for ascertaining the rights of parties. It is also felt that the schedule appended to the statute calls for reconsideration, and that the notice of intended claim and counter-claim should be dispensed with, and a simple provision substituted providing for the settlement of all questions between landlord and tenant within at most a period of three months after the termination of the tenancy. In at least one case which came before the Court of Session, a tenant's right to compensation would have been denied to him, on the ground that he had failed to state particulars of his claim as required by section 7 of the Act, and this, it is also felt, is a matter which requires reconsideration. It is strongly urged that the statute should be reconsidered and cleared of all those echnical requirements which do not in the least aid either party in arriving at a just conclusion, but which are sometimes used to obstruct, if not altogether to destroy, just claims.

Sinclair *v.* Brown, May 17, 1892: 19 Rettie 780.

52. In view of the serious objections stated to the mode of carrying the principle of the Act into effect, I venture to submit the following summary of suggestions which have been made to me for the consideration of the Commission, viz. :— Suggested amendment

(*a.*) That the schedule appended to the Act should be abolished, and that all improvements executed by the tenant, and tending to give an enhanced letting value to the farm, should be paid for by the landlord at the termination of the tenancy.

(*b.*) That in the case of several of the improvements specified in Part I. of the Schedule, some adequate provisions ought to be made to the landlord against the individual fancies of tenants, so as to prevent the expenditure of money by the tenant, which the landlord might be called upon to repay upon useless works, which might not be necessary for the proper requirements of the farm, and which might be profitless to a succeeding tenant. That in the event of any difference arising between landlord and tenant as to the necessity for any works enumerated in Part I. of the Schedule, called for by the tenant, an arbiter to be named by the sheriff, should be called in, and that his decision in the matter should be final and not subject to review. In the matter of drainage, that a tenant should have an absolutely free hand, no tenant being likely to spend money on drains unless they were required.

(*c.*) That an allowance for consumption on the farm of produce which would naturally fall to be sold, but which the tenant elects not to sell, but to consume on the holding, should be granted under the Act. As it at present stands, if a farmer wishes to get compensation for corn, hay, potatoes, or other home-grown produce consumed, he would require to resort to the device of selling produce off his farm, and buying similar produce possibly from his neighbour. This, I was informed, was frequently done. Such a proceeding is, it is thought, wrong in principle, and it is urged it would be a much better arrangement if all produce consumed on the farm, which, according to the natural and ordinary management, would be sold, were treated in the same manner as if it had been bought in by the tenant.

(*d.*) That allowance should also be made to the tenant for improvement of the general condition of the farm. Take for example a tenant entering upon a holding which has been badly managed and is overrun with weeds. It is well known that in order to raise the condition of the farm, clean the land, and keep it clean, very considerable expense must be incurred by a tenant. Every outlay of tenant's capital in such an instance has at present no protection. And, as is

well known, nothing is more calculated to improve the attractiveness of a farm and to increase its letting value, than to leave the land in thoroughly good order and free from weeds.

(*e.*) On the other hand, that where a holding falls into bad hands the landlord should have a corresponding claim against the way-going tenant for having allowed the farm to go to waste by scourging it or permitting it to be overgrown with weeds.

(*f.*) In regard to the procedure for determining the rights of landlord and tenant respectively, it has been suggested that within three months after the termination of the tenancy, each party should be bound to submit to the other a statement of his claims. Such a statement it was represented to me need not be fettered with any legal technicalities, but should be expressed in such ordinary language as would convey to any party reading it a fairly correct view of the claim attempted to be set up. As respects procedure there is a strong opinion in favour of a single arbiter, who should be an outside party, wholly unconnected with either landlord or tenant, acting as sole referee.

That the machinery for obtaining the appointment of an arbiter should be of the simplest kind, and it has been suggested that the nomination of arbiter should be in the hands of the sheriff of the county, such nomination to be obtained by either landlord or tenant by a simple letter of request, addressed to the sheriff of the county (and forms of which might be obtained from the sheriff-clerk), in something like the following terms: "I hereby request you to nominate "an arbiter under the Agricultural Holdings Act, to determine the claims which "I have against , the of my farm, or which he may "have against me." Upon such a letter being put into the hands of the sheriff-clerk, he should be bound forthwith to lay it before the sheriff, who would nominate an arbiter in the following terms: "I hereby appoint , "as sole arbiter under the foregoing letter of request."

On such a letter, with the nomination of the sheriff, coming into the hands of the sheriff-clerk, he would be bound to transmit it to the arbiter, and it could easily be provided that the nomination so made should carry with it all the powers of an arbiter or referee appointed under the existing procedure.

(*g.*) That the arbiter's award under such a reference could be expressed in a simple form, and on being issued it should be placed in the hands of the sheriff-clerk, who would register it in the Sheriff-Court Books, and thereby give it all the force of a decree of court.

(*h.*) If some such simple procedure as that sketched were resorted to, it is thought that it would go a long way towards removing the grievance which parties now complain of on the head of expensive procedure.

(*i.*) That as respects the general condition of the farm at the date of entry, both parties should take effectual means to ascertain the condition of the farm. In the matter of buildings, drains, fences, &c., the present practice is that their condition is ascertained before the lease is signed, and their state is usually recorded in the lease itself or in a separate document. At the termination of the tenancy this document is referred to as measuring the rights and obligations of parties, and it is very rare indeed that any dispute arises between the way-going tenant and the proprietor in regard to them. This was merely pointed out as showing how very easy it would be to preserve evidence of the actual condition of the farm at the date of the tenant's entry to his tenancy.

(*j.*) That tenants should also have power to borrow money on the security of improvements executed by them under the Act at the same rate of interest as that suggested in the case of improvements by landlords.

I think it a matter of the very first importance that the farmers of the country should have the fullest encouragement to invest their capital in developing the resources of their holdings, and this they can only have when their just claim to compensation for every improvement that adds to the letting value of the farm is fully secured to them by law. If this were done, there is no reason to doubt that a vast amount of capital that is at present sent abroad would be invested in developing the resources of British agriculture, and a benefit would be conferred on the nation at large.

There cannot, I think, be any doubt that the Agricultural Holdings Act of 1883 requires very careful revision and amendment, and I shall be glad if any of the above suggestions are of service to the Commission in arriving at a conclusion in the matter.

XXVII.—Fixity of Tenure.

53. There is one other thing to which I desire to call attention before concluding my report. At my public meeting in Aberdeenshire several of the speakers advocated that the principle of fixity of tenure should be established in Scotland, and that the provisions of Lord Ashbourne's Irish Land Act should be extended to Scotland. In the written answers to the questions contained in the Schedule issued by me to the farmers in Aberdeenshire, the same position is taken up by the majority of those who have favoured me with answers. In the other counties visited this subject was sometimes mentioned, but it had not evidently taken so strong a hold of the public mind as it had done in Aberdeenshire. It may be that as ideas progress upon questions affecting land rights, that calls may be made for the introduction of such a statute, but at present there has not been sufficient evidence adduced to justify me in reporting that it is the wish of the majority of those with whom I have been brought into contact.

Districts not reported on.

54. The instructions which I received did not require me to deal with all the varied interests in agriculture, but simply to confine my attention to certain areas which I was asked to select. I have accordingly not overlooked the fact that there are many questions affecting the large dairying industry carried on in the southern and western and in some of the midland counties of Scotland which I have not touched upon, and that with the time at my disposal it was impossible for me to visit or to report upon the condition of agriculture in the northern and the remaining midland counties in Scotland. The information which this report contains, therefore, can only be regarded as applying to the areas which I have visited.

I have, &c.
(Signed) Jas. HOPE.

APPENDIX I.

Schedule of Questions referred to in foregoing Report (See Para. 3).

1. For the period betweed 1882 and 1893 has there been depression in agriculture in your district?
2. If there has been, what is your own, and the local opinion, as to the cause of the depression?
3. Have there been many changes of tenancy in your district mainly, if not solely, caused by the bad times?
4. Have the proprietors in your district been obliged to take any, and if so, what number of farms into their own hands, through inability to find suitable tenants at reasonable rents?
5. During the past ten years has there been any cessation of the execution of works in the way of drainage or buildings for the improvement of the land in your district?
6. Is it the practice in your district for the tenants to pay, in addition to their rents, interest on money expended by the landlords upon improvements?
7. If landlords could obtain money from Government at say 2½ to 3 per cent. for the execution of improvements, would that, in your opinion, lead them to make further expenditure upon such improvements?
8. If you have kept accounts in connection with your farm, kindly state the result of each year's working from 1882 to the present time?
   Note.—This information is solely for Mr. Hope's guidance, and neither your account nor your name will pass him.
9. Have working expenses during the past ten years increased or decreased? If either, to what extent?
10. Have you any observations to make upon the working, as between landlord and tenant, of the Agricultural Holdings Act?
11. Have you any suggestions to make which would in your view, improve the working of the Agricultural Holdings Act, and still carry out the principle contained in the Act that compensation should be given to the tenant for that which belongs to him in and upon the land?
12. Have you any complaint to make as to the imperial and local taxes and rates paid by you as tenant of your farm, viz.:—Income tax, poor and school rates, and the assessments imposed by the county council?
13. What is your opinion in regard to the "cropping clauses" usually contained in leases?
14. Has the demand for farms increased or decreased during the past ten years?
15. Have rents declined or otherwise during that period?
16. Have abatements of rents been given which have not appeared in the valuation roll?
17. Do you consider that the present law of entail in any way hampers the proprietor in dealing with his property from an agricultural point of view?
18. Do you consider that the necessities of the present times call for periodical readjustments of jointures to widows of deceased proprietors of entailed estates?
19. Will you give statistics showing the yearly expenditure on permanent improvements on your estate during the past ten years?
   Note.—This information is not wanted for publication, but solely for Mr. Hope's guidance.
20. Generally, I shall be glad to have any suggestions which you have to offer to me bearing upon the agricultural depression in Scotland, and the best method of relieving it?

Note.—The foregoing Schedule of Questions has been prepared so as to apply both to landlords and tenants, and Mr. Hope will be glad if each party furnishing information will deal with the queries applicable to his case.

APPENDIX II.

Selection of Representative Answers made to Questions contained in Schedule issued by Mr. Hope.

Q. 1. For the period between 1882 and 1893 has there been depression in agriculture in your district?

Ans. (*a.*) Yes; there has been great depression.
(*b.*) Very heavy depression.
(*c.*) Yes; and in a very acute form at times.
(*d.*) There has been depression, and that of a very serious nature.
(*e.*) There has been, and still is, great depression.

Q. 2. If there has been, what is your own, and the local opinion, as to the cause of the depression?

Ans. (*a.*) Low prices in every article that the strictly arable farmer can produce, caused by foreign importations, and intensified every now and again by a bad, wet, sunless season such as last.
(*b.*) The very low prices of grain and potatoes, and the great increase on the working expenses of the farm.
(*c.*) Chiefly the large importation of foreign agricultural goods free of duty, and the heavy duties imposed upon our exports by foreign countries; also occasional bad seasons, and the fact that foreign produce is carried by the railway companies at a cheaper rate than home products.
(*d.*) Chiefly the low prices received for farm produce, aggravated at the present time by the exclusion of Canadian stores.
(*e.*) Abolition of the malt tax; high rents; the rise in the labour market and foreign competition.
(*f.*) (1.) Rents too high. (2.) Foreign competition. (3.) Want of proper security for the capital expended by occupiers in improving the soil. (4.) Tenants being bound to follow antiquated systems and rotations of cropping in their leases; and (5.) want of sufficient capital by tenants in some cases

Q. 3. Have there been many changes of tenancy in your district mainly, if not solely, caused by the bad times?

Ans. (*a.*) Yes, a very great many; many of the old farmers have been ruined, and the younger men of education and intelligence, who have looked in vain for a fair remuneration for capital and labour, have quitted their possessions in disgust.
(*b.*) There were a few solely caused by 19 years' leases, and the fall in the price of agricultural produce.

(*c.*) Not very many changes in this district, as the proprietors have met the tenants and readjusted the rents even in the middle of the lease.

(*d.*) No.

Q. 4. Have the proprietors in your district been obliged to take any, and if so, what number of farms into their own hands, through inability to find suitable tenants at reasonable rents?

Ans. (*a.*) No, farms can always find tenants of a class.

(*b.*) Few proprietors manage their own land, most submitting to reductions of from 30 to 50 per cent.

(*c.*) Tenants could always be found for farms in this district where the proprietor accepted much reduced rents.

(*d.*) Very few farms taken in hand by owners. This done in some cases in hopes of larger rents being offered after the farms are put in better cultivation Some of these farms let this year at moderate rents.

Q. 5. During the past ten years has there been any cessation of the execution of works in the way of drainage or buildings for the improvement of the land in your district?

Ans. (*a.*) Almost entirely ceased.

(*b.*) There has been very little drainage done during the last ten years. The buildings during that period have been considerably improved.

(*c.*) No; rather the reverse. As the profits of farming have decreased, tenants have insisted on more draining to improve the fertility of the land, and more covered courts on the steadings for the quicker fattening of cattle. The result to the landlord being increased expenditure on a falling rental.

Scope. (*d.*) Much less expenditure on drainage and improvements has been done, and there is a great deal of wet land in my neighbourhood.

(*e.*) Little draining has been done of recent years, though considerable sums have been spent principally on renewal of roofs and covering in of open courts. Cottage improvements have also received attention since the County Council moved in the matter.

Q. 6. Is it the practice in your district for the tenants to pay, in addition to their rents, interest on money expended by the landlords upon improvements?

Ans. (*a.*) It is not the practice for tenants to pay interest on improvements. There are exceptional cases.

(*b.*) It is the practice to pay interest on drainage and do the carriages free.

(*c.*) It is a question of agreement, but tenants object strongly to it, and it is not nearly so common now, as it was 10 or 15 years ago. A tenant may offer to pay 5 per cent. still, but that would be for some extra buildings during the currency of his lease, and after he had accepted the buildings as being sufficient.

Q. 7. If landlords could obtain money from Government at say 2½ to 3 per cent. for the execution of improvements, would that, in your opinion, lead them to make further expenditure upon such improvements?

Ans. Yes.

Note.—This question has been invariably answered in the affirmative.

Schedules to Act. *Q.* 8. If you have kept accounts in connection with your farm, kindly state the result of each year's working from 1882 to the present time?

Note.—This information is solely for Mr. Hope's guidance, and neither your account nor your name will pass him.

[In consequence of this note none of the results furnished are here printed.]

Procedure for determining compensation. *Q.* 9. Have working expenses during the past ten years increased or decreased? If either, to what extent?

Ans. (*a.*) An increase of about 7 per cent. to 10 per cent.

(*b.*) Increased by 12 per cent.

(*c.*) They have increased by about 12½ per cent.

(*d.*) Increased 10 to 20 per cent.

(*e.*) They have increased about 15 per cent.

(*f.*) Increased to the extent of 20 per cent.

(*g.*) Increased nearly one-third.

(*h.*) They are much the same.

(*i.*) Wages have increased, but working expenses have been kept down by employing less labour through laying down more grass.

Q. 10. Have you any observations to make upon the working, as between landlord and tenant, of the Agricultural Holdings Act?

Ans. (*a.*) Certainly the Act was a step in the right direction, but it is too expensive and intricate for a tenant with small means to take advantage of.

(*b.*) I have had very considerable experience as an arbiter under the Holdings Act, and am sorry to say that it in no way improves the feeling that ought to exist between landlord and tenant at the end of a lease. The Act from end to end bristles with litigation.

(*c.*) A complete failure, made only for the lawyers.

(*d.*) Unless parties can agree privately (which has always been done here, the expense of working the Act eats up all the compensation.

(*e.*) I consider it a very great hardship that the consent of the landlords to a great many of the improvements under Part I. in Schedule is required.

(*f.*) It admits the principle that a tenant can leave something in his land that he should be paid for, but in the meantime the principle is too expensive to work out.

Q. 11. Have you any suggestions to make which would, in your view, improve the working of the Agricultural Holdings Act, and still carry out the principle contained in the Act that compensation should be given to the tenant for that which belongs to him in and upon the land?

Ans. (*a.*) There is a great need of improvement; for instance, an improving tenant is always making his farm better by his skill and good management, for which, by the Act, he gets no compensation—the landlord getting all for nothing.

(*b*). Inducements should be given to keep land *clean*. Much land is getting very dirty—possibly through a desire to save the expense of cleaning. If a report on cleanness and condition was carefully made at the commencement of a lease, and another report at its termination, and the difference in their conditions allowed for in making other compensations it might induce better cultivation.

(*c.*) The tenant should be compensated for increased *cleanliness* and condition. The landlord should be compensated for decreased *cleanliness* and condition.

(*d.*) The Act should embrace compensation for cleaning land, making roads, cutting and keeping hedges when got out of order, sinking wells for water to fields, and such like improvements.

(*e.*) I would suggest that the landlords and incoming tenant should get a report made at the commencement of lease of every field on the farm to start, whether it is clean or dirty, wet or dry, fenced or not, and the houses the same. At the end of the lease, if the two cannot agree, the sheriff to have full power to appoint a man to decide who has to pay, and the amount to be paid. *No appeal.*

(*f.*) In Schedule, Part I., erection or enlargement of buildings ought to be on the same conditions as Part II., drainage; also (3) and (6) of Part I.

(*g.*) The principle is right, but the Act is quite incomplete. Where a proprietor will not agree to drain or to build houses where required, it should be compulsory, on the report of a qualified person.

(*h.*) The principle of the Act is excellent and only bare justice, but the carrying out of it is beset with great difficulty. At all events the appointment of valuator under the Act ought to be in the hands of the sheriff of the county, or some such impartial official.

(*i.*) Honesty on both sides would help a great deal. At present every claim is met by counter claim, and both sides look on the other claim as an intended swindle, and, as

you know, in cases of dispute the lawyer steps in to put matters to right, and finishes up by putting all the compensation in his pocket, and sometimes more, and then blesses the present Land Act.

(*k.*) I think that district valuators should be permanently appointed by the sheriff—ONE of these to be called in *in the event of parties not agreeing*. His decision to be final and not subject to reduction.

(*l.*) I must say that I prefer a "Schedule" agreed upon with the landlord, specifying the compensation you are to receive for the different improvements made upon the holding. But I think it very unjust that you cannot claim for the produce of the land which you have a right to sell—if it is consumed upon the land. A sitting tenant on renewing his lease should get the same compensation as though he leaves.

Q. 12. Have you any complaint to make as to the imperial and local taxes and rates paid by you as tenant of your farm—viz., income-tax, poor and school rates, and the assessments imposed by the county council?

Ans. (*a.*) The imposition of the income-tax is very unfair, the rates on rental being too high.

(*b.*) I think tenants should be charged for income-tax at one-sixth instead of one-third of their rental.

(*c.*) I consider the income-tax a great hardship on the farmers, as they will rather pay it, although they have no income, than be at the great trouble and expense of making up a real statement of their year's accounts [for appealing].

(*d.*) All these taxes should be levied on means and substance. Landlords and tenants are both paying far more than their share, especially of local taxes.

(*e.*) There is no reason why farmers should not pay a fair share of taxes, but these taxes require to be equalised.

(*f.*) No, I have not much to complain of, except the assessments of the county council, which have risen somewhat since the advent of the council. I have no poor rates to pay in this parish.

(*g*) Mansion-houses should be rated at their full value. No new tax should be imposed during the currency of a lease. If new taxes are imposed they should be borne by proprietor.

(*h.*) Poor, school, and registration rates in my parish amount to a perfect scandal. The existence of a fishing village, paying about a ninth of the taxes, while having complete control of the administration, entails upon the landward part a grievous wrong.

Q. 13. What is your opinion in regard to the "cropping clauses" usually contained in leases?

Ans. (*a.*) That in many cases they are simply absurd, and where they are adhered to and enforced, as in some cases they are, they are unworkable; they might have been required last century, but in this enlightened age are not wanted. I hold that any tenant to be able at all to compete with his foreign rival should and must have a free hand to crop and manage the land as he likes, and sell what he likes, and if any landlord cannot trust his tenant to farm the land with a free hand, he is not deserving of the place.

(*b.*) I would sign no lease with stringent cropping clause.

(*c.*) If a tenant by miscropping hurt the proprietor he will also hurt himself.

(*d.*) A lot of rubbish. A good farmer needs no cropping clauses of any kind. A bad farmer should not have land at all.

(*e.*) Were there no such clauses, there are tenants who would exhaust a farm in three or four years, then leave, and the landlord has no recourse against an insolvent.

(*f.*) The cropping clauses are often senseless and useless, and not in keeping with the times. Freedom of cropping, with restrictions at the end of the lease, and the rules of good husbandry is sufficient.

(*g.*) Useless for the purpose for which they were devised; they are no check on an unscrupulous tenant, and often prove an obstruction to an intelligent farmer in trying to develop the utmost capabilities of his farm. If landlords give any consideration to the character and capacity of the tenants whom they accept, the cropping clauses would not be needed. As it is, they are, as a rule, I think, tacitly ignored.

(*h.*) My opinion, derived from long intercourse with both landlords and tenants, is against specified rotation of cropping, except for the last five years of a nineteen year's lease. A landlord in accepting a skilled and honourable agriculturalist as his tenant, with personal resources adequate for the due stocking and management of the farm, ought to be satisfied with an obligation to cultivate "according to the rules of good husbandry," such as avoiding two white crops in immediate succession, and duly manuring the land.

Q. 14. Has the demand for farms increased or decreased during the past ten years?

Ans. (*a.*) Had this question been asked a year ago, I should have answered that the demand was decreasing, but within that period an active demand seems to have suddenly arisen, only however, for the best class of farms. I attribute this largely to the increasing difficulty of finding safe investments for capital in these times of scares, panics, and wholesale smashes.

(*b.*) Decreased.

Q. 15. Have rents declined or otherwise during that period?

Ans. (*a.*) Generally about 15 per cent. of a decline.

(*b.*) Declined about 15 per cent.

(*c.*) Rents have declined about 25 per cent.

(*d.*) There has been a reduction of rents equal to 25 to 30 per cent.

(*e.*) They have seriously declined during the period, I should say, upon an average from 30 per cent. to 35 per cent.

(*f.*) In Fife rents have declined from 30 per cent. to 40 per cent.

(*g.*) Declined. My gross rental in 1882 was 3869*l.*; in 1892, 3648*l.*; in 1879 it was 3960*l.*

(*h.*) During the height of the depression rents decreased about 25 per cent., but since 1889 there has been a slight increase.

(*i.*) A general decline has, I think, been continuous since 1882 until about a year ago. One or two instances have occurred in this district of farms coming into market this year (*i.e.*, Marts. '93), and the new rent is the same as the old one; but in each case there has been a reduction since 1882.

Q. 16. Have abatements of rents been given which have not appeared in the valuation roll?

Ans. (*a.*) Abatements of rent have been pretty general, which have not appeared in the valuation roll. Some in money, and others in the shape of manure.

(*b.*) When abatements were first given, in many cases they did not appear in valuation roll, but in most cases now that has been altered.

(*c.*) Yes. Is one of the most adverse seasons. Slight abatements were made in this district which did not appear in the valuation roll.

(*d.*) Yes; especially on some estates requiring purchasers. At the same time most of the money abatements even when temporary, have been shown in the valuation roll. It is, however, known to me that some landlords have freely and repeatedly distributed bone meal, lime, and feeding cakes amongst their tenants.

Q. 17. Do you consider that the present law of entail in any way hampers the proprietor in dealing with his property from an agricultural point of view?

Ans. (*a.*) I am sorry to say in this county we have too much evidence that the present law of entail hampers both proprietor and occupier in a very marked manner.

(*b.*) I believe it must. Most landlords are burdened with large estates and small incomes. A proper outlay cannot therefore be made annually for the upkeep of buildings and other improvements.

(*c.*) There can be no reasonable doubt that the law of entail hinders agriculture, as a poor laird cannot sell to a man with money who

would make improvements which the poor laird could not. Land ought to be as easy of sale as a ship or a ton of potatoes.

(*d.*) Yes. The law of entail does; it should be abolished.

(*e.*) I consider the law of entail on this estate the greatest curse that it could have, as the houses are all in a tumble-down state, and the proprietor will neither build houses nor encourage improvements of any kind.

(*f.*) The proprietor sometimes, I may say often, wishes to burden the next heir, and withholds improvements on the estate for the sake of the younger members of his family. It has been the case when a proprietor becomes bankrupt, that the management was handed over to a managing trustee or contractor, who rackrented the tenants to the utmost, and crippled farming in that estate not only for the time, but for all time. Land should be a free marketable commodity.

(*g.*) The law of entail is very unsuitable where there is a large family of sons, as the oldest is often left with little or nothing to carry on the estate, consequently he has to borrow money at high interest, and he looks for high rents.

Q. 18. Do you consider that the necessities of the present times call for periodical readjustments of jointures to widows of deceased proprietors of entailed estates?

(*a.*) I consider that jointures to widows of deceased proprietors of entailed estates should be either periodically readjusted, or be calculated proportionally to the rise and fall of the income derived from the estate.

(*b.*) Yes, annuitants ought to share the bad times along with proprietors; unfortunately many proprietors are only nominal proprietors, and to take 30 per cent. or 50 per cent. off a man of his stamp is like taking the "breeks" off a Highlandman.

Q. 19. Will you give statistics showing the early expenditure on permanent improvements on your estate during the past ten years?

Note.—This information is not wanted for publication, but solely for Mr. Hope's guidance.

[In consequence of this note no statistics are here published.]

Q. 20. Generally, I shall be glad to have any suggestions which you have to offer to me bearing upon the agricultural depression in Scotland, and the best method of relieving it.

Ans. (*a.*) A most difficult question to answer, but I say, give us equitable laws, no class privileges, let us have land free so that only those should hold it who can do justice to it. Above all, a sound and workable Agricultural Holdings Act, so that the man who makes any subject he farms more valuable to another, be paid every shilling he has added to its value; brand all foreign imports so that the public know what they are buying, and supply and demand for land will rule the rest.

(*b.*) Tenants should be more careful in competing for farms, and proprietors should exercise the same care in selecting *practical men* first, other than those with most capital. A full statement of such should always be supplied. Foreign beef and mutton should be put on the market as such, and prohibit importation of store cattle. Equalise railway rates, so that no preference be given to sea-borne produce. Supply and demand will rectify the rent.

(*c.*) The law of entail should be abolished, and the Government should lend money to farmers to enable them to buy their farms repayable at long dates, say, 30 to 50 years, payable by an annual instalment added to the interest at the actual cost which the Government can borrow the money at.

(*d.*) (1.) Parliament ought to amend and simplify the Agricultural Holdings Act, and appoint a Land Commission to settle any disputes between landlord and tenant; also a tenant should be compensated at the end of his tenancy for the improved condition of his farm generally. (2.) Foreign articles, whether beef or bread stuffs, or whatever they may be, sold in this country should be labelled, and let the public know what they are really buying. (3.) That our ports ought to be opened to Canadian, and cattle from any other counties as soon as there is no disease in these counties, to be sold as stores, as the present system of slaughter at port is very injurious to the home meat market as at present.

(*e.*) The only practical help that can be given to Forfarshire tenants at present is the opening of the ports to Canadian stores.

(*f.*) Reimpose tax on malt and take it off beer, reduce rates and other burdens on land, give loans at a low rate of interest to proprietors to improve their estates, give loans to tenants at similar low rates of interest to improve or purchase their farms, with favourable terms as to re-payment.

(*g.*) Tenants should be allowed a free sale of all farm products, and should be paid compensation for condition and cleanliness of farm as well as other improvements.

(*h.*) Give no preference to transport of foreign agricultural produce by ship, rail, or canal over native produce, and when our competitors can no longer compete unduly, we will hold our own against them.

(*i.*) (1.) Repeal the malt tax. (2.) Tax all foreign grain imported here for brewing or distilling purposes, and if possible attempt to obtain reciprocal treaties with foreign countries.

(*k.*) See that in every district there is a due proportion of small holdings to which the ploughman may aspire in middle life and become a farmer on a small scale. Tax the butchers, bakers, grocers, drapers, brewers, and other carts which now run on all the county roads free, and destroy the small tradesmen of our villages.

(*l.*) Reimpose the malt tax; put 5*s.* a quarter on foreign barley; get potatoes free into America; let railways carry farm produce as low as foreign; label foreign meats; more small farms, cheaper money to proprietors to build steadings.

(*m.*) I would respectfully wish to see our proprietors live more at home amongst their own people, judge for *themselves* their good tenants and their bad, and spend more of their incomes in the rural districts where that income is made; and I venture to predict there would be a higher class of tenantry, more justice done to those who deserve it, and we would hear less of agricultural depression.

(*n.*) Supply and demand are understood to govern the price of everything, and I think should apply to this as well. Unless you suggest that a law should be passed to protect farmers from themselves, I do not see what can be done. You may import the Irish Land Act (Lord Ashbourne's). In short, land just now is far too dear. The prices got for farm produce will not pay it. Still farmers continue to offer those rents, and therefore must be said to have themselves to blame.

(*o.*) Cattle and sheep to be sold only by live weight at so much per lb. or cwt., same as America. Auctioneers to be compelled to furnish a true statement of sales.

(*p.*) Scotch farmers ought, like the Irish, to have fixity of tenure and fair valuations given them by law. In short, the "Irish Ashbourne Act" ought to be extended to Scotland, and *three-fourths* of the depression, if not all of it, would be at once removed.

(*q*). I consider the present tenure of land most unsatisfactory. We require an Act upon the lines of the Ashbourne Act for Ireland, to give us a permanent interest in our land. A 20 per cent. reduction and a permanent interest in the holding would give new life to farmers. Cheap money from Government would then go where it was needed without any extra per cents. added. There would then be no use for an Agricultural Holdings Act, which can never be satisfactory.
